Correspondence: You know how a computer has a system restore that will take you back in time to fix errors your computer might face. I think that is what should happen to this issue about closing our beaches that I grow up on. lets just go back to that day when one could shake each others hand and the deal was as good as gold, that day when we were told that our beaches would always be open for us,hands were shook and that deal was done. how can people who live in concrete cities where there is not even a blade of grass for a rat to eat thank they need to change our way of life. been to the beach all my life and I have never seen any harm done to any birds by humans. what I have always seen is families and friends having some of the best days ever out there on the beach, never have I seen families and friends harming the wildlife in any way. These people attempting to close our beaches I would like to invite them down for a Sunday afternoon on the beach with my family and friends, grilling burgers, sitting back watching the kids playing in the sand and water, and just relaxing and telling stories, not to mention all the amazing sights and sounds, playing horseshoes, throwing the fresbee , playing catch, surfing, floating, swimming, snorkeling, and I could go on. But my point is none of these activities is harming anything or anybody. We and everybody I know has nothing but a blast out on the beach. every time we leave we pick up all our trash and other trash that we may run across. again I invite anyone to come hang out with us and just try to find something wrong with what we are doing. please don't close our beaches, I have two boys and I would like for them to enjoy the beach as I/We did when we were just little fellers....

Correspondence: As a property owner in Frisco. I find it hard to believe that a well funded special interest group has restricted beach access on Hatteras Island. Please return control of the beaches at CHNS to the rightful parties. We have stopped construction on our lot in Frisco until the beach access problem is resolved one way or the other. Why build a retirement house at the beach if you can't access the beach?

Correspondence ID: 4 **Project:** 10641 **Document:** 32596
Name: Smith, Kenneth W
Received: Mar,12,2010 13:01:14
Correspondence Type: Web Form
Correspondence: My name is Ken Smith. I am a resident of PA but have vacationed in AVON on Hatteras Island for many years. What brought my family to this beautiful place was the freedoms provided to families and fishermen alike. The beach access was a godsend and the array of wildlife and marine life amazing.
Beach access is an extremely important part of island life. The access keeps shops and family owned businesses alive and open. The economic basis of the island derives a major portion of its revenue from the anglers and families that vacation on the Outer Banks. Without the access to the beaches, my concern is the island will become run down and destitute.
I am an angler and a father. My hope is for my kids to grow up on the Outer Banks as I did in the summers and they have for the last five years. The beach access is important to my family for a number of reasons. When we go to the beach for the day, we drive out to our spot and park. The kids have the freedom to enjoy nature and everything the ocean has to offer. If they are tired, they nap in the truck. If they need a drink there a cooler close by. If they need shade, we make a tent from the back of the truck like a patio.
The importance of beach access is not just for my family or the families with young children. What about the veteran that suffered a disabling injury fighting for our freedoms. Removing beach access will remove that very freedom that he fought for. How will that retired soldier gain access to enjoy a day on the beach? He will not and this is a disgrace.
98% of the vehicle owners and drivers that I have witnessed on the beaches in the Outer Banks, are respectful. We know what we have and we protect it for the future of the beaches. When we see trash, we pick it up. When we see someone in need of help we help them. When we see people begin to become ignorant to the beach and everything it is, we intervene.
ORV's do not damage the beaches or the habitats of the birds and life that exists here. Our access to the beach is an awarded freedom that all respect and enjoy. It is extremely important to preserve the marine life and wildlife on the beaches, but at the expense of what some families have built. I have met old men on the beach that say that they came to the beaches with nothing and have now built a legacy for their families, whether it be a simple cottage to vacation in or a family owned store and bait shop.
Removing and extremely limiting the beach access to the Outer Banks beaches is criminal. The beaches are there for everyone placed on the earth to enjoy. No person or group should be afforded the right to decide who can be present on any beach or forrest at any time.
Beach access is a necessary part of life for the Outer Banks. With the beaches being closed and limited in the past couple of years, I am sure that if anyone is to take a look at the economic reports that generate from the island, they have suffered. In an economy that is already scarred, why further scar and destroy what is here.
I ask, nay demand, that the beaches of the Outer Banks remain open and available to any person that respectfully and properly feels that they belong there. It is the right of the people to enjoy what has been placed on this earth, and not the right of any group to deny that simplest of human rights.
My name is Kenneth Smith and I will remain to fight for the access of the Beaches of the Outer Banks. I respectfully thank you for taking time to read my concerns and comments. Beach access is the life blood of a beautiful island and without it, will kill that island and ruin the lives and hard work of people that do not deserve that treatment.

Correspondence: The National Parks were created for all Americans to enjoy. We can share the beauty of the Outer Banks with the wildlife. Beach closure unfairly deprives generations to come access to the very best part of the Cape Hatteras National Seashore. As a native to the area, I cannot imagine being kept off of the beaches by outside interests whatever their good intentions. Please keep the beach open.

Correspondence: in times as hard as these how can a government which claims to have it's citizens best interests at heart even consider enacting rules/laws that will destroy entire economies, communities, and the families that go with them. there are currently many more miles of beaches in the area in question that are closed to orv traffic than are open. we have not complained about these areas that are closed as wildlife refuges because we love all wild life and want to prosper. we have not asked that these areas be opened to orv use. these people and groups are selfishly demanding things that will harm countless individuals and families. my reasons for using these areas is to see and be with the wildlife. please think of and listen to the people that depend on this to earn a living instead of lawyers and groups with no concern for the humans that inhabit these areas.
i work hard, pay my taxes, and save money all year to be able to use these beaches and see the families and friends that have made it thier home. i know that i am not alone when i say that my faith that our government has the best interests of its people in mind has already been deeply eroded over th years. if the the country that i love so dearly has leaders that turn their backs on entire communities by bowing to these unreasonable pressures, i really dont know if i will have any faith left. our government for the people is turn out to be "for the birds" truly, truly sad.

Correspondence: I moved down to NC a few years ago with the hopes of my children and grandchildren being able to enjoy the beach as much as I do when they come to visit me. It is a shame that the new laws will close access to the beaches. It is the little enjoyment that people can afford now days. Why would you do this? People can live in harmony with nature with out closing the beaches.

Correspondence: Please find below, Letter To The Editor, printed on July 9th, 2009 in the Outer Banks Sentinel. A local newspaper on the Outer Banks of North Carolina.
Preserve Beach Access.org
Above, are three words, with an abbreviation attached.We as Americans need to realize, these three words could be included in our stories, to our, future generations.These three words could be part of our generation's effort to protect our freedom for our children, family, friends and way beyond the shores of Hatteras Island, on the Outer Banks of North Carolina.Today is July 5th, the day after our entire nation celebrated our country's freedom. I was one of the very fortunate Americans to, enjoy this fourth of July with my grandchildren and my family.We started our day by going to our beautiful beaches to collect shells with our grandchildren. To enjoy the spectacular day, sitting on our favorite beach, swimming, building sandcastles, writing our names in the sand and telling many happy stories.There was a very, heartfelt, sad point, at the beginning of our day though. As we began to cross the Oregon Inlet Bridge, going south, there were no Americans or any of our friends from other countries celebrating this day, no families, no children, no sandcastles in the sand, not one story being told -- there was nothing -- nothing at all.Reason being -- special environmental groups have filed a lawsuit against the National Park Service and the National Park Service -- thru no fault of its own has been forced to close some of our beaches.Oh, There was something there, but it wasn't on the beach it was in our hearts -- it was sadness. It was as if someone said we are cutting you off from everything -- that's the way it's going to be no matter how it affects any of you.We all remember when Hatteras was literally cut off from the rest of the world. The island was cut off because the ocean ripped thru the road that connected our neighbors and friends to the rest of us. Hurricane Isabel created devastating effects on Hatteras Island.What did we do? We came together as friends as neighbors as volunteers as government as people coming together to help each other, connecting the link again and re-building, there lives and there crushed economy. We came together. We all helped.Hatteras, has another devastating hurricane coming thru destroying their very being, a category 5 environmental hurricane. A hurricane that will wipe them off the map if we don't come together and say we've had enough and we are going to stop this very sad disaster.When the symbol of our country, the American Bald Eagle, was on the verge of extinction, we didn't close down Yellowstone National Park. When Condor's were in trouble with their survival, we didn't close the Grand Canyon.What did we do? We all came together, we nurtured them, we protected them, we relocated their eggs and chicks. We helped them survive and survive they did.Hopefully, I speak for most of us. We all want to help animals and wildlife survive. Let's all help do this -- let's relocate eggs and chicks, let the experts move nests. We don't want to. We ask you to accomplish this wonderful task -- you're the experts.For God's sake, in the process, please use some common sense. Please don't eliminate us and our lifestyle and our future generations celebration of freedom.Are the words PRESERVE BEACH ACCESS.ORG important to us?You bet your sweet life they are. Most of all, you bet your American freedom, they are extremely, important.www.preservebeachaccess.orgPlease, we need your help now.Thank You So Much For Your SupportProud to be an American With Common SenseProud to live on the Outer Banks and Help Our Neighbors on Hatteras Island

Correspondence: Please allow as much ORV access to CHNSRA as promised, when the people who live there gave up the land they owned to create this park.There is no reason for the expanded buffers and closures in the park.No other beach allows such a large area to be closed for a small bird that benefits from being near people.The lack of access to the beach for handicap or disabled people is illegal.A small number of park and walk areas,plus oceanfront houses makes most of the park impossible for people to get to without ORV access.If there was more ramps and a road connecting them, it would allow more access and still protect nesting areas.The ban on night driving on the beach should be flexible enough to allow ORV on the beach after dark and still protect turtles.This could be accomplished by allowing ORV to remained parked after dark on all open areas. The most popular spots, cape point,south point and others should have a small corridor to allow limited traffic after dark.If there is no way to allow night traffic, then camping overnight at the popular fishing spots should be permitted.I love to visit the OBX but have not visited since the Consent Decree took effect because of the difficulty of access for my disabled and very young family members.I look forward to returning as soon as this mess is resolved, until then I hope for a solution that allows access the best surf fishing in the world.

Correspondence: Concerning the limitation on ORV usage and impact to the ecosystem on the Outer Banks. Policies of the NPS and the corresponding judicial decisions governing usage of the Beachfront by NC citizens are a violation of NC Residents ownership of public lands and their ability to decide usage and the coincident limitation or non limitation. All decisions concerning this land area should be determined by state residents in which the land is loacted. Allowing outside, non resident parties to further their agenda is travesty and a violation of our civil rights. The negative economic impact to the local

economy and the restrictions to NC Residents of the use of our own property should not be allowed. Please return this area to the State of NC Residents and remove the protection of a bird that has many places to live and where anecdotal and scientific evidence is at the minimum tainted by opinion and at the most totally false. Our tax dollars should be spent putting people to work, not wasted protecting a bird which flourishes elsewhere and is not proven to be in NC for any lengthy period of time. The entire piping plover saga is a shining example of judicial overreach and the downfall and removal of state's and individual rights.

Correspondence:	<p>Why not just charge an access fee (seasonal, monthly, weekly and daily) make it steep enough to discourage the curious. Issue decals, patrol the beach and right large fines for violations. This would pay for the patrol effort, provide additional revenue to maintain ramps and other beach maintenance items and most importantly reduce the volume of traffic on the beach.</p> <p>Today a monster home on the beach can have 5-8 SUV's parked at it and they usually walk out on the beach behind their house, but usually 1 or 2 days of their rental they ALL drive out on another beach "for the fun of it". If the fee was high enough, maybe they'd leave a few SUV's home.</p> <p>The turtle nests and bird nests can still be marked but the impact of the markings would be less severe because the volume would be less.</p> <p>Locals could be provided a significant discount to the fee structure.</p> <p>Today, the roped off protected areas, because of the high volumes, creates more damage because of the severe concentration. Man and Wildlife can co-exist on the Island, as they have for 400 years, you just need to manage the volume...not create rules to completely close access.</p>

Correspondence:	<p>Let's move our attention away from total inaccessibility and venture towards responsible accessibility.</p> <p>It is time to open the beaches.</p> <p>My family and I have been regular guests at Ocracoke for over 15 years. We are respectful of the wildlife and have developed a deep appreciation for the multitude of species, especially the sea turtles and piping plovers. When the beaches were open, my children did school reports on the piping plovers, taking pictures and sharing information of their endangerment with their teachers and fellow students.</p> <p>Having such significant portions of the beaches closed has severely impacted our vacation experience, from daily walks where we observe and study the wildlife to occasional fishing. Closing the beaches is taking away what the park service is truly about!</p> <p>Rather than closing beaches, resources should be geared towards education for the protection of wildlife. There is a captive audience of people arriving on the island -- they can only get there by ferry (over 99% of the people)or private plane. Initiatives should be made towards education.</p> <p>THE FERRY SERVICES SHOULD HAVE EDUCATIONAL VIDEOS PLAYING ON THE TELEVISIONS EXPLAINING PRESERVATION MEASURES AND FINES FOR NOT FOLLOWING GUIDELINES.</p> <p>FLYERS SHOULD BE DISTRIBUTED TO EACH VEHICLE ENTERING THE FERRY WITH EXPLANATION OF PUNITIVE FINES AS WELL AS EDUCATION ON PROTECTING THE BEACHES AND WILDLIFE.</p> <p>FERRY WORKERS AND PARK RANGERS SHOULD TALK WITH GUESTS, PROVIDE PROGRAMMING, AND CREATE AN OVERALL CAMPAIGN TOWARDS RESPONSIBILITY.</p> <p>The majority of reidents and guests are respectful of the needs of wildlife. Ocracoke residents and private organizations have always been willing to volunteer to help preservation activities. Certainly they will again be willing to walk the beaches, assist with education and enforcement, and help assure wildlife safety.</p> <p>Closing the beaches is a short term solution, without long term results. Opening the beaches, teaching guests and residents of preservation needs, leads to long term societal behavioral changes.</p>

Correspondence:

Mr. Murray, I know you and your staff have put in countless hours dealing with all of the requirements mandated on the Park Service and I personally appreciate the hard work. That said, I can only hope that your work does not result in the total closure of the beach to all but a few bird watchers and homeowners. I consider myself a steward of the environment and take the issue seriously. I've helped clean the beach, I've called in reports to rangers when I've seen abuses on the beach, myself and others I fish and vacation with make sure we follow all rules and regulations and we leave the beach cleaner than before we got there. We do not harm any creatures while there and do our best to make sure those around us don't either. The organizations I belong to have championed the very things I described above and will continue to do so as long as I'm a member. I will not stoop to name calling and tit for tat with the groups that have sued the Park Service because it does nothing to further the dialog needed to accomplish your mandate. It seems to me that prior to the lawsuit, you had things well under hand and all that was needed was a formal document stating the Park Service's due diligence in maintaining both an environmental and recreational balance within the Cape Hatteras Seashore. It also seems to me that everything that has been done since the ruling (closing large portions of the beach to pedestrians and fishermen) has resulted in the same or fewer birds being hatched, the killing or relocating of hundreds of other animals and the lost of numerous livelihoods to the people who make their home on the island. After all of this, it would seem that the Park Service had it right to begin with and the logical result would be to remove control of the park from the Judge and return it to your group. The Judge may have had the right to force the Service to finish the process but he has punished the Park Service enough. I employ you to take back control of your park and use your common and proven scientific sense to maintain a good balance for both the environmental and recreational users of the Seashore. To the groups that sued your Park, saving birds is a noble endeavor and I agree. But education and enforcement will accomplish as much if not more than expanded closures and at what cost. I know you and your staff are familiar with the rule of Unintended Consequences (UC). We try to accomplish one thing that someone says is needed and find out that by doing so a different group is harmed. In the Park Services case, you have maintained the numbers of a certain species but we have killed other animals to do so(UC). Another, you close the beaches to improve the numbers of a certain species. I love the beach and 8-10 of us have been coming down 3 times a year (spring,fall and winter) to fish. I spend another week with the family (summer)and this has been going on for years. Last fall, we brought 7 down to fish, this spring (May 15th) there will only be 6 of us. The compelling reason for the drop, they got tired and frustrated with having to drive around and hunt for places to fish because of beach closures(UC). This summer, we will vacation in Pawley's Island(UC) because of beach closures. It is now your job to determine what the Cape Hatteras Seashore will be in the future. Will it be a Recreational Park (like it was set out to be)or will it become a bird sanctuary like Pea Island and False Cape Park (VA.). I wish you the knowledge of Solomon in your decision because a lot of people will be affected by it. My hopes are that my grandchildren and I will be able to fish there the rest of our lives.

Correspondence: As a US citizen I would like to comment on the Draft OVR Management Plan/EIS for the Outer Banks. I have no vested interest, that is, I am not a resident or even a frequent visitor to the region in question. My interest as a citizen relates to my combined interest in birding (watcher, feeder, Audubon member) and fisherman, hiker and cyclist. I have confidence in the trained wildlife management professionals at the National Park Service to manage our public lands to maximize public use for education, sport and recreation and at the same time insure the safety of wildlife and it's habitat. After reading the various alternatives,I feel that alternative F provides for the most reasonable mix of environmental protection and public use. Thank you for your consideration.

Correspondence: Superintendent Robinson, (If you knew what a pitiful tyest I am you would have a special appreciation for this responce.) I was impressed by the sheer scope of this document. I know how controversial it is and how difficult it must be to try to satisfy everyone in this process. I resent the efforte of those who have forced the restrictions which are being imposed on this park more than the restrictions themselves. On one hand it is easy to be on the side of conservation. It is a heartbreak on the other hand ,that this place, which represents a great sabatian of freedom to so many, will be reduced to an area with so many " rules ". I was a young man at 19 laying on a dune facing the ocean watching a meteor shower of epic portions when I first felt that "feeling". It was as if all cosmic energy...sea, sky ,stars ,wind, moon ,sun,storm,wave,current all converging in one spot. Cape Point congered thoughts of the high seas and conquest... of great creatures and stories that could only be told by the dead. The wonderment that it stirred up in me was almost universal to those with whom I shared this place. My children all were moved from an early age. Katie ,at the age of 12 ,commented to me after returning from vacation at Duck with family friends," Dad , I don't like going to OBX without you ". " Why?, I asked ". " They just don't get it ". There are those that know the " secret" to the Banks is to be on the beach in a vehicle. To witness the scope of the shore and what it reveals you need to cover ground. A pod of porpoises there,a group of diving Gannets here,a flock of Skimmers working the wash.It is a pity that with all the habitat Plymouth Island ,Core Banks,Cape lookout,Bald Head,The marshs of Delmarve, etc. that offers little access to man ,much less by vehicle. that we need to restrict Man's access here. This does not preclude you from following an executive order I know,however it is a shame that we are in this position. It is especially a heartbreak to those individuals who are without the resources to " see the world" For them the experience here puts them on an even plane. They are angry and not very well understood. These individuals do not have much of a voice,at least not as loud as Audubon. So... as unpopular as this is you need to be ther voice. The Park Service has a difficult task I know but you must do what you most to insure that this Park remains open to those that marvel in it the way that I do... that my kids do. The park has been a class room for them ,that they would never have had ,were we not able to access the beach by an SUV. If a permit which requires an test along with instruction is required, then so be it. If a fee for a yearly permit to provide for resorce protection ,then so be it. If a restriction for limited access for an area behind the Point be required, then so be it. But closed to SUV... NO! I was hunting seashells along a strand near the "hook" last weekend when a group of Plovers were trotting by me at arms length. We were co-existing. They were my companions... my little friends. I will afford them some space behind me when I fish at the point. I will not allow my yellow lab " Little Miss Hateres " to run free into their nesting areas. And as usual, I will wipe the tears from my Grand childrens eyes as the Gulls carry away their hapless chicks as I did for my own wee ones. I do resent you killing my River Otters. If I saw one of your officers attemp to kill one ,I would do what I could to stop them with the promise of arrest.You need to stop that. They are not like a Fox,a coon,or a opossum. They do not populate as quickly. I do hope you are driven by a moral purpose and push back. You need to find some middle ground. This has the liklyhood of ending badly otherwise. All men are not rational. I myself feel the anger. I can't imangine how I would feel if I made my living down there. I have great empathy for them. As you have by now discovered I spell poorly. It is the middle ground you must find and if after you have done so ... let the court case begin. Will you be my Ranger please? Sincerely R.G. Shircliff

Correspondence: Please make this prohibited. In areas that are deemed sanctioned for ORV [in case my objection to total ban on any ORV in non-designated areas does not stand] make the access extremely limited with heavy fines for violators. Listen up because here is the Gods' honest truth! People think that their activities in the wild are benign. Until we come to grips with our selfishness, wild animals, plant life, and habitat will continue to dwindle and extinctions will be our sad legacy. Our decedents will look upon our way of life as heartless and evil. Examples; in Antarctica humans have 'studied' the penguin and tagged them in the interest of science for the last 40 years. With no respect to the fragility of the habitat people have left footprints in an environment that had no such influence for over 20 million years. Now the penguins are disappearing at alarming rates. We cannot ignore what changes our presence brings. In Florida and other parts of the world dolphins are beaching themselves and dying every year in varying numbers. These are the most intelligent marine creatures and we have ruined their lively-hood with sewage runoffs and leaching plastics. The runoffs bring chemicals that change the pH of the coastal waters where they hunt for food and the plastics break down into different types of pseudo-hormones that destroy the ability of their prey to reproduce. They have been trying to tell us for years. By beaching themselves they are attempting to get our attention. They are saying they have no future. They are giving the ultimate sacrifice. They need us to stop polluting their habitat. In Alaska people want to drill for oil. They say that the impact on the environment will be minimal. Well we do not need any more fossil fuel in the atmosphere. One truck tire track is too many in the great national parks of the North. As the ice cap melts methane escapes at ever increasing rates. We may see exponential global warming way sooner than anyone imagined. The Outer Banks will be submerged. It matters not how long this will take. We need to observe the finite capacities of our Biosphere now. We need to set and be examples for future generations and societies now. If it were up to me there would be no Off Road Vehicles at all, allowed anywhere. I mean from Virginia Dare Bridge to southern tip end of Ocracoke Island. I say if you want to drive down to the beach you have to park on or near the road and walk your belongings in on foot. The simple fact that people can drive onto the beach means they can carry more, and the more they carry, the more potential for catastrophe. Again; Please make this prohibited. In areas that are deemed sanctioned for ORV [in case my objection to total ban on any ORV in non-designated areas does not stand] make the access extremely limited with heavy fines for violators. Thank you, Eldest Son of the Eichinger family, North Beach,[near Waves, N.C.] Ed Eichinger "What lies behind us and what lies before us are small matters compared to what lies within us." --Ralph Waldo Emerson

Correspondence: Having visited, lived and worked at CAHA beginning in the late 70's, I have observed a drastic increase in OHV use, and decrease in shorebirds, shorebird nesting success, and the general health of the natural system. I like to drive the beach and to the point, but I would rather have a semi-intact "natural" beach than to have the privilege of driving everywhere on the beach with the obvious negative impact to the coastal wildlife. Cape Hatteras National Seashore is part of the National Park Service. Its one of the few Land Management Agencies that was created to protect these public lands. Other land management agencies are much more "multiple use" and offer the motorized recreational user the type of recreation that they seek. The NPS should be, and is different. I vote for very limited motorized use of CAHA, or no motorized use, with the main emphasis on providing wildlife habitat and maintaining a non-motorized "National Park" feeling. Even if I have to walk, or if I am physically unable to walk, or don't have any access, it would be nice to know that the natural system is there and semi-intact. Thank you for your effort on this. Bill Munsey

Correspondence: I have visited the Cape Hatteras National Seashore RECREATION Area twice a year for fishing vacations for the past 25 years. The last couple of years I have ceased to visit the Park in the summer due to the uncertainty of beach closures. If the closure issue is not soon resolved in favor of restored access to the beaches, I will no longer make the twelve hour drive to visit the Park. It is simply not possible to enjoy fishing recreation in a RECREATION AREA that has closed the most popular fishing areas. I urge the adoption of the positions outlined in the "Coalition for Beach Access, Cape Hatteras National Seashore Recreation Area, ORV Access Environmental Impact Position Statement, March 5, 2010". This document promotes a reasonable balance to access and protection of wildlife. The NPS must take into account ALL users of the park. The NPS must NOT simply take the easy way out and close the most popular areas because it is too difficult to develop a management plan for all park users. There is surely a way to allow access to the Park shoreline while still protecting wildlife. The NPS needs to manage this RECREATION AREA for RECREATION! This park is not a wildlife refuge to be closed to all but the privileged, sophisticated experts.

Correspondence: I have written and posted on various sites, etc- so i will TRY to keep this short. My Dad and Brother & families live in Avon,NC (affectionatly known as OBX) and as with most residents will be more than negatively affected by this action! I would call it devastated!!! I was there last year and could not believe the chaos of just trying to get on the beach to fish in a LEGAL area. The postings are very unclear and moved around daily!!! Seems to me that if a whole species (PIPING PLOVER) is to be protected then why not have an educated person manufacture CLEAR, CONCISE, signage that leaves nothing to ponder! I finally get on the beach to fish and had to answer 1 million questions from kids that wanted to fish,etc and others who just wanted to walk to the point! Asking ME where they were allowed to walk, etc! WOW!! I couldn't understand. So I came back to Pa and started to look into the much protected plover, to find that not only are they not endangered they are not INDIGENOUS to Cape Hatteras. They can be found up and down the coast and apparently MIGRATE!!! Am I missing something here??? Seriously on one hand an entire economy vs a non indigenous bird, Are you kidding me? One last thought...In one of my previous visits to the Beach access site a guy that is from Hatteras was upset that everyone kept talking about the economy of the island, instead of the "quality of Life" to residents, to me if your broke, jobless and homeless or have a beach access home you cannot sell because you cant GO ON THE BEACH!!! Quality of life is a misnomer. I guess we could just convert them to BIRDHOUSES!! Thank you for the space Kimberely Doerr-Martin

Correspondence: During the firestorm that has erupted since the Consent Decree was signed, the term ORV has become a catchall for any party wishing to access the seashore. Pedestrian access should not be covered under any part of the ORV Management plan. ORV stands for Off-Road Vehicle, not pedestrian. The science of pedestrian impact on the seashore should not be lumped into the science of ORV impact. The Consent Decree was signed by environmental groups, attempting to uphold the law that ORV's should not be admitted on the seashore without a management plan, and a group of ORV access defenders. The Consent Decree contained language that also covered management of pedestrians, and the ORV groups sold their soul to sign this document so they could keep driving on the beach, at the expense of pedestrian access. Please do not continue this horrendous oversight. Please remove all portions of the Draft ORV Management Plan that references and restricts pedestrians. This plan is not the place for it. Feel free to work up a Draft Pedestrian Management plan independently. Restricting large areas of a National Seashore to ORV's is one thing, if there is determined to be a negative impact, but restricting individual citizens on foot from visiting these areas is against everything the park stands for. Particularly the areas that are under consideration for being closed. Closing Cape Point at CHNSRA to all access would be akin to closing access to Old Faithful at Yellowstone, El Capitan at Yosemite, the North Rim at Grand Canyon, and even more closely to closing Mt. Rainier at Mt. Rainier NP. You simply cannot close the park's name sake (Cape Hatteras Point) to visitation. Thank you for your consideration.

Correspondence: Thank you for the opportunity to comment on the EIS for Cape Hatteras National Seashore's ORV Management Plan. My comments are below in CAPS and where possible, refer to a page number or section of the document.
GENERAL COMMENTS:
1. UNDER NEPA, IT WOULD SEEM THAT "ACTION" ALTERNATIVES SHOULD BE COMPARED TO THE NO-ACTION ALTERNATIVES. ESTIMATES OF SOCIO-ECONOMIC IMPACTS CAN ONLY BE DETERMINED BY DOING SO.
2. I CANNOT FIND ANY MENTION OF PLANS ON HOW TO DEAL WITH CURRENT PERMITEES (GUIDES, SCHOOLS, ETC.) THAT OPERATE IN THE PARK AND HOW THEIR PERMITS WILL BE MESHED OR CONSIDERED WITH NEWLY REQUIRED VEHICLE PERMITS.
FOR EXAMPLE, MY PARTNER AND I OPERATE 3 FISHING SCHOOLS EACH YEAR MOSTLY FISHING BEACHES IN THE PARK. WE WILL HAVE 12-25 PEOPLE IN EACH CLASS AND WE USHER 10-15 VEHICLES ON AND OFF THE BEACH FOR 1-2 DAYS DURING EACH PROGRAM. WILL EACH OF THESE VEHICLES BE REQUIRED TO PURCHASE A PERMIT? WE CURRENTLY PAY THE NPS \$200.00 PER YEAR TO OPERATE IN THE PARK- AND HAVE DONE SO FOR 4-5 YEARS- ONE OF THE FEW BUSINESSES TO DO SO I BELIEVE. TO REQUIRE OUR PARTICIPANTS TO PURCHASE VEHICLE PERMITS OVER AND ABOVE THE PERMIT WE NOW PURCHASE SEEMS EXCESSIVE.
I WOULD SUGGEST THAT YOU ALLOW US TO OPERATE AND OUR STUDENTS TO FISH UNDER OUR EXISTING BUSINESS PERMIT. WE COULD BE ISSUED PERMANENT REARVIEW MIRROR PERMITS FOR DISTRIBUTION TO OUR STUDENTS. WE COULD BE RESPONSIBLE FOR MAKING SURE THEY KNOW AND ABIDE BY PARK RULES. WE COULD PROVIDE NECESSARY TRAINING IN OUR CLASSROOM SESSION.
AT THE VERY LEAST, YOU MUST ACKNOWLEDGE AND HAVE SOME PLAN FOR ACCOMODATING THOSE STUDENTS FISHING UNDER OUR "USE PERMIT." FURTHERMORE, LIKE COMMERCIAL FISHERS, I WOULD SUGGEST THAT OUR OPERATION NOT BE SUBJECT TO LIMITED ACCESS PROVISIONS BEING CONSIDERED.
SPECIFIC COMMENTS:
COMMENT 1: CURIOUSLY, BASED ON THE TABLES ILLUSTRATING PIPING PLOVER HISTORICAL ABUNDANCE, (Tables 14-24) IT APPEARS THAT HIGHER DENSITIES AND FLEDGLING SUCCESS OCCURRED DURING PERIODS OF HIGHER ORV USE (1990s).
COMMENT 2: Page 210- "At other sites, it was documented that fledging success did not differ between areas with and without recreational ORV use (Patterson et al. 1991), although pedestrians caused a decrease in brood foraging behavior in New Jersey (Burger 1994)." OTHER STUDIES SUGGEST THAT HUMAN PRESENCE AFFECTS BIRDS. EVIDENCE IS NEITHER CLEAR NOR CONVINCING THAT ORV USE NEGATIVELY AFFECTS PIPING PLOVER BEHAVIOR OR BREEDING SUCCESS. YOU CANNOT SIMPLY CHOOSE TO ACCEPT ONE STUDY WHILE IGNORING OR DISREGARDING ANOTHER- NOT WITHOUT SOME JUSTIFICATION.
COMMENT 3: FIRST LET ME SAY THAT I AM VERY MUCH IN FAVOR OF ADEQUATE PROTECTION OF ANY SPECIES THAT IS IN TROUBLE (ENDANGERED, THREATENED OR LISTED). BUT IF WE ARE DEPENDENT ON PIPING PLOVER SUCCESS AT CAHA TO BRING THIS POPULATION OUT OF ENDANGERED STATUS, WE (OR RATHER THE BIRDS) WOULD APPEAR TO BE IN BIG TROUBLE. THE NUMBERS USING THE AREA NOW AS WELL AS HISTORICALLY, ARE INSIGNIFICANTLY LOW. IF THIS IS IN FACT TRUE, YOU SEEM TO BE GOING TO GREAT EXTREMES FOR VERY LITTLE GAIN.

Correspondence: This issue has been a cause of great distress to me and my family. We have been enjoying vacationing on Hatterass Island and Ocracoke Island for the last decade, and the main reason is that we are able to drive onto the beach and enjoy a full day out on the beach. My father is not able to walk on the

beach because of severe arthritis, but by driving on the beach, he can enjoy the beach with the rest of us. Also, the Outer Banks residents and visitors have kept the beaches natural and clean (cleaner than any other beach I have been to) regardless of the fact that more people have been vacationing in this area. The idea of preventing ORV access, but building walk ways and ramps to the beach, is destroying the natural environment more. As to the issue of the birds and turtles, no one who goes to the beach attempts to interfere with the natural activities of any animal on the island. We must remember that we humans are part of the ecological system as well. The idea of natural selection has been ignored. No species on earth is designed to continue for eternity. Species evolve to adapt to the living environment, and species die off when they can no longer survive. This is a natural part of life. While humans affect the earth, so does the earth affect us. We who love and enjoy the Outer Banks do so because we enjoy the natural environment, the birds, the turtles, and even the foxes and other natural bird predators (which have been killed to protect the birds). This human interaction also affects the birds and their life cycle. I also take issue that this is a vacation spot for the working class person. It is affordable for those of us that cannot travel out of the country or spend the summer in the Hamptons. I find it interesting that this recreational beach has been targeted. On the issue of economics, restricting ORV access to the beach will severely affect the livelihoods of business owners, owners, and residents in the Outer Banks because those of us that vacation here because of the ORV access will no longer vacation here and spend our money. This will also negatively affect the entire economic position of the state of North Carolina in the form of decreased sales taxes and decreased income of the citizens. I cannot believe that the Audobon society and environmentalists have this much power to so greatly negatively affect the lives of millions of people. It scares me to think what will happen next. When is anyone going to listen to the pleas of the residents and visitors of the Outer Banks? No one appears to even consider what we are saying, or care that the lives of these people will forever be changed for the worse. Ultimately, it is the residents that should determine their own destiny and how best to utilize their community to serve themselves and others.

Correspondence: I would like to state that after reading the report,I do not agree with the DEIS. The closed areas are considerably larger than that of last year. And why? I

don't see the amount of birds increasing on the beach. They are however, thriving quite well, in the sound on manmade "islands". Where I might add, the conditions are ideal from washover and direct hurricane hits. We have already felt the impact of what these closures have done for the seasonal retailers/restaurants/mom & pop shops, in our area. Many visitors have stated that they would not come back to vacation here if the beaches continued with closures. Many of these same people are in their elder years and have been coming here to vacation on the beach year after year, but will consider other venues if they have no drivable access on the beach. Some of these people are disabled and can't maneuver themselves over walkways or around dunes. Many are Veteran's young and old who are disabled. And what about the folks whose spouses or care providers who cannot maneuver those in their care due to their own disabilities? I don't believe the report considered or inquired with these folks!

I have witness my own seasonal hours decrease considerably since the beach closures. Two positions that I count on to get me through the winter, came to a standstill with a much shorter season of employment. I have asked customers over the past year and some, how they felt about beach closures and their responses are overwhelming. If they can't fish and get all their family members on the beach, then why come here?

The results of the beach closures have been disastrous. Many folks I know have moved away since the beach closures because their jobs dissolved.

And if these same people can't fish to put so much as food on their table what alternative do they have to stay here?

There is nothing in the report that addresses TCP's. Is that to say that there is no cultural or historic input that has made these areas what they became on Hatteras and Ocrakoke? How can this be true?

I embrace what I know about this area. I moved for the lifestyle to fish and drive on the beach as I have asthma and in the summer, it is impossible for me, despite medication, to walk any distance, without suffering an attack. I AM A TAXPAYER and a CONTRIBUTOR TO MY COMMUNITY. I have volunteered on beach clean up at Ramp 4 and Cocino Beach. I have picked up litter, in my area and nearby, ever time I am on the beach. I buy sandwiches, gas and fishing supplies from 3 different mom & pop shops everytime I go drive and fish on the beach.

I don't believe the Park Service is doing right by me or my neighboring brothers and sisters in this matter. I don't feel that we THE PEOPLE are being heard and listened to. I just hope the special interest groups involved in this matter are moving to live here soon, so they can support the remaining mom & pops and their families. I also can't wait to see the special interests volunteer for beach clean-ups.

I do however, thank you, for this opportunity, Ali Kerekes member NCBBA, FOE 4506 Outer Banks-Aux Secretary (2 yrs), Stakeholders Committee - Kill Devil Hills, Past Vice President Avalon Beach Improvement Association (2 consecutive terms)

Correspondence: July 7, 1977. My older brother brought me to Cape Hatteras NC for the first time. It was magical for a 12 year old. I'd always had to walk across a hot boardwalk at a filthy dirty place like Ocean City, MD. or Colonial Beach, VA. We had to drag chairs, blankets and a cooler over burning sand and get our shoes filled with sand as well.

Suddenly, here I am in a magical place. We drive right up to the waters edge. We leave the cooler in the truck. We wave at all of the fisherman and surfers slowly passing by in their trucks or Jeeps. The Park Rangers come up and chat us up while carefully checking that we are picking up after ourselves and generally just behaving. For a young boy, it is a fantasy land. There are plenty of birds around running into the sea pecking at the sand. My brother calls them plovers but I just think they are silly little things.

I continued to come each year with my brother and camp at the Park Service campground by the lighthouse. After I turned 16, I began going down on my own with friends and girlfriends. Always, it was a wonderful and exciting time, each and every trip. And, as always, those little birds were there running up to the waters edge and pecking at the sand. Plovers, always lots of plovers.

Well, I have continued to come at least once but usually twice a year since 1977 and only in 2008 did anything change. There was a sense of urgency and panic to all of the faces I'd come to know since I was a kid. They all seemed shell shocked and depressed. As I was made aware of the situation of impending beach access restrictions and possible closures. And for what? A bird that still has just as many little ones scampering around the waters edge as I have seen for the last 33 years. I ran into ropes and signs telling me I could no longer go to my favorite area of the beach via the route I have used since 1977. I had to go around because their nests are in danger from our vehicles. However, in 33 years of visits I have seen not one sign of declining population, human tampering of nests or even poor driving choices by ORV users.

The National Park Service needs to think clearly about the original intended use of this National Park. It was set aside as a "recreation area" for the citizens of this country AND a nature reserve. There is NO reason that both uses cannot continue to be preserved, enjoyed and supported by all parties concerned. As a long time visitor, it breaks my heart to think that the 'Environmental Lobby' and a few special interest groups can so adversely affect the lives of so many people from all over this country and others by trying to impose regulations that were never needed in the first place. A little bit of tolerance and awareness is all that is required to keep this "treasure" of a place enjoyable for all.

Correspondence:	<p>The ORV management plan that is proposed will have a devastating impact on the economy of Hatteras Island. Since the construction industry on Hatteras Island has declined starting in late 2005, there has been a significant loss of income for our company, but the beach closures has made a bad situation much worse. In 2008 and 2009, our company, Keys Plumbing, Inc, has show a net loss on our books for the first time in 25 years. I believe that in large part, this is due to the beach closures. There are less people visiting Hatteras Island since the beach access is so limited. We do not have numerous shops, restaurants and entertainment facilities, like the northern beaches. The open beaches here, are what attracts visitors. Tourism construction and fishing are our only industries. Without them we cannot survive. Please keep in mind that the people who come here, love the environment, and are good stewards of this resource. People who enjoy what this area has to offer, would not want any harm to come to wildlife or birds. The closures have not increased the bird population and nests any more than when the beaches were open. Please take the people who live and work on Hatteras Island into consideration when putting any ORV plan into place.</p> <p>Thank You, Janice Keys</p>

Correspondence:	<p>My wife and children and I have been visiting the Outer Banks since 1978. Mostly we visit Avon and Buston, NC. We have always noticed the respectfulness for which everyone shows for the beaches in the Cape Hatteras Seashore. I strongly oppose closing those beaches. We do not feel that there has been enough factual information that justifies the closure of these beaches. There also has to be some balance here, between the public's use of the seashore for recreation and personal enjoyment and for nature loving enthusiasts who feel that their use supersedes anyone else's.</p>

Correspondence:	<p>The negotiated rulemaking and management plan has created one of the worst situations I have seen or experienced in my life. I'm disappointed with government and anyone trying to pretend to protect the wildlife of Hatteras Island. These organizations have come in with money and lawyers and the small government of NC ran the other way. Island folks have paid the price during this bad economic time. They need to be paid damages, but by who! I knew that the common citizens of this island should have sued first to stop them but it was too late. It happened so quickly. nobody new what was happening.</p> <p>I also know that after two years of this mess it will finally be corrected because those same people fought for justice and uncovered/exposed many unjust and potential criminal activities on the part of DOW and Audobon. Not to mention, no scientific protocol to support any of their claims. One of their leaders does not even pay his Dare County property taxes, year over year. This is type of person is looking out for the wildlife or trying to better the world through DOW/Audobon? Put him in jail!</p> <p>Everybody knows why these groups came here to NC. MONEY! They wanted a big issue that would open the purses of old ladies and the wallets of their midwest and western friends. Now that they have lost, they will move down to S.C. or Topsail Island and start a new campaign.</p> <p>There are very few politicians or government representative that I trust. They all seem to have a personal issue that causes them to screw their loved ones or the people they were hired by to represent. Do me a favor and unscrew this mess that was created by some judge or some politician or some greedy DOW/Audobon lawyer. Just unscrew it so I can go fishing!</p>

Correspondence:	<p>I am 57 years of age and a North Carolina native. My uncle choreographed the "Lost Colony" in the late 1940's and early 1950's. I have been going to the Cape Hatteras National Seashore Recreational Area (CHNSRA) since I was two years of age. I have been a member of the North Carolina Beach Buggy Association since 1977. I am a responsible environmental fisherman</p> <p>Upon reading the DEIS for the CHNSRA I see it totally ignores the history, cultural importance and traditional use of the CHNSRA in favor of a narrow focused agenda.</p> <p>The 800 plus pages of the DEIS ignores the people who live and work within the boundaries of the CHNSRA. These folks live in public communities surrounded by the CHNSRA. Further, the DEIS ignores the citizens of the United States of America with regards to their access to the beaches of the CHNSRA.</p> <p>The established boundaries of the CHNSRA preclude further commercial development so these town within the park cannot expand and I agree with that.</p> <p>I am in agreement with an ORV plan for the CHNSRA, I do not see within the pages of the DEIS an ORV plan that makes any rational sense. I see plans designed to prohibit or eliminate access to traditional areas where recreational activities such as sunbathing, surf fishing, swimming, and picnicking take place. Many ORV plans have been proposed that made sense, many ORV plans are already in place in other areas that make sense with some modification for the specific geographic location of the CHNSRA. The problem here is, these real alternatives have been ignored in favor of</p>						

excessively restrictive plans.

The DEIS is misleading, it does not represent the whole story, just like the consent order that was put in place a couple years ago. These actions are strangling North Carolina and it's people, not to mention eliminating our pursuit of happiness when it comes to our CHNSRA.

Correspondence:	<p>I am 50 years old and have used the beaches of the Outerbanks since I was a child. As time has passed the use of ORV on the beaches has become more and more restrictive. The past few years have escalated to the point that the use of the beaches has become so restrictive that it is terrible. There are so many closures to beach access that for ORV that the few areas of access are extremely congested. It has become so bad that I have considered trying to find another place to vacation on weekends and my two weeks of vacation during the summer. I have searched up and down the east coast to try and find another place for beach access during the mid summer months. I did not find anything on the entire east coast. The Outerbanks is the only place that I can find that I can continue my lifelong tradition of taking my family for a ride on the beach and finding an uncongested area to swim and fish. The current efforts through legislation have become too restrictive to those who like to use their ORV to enjoy the beach. I just don't understand why my family and many others that have used this area for several generations have fewer rights than a few animals. This is the only place on the east coast for me to use the beach with my ORV. The animals have the rest of the entire east coast to use. If there is a problem for these animals in the Outerbanks they will move a little farther north or south. I do not have that option. At what point do the citizens have any rights? I should have some say so! The current proposal of beach access is too restrictive on ORV. I would encourage the NPS to give a greater consideration to the use of ORVs. My family has been using the beaches for generations and believes the NPS has encroached on our rights.</p>

Correspondence:	<p>Birds and man can co-exist together, especially sea birds that have walked among surf fishermen for over 100 years on Hatteras Island.</p> <p>The presence of surf fishermen, at least those on foot, at Cape Point, Cape Hatteras, and other spits that have long been the mecca of surf fishing in the Outer Banks, will not cause any measurable harm to any bird population. The banning of fishermen, especially those on foot, will however kill most of the businesses and livelihoods of the humans who have called the Outer Banks home for over 100 years.</p> <p>The use of legal action predicated on non-adherence to a 1970's Presidential Executive Order regarding ORV use is a smart way for several extremist groups to get their way without submitting to negotiated rulemaking or other forms of compromise. It is not a smart way to foster cooperation or further the ideals that our country has made great for over 230 years.</p> <p>The overwhelming majority of fishermen love birds and would never do anything to hurt one, even if it meant changing his or her fishing habits. Closures such as those required by the consent decree and the current lack of compromise are a good way to change this sporting love and turn it into anger, contempt, and bad blood.</p> <p>I request that NPS establish a final rule that allows at least foot access for all people, fishermen included, in all parts of Cape Hatteras National Park at all times of the year. Protective enclosures consistent with pre-Consent Decree practices and appropriate signage should be used, along with education and enforcement, to protect species.</p> <p>No final rule should preclude human presence on any shoreline - there should always be at least a 30 foot area from the water's edge where humans are allowed to be walking, fishing, or otherwise peacefully enjoying themselves.</p>

Correspondence:	While I believe the Park Service is doing the best they can with what they have to work with, I believe also that we are bowing to an affront to the very reason our national parks were formed. There is a difference between "park" and "refuge". I feel that the special interest groups want to turn our beaches into refuges, thus denying us the right to recreational use of them. Much of the land that is considered Cape Hatteras National Seashore was LENDED						

to the federal government for the originally agreed upon purposes. At one time a great deal of this property was privately owned. I feel that if the government is going to renege on its promise to make this a recreational area, these lands should be returned to the original owners, and the Park system dismantled if small, private groups can override the wishes of the general populace. Needless to say, a bird's nest doesn't need as much area as is proposed. Birds fledge, and fly. One hundred yards around a nest should be more than adequate. Please get some input from scientists not connected to the environmental groups involved. Pre - nesting areas are a joke. A bird isn't going to fly over, see the areas staked out, and nest there. Don't take a genius to know that these birds nest where they do because they already think it is safe enough. Please use common sense when making these decisions. A lot of really smart people are that way in certain specialized areas while being totally clueless in others. Please give the "PEOPLE" a voice in this, the general population, and not the loudest screamers. Thank You. Johnnie Baum / The Hatteras Island Poet

Correspondence:	Previous to the current situation, large portions of Hatteras Island's beaches were already closed to ORV use. This includes Pea Island, Buxton, and Hatteras Village year around. In addition Rodanthe and Avon village beaches were closed seasonally. Also in addition, soft barriers prohibited driving on large portions of the beach at Cape Pt. and Hatteras Inlet. The overwhelming majority of ORV owners respected these limitations without question. There was virtually no evidence of significant environmental damage. Yet, the Federal Court has imposed regulations which prohibit ORV use on large portions of the most popular areas on the island. This has been based on flawed procedures and questionable science. Any plan should allow people to have a few feet above the high tide line to drive and park on most if not all of the island. I am opposed to the DEIS as written and would respectfully request that ORV use be expanded not contracted. Thanks. Joe Basilone 39191 Sunfish Ct. Avon, NC

Correspondence:	The issue of ORV access the point at Cape Hatteras is an important one for fishermen and the local economy of the Outer Banks community. As anyone who has tried to walk to the point can attest it really is not possible if one is carrying even minimal gear for fishing. Thus, use of 4-wheeled drive vehicles is essential if "useful" access is to be maintained. There are no alternatives - ie a shuttle system where fishermen could be taken out & brought back during periods of peak usage. This option is never mentioned - perhaps it should be - other national parks have concession where folks are given bus tours through the park to help eliminate congestion by autos - why not on the beach - could use quiet electric vehicles - provide a few more jobs in the community - and help reduce impact of excessive ORV traffic. Of the various options in the document it seems that option F provides the most access. The question of closures due to wildlife should be scrutinized for its validity. "Accidental" movement of a species into an area where there is no historical evidence to show this area was a preferred area for nesting/breeding should not be considered grounds for closures.

Correspondence:	My family has been going down to the outer banks since 1982, when we bought a time share in Nags Head. We enjoyed our time there in the winter so much that we ended up buying membership at Pea Island Resort, now know as Camp Hatteras, just so we could come down whenever we wanted. The fishing and beach driving was one of the biggest draws for us as I'm sure it is for the majority of the tourist the outer banks gets. Until an incident happened on the beach a few years ago, there was never any problem with the ORV drivers. They respected the wild life, didn't drive up on the dunes etc. There was no need to close off large sections of the beach to protect wild life, just areas roped off which was respected by ORV's. Then all of the sudden the invirementlists jumped on the band wagon when that incident took place. After that it was one excuse after another to close off sections of the beach areas, especially the spots where the best fishing was. I guess that just happens to be the area some bird chose to nest. I have noticed a lot less people coming to OBX for the fishing and beach driving because of the restrictions that were implemented. First it was getting a fishing license, which for my wife and I, is \$60 a year since we are nonresidents, nor can we get a lifetime license even though we are in our late 60's. Here in VA, people our age are no longer required to have a salt water license. Then it was closing sections of the beach for ORV at the best fishing spots, not that there is any fish to be caught. As that isn't bad enough, there is even talk of a fee to drive on public property! I seriously doubt those responsible for making up these rules, getting well paid and more than likely do not live on the outer banks, nor take into consideration the loss of revenue from gas sales, food sales, rentals etc. I say go back to the old way and if someone violates the protected areas, then ban them from driving on the beach.

Correspondence:	ORVs can peacefully co-exist with all animal species. There has never been a documented case where an ORV or ORV traffic has killed a bird on the Cape Hatteras National Seashore. In Corpus Christi, Texas, regular 2WD vehicles travel the beach freely and there is an abundant plover and many other bird population. We can peacefully co-exist with all animal and plant life. The second point is that you are killing the tourism industry and fishing industry for this once thriving island. Please allow ORVs to travel the seashore in peaceful co-existence with the environment. We can make this a win-win for humans and the environment.

Correspondence:	Our family has been visiting Cape Hatteras since the '60's. Every visit left us impressed with the area and the locals that clearly respect their home and the natural environs where they live . We have purchased 2 homes on the outer banks, one in kill devil hills, the 2nd in Buxton. As such, we believe we have a stake in the future of the outer banks, and offer the following comment: Please adopt a philosophy closely shadowing that of our medical professions: Please do no harm! Do not harm the businesses, do not harm the fishermen, do not harm tourist access. Unless and until a legitimate "Dr. Doolittle" emerges, all the science in the world falls short of speaking for the						

plover, turtles, etc.

the only species i believe can be fairly spoken for are those being hunted by the NPS rangers as they choose which animals are "good" and which are "bad".

Correspondence:	Please provide year round unrestricted daytime/nighttime ORV access from the low tide line to 100 feet above the high tide line. During turtle nesting dates, do not allow driving parrallel to the beach within 200 feet (or 50 feet beyond the average turtle crawl/nesting distance)allow vehicles to approach the water at a 90 degree angle and park at that designated distance from the water. Additionally, I do not mind paying for this right of access. Every visitor should apply/pay for a park ORV pass \$ 5.00 per day, 10.00 per week, 50.00 per year. This will provide a means to educate the users and make them more aware of the wildlife and fines/penalties for breaking use restrictions.

Correspondence:	<p>Comments on Cape Hatteras National Seashore Off-Road Vehicle Negotiated Rulemaking and Management Plan/EIS 2010 03Mar 05 for North Carolina National Seashore</p> <p>Looking at the data provided in Chapter 3: Affected Environment of the proposed plan it would seem that the Piping Plover, Loggerhead turtle, and Leatherback turtle populations have remained relatively consistent from 1995 to 2009 with the exception of a dramatic drop from 2002 ? 2004. With the populations of these animals again within acceptable limits, I would venture to assume that human disturbance of their habitat(s) is of questionable impact.</p> <p>I have personally visited several of the beach areas under consideration, most particularly from the Oregon Inlet Campground north to Nags Head and from the northern tip of Ocracoke Island south to the ferry terminal and have seen little activity on the beach areas except for fishermen with few ORV's and foot traffic in the highest-density tourist areas directly adjacent to motels/hotels. Foot traffic around private and rental beach-side houses appeared to be minimal or non-existent.</p> <p>As for the American oystercatcher, Chapter 3 also cites human traffic as the least responsible form of disturbance affecting survival rates (4% - tied with avian predation) according to Simons and Shulte 2008 (on pg. 232.) Since it would appear that mammalian predation (58%), and I am assuming this to be due to foxes or other naturally-occurring and federally-protected species that do not include humans, is by far the greatest threat to chick survival that there be further study into the populations of these animals and their impact on ecology before any further action or planning to limit human traffic be considered. As for increased populations of raccoons in areas frequented by humans, I see this as a real and present danger due to droppings of foodstuffs, accidental or otherwise. Maybe the study should include a look at the number of these animals and consider limiting it to a level appropriate to the habitat(s) in question.</p> <p>There seems to be great emphasis placed on the study of high-disturbance areas and the resultant impact on breeding populations of all the animals listed, however the same study reports that human traffic is only responsible for a small portion of the populations' threats. Also, it appears to me that only a relatively small portion of the Outer Banks coastline is accessible to humans and their presence is a minor factor in the overall survival rate of any of the threatened species. It is noble for humans to consider the resultant effect they have when traveling any part of the earth, but it is impossible to do so with absolutely zero impact, not to mention that we, as fellow inhabitants of the earth, have just as much right to be in any given area as any other species.</p> <p>There already exists well-delineated areas for foot traffic as well as ORV's and, as long as these boundaries are observed, no further action should be necessary. I, therefore, see no need to further limit accessibility to the beach by humans.</p> <p>Sincerely, Kevin Dawkins.</p>

Correspondence:	First, thank you for providing this forum. In my forty years or so of enjoying the Outer Banks, I cannot recall a single instance of irresponsible behavior, by ORVs or pedestrians, much less any behavior which threatened the plantlife or wildlife. The Interim Strategy was well designed and did a good job of maintaining a fair balance between plants, wildlife, and humans. While I can't claim to have read the 800+ pages of the DEIS, the data I came across seemed to support that conclusion. After doing some research on the history of the Consent Decree, and listening to people like Dr. Berry of UNC, an honest-to-God environmentalist, teacher and an individual who understands the data and procedures involved in government processes like this, it becomes quite clear that the process was hijacked for political use and that the American people have been ignored until now. Since there was no valid reason to enact the Consent Decree and the Interim Strategy was doing an adequate job, it's time to return to a reasonable set of rules for use of this amazing mostly NATURAL resource, so that local businesses can continue to provide for tourists and we can all go back to enjoying this wonderful place. We don't need a Virginia Beach "south". Respectfully, Brian Palazzolo

Correspondence:	I strongly oppose the denial of vehicular and pedestrian access to the Cape Hatteras National Seashore. I live and work here and part of the reason for living here is the beauty and availability of some of the best beaches anywhere. I also fish and having vehicular access is critical. I feel that a well managed and enforced open beach policy is critical to the people and the economy of this area. The tourism industry is our backbone and the consent decree has crippled us. In my opinion, the use of the beaches and water of Hatteras, Ocracoke, and Nags Head has actually given the birds and wildlife more than we have taken in that the spoil islands that have been made over the years provide untouched habitat. Therefore we have given more that we have taken, in my opinion.

Correspondence:

I have enjoyed using the beaches of the Cape Hatteras National Seashore since 1972, and I currently own property in Salvo. I firmly believe that the actions of the National Park Service in conjunction with the Southern Environmental Law Center (SELC), Audubon Society, and Defenders of Wildlife in creating the Consent Decree of 2008 are despicable. How can three environmental groups and a single federal judge dictate land use and policy on a recreational area created by congress for the enjoyment of the American people? Furthermore, I blame Mike Murray and his superiors for allowing the environmental groups who brought the lawsuit to retain their seats on the Negotiated Rules Committee. Due to this decision, several hundred thousand dollars of taxpayers money and hundreds of hours of time were wasted by the dedicated participants.

I have scanned the DEIS and would never attempt to argue with 800 pages (much of it redundant) of governmental data. There is one part of the DEIS which makes no sense. If the Cape Hatteras National Seashore was created mainly for recreation, why are the most popular visitor areas (Oregon Inlet, Cape Point, Hatteras Inlet and Ocracoke Inlet) closed or highly restricted to vehicles and pedestrians during the peak of the tourist season (March to August)? It continues to baffle my mind how the Park Service can ruin the enjoyment of thousand of seashore visitors and hurt the local economy because of a few shorebirds.

Another policy that I strongly oppose is predator control for the plovers. My interpretation of the Organic Act is that predator control in national parks is permissible to rid the park of animals which are detrimental to the park's purpose. Since the seashore was created as a recreational area and is not a bird refuge, how can the park service justify killing fox, otter, mink, racoon and other native mammals to protect piping plovers? Personally, I prefer otters to plovers, so what gives the federal government the right to affect the balance of nature and choose which species lives or dies? Furthermore, since these animals do not pose any danger to humans, there is no justification for killing them.

In conclusion, prior to the Consent Decree the park service was doing an adequate job under the Interim Strategy. An ORV plan was being developed by the federal government with input from users and locals. The environmental groups have ruined the entire process by attempting to limit access and recreational use of the seashore. The ironic part is that most of the environmental supporters will never set foot on the outer banks because most of their finances and backers are from out of state. Unfortunately, it is becoming obvious that these organizations have connections and employees in the Department of Interior and other federal agencies. In my opinion, this influence is the main reason that the Cape Hatteras National Seashore is losing its status as an outstanding recreational area for families to visit. If Alternative F is selected the seashore will lose much of its popularity and reputation as a vacation destination.

Correspondence: Concerned,

Since coming to the Outer Banks in 1977 as a member of the U S Coast Guard I have seen the Outer Banks go through alot of changes. I have watched the people of the Outer Banks grow a vigorous economy rich with the histroy of not only it's local people but of Global Fame. From the Wright Brothers whose accomplishments have changed our world to the humble Outer Banks fisherman it has been a place to come and bring children to show them about life that they will cherish forever. But with the closure of the beaches the once vibrant history of the Outer Banks is dying. I am watching as the lifetimes of the old and the hopes of the young are being dashed aside. For the past 100 years people have been free to enjoy the beaches fully. And in that past 100 years there has never been a need for the closure of the beaches. All Life has shared it with no ill effects. The changes I now see as a resident is truly life changing and disheartning. The old fishermen no longer can drive out to the beach to teach the young the fine art of fishing - which is mostly about patience. Hours spent just admiring the beautiful ocean , it's ebb and flow. Same as life. Retired folks who have waited all their lives to spend their last days fishing the same now find that future dashed. Geologists will tell you that the Outer Banks in it's present form has only been around for the last 3500 years. They will also tell you that in another 100 years or so it may be gone all together due to rising sea level. I will ask what sense does it make to close a beach that has limited time just to protect wildlife that has thrived all along with no help from us anyway. Recently I purchased property in West Virginia. The site is on the top of a mountain and is an abandoned airfield. Much to my surprise the first birds I heard on top of that mountain just happened to be sandpipers. They were living in shallow ponds that formed when it rained. But these ponds do not last long and yet here they were, shorebirds making a life almost 400 miles away from the shore. I wish to state that I am for total open beaches year round. I am for the economy of the Outer Banks to remain a place where my children can come and bring their children in the future to a place we hold so dear. The Outer Banks as we know it depends on the beaches to bring the tourists to our shores to enjoy the beach. It was supposed to be a National Recreation Park for the citizens of our Country. It was set aside for this reason. Should the beaches be closed the area will surely die. The property values will plummet. People will no longer flock to this summer vacation site as there will be no reason for them to come. Towns will struggle and eventually find themselves failing if not bankrupt. This is not the future that should be allowed to come to be. The Outer Banks has too great a history, from the lifesaving stations along it's beaches to the wright brothers, to die this death. I wonder where the Wright brothers would have gone had they not had the ability to come to the outer banks? Please keep the beaches open fully. Educate the public about the birds and wildlife that has caused this concern but above all keep the beaches open. Thank you for allowing us to comment. Rodger Schwartz

Correspondence: Mr. Murray I am pleased the park service is formulating a sustainable operational plan for beach access for North Carolina's Outer Banks. I feel that the Consent Decree was extremely one-sided, non-scientific, heavy handed, and punitive to all non-offending human park visitors. I expect a more reasonable compromise in the final plan.

The areas closed for nesting under the Consent Decree are not the ONLY areas suitable for bird/turtle nesting. In fact, the Pea Island refuge and much of the Outer Banks from Okracoke down to Diamond Shoals is uninhabited and open for all nesting. Any of these areas can be seasonally restricted to allow nesting, study of wildlife behavior, and outcome measurement. The CAPE POINT and INLETS, however, are extremely unique and as such, are points of prime interest to the human visitors to the park. The complete closure of these areas is as absurd as totally closing OLD FAITHFUL or the north rim of the GRAND CANYON to the visiting public so that a possible nesting opportunity may not be lost.

I would very strongly support a compromise policy that allows year-around human visitation to the CAPE POINT and INLETS with restrictions for wildlife nesting in other areas of the park. These areas should be managed based on the very best science available. I realize your task is difficult, but please consider my thoughts as the new policy is negotiated. thank you Andy Martof DDS

Correspondence:	I have been traveling to the beaches of the outer banks be4 some of these protesting organizations knew what they were. Countless surf trip miles were logged on multiple vehicles purchased throughout my ever aging life just to camp out and catch some good surf at Cape Hatteras. To many east coasters, especially surfers, closing Hatteras would be a devastating move. Tourism, is a way of life for the locals at the banks. It could potentially be devastating economically to them, as many tourists come to the OBX to enjoy the Cape Hatteras area. Please keep both surfers and the locals who have been using this area RESPECTIVELY for many years close to your minds when making such drastic decisions.

Correspondence:	As a surfer and avid environmentalist, the issue of closing the outer banks and other parts of the East Coast presents a conflict. What is more important, free access to the beach or protecting our natural coastline? As a former local resident and surfer in San Diego, California for almost 10 years, I know there is a solution to both. It used to be in San Diego after major holidays (especially 4th of July), there would be trash lining the beach for miles and pollution to the water was horrendous. In response to this increased pollution, city government made a very good decision. They decided to outlaw smoking and alcohol on public beaches. While this sure made partying on the beach less fun, it decreased pollution problems exponentially. I volunteered for beach clean ups before and after this law was made, and I can say from personal experience there was a huge difference. Before the law, I would personally collect 3 trash bags full of trash from a small stretch of beach after the 4th of July. After the law was passed, I had trouble filling one trash bag up after covering a few miles of beach, on July 5th, on the same beach. Protecting the environment, especially such delicate ecosystems frequently visited by humans, like the coastlines, should be a top priority. But blocking all access from the public will simply create more problems as surfers and fishermen will continue to try to get to the beaches. Instead, it is cheaper and more effective to simply ban certain substances that create large amounts of pollution. I would encourage you to work with frequent visitors to the beach, local government, and other local environment groups to find out what is the primary cause of pollution along your coastline. While people will always pose a threat to the environment regarding pollution, this threat can be greatly reduced by simple and straightforward legislation. Again, I love and wish to protect the environment like many others, but blocking access is not the answer. Thank you for your time in reading and listening to my argument, I sincerely hope you take it to heart. Very Respectfully, William Baker

Correspondence: I recently just moved from Wilmington, NC to California. I remember being able to ride out on the beach with my family in the Outer Banks. It is so much fun. Also I surf all the time. The last thing anyone would think of doing out there is hurting the environment or trashing the place. The beautiful tranquil area is enough to make you want to enjoy it rather than not. I have been there numerous times just for vacation and surf trips. I think that at least 95% of true surfers are more responsible for positive things towards the ocean and its surroundings more than tourists. Surfing is a way of life and I know on the East Coast that the Outer Banks is an "epicenter" for surflife. I always pick up trash off the beach when I surf because I feel like it is the right thing to do and especially for karma when you are in the water. I don't know how this issue got started about this but I think that shutting down almost all of the beach is just not right considering that we are all Americans and should be able to enjoy this atmosphere and beautiful place.

Correspondence: Banning all ORV's is not the answer. Surfers and fishermen are taxpayers also and deserve access to this land. However I do respect the need to preserve nature and the habitat. Perhaps having the rangers roping off areas suitable for driving that would not interfere with the local animals with extremely large penalties for venturing off course would be a solution. Night driving could be allowed seasonally when it does not interfere with turtle nesting. There are many solutions that would allow us to co-habitate instead of just banning the use of these areas.
 Thank you,

Correspondence: This stretch of park is a nesting ground for sea turtles, however to limit access to humans would be unjust. More research needs to go into specific site analysis of nesting habitats. Certain zones could be flagged from constant watch, none the less it would give some of the park service rangers more work during these weak economic times. Without further scientific studies the beaches should be placed in limited access to only permitted individuals. These individuals could be checked in and have maps of specific areas of interest that cannot be disrupted. Checkpoints could present a very effective way of monitoring. Being a graduate student of natural sciences and a native carolinian I believe more scientific research should be done before anything gets approved.

Correspondence: I have been an avid surfer for 30 years.
Over the years I have seen far too many instances of taking a yard when given an inch by surfers, so whatever decision you make must include oversight and enforcement.
I don't wish to see access to the waves rescinded, but I do believe that dune and wildlife sensitivity must be taken into account. A balance that protects the environment and allows surfing would be optimal.
Surfers can walk some distance, and some beach driving may be acceptable in certain areas.
One thing not mentioned is that any vehicle driving on the beach MUST be ABSOLUTELY OIL-LEAK FREE. It is imperative that cars be routinely inspected for oil leaks.
Or, perhaps the only vehicles allowed should be electric.
Go with the science.
sincerely, Paul Cunningham

Correspondence: I am writing in regards to ORV access along the outer banks during the summer month. I am an Environmental Studies major in college with an Economics minor so I can hopefully work on issues such as this as an Environmental Economist. I am also a surfer. I am going to disagree with 99% of my fellow surfers on this topic. I feel it is IMPERATIVE that Off Road Vehicle access is limited during summer nesting month for the protection of sea turtles and shore bird nesting. Night time driving undoubtedly should be banned. If driving is permitted in the height of the swell season (september-october) surfers should be appeased and that is an issue you should consider and raise in hearings. As long as the birds are done nesting and the sea turtles have hatched and made it to the ocean, by September with the hurricane swells, there should be minimal conflict. I am going to talk with my room mate who worked for Audobon with shore bird nesting in NC and down on Bald Head with Sea Turtle nesting to get some concrete data on the time frame these animals need the protection. The majority of the tropical swells that hit the outer banks an the winter storms that bring surf do not interfere with shore bird nesting summers are flat when there is no reason to go drive the beach to hunt for waves. Additionally vehicle access in the winter months creates suitable nesting grounds for certain seabirds as it clears out vegetation which they don't like nesting near. in short here are points for you to bring up at the public hearings to protect the fauna of the outer banks.
1) nesting seasons and surf seasons are not aligned. 2) since the season don't align it is not going to impact the enjoyment of the surfers and the protection of endangered species.

Correspondence: To Whom It May Concern:
Human access is a necessary right that needs to be preserved in this process. I spent a few summers of my childhood in the Outer Banks, and if Hatteras was closed to human access, we would have vacationed closer to home. Do not think only of the residents of the area, but of the tourist dollars that pour in to local businesses during the summers. This area is an important ecological area, but by educating visitors to the area, many of the potential problems can be avoided. Better signage and awareness campaigns can be productive in managing the already very low risk of negative human/animal interactions. Humans and animals have coexisted in the area for years, and can continue to do so. I hope to be able to visit the area in the future, as I am an avid surfer, and Hatteras is an important destination for many surf travelers.
Thank you for your time,
Chris Lupin

Correspondence: I live at perhaps the most disputed recent Nature vs. Humanity battle - The Trestles vs. the 241 Toll Road Expansion. I live directly at the current end of the Toll Road, and I Surf at Trestles At least once a week, so the transportation would have benefited me quite a bit. However, I stand 100% against any

expansion of Human Waste, Construction, and Recklessness and supported stopping the Toll Road. Thanks to the support of many from all around, The Toll Road was stopped, hopefully for good. The most important part of this process is that respectful surfers and a few beach-goers willing to make the long trek were able to keep their little secluded paradise. What is the point of saving something if no one can appreciate and respect its beauty. I hope that both environment and the world of surfers can reach an agreement on this issue. Thank you for reading my opinion, I hope it is heard.

Correspondence:	<p>I support your actions to restrict ORV's on the seashore. I have worked with threatened and endangered species (western snowy plovers and California least terns) for 17 years on California beaches. I know very well the sensitive nature of beach dwelling wildlife. I have observed that the general public tends to propagate a self imposed ignorance to the real issues simply because they want unrestricted beach recreation. Which leaves it up to you to do what is right for the resources. Driving on the beach on the sites I work on is strictly regulated. If it weren't, the plovers and terns would have heavy negative impacts. I can't imagine it being different on your beaches.</p> <p>I encourage you to protect the fragile resources involved.</p> <p>Tom Applegate</p>

Correspondence:	<p>To whom it may concern,</p> <p>It is essential to keep the Outer Banks and Cape Hatteras National Seashore as open to the public as possible. Whether visitors or locals the beaches, oceans, marshlands, bays and their included wildlife on the Outer Banks and Cape Hatteras National Seashore are one of our countries treasures and should be shared with all who wish to experience them. As a 10 year employee of the National Park Service at Jacob Riis Park, NY I understand that there is a need to protect the wildlife, but there are alternatives to closing areas. Education is first and most important. If someone would like to drive on the beach there should be a short (15-30min) instructional course to explain the hazards. I have been visiting the Outer Banks for the last 15 years, mostly to compete in ESA's Eastern Surfing Championships, and I would like to continue to visit with the freedom to safely drive the beaches. It is an amazing experience to spend a day on the beach with family and friends surfing the waters and enjoying the sun with the sand in your toes. It should be an experience that is allowed to all who want make the trek down to Cape Hatteras, NC. Thank you for your time.</p> <p>Jeff Anthony</p>

Correspondence:	<p>I just wanted to say that, in the past, I have taken my family driving on the beach and have enjoyed the liberty of doing so. This has been a tremendous draw to bring my family to the Outer Banks as it is one of the few areas on the East Coast where we can enjoy this kind of activity. It is very adventurous to everyone and great to be able to find a section of the beach that is private. I have read the articles about the bird/wildlife concerns posted by the Audubon society. I am not convinced that beach driving is such a threat to these creatures. I do believe that reckless driving on the beach should have stiff penalties to ensure that everyone is respectful to the environment. I think that a ban on beach driving would economically hurt the locals of the Outer Banks. Of the suggested measures, Alternative C would make the most sense to me. I also think that areas that may be closed to driving at certain</p>

Correspondence:	I think you should really evaluate what it is you are doing. The problems I foresee in your solution are really flawed and present no real solution. Or at least a logical solution. The problems with the Cape Hatteras National Seashore are attributed to lack of appropriate access. First of all, you provide little or no access for the public, thefore you have surfers, bird wathcers, and general beach goers parking on the side of the street. (Not Safe) If the Park Service had their way they would close the beach. Just remember who gave you the property, locals of the villages here. Most of the problems that occur are attributed to people living on these islands, not by people accessing the beach and surrounding areas. These ribbons of sand are perpetually in motion, don't forget that! So, what would be the best decision? You should allocate parking spots for access to certain areas. Remove Highway 12 North of Rodanthe and replace with a bridge type structure that could be moved when erosion threatens. Not only would this be easier than placing sand in area to be eroded and never regained, but would also be a solution to create an environment more friendly to wildlife. This would also, create a mechanisim to coontrol access to our beaches and waters. So lets pull our finger out and start thinking.

Correspondence: To restrict access to a national treasure would be to defeat the very purpose of that treasure. It would in effect, result in a impoverished generation lacking the scope and breadth of all that "Banks" have to offer, and In my opinion: The results will not foster great awe and respect of God's creation, and all of the care, with stewardship that it entails. NO! KEEP THE BANKS "OPEN" Its only because of my experience "as a native of North Carolina" and resident of Florida, spending time exploring the the outer banks that I take this time to share my thoughts, of how important it is to continue to allow the treasure to be explored, revered and protected. The single most important factor in protecting the banks as a sanctuary for wildlife and people is not to erect gates; but rather, change minds and hearts through steadfast dilignece to education and a personal experience, that makes life long impact on those who are apart. Change comes from the inside out.

Correspondence: First of all,like many others, I have been spending my summers and countless weekends on the outer banks of North Carolina. Some of my fondest memories were made driving down the beach's of Hatteras with my family. I learned to surf there, went on my first date, and even learned to drive. I completely understand the need to shut certain spots on the beach at points for shore life nesting and other wildlife preservation. Preserving shorebirds and turtle habitats and nesting grounds is very important and we are responsible for doing so. Though we must shut parts of the beach I don't feel the need to stop all traffic on all spots. Being able to drive onto the beach is a favorite pastime on the outer banks and attracts many tourist, fisherman and even locals to come spend the day out, grab some lunch from a beachside restaurant, and maybe even stop in a beach shop and do some shopping. Beach access helps support the economy on the banks and in Hatteras, there's no question about it. Because this is such a money maker the county should be willing to put some of that money back into protecting the beaches while keeping them open. Maybe we could hire a few more lifeguards to patrol the car accessible beaches on 4 wheelers and act almost as beach traffic police. Surfline was right when they said it's an island full of drive thru brew stations and some people tend to get rowdy and take it out on the beach with their trucks. Will they still want to do this when threatened with constant patrol and a Hefty fine? Beach access is a privilege, if someone is caught breaking the rules then their license plate should be taken and there privileges should be revoked. We shouldn't all be banned because someone thought a sand dune resembled a monster truck jump. We must save both wildlife and the public beach. Both are vital to the outer banks economy. Sure it would be easier to shut all the beaches, but you might as well shut down the whole set of barrier islands in that case because they aren't going to be able to support themselves. A solution somewhere in the middle must be found.

Correspondence: This I know. Our environment is in peril. Experts agree, all coral reefs could easily be extinct by the end of this century. I am in favor of doing what it takes to protect all natural resources. Last year was my first visit to Hateras since before I can remember, and I am now 37. I live in the mountains, another example of rampant over developement. From a purely selfish standpoint it sucks when condos get built where we used to rock climb. However, I know we did far less damage- practically no impact compared to dinamite and bulldozers. I believe that sensitive areas can be managed by parks and recreationalists alike with the goal of preservation in mind. I do not claim to be an expert but I have seen a lot of impact on our coasts and mountains. There is a right way and a wrong way, I hope that people realize that surfers are environmentalists with the best intentions: the hope that future generations can enjoy what we did responsibly.

Correspondence:	<p>I feel it is imperative that a solution be found which still enables and maintains beach access for fisherman, nature enthusiasts, and the surfing community. The evidence that beach access is endangering bird and turtle habitat should be studied further and empirical evidenced provided. Alternative solutions to overall access restriction need to be developed. Most of us who drive on the beach to fish and surf or just relax and get away into one of nature's most beautiful surroundings never wants to endanger any of the animals or the beach at large. There may be the very rare drunken fools that fly around like idiots out there but the majority of us are respectable, nature loving people and access to this pristine environment in some form is a right we deserve. I used to live on North Padre Island in Texas where there is the Padre island national seashore with the Kemps Ridleys. Out there they have still managed to maintain 4wd beach access while doing their best to protect the sea turtle nests through active daily and nightly patrols during nesting season. Where does one draw the line? It could easily be argued that driving on the park highway parallel to the beach is just as damaging or so are the development,etc... We are human beings and our ingenuity should enable us to interact peacefully with the environment while preserving our rights for beach access.</p> <p>thank you</p>

Correspondence:	<p>I believe this whole monstrosity to be a terrible act of non local concern. I agree with the fact that these wildlife animals' lives are in need of security to tourists and those taking advantage of the ability to drive on our beaches. BUT, there is no reason to close the whole accessibility to those that respect the territory and act upon that. There are two kinds of people in this matter, those that are not aware of the wildlife issues that take advantage of the area; and there are those that either live there and put in effort to protect their home. I think that in order to get the most out of both sides, we will need to respect both parties and take action towards an equal outcome. To locals, this is why they live there, the beaches, fishing, surfing, and wildlife. To the outside wildlife preservatives, if you actually live there, you will see that; for the most part, the problem is not the locals, its the tourists and non caring people that visit these beaches that take advantage of them and do not respect the land. So, what I suggest, is all you turtle huggers, go on and let the local towns take action towards these issues. We do not need you and your non local ideas to preserve what most locals live in this area for. This is there land and I believe that since these issues have risen, we can gather a plan to better protect these beaches that I have been raised around and love. If you turtle huggers have such an issue with turtles, go to Costa Rica where there is a greater issue of this topic. I cannot stand people that try to come into areas where they do not live or know much about and try to politically change the ways of the lands.</p>

Correspondence:	<p>To whomever this concerns:</p> <p>As an extremely frequent visitor to the Cape Hatteras beach areas, it is very concerning that much of the coast line could be closed. I support the effort to protect the wildlife in the areas that will potentially be closed. However, many of the locals and those who visit for recreation will be substantially affected by these closures. As a surfer, Cape Hatteras serves as a destination and a source of fantastic waves, which are already scarce on the east coast. Cape Hatteras is the mecca for east coast surfers, as many make the trip north or south to explore and find great uncrowded waves in one of the most beautiful settings possible. To deny access to many of the best sandbars during the most active times of the season would be a massive blow to the surfing community and recreational community as a whole.</p> <p>If it is possible, all access should be granted with more highly regulated restrictions. It would be beneficial to monitor whether or not those who drive on the beach or attend the beach frequently actually have a significant effect on the wildlife in those areas. It is possible that recreational users have very little impact on the issues which have raised concern for the beaches.</p> <p>Beach closures for an area that is a rare east coast surfing oasis would be tragic and everything should be done to keep these areas healthy, protected and open for people to appreciate.</p> <p>Very Respectfully, Brett Fox</p>

Correspondence: To Whom It May Concern,
 Concerning the Closure of The Outer Banks Beaches to human access in order to preserve bird habitat:
 I grew up in the region of the Outer Banks, NC and spent many of my early years enjoying the beaches there with my family. This was an important part of my appreciation for nature, by directly interacting with it, I learned to love it, appreciate it, use it responsibly, and protect it. I have dove the OBX, fished it, boated, kayaked, and spent a great deal of money at the federal camp grounds and other tourist attractions there over the years. I am now in California and still return to that region to enjoy the beach access by ORV. To be able to use the beaches is why I return there and choose not to take vacation in other places.
 I surf and dive those beaches. I also enjoy viewing the other critters that inhabit the dunes, such as lizards, other birds, and the plant life. These areas are important access points for many beach-related activities. With many regions across the US already taking away opportunities for outdoor enjoyment, it would be horrible if this area were added to the list.
 I understand the need to protect the habitat of wild birds - as a life scientist, I understand this. But complete closure of our beaches is unacceptable and unnecessary. I would be open to closures during crucial breeding weeks/months, but under no circumstances would it benefit the birds any more to close the beaches year round. I am also open to creating fenced zones for the birds or creation of habitat.
 I want to be able to return to these beaches for many years for my family's future generations to enjoy - so that I can have them enjoy our heritage and natural resources by direct interaction. The birds have been breeding fine for hundreds of years of human interaction - it is unreasonable to close the beaches to human access. A compromise between conservation and beach access is something I would support.
 Thank you for your time and consideration,
 Kelsey Albert

Correspondence: Please keep the beaches open to public use specifically fishing, surfing, and other recreational uses. Consider permits, fines, passes, etc. to help control the amount of people who drive the beach. Also consider doing more tests to prove what exactly needs to be done with control over the areas of the Cape Hatteras National Seashore.

Correspondence: As someone who was born in North Carolina and returns to vacation frequently, just thought I'd say chime in on the whole OBX shore restriction vote. In my opinion you should really make sure that there is still access for surfers, swimmers, kayakers, etc. Don't limit something so special for everyone for just a few mistakes. I understand the point to protect the environment, but you still need to have access for these sport pursuits that are meant to be enjoyed in the ocean and not hurt it. The ocean is meant to be shared and enjoyed, not restricted.

Correspondence: Comment re: Beach Access on Hatteras Island
 We support continued beach access (within the reasonable constraints of wildlife habitat). We have fished and birded on the beaches of Hatteras Island for over 35 years. The villages and the residents of Hatteras depend on income from visitors who access the beaches, currently with four-wheel drive vehicles. A balanced approach to shared beach access for fishing, birding, nesting, and general recreational use would be ideal. Certain areas (Cape Hatteras Point and Hatteras Inlet for example) require vehicles for any reasonable access for fishing.
 Secretary of the Interior Harold Ickes wrote in 1938 the following excerpt - one that applies today: "When we look up and down the ocean fronts of America, we find that everywhere they are passing behind the fences of private ownership. The people can no longer get to the ocean. When we have reached the point that a nation of 125 million people cannot set foot upon the thousands of miles of beaches that border the Atlantic and Pacific Oceans, except by permission of those who monopolize the ocean front, the I say it is the prerogative and the duty of the Federal and State Governments to step in and acquire, not a swimming beach here and there, but solid blocks of ocean front hundreds of miles in length. Call this ocean front a national park, or a national seashore, or a state park or anything you please - I say that the people have a right to a fair share of it."
 To view beach access as a one or two dimensional issue between fishermen and environmentalists diminishes the opportunities available to protect and enhance this national seashore. How we as human beings continue to interact with our environment while trying to live and recreate is a constant balancing act between multiple factors that require vision and leadership on the part of our National Park Service (NPS). Barrier Islands are a good example for us to witness the fragile, vulnerable and constantly changing nature of "Mother Nature". Our NPS needs to think "out-of-the-box" and come up with a plan that can enhance public access to the beaches while protecting the plants and animals there.
 The issue of beach access, as important as it is to the current view of the Outer Banks economy and life style, is equaled in importance as the need to embrace change, for example in the establishment of paved (bike and pedestrian) paths and more dune walkovers. Perhaps expanding access in other areas will take pressure off the need for vehicle access. In other words, building paths in the Island villages and along Hwy 12 could encourage, and result in, less vehicle pressure on the beaches. The dune walkover, south of Frisco, is an example of how the Park Service has both encouraged the use of the Island beach without vehicle usage and has provided protection to the vulnerable dune system.
 We wanted to voice the opinion that paved paths on the Outer Banks will positively impact the way people can experience our beloved area and will enhance and help serve to maintain the culture of laid back fishing villages. These are long overdue and we hope the Park Service recognizes their potential and comes forward in strong support.
 These paths are looking positively to the future and will help maintain the beauty of the past history of the islands, (not to mention the healthy lifestyle that needs to be encouraged). In Colorado the Summit county area of the Rocky Mountains (Breckenridge, Frisco, Keystone, Copper Mountain and Vail) are all interconnected by over 100 miles of bike paths that are 95% off the highways. The businesses there would be fast to admit that bikers are a huge source of income for the summer months. Sounds like a "win-win" to us.
 We appreciate the opportunity to make these comments.

Correspondence: First let me start by saying that I am not from North Carolina but have traveled there on many occasions. I am only writing this letter because I care about our civil liberties and freedoms. More and more I see America's freedom diminishing, due to rules and regulations placed upon us by our fellow men and women in societies, political parties, and other areas of high ranking officials. I respect nature and would never want to see animals or natural habitat maliciously harmed. This is wrong and should not be tolerated. I do feel however that people should come before the animals. we are higher on the food chain, and therefore take precedence. Let people fish, let them surf, find better ways to park the cars and continue to let people enjoy themselves in a respectable manner. As far as the audubon goes, they dont want any humans even near the water or anywhere else animals live. if it was up to them we would probably be banned from all beaches, lakes, rivers, mountains, glaciers, caverns, ect..... you see where I am going with this. This society has potential to do good, but not by regulating the public so much in regards to the beach that they simply give up and never come back. this could have an impact on small business located near the obx and surrounding areas. Give people this freedom, to many others are already gone, and when they are taken away, its hard to get them back

Correspondence: I've been heading down to the OBX for years, fishing, surfing, and just hanging out, and there is nothing like an off-road excursion to find a beach to yourself in this day and age of overdeveloped coastline and monopolized beaches. It definitely gives the o.banks a different edge, which makes it the way it is to everyone lucky enough to have the resources, knowledge, and desire to explore and experience its true natural beauty. It would be a complete shame to see the detriment-- of a high level of restriction of ORV access on these beaches-- the local community would experience, and a great loss to East Coasters and OBX inhabitants alike. I'm certainly not saying efforts to preserve its spectacular natural beauty should be completely overlooked; i think it would be terrific if an optimal compromise could be achieved between conservationists and ecologists and the surfers, fishermen, and ORV enthusiasts who have the privilege of experiencing its beauty first-hand.

Correspondence: Dear Representative -
Please do not restrict access to the Atlantic Ocean to anyone, anywhere, any time, for any reason. Cutting off miles of coastline to public access would be shameful and un-American. The Oceans are public domains, always have been, and always should be. I understand there are environmental impacts from ORV's, so perhaps limiting ORV access to certain areas would be understood. However, in lieu of that, coastal access should be allowed at all times to all surfers, fisherman, hikers, or anyone else who would like to enjoy nature's miracle in pursuit of happiness.
Thank you,
Dave Warga

Correspondence: I am a new jersey surfer,fisherman,and all around beach going person. I have grown up fishing and spending time on the beaches in new jersey and have been passing this love of the ocean onto my 10 year old daughter. I regularly buy my beach buggy permit for Island beach state park here in new jersey,and I follow all rules and regulations that are to be followed when on the beach. I have been coming to the outer banks for years and have now brought my fiance there for the first time in 2009 and she fell in love with the area and we now have vacation plans for july this summer. Last year while we were there we were on the beach where there was an area closed off do to the wildlife which we both agreed that it was a good idea to help preserve natures creatures, but after reading what is trying to be done it's upsetting. I would not like stop comming to the most beautiful friendly place I've ever been do to the fact that beaches are closed and not be able to bring my daughter there when I am able to and show her all the great things that I have fell in love with in North Carolina. Im hoping that when we get there that my fiance and I can enjoy the beach just as we did last summer.
Thank you, Jason Redwanski

Correspondence:	I believe full access to the outer banks for surfing should be preserved in all areas. Surfers are extremely environmentally concious and an activity like surfing is one of the specific reasons areas like the outer banks should be preserved. Other outdoor activities should be allowed as well. I firmly believe these types of activities can be done in an environmentally sensitive manner.

Correspondence:	My wife and I make numerous trips each year to Buxton and Frisco. The last few years we have rented a cottage in Frisco for two weeks in July, and I'm looking forward to our two week vacation in Frisco this year. I am a dedicated surfer and I would just like to be assured that there will be plenty of places still available for me and the many others like me to persue our passion. One of the great things about OBX and surfing is that there is plenty of space to spread out and not get in each other's way. Many are the time times that I have complimented North Carolina and the way it manages it's beaches. My hope is that I will always be able to be complimentary and continue going to OBX. Otherwise I guess we might as well just stay in Virginia Beach. Ed Allen

Correspondence:	Closing the beach for public access is nonsense. I guess you guys should close down the entire eastern coastline since hurricanes ruin most of the coast. I have an idea to protect dunes. Build singel causeways to get over them with designated driving. I would support not driving on certain parts of the beaches, but to shut them down completely to surfing an fishing is just not right. Surfing especially since we are on the water not the dunes. I guess you guys could kill all the deer as well since they walk on the dunes or atleast fine them.

Correspondence:	My family and I have been going to the OBX for many years. We are a beach family with several of us that surf. We live in Virginia, surf Virginia Beach and OBX year round. We typically go to the OBX every weekend during the summer months and several times in the winter. We also rent houses at the OBX and spend typically \$5,000 - \$7,000 on our summer vacation. The OBX represents the very last natural open beach on the east coast for us to enjoy its beauty and resolve. Closing these areas off to access will not only deter our visits and financial support to the OBX but will also do the same across the board with others. If everyone is so worried about keeping things natural why not let things alone and let nature take care of itself? Why is it that our self agenda organizations whom must make an impact somewhere to keep their donations coming in feel like they know what's best. Kind of like the Global Warming concept.....it's all about the money. If anyone really feels like they want to save any wildlife or solve beach concerns let nature take care of itself. Also someone needs to understand that humans are part of nature, and using the beach, swimming, surfing, is all natural. As for the vehicles are concerned, I am sure that there is some negotiable solution that would provide resolve for all. But closing these areas off certain times of the year to surfers is ridiculous. Surfers care more about the ocean and its surroundings more than any other self interest group possibly could. You see for the surfer the ocean is life, it represents the true meaning of living and the OBX is alive. Closing these areas even in a scheduled circumstance will be taking the life out of the OBX.

Correspondence:	With no access by vehicle to the Cape Hatteras seashore how can my family enjoy the pristine beauty of the Outer Banks. The best part about the Outer Banks is the ability to experience an un-crowded section of the beach all to ourselves. If they close down these access points our decade long tradition of a week of surf & sun will go up in flames. I have already spents thousands of dollars to reserve a house for this July. What will we do at a National Sea Shore for a week with no access to the best surf breaks?

Correspondence:	I believe that ORV access should be preserved alone the Cape Hatteras national seashore. Permits should be issued to help fund the preservation and protection of the wildlife. Plover fencing and protection areas with cross access should also be considered. The area is a national park and any citizen should have access to this national resource. what good is protecting an area if it can not be accessed or enjoyed? If access was denied then it might as well be taken off of all maps since it would be useless to anyone without access. Also consider the many industries that are involved. Tourism is Americas greatest industry, with out access no one can visit and there is no tourism where one can not go. Fishing, with out access this fishing mecca is not longer a mecca but a legend of long ago when you used to be able to go there. Surfing, one of the largest industries that want to recreate and deserve the access to do so, less invasive then fishing as surfers take nothing from the ocean but some waves. A happy medium of access, protection, and preservation can be reached. Permits are a good idea but make them available to all and reasonably priced.

Correspondence: I have lived in the coastal VA/NC area all of my life and people have always been able to enjoy a trip to NC to take thier 4wheel drive out onto the beach. Not to go tear up the beach, Not to go cause trouble, but to enjoy the natural undeveloped coast and maybe alittle surfing or fishing while there. If you take away the ability for people to travel to these areas via 4wheel drive you also cause major harm to the small business owner who thrives off of the surfing and surf fishing market. The charter boats dont keep these shops in business and the piers have thier own shops. You also impact the restuarants etc. that make a livelyhood serving beach going customers. If you take away draw to the area you are taking away people from a market already impacted by the economy. If you take away tourist you loose local business. If you start to lose local business you risk destroying the once stable local economy in some of these areas that are dependant on tourism. For decades people have driven the shores of NC, Not only tourist but also residents of NC and neighboring states. It may not be land that we own but we all feel ownership in a sence that have lived here and enjoyed these beaches all of our lives and for any group of individuals that are not part of that ownership or native to the area to come in and mandate its use seems criminal. What next the harmful effects of suntanning lotion on the enviroment... We will all be banned from wearing suntan oil at the beach. Draw the line in the sand and refuse these over conservative groups. We need to leave the beach open and not take away from what is the OuterBanks life.

Correspondence: I am a surfer. I have surfed the outer banks and Hatteras seashore my entire life. I rarely drove on the beach and have since a young age felt uncomfortable doing so. Now with this issue being raised, I have spent time reflecting on why I always feel somewhat uneasy driving on the beach. I feel uncomfortable because I know its a park, plain and simple, its a natural place. I don't drive vehicles around on natural areas in any park, anywhere on civilized earth. Not just because its illegal in all those locations, but because its absolutely irresponsible, and spoils these places, places set aside to remain free of unnatural things.
Can we drive ORV's and ATV's all over the Jefferson National park? First Landing state park? or Yosimite? Or drive over all the wilderness along the appalachian trail? Or how about central park in NY?
Should we drive all these as well?
Why is the Hatteras seashore different from these locations? Because its a beach? Because people have been allowed to do it in the past? It is absurd to think that we keep doing something just because we are doing someting.
Lets start treating this place as special, as a national park and wildlife refuge, it is one.
When I want to hike the mountains of NC, I expect to park in a remote location and hike or walk. This keeps things that cannot tread lightly (vehicles) away, and keeps the lighter treading vehicles (humans) mobile throughout the park.
There's a lesson from Monterey California, some of the most beautiful seaside wilderness in America that also enjoys some of the best surf spots and beaches. You park a mile or 2 outside the preserve and have to walk in, board in hand for surfers.
Hatteras is a very special place, close to me, my family, and many others. Lets start treating like a special place, and not a street or alleyway.
NC can now start acting like it takes its piece of earth seriously, rather than treating it like a highway or street system, unbounded, careless in the way it liberally gives away its few natural resources and places.

Correspondence:	I grew up going to Cape Hatteras for family trips. The past 5 years it has been a second home for me when i was not attending school. With that being said i noticed last year that tourism, especially for fishing had greatly decreased when Cape Point and other beaches along Cape Hatteras National seashore where closed. Bottom line, keep the beaches open they way they where before The Audubon Society and other groups took the National Park Service to Court. The National Park Service was doing a fine job of regulating ORV use on Cape Hatteras, by protecting wildlife, yet leaving the beaches open for the publics use. After all that is what Cape Hatteras National Seashore was intended for in the first place. Its a shame that these special interest groups care more about a birds well being than they do about the well being of the inhabitants of Hatteras Island.

Correspondence:	My name is Collin Ruppert. I am the grandson of Sarah "Sally" Ruppert. She is the person responsible for starting the piping plover conservation in my area. She started an accossiation called Volunteers for Wildlife. She was also one of the first presidents of the Autobahn Society. I spent most of my young life, as did my father, learning about and protecting our wildlife. Many areas of beach have been closed off to the public in our area as well as the outer beaches of North Carolina. As a passionate wildlife lover as well as a passionate surfer I am placed in a difficult decision. It seems to me that more study should be put into the actual affects that beach vehicles have on the piping plover population. It would be a travesty to close off beaches to people who love them and make a living from them without solid evidence that they are actually causing damage to the area or its wildlife. These beaches mean so much to so many people. Closing the beaches would be devastating to many people unless it can be shown that they are being closed for good reason and that the reasons are backed by substantial evidence. Thank you for allowing me to speak my opinion. Sincerely, Collin Ruppert

Correspondence:	Cape Hatteras is a wonderful place that strives on its access to the beach and the water surrounding it. Taking away access to the beach will hurt Hatteras in many aspects. Many of the locals make a living off the water and limiting them in anyway will hurt the local economy. Going to and being on the beach is one of the main attractions the this area. If there are no scientific tests correlating destruction to nest because of motor vehicles, then why blame the cars. Understand the cause and effect of the issue before taking action.

Correspondence:	Cape Hatteras is a wonderful place that strives on its access to the beach and the water surrounding it. Taking away access to the beach will hurt Hatteras in many aspects. Many of the locals make a living off the water and limiting them in anyway will hurt the local economy. Going to and being on the beach is one of the main attractions the this area. If there are no scientific tests correlating destruction to nest because of motor vehicles, then why blame the cars. Understand the cause and effect of the issue before taking action. If taking away beach access has to be done, make sure it is in areas that are not popular locations for the people that come to enjoy Hatteras and what it has to offer. Im sure there will be a vote on what areas to limit access to, so make sure to listen to the people that know the area because there opinions are very valuable.

Correspondence:	I am writing to support alternative C of the proposed changes; I am most concerned with restriction of beach driving for recreation, specifically surfing and surf fishing. While my motives are selfish, the outer banks economy stands to suffer if beach driving is limited. Additionally, with a paucity of scientific data that supports the need for specific restrictions on beach driving, it is irresponsible to pass legislation or enact rules that will undoubtedly do harm, when the alternative may not. Thank you for your time. Andrew (Trey) Black,III,DPT,OCS

Correspondence: Please be reasonable. Closing the Outer Banks beaches to driving will devastate the surfing, fishing, and birding economies, to name a few. Buxton isn't Daytona Beach, where you can pull into a parking lot just about anywhere and not have to mosey more than a couple hundred yards to your final destination. Recognize that you have a tremendous resource to manage, and please do so appropriately. It makes sense to ensure that Bubba doesn't drive over a sea turtle with his 33" lift and 6 beers in his belly. Banning the responsible recreation of the very advocates that work tirelessly to protect the coastline does not. I'm sure that sensibility will prevail. Thank you.

Correspondence: I have been traveling and vacationing in the outer banks since i was a little kid. My family has had a house in Nags Head since the 60s, im 22 years old and my family loves to surf. Our house is actully on the sound which is nice and relaxing, but also means to go to the beach we have to load up our vehicles and lug everything over the dunes to the beach. The sandbars the outerbanks has to offer compared to surrounding areas on the east coast are second to none...and the fact that once you get on Pea island you can use the beach accesses to drive your 4x4 out on the sand is worth the 2 hour drive from va beach. I think that the wildlife does need to be protected, but I do not agree with the closure of every beach access during peak tourist season. Im sure you have already recieved many emails like mine wishing for the beaches to stay open, but i know you are also handling emails that wish for the beaches to be closed to protect the wildlife. Most of the local economy in those smaller towns would deffinly feel the effect of the beach closuers. Have you ever seen how crowded frisco beach gets on july 4th? all of those people have to refuel and re-bait or re-load on beer, and guess what...they wont be spending that money in the local stores, which i know you are also aware of. just asking if its worth it to you all if saving a few birds and turtles is worth destroying an economy. The turtle nests should be marked a little better during peak tourist season as well...a rising tide from a late season nor'easter or a tropical depression could wash away most of the little orange flags that are used to indicate turtle nests. please do not close the beach acceses! -matt

Correspondence: I understand that this is a complicated issue, but the only way to educate people relies within experience. I was walking on a section of South Nags Head Beach a few days ago, and a gray seal had washed up on the beach (most likely to take a rest). Very shortly after this, a couple marked off a 50x50 yard perimeter and carefully guarded it. They didn't want anyone coming close to the seal because it might scare the seal.. How does this tie in to the proposed issue at stake? Well, I feel that restricting beach access might reduce the possible number of these environmentally conscience citizens... It would seem that with very restricted access, only extremely adventurous persons (most likely young persons with time on their hands) would be able to scale the beaches to no end. These same types of people are not necessarily experienced and environmentally educated... there is no telling what they would do if they were alone with some kind of environmental factor present (would they attempt to play with the seal, or steal or contaminate the turtle's nest)... An even bigger reason why restricting access is a bad idea is because surfers would greatly suffer... Surfing is one of the only true available connections with nature, and to destroy any kind of access, or make it harder to take advantage of waves (that are already scare here in this part of the coast) would just be devastating... To all of you "environmentalists", please ask yourself, "How do surfers and surfing really affect the environment in a negative way?" I am very sure that the amount of leisure gained from surfing could greatly outweigh the slight increase in leisure that you environmentalists gain from greatly reducing vehicle access to the OBX beaches...

Correspondence: Dear Sir or Madam, I have been a long time vacationer in the Outer Banks of North Carolina and a 4 year resident at one point in my life. I appreciate the Outer Banks for the diverse wildlife, the uncompromised beauty and uniqueness of the landscape and the unrivalled surf that these barrier islands offer. I believe that preserving the islands for future generations is of the upmost importance. That being said, I feel strongly that preventing access to the beaches at any time for any reason does no one, including the wildlife and all parties in this process, any good. I have always been impressed by the lack of litter on the beaches in the outer banks. I have noticed on many occasions, surfers and fisherman alike, collecting trash from the beach and driving it out to be properly disposed of. I do not believe that litter contributes in any significant way to bird deaths in these islands. I also know that 88% of bird deaths relate to predators and weather. The other 10% is most likely the result of deaths on the highway (Route 12) leading into and out of the islands. That leaves 2% of deaths possibly related to beach traffic, and it is fact that the only confirmed bird death by vehicle is a case where a Federal vehicle ran over a nest. Are we going to limit beach access because 1 or 2% of bird deaths result from it? That seems to be a bit of an overreaction. In addition, there is no doubt that the impact of closing the beaches will significantly impact the ability of local businesses and residents to earn a living and provide for their families. Finally, it is obvious that the bird population on the island is thriving and will continue to do so. Perhaps requiring an ORV permit to fund additional impact studies and rangers to regulate beach traffic is all the regulation that we need. After all, 99% of people respect all signs denoting turtle and bird nesting areas and requiring a permit may keep that other 1% off the beaches. Let's keep the beaches open so that every generation gets to experience the beauty of the outer banks. The people who make their living here and the families that have been coming here for generations deserve and have the right to it.

Correspondence: Keep all beach access as it is now.

However, I do support ORV permits to curtail wild behavior on the beach. The permits will cut down on some dangerous drivers and will help inform and remind EVERYONE who drives on the beach about rules, procedures and protected areas. Close ramps when needed to protect portions of the beach or nests.

Keep 24 Hour access as well.

Beach access benefits...

-Handicapped and elderly folks -Surfers (I am a surfer)This National Seashore is home to the best surfing on the East Coast. Taking beach access away will be devastating. -Fishermen/women and children (I also enjoy fishing at Cape Hatteras Nat. Seashore)

By limiting beach access, local business will see a drop in tourism as the Cape Hatteras Seashore loses the allurements that brings folks. Many families and individuals will simply choose other destinations. We cannot let this happen. Not today, not tomorrow.

Correspondence:	<p>What scientific proof as been obtained that substantiates the closure of beach access, especially to pedestrians. How many dead birds? Isn't this sponsored by the National Audubon Society. These groups are going too far in their quest to fence the country and lock Americans out. Would this law close access to the surf zone for surfers? When was the last time you saw or heard of a surfer harm wildlife. This sounds like more special interest propaganda to use the government for another land grab in the name of conservation.</p> <p>The last thing OBX needs is access lost and visitor use experience improvements in the form of more signs to tell the people what they're looking at. Why does the park service litter the natural environment with all of the signs? Think of what has become of Yosemite it has been turned into Disney Land. The signs are a form of visual pollution and OBX does not need to be turned into another Disney Land.</p> <p>I'd like to see the government use a little common when making these types of decisions that affect this, the very foundation of Americans liberty.</p>

Correspondence:	<p>The killing of our island's foxes, raccoons, otters, minks, geese and other wildlife by the Park Service by way of shotguns, leg traps and poison gas for a non-endangered, non-indigenous bird is insane. We lost our cultural and historical heritage as well as millions of dollars in tourist dollars over bird eggs. The lack of science for closing the beach and ridiculous rules such as taking more land if a sign is kicked down or not holding any meetings of Hatteras Island to make it nearly impossible for locals to attend is insulting and wrong. There is no evidence that shows people being on the beach especially walking on the beach, hurts any animal and with no proof that people on the beach hurt these non-indigenous birds there should be no beach closure. If anything the presents of people on the beach keeps the number of predators on the beach down which are the biggest threat to the birds. Besides the Park Service drives up and down the closed areas year round while the rest of us cannot even walk out there. These same birds nest on the top of the sea mart in Nags Head and in Virginia Beach where millions of people frequent the beach so obviously the birds do not mind being near people. The Park Service should be ashamed of what they have done stealing this beach. People have lived on this island for thousands of years making the presents of people a part of the ecosystem. This bird is new to the area and we should not kill all the indigenous animals, the economy and our liberty for a few bird brains on a ji-had for the plover egg. I pick choice A if I had to but really all beaches should be open year round as was intended when the park was created in the first place.</p>

Correspondence:	<p>The local economy overall is suffering already and if you close the beaches it's not going to get any better. This past winter is the first one i've ever been unemployed the whole time. Whether it's related or not, it's an issue. I've lived here my whole life and my family is the same since the 1600's. We've never seen such disregard for our thoughts on something that effects us the most. I like birds and would like to see the piping plover do good but if it comes down to the bird or my livelihood then the birds gonna go. We're not the only place it nests. You close down the whole beach, dunes to the water when the bird doesn't nest anywhere near the water. We've always had tern nesting areas as long as i can remember and they were acceptable, nobody uses that part of the beach anyhow. Why would this little bird nest in the tide zone? Even if we had use of just the tide zone and a few more feet it wouldn't be so bad. In my eyes i see the audobon society which has 100's of times more members than we have total residents strong arming us into a situation which will crush our economy worse than it already is.</p>

Correspondence: I'm an avid fisherman and typically try to come down to Hatteras Island several times during the course of a year. I rent a cottage, and also frequent the local bait/tackle shops as well as restaurants. Being able to have access to the beach via 4wd is one of the main reasons I come. As that access has been limited the past couple years, so have my trips been cut back during the spring/summer when access is most restricted. This is definitely costing the locals, as I will typically spend between \$1000 and \$1500 for the week I'm there. So I can definitely say that the current policy has cost the locals at least \$4000 over the past 2 years coming from me. While I can appreciate the need to make some attempt to foster a good environment for endangered indiginous(and that is endangered, not threatend) wildlife, I'm not too sure about the 'science' being quoted to support the suggested closures. From everything I have read, there doesn't appear to be any solid evidence that the restrictions to access and expanded closure zones imparted by the consent decree and suggested in this document(compared to previous closure policy) are a necessity. I think the environmental impact of these closures are minimal with respect to the actual number of birds that are 'saved' compared to the negative financial impact on the community. And that doesn't even address the issue that these are not idiginous species, nor are the endangered. I think the previous method of controlling access based on the day to day observations of nesting activity and the smaller closure zone was a reasonable practice. While it still resulted in closures, and thus protected the wildlife, it was not as detrimental to the tourist business this island depends on. And while I was not happy to have certain areas of the beach shut down due to a small number of non-endangered species, I could live with that.

Correspondence: The Outerbanks is quite an amazing place. It is beautiful and peaceful. I hope that areas down there won't become restricted. It is awesome to be able to pull our car over and walk over some dunes and have miles of beach to yourself and your friends. It is so peaceful and an experience that i haven't found anywhere else, or so close to home. I hope that the beach won't become restricted. The peaceful and relaxing experience would simply disappear and would force people into more crowded areas. It would make the islands less peaceful driving people to vacation else where making putting a hard time on business owners. The vacationers are needed for their economy.
If you want to restrict beaches make the driving on the beaches more restricted but don't take away the ability for people to walk over dunes and enjoy the beaches. Please let beaches continue to be opened to travelers on foot.
There are also valuable surf locations that would be taken away with these restrictions. The east coast isn't known for having good surf. Out all of the surfing spots on the east coast the OBX has some of the best surf. These spots are very important to east coast surfers and vital. These waves provide power which isn't see else where on the east coast so often.
88% percent of turtle death is due to natural predators, i feel bad for the turtles but with 12 percent coming from i guess humans, please don't completely shut down the beach. 12 percent while it could be lower, shouldn't be enough to completely shut down the possibility for us to use these beautiful areas. Don't take away such drastic changes.
Take cars of the beaches, put more trashcans with animal safe lids on the beaches.
Please don't take away the peaceful beauty of the Outerbanks and the great surf spots. There is a reason my family goes to the outerbanks multiple times a year.
Sincerely, Rob Hamrick

Correspondence: Since there's been no real scientific study connecting ORVs with bird mortality -- except the "Federal Vehicle" that ran over a nest a few years back -- and 88% of deaths is attributed to weather and predators, the NPS needs to keep studying how these closures are affecting species survival in hopes of looser, more reliable restrictions in the future.
Of them all "Alternative C" seems to preserve the most possible access to the best surfing areas for the most time, while keeping some common sense ideas in place. (On an island filled with drive-thru beer stores, maybe requiring ORV permits will keep a few drunken yahoos from burying their Escalade in a turtle nest.)
More and more access to "Public Lands" are being taken away or restricted from the public all across the USA.
What's happened to "Public Land" being "Public Land" for use by the people..... we are the public!

There is a reason the word MENTAL is in the word environmentalist! They have taken over this country and not for the better. It is insane to murder thousands of animals, that cannot fly back to an island, to protect a few bird eggs. When I tell people this story that come into my business, they think I am kidding with them, nobody believes that the NPS is that cruel and stupid. I will be attending all your workshops, we are planning a protest at the Raleigh location, with signs and media attention, hopefully being in Raleigh, the state capital. Governor Perdue will hear our side of this story and start to understand the stupidity of this and maybe offer some type of tax relief or refunds for the loss of business that every business on Hatteras Island has suffered since our beaches have been closed for the past two years. Carol Dillon Dawson

Correspondence: "Give the birds a break". How about giving the humans a break for a change! This problem does not remotely include recreational traffic on the beach. If it does so us the proof! The mortality problem has more to do with mother nature as WEATHER, YES WEATHER is your, the bird lover's problem! Who controls the weather, God and maybe this is his way to balance out nature. DON'T FOOL WITH MOTHER NATURE! Leave the beaches be, the birds have been fine since the creation of time and they are now.
 Make them so cause directly related to that which they seek to prevent!

Correspondence: It's Important that we put greater efforts in preserving our planet, which harbors, nourishes, and has been providing for us for thousands of years. Modernization does not mean we can neglect our planet, matter fact it should and must work with it and not against it. If we are truly advanced then we would not have needed to wait this long to realize the importance of our planet and its extremely complex and delicate operations.
 The Quran gives protection to all living organisms, and it only makes sense that it should.
 Peace be with you all

Correspondence: For the majority of my life, I have been a resident and a taxpayer of the state of North Carolina. During that time, I have had the pleasure of traveling to various locations inside and outside of both the state and the country. Through all of my travels, the Outer Banks stands as one of the most unique places in the world.
 However what value is the uniqueness of the Outer Banks, and the joy that it brings to the many visitors each year, if it is inaccessible?
 I travel to the Outer Banks multiple times per year. Given that I live in Charlotte, the trip is not a short one, requiring well over 5 hours of driving in order to reach any specific point. I could not fathom making that trip if the beach access is further restricted or hindered.
 Many places on the Outer Banks require ORV access in order for you to truly reach the beach/destination with sporting equipment and gear, whether it be for surfing, fishing, or other. Eliminating or further hindering ORV access would essentially make many parts of the Outer Banks inaccessible. Additionally, by further cutting off access to different beaches, the beaches that do remain accessible suddenly will have to absorb the overflow of people that can no longer spread out. Suddenly, you have a serene environment transformed into a tourist trap, where huge populations of visitors are relegated to the remaining areas. If the intent is to preserve the environment, then what essentially is now the impact on the beaches that remain open, but are now subjected to overcrowding? Moreover, how many US taxpayers, like myself, will cease to visit because the Outer Banks becomes less unique and more like an over-run tourist town, where swarms of people over-saturate the remaining accessible areas? I will then find it very hard to continue to support any further initiatives by the NPS with my voting rights, given that the NPS will essentially have removed the usefulness of the "park" that I most highly value.
 Ultimately, I find that the proposition should continue to maintain as much open ORV access as possible. I do not find that the speculation by which further restrictions are being imposed reflect any foundation on scientific evidence. There has been no true scientific study connecting ORV use with bird mortality; if I am mistaken, please provide me with an article in a legitimate scientific journal. Additionally, the NPS must continue to expand any studies related to connecting the reduction of ORV access to improvements in species survival prior to implementing sweeping additions to the restriction of access, such as this. I disagree with the use of speculation when implementing such restrictions. There are numerous examples of non-factual speculation contained within "Table ES-1." "Habitat loss?could also occur indirectly" is a statement overflowing with nonfactual ambiguity. Could it occur or does it occur? Also, is there any proof that "vehicular noise could create unsuitable habitat for Seashore wildlife", or is that speculation as well (use of "could" again)?
 I support the protection of the environment, but in this case, I do not believe sufficient factual evidence has been put forth to justify additional restrictions on ORV access. Therefore, I lend my support to "Alternatives A & B", assuming that factual evidence does not exist within unbiased, scientific journals (i.e. not the Audobon society publications, which are biased in this circumstance). If sufficient articles and evidence can be cited, then I will support the additional restrictions of "Alternative C." However, I am not convinced at this point that any such fact-based studies have been completed.
 Sincerely,
 (Thomas) Michael Caldwell

Correspondence:	I believe that the beaches of Cape Hatteras should remain open and accessible to all surfers and fisherman. I am against any beach closures or 4 wheel drive restrictions. I believe there should be a severe fine for any individual using the beach improperly. There is no credible proof that beach driving impacts any of the beach's natural inhabitants. The Audubon society has no real interest in cape hatteras

Correspondence:	I am always in favor of protecting wildlife. In this case, however, I feel the Adubon Society is going way over the line. Visting the Outer Banks has long been a tradition for my family and myself. As a freelance writer and traveler, I have seen many places around the globe and the Cape Hatteras National Seashore is among my favorites. I feel very strongly that keeping access to the National Park is very important to not only visitors, but the local economy. Surfing and fishing are a way of life. Perhaps Alternative C is the best answer, keep areas open but limit ORV traffic. I think there are better solutions than closing the National Seashore off.

Correspondence:	Please do not close the beaches at Cape Hatteras so that we surfers can have access to the surfing areas that I personally surfed for 45 years. Surfers are very eco-friendly and can abide by restrictions but keep the beaches open for us. I cannot say much for the beer-drinking rednecks or the abusive fisherman who fly down the beach just to be driving on the sand, whereas we surfers need the access to surf our favorite breaks which shift with the sandbars. Thank You, Ralph Wyatt

Correspondence:	Where is the EIS for this area? Are there sensitive species living/breeding in the area? There are places on this earth that people need to leave alone. Is this one of them? No one group or groups have a right to disrupt an environmentally sensitive ecosystem. It belongs to everyone. Fishermen have fished out our seas for profit and left by-catch and trash in their wake, surfers demand access to every break but leave their mark on the beach with plastic water bottles and other throwaways. They need education on taking care of our sensitive areas if they want access. It is not just about killing a bird but disrupting these creatures natural rhythms. I vote to limit access to everyone. No driving in sensitive areas, limited by permit access to some areas and no access in areas that provide breeding/feeding habitat for native species is a responsible beginning.

Correspondence:	To Whom It May Concern: I live in Gilbertsville PA. My family has vacationed on the OBX both North, South, and in between for the past 20 years. My wife and I hope to retire there. It is very plain to see to anyone who takes the time to look and listen, that the local folks who live there, some for generations, have a great respect and love for all that makes up this wonderful place. I'm talking about stewardship here. The flora, fauna, everything. The people that live here need to put all these things together in order to make a living here. Tourism and recreation are the main drivers of the OBX economy. I truly wonder, if the tourism trade is eliminated, where the tax revenues will come from to replenish the local, state, and federal coffers. I have read a good bit of the DEIS and am appalled at the lack of concern for the folks who live there. The eventual destruction of their lives and livelihoods seem more important to Washington and the environmental special interest groups than recognizing the same folks for the lifetimes of stewardship that have to date maintained a very balanced ecosystem. In my opinion, the management of these local resources, including all wildlife and their habitats, by the same local folks who have lived here for generations are not acknowledged for their efforts anywhere in the DEIS. Who do the environmental special interest groups think have been safe guarding the environment on the OBX since it was declared a National Recreational Area all those decades ago? Long before there was a Federal Environmental Protection Agency or state environmental agencies. Tell me who maintained the local ecology during all those years? The answer is easy, the folks that these same special interest groups are trying to force out of their livelihoods, and eventually their homes, so that the OBX can be rescued from their care. After all these decades of stewardship what could the locals possibly know about maintaining a thriving ecoculture? This				

DEIS would seem to indicate that these folks have no idea what it takes to maintain an optimal environment for local flora and fauna, let alone fishing. The National Seashore and Recreation Area is not a test tube for environmentalists. It is a National Recreation Area that was meant to be shared and enjoyed by all our country's citizens. In this regard I have, as a supporter of the Outer Banks Preservation Association, contacted my federal senators and representatives and expressed my concern over what is taking place on the OBX. Someone has to have some common sense and see that these special interest groups are trying to turn the OBX into a Discovery Channel experiment in isolation. The removal of man from his environment in favor of turtles, birds and environmental studies. Not a peaceful co-existence that has been going on for hundreds of years but a big brother takeover in the name of wildlife and habitat protection. I can not stress strongly enough that all good citizens should do all that we can to preserve this place and its people and way of life for generations to come. Thank you for your kind attention to my comments.....EOB

Correspondence: I have been going to the Outer Banks for the last 39 years. While traffic has increased greatly, it is still a wonderful place to go to. We currently have a cottage in Avon.
 Closure of additional beach access would take away a lot of pleasure and enjoyment that this area brings. The parks are for the people of the US. All of the people. While it is very important to have places that stay wild and protect wildlife, the Outer Banks have been open to people since its creation. If the Outer Banks was the only place for wildlife to live without human contact that would be one thing. But it isn't. There are miles of beaches off of the Virginia coast on the Eastern Shore and Portsmouth Island right next door are extremely restricted.
 There are few places in the US that allow people to drive on the beach, why take it away.
 If funds is the main issue, then put into place a permit. It would create funds but still allow access. The full time citizens of Avon, Buxton and Frisco can not afford additional cut backs in access.
 SAVE THE BEACHES FOR HUMANS!!!

Correspondence: We are against any further closures of beaches in the Cape Hatteras National Seashore. My wife and I own two residential properties on Hatteras Island. The one in Frisco is strictly for investment, and is a full-time rental property for visitors. The one in Frisco is where we stay when we visit, and is available for rental at other times.
 The restrictions on beach driving have been a significant detriment to our rental seasons, especially in the Frisco house, which caters to small families and fishermen. I know it has also negatively affected many businesses in the area, as we know many locals and have been coming to Hatteras Island for over 35 years. Tourism is the major industry in the area, and the pending restrictions on beach access can do nothing but further damage it in a still-weak economy.
 The restrictions in effect prior to the latest regulations were sufficient to keep the beaches accessible yet controlled. There was a de facto code of etiquette on the beach, which was in effect, to quote the lyric of a popular song of a while back, "Everyone agrees that everything will work out fine." The people who live on and visit Hatteras haven't changed; the desire to over-regulate their/our beach access has.
 Wildlife have fared no better or worse since the closings, despite the wishes of the Audubon supporters - an organization I supported for 30 years but which I no longer do because they are on the wrong side of this issue. Not every place at every time can be 100% purely ecological, but the new regulations are draconian in most instances. Those in place previously were working to maintain a balance between people and animals. Please return to reason, and re-authorize them.
 Thank you,
 Paul Payton

Correspondence: There is absolutely no hard scientific data to support closure or limit access to the Cape Hatteras National Seashore. As evidenced by your data some of the sequestered areas of protection have not had nesting(endangered) bird species in recent years.
 It is reasonable to assume a limited benefit to beach wildlife and birds his plan is enacted. On the other hand it is very reasonable to deduct, based on personal contact with local business owners and residents, that human existence on the island would become endangered!
 Humans (beach driving) and wildlife have cohabited very well for well over sixty years. The vast majority of sportsmen are ethical and will treat nature with respect. This area, both the wildlife and humans will not benefit from more government intervention.
 I respectful request that the NPS drop this plan or any part of it so that both wildlife and humans can thrive.

Correspondence: Access to the beach by ORV is crucial to so many people who come to the outer banks for family vacations and fishing. Please consider NOT closing these beaches for the many who have come to love and enjoy it so much. With the world and economy in the state it is today, there are few simple pleasures that all people should be allowed to enjoy. Our nature. I personally think there are few people who want to harm the birds, but there is so much more there to enjoy for so many.

Correspondence:	<p>Thank you for putting so much time and effort into the Management Plan and EIS.</p> <p>I have reviewed much of the document and wish to give my opinion that while I certainly want the NPS to maintain a high level of resource protection for the National Seashore, I also feel the various buffers should only extend to a distance from the water that will allow use of the seashore by people, year-round and for all of the shoreline.</p> <p>I do understand that ORV use should be managed and at certain times of the year be more severely controlled to help ensure protection of the dunes and the creatures that live there. However, from personal observation from the past 30 years of visiting Cape Hatteras at least once per year, for up to two weeks in April and May, I just do not understand the need to now completely close much of the beaches to people. We have as much right to use the beach as any bird or animal.</p> <p>I feel if the true aim of resource protection for nesting birds is to help these birds successfully breed and raise their young, an aggressive program aimed at controlling predators, along with maintaining a reasonable buffer around the dunes where they nest will do more to help than simply closing the beaches.</p> <p>Since I do not generally visit in the summer months when turtles are coming ashore I will refrain on comments pertaining to protection of turtles.</p> <p>Thank you. Correspondence:	<p>This really makes me sad that my family tradition for the past 20+ years may come to an end if driving on the beach is no longer allowed. My family looks forward every year to this vacation just riding up on the beach and unloading the Jeep. My mother has bad legs so is unable to walk on the sand to access the beach any other way, even the boards going to the beach does not help since she still needs to walk quite a distant to find a spot without people around you. I do understand that there are people out there who do not follow the boundary lines, it is these people who are going to end it on the families who look forward to this every year. It is not just the tourism that will be affected from these closures but also the local fisherman who we share the beach with when we vacation. Our vacation is the Outer Banks and I am sure there are a ton of people who go there every year too just because of the convenience of driving on the beach and the fishing. I love not being on top of people at the beach and knowing my kids know how to enjoy a vacation without all the bells and whistles that you have in the Nags Head area. Please take my comment into consideration. I love the OBX and do obey the closures on the beach for the bird and turtle nesting. Just somebody trying to save the beach from being closed to the public and our family vacation. The Kashlak Family Baltimore, MD</p>

Correspondence:	<p>As a 56 year old native of North Carolina I have very deep roots to the Outer Banks, ie: Hatteras Island especially. Although my current residency is in central N.C. much of my family still resides in much of the area that I do visit often. After a way and manner of living for people on the island for some 60-70 years or more, suddenly NEW beach access regulations came about stopping beach recreational activities, especially my favorite fishing, all because of special interest groups with very deep pockets?. in the millions wanting to preserve a bird not even endangered. Although perhaps up for discussion, quite a few have contradictory but, scientific documentations that much of the "special interest groups" evidentiary initial presentation was heavily fabricated in an effort to obtain the desired results. In reality -the special interest group- with very deep pockets seem to outweigh the residents with -not so deep pockets- who was at the time not able to complete satisfactory rebuttal because of such a fabricated presentation not expected by the plaintiff. The Federal Judge bearing witness to the "plaintiffs" very expensive attorney seem to have bit hook, line, and sinker. In effect the restriction as current allows a bird who has survived for years before to suddenly have the run of the land with more rights than any human has ever had.</p> <p>Since, I have witnessed business owners struggle to pay mortgages. Seen restaurants that have closed, resort shops with for sale signs in the window while there competition has already gone out of business. I have seen hotels/motels during peak seasons look like a ghost town while seeing other new arrivals of far away expecting a few days on the beach learning the news, become aggravated and leave quoting : "I'll never be back to this place again". As for myself and family we have visited about 75% less than ever before over the past 3 years. This means local proprietors of restaurants, tackle shops, gift stores, ect. simply do not get our business of the past? some 75% less and that is called a man made disaster. Birds and humans have survived</p>						

0008808

together since the beginning of time. Without going to extreme overboard measures and with simple common sense supervision, we still can and therefore should not close beach access recreations during spring and summer peak times.

In closing let me leave remembering a statement my Dad said many times, whom died on the very beach now under attack while fishing in 2002. Quote: "We are the most supreme educated people of the world but, we everyday are our own self destructing enemy caused from our own stupidity"?. Unquote. Tootie Palmer 1927-2002

Correspondence: I have to believe there is a better solution to environmental concerns than shutting beach access, especially when it affects so many people both in and out of your region. As one who loves OBX and has been a persistent vacationer in the area for over 15 years now, I've always been impressed by the care everyone takes of the beaches...much more so than in other areas along the East Coast that we've visited. It's obvious the people who love OBX take care to preserve the region. I'm sure that care can be translated into positive solutions that do not involve denying folks the beauty and enjoyment of the beaches concerned.

Correspondence: I am privileged to be a property owner on Hatteras Island at the Cape Hatteras National Sea Shore. I purchased my property with a view to staying there extensively when I retired because I love the beach and the beauties of nature in this unique environment. I have been privileged to volunteer to watch sea turtle nests. I have reported some sea turtles that have been distressed in the winter and was gratified to see them rescued. With that in mind, I was delighted to see stricter court ordered restrictions on beach driving during nesting season for sea turtles and shore birds. I have witnessed the dramatic increase in these species and of successful hatchings since the court orded restrictions. Furthermore, my experience of beach driving enthusiasts has been that they tend to create a nuisance for those of us trying to quietly enjoy the beach. They create extra litter and air pollution. The deep ruts their vehicles make in the sand are not only hard on the wild life, they are hard on ankles and knees for those of us who to walk along the beach. We are also entitled to access to the beach. Furthermore, during the time my house was on a weekly rental program, I found no difference in rental volume before and after the court ordered beach access restrictions. I have been sorry to see business people bamboozled into thinking that good environmental management is bad for business. Please preserve the beach for the wild life and the tourists it draws to the beach. Please preserve the beach for those of use who have purchased beach property to enjoy the sun, sand, and the beauties of nature. We are the true majority of people who enjoy the Cape Hatteras National Sea Shore.

Correspondence: Although I don't live on the Outer Banks I have been a regular visitor there since 1965. I have read the draft off-road vehicle management Plan and I think that of all the options presented alternative D would be the best compromise, although I also believe that all vehicles should be banned from the beaches except for service vehicles and in emergencies. I realize that driving on the beaches used to be necessary for transporation, but with the increase in population and in the number of visitors, driving on the beaches is dangerous for the habitat and diminishes the ocean and beach experience for all. Vehicles if not completely banned should be allowed only in very restricted areas.

Correspondence: Thank you for the opportunity to comment. I would like more information on the "science" used to close off areas of the beach for nesting birds and turtle eggs. I think the Park Service has done a good job in the past sectioning off areas of concern. Thank you. I am very concerned that pedestrians and ORV users are being penalized. I am also concerned that hundreds of animals have been trapped and either relocated or killed to "protect" a few nesting birds. "best science..???" The public has to be more aware of this. I am particularly concerned that free roaming cat tracks are found all over the sea shore.. I am concerned that the economy of the area is being compromised , in the obscure interest of "best science"... I am concerned that the designation of the national seashore areas in Hatteras etc. that are "Recreational" areas , are being targeted by groups and organizations..like Audubon society, Environmental Law groups ,etc. who have no idea about the original intent of the designations. And do not understand what the areas in question are used for. We own a rental cottage in Hatteras, and do not want access to our loved areas being determined by a judge and people who have no stake in or interest in the beach. Please keep the beaches the way they were intended to be used. Do not be influenced by unknowing "scientists" and "environmentalists", who know nothing except the propaganda forced on them. Let the Park Service run the beaches the way they did in the past...not the way they are being forced to at present. The "consent decree" has little to do with "consent" but more to do with coercion..{spell??} Thanks again, Bob Mead, Arlington , Vermont, and Hatteras , NC

Correspondence: We have one of the largest breeding populations of western snowy plovers on the Pacific Coast, so I can relate to the struggles out there. One of the compromises here was to designate an area for off road vehicles and the rest is fenced off and protected. If people want to drive on the beach, they should pay a fee which would support the monitoring of shorebird populations and enhancement of habitat for them. Enforcement is a key element as well, as one disgruntled tourist can do a lot of damage in a short amount of time. If people really want the experience, then allow corridors and access points and let them walk the rest. My argument is always for sharing the resources, but we half to acknowledge that the birds have rights too. Please do all that you can to limit destructive vehicle use and protect the environment. We need to save ourselves from ourselves.

Correspondence: We visit Ocracoke twice a year. We love the beauty of the island and do our very best to take good care of it while we are visiting. However, we do enjoy being able to drive down on the beach. It is one of the reasons we go to Ocracoke because it is so charming. Please consider that this is an attraction to Ocracoke. The people that visit Ocracoke love it for its charm and natural environment. We need to be able to enjoy and absorb the environment we visit.

Correspondence: My family and I have enjoyed coming to Hatteras Island for many years. The primary reason we come to Hatteras is the beach access by ORV. We carry a ton of fishing rods, beach canopies, coolers, grill, and lots of food. If beach access is denied to ORV's, then our prime reason for coming down is gone. Thus we will be relegated to spending all of our vacation money at a water front hotel room at Virginia Beach. Hatteras has such a rich history of beaches that are easily accessible to ORV's that it is a shame to end such a storied tradition. The best fishing spot in the world, in my opinion, is Hatteras Point. I heard that one option is to leave vehicles at the designated parking places by the ramp accesses. When is the last time you have walked from the parking lot to the water's edge in June, July or August? When a decision is reached on beach access by ORV's, I hope that you will take into consideration the flood of bad publicity, the enormous impact to the Island's economy and the loss to future generations of the special times we have all had with our ORV's parked close to the water. If the ban goes into effect, make sure that Park Servive vehicles are included in the ban. Then you will enjoy the experience of having to walk to the beach like everyone else. Be carefull though to not to step on a turtle or piper clover.

Correspondence: My family and I have enjoyed the Cape Hatteras National Seashore for well over 20 years. As I am only 29 now my fondest childhood memories are of the seashore. I now wish to share those same experiences and make the same memories for my children (ages 10, 9, 6, 6, and 2) As a father of a large

family and also an avid angler ORV access is a primary concern for my family and I. Without the use of our vehicle we would not be able to enjoy all of the things the seashore has to offer. Without the use of our vehicle I would not be able to tote 5 small children, beach chairs, fishing gear, sandcastle toys, metal detector, boogie boards, beach towels, coolers and all of the other gear necessary to enjoy a day at the beach. One of the draws of Cape Hatteras are the open beaches, the lack of boardwalks, oceanfront restaurants and other eyesores that have taken over most of the other beach resorts nationwide. Now it seems as though CHNS is being punished for their desire to keep the beaches free from this sort of commercialism.

I fully support resource protection, and as an outdoorsman respect and enjoy nature and would never partake in the destruction of habitat or species native to the land I enjoy. I do feel however that the current plan preferred by the NPS is light on protection of resources and heavy on prevention of recreational use of these beaches. One avid outdoorsman enjoys the natural environment in which they encompass themselves. I am unnerved by the feelings of nature vs. people that special interest groups have caused by forcing such restrictions on the seashore over the last couple of years, never before have the residents and visitors of the seashore ever resented or taken these creatures for granted, and have enjoyed their company and looked out for them ever since the seashore has been inhabited.

From a personal standpoint of that of a father, hoping his children will grow up with the same love of the seashore and memories that I have enjoyed all these years, and as a way of protecting the shorebirds for future generations to enjoy and marvel at I put my support behind the Coalition for Beach Access DEIS Statement. I believe this represents the best options to protect both resources and beach users.

The Coalition for Beach Access DEIS Statement can be found here: <http://www.obpa-nc.org/position/statement.pdf>

I appreciate your time in reading this,

Sincerely, Christopher A. Tolliver

Correspondence: I'm writing today to request your swift action and fervent support of [HR-718 /S-1557], a bill regarding preservation of public access to the beaches of the Cape Hatteras National Seashore Recreational Area.
The National Park Service has for decades done an exceptionally capable job of managing our nation's first National Seashore. A delicate balance exists between insuring and protecting public access and wildlife habitats. Management authority belongs in the hands of NPS. Passage of this bill restores that authority and with it that balance.
There is no place quite like it yet both its past and future is in peril without your support. The currently imposed Consent Decree is based upon flawed science with no peer review and supported only by well funded special interests and experts without credential. Along with missing its goal entirely it succeeds in polarizing while ignoring balance and excluding the stakeholders. Recreational enjoyment of this rare national treasure and public access to all Americans is being denied. A local economy is being devastated and the historic fabric of a community woven over hundreds of years is threatened at additional expense to taxpayers.
Recent National Park Service Resource Management Field Summary Reports confirm that the first full season of park management under the Consent Decree has had no measurable positive impact upon wildlife habitat in general, or bird and turtle nesting results specifically.
The National Park Service has historically been the protector of the National Seashore's natural resources while promoting safety and minimizing conflicts among its various users. I urge you to return management authority of the park to those best qualified. In the interest of fairness and good common sense I ask for your vigorous unqualified support and immediate action.
Sincerely,
Michele Tidd

Correspondence: Dear NPS
After carefully reviewing your purposed plans for ORV Management on Hatteras Island I strongly disagree with Alternative Plan F in your DEIS. I agree that the resources of the national park need to be protected but I have an issue with the face that Alternative Plan F mainly only addresses the Human interference to the bird nests which as your study states only represents 3% impact. It fails to significantly address the causes for the 83%(54% mammalian predation 29% storm/Lunar tides) of nest failures. In order to protect these nests, the main issues should be more significantly addressed. In order to limit the predation, you are trapping and killing animals that pose threats to the nests. Why not eliminate the habitat for these predators and force them to find other areas away from the beach to live? There is a huge area inland of Cape Point that has slowing over time become restricted to human access thus allowing sand dunes and vegetation to flourish. These dunes and vegetation provide ideal habitat for the very same animals that you are trapping and killing. By flattening the area and allow visitor access solely in the non breeding time November- March you will eliminate places for these predators to live effectively protecting the nests much more effectively. By solely trapping and killing these animals you are not trying to deter any new predators from accessing the area close to the bird nests. By closing these areas off over the years and allowing the dunes and vegetation to flourish the birds have been forced closer and closer to the Surf Zone thus moving closer and closer to danger. By flattening this area you will also be creating possible habitat for these birds to nest which will be further away from the ocean which represents the 29% of failure rates. By encouraging and providing safe habitat further away from the ocean you will not only be protecting the bird nest but also moving them away from the main access points for visitors thus allowing visitors and bird nests to thrive is this wonderful national park. I find it very difficult to understand why your preferred Alternative Plan F does not address any of these points. If you are truly trying to protect the species why not address the main threats to them first? Please read these comments and truly look at the suggestion I and many others have and will continue to make. The Cape Hatteras National Seashore is a recreation area that has and hopefully will continue to be enjoyed by generations of visitors. Please do not eliminate these accesses when there are better ways to help visitors and nature co-exist in the park.

Correspondence:	I strongly believe the beaches should be kept open for 4x4 access. This is vital to the OBX. One of the great things about the place and a beautiful way to get some solitude in a unique part of our country. The bird population is not nearly as effected as they want you to believe and the people pushing for 4x4 ban on the beaches are completely unfamiliar with the realities of the situation. They do not utilize beach access and realize how important it is for many people to enjoy their time outdoors.

Correspondence:	Please try to do everything possible to keep the Outer Banks beaches open for driving. The main reason my family and I visit is because we can drive out on the beaches. We enjoy being able to pull up to a spot right there on ocean front to fish, tan, or just enjoy the sound of the waves. It is sooo much more appealing to be able to park at the place you're going to be for the day. Having to carry chairs, towels, coolers, umbrellas, baby items, tackle boxes, fishing rods, etc is extremely cumbersome and being able to drive and park where you are going to be situated makes it that much more enjoyable. If we had to lug all of the aforementioned items out onto the beach from a parking lot, well we just wouldn't go. We drive over 3 hours to visit the Outer Banks and Hatteras area every year for a week stay and then we also visit on numerous weekends. If we were not able to drive on the beaches then we would find somewhere else to visit and I feel like there are many others that feel the same way. The decreased tourism would be detrimental to the local people and businesses as they make their living on tourism. Everyone is always so pleasurable to be around there and always willing to help out. The Outer Banks is a place of enjoyment, peacefulness and relaxation that you can't find many other places. Being able to drive out on the beach is the main contributing factor to the enjoyment of the Outer Banks. Whenever someone thinks of the Outer Banks, they automatically think of driving on the beach and I would hate for this to be taken away from the area. I understand the potential dangers to the wildlife, but most everyone that visits is respectful of the wildlife and their habitats and I do not think they will cause harm to them. Please keep the Outer Banks beaches open for driving, it has a huge effect on so many people. Thank you.

Correspondence:	Please re-open beach driving and keep it that way. I used to make 10-15 weekend trips a year to the outer banks but now I don't feel the need to come the extra miles. Living in Virginia I have the beaches of Delaware, Maryland, Virginia and North Carolina within a few hours drive and before the restrictions would ALWAYS choose the outer banks of North Carolina. Not any more! The beach restrictions have cut that 10-15 trips a year into 2 -4. I now go elsewhere the majority of the time. I feel sorry for the local motel, restaurant/bar and shop owners. They are the ones hurting from the beach closers. I still spend my money it's just in other markets now.

Correspondence:	It is imperative that these beaches stay open for people to drive on. One of my favorite memories growing up was driving on the sand with my eyes fixed on the ocean, looking for a good spot for a surf. My dad and my brothers would pile in our truck, pack our boards, pack a lunch, and set off. It was like our own mini-adventure in a way, harkening back to the pioneer spirit of early surfers and early Outer Banks residents alike. Do not take away this integral part of the island to placate some overzealous (albeit well-meaning) environmentalists. I think what the Outer Banks stands to lose from shutting down the beaches is too great both culturally and economically. The Wright brothers probably bothered a few animals with their forays down the dunes, but look what their accomplishment has meant to the island, state, and world as a whole. Obviously driving on the beach will not lead to another great leap in human technological advancement, but like the first flight, it represents a trademark of the Outer Banks experience that is too important to be taken away. Thank you, OBX tourist and hopeful future resident

Correspondence: I am a strong believer in saving the outer banks as a natural wildlife area. I would be appalled to see any further development as far as housing and business. Driving on the beach provides a perfect way to get to a stretch of beach that is not full of people. Finding a serene place is one of the reasons people come to the outer banks. Essentially, closing off these areas to the public would prohibit them from ever seeing the outer banks in their true form. I would be agreeable to a line of demarcation that would not allow vehicles near the dunes, but would allow them closer to the water. Please consider other options such as the one I mentioned. Thank you. Linda Lambert

Correspondence: Large, Inflexible Buffers (page 121-127)
I disagree with the beach closings due to oversized buffers. Please consider the tax paying fishermen and women by allowing for ORV driveby areas to pass a protected area while still ensuring the recreational value of the Cape Hatteras National Seashore Recreational Area.
Predator Management (page 124-125)
I disagree with eradication of certain species in order to protect others. God did not plan it that way! The cruel slaughter of foxes and raccoons is unacceptable to me and should be illegal-at the very least-think about it-the government is deciding who should live and who should die!!
Excessive DEIS Hatch Window Closures Restrict Access(page 125)
I disagree with the "close it down" approach again. As stated above. ORV corridors should be provided and if this is not possible the nests should be relocated to protect the species very much like the DEIS does on a regular basis for other reasons....(storm, high tide line, etc)
ALTERNATE F
The rules, policies and procedures were not reviewed nor approved by the participants within the Reg-Neg process and ALTERNATE F as such should be ruled out entirely!

Correspondence: I love going to the OBX. With the access rules that have been in place the last two years I have not been going to the national beaches in the OBX. It is a shame to limit the access to the beach to the ones who are responsible and view themselves as a Sheppard of the ocean. If only the outer banks would follow the same rules that New Jersey created for Island Beach State Park (ISBP) you would see me at your park more often then now.
By following ISBP you would be creating revenues for the park service to protect, maintain, protect the beaches and habituate all animals. By charging for beach buggies to use the beach you would be able to make sure that the drivers are aware of the park rules and the vehicles are in proper working shape and have the items necessary for driving on the beach. This has all been missing since I started going to the national park in OBX since 1987.
When applying for a beach buggy permit in New Jersey I learned more about driving on the beach then the previously 15 years that I exclusively went to OBX to drive on the beach. I hope that matters concerning beach access in the park service at OBX get fixed as it has been broken for way too long.

Correspondence: Dear Superintendant Murray,
Thank you for the opportunity to ask a few questions concerning the Proposed DEIS plan.
1. In the perusal of the plan I noticed several references to the Buffer zones for the nesting of the piping plovers. The requested circumference of the "Buffer Zones" is stated as 1000 meters. I would like to know what specific scientific findings recommend such distances and the reasoning for 1000 meters as opposed to less, more reasonable,distances. What was the justification for the distance and where else was this distance tested and found most suitable than a lesser amount of buffer.
2. The rules restricting the presence of any animals was attempted to be stated in the DEIS plan. What are the specific areas noted and for what duration are those restrictions proposed? Does this restriction include the whole seashore including the villages? Does this proposed restriction exclude the villages and only apply to the beach? Are the animals permitted in our vehicles on the beach or only in the villages. Can we transport our animals in our vehicles to and from the villages or on and off the Islands?
Thank you for your consideration

Correspondence: I disagree with the proposed NPS Preferred Alternative F. The restrictions are too aggressive/restrictive and should be reconsidered. I have a real concern in 2 areas.
Too restrict ORV on the NPS seashore would take away the physically disabled pedestrians their right to access the areas year round. I don't have a

problem with certain time limitations due to endangered species breeding or other key events that would damage their ability to continue their natural existence.

The "Coalition" for the most part are local to the area and would be greatly affected by the restrictions that are proposed by the NPS Alt F. The economic impact would cripple their ability to continue to be a part of such a wonderful natural resource that all should enjoy. These individuals know what's going on in these areas and should be given more of a chance to defend their stand. I doubt that many of those who want this area shut down have ever set foot there.

Please consider my comments.

Thanks, Scott Leonard

Correspondence: I have chosen to comment on a very a contentious issue, The Piping Plover. In addition, I will also comment on the punishment aspect of the Consent Decree.

I am a retired scientist (entomologist) who greatly appreciates nature and respects wildlife. Throughout my entire career I have been concerned with good data concerning many scientific projects. Nowhere in this voluminous document have I seen any concrete data, which incriminates Off Road Vehicles (ORV's) with the decline of Piping Plover (PP) populations on the Outer Banks (OBX) of North Carolina.

The DECIS lists the ebb and flow of PP populations over the years but no concrete data is presented which links population decline with the use of ORV's. Rather, there is incrimination by inference. As mentioned in the DECIS, many factors affect Piping Plover populations such as climate, predators and other natural phenomena. I could not find any concrete data which points to ORV's rather than climate or say predators instigating the decline of PP numbers.

North Carolina is the southern most range of the PP. No PP's were found in South Carolina during the 2008 survey. A clear majority of the population was found in the northern states of Massachusetts (566) and New York (443) while 64 were found in North Carolina. The state of Maine on the other hand is the most northerly range of the PP where 10 were counted in 2008.

This population distribution can be graphed into a bell shaped curve i.e. Normal Distribution graph. Variability exists in every biological population. The greatest variability in the PP population exists at its extremities (North Carolina and Maine). The least variability is found in the states, which harbor the largest numbers (Massachusetts and New York). Statistically speaking, it is very difficult if not impossible to have a high degree of confidence in North Carolina PP numbers used to make important decisions on beach closures.

As a result of my above commentary, I strongly disagree with the National Park Service (NPS) decision to regulate ORV traffic and close beach access based on PP population numbers. I will be one of the first people to applaud ORV beach closures if shown concrete evidence that ORV's are to blame for reducing marine bird populations.

The other issue I would like to comment on concerns the Consent Decree decision of extending beach closures based on vandalism. I was astounded to ascertain that the punishment of extending beach closures is based on absolutely no evidence. If I am not mistaken, North Carolina is in the USA and not China or North Korea. There is an obsession in this country known as "Due Process".

There are radicals on both sides of the fence. Advocates for beach closures may have caused the vandalism (Defenders of Wildlife and/or the National Audubon Society) as well as groups (NCBBA and/or OBPA) opposed to marine bird regulation by the NPS. It is unjust and unfair to arbitrarily punish one group while another group is deemed to be without guilt.

Correspondence: To Whom it May Concern:

I have been traveling to North Carolina's Outer Banks for the past 20 years, since I was a child with my mother, father, & brother. Now that I am a father, I continue to travel down each year with my family to share this special place with my own family. There are many great surfing breaks along the stretches of beaches that I have enjoyed for sooo long. It would be a travesty to loose this place. I am a father, a surfer, a fisherman, & a waterman. I think that this proposal is outrageous and should be turned down immmediatly. To deny access to the Outerbanks would be unconstitutional. If access is denied, I will never make the trek down to North Carolina again. North Carolina will loose a lot of commerce and business and I guarantee that North Carolina will absolutely not have any of my business ever again!!! Please Vote NO on this issue.
Sincerely, Chad Broder East Meadow New York

Correspondence: Ladies and Gentlemen,

While we (Mrs. McCarthy and I) currently reside on Fire Island, NY(within the Fire Island National Seashore, (FINS)) we own property in Waves, NC and a home in Virginia Beach, VA.

My comment is more general in nature and addresses the tenor of the Draft Environmental Impact Study which, when read objectively, displays a clear bias against ORV use and for environmental concerns real or imagined. Additionally the tenor is somewhat condesending which is typical of documents

written by bureaucrats. I would expect our US Department of the Interior to require its employees to maintain a more neutral position on issues as sensitive as the "Rights of Individual Americans" to continue to use the Hatteras Island beaches as they have for decades.

My second point is that THE PIPING PLOVER POPULATION IS VERY NEARLY AT THE FEDERALY MANDATED REMOVAL NUMBER OF 500 PAIR OF BIRDS. PIPING PLOVER WILL BE REMOVED FROM THE "THREATENED" LIST IN THE VERY NEAR FUTURE. So the Hatteras Island National Seashore (HINS) folks have developed a plan based on a "Threatened" not "Endangered" species that is about to be removed from the Threatened and Endangered list all together. What kind of sense does that make? OH, Yes they must be MONITORED for an additional five years but that is just that, MONITORED, nothing more. Well as they have done here at FINS they are aware of the PLOVER Issue so they have recently introduced a replacement "Threatened" plant, the Sea Beach Ameranth. Sound Familiar? You bet it is. All in the name of protecting what has been and is the property of the citizens of this great country. What we are seeing is a concerted effort by a small group of bureaucrats to impose their will on the people of this region. I have yet to see the REAL SCIENCE behind any of their recommendations. For Example: WHO says the PLOVER breeding season begins in March as stated in the EIS? Here in NY (Further North) it begins April 30th. How is that when we know the birds migrate from north to south? Why do they use "exlosures" to keep out predators? Why not collect the eggs and incubate them till they fledge? Where is the SCIENCE that says allowing a couple of birds to live naturally is better than having hundreds live via an incubator?

The Environmental EXTREMISTS have won here in NY. You will not like what is about to happen to your rights if this DEIS passes in any of the present forms (A thru F).

Respectfully, LTC & Mrs. Justin V. McCarthy, Jr. USA (Ret.)

Correspondence: i believe that responsible driving on unpopulated beached in the outer banks is one of its major appeals, especially from users that come from populated, over-governed beaches up north, like in ny and nj.
i am fortunate to be from east hampton, ny and we are allowed to drive on the beach year round, with limitations on certain beaches during peak season. it works out great and contributes to fishing, surfing, camping, and other activities.
many people compare east hampton to cape hatteras in that the ocean and the sounds (bay) are so close divided by a strip of sand. it is a major appeal that is remains uncrowded and accessible for most of the year.
please keep the outer banks appealing...thanks.

Correspondence: This is a test message to confirm that we are able to successfully communicate with your office via your webform. There is no need to log or respond to this message. You can disregard the remaining message, unless you want information about why such test messages are necessary. There is also no need to add the email address associated with this test (webformtest@convio.com) to your office's email lists.

This message has been sent by Convio, one of the leading providers of online advocacy communication services to nonprofit organizations. Our clients include many of the country's largest public interest groups, trade and professional associations, labor unions, higher education institutions and corporations. These groups use our software to publish web pages that enable their supporters to send messages directly to their elected officials. Each message sent by our system has been initiated and authorized by a constituent, always contains the sender's name and home address, and has often been personally edited by the constituent.

Regular testing of webforms is necessary because there are no standardized protocols governing communications with the offices of federal, state or local officials. In contrast with email and fax, webforms allow each office to require different information or steps to successfully transmit a constituent's message to their elected official. Moreover, webforms are often changed without notice, and these changes require us to update the custom connectors we used to communicate with each office. If your elected official is a member of the U.S. House of Representatives or Senate, we have begun working on a project under the auspices of the Congressional Management Foundation to develop best practices and promote a standard communications protocol that will help facilitate your management and processing of digital communications.

We apologize if this test message has caused you any inconvenience. If you have any additional questions or concerns regarding these tests or online constituent communications generally, our Director of Engineering Services, Joseph Poirier, would be happy to speak with you. He can be reached at (512) 652-2665 or at joseph@convio.com.

Correspondence: Dear Park Service,
I do not understand how TCP information was not included in the DEIS. I spent a little less than an hour on the internet and here is what I found as posted on the nemuseumofhistory.org/nchh/amerindian.
North Carolina American Indian History Time Line
Pre-Sixteenth Century American Indian History Time Line- 700-1550 A.D. Many groups of American Indians live in the area now called North Carolina. These include the Chowanoke, Croatan, Hatteras, Moratoc, Secotan, Weapemoc, Machapunga, Pamlico, Coree, Neuse River, Tuscarora, Meherrin, Cherokee, Cape Fear, Catawba, Shakori, Sissipahaw, Sugeree, Waccamaw, Waxhaw, Woccon, Cherawah, Eno, Keyauwee, Occaneechi, Suponi and Tutelo Indians.
1584
Sir Walter Raleigh sends explores Phillip Amadas and Arthur Barlowe to North America in search of potential colony sites. At Roanoke Island the explorers meet American Indian Wingina and finds the site excellent for settlement. They return to England with two Indians, Manteo and Wanchese who learn English and are used to create publicity for Raleigh's colony.
From the accessgeneology.com/native/northcarolina site:
Hatteras-Meaning unknown. Location-Among the sandbank about Cape Hatteras east of the Pamlico Sound and frequenting Roanoke Island.
Village-Sandbanks of Cape Hatteras History - Lawson (1860) thought the Hatteras showed traced of white blood ... In 1762 the Rev. Alex Stewart baptized 7 Indians and the mixed blood children of the Attamuskeet, Hatteras and Roanoke tribe.
Connection in which they have become noted- The possible connection of the Hatteras with the Croatan has been mentioned and their name has become perpetuated in the dangerous cape at the angle of the outer sand islands of their old country.

0008815

It seems to me,if there is historic documentation of the Hatteras Nation noting they lived on the cape of the outer sandbanks, and their blood line mixed with Sir Raleigh's colonists then, many of the people here, on Hatteras Island today, have historic as well as cultural properties in and about them, also. And since Native Americans are perpetuators in keeping their history & culture alive in their present, daily lives you can be sure the culture and history of the people of Hatteras Island perpetuate the same.
Thank you for your time on this matter.
A.K.

Correspondence: To whom it may concern: My family and myself have vacationed on the Outer Banks for the past thirty (30) years. I disagree with the proposal to limit ORV travel at Cape Hatteras National and Recreation Park. My family has always adhered to the regulations that are posted, we value what the Park has to offer we show respect for wildlife and foral growth never to distrub or pick. We have piniced on the beach and fished taking what we bring in back out and depose of properly. As a Vietman era Vet who believes that the Park is for all to enjoy.
Over the years walking has become difficult for me to walk long distance hense my need to be able to drive on the beach. I feel that the restrictions being placed on the Park will hamper me and my fellow vets the enjoyment of the park by limiting our access to the beach. I am will to work with the Park to come up with a soluation that would benefit all.
Sincerely your;
Leo J. Carmosky

Correspondence: My family and I are long time visitors of the Cape Hatteras Seashore and look forward to the peace and serenity we find while visiting the island. I have been visiting since 1980 and return annually for vacation. One of the primary reasons I/we enjoy the island is the ability to access the ORV areas and the benefits that come with that ability. This includes many different areas of Cape Hatteras and Ocracoke. From Waves to Avon, to the point at Buxton, I find that it brings me closer to nature and to the way those beaches were enjoyed decades ago. Growing up in Virginia Beach, I much prefer to quite nature of the ORV areas as opposed to crowded pedestrian access beaches. Myself and my family (of five) included, consider Cape Hatteras to be 'God's Country' and not having easy access to these areas would prohibit my family from enjoying the beauty and serenity of the seashore. I urge you not to prohibit access to the ORV areas during peak summer months. While I agree that we must protect the coastal area including its most precious inhabitants, having a balanced system of education, accountability and enforcement would be the most appropriate method of doing so; promoting the viability of the wildlife protection, using funds collected from permits (short and long term) to maintain the shoreline, and enforcing the adherence to the ORV guidelines.
Having said that, I absolutely agree with increasing the education of those using the ORV areas, limiting access to those that have completed an educational program and acknowledged their responsibilities in doing so, and having tight oversight of those areas are warranted. Prohibiting access to those areas, on the other hand, are not warranted, nor would they benefit the balance between growth, tourism and respect for this national treasure. I have witnessed careless or perhaps, clueless user's of the ORV areas and understand the damage that such individuals may cause. I also have witnessed caring and concerned user's, such as my family who carefully observe the ORV guidelines and who take pride on doing things like taking the children on a walk with a goal of removing all trash from the areas around our vehicle. Let's work to educate individuals, promote the protection of the inhabitants, self manage the areas, but not limit the area to those who care deeply about them.
In closing, I would urge you to not prohibit access (other than security/active breeding or nesting areas) but, rather, teach people fo respect and care for them. Initiate children and family programs such as a turtle nesting education walk, 'make better than when you arrived' drives, post signs that will serve to remind and promote this needed balance and work to empower visitors to make the changes that are needed. I should also add that being a spiritual man, the seashore of Cape Hatteras are perhss the most awe ispiring place on this earth for me. I proposed to my wife their, I have introduced my children to the great mother ocean there, and I plan to live my last days there. Please, please, don't take that away from me or any others that share that same passion.
God bless and good luck in your deliberations.
Sincerely,
Jason Wade

Correspondence: I am pleased that the use of ORV's on Hatteras Island is being evaluated, but find that the concerns of ORV beach users, and environmental concerns seem to be overshadowing those of users who choose not to drive on the beach (pedestrian users).
This is probably due to the fact that there are dedicated and effective organizations which promote ORV use on beaches and there are also equally effective organizations dedicated to environmental protection. There does not seem to be a similarly effective organization to promote the needs or non-ORV users.
This could be because pedestrian beach users have an expectation that reasonable beach use does not ordinarily include ORV use. Because of this expectation, the beach users who prefer limited ORV use are not organized in the same manner as pro-ORV groups or environmental groups. Consequently, non-ORV beach users' interests seem to be lowest on the priority list with regard to this issue. In fact, this group could very easily be a majority of users who are unfortunately at this point a silent one. While it may be true that this is a less organized group, that fact does not diminish the

importance of equal enjoyment of the beaches for pedestrian users, especially those which are part of the National Park system.

I am in favor of environmental protection since most of the enjoyment I receive as a beachgoer is from the appreciation of nature. I would argue that is the reason most people use the beach except for commercial users. Also, if there must be beach driving, why do it on barrier islands? These are fairly limited compared to the rest of the Eastern coastline. These are more isolated, and therefore unique habitats.

I realize that there are some users who only enjoy the beach while driving on it. I understand that some surf-fisherman want to drive their gear to the beach in ORV's instead of using other methods. I do not understand why this is being given such legitimacy when ORV drivers are not permitted to drive on most other beaches or in other National Parks except on park roads. I am sure there are many ORV users who would like to drive their vehicles directly to sites within National Parks but are prohibited for many of the same reasons they should be prohibited from driving on the National Parks located on the barrier islands.

If the assumption has been made that ORV use on beaches is an acceptable use then I hope the following issues will be carefully considered.

Pedestrian users spend money at local establishments in much the same way as the group of ORV users.

The only exceptions I can think of are that ORV users may purchase more gas than non-beach drivers, or this population may include more surf fisherman. This category of ORV user is the only one that seemed to have specific consumer needs that may (or may not) vary from the non-ORV beachgoer.

Unlimited ORV use may preclude use by pedestrian users.

In personal terms, my husband and I have traveled from Richmond, VA to the Frisco National Park Campground each year during the summer since approximately 2001. We tried beach-driving with our SUV and found that it did not enhance our experience. In fact it clarified the fact that we choose to visit Hatteras Island specifically to experience the unique natural habitat found there. There are many other beaches closer to Richmond but we go the extra distance to experience what had been in the past a fairly quiet and natural beach. During our many visits we happily spend a considerable amount of money at local establishments. An amount that is surely comparable to what ORV users spend. While our past beach experiences did include some ORV traffic, there was not enough to be so disruptive that it ruined our enjoyment.

This has changed drastically in more recent years, especially in 2009. The beach at Frisco campground was either roped off for environmental reasons to the North or so crowded with ORV users to the South that the beach area was practically unusable by non-ORV beachgoers from the campsite. The beach looked much like an overfilled parking lot. I do not agree that this can be environmentally sound and I know from personal experience that it ruins the enjoyment for pedestrian beach users.

So unfortunately, if this ORV activity continues in the future, we will stop vacationing in Hatteras. It seems to me that if the ORV activity negatively impacts pedestrian human use of the beaches it must surely be negatively impacting wildlife as well, for many similar and not easily quantifiable reasons.

To conclude, here are the points I hope will be considered in the decision-making process:

The concerns of non-ORV beachgoers should not be overlooked since many users of this type will not return if unlimited ORV use is permitted. This will have the ultimate effect of reducing the economic benefit for local businesses from pedestrian users. If pedestrian users do not visit because of ORV use, this offsets the argument that there is overwhelming economic benefit to the area due to ORV use.

In fact, over the long run, more visitors may come if they are assured there is no or limited beach-driving. Local businesses may become more viable in the long run with a broader target market as opposed to the surf-fishing market.

ORV use doesn't need to be prohibited altogether to conserve the enjoyment of non-ORV users, but there must be limits on the number of vehicles on the beach at any given time. Either through the use of permits issued, or monitoring of ramps to limit the number of ORV's allowed to enter.

Policy-makers may not be aware of the tremendous number of vehicles that were actually on the beach in 2009 when options were being considered.

There could be a means for monitoring the actual number of vehicles each year and policy could be structured so that more stringent rules can come into effect if the number of ORV's continues to increase.

Some of the beach area in front of Frisco campground could be reserved for pedestrian use only. This will increase enjoyment for non-ORV users and create a potential buffer area between any areas where ORV use is permitted, and the areas roped off for environmental reasons. Also, since most of the campsite is reserved for tent campers, a group who likely choose to tent-camp to experience nature, it would seem to follow that there are many users from the campsite who will not be using ORV's on the beach.

In addition, there are two pedestrian walkways specifically designed to make the beach accessible to pedestrians only. Why not use this as access to a pedestrian only beach area. There should also be some accommodation for areas limited to non-ORV use only at all times of the year.

The natural habitat must also be conserved in order for there to be continued enjoyment by most beachgoers. Clearly if the ORV's cause humans to leave and not return they are also affecting wildlife in a similar manner.

Correspondence:

First I would like to say that I believe that Alternative A, which would resume management of the Seashore beaches as they were managed under the "interim plan", is most preferable of the alternatives provided in the DEIS. This alternative provides both an adequate amount of resource protection and maintains a good visitor experience. Other alternatives provided in the DEIS provide neither effective resource protection nor sufficient visitor experience. Each actually detracts from visitor experience while providing no actual benefit to the resources they attempt to protect. My reading of the NPS preferred Alternative found it to be the most restrictive set of regulations ever promulgated in a National Seashore. I also see it as creating major impairments to visitor experience while having negligible benefits to resources. This is not the alternative produced by the "advisory committee", assuming that the "advisory committee" is the Negotiated Rule Making Committee. That committee did not produce a recommendation and for the NPS to claim that their preferred alternative came from that process is totally ingenuous. Re: the need for additional pedestrian only areas within the Seashore. I do not believe these additional areas are necessary. The beaches of Pea Island must be counted as pedestrian only areas within the Seashore. While NPS and USFWS employees might see a distinction between the beaches of Pea Island and the rest of the National Seashore, the visiting public does not. Even excluding Pea Island from consideration, there is presently more than adequate pedestrian only access to the beaches. Those areas in front of the villages provide 24 hour vehicle free areas during the tourist season. Outside of tourist season, the Seashore beaches see very little ORV use. I have lived on Hatteras Island full-time for the past 10 years and have never had trouble finding deserted beaches for walking, jogging, or driving. This is even true during tourist season, if one merely goes on the beaches in the early morning. I also see no justification at all for having differing seasonal beach closures in front of east-facing villages and south-facing villages. Those closures should be as stated for Rodanthe, Waves, Salvo, and Avon and should apply to all village beaches. The NPS preferred alternative provides for closures due to birds that are grossly excessive. First, all such closures should provide pedestrian and ORV corridors or bypasses during the entire breeding and nesting season. Second, the buffers themselves should be much smaller. I recommend that PPL buffers be no more than 50 meters for nesting birds and 200 meters for unfledged chicks. The NPS preferred alternative provides for closures due to turtles that are also grossly excessive. There should be no night-time restrictions of driving or of beach fires. There is no evidence that such use of the Seashore beaches effects turtle populations in any manner. Restriction of beach access during night time hours will not preclude the need for law enforcement coverage. It will not increase law enforcement's ability to address problems during daylight hours because there never has been, nor is there now, night time coverage that can be shifted to daylight hours. Finding an on-duty NPS law enforcement ranger within the Seashore after 11pm is something that happens very infrequently. Extremely limited and inadequate law enforcement coverage has existed within the Seashore for many years. The solution is to hire more rangers. One of the Seashore's primary visitor activities, fishing for red drum and striped bass, is best done during hours of darkness. Many visitors come to the Seashore primarily to enjoy a beach fire. These activities should not be restricted without definite proof they significantly reduce turtle usage of the Seashore beaches. Turtle closures provided for in the NPS preferred alternative are much too large. All turtle closures should provide for pedestrian and ORV passage at all hours of the day and night. During the "hatch window" passage should be provided at all hours, either between the nest and the dune line or in front of the nest with NPS volunteers overseeing the nest to insure that vehicle passage will not interfere with hatching turtles. The restrictions placed on pets in the Seashore under the NPS preferred Alternative are excessively restrictive. I see no justification in "prohibiting pets in the Seashore during breeding season including in front of the villages" as is stated in that Alternative. Pets should be restricted from SMA's, but not from other areas of the Seashore. I found the Socio-Economic analysis as presented in the DEIS to be flawed. First, I do not believe that the NPS visitor counts are anywhere near accurate. These counts have been taken in a haphazard manner, with extremely inaccurate measuring devices, and have been compiled and assessed by people who have no concern for the validity of the numbers they are presented. Secondly, I believe that the economic impact by any of the Alternatives on the villages of Hatteras and Ocracoke Islands is much greater than their effect upon the whole of Dare and Hyde counties. Any analysis that includes data from areas outside of Hatteras and Ocracoke Islands is flawed. As one example only, the economy of Nags Head is affected much less by regulations imposed on Hatteras Island than is the economy of Buxton. An interesting analogy would be to look at the feelings towards NPS employees generated by NPS actions in regards to beach closures by the residents of Buxton and the residents of Nags Head. I believe that there is a similar difference in economic impact between the two areas. The NPS has obviously noted this difference in feelings as evidenced by actions they have recently taken in the Buxton area to shield their employees from the perceived animosity. ORV permits should not be required unless they are readily and easily accessible to all visitors. Present NPS staffing and facilities are inadequate to handle an ORV permit requirement. Any cost for these permits should be negligible, no more than \$10.00 for an annual permit. Any educational component should be no more than receipt of NPS brochure along with the permit.

Correspondence:	Please don't close the beaches. That's the main reason we go there. Those ruggedly beautiful beaches have been the backdrop to our family vacations for the last 35 years. My parents always took us to Avon for a week every summer and I can tell you honestly, we looked forward to it all year long. Now I have a daughter of my own and although she was only 1 1/2 this past summer on her first trip, she LOVED it. I wish I could share with you the video of her first time on the beach. We drove out the afternoon that we got there. She loved bouncing through the sand and through the dunes. By mid-week she started shouting "pirate!" every time we drove out. Although it was very windy that first day, you could still hear her squeals of delight and her laughter over the wind and the crashing waves on the video camera. We need to be able to drive out to take the little ones and all the gear that goes along with them. Maybe if more people were available to patrol the beaches, there wouldn't be any problems that would prevent the rest of us from being smart and respectful of this place we love so much. You could create new jobs, how could that be bad these days? I just think of all the perfect places out there on the point that we could never get to if the beaches were closed. Those tidal pools and sand bars and shallows are PERFECT for families with little ones and for the grandparents as well. If we can't get to the beach, why would anyone come to visit?

Correspondence:	My husband and I have been visiting Cape Hatteras beaches for our annual weekly vacation for the past 35 years -- always careful to protect any wildlife we may encounter, always careful to leave no trace, always in awe of this inspiring location. There is a unique freedom that one experiences on the beaches of Cape Hatteras (a freedom that is simultaneously intertwined with nature, history and a restoration of one's soul). To deny responsible citizens that freedom is to deny us our "pursuit of happiness". We expect our elected officials to protect OUR rights to life, liberty and the pursuit of happiness. Please ensure access to Cape Hatteras beaches for all responsible citizens and for future generations!

Correspondence:	I would like people to be able to drive on the beaches of the outer banks if possible. If not I hope people will be allowed access to the park via boardwalks, bike trails, etc. I am a surfer and can say the waves there are some of the best on the east coast of the united states, possibly the best. It would be a disappointment if surfers were not allowed to surf there, as that is the story for many of the best breaks on the east coast. Hopefully, a solution will be found that doesn't impact the environment while still allowing people to access this beautiful, surreal place.

Correspondence:	<p>To Whom It May Concern:</p> <p>I'm appalled with the possibility that our North Carolina beaches are going to be governed by "environmental" policy that will deny access and recreation to the public. We have similar problems in other parts of our country with restrictions initiated by people who haven't a clue about reality yet are part of organizations that can spend without restriction and file lawsuits that force issues to be resolved that don't exist.</p> <p>I am writing to you today because my family enjoys recreation in the Cape Hatteras National Seashore Recreational Area. My father enjoyed those same beaches (and even rode with his fishing buddies in a plane right onto the beach in the 1950s/60s) and his father before him. I support H.R. 718, which would reinstate the National Park Service's Interim Management Strategy, pending the issuance of a long-term management plan, for America's first National Seashore, on the Outer Banks of North Carolina.</p> <p>Currently the area is in the wake of a consent decree that restricts public access to prime locations in many parts of this recreational area. The consent decree is the result of a lawsuit, filed by a few environmental groups, against the National Park Service challenging their management of the area. People throughout America have a tradition of traveling to the Cape Hatteras National Seashore Recreational Area for family activities. These include fishing, surfing, swimming, bird watching, beachcombing, kiteboarding, horseback riding and many others. These activities have been disrupted by the consent decree and local businesses have been hurt in the process. If H.R. 718 is enacted, the management of the area would revert back to the National Park Service, which historically has proven to be effective in protecting resources, instead of a court imposed consent decree.</p> <p>I ask that you preserve access to Cape Hatteras, one of America's most beautifully enjoyed beaches, for responsible family recreational activities as it was intended when the Federal Government created it.</p> <p>Sincerely, Karen W. Louisburg, NC</p>

Correspondence:	<p>I am writing to express my views that as many as possible public beach access points at the Outer Banks remain available for visitors and residents to enjoy. Being the owner of a commercial real estate firm, I have had quite my fill of eminent domain issues where the government tries to take property from owners - this attempt, disguised as a charitable motivation to safe wildlife, is a misguided attempt by liberal-minded leftwings, most of whom don't even live in our state, much less at the North Carolina coast!</p> <p>My family and I enjoyed a wonderful week at Nags Head and we saw plenty of areas, along with others in North Carolina throughout the state, dedicated to wildlife preservation. In this day and time, given present economic difficulties, to burden the local taxpayers by infringing on their ability to earn a living is a travesty. Enough already of the activists posing as "do-gooders" - send the interlopers home!</p>

Correspondence: I have been traveling to the OBX with my family for over 40 years. While I live much closer to Ocean City , MD, i am not at all attracted to it's busy commercialized shore. I love the natural beauty of the beaches protected by the National Seashore. It is ridiculous to close beaches to public use. It is possible for piping plovers to survive and thrive with humans making use of beaches too. Please don't allow this natural resource to be taken away from those who love it.

Correspondence: As a concerned citizen, born and raised in North Carolina, I am deeply concerned about the Draft Environmental Impact Statement for the Cape Hatteras National Seashore Off-Road Vehicle Management Plan (DEIS). The results of this study will have profound effects on the residents of Ocracoke as well as the thousands of tourists who visit the island each year. For centuries man and fowl and sea creatures have co-existed on this island, why the urgency now to adapt a plan so prohibitive? Please consider the repercussions of your decisions and how they will affect everyone, man and fowl. A healthy balance has existed, so far, and with proper insight the island can remain accessible for generations to come. I urge you to use well meaning, environmentally sound, logical reasons coupled with considerations of equitable access to our natural resources when deciding the size of buffers and corridors for off-road vehicles. Please, please be fair.

Correspondence: The purpose of my comments is to express my profound disbelief that our country can/will allow such an atrocity to go forward given the gravity of the impacts upon the livelihoods on the Outer Banks. The beach access issue as relates to the Cape Hatteras National Seashore Recreational Area amounts to nothing more than a "taking" of rights granted to the public when the park came into being. The US government made promises to the good folks of the Outer Banks when the park was established and the original naming of the park explicitly set forth the intended future use thereof. Over the years, the National Park Service has largely ignored their custodian obligations as the keepers of the Seashore Recreational area due to an apparent lack of adequate funding. Of even greater consequence is that the NPS apparently didn't bother to follow it's own internal policy and have repeatedly failed to meet federal mandates for planning and intended use purposes. Furthermore, the efforts to restrict access are being driven by off-island, over-zealous environmentalists who have very limited, if any, practical science to back up their claims. These liberal idealists have no real stakehold in the issue being addressed and have proven to be less than forthright in their approach. The facts are not even a consideration for them and just might tend to undermine their case. Hence, they rely upon stuffed shirts abusing stuffed coffers to get their points across. Unknowing contributors send serious money to these environmental organizations thinking of the 'good' they create with their tax-free donations. I will speak for the citizens of Cape Hatteras in stating that positively no good has come from these contributions. I strongly encourage the agencies involved to reach accord and re-open access to the beaches of the Cape Hatteras National Seashore, re-name the Park as was originally set forth and restore the rights of those whose lives depend upon the beaches being open to the public. Historically, these same beaches have been the life blood of the economy on Hatteras Island. The beaches have been used to carry on the island traditions of commercial and recreational fishing. The fine folks of Hatteras Island deserve the rights they were guaranteed during the creation of the park and have enjoyed for generations. The NPS should perform their custodial responsibilities and ensure unrestricted access just as soon as practical. This is not an issue for the courts to decide - that has proven to be both an economic and catastrophic disaster already. Anyone playing judge and jury in matters such as this should be tarred and feathered for intervention into a democratic right of freedom established by none other than our great democracy, the United States of America.

Correspondence: I live in North Carolina and vacation at Hatteras Island 3-4 times per year. It is a special place that needs to be preserved. I agree that as a nation we have a responsibility to protect animals that live and breed within our borders. But we also must ask ourselves, when does a bird's life become more important than a persons? People have been living and working on Hatteras Island for generations. Most of these residents are dependent on tourism for their livings. I, for one, and I know that a significant number of vacationers would not visit Hatteras as much if beach driving were prohibited. Getting to the beach at Hatteras requires a long walk through deep, loose sand to reach the shore. There is no way a disabled person could make the walk. So by restricting the availability of driving, you are also restricting the availability of disabled persons to enjoy the national park that their tax dollars are helping pay for. I don't agree with closing Hatteras to all vehicle traffic, I think that it would do more harm than good. I do think that education and money can help the birds and turtles. Why not close the parts of the beach to traffic where the nests are, and for the rest of the beach, implement a beach driving permit system? Charge for the priveledge of driving on the beach. I would have no issue with having to take an online or at the park service class with test and pay a significant fee to obtain a yearly driving permit. The permit fees can pay for the program. You can also levy heavy fines on those who are caught driving on the beach without one. You will get a more educated public, less driving as some people will opt to walk in as opposed to paying and raise additional funds to pay to find and protect more nests. With the state of the American economy, the park service could use additional income and the residents of Hatteras need to keep what little they have.

Correspondence: To my beloved Hatteras Island:
I will always cherish the many memories we have so dearly enjoyed together. Do you remember the time when I was a child and my grandparents introduced me and my brothers to you? It was love at first sight. The countless mornings watching the sunrise over your beautiful waters while fishing, and learning life lessons spoken to me by my grandparents. Lessons on respect for you and your abundant wildlife. Learning to drive on your golden sands with care and caution. Oh that was so many years ago. My how time fly's.
I recall countless times when my friends along with my family and I would drive your sands to clean you up. We would load our vehicles with washed up storm debris or scattered litter left behind by non-respecting walk over tourist. We did this out of love and respect for you and your wildlife and enjoyed every minute of it.

How about the time you hosted a beautiful wedding for your dear friends Mike and Donna, only later you so graciously did it again for their son Josh. Let us not forget the gorgeous sunset that prevailed while Scott and Lynn were exchanging their vows. My you are quite a lady. I remember surfing your water and meeting a beautiful lady walking your pristine sands. That lady is now my best friend my love and not to mention my wife. I recall brgining my new born son to you and watching him smile as we stuck his tiny feet in your sand. He is now grown and would someday love to introduce his children to you.

I have met the most awesome friends in my life on your shores. These friends and I all ahve the same love interest and that love is for you my sweet Hatteras Island. You have so touched our lives that thanks would not even be sufficient. you are our refuge our peace and our sanctuary. When life's troubles seem to drag us down, you my dear show us the beautiful creations of our all mighty God. Peace and serenity seem to over take us. You have no idea how much you mean to countless people. Millions who love and respect you.

Please I beg of you don't leave us for the un-informed unappreciative and selfish organizations such as the Audubon Society or the so called Defenders of Wildlife. You know as well as I do that this would only mean that your shoreline would be left cluttered with debris and trash by those that may walk your sands, those that do not respect you and enjoy the many things we have shared together.

Our hearts right now are very weary knowing the fate that may lie ahead for you. If those that don't know or even VISIT you have their own selfish agendas placed on you.

I plead with you our National Park Service or any government agency that has deemed themselves as decision makers for what you may think is best for our beautiful Hatteras Island. THINK before you decide to take away a place that our most Glorious God has created for all. Created not only for birds and animals of all types, but also created for humans those that God created in his own image.

Hatteras has long been a wildlife santuary and respectfully so. But it is also a santuary for people. People who respect and appreciate all of what Hatteras Island has to offer. Please do not take our access to these beautiful shores away.

Correspondence: As a long time visitor to the Buxton/Hatteras area for purposes of vacationing and fishing I would like to encourage the N.P.S. to take visitors who drive vehicles onto the beach into account when drafting the DEIS. I personall have been driving vehicles on these beaches for 28 years and have not once seen an instance where harm was don to the beaches or environment by vehicles being driven on the beaches. In fact, the people gaining access to the beaches via 4 wheel drive vehicles are concerned to the extreme for the well being of the beaches, and creatures that frequent these beaches. The environmentalist would have the public believe otherwise, that the visitors to the beaches cause harm to the environment. if this is the case, why have I never seen this happen in all the years I have driven the beaches of the OBX? Where is the scientific proof that such damage is being done? Bottom line - there is plenty of room on the OBX beaches for visitors in vehicles to coexist with the environment with no harm being done to the environment. To close these beaches to vehicle traffic, for no reason other than pressure being brought to bear by environmental groups, would be a gross injustice to the American public.

Correspondence: I'm writing to ask you to please consider my comment on the Draft Environmental Impact Statement. Cape Hatteras National Seashore is a very special place where man and nature have been able to coexist for many years. Its natural beauty and beach access have drawn many of us there and we in turn have supported the local economy, gladly. We've enjoyed beach access for surfing, fishing, and just being on the beautiful place that the CHNS is. We've made many friends from other states there along with business owners whom we also consider friends. The friendly ladies of The Outer Banks Motel, Tides Restaurant, Orange Blossom Bakery, Diamond Shoals Restaurant, Bubba's BBQ, Red Drum Bait&Tackle and host of others. We haven't been down there in a few years, but what is happening there now with beach access saddens me so I felt compelled to write to you. Please consider the impact the beach closures have had on the local businesses. We all love nature and we've been patiently waiting for the Piping Plover issue to be resolved. However, it appears that the real problems facing the Plover are not trucks driving on the beach, but predation and studies have shown that predation actually decreases with beach access. The Plover situation affects us here in New Jersey as well. The efforts made to protect Plovers over the last 15 years have produced no marked increase in their population compared to their numbers when beach access was unrestricted. In that sense, I think the measures taken have done more harm to people than good for the Plover. When you all decide what it is you are going to do down there concerning beach access please understand that it will most likely set a precedent that will have repercussions along all coastal communities of the United States. We're all watching and hoping. We don't envy you and the position you are in and wish you all the best in what happens on The Cape Hatteras National Seashore and the beach access issue.

Correspondence: Dear Mike,

I am writing today to express my thoughts and observations with hopes they will be taken in consideration for the new Cape Hatteras National Recreational Seashore management plan. I have reviewed the 700 plus pages of the ORV management plan and environmental impact statement. What I did not see deep in the pages was very disappointing. Cape Point needs to be represented with more respect in regards to human activities! The Cape Point area has been a very large part of this Nation's maritime history and this island's cultural. Well over 1200 shipwrecks over have been recorded in the immedieate area and countless lives and dreams have been lost at Cape POint. There is also a longstanding heritage of commercial and recreational fishing that has fed families and this nation for centuries. It has been a social gathering place of people for many generations including the Native Americans from long ago. Cape Point is a Mecca for surf fishing, birding, shelling, windsurfing, surfing, sunbathing, and many other recreational activities. These are facts. I understand too that it is the southern most breeding area for a very limited number of piping plovers and other shorebirds when the conditions are just right. The National Park has done a decent job helping these species. But neither you nor I are responsible for their fluxuating numbers. There are several major factors that cause these bird's survival numbers to go up and down. Storms and predation are by far, and with no argument, the two biggest factors. The Park's own data shows it is not from visitors walking or running over nests or chicks! The bird enclosures in the Cape Point area are

necessary and I have personally always endorsed them. However, I spent the last two months reviewing piping plover nest hatchings at Cape Point. Over an eight-year period, all the data I reviewed showed that every chick hatched in an enclosure has traveled west towards the salt pond or lateral dune, never east towards the north beach or ocean! I know my birds and their activities very well after observing them for over 40 years. Perhaps that is why I'm presently working with Duke Energy studying avian patterns in the Pamlico Sound for the proposed wind energy project. Please look at that data very closely when making final decisions at Cape Point. There is no reason access to Cape Point should be denied when the area is being monitored by so many qualified Park biologists and the enclosures are properly in place. The special interests groups that created the latest outrageous buffers did this with little or no scientific justification and most intelligent people question their true motives. I would also like to know what Audubon, SELC, and DOW have done to help my National Park increase shore bird numbers. Local and national organizations have multiple beach clean ups. Has Audubon? How about DOW? Have they created new habitat anywhere? Have they increased education to help shorebird species? Donated any money to local groups like N.E.S.T.S? They have done absolutely nothing! Their influence should be very limited when the final plan is drawn up. They are going to sue again regardless of what plan is implicated.

In closing Mike, please keep this in mind. If the American people knew the truth and what the hell was really going on out here, I would not be writing this letter. Remember what just happened in New Jersey, Virginia, and Massachusetts elections...and don't forget Toyota's bad karma after giving Audubon 20 million dollars. The good people of the United States are tired of being pushed and bullied around. This Park certainly needed some changes but it should never resemble a full-blown bird refuge or be managed by a few special interest groups with big money lobbyists. You were doing a fine job way before they ever got involved. There's a very large majority of people that are behind you and I don't hear anyone screaming "I want my National Park close" ...do you? Do not confuse other areas of the Park like the inlets and spits with Cape Point. The Point is a very special place and needs the full respect and access it deserves. Please listen to the majority and thanks for all your time invested in my National Park's future.

Correspondence: I have been visiting Ocracoke Island yearly for the past 44 years. Over the past several years, the beach closing to the South Point has decreased our desire to come to the island. It is the only calm water for our smaller children. We have come each year as a large extended family of over 75 people renting many cottages and staying for 1 to 2 weeks. These closures for birds that are not endangered species is not acceptable. These closures are going to greatly hurt the economy of Ocracoke. My family is trying to decide if we should change to a new location. I can guarantee if my family, that are devoted to Ocracoke, are considering not going anymore, many others are as well. We love Ocracoke because it is so peaceful and we have complete respect for the beaches, but nonendangered birds shouldn't be a priority.

Correspondence: In regards to DEIS draft Alternative F. I understand protecting the wild life, but you also have to consider the people that come to Ocracoke to fish and enjoy the beaches with their families (including pets). Too many times I have seen something that my family enjoys taken away because some environmentalist is ticked off. Last year was our first year vacationing at Ocracoke and we scrimped and saved this year so we could come back. We enjoyed the unregulated, un-commercialized, family feel of the town and the ability to drive our SUV down to the beach. With 2 small children, it was way easier to drag all their toys, chairs, etc. down in the truck. I understand keeping the wildlife protected, but don't eliminate what little use we have on Ocracoke...at this point you may as well close the town down. Has anyone done an economic impact as to what this "proposed" act will do to the town? If this goes through - you will lose us as vacationers.

Correspondence: I think that it is awful that the beaches may be closed because of birds and turtles. I love animals, but when they start running our governments and dictating when beaches should be closed. They do not pay taxes! These beaches keep the economy going in Hatteras. Without people on the beach there will be no need for hotels, restaurants, etc. We the people support the Island of Hatteras. Our family travels to Hatteras 3 times a year. When the beaches start closing we will find another place to vacation, but will the residents of Hatteras be able to find another place to live and make a living? Good question. Maybe the environmentalists should try collecting the eggs off of the beach and putting them in a SAFE habitat to hatch. The odds of them hatching on land is not very good anyway with nature the way it is. Hope this sheds some more light on the subject. DON'T CLOSE THE BEACHES!!!!!!!!!!!!!!

Correspondence: We received your consistency determination on march 10, 2010 for the proposed implementation of Alternative "F" as the Off-Road Vehicle Management Plan for the Cape Hatteras National Seashore, Dare and Hyde Counties, North Carolina. The project has been distributed to State agencies that would have a regulatory interest in the proposed activity for review and comment. The public review period will close on April 9, 2010. Please be aware that as we continue to review this submission that we may request additional information. We intend to make a decision regarding whether the propose activity would be consistent with the State's coastal program soon after.
The State of North Carolina has sixty (60) days from the receipt of the consistency determination to either "concur" or "object" to your consistency determination unless an extension is agreed to. The sixtieth day is May 9, 2010. Furthermore, the State is entitled to an extension of up to fifteen (15) days if additional review time is necessary. Final Federal agency action cannot be taken sooner than ninety (90) days from the State's receipt of the consistency determination unless State concurrence is obtained. Please feel free to contact me at 252-808-2808 if you have any questions. Thank you for your consideration of the North Carolina Coastal Management Program.

Correspondence: I just finished reading the six plans the NPS has recommended for ORV driving on Hatteras and Ocracoke Islands. All six plans kill the economy on these islands. I see absolutely NO evidence of compromise with the officials of Dare County! And nowhere have I read anything that convinces me that any of your plans were based on substantial scientific evidence! You are recommending closing our beaches for birds who are not even in danger of extinction and killing other wildlife to protect them! What the scientific evidence shows is that ALL wildlife and humans have coexisted beautifully on Hatteras and Ocracoke Islands since the beginning of time! Your recommendations represent the most despicable miscarriage of justice I have ever encountered! These plans are simply plans for government control at the expense of the people who pay park service salaries and expenses! It's a devastating mockery of justice and totally disregards the voice and rights of the people!
Please, help us preserve the economical well being of two islands, totally dependent on tourism to exist. Leave yourself open to a compromise that will keep our beaches open during the tourist season. The citizens on Hatteras and Ocracoke love nature and want to work with the park service to preserve wildlife, but your options do not take the people into consideration! I beg you to reconsider your recommendation to close our access ramps during the summer. It appears obvious that the NSP does not want to work with the citizens to preserve wildlife. Please prove me wrong!

Correspondence: In regards to the DEIS section on "prohibition of pets in the Seashore during bird breeding season including in front of the villages" page 136. I disagree with this item wholeheartedly and feel that it is far to restrictive and that current regulations are sufficient to protect both birds and other wildlife. Current regulations allowing pets on a 6 foot leash year-round in all areas open to pedestrians or ORV's are fair and the rare infractions are dealt with in such a manner as to strongly discourage future disobedience. Please do not completely prohibit us from sharing the beauty of the seashore with our four legged friends.
Thank you for your time.

Correspondence: I have been a property owner in Nags Head since 1996. One of the main reasons I own property in this area is the sheer joy I get from accessing the entire National Seashore area for surfing and for being able to utilize access to the ramps for fishing and beach enjoyment, without the crowds. I, and my family (and I would venture to say all property owners) have always been very respectful of the land, the wildlife and the ocean. There is nothing I cherish more than surfing north of S-Turns at sunrise, mostly by myself. It is pretty close to an inspirational experience. I am sure many can identify with this sentiment.
Although, as an attorney, I understand that there are some who mistreat the beauty of the area. When I see it, I address it. Those persons should be prosecuted. Perhaps there is a need for more Park Rangers to enforce the existing laws or to take another look at the laws and to draft some that have some more teeth. But, for those who want to go to extreme measures to take access away from the majority of the locals and a nation of travelers, surfers, fishermen, and beachgoers, who respect the nature of the land, is to perpetuate, what, in my opinion, is the problem in this country at this time. Punishing those who should not be punished, because of a minute percentage of wrongdoers and the environmental(in this case) opportunists who will use and exploit a situation to further their cause.
I am not saying that there are not measures that can be taken to try to accommodate all interests, and wildlife is very important to me. I, as have most surfers, probably have spent more mornings with honu (turtles) in Hawaii and dolphin on the Outer Banks than most of the population, but there are surely less extreme measures that could be implemented to resolve the problem. Although I consider myself an environmentalist, as I spend time in the Atlantic and Pacific oceans most of the year, I do not agree that you can stop every problem that arises or protect every animal or species that the EPA determines is endangered. That is just a ludicrous and impossible thing to achieve. Taken to its logical conclusion, IT WILL NEVER BE POSSIBLE. MAN CANNOT CONTROL NATURE OR THE ENVIRONMENT OR THE LAWS OF NATURE. There will always be hurricanes, earthquakes, warming periods and cooling periods. Species will survive and not survive, including human beings. Accidents and nature happens, no matter how much money or regulation you implement. The problem is that certain groups think they can control nature. We have to be respectful of the land, but we have to live on the land. I am concerned that this is another example of the use of extereme measures to take control of another large area of land to advantage the extreme adgendas of the politically correct.
And more importantly, who is going to foot the bill for the loss of use and revenue and cost to the local community? The environmental people are pushing this to save yet another species that they have elevated to status above any human being, and specifically, of the local people who have the use of the area for food, enjoyment or their livelyhood? They repeatedly want to create a perceived environmental emergency and then move on to the next, leaving the local population to deal with the cost of saving their cause. Let them fund the loss of use. If this was private property, it would be called a taking without just compensation, a breach of the 5th Amendment.
Please do not make a decision that will take away any rightful use of the land by the people of this community and of this country. That land and access to Cape Hatteras National Seashore belongs to all Americans, not the EPA, not the turtles, and not the government.

Correspondence: Having interacted with wildlife for most of my 65 years, a few things stand out in my mind. Many species have come, gone and returned. Populations have varied over time. Some have evolved in varying ways and many have adapted to numerous and constant changes. God's creatures do this. I have observed that many species, particularly birds, though some are not prone to become intimately friendly, consider us to be good neighbors with close cohabitation and activity as an advantage and contributing to their security and well being. I believe most folks, with thought, would say the same thing. We are not the predator, we do not influence the weather and storm pattern, nor are we eliminating their habitat which have to be their primary concerns. We are of a nature that we want to help birds of the Seashore to thrive. There is no reason not to. I will not address the Turtles, though they too are of special concern to us, as it would basically result in duplication. I'm sure you understand. I will not overlook the fact that there are a few who are not good stewards of the seashore or God's creatures. They are rare and need to be dealt with as in other areas of our society. This can be done and we will help. But, don't punish the good because of the acts of a few bad. At this point, you are probably asking, What do these people want? We want you to look past the "Science" and "Lawyers" and "Decrees" and "Special Interest Groups". We want you to realize WE are not the enemy. We want to continue to enjoy the traditions of Hatteras and pass them on to our children and grandchildren. And yes, we want them to enjoy the beauty of all the birds and other wildlife while they are swimming, fishing, surfing or just playing in the sand. There is no better way to do this than driving to your favorite place at Cape Hatteras Seashore. It is the greatest recreational area we know of. In closing, we would like to say we realize closures are necessary but, there should be consideration as to the size and type of closures, keeping them as small as practical and only up as long as actually needed. This should be a judgement call by Superintendent Murray. Not environmentalists or other special interest groups. We want to trust Mr. Murray. We don't trust the others. We believe Mr. Murry has the knowledge to decide this and the common sense to administer it effectively in everyones best interest. We have to have someone we can count on where this is concerned. I think if the birds could tell us, they would say "we want you close, don't go anywhere, just don't mess with the nest, please".
That's the way we see it.
Thank you, Ron & Cecile Saunders

Correspondence: To whom it concersed, I have been a visiter of the Outer Banks for over 30 years and have enjoyed off road vehicle riding on the beach. I practice beach respect and care very much for the beaches and its wild life. I have also participated in many trash pick-up events, from the wash up from the ocean and sound. I would like to continue enjoying the beaches along the outer banks with my family and friends for outings and weeks that we plan for the years to come...It would be a great dissapointment to have this taken away from us. Please let us no if their is anything we need to do to have this place stay as it always has been. We would hate to see this change :(Sanford Miles Boutchyard Lynda Hazelwood Boutchyard

Correspondence: Much of this plan seems like overkill. There is such a small part of Ocaraoke that is developed and I fear that these restrictions would hurt tourism. Requiring dogs be leashed is fine, but banning them is too much. I feel like the restrictions put on the rest of the island are sufficient for maintaining the natural beauty that draws many of us there. Don't go too far! I can't speak to the fishing restrictions as I do not fish, but the hatching buffer seems extreme as well. And the enforcement would require much effort. I think a public awareness program would do just as well given the respect that the vast majority of visitors and residents have for this beautiful and important piece of land and history. Perhaps that should be the first step and then come in with a more restrictive plan if the results are not satisfactory. Thank you.

Correspondence: I don't really have much to say except that drastically restricting or shutting people out of some of the most beautiful natural areas in the world is wrong. Many of the people and sportsmen you're shutting out are the true naturalists and conversationalists on this planet and are responsible for preserving much of what we still have.
The saddest part is that these people won't be able to pass on the respect they have for these natural areas and over time if this is done the children of today and/or tomorrow will resent being excluded and may reverse everything being attempted here with drastic and with unintended consequences.

Correspondence: I am a retired entomologist who loves to surf fish and respects wildlife/Nature. I have been concerned with technical data during my entire career. After reading the DEIS (Draft Environmental Impact Statement) for ORV management on the OBX, I couldn't find any statistical technical data which incriminates ORV's with the reduction of marine bird species, in particular the Piping Plover. The OBX is the southern most range of the Piping Plover. Their numbers here, therefore, are very small (64 counted in 2008) compared with New York and New Jersey where their populations are in the 300-500 birds counted in 2008. Piping Plover populations on the OBX are impacted by climate (storms and over-wash) and predators (raccoons, fox, feral cats, raptors, gulls, etc., etc) just as much or more so than ORV's. Where is the climate and predator DATA????????????? Rather than go into a long discourse on statistics, I invite the National Park Service, Audubon Society and Defenders of Wildlife to check any reputable technical publication concerned with providing important answers to important questions. All these publications rely on statistics to provide UNBIASED answers. Nowhere in the DEIS could I find any statistics on migratory birds or turtles. The reason beingstatistics require large numbers to work with in order to provide important reliable answers and these large numbers simply do not exist especially for Piping Plovers. How can any rational person look at a small number of Piping Plovers (64) and conclude that ORV's are responsible for the low numbers without using statistics. The decision to close beach access to ORV's without using statistics is unforgivable and dishonest.

Correspondence: There must be a balance between NATURE and PUBLIC ACCESS.
While Piping Plovers must be preserved, and reproduction assured, a 1000 yard buffer is excessive, and prevents the public from viewing this wonder. I believe 50 yards is sufficient, and allows viewing with the aid of binoculars. While my opinion is hardly scientific, it should be noted that the proposed 1000 yard buffer is 10 times larger that what NPS has established in other areas, and reproduction has been unaffected in these areas!
Likewise, the National Seashore allows wonderful fishing access. This is traditionally by 4WD. A prohibition on ORV's would prevent public access to a facility that is maintained by taxpayers. It is the fishermen that Observe, Report, and Voluntarily clean this facility. Perhaps this would be a better definition of "ORV?"
There is an old conundrum that asks: "If a tree falls in the forest, and nobody is there to hear it, does it actually make a sound?" What good is preserving the National Seashore, if we (the public) never get to see it? NPS must strike a balance between ACCESS and PRESERVATION. Because BOTH are equally important! The current proposal doesn't attempt any semblance of "balance" and must be modified.
Thank you for allowing me to commentm

Correspondence: Dear Sir or Madam, I have been a member of the North Carolina Beach Buggy Association for 15 years. Over that time,I have witnessed the NCBBA (and other organizations involving recreational vehicles on the North Carolina seashore) act as concerned members. Protecting (NOT destroying) our precious coastline in regard to vegetation,animal life, man made pollution, and erosion is all of great concern to us. I have never met or witnessed a fellow member treat our pristine shores with disregard or neglect, in fact, we are a strong force in policing the coastline to educate visitors and locals to take care of the beauty that surrounds them. By removing access to responsible groups and organizations from recreational passage on the beaches with vehicles, I believe it will further the decline of a watchful eye on our natural resources and increase irresponsible behavior. North Carolina's National Seashore is unique by including passage on our beaches by way of personal vehicle and a tremendous impact on our states economic well being. If beach access is diminished; wildlife, environment, tourism, and livelihoods will be threatened. I am strongly against any legislation that would prohibit using our beaches for responsible vehicle recreation. Sincerely, Kevin A. Caulfield NCBBA Member #8214 Director of Hospitality, Murphy Family Ventures 406 E. Freemont St. Burgaw, NC 28425-5128

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
 This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
 The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
 *Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
 * Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
 * Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
 Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
 The abuse of this Seashore has been a black eye for the National Park Service, an agency that has responsibility for some of our most treasured landscapes. I support this more balanced approach, and I frequently travel to the Outer Banks as my niece and her husband own a restaurant there. This kind of approach is good for the huge tourist business there and for the other uses of the Seashore. This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.

Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
- * Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
North Carolina needs to invest more in "eco tourism". Keeping the ORVs off the beaches will assist in promoting wildlife, which will in turn, promote ecotourism.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are VERY important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Wildlife should be thriving so tourists can see and enjoy their presence. Sometimes that means keeping tourists and other beach users away--during hatching times for example. Helping them "come back" is essential.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: Dear Mr. Murray, I am writing to voice my opinion and concern about the Park Service's plan for off the road vehicles on the Cape Hatteras National Seashore. This is a very environmentally sensitive area, and should be treated as such. Any use of the area must be consistent with the protection of this region's wildlife and natural resources. Only alternative D provides adequate protection for birds, sea turtles, and other wildlife that depend on this environment for the the long term survival of their species. I am a frequent visitor, and I value beaches without off the road vehicles. Not only do they disturb the wildlife and the environment, they are very disturbing to thousands of other visitors just like me. Please protect our natural resources and wildlife by choosing alternative D. Thank you for taking the time to read and consider my comments. Sincerely, William J. Warfel Fayetteville

Correspondence: Why Oh Why must Government position papers all be so very long? No reply needed.
I have actually read (most) of the proposed changes to ORV use on the North Carolina Outer Banks.
For the record, I am really upset that the Audobon Society will not let me use their web site to reply if I disagree with their preferred alternative -- D. I prefer to see ALternative F used to guide these and follow-on actions.
While F is more resource intensive -- it may call for increasing budget line items and/or staff to satisfy the increased monitoring requirements I view F as the best of all possible worlds.
As a frequent visitor to the Outer Banks --- I live on the Inner Banks in the town of Belhaven which is adjacent to the intra-coastal waterway -- I am neither an "off roader" nor do I intend to become one. I am in favor of providing as much protection to the fragile environment of the outer banks as is possible while at the same time not closing off other venues for use of this environment (i.e., ORV).
Thanks for the opportunity to comment on this critical piece of environmental legislation.
Dr. Bob Holz Belhaven, NC

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
North Carolina's beaches need to be protected and expanded as natural areas for all to enjoy -- including birds and sea turtles.
According to a U.S. Fish and Wildlife Service study, birdwatchers contributed with 36 billion USD to the US economy 2006, and one fifth (20%) of all Americans are identified as birdwatchers -- there is significant economic potential being lost by not enabling good bird habitats.
The alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me. The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
* Provide Equal Access for All Visitors. * Put Natural Resources First. * Establish and Meet Clear Goals for Wildlife Recovery.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the

alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.

This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me. No one plan will fit everyone, so we need to compromise and give all the space needed for the wildlife that very often can not fight back and wild life at the beach is just as important as the sand for it to retain it's natural beauty for every one to enjoy.

The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.

* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.

* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.

This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.

The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

- *Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
- * Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
- * Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Dear Superintendent Murray,
I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
For years, there were lots of birds, and few ORVs. Today, sadly the situation is reversed.
We have visited & fished on CHNS often, and are quite amenable to restricting vehicular traffic. The rights of nature lovers & the birds are as important as the ORV owners. The future of the park's animal visitors & pedestrians should take priority over noisy, damaging machines.

As a person who loves wildlife and the Cape Hatteras National Seashore, I am very interested in protecting both. I could write a long letter explaining why protection is so important, but I'm taking care of my two elderly parents, one with cancer and the other with Alzheimer's. So please help me by reading the following form letter and letting it speak for me. Thank you. Ruth Stambaugh
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. * Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
 This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
 The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
 *Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
 * Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
 * Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. Correspondence ID: 329 **Project:** 10641 **Document:** 32596 **Private:** Y**Name:** private**Received:** Apr,22,2010 00:00:00**Correspondence Type:** Web Form**Correspondence:** I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.

I have been visiting the Outer Banks and Cape Hatteras for nearly sixty years and I love this extraordinary natural resource. I am vitally interested in preserving this for the creatures who have inhabited it far longer than we humans.

This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.

The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. A fair and balanced solution to use of this beautiful but fragile should be achieved. We owe it to future generations as well as to the compromised wildlife who need the area for survival.

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.

We enjoy Cape Hatteras and have been there numerous times. What we don't enjoy is having big trucks driving all over the beach. let them bring their fishing tackle in on bicycles like the folks do at Huntington Beach State Park in South Carolina. This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.

The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

- *Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Correspondence: Let me say first that my family and I are 100% against this proposed further restriction of our RIGHT to cary on the traditions of traditional ORV use with in the Cape Hatteras National Recreational use area. Our forefathers did not gift some of the land now composing the park to have our rights to use it taken away from us. If you pass this legislation you are all but ruining a way of life created long before anyone on either side of this issue was even born. Furthermore as a home owner in Waves, NC you are further destroying our homes values as if the housing economy wasn't depressed enough. My wife and I both grew up enjoying the access to sea shore and sounds via ORV. We respect, clean, and enjoy the life style of ORV use that is the culture of the OBX. We beg of you to do what is right and maintain a way of life that includes ORV use and access to some of the most beautiful beaches in the world. I am purposefully keeping this short in hopes that it will be read in full and used to brief those individuals that have much of our future in their hands. Our home in Waves will be completely worthless with out the value brought by the ORV access. Our hopes and dreams of continuing the traditions of beach activities will end with out your support to maintain access. PLEASE look out for the small business owners and home owners who will be greatly effected by this outcome. Enforce the laws we have, don't add to them.
The Knaack Family
Kevin, Molly, and Zane

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me. I am an enthusiastic birder, and have visited Cape Hatteras National Seashore a number of times in pursuit of my hobby. Restriction of ORV use on the National Seashore is important for the preservation of critical habitat for nesting birds.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me. Such a practice will increase needed critical habitat for rare birds and reptiles.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. A small child was narrowly missed by a truck going down the Emerald Isle beach, in front of our cottage at 7211 Ocean Drive, last Fall. I yelled at top of my lungs as ran down the beach stairs from our cottage to try to ward off the approaching truck. The child, was scrambling out of a beach hole a group of children had dug - and did not see the truck. The truck missed him by a few inches, AND KEPT GOING on down the beach - not even stopping. I could not record the license to report the incident to officials, as ran to the child. I did report the horrific happening to the Emerald Isle Realty, begging their leadership to take active steps to end vehicle use on all Outer Banks beaches, all throughout the year. Folks think beaches aren't used in "off season"???? Wake up! A crime to these sixty-nine year old eyes.
Why is the beach allowed to BE a highway???? in the middle of the sand? Unbelievable. I was raised on the Cape Cod shores and a vehicle on the beach was/is unheard of !! What, for fishing?? Folks can't use the public piers? And at Emerald Isle there are PUBLIC walkways to the beach from the road every so many feet (about three city blocks).
There is no excuse for EVER allowing a car or truck on a beach. None.
Mrs. Carol Bower Johnson Dr. Burt P. Johnson, husband.

* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a

chance to rebound to its traditional numbers and diversity within the park.

* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.

* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. All members of the public should be able to use The Cape Hatteras National Seashore, not just those who drive ORVs. I have driven on the beach while fishing, but a balance can be struck between my interests and those of others. The overriding objective should be minimizing the impacts to the wildlife that uses the beach and dunes so that sustainable populations are maintained. Alternative D is the best of the alternatives, and it is the one that should be adopted.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

There are PLENTY of other places where ORVs & SUVs & dune buggys can be used. Please keep them OUT OF THE OUTER BANKS!!! Americans, generally, are overweight & 'out of shape'. Let them walk. It will do them good & protect the beaches, sand dunes & fragile vegetation too. I've been to the Outer Banks numerous times. I can well attest that the area can be thoroughly enjoyed without the 'aid' of ORVs.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.

Correspondence: I think restricting beach driving is so crucial to the biodiversity of the beach ecology. The rest of the outer banks is a highway. Why trample all over the beach. The thing that should be done is try to make areas more accessible on foot. The Surfrider foundation doesn't want offshore drilling which is good, but they think it's imperative that we not block 4 wheel drive access to areas that might provide potential surf spots. To me that is contradicting considering how dirty automobiles are and the fact that you burn so much more fuel in bigger 4 wheel drive vehicles. The Surfrider foundation is misrepresenting the environment with their double standard philosophy. Please protect the ecology it's imperative to having clean beaches where wildlife can do the thing they have been doing since before we came to these barrier islands!!!!

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.

This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.

The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.

* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.

* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.

I am president of the Cape Fear Audubon Society. Like Hatteras, our area (New Hanover, Pender and Brunswick counties) has seen explosive growth in beach use and subsequent declines in numbers of successfully nesting shorebirds. National Seashore is important for public recreation but this recreation must be compatible with protection of birds, turtles and other endangered, threatened or declining species. ORV-use is only one small part of public use. Where it is allowed, for instance at the Fort Fisher State Recreation Area, pedestrians cannot safely use the beach. The area becomes off-limit to them. It then looks as though all recreational use is ORV use simply because all other use is excluded. This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife.

I would like the final plan to include:T

*Equal access for all visitors whether they are on foot with binoculars and cameras, families with little kids in tow, or recreational fishermen. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. Thus, a small percentage of users would dominate 75% of the National Seashore. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors and allow wildlife to regain the ground lost by the previous years of poor management.

* Primary emphasis on protecting natural resources. All recreational use should be consistent with this goal. Despite the ORV uproar, this is readily achievable and would not result in less public use, only in better managed public use. The preferred plan does not allow for adequate areas that are free of ORV use year round for wildlife, including breeding, migrating, and wintering species. Decisions regarding size and location of protected areas should be based on science, not politics.

* Establish and meet clear goals for wildlife recovery. Park management needs to have a plan to undo the years of mismanagement that have resulted in precipitous declines in wildlife. The plan should be based on the best available, independent science and include clear and measurable goals. If these goals are not met, the plan needs to be periodically adjusted to meet them.

Thank you for allowing public comment. Our chapter regularly visits Hatteras on birdwatching field trips. This is a resource for the whole country. Beaches lined with people and crisscrossed with tire tracks are available for public use all over the east coast. National Seashore should be where people can go to observe wildlife while enjoying beachcombing, sun bathing, swimming, birdwatching, photography and all other activities compatible with wildlife habitat. Please do not allow the noise and political clout of the ORV industry to obscure the fact that it is just one use among many and that it is

the only use that by its nature precludes all the others.

Correspondence: The "preferred" option F on the DEIS is completely unacceptable. It is even more restrictive for both pedestrian and ORV access to the Cape Hatteras National Recreational Seashore. The distances of beaches closed for mating and or nesting birds are much too large. Why does a bird need an area the size of a battleship to breed and nest? This plan is not fair to all users of the park because it not only limits access to the seashore for ORV usage but also pedestrians. Limiting access by ORV is discrimination against those not physically able to reach most of the remote location for recreation. NPS: "Even with resource closures in place, protected species are still at risk [from pedestrians and ORVs]." page 210. No piping plover deaths have been attributed to ORVs. ORV violations continue to decrease as signage and education improve. Pedestrian violations are much more significant than ORV violations.
NPS: "Visitor experience could be affected by conflicts between motorized and non-motorized recreation users." (page vi) Why has NPS never made public a list of reported incidents? In 10 years, only 1 minor incident involving a stuck vehicle and a pedestrian was disclosed. The drive was not blamed by those involved, nor was he charged. page(268).
NPS: "ORVs have long served as a primary form of access for many portions of the beach in the seashore, and continue to be the most practical means of access and parking for many visitors." page 1 Pedestrian only areas discriminate against individuals with limited mobility due to age or physical impairments, families with small children, and those wishing to engage in activities requiring recreational equipment. Why will Special Use permits to allow the transportation of disabled visitor to the village beaches require the vehicle to be returned to the street, creating hardships and risks in the event of emergencies? page 58
Excessive DEIS hatch window closures RESTRICT ACCESS- NPS: Around the clock closure from nest to surf line(p.125) Pro-access: Closure to surf line from 1 hour before sunset until dawn, monitored by turtle nest watch team. NPS: 105 meters wide(p.125) Pro-access: Closure should be 10 meters square during the day NPS: Use U shaped light filter fence to orient hatchlings Pro-access: Use Pea Island style keyhole pattern fence to the surf line at night.
Night driving restrictions penalize pedestrian and ORV users(p.125) May 1-November 15th
The DEIS describes ORV access as historical in nature(p.83) and also both pre-dating the Seashore and as being integral to the public use by both residents and visitors. The document also illustrates and captions historical commercial fishing(p.18), historical recreational fishing(pgs.15,260) and historical general recreational activities(p.259). These same activities are featured on the cover. The surf zone has long been not just a location for traditional economic activities such as surf dory seine net fishing but also other cultural activities. These include general beach recreation activities, social gatherings, weddings, funerals and hook and line recreational/subsistence fishing. Collectively these activities are components of an unbroken pattern of land use that extend back many generations before the establishment of the Seashore and remain integral to the fabric of the historically unique Outer Banks communities. With that stated: Why has the NPS failed to appropriately address the traditional cultural value of surf zone access? The NPS failure stands in direct violation of its legal responsibility under Section 106 of the NEPA and the NEPA framework as a whole.
As for the Socioeconomic data and analyses in the DEIS(pg 270-281) it leads to misleading and sometimes erroneous conclusions. Critical weaknesses in the analyses pertain to: 1) statistical definition of the Region of Influence(ROI); 2) incomplete visitation/business survey data (p.566); 3) erroneous recreational user data; 4) inflated overall Seashore visitor counts pertaining to beach use; 5) flawed key assumption concerning the maintenance of access under Alternative F. These flaws are directly manifested in both the Effectuated Environment and Socioeconomic Impact sections of the DEIS. Region of Influence(ROI)- The ROI incorporates the Northern Beach communities, including Southern Shores and Duck. These areas are almost completely disconnected from ORV and access issues relating to the Seashore. Inclusion of Northern Beaches in analysis greatly dilutes estimates of economic impact on the Seashore Villages. Economic analysis in the DEIS do not use data from the first full year of the Consent Decree (2009). Many visitors were either unaware of the scope of the Consent Decree beach closures, or had already made plans/reservations. Actual business survey data rather than model projections for economic impact for Seashore Villages businesses are not available in the DEIS.
Alternative F may be the preferred by NPS but it is surely not the best alternative for users of the seashore. In fact all of the alternatives have far too much access restriction for both ORV and pedestrian usage. If I had to choose one it would be Alternative A, which at least takes elements of the 1978 draft interim ORV management plan. NPS should seriously consider the irreparable damage implementing such a restrictive plan as Alternative F will do to the surrounding villages and to visitors to the park itself. This is a unique place, the first National Seashore Recreational Area in the United States. Let's not lose that important word Recreational Area, lest we lose sight of the founding legislation for this wonderful place.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
I personally consider this a life or death situation, certainly not for human beings, but clearly for the nesting birds and sea turtles. There are many places where off-road vehicles can be used. Sadly, there are all too few places left for wildlife fighting to survive human intervention. Alternative Plan D would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, both of which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. Correspondence: Per page 468 of the DEIS regarding restrictive management areas the use of ML1 is recommended which prohibits any pedestrian or ORV access during the entire breeding season. It seems to me that at least an allowance of a corridor around the enclosed areas should be permitted at and through the high tide line. We are well aware of where the closures are as one cannot possibly miss the unsightly signage and believe it or not, we do not care anything about disrupting the birds and their breeding habitat. All I want is to be able to get my family to the beach and to be able to catch our dinner from the ocean once in a while. And our friends and family that visits each year certainly will not be visiting if we are unable to get to these beaches. My friends and family spend hundreds of dollars per each visit. The alone are bringing thousands of dollars to the area. We have driven and walked around these closures for years now without disruption to the birds. Thank you for reading this comment. Correspondence: I visit Hatteras Island twice a year for fishing. I do not own property on the island, nor am I involved in any business on the island. When we fish, we are always very aware of our responsibility to protect the resources of the area. We enjoy the total experience which includes observing all of the wildlife of the island, even the rabbits around the light house.

I realize that it may not be possible to have maximum access at all times and protect the wildlife resources. It may also not be possible to give the wildlife maximum protection and have any access. Somewhere in the middle is a compromise that will allow both protection and access. In my opinion, closing beaches and forcing more fishermen onto less and less area is not a good answer.

It may be to late for this idea, but I would like to see an education program for all who use the Seashore. If we are all aware of the needs of the wildlife, we can all work together to make sure that both access for people and protection for wildlife are available.

Correspondence: I am writing to express my grave concern over the Cape Hatteras Off Road Vehicle Negotiated Rulemaking and Management Plan EIS. I understand there is a proposal to close Hatteras inlet and other areas to Off road vehicle (ORV) use year round. As the operator of a beach house rental unit very close to Hatteras inlet and Ocracoke island at 58213 Sand Road, Hatteras, NC this would have a potentially devastating affect on my rental cottage business as many of my weekly renters are surf fisherman who require ORV access to get to the inlet and good fishing areas.

I have been operating my beach house rental for many years as an investment and my house has provided income to many local handymen, cleaners, and other small businesses. However, if this proposal is adopted I fear I will have to sell my investment (likely at a loss) due to lack of rental income generated from those who wish to safely fish while using their ORV's on the beach. I implore you to reject the ORV driving restrictions and will also be contacting my local congressman to share my outrage at your proposed action.

In addition, on a personal note, my disabled mother would not be able to enjoy the inlet as she cannot walk the many miles to the end of the inlet. I beleive you may further limit access for those disabled who are unable to reach more secluded areas of the beach without the use of ORV's.

Thank you for taking my comments into consideration

Sincerely,
William Burlew Owner Flying Cloud located at 58213 Sand Road Hatteras, NC 27943

* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are

management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
As an avid birder and nature lover, the Outer Banks has been one of my favorite places to visit. One of its special assets is the possibility of seeing endangered species such as Least Terns, and Piping Plovers. ORV's take a heavy toll on these fragile birds as well as the precious and declining sea turtles. ORV enthusiasts are not the ONLY people who want to enjoy the beach. There are those of us who want to enjoy the wildlife and those of us who want to just enjoy the beach without the risk of being run down by an ORV. Surely a compromise can be reached.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. * Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. Correspondence: Hello, Thank you for the opportunity to comment. After reviewing the DEIS, the best choice appears to be option C--it seems to provide the best combination of environmental protection and beach access without additional expenses of options D, E, or F--those options involve building additional ramps, parking, etc., in addition to the probability of increased management expenses. Thank you, Jeff Schuyler

Correspondence: My family travels to Cape Hatteras every year for our summer vacation. One of the main reasons we travel there is due to the ability to drive on the beach. If the beach were to be closed due to environmental reasons that are more extreme than anywhere else on the east coast, 1000m closures for a plover nest which is ten times larger than the required space in Cape Cod, we would not travel to Hatteras anymore.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.

I am aware that a personal letter may be of more interest to you. However, after reading over letter below, I can think of no way to improve on what is suggested by Audubon. Please consider their proposal carefully, and I pray that you will act in the interest of the needs of wildlife and of the public who wish to enjoy the beach without the disturbance of ORV's.

This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.

The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

- *Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
- * Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
- * Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.

This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.

I'm a North Carolina resident and I am in favor of restrictions on ORV's on the beach. We've seen how these restrictions bring back wildlife - don't stop them now!

The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

- *Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
- * Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
- * Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

- *Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
- * Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
- * Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent

degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore. Where I come from, Cape Cod, ORV use is restricted except in designated areas to protect the fragile dunes and beaches from man made erosion. This will also help preserve the birds and wildlife and tranquility of the NC seashore for everyone's enjoyment.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
The following principles should underpin the park's formulation of its final plan.
*Equal access is already provided for all visitors. The current consent decree has turned management of the National Seashore over to special interest groups. Closures in place before the consent decree were proven to be adequate for wildlife success. The current plan does not represent a balance for current users and wildlife. As has been in the past ORV use should remain allowed within the park and all of the beach should be available year round for ORV users pedestrians and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. * Put our Natural Resources First. Protection of the natural resources of the Seashore should come first. Studies should indicate bird use in areas other than the National Seashore such as the barrier islands surrounding the area so as to indicate an accurate indication of wildlife use. Resource closures are not fair and have not proven to affect the outcome of birds breeding on our seashore. Closure would not be necessary if the proper data had been collected prior to the consent decree. The previous plan before the consent decree set aside adequate areas that were free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan represent a minority opinion and should allow for reasonable travel around them to protect the best public interest.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras National Seashore and look forward to a complete return of the Seashore to the public use as it once was. FREE and OPEN for ALL!
Sincerely, Ryan Young 4419 Pine Hollow Dr Wilmington, NC, 28412

Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Correspondence: Cape Hatteras National Seashore holds a unique ecological, recreational and economic value. I believe that beaches are a public resource and should be held in the public trust for their preservation.
Cape Hatteras National Seashore provides some of the best recreational resources on the East Coast, including surfing and fishing, but I recognize that if not regulated correctly ORV use may detrimentally affect migratory species that nest in the area. I believe that a balance between access and preservation can be achieved and that allowing continued access with improved management of ORV use to the National Seashore is the optimal solution for this area.
I support Alternative C, a balanced solution that benefits the animal species while guaranteeing humans can continue to enjoy and protect this most-precious coastal resource for years to come.

Correspondence: Hello NPS
My opinion is that the ORV access should be expanded or at least remain as is. I visit the Outer Banks regularly and love being able to drive off road. In Volusia county in FL Turtles have made a come back just by keeping traffic off the dune areas. They currently use poles to deliniate where vehicles can travel. This may be overkill but it is a successful example.
Thank you for the access we currently enjoy and for all the hard work of the park service.
David McCurdy

Correspondence: Please protect Hatteras National Seashore. This is a great sea shore I have visited while staying in the outerbanks. This has to be protected from ORV use. ORV's threaten nesting birds that migrate through my state of Virginia and the whole east coast of North America. ORV use on beaches will destroy these birds for all Americans. Also ghost crabs and local crustations and mollusks that feed the birds will be killed. Plead put a high strongly enforced fine on ORV use on the Seashore. ORV use also ruins the. Experience for beach walkers.

Correspondence: Hello,
As the longtime owner of two Cape Hatteras vacation cottages and as a person who has been coming to Cape Hatteras for nearly 50 years and loves the island and its beauty, I wish to offer two comments about the proposed beach access policy.
1. Pedestrian and pet access are an important element of the beach. I love to walk along the beach with my dog from Avon to Buxton, down to the point and through Buxton Woods. We always respect nature and I see absolutely no conflict with nature by having pedestrian and pet access, so long as reasonable rules of conduct are developed and observed.
2. It seems very important to develop a plan for preserving historic manmade and cultural features in the area, either as part of this effort or as a separate mandate.
thank you very much,
Steve McQuillin

Correspondence: I think it would be a good idea to try to remove houses from the Ocean front to allow plenty of space for the sand to shift back and forth. Also we should develop means to prevent people walking on the beach from crushing live crustaceans and mollusks buried in the sand and work out regulations to allow migrating birds to have sufficient time on the beach to feed.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.

This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.

The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.

* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.

* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Humans have enough of the planet. Save some for the wildlife. Stop ORV usage this is insane.

 The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
 *Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
 * Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
 * Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
 Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I urge you not to sacrifice legitimate human leisure, pleasure and sporting activities to protect animal life on the Cape Hatteras National Sea Shore. Your plan, in my judgement, will severely change beach access and length of access. As a result, there will be restrictions placed on the human beings for whom the National Seashore was originally created. The National Seashore is not a wildlife preserve. Additionally, this plan would have a negative financial impact of the two homes I own in Avon NC and lessen their value. Who will compensate me for these losses of their value? The proposed plan even goes farther than the present consent agreement. Finally, the plan shows little sensitivity to the local families on Hatteras island--especially infringing upon and impacting negatively on their ability to earn a living which would support their families. You can do better and protect the rights of everyone.

Correspondence: Cape Hatteras National Seashore holds a unique ecological, recreational and economic value. I believe that beaches are a public resource and should be held in the public trust for their preservation.
 Cape Hatteras National Seashore provides some of the best recreational resources on the East Coast, including surfing and fishing, but I recognize that if not regulated correctly ORV use may detrimentally affect migratory species that nest in the area. I believe that a balance between access and preservation can be achieved and that allowing continued access with improved management of ORV use to the National Seashore is the optimal solution for this area.
 I support Alternative C, a balanced solution that benefits the animal species while guaranteeing humans can continue to enjoy and protect this most-precious coastal resource for years to come.

 I believe educating on the ORV drivers on proper beach driving practices before allowing access to the outer beaches will help to avoid any destruction of sensitive beach habitat and wildlife.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
 This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
 The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
 *Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. Correspondence: I live on Hatteras Island and spend time on the beach every day. I love the beach and all the wild creatures that live here and depend upon it. I also enjoy seeing people recreate and families relaxing and playing. I understand why people want to drive on the beach, nevertheless, without further discussion, and after weighing the many factors, I believe it is detrimental in all ways - for the general public and for the wildlife, and for the coastal erosion. I believe we need walkways for access - many more walkways.
