Correspondence: Cape Hatteras National Seashore holds a unique value to each person who visits. There is an ecological, recreational and economic value. I believe that

beaches are a public resource and should be held in the public trust for their preservation.

The Cape Hatteras areas has the best recreational activities on the East Coast. I recognize that if not regulated correctly ORV use may detrimentally affect migratory species that nest on the Cape Hatteras National Seashore. One of the main reasons my daughters and I visit the area every year is because the balance between beach access and preservation is at it's highest level at Cape Hatteras. I believe that a balance between access and preservation can be achieved and that allowing continued access with improved management of ORV use to the National Seashore is the optimal solution for this area.

I support Alternative C, a balanced solution that benefits the animal species while guaranteeing humans can continue to enjoy and protect this most-precious coastal resource for years to come. Thank you for your time, Meg Nealis

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. This is the rules at the Cape Hatteras website: Cape Hatteras National Seashore contains a wealth of natural and cultural resources. Off-road vehicles (ORVs) are one way for visitors to enjoy the seashore's ocean beaches and sound-side waters. Please use the following links and information for details on beach driving and beach access.
?*"New"* (April 2010) Frequently Asked Questions: Beach Access (pdf 173kb) ?Night Beach Driving Permit ?Current Google Earth Interactive Beach Access Map ?The weekly Beach Access Report can be found on our park news release page, April-October ?Beach Driving at Cape Hatteras National Seashore brochure (pdf - includes map, regulations, and tips for beach driving) ?2008 Consent Decree Information Updated information on the seashore's Off-Road Vehicle Negotiated Rulemaking and Management Plan process is available at the National Park Service Planning, Environment and

Public Comment website.

There does seem to be good rules already in place if you do more research on the Frequently Asked Questions. I am looking to future information to see how these rules are going to hold up. I believe that the voters of North Carolina should all be notified about their rights to speak openly on this matter at the your site. It is imperative to call a halt to such destruction, and make this the case that sets the precedent for future decisions.

Correspondence: Cape Hatteras National Seashore must first and foremost function as a safe and healthy habitat for its indiginous marine species, sea turtles, birds and mice. With adequate rules in place to regulate the activities of the human population, especially the use of ORVs across the sands, the dunes and littoral areas, the National park Service will be able to preserve and protect this ecosystem and also allow for responsible recreational activity. Adequate means the plan chosen should not endanger the natural beach environment or its creatures.

Correspondence: I am writing to you concerning Cape Hatteras National Seashore. This is a wonderful place that holds a unique ecological, recreational and economic value.
 Beaches are a public resource and should be held in the public trust for their preservation. Cape Hatteras National Seashore provides some of the best recreational resources on the East Coast. If not regulated correctly off-road vehicle use will detrimentally affect migratory species that nest in the area. I believe that preservation is the most important aspect. If full preservation is not possible, Alternative C provides an adequate compromise position that benefits the animal species yet still guarantees that people can continue to use it in a number of ways.
 I ask that you pick the strongest solution possible to protect and preserve this most-precious coastal resource for years to come.

Correspondence: The Outer Banks Chapter of the Surfrider Foundation recognizes the unique ecological, recreational and economic value of the Cape Hatteras National Seashore. We further recognize that beaches are a public resource and should be held in the public trust for their preservation. We understand that for decades the Park Service has allowed access to Cape Hatteras National Seashore beaches by Off Road Vehicles (ORV) with minimal restriction or oversight and that if not regulated correctly ORV use may detrimentally affect migratory species that nest in the area. The Outer Banks Chapter supports beach preservation and protection efforts, but feel that a temporary and or permanent ban on ORV access to these beaches could have an immediate detrimental impact on the Outer Banks economy, and severely limit public access to groups that appreciate, use, and support the protection of these coastal resources. We believe that a balance between access and preservation can be achieved.
It is difficult for one that has not spent significant time on the Outer Banks to consider how limited access to beaches would become without ORV use, access that is the very reason that people from all over the world come to the Outer Banks to visit. In our small community where much of the oceanfront has been developed by homes, this small stretch of National Park is truly one of the last protected places to enjoy the unique resources on Hatteras Island. Hatteras Island offers world class surfing and fishing, much of which can be attributed to its remote location that is accessible only by ORV's. At this time the Outer Banks Chapter of Surfrider Foundation believes that allowing continued access with improved management of ORV use to the National Seashore is the optimal solution for this area.
The Outer Banks Chapter implores all parties involved in this issue to find a balance between access, protection and preservation. We recommend managing access of these areas through a combination of permitting, limiting the number of vehicles, and closures when necessary to protect the migratory species that use this area seasonally. The Outer Banks Chapter of Surfrider Foundation supports protection and preservation, and in this unique situation does support the reasonable use of ORVs to allow public access to this area.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.

This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.

The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

- *Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
- * Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
- * Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: Dear Superintendent Murray:
Thank you for opening the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore to public comment. Several alternative plans are presented in the draft environmental impact statement.
If altered to provide greater pedestrian access, Alternative D, identified as "environmentally preferred," is the alternative I would support. This approach would allow for greater non-ORV use of the Seashore as well as have less negative impact on wildlife ? one of the very environmental resources the Seashore was created to protect.
I support the principles the Audubon Society represents for the DEIS process, should Alternative D and its modification not be enacted:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: Cape Hatteras National Seashore holds a unique ecological, recreational and economic value. I believe that beaches are a public resource and should be held in the public trust for their preservation.
Cape Hatteras National Seashore provides some of the best recreational resources on the East Coast, including surfing and fishing, but I recognize that if not regulated correctly ORV use may detrimentally affect migratory species that nest in the area. I believe that a balance between access and preservation can be achieved and that allowing continued access with improved management of ORV use to the National Seashore is the optimal solution for this area.
I support Alternative C, a balanced solution that benefits the animal species while guaranteeing humans can continue to enjoy and protect this most-precious coastal resource for years to come.

Correspondence: I have visited the outer banks for two decades and spend at least two weeks a year on Ocracoke Island where I surf, paddleboard, swim and enjoy the beach. Sometimes, I camp in the NPS campground. The outer banks are unique in their wildness and raw landscape. This undeveloped resource and it's natural inhabitants are a rare treasure that should be protected to the fullest extent and not taken for granted! Over the years, I have noticed the tourism population grow and grow on the banks. It also seems like everyone now has a 4WD vehicle. Gone are the days when it was just fisherman driving with great respect and caution to find their spots on the beach. Now, the majority of beach drivers seems to be tourists mainly joyriding. My observation of these tourists driving on the beach is that they lack the basic knowledge of how to properly drive on the beach. These tourist also seem to lack basic respect for the beach, it's conservation and the safety of others. Numerous times a year and sometimes numerous times A DAY, I witness speeding, near collisions with other vehicles, driving on the dunes, driving below the water line, driving past beach access boundary markers, drinking and driving, littering, aggressive driving and near misses with beach goers (including small children) and their pets. There have been no less than five times that a vehicle has come within a few feet of hitting me as I sunbathed on the beach and it wasn't that I was hard to see as I had an 8ft. sunshelter set up over a cooler, two colorful chairs and beach blankets, etc! If ORV are going to continue to be allowed access there needs to be significant and severe restrictions implemented and then enforced. Perhaps a permitting process that involves a fee and an educational requirement so that all ORV drivers are at least competent and then hopefully respectful. ORV access should no longer be a free for all!

Also, I am a student at Stony Brook Southampton, the ONLY campus dedicated to sustainability and an extended marine course. I myself am becoming a marine biologist and am doing work at the Riverhead Foundation for Marine Mammals Research and Preservation. When it comes down to issues like these, I know a pretty good amount of knowledge and what would be BEST for all, including our planet and its OTHER inhabitants. Please take my word for when I say Alternative C is the best choice for everyone and everything.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.

This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.

The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

- *Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
- * Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
- * Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: Cape Hatteras National Seashore holds a unique ecological, recreational and economic value. I believe that beaches are a public resource and should be held in the public trust for their preservation. Although I have never had the opportunity to visit Hatteras, I do believe that an overuse of off roading vehicles will damage the beach and surrounding natural areas.

Cape Hatteras National Seashore provides some of the best recreational resources on the East Coast, including surfing and fishing, but I recognize that if not regulated correctly ORV use may detrimentally affect migratory species that nest in the area. I believe that a balance between access and preservation can be achieved and that allowing continued access with improved management of ORV use to the National Seashore is the optimal solution for this area.

I support Alternative C, a balanced solution that benefits the animal species while guaranteeing humans can continue to enjoy and protect this most-precious coastal resource for years to come.

While I am an out of state resident, I have visited the Outer Banks several times over the past decade. I am an avid surfer and birder who is drawn back time and time again to the rugged beauty of the Cape Hatteras National Seashore. I believe that Alternative C is the best option to preserve the critical migratory bird habitats.

Correspondence: I have never shared my thoughts regarding the management plan officially before, but I believe it is important that all of us share with you how various decisions may affect our lives.
 My family and I own a home in Buxton where we spend about 3/1/2 months per year, and where my husband and I hope to retire in a year or so. When we are on Hatteras Island, we enjoy walking and sunning on the Buxton beach, walking and bicycling on the park road to the lighthouse and around the Buxton campground, and driving our truck between ramp 34 and Frisco to watch sunsets, pick up shells, have an occasional picnic dinner, or a walk with our dog Millie.
 On these drives, we enjoy watching and trying to identify the many shorebirds that are so different than those here in Ohio, and we respect the need to protect their habitat. However, honestly, it does seem kind of ridiculous to "protect" species during the spring and summer that are truly not endangered at the expense of thousands of people's ability to enjoy the seashore.
 Having said that, I also believe it is equally ridiculous to allow driving on all parts of the seashore. As much as I love our beach drives, when I look at the effects of all the tire tracks on the driving parts of the beach vs the pristine look of the Buxton, and other beaches, where there is no driving, there is a difference. People who want to walk on an undisturbed stretch of beach should have that right too. And I don't understand why "walkers" should be restricted from parts of the seashore for any real length of time. If walkers can be expected to respect turtle closures, why can't they be expected to respect bird closure areas?
 In summary, I guess you would say I am a moderate in regards to the plan's design. I oppose closing huge stretches of the recreational seashore for all human access during the nesting months, and I also oppose the notion that anyone should be able to drive anywhere anytime.
 One final thought: I will be very sad if Millie is prohibited from riding in our truck to watch the sunset or to walk on her leash with me while I look for shells.

Correspondence: The following is a letter I wrote to the Island Free Press Friday, April 4, 2008. The last time this issue came to a head; I believe it still rings true. <http://www.islandfreepress.org/CatBeachAccessIssues.html> I packed my truck last night. This morning, my family and I will drive 12 hours to Cape Hatteras. We have been visiting Hatteras since the early 70's. What I have always loved about the Outer Banks, is that I could do anything there. My father shared his love of the ocean, sound, and marshes that are the cape's barrier islands. My father is now retired to Cape Cod; I now live and work on Long Island. While we live in places that are similar to Cape Hatteras? They are still not that wonderfully special place where I learned how to play with its forces; [waves, wind, and, water]: Feed from its bounty: [fish, crab, and shellfish]; and stand in awe of its beauty. That's why we keep coming back. But if you ban four wheel drive access, you will make it impossible for me to share the same experience with my family that my father shared with me. Sure, you may need to limit or regulate 4X4 access. There are just too many SUV's around today. But an outright ban is unnecessary! There are just too many of us who use 4X4 access responsibly who will be hurt in the process. We understand that the beach is a fragile and ever changing place, best accessed by foot, or by responsible four wheel access. The last thing you want is hard structures like roads and parking lots. So, I will make my "pilgrimage" to the OBX today. I've already paid for my rental house. Because of this love for the Cape, we visit in the spring or fall. Any sunburned tourist can love the Cape in the summer? But we rent homes, and spend dollars when it is 50 degrees, 40 knots, and pouring rain. And we love it! Take away our access, and see how many of show up next season. Postscript: Saturday April 24, 2010? I am a member of Surfrider's Central Long Island Chapter, The Long Island Beach Buggy Association, The North Shore Yacht Club, as well as an avid year round Waterman. I believe in 4X4 access not merely for convenience. Although that is part of it. [It is difficult to drag your family to the beaches I love, especially when some of your family are unable to walk one or two hundred yards.] I believe it is the flexibility of 4X4 access that makes it environmentally responsible. Barrier Islands are nothing more than shifting sand bars. They are constantly in motion. With responsible 4X4 access you can better utilize the beaches they create and take away. If a certain area is eroding, or needs to be protected as a nursing or nesting area? you can simply close, or limit access to that beach. Temporarily; of course. If you build "hard structures": like buildings and roads: you are forced to engage in irresponsible dredge and fill operations, as well as poor beach management practices, like building bulkheads, and jetties. These practices do more harm than good. In many cases, regressively uses taxpayer money to subsidize, ie protect some rich guys home, that should never have been built in the first place. Tomorrow, I will attend a Dune Grass Planting at Gilgo beach in NY. As a 4X4 user, I fully support the closing of this, and other beaches to Off Road traffic right now. [Long Island beaches, where I live took a real beating this winter.] So that is why I will be planting Dune Grass on Sunday. It will give the beach a fighting chance to replenish its self. And I will once again be able to drive on and access that beach at some point in the future. It's responsible 4X4 users like me,; or some irresponsible rich guy with a million dollar home. You tell me what's better for the Environment. Thanks for listening,

Correspondence: I appreciate the oppotunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more oppotunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
For the fifty years I have visited Cape Hatteras National Park. During that time there has been a tremendous increase in the number of people using the park and surrounding areas. I think it is important to protect our natural resources and wildlife and to set aside areas that are free of ORV use year round for breeding, migration and wintering of birds, sea turtles and other animals.
Thanks for the opportunity to comment on this important issue.
Sincerely,
Suzanne Magalis PO Box 1699 Cashiers, NC 28717

Correspondence: I appreciate the oppotunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more oppotunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more

balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I am writing to support Surfrider Foundation's position on ORV use in Hattaras. As someone who cares deeply about our oceans and shore preservation, I wanted to put my two cents' in through them. Their statement: Cape Hatteras National Seashore holds a unique ecological, recreational and economic value. I believe that beaches are a public resource and should be held in the public trust for their preservation.
Cape Hatteras National Seashore provides some of the best recreational resources on the East Coast, including surfing and fishing, but I recognize that if not regulated correctly ORV use may detrimentally affect migratory species that nest in the area. I believe that a balance between access and preservation can be achieved and that allowing continued access with improved management of ORV use to the National Seashore is the optimal solution for this area.
I support Alternative C, a balanced solution that benefits the animal species while guaranteeing humans can continue to enjoy and protect this most-precious coastal resource for years to come. thank you! LD

Correspondence: HELLO, I A WRITING TO OPPOSE THE CLOSURE/RESTRICTIONS OF THE BEACH ACCESS POSSIBLY OCCURING IN CAPE HATTERAS. I AM AN EXPERIENCED SURFER, FISHERMAN & BEACH GOER AND I HAVE LIVED AS FAR NORTH AS JEW JERSEY TO CURRENTLY THE WEST COAST OF FLORIDA. CAPE HATTERAS HAS AND ALWAYS BE A PART OF ME AND MY FAMILY BECAUSE OF ITS SPECIAL QUALITIES SUCH AS AND NOT LIMITED TO EXCELLENT SURING, FISHING, NATURAL REMOTE CLEAN BEACHES, FRIENDLY LOCALS, AND MUCH MUCH MORE. VISITING BOTH RECREATIONAL AND COMPETATIVELY (SURFING THE ESA EASTERNS SINCE 1987)DRIVING ON THE BEACH TO A REMOTE AREA WITH YOUR FAMILY IS SOMETHING THAT WE LOOK FORWARD TO EVERY TIME WE ARRIVE ON THE ISLAND. IT IS AN ADVENTURE THAT I LOVE MORE THAN MY KIDS OR THE YOUNG ONES WITH US ON THAT TRIP.
PLEASE CONSIDER KEEPING THEM OPEN TO THE PUBLIC. I KNOW THE EXPERIENCED PARK EMPLOYEES AND RESPECTFUL PEOPLE WILL CONTINUE TO PRESERVE THE AREAS IN CONSIDERATION. KNOWING THEY ARE AT RISK FROM REMOVAL TO PUBLIC USE, I BELIEVE USERS WILL BE A LOT MORE WILLING TO FOLLOW WHATEVER RULES ARE APPLIED TO CONTINIE USE IN SUCH A UNIQUE BEAUTIFUL AREA. SINCERLY, LAWRENCE S.POLLIN AND FAMILY

Correspondence: We are deeply concerned regarding the direction being taken by the National Park Service (NPS) with the draft "Cape Hatteras National Seashore Off-Road Vehicle Management Plan / Environmental Impact Statement." We strongly believe that the positions developed by the Coalition for Beach Access are reasonable and provide adequate protection for endangered species. We are particularly concerned with the NPS proposed positions limiting beach access for pedestrians with leashed pets. For example, DEIS states that "Pets would be prohibited within all designed breeding shorebird Species Management Areas (SMAs) from March 15 to Oct. 15," and "Pets would be prohibited within all nonbreeding shorebird SMAs that are otherwise open to recreation use." This is an unacceptable proposal.

Current NPS regulations require pets with pedestrians to be on leashes no longer than six feet. This requirement is more than adequate to prevent pets from damaging protected species. Pets on leashes do not damage protected species. Statements in the DEIS that reference reports citing damage to protected species from pets are not accurate reflections of conditions where pets are required to be on leashes. Prohibiting pets completely from beach areas, particularly in front of villages, will significantly disrupt vacationer experiences and cause vacationers to seek other more pet friendly beach areas such as in Currituck County. Implementing the NPS proposed actions regarding pets would significantly affect demand for rental properties on Hatteras Island, a hardship that is not accurately reflected in the DEIS.

Many families choose to take their pets with them on beach vacations. This is an important criterion for vacationers choosing a beach destination. Our family makes it a priority to have our pets with us on our beach vacations. One of the reasons we purchased a home on Hatteras Island was the beach access for our walks with our pets. Adoption of restrictive beach access rules for pets may force us and others to leave Hatteras Island for more pet friendly beach areas.

Proposals within the DEIS to limit beach access beyond current requirements would present a significant and unnecessary hardship on rental property owners and vacationers. We strongly urge your department to adopt the positions of the Coalition for Beach Access, particularly with respect to pet access to beaches.

Correspondence: I disagree with the proposed regulations for ORV use in the Cape Hatteras National Seashore Recreational Area. As a tax payer, OBX property owner and longtime resident of North Carolina, I believe this Recreation Area needs to be preserved first and foremost for the enjoyment of the public. For decades the Cape Hatteras and all of the Outer Banks have relied heavily of fishing and tourism. To date, these continue to be the prime economic engine for the community. Having grown up fishing the ocean and sound, I know first hand how important ORV access is to this area. Without ORV most of the seashore is inaccessible to the average surf fisherman. Hauling gear for miles across the sand is hardly how I'd define a happy recreational outing. I remember my dad teaching me how to drive of the beach and later taking my own Jeep out to go on fishing trips. I just welcomed my first child into the world two months ago. I want to be able to share the same experiences I had with my dad with her. I remember standing in the water over looking Cape Point while the blue fish blitzed. I remember standing on the north shore of Ocracoke fishing the inlet for drum. These are priceless memories that I fell are entitles to all North Carolinians and all Americans. Please don't take these precious spots away from us.
Here are a few points of concern I share with several others:
1) You want to close Hatteras Inlet, North End Ocracoke Island, Ramp 27-Ramp 30 (Salvo) year round. I am completely opposed to this. There are miles and miles of beach that are already non-accessible to ORVs up and down the Outer Banks. We aren't seeking an expansion of ORV areas, just what we've been historically entitled to.
2) Why do non-endangered or non threatened species like Oystercatchers get so much area closed for them? 3) Piping plover buffers. Let's examine this. By NPS reasoning this bird is endangered and should be protected. I agree. People need to be aware of these nests and taught to look out for the birds. That said, why isn't the same level of protection afforded to all endangered bird species throughout the national park system? ORV trails run through parks in Colorado, past the nesting ground of bald eagles yet no one is suggesting a stop to that action. The same can be said of trails in California, Utah and other NPS areas where endangered birds nest.
4) NPS does not adequately consider locations neighboring the Recreational Area that are part of the same ecosystem. This includes dredge and spoil islands that have less predator presence. (p124)
5) Why is it okay to tamper with nature in some instances but not others? NPS sets aside areas of beach to "extirpated" sea beach amaranth, but it's not okay to clear vegetation at Cape Point ponds to create more favorable piping plover habitat.
6) I completely disagree with the ban on pets during the summer season. If a person is not properly managing their dog, then cite them with a ticket. Make the penalties steep if you must, but don't take away pet owners rights.
7) Why is it okay to kill predators (greatest risk to birds and turtles), but not okay to drive on the beach at night (deterrent to predators, low risk to turtles and birds)?
8) Finally, please consider the impact on the economic livelihood of these communities. ORVs have been supported for over half a century with businesses developed around their use.

Correspondence: If all people were responsible enough to take nothing but pictures and leave nothing but photos I would be a proponent of allowing more access to this national park. However, this perhaps is and will continue to be another issue of the few ruining the quality of recreation for the many. Where humans tread environmental impact and destruction is certain to follow. There is no doubt allowing more access will result in a more pollution, littering, destruction of wildlife habitat, and the sacrifice of once-pristine and practically inaccessible areas. In addition, more access eventually and invariably leads to the need for more services and infrastructure, such as equal access for the physically-challenged, bathrooms, gas stations, roads, and even outfitters--allowing more access may very well be opening up a can of worms, or at minimum providing the can opener. Certainly there is profit to be made, and increased access and development will allow the land to be more efficiently used--or used up. Over 40 yrs after the park was created we need to be asking ourselves not only if this is the best way to preserve the park for future generations, but if this is what LBJ intended. Perhaps if one can't find the motivation 'get there' and bring what they need so easily, they have no business going.
I live on an Atlantic barrier island of central Florida and am an avid surfer and member of Surfrider Foundation. The first time I rode the ferries and visited the outer banks I was mesmerized. Their pristine beaches and dunes look exactly like those where I live in Florida, minus development and infrastructure. If there is anywhere else can one visit, enjoy, and experience what the outer banks has to offer I have not heard of it. Once this untouched area is gone, it will be gone forever.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the

alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.

This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.

The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.

* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.

* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
I speak for 'wild'life as well as my own family's future.
I take issue with * Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on at only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife.
Motor noise impinges on my right to quiet. I would like to prohibit Off Road Vehicles all year round, period. Families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Correspondence: It seems reasonable that public lands should be shared in their use by all interested parties and rules/law should reflect that. We have similar problems here in Hawaii where the shoreline waters are used by fisherman, surfers, boaters, swimmers and issues of use are addressed accordingly (not always without acrimony, unfortunately).

Correspondence: Cape Hatteras National Seashore holds a unique ecological, recreational and economic value. I believe that beaches are a public resource and should be held in the public trust for their preservation.
Cape Hatteras National Seashore provides some of the best recreational resources on the East Coast, including surfing and fishing, but I recognize that if not regulated correctly ORV use may detrimentally affect migratory species that nest in the area. I believe that a balance between access and preservation can be achieved and that allowing continued access with improved management of ORV use to the National Seashore is the optimal solution for this area.
I support Alternative C, a balanced solution that benefits the animal species while guaranteeing humans can continue to enjoy and protect this most-precious coastal resource for years to come.

Correspondence: I have enjoyed the beaches of the Cape Hatteras National Seashore for over 35 years. I do not fish, but I prefer Cape Hatteras beaches because one can avoid the crowds at Nags Head and other popular seaside resorts. However, I am very concerned that the effort of the National Park Service to decrease the amount of accessible shoreline in the National Seashore will cause over-crowding in sections that are still open to vehicles and pedestrians. If this situation occurs, the Cape Hatteras National Seashore will lose much of its allure and popularity.
I am also disappointed that the emphasis of the National Seashore seems to have shifted from recreation to bird and turtle protection. THE ORIGINAL INTENT OF CAPE HATTERAS NATIONAL SEASHORE WAS RECREATION NOT WILDLIFE REFUGE!
In closing you will probably receive thousands of comments from Audubon, Defenders of Wildlife, and numerous other environmental activists. My question is: How many of these "environmentalists" have visited or will ever visit the Cape Hatteras National Seashore?

Correspondence: I am a vacation rental property owner in Avon. I in principle accept and agree with the provisions of the option F plan with the following objections and suggestions: 1. I do not agree with the provisions concerning pets and their access in any non-breeding SMAs year round that are otherwise open to recreational use and any pass-through zones. Pets should be allowed in these areas with the current leash requirements. I would suggest you require a one-time pet tag with an annual fee attached to it for educational training of owners. Have the owner sign off on the provision, adults only. Permits should be available at retail stores, ranger stations and on line registration. The permit should be available before seasonal visitors come to the shore from outside the local areas. If we need a beach fire permit ORV why not pet owners permit? I also believe that pet owners should be responsible for the cleaning up and properly disposing of pet waste. Any well trained vet will tell you pet waste can be a public health risk. Provisions for enforcement and fines should be attached for failure to comply. The park service should also make available stations for proper disposal of pet waste particularly in the villages and ramp accesses. Biodegradable bags should be provided for pet owners at these stations. This is done in many state rest areas with much success. Cost to administer should be borne by the pet owners. Just so you are aware I am a responsible dog owner. 2. I question the conclusion that restricting beach access will have a negligible economic impact. Is there a way to adequately study cause and effect before the plan is adopted? I see a conclusion in your draft but there seems to be unsubstantiated evidence. 3. I applaud the recommendation of the adoption of turtle friendly lighting. I believe the municipalities and the county governments should adopt lighting ordinances for regulation and enforcement. All government agencies including the US Postal service should comply with your guidelines. The biggest offender to the creation of powerful ambient light is the Post Office in Avon. Their lighting system is so powerful that it prevents people from enjoying the stars and clearly affects turtles. The postal service has ignored repeated requests to alter their outside lighting despite the fact they do not conform to county ordinances. 4. Your beach equipment ordinance has no teeth. Twenty four hours notice before removal does not accomplish the goal of no obstructions. Confiscate the junk when you see it and make everyone aware they can retrieve it at the Ranger Station, for a fee.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the

alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.

This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me about the areas mentioned below as well as in the whole southeastern region of the US which has abundant wildlife, ancient and historic forests and more, that need more protections than ever!

The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.

* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.

* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: Cape Hatteras National Seashore holds a unique ecological, recreational and economic value. I believe that beaches are a public resource and should be held in the public trust for their preservation.

Cape Hatteras National Seashore provides some of the best recreational resources on the East Coast, including surfing and fishing, but I recognize that if not regulated correctly ORV use may detrimentally affect migratory species that nest in the area. I believe that a balance between access and preservation can be achieved and that allowing continued access with improved management of ORV use to the National Seashore is the optimal solution for this area.

I support Alternative C, a balanced solution that benefits the animal species while guaranteeing humans can continue to enjoy and protect this most-precious coastal resource for years to come.

Correspondence: I would like to comment on the draft DEIS with emphasis on alternate F. I have been frequent visitor to Cape Hatteras and Ocracoke since 1977 primarily for recreational fishing and family vacations. I normally frequent the area of Avon 3-4 times a year. I have read over the document and find alternate F to far exceed anything contained in the consent decree and frankly make my reasons for visiting almost useless. I see nothing that fully considers the economic impact to the area of Cape Hatteras or this region. If feel the considerations inject areas like Duck and Kill Devil Hills but do not consider this unique area around Avon and southward. Why doesn't DEIS address actual business impact. Surely it is available.

I have been closely following the various actions of the NPS and have read input by the NPS in the NCBBA publications. Alternate F is a complete surprise to me. Additionally, I do not see that alternate F was ever reviewed within the Reg-Neg process. How do you explain this???

I do not see where the NPS has aggressively considered experiences of other locations in NC, namely Carolina Beach Freeman Park or the state park at Fort Fisher not to mention other East Coast locations.

I find the consideration of less restrictive closures on a five year basis insulting. Buffers should be minimized and reviewed weekly for their relevance. I find the 'ML1' closures almost beyond common sense.

In 1937 the park service was entrusted with a unique opportunity to protect the cultural heritage of this area. My review of the DEIS leads me to the conclusion that what the NPS is protecting is their own interests. Human/ORV access is being blamed for almost all bird/turtle 'problems' yet by your statistics they account for about 3%. All the emphasis seems to be placed on restricting human access when I was always under the thought that all parks

should be for access by humans to appreciate the fullness of nature.

Thank you for your time and I hope this comment period will be used as input and not merely an exercise of government letting the people comment and then we'll do what we always intended to do.

Correspondence: My family and I strongly object to this plan. The 1,000 meter pedestrian/ORV closure around a piping plover nest is way, way, WAY too much. It is equivalent to 771 acres of protection per nest. Where is the science that says each nest needs 771 acres?

The 300 meter pedestrian/ORV closure around an oyster catcher nest is similarly unjustifiable by all the known science for that species. Further, the Oystercatcher is not even a federally threatened species.

The restriction against dogs on the beach from March 15th and July 31st is simply unprecedented. Where is the data that shows that this is even a problem? Who says this will even help protect the birds if dogs aren't a part of the problem?

It looks to us like environmental extremists of the worst kind have taken the litmus test approach to the entire National Seashore - including the property directly in front of THOUSANDS of existing homes. And like most single issue extremists, they simply refuse to recognize the many other significant factors that need to play into these decisions. Namely, the rights of existing property owners, the damage to the local economy, and the need to provide appropriate access to the Park to an entire nation of vacationers and other visitors.

The National Park system was created and developed to allow the entire nation a safe and beautiful place to visit. What this plan does is to create a permanent bird sanctuary, where most forms of human access are off-limits. Where is the balance? Where is the compromise? Where is the sanity?

Correspondence: I've been coming to Hatteras for 22 years. My kids enjoyed it and it has been part of my life with my family. Now my grandson is ready to come down to enjoy the open beaches. I feel that NPS did a good job of taking care in protecting the turtles and birds from what I could see for the last 22 years and before the (CD) was put into effect. No other place on the eastern sea board has the restriction with the bird closers as Hatteras does now. With the space used on the beach for the closers. I feel it should be given back to the NPS as before the (CD) and let the GOV. rule over the beach. Not an environmental group that looks into everything the Gov. does and try to find a little fault in it to set up a law suit to try to make more money. I not only pay the Gov. taxes each year but I also don't like the idea of my tax money going to an enviro. group when they sue. In my eyes there just another group out there taking money from the gov. that I would rather have going to schools or other groups that could use it. I could go on and on but I think you all get the idea. Use the gov. money where it belongs and don't put the country more in debt by paying enviro. groups. That money has a lot better uses for our young people. The Gov. needs to stand up to these groups and say enough is enough. You want to complain fine, we will look into it, and save and spend the money I pay in taxes where it needs to be spent. The Gov needs to pass a law where other out side groups can sue the Gov. Funny thing is I have Rheumatoid arth. the F.D.A approves the drug to go on the market. If I would die from one my wife can't sue the F.D.A only the drug manufacture. But these enviro. groups can keep taking the Gov. money and it looks like it ok.. WRONG. As for the (ORV) use on Hatteras It's been a way of life down there for along time. When we go down to Hatteras we enjoy the freedom of being able to drive on the beach too. It lets the elderly and the handicap like me to enjoy more of the beach as well as the very young with the parents that are to young to walk to far yet. Most people drive out and park and enjoy the day. Most do not just go out there and drive around all day. I hope you keep the beaches of Hatteras free and open for all. Thank you for reading.

My family and I have enjoyed many wonderful vacations on the Outer Banks and one of our favorite places to visit is the Cape Hatteras National Seashore. We are concerned that the wishes of the minority of people who use noisy, polluting and destructive vehicles on the beach seem to outweigh the desire of the majority of citizens who would use the beach in a sustainable manner. We are wildlife watchers and relish the opportunity to quietly observe the wonderful creatures who make their home in this unique place. Please do not destroy this precious heritage for future generations.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.

This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.

The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

- *Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
- * Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
- * Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are

management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: This whole process is rediculous, plain and simple. Ive been traveling to Hatteras and Ocracoke Islands for 25 years, 5 or 6 trips per year, primarily to surf fish. I have met and come to know quite a few of the locals down there, and it pains me to see them now, in the midst of this political hurricane! Everybody is stressed out, and you can see it in their faces. They are very concerned about their livlihoods, because as anybody knows, these islands' economies are driven by tourism. People travel from all over this country to visit Hatteras' beautiful beaches and serene villages. The biggest draw for tourists, is the ability to DRIVE ON THE BEACHES! Now, you take away that right, people will stop visiting. People stop visiting, there's no income, and an entire economy will sink. I cannot honestly believe that a group of individuals, most of who have never even been to Hatteras, would want to ruin an entire way of life, over a couple of birds that havnt been able to flourish, even with the current closures in place!!! The science is bogus, anybody can see that a bird who makes its nest below the high-tide line is doomed. Any lunar tides or high onshore winds will kill these nests long before a vehicle gets close to them. These closures have been in place for a number of years now, and the reports at the ends of those years have showed ZERO evidence that closing the beaches has helped these birds! People have lost jobs, businesses have closed, and the overall tourism has dramatically decreased in the last two years. It is rediculous to close an entire stretch of beach for two birds. Mark the nest and close off a small portion to protect it; fine. When the birds move, you move the closure, not close an entire beach! Its really simple folks. As for the turtles, in Florida, turtle nests are roped off in a 15'x15' square, and those beaches see FAR more traffic than those of Cape Hatteras. Tell me whats different? Same animal, different place. If the birds wont flourish on Cape Hatteras then why not re-locate then to another area where they will? You've already killed every predator on the islands, and closed beaches to ORV use, and STILL the birds havnt done any better! Really? Can you not see that what you are doing isnt helping at all? Please do not ruin Cape Hatteras National Seashore. Use common sense and keep our beaches open for generations to come. Thank You.

Correspondence: I appreciate the oppportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
 Have you ever taken a walk in nature with a loved one? If you have, please read on...
 This alternative plan would provide more oppportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
 The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
 *Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
 * Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
 * Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
 Thank you for the oppportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

On a personal note, I am a frequent visitor to Cape Hatteras National Seashore and I appreciate the unspoiled beauty of it. I have always been very impressed with the management of the seashore. Please do not destroy what so many of us love so that people can drive on the beach just to fish. I can't believe that the benefits of that outweigh the damage it would do to the animal population and the solitude and wild beauty of the shore. I am also an avid birdwatcher and naturalist and feel that the animals already have a hard time with encroaching humanity. Don't make it worse.

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: To Whom This May Concern:
I am a Florida Native who lived in NC for several years as a park technician in Durham at Eno River State Park. I feel at home near my coast. My passion is that the coastal ecosystems get as much help in the form of vehicle restraint as we can give them. Haven't we thought too little of our coastline and too much of people's temporary wants? Isn't our coastal eco system in a tenuous state of protection as it is? I hope the Alternative of C is chosen to best insure the protection of life, all life that lives in the environment along the sea.
Sincerely,
Kathryn A. Thomas

Correspondence: I would like you, employee of the Federal Government of whom the people pay, elect, and choose, to take my comment into consideration, as I am not speaking of just my own beliefs, but, as President of the Cape Hatteras SGA, I am speaking as the official representative of the students that attend the

Cape Hatteras Secondary School of Coastal Studies. I am going to start off defining the long forgotten purpose of Government, as the founding fathers wanted it to be. We the people, are more powerful than the government, including you, and I encourage you to think about governmental decisions you make. This year is an election year, and if the people, who elect the Congress, don't agree with you, then Congress can override any Executive Order by creating a law restricting it. Many people throughout the United States are tired of Private Interest groups running the country instead of the people, and unless the Government does it's job, and listens to the people, things are going to change, and we, the people, will fire you.

Anyway, I'll get to my agreements and disagreements with the DEIS Plan. I am not an animal hater, and I do believe in ethical ways of protecting animals. However, humans can only be blamed in less than 5% of the cases, while predation causes over 50% of the death of threatened/endangered species. Although it is reasonable to place a small buffer between human activity and nesting sites, a 1000ft buffer is absurd on the basis of two reasons: 1. It is highly unfair and unjust to the human race, and 2. It also negatively impacts animals. Research shows that areas with high human traffic have less aggressive animals. When humans are around, it is natural for any kind of animal, large or small, to be scared of and either more distant or hidden. In any case the animal, if it's a predator, would be less likely to attack a weaker animal, such as a sand piper or a piping plover if humans are near. 1000ft isn't even close to near, and although it decreases the amount of human-related deaths of the piping plover (which, given the benefit of the doubt cause less than 7%) and increase predation (which amounts to 55%). Although technology has impacted the world's view of humans importance in nature, it still exists. At Camp LeJune (which is Government, run by the way, by environmental experts in the military) a 30ft. buffer zone is placed around ENDANGERED animals. The Piping Plover, which is the main animal of concern to the NPS and the Audubon Society, is ranked as being "Near Threatened" which is above the "Least Concern" rank. All in all, it would be beneficial for the residents of Hatteras Island, the Piping Plover, and the NPS if the NPS adopts a DEIS that gives the animals some room so humans can't directly interfere with them, but close enough to give humans their own freedom of the land they purchased in tax their dollars (and are still paying for with their tax dollars) and keep predators away without having to trap them (which doesn't always work.) The students at CHSSCS will be happy, the residents of Cape Hatteras National Seashore will be happy, the businesses will be happy, the Plovers will be happy and the NPS will be happy if the buffer is reduced to 30 yards.

Correspondence:

It is my belief that allowing off-road vehicles in Cape Hatteras National Seashore is a very bad idea for a number of reasons.

- 1) It would have a disastrous effect on the birds and turtles that nest in the sandy beach areas. The breeding habitats for these animals is becoming scarcer every year. Many of them are threatened or endangered species. If ORVs are allowed in these areas, they will have even less breeding grounds.
- 2) Many migratory birds depend on Cape Hatteras National Seashore for food and resting areas during their arduous journeys. Without places to refuel and rest, many will die and their species pushed further toward extinction. If you allow ORVs to operate in the secondary dune zones, that will harm still other varieties of birds and animals.
- 3) It would have an adverse impact on the grasses that are the island's first defense against storms and erosion. These are barrier islands, subject to change from the effects of winds, tides and ocean currents. The grasses hold them together and are sensitive to physical damage. Removing the grasses or causing additional stress could endanger the very existence of the island.
- 4) It is a quality-of-life issue. Places like Hatteras National Seashore are among the last remaining undeveloped shorelines in the country that are accessible to the public. People escape from cities and suburbia to places like this. They seek to experience the awesome beauty of sand dunes, marshes and the ocean without intrusion from loud engines and noisy people drinking beer.

Your document says that you will implement rules for the drivers of ORVs to follow. My personal experience is that the people who use ORVs do not always follow rules, nor do they care one iota for the damage they inflict on the environment. More than once I have observed people driving ORVs in forbidden areas within parks in Florida. When I told them they should not be operating those vehicles in sensitive habitat areas, they were either abusive and made obscene gestures or they just ignored me. Do you think that ORV users in North Carolina will be any more observant of such rules? The only way those rules would have any effect is if they were strictly enforced with stiff penalties imposed on the first infraction. This requires additional staff at a time when budgets cuts and staff shortages are the norm.

5) It is an economic issue. Some members of the business community will claim that prohibiting ORVs will hurt the local economy. I have several answers to that assertion.

What is the number of visitors who would come to Cape Hatteras National Seashore to operate ORVs compared to the number of visitors who come there for other reasons? How many of those would not visit BECAUSE of the presence of ORVs there? How many birders visit CHNS? What is the percentage of ORV users compared to that of birders? When the bird species and overall biodiversity are reduced, do you think the birders will still come? I think birders have a greater impact on the local economy than ORV users. It would seem the only economic beneficiaries are those who sell ORVs. If owners of ORVs complain that they have no place to operate their machines, I would say they should have thought of that before they bought them.

In closing, I want to emphasize my objection to ORVs in Cape Hatteras National Seashore. It would completely and negatively change the entire character of that pristine place.

There is no area within the Hatteras National Seashore to establish an area for ORV use that will not cause damage to the environment. ORVs are loud and incredibly destructive. The damage they cause is horrific. To owners of ORVs who say they have should the right to operate them at CHNS, I say

the remainder of the CHNS visiting public, as well as the birds and other animals that live and migrate there, have an even greater right to be free of ORVs in that beautiful, fragile and precious place.

Thank you for considering these comments. Steven A. Gaber

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only

16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.

* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.

* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: Dear NPS,

Thank you for your concern for the Cape Hatteras National Seashore.

I am concerned about your proposed rules on beach access. As an owner of two homes in Avon, NC for the past 25 years, I know Cape Hatteras very well.

Our rental homes rely on the annual visitors of guests. Our guests want access to the beach. Without our guest, we could not afford to have home ownership in Cape Hatteras. We need reasonable access to the beaches at all times of the year.

I am confident that the many hurricanes, wild fires, and over washes that we have lived through in the past 25 years, these natural occurrences have had much more damage to the beaches of Cape Hatteras than any tourist access, including walking and even driving on the beaches. The beach has healed itself sometimes with the help of man, but it has been healed each time there has been a natural disaster.

Your rule making will have a huge economic effect on Dare County, please be careful not to destroy the livelihood of the good people who live and work in Dare County. Please remember that the National Park Service was created to serve the people by giving them access to our nation's treasure, not to ban the people from the nation's treasures.

Sincerely,
 Lewis F. Larsen

Correspondence: Cape Hatteras National Seashore holds a unique ecological, recreational and economic value. I believe that beaches are a public resource and should be held in the public trust for their preservation.

Cape Hatteras National Seashore provides some of the best recreational resources on the East Coast, including surfing and fishing. But, if not regulated correctly, Off Road Vehicle (ORV) use may detrimentally affect migratory species that nest in the area.

I believe that a balance between access and preservation can be achieved and that allowing continued access with improved management of ORV use to the National Seashore is the optimal solution for this area.

I support Alternative C, a balanced solution that benefits the animal species while guaranteeing humans can continue to enjoy and protect this most-precious coastal resource for years to come.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.

I absolutely support limiting vehicles on the beach and protecting the wildlife. I have been a visitor to the Outer Banks Beaches, Hatteras specifically, for 30 years and have never felt it necessary to drive on the beaches. Please follow the principles described below and save the beaches for all creatures. Part of the enjoyment and beauty of the Outer Banks is the wild setting and the wildlife that goes with it. You lose that and you have lost everything including a large population of visitors who visit your beaches because of the wildlife. Vehicles on the beach take away the beauty, peace and tranquility of the natural setting you have to offer as well as taking away the ability of wildlife to thrive.

This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.

The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. Please keep our beaches open for all. Do we really thing that govt control is good? They have killed over 700 other animal that they deemed a hazard and now we are next on the list. It is a Recreational Area.

Correspondence: I have visited the Outer Banks for purposes of surfing for the last fifteen years. I have no intent of returning should a ban or some type of access restriction be implemented. Good luck with tourism if that happens given the amount of surfers, fishermen, and families who travel from all over the east coast to visit. Instead of punishing everyone, why don't you step up the enforcement efforts and stiffen penalties against those who don't care about keeping this gift pristine and full of wildlife as it has been in the past.
Here's a suggestion on a ban: no Cadillac Escalades, Hummers, or Lincoln Navigators with New York or New Jersey plates; no males with white hats on sideways who wear Adidas flip flops with white socks, with female companions who wear hoop earrings, black stretch pants, and Bon Jovi hairdos; anyone who meets the above referenced description and claim that they work as a DJ at a club, and spend any more than six hours a week in the gym.

Correspondence: My family has visited the Cape Hatteras National Seashore since the early 1970s. In 1983 we built a house in Avon that we still own. The hysteria caused in the last few years by a few individuals, a few if any birds, and a large national organization is beyond my comprehension. Of the many tens of thousands of visitors that vacation on the island yearly, it has been my experience that the visitors are very respectful of the environment. I can attest that this is no new phenomenon. It has been the rule rather than the exception from my experience since the early 1970s. By limiting beach access you are punishing the vast majority of visitors and locals who have been taking care of and enjoying the beach for many years. The Cape Hatteras National Seashore should be a must on everyones bucket list. It would be a travesty to limit access to the Cape when it seems that the no harm no foul seems to apply. I hope those who make the rules come to their senses.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.

This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.

The National Park Service should provide equal access to all visitors and not preferred access to ORV users. ORV use on the beaches interferes with most other uses. I note with dismay that Alternative F would only keep a mere 23% of the beaches free from ORV use year round. This is not fair. At a minimum 50% of the beaches (measured in miles of beach) should be ORV free year round.

The National Park Service needs to put more emphasis on preserving wildlife and healthy natural communities. It is very apparent that the NPS has earned failing grades in this department at Hatteras over the past several decades. One simply needs to look at the populations of threatened breeding shore birds during this time to see this.

Please recall that there are not other agencies in the Federal Government whose primary mandate is to preserve wildlife and natural communities. The National Park Service is all we have and if it fails to take the necessary measures to provide at risk wildlife with the protection it needs to recover, then there will be no recovery. This protection needs to be the primary goal to which all other goals are clearly secondary.

ORV's are intrusive. They disturb people who are minding their own business. They disturb the majority who seek out our National Parks and Sea Shores for the opportunity to appreciate the natural world. There is good evidence that they are a primary cause for the inability of the park service to manage the seashore in a manner which is leading to the return to historic population levels of many of its native breeding birds. They threaten sea turtles which have survived a huge number of threats for the past many million years.

The Park service should pay more attention to making sure that wildlife disturbance buffers are adequate. The bare minimum allocation in the preferred plan does not leave adequate room for unexpected eventualities. A bare minimum may be fine when everything is going as well as could be hoped for, but the reality is that this is seldom the case and more. More generous wildlife disturbance buffers would increase the chance that they accomplish their intended purpose.

It is of the greatest importance that any plan for the future management of the Sea Shore must establish clear goals for the recovery of the sea shore's wildlife. Targets must be explicit, annual reviews must be transparent and in the hands of people recognized in the scientific community as experts in the field. The base line cannot be the sea shores present degraded ability to support wildlife, but must reflect its historical and potential ability to harbor thriving communities of turtles, plants, breeding and over wintering birds. If the targeted improvements are not reached in a given year, then additional protections should be in place by the next year.

Correspondence: I disagree with the DEIS due to the negative impact the restrictions will have on visitor experience. The NPS has not provided a list of reported incidents that support the assumptions made regarding motorized vs non motorized recreation use.

My wife and I first discovered Ocracoke Island over 20 years ago while on a discovery vacation traveling the coastline. Being from the mountains of NC our shortest trip to ocean was to South Carolina. The uniqueness of the Beach access by vehicle on Ocracoke was a major reason we then chose to make annual trips to Ocracoke with our growing family. The ability to access the beaches by car created a great experience for our family due to the convenient access. If the currently proposed restrictions were in place when we originally visited I am sure our impression of Ocracoke would have been impacted and our future vacation beach plans would have been to return to the SC beaches.

Correspondence: I disagree with the DEIS due to the omission of appropriate analysis on the Socioeconomic Impact of the significant restrictions proposed.

My family and I have been traveling to Ocracoke Island for over 20 years and have spent a significant amount of money on the trips. We have also become property owners on the island and all of this is due to the uniqueness of accessing the beach by vehicle and enjoying not only the nature but the villagers who make this their home and rely on tourist's spending to support the local economy. The proposed restrictions will significantly discourage visitors like my family and will negatively impact the economy on Ocracoke Island. Also now that I am a property owner on the Island this will negatively impact property values.

The desire to provide protection to the birds and turtles can surely be accomplished without the negative impact to the economy and culture.

Also with the vast beach area of Portsmouth Island just to the south of Ocracoke, the overall negative impact on the wildlife is miniscule compared to the negative impact on the human life this DEIS provisions will have.

Correspondence: Cape Hatteras National Seashore holds a unique ecological, recreational and economic value. I believe that beaches are a public resource and should be held in the public trust for their preservation.

Cape Hatteras National Seashore provides some of the best recreational resources on the East Coast, including surfing and fishing, but I recognize that if not regulated correctly ORV use may detrimentally affect migratory species that nest in the area. I believe that a balance between access and preservation can be achieved and that allowing continued access with improved management of ORV use to the National Seashore is the optimal solution for this area.

I support Alternative C, a balanced solution that benefits the animal species while guaranteeing humans can continue to enjoy and protect this most-precious coastal resource for years to come.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.

This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.

The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at

least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.

* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.

* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: As an avid fisherman and hunter I still consider myself as a representative of the goal of conservation. For over 2000 years people have survived on this earth by different forms of hunting and fishing: even those that are opposed to the taking of other life forms still benefit daily from the activities which they are against. The effects of human intervention on the outer banks area are noticeable, yet pale in comparison to what devastation mother nature deals out every year. Closing an area of the shore to ORV use, but watching an NPS vehicle drive through the same area is in my opinion a slap in the face. Any human influence in nature, either good or bad, is still unnatural, period. Regulations regarding speed limits are needed as well as creel and size limits on fish. Animals that use the shore as a place to nest or breed will survive only if they can win the battle against the elements, not whether they can elude an ORV's tire.

It is not only ORV users who are affected by the closures. Anyone who enjoys taking long walks on the beach, looking for rare seashells, or just taking their family on the beach for a day of fun are severely affected by the closures. The closures are to keep everyone off of the beach. All of the signs at the closures say no humans, no vehicles, no pets!!! Thank you for the opportunity to provide these comments.</p>

Correspondence:	<p>There is a special place in my heart for the Cape Hatteras National Seashore. The memories that friends, family, and I have and continue to make involve time spent along lonely stretches of shoreline - fishing, surfing, and talking. No more access in this capacity would greatly diminish future recreational enjoyment.</p> <p>At the same time I recognize that if not regulated correctly ORV use may detrimentally affect migratory species that nest in the area. I believe that a balance between access and preservation can be achieved and that allowing continued access with improved management of ORV use to the National Seashore is the best solution for this area.</p> <p>I support Alternative C, a balanced solution that benefits the animal species while guaranteeing humans can continue to enjoy and protect this most-precious coastal resource for years to come. In the end, I truly hope that my family and I can continue the great experiences we've always had when coming to Cape Hatteras Natinal Seashoer. Thanks for listening.</p>

Correspondence:	<p>I disagree with the Prohibition of PETS in the seashore during bird breeding season, including in front of the villages."(p136)= No pets in public areas-beaches, campgrounds, sound-front, foot trails, park maintained roads from March 15 -July 31</p> <p>I agree that pets should be allowed at all times utilizing the six foot leash rule.</p> <p>I disagree with the NPA proposed Alternative F restrictions because they far exceed those under the Consent Decree, the Interim Management Strategy, and the de facto ORV plan previously in place under Superintendent's Order #7.</p> <p>I disagree with the assessment made by NPS that: "Visitor experience could be affected by conflicts between motorized and non-motorized recreation users." (p. vi)</p> <p>I agree with the need to ask the question: Why has NPS never made public a list of reported incidents? Because</p> <p>? In 10 years, only 1 minor incident involving a stuck vehicle and a pedestrian was disclosed. The driver was not blamed by those involved, nor was he charged. (p. 268)</p> <p>I disagree with the assessment by NPS: "Because it is not administered by the NPS, the seashore cannot direct the visitor use at Pea Island NWR." (p. 1)</p> <p>I agree with asking the question: Why does NPS refuse to acknowledge that Pea Island is a prime, pedestrian-only area for visitors to the seashore and overstate the need for more ORV free areas?</p> <p>I disagree with the NPS position: "Even with resource closures in place, protected species are still at risk [from pedestrians and ORVs]." (p. 210)</p> <p>I agree with facts related to current ORV access that:</p> <p>? No Piping Plover deaths have been attributed to ORVs.</p> <p>? ORV violations continue to decrease as signage and education improve.</p> <p>? Pedestrian violations are much more significant than ORV violations.</p> <p>I agree with the statement by NPS: "Carrying capacity would be a 'peak use limit' determined for all areas based on the linear feet of beachfront?" (p. xxiv)</p> <p>But I also agree then the question needs to be asked: Why is capacity more restrictive on Bodie Island and Ocracoke than at Cape Point? (p. xxiv). (Bodie Island & Ocracoke -260 vehicles per mile and Cape Point ?400 vehicles per mile). This seems to be in conflict with the earlier assessment made by NPS regarding "Carrying Capacity"</p> <p>I also agree that the question needs to be asked of the NPS: Why do ORV counts provided for Memorial Day and July 4, 2009 which state: " ramp 4:includes Bodie Island Spit" and "ramp 43 to ramp 49:includes Cape Point" fail to recognize Bodie Island Spit and Cape Point were closed to ORV access on these dates due to resource protection closures, which thereby increased ORV congestion at ramps 4, 43, 44, and 49? (p. 265)</p> <p>I also agree that the question needs to be asked of the NPS: Why are buffers and closures administered such that more people are forced into smaller areas, potentially resulting in more resource impairment and diminished visitor experience?</p> <p>I disagree with the statement made by NPS: Shorter Off-Season ORV access on South-facing Villages (p. xix)</p> <p>I agree that the question needs to be asked: Why are Frisco, Hatteras and Ocracoke Villages closures to ORV access longer than the traditional May 15 to September 15 period, even though seasonal visitor statistics are similar for all villages? (p. 23)</p> <p>I disagree with the NPS assessment of Restrictive Species Management Areas (p. 468) Where they state:</p> <p>NPS: Established based on annual habitat assessment. NPS: Manage each SMA using ML1 or ML2 procedures. NPS: ML1 ?No pedestrian or ORV access during entire breeding season NPS: ML2 ?pedestrian only corridor thru SMA at Bodie Island Spit NPS: ML2 -pedestrian & ORV corridor thru SMA at Cape Point, South Point</p> <p>I agree with the opinion that: ML1 is overly restrictive. Pedestrian and ORV corridors or bypasses should be provided thru, around or below high tide line in all SMAs during entire breeding & nesting season (within guidelines) to maintain access.</p> <p>I disagree with NPS assessment of Limited Pedestrian and ORV Corridors (p. 468) because:</p> <p>NPS: Only recognized in ML2 managed SMAs NPS:S MA management reverts to standard buffers when bird breeding activity first observed</p>						

I agree with the opinion that: Pedestrian and ORV corridors or bypasses should be provided thru, around or below high tide line in all SMAs during entire breeding season to maintain access.

I disagree with the NPS Large, Inflexible Buffers (p. 121-127) because they are too large, too restrictive and do not allow for ORV pass-thru only corridors

I agree with the opinion that:

- ? buffers use breeding / nesting buffer distances to establish ORV pass through only corridors to ensure beach access is always maintained
- ? Piping Plover unfledged chicks buffer should move with the brood as it relocates to reliable food source, not expanded

I disagree with the overall assessment made by NPS Resource Management Pedestrian / ORV Closure Policies Address because the Least Significant Factor Affecting Nest Survival with Little Chance to have more than Negligible Impact, AMOY Nest Failures are Predominately due to Non-human Events. ?for example:

- ? Mammalian Predation: 54% Highest Impact ? Storm / Lunar Tides: 29% ? Nest Abandonment: 6% ? Avian Predation: 5% ? Ghost Crab Predation: 3%
- ? Human Interference: 3% Insignificant Impact

I disagree with how NPS does not adequately consider locations neighboring the Recreational Area that are part of the same ecosystem. They did not consider:

- ? Villages, dredge and spoil islands, Pea Island National Wildlife Refuge
- ? Dredge and spoil islands typically have fewer predators to threaten nesting birds
- ? Bird activity within neighboring areas should be tracked and included in target productivity levels. Fluctuations and trends in Recreational Area bird populations should be viewed relative to regional and state experiences ?not in isolation.

I agree that all locations neighboring the Recreational Area that are part of the same ecosystem and should have been considered.

I disagree with the NPS: Around the clock closure from nest to surf line (p.125) from May 1 ?November 15th

I agree with a Closure to surf line from 1 hour before sunset until dawn, monitored by Turtle Night Nest Watch Team because Night Driving Restrictions Penalize Pedestrian and ORV users.

I disagree with the NPS barriers 105 meters wide (p.125)

I agree with that "Closure should be 10 meters square during the day"

I disagree with the NPS: Use U shaped light filter fence to orient hatchlings

I agree with a proposed "Use Pea Island style keyhole pattern fence to the surf line at night"

I disagree with NPS that : "ORV and other recreational use would have long-term major adverse impacts on sea turtles due to the amount of Seashore available for ORV use and by allowing nighttime driving on the beach." (p. 377)

I agree with the assessment that "Major Adverse" (NPS definition, p.369) events have not occurred at the Recreational Area ?Night Driving Restrictions are not Necessary because :

- ? Nesting females have not "been killed"
- ? Complete or partial nest lost due to human activity has not "occurred frequently"
- ? Hatchling disorientation/disruption due to humans have not "occurred frequently"
- ? Direct hatchling mortality from human activity has not "frequently occurred"
- ? Pro-active Turtle Night Nest Watch program will insure no ORV impact.

I disagree with the position that NPS will not Adopt More Proactive Techniques Used at Other East Coast Locations to Encourage Turtle Nesting Success.

I agree with the assessment that NPS Inadequately Addresses Environmental Issues More Detrimental to Turtle Recovery Success than ORVs or Pedestrians (p. 392-396) because:

- ? 38.5% of nests had 0% hatchlings due to weather events. (p. 87, p. 219) ? 2009 Loggerhead Recovery Plan calls this catastrophic
- ? False crawl statistics do not support theory that light pollution is a significant problem at the Recreational Area. (p.125, p. 219)
- ? Predator management and nest enclosure practices encourage ghost crabs which are a primary predator of turtle eggs and hatchlings

I disagree with NPS usage of The North Carolina Wildlife Resource Commission Relocation Guidelines.

I agree with an assessment that the North Carolina Wildlife Resource Commission Relocation Guidelines are Inadequate because:

- ? Recreational Area and the State have lost 55% and 60% of Leatherback nests respectively over the past 10 years following these guidelines.
- ? Use of "average high tide line" (as used in other states) rather than "seaward of debris line marking spring high tide" to identify which nests to relocate leave many nests at risk.

I agree with the DEIS descriptions of ORV access as historical in nature (pg. 83) and also both predating the Seashore and as being integral to the public use by both residents and visitors. The document also illustrates and captions historical commercial fishing (pg.18), historical recreational fishing (pgs. 15, 260) and historical general recreational activities (pg. 259). These same traditional cultural activities are featured on the front cover.

I disagree with the NPS failure to appropriately address the traditional cultural value of surf zone access. I disagree because the NPS failure stands in direct violation of its legal responsibility under Section 106 of the NEPA and the NEPA framework as a whole.

I disagree with the socioeconomic data and analyses in the DEIS (pg 270-281;561-598) because it results in misleading and sometimes erroneous conclusions and is directly manifested in both the Effected Environment and Socioeconomic Impact sections. Critical weaknesses in the analyses pertain to:

- 1) statistical definition of the Region of Influence (ROI);
- 2) incomplete visitation/business survey data (p.566);
- 3) erroneous recreational user data;
- 4) inflated overall Seashore visitor counts pertaining to beach use;
- 5) flawed key assumption concerning the maintenance of access under Alternative F.

These flaws are of the DEIS.

I agree with the definition that ROI incorporation of the Northern Beach communities, including Southern Shores and Duck is misleading. These areas are almost completely disconnected from ORV use and access issues relating to the Seashore

I agree with the opinion that the inclusion of the Northern Beaches in analysis significantly dilutes estimates of economic impact on the Seashore Villages.

I agree with the opinion that the analysis of economic impact to the Seashore Villages appears to be significantly down played. Emphasis in DEIS is on the ROI-wide or county-wide level impacts.

I agree with the opinion that nowhere is it clearly addressed that the overwhelming majority of negative impacts will be felt by small businesses in the Seashore Villages rather than by overall economic interests within the greater ROI. . I disagree with the management decisions reflected in the DEIS that show a clear bias to implement actions that will adversely affect the visitor experience but to avoid actions that would benefit both natural resources and visitors. For instance:

- ? The NPS says it is OK to replace South Point wetlands with parking area because beach will be closed to ORVs.
- ? The NPS says it is OK to relocate Turtle Nests when storms are imminent, but not before (coincidentally the high risk nests are in prime ORV corridors).
- ? The NPS says it is OK to set aside areas of beach to replant the "extirpated" seabeach amaranth, but not OK to clear vegetation at Cape Point ponds to create more favorable piping plover habitat (outside of the prime ORV corridor).
- ? The NPS says it is OK to kill predators (greatest risk to birds and turtles), not OK to drive on the beach at night (deterrent to predators, low risk to turtles and birds).

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.

This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.

The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.

* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.

* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: As a visitor to NC, I must say that your parks are truly beautiful. As a surfer I have enjoyed all that NC has to offer in terms of the ocean and its beaches. Automobile access to surf areas by way of the beach is something that must remain. Surfing brings many people to the Cape Hatteras area and the lore of reaching unique surf breaks by beach access keeps people coming back year after year. Taking away automobile access on beaching will diminish the number of tourists/ surfers to the area.
Thank you.

Correspondence: I've been visiting cape hatteras since 1974 Camping at either state or public camp grounds and surfing where ever it was breaking best. Beach access is necessary to enjoy Hatteras. Protection from pollution, erosion(unnatural eroision, man induced) and wild life protection are also essential. Blanket bans are unacceptable. Seasonal access limits or restrictions,due to specific animals nesting or mating should be carefully issued and administered. Access to beaches on foot, should be limited to established trails over dunes. Hikers should not braze new trails through fragile dunes. 4wd drive access should also be accomplished only through dedicated access ramps.
Cape Hatteras National Seashore holds a unique ecological, recreational and economic value. I believe that beaches are a public resource and should be held in the public trust for their preservation.
Cape Hatteras National Seashore provides some of the best recreational resources on the East Coast, including surfing and fishing, but I recognize that if not regulated correctly ORV use may detrimentally affect migratory species that nest in the area. I believe that a balance between access and preservation can be achieved and that allowing continued access with improved management of ORV use to the National Seashore is the optimal solution for this area.
I support Alternative C, a balanced solution that benefits the animal species while guaranteeing humans can continue to enjoy and protect this most-precious coastal resource for years to come

Correspondence: I have spent many weeks on Hatteras and related islands. I believe the only way to remain an attractive spot for people, is to protect what is there that attracts them in the first place. The use of special vehicles to access remote areas is disruptive and ecologically damaging. A preserve is a preserve, not a vacation hot spot for our entertainment beyond what nature has to offer.
Limited access allows the contradictory goals of preservation and appreciation to prevail.

I support Alternative C, a balanced solution that benefits the animal species while guaranteeing humans can continue to enjoy and protect this most-precious coastal resource for years to come.
Perhaps, a potential solution may be to design and implement small networks of protected areas on the beach where habitat for migratory species is known and restrict access in these particular areas year round or temporally when species activity is highest. In addition, providing informational resources on these areas and their importance to coastal ecosystems for the public, if not already provided, may promote public awareness and involvement on this issue.
It's important that both environmental and economic effects be considered and while it may seem difficult to satisfy one without detrimentally affecting the other, with a little open mindedness and ingenuity I'm confident an effective and sustainable solution will be made.

Correspondence: Restrictive Species Management Area (p. 468) is overly restrictive. ORV driver are very careful not to disrupt the wildlife. We value and appreciate conservative approaches of conservation and DO NOT close the beaches to off road vehicles and fishing. Personally, coming to the beach, riding in our 4x4 and fishing are hallmarks of my vacations for as long as I can remember. My Dad used to bring us. My grand-father used to bring us. I have brought my own children and now they bring my grandchildren. PLEASE do not close the beaches to 4x4 trucks. This is a sleepy little town that makes it's living from tourism. I have developed friendships with many of the business owners and their "way of life" is significantly threatened. Please vote against the closing of the beaches of the Outer Banks. We love it!

Correspondence: My family and I have been visiting Hatteras and the Outer Banks for over ten years. It is where we come together, once a year, to enjoy each other and the beautiful seashore of North Carolina. We have seen quite a bit of development during the past decade and a growing number of summer visitors

(like ourselves). We understand that all of us put increasing pressure on the environment.

I would hope that the Park Service will restrict the using of motorized vehicles throughout the areas it is responsible for. We would like for the land and seascape to remain in the most natural state possible, with the fewest intrusions of vehicles.

Thank you for your interest.

Mark Irwin

Correspondence: Cape Hatteras National Seashore holds a unique ecological, recreational and economic value. I believe that beaches are a public resource and should be held in the public trust for their preservation.
Cape Hatteras National Seashore provides some of the best recreational resources on the East Coast, including surfing and fishing, but I recognize that if not regulated correctly ORV use may detrimentally affect migratory species that nest in the area. I believe that a balance between access and preservation can be achieved and that allowing continued access with improved management of ORV use to the National Seashore is the optimal solution for this area.
I support Alternative C, a balanced solution that benefits the animal species while guaranteeing humans can continue to enjoy and protect this most-precious coastal resource for years to come.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to

me.

The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.

* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.

* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: Dear NPS,
I disagree with the Cape Hatteras DEIS for the following reasons:
1. The buffer for the nesting piping plovers of 1000 m is unnecessary, and not supported by scientific proof. 200 m is an acceptable distance and used by other National Parks ie Assateague island MD.
2. I do not agree with not allowing dogs on the beach during nesting. Dogs on a leash pose no threat to nesting birds or turtles.
3. I do not agree with the DEIS lack of impact to Cape Hatteras socioeonomic status. Under the beach restrictions of the Consent decree local businesses have suffered.All Cape Hatteras has is the beach. There are no golf courses, boardwalks or amusement parks. Severely limiting beach access during the most popular summers seasons will keep people from returning. Cape Hatteras was promised to the people as a recreational area.Communities and businesses developed as a result of that promise and now will be threatened as a results of severely limited beach access.
4.I agree with management of the seashore but believe that the alternative F is unfair and to restrictive to the people.

Correspondence: Cape Hatteras National Seashore Recreational Area DEIS Comment
The legislation states: "said area shall be, and is, established, dedicated, and set apart as a national seashore recreational area for the benefit and enjoyment of the people and shall be known as the Cape Hatteras National Seashore Recreational Area." The enabling legislation created the park as a Recreation Area not a Wildlife Refuge. Areas such as Pea Island National Wildlife Refuge on Hatteras Island were created to provide habitat and protection for endangered and threatened species. Finding a way to guarantee unrestricted public beach access for pedestrians and ORV that coexists with wildlife needs to be the highest priority. I believe ORV & pedestrian corridors should be maintained with adequate monitoring through temporary resource closures to provide access to the beach. Because of the distances involved, ORV access corridors are required so citizens can travel to their desired destinations within the Recreation Area. ORVs have historically served as the primary form of access for many portions of the beach in the Recreation Area, and continue to be the most practical means of access for most visitors to Hatteras Island. To limit ORV access would discriminate against individuals with limited mobility due to age or physical impairments, families with children, senior citizens and those wishing to engage in activities requiring recreational equipment such as Fishing, surfing, birding, swimming and family gatherings. Equipment needed for recreating in popular areas of the park cannot be easily carried on foot through miles of deep sand on a hot summer day by even the fittest individual without the risk of heat stroke, dehydration, physical exhaustion or even death. For example: Water, Food, Beach toys, umbrellas, beach chairs, coolers, fishing poles, tackle boxes, water-sports boards, first aid kit, cameras, binoculars, etc... ORVs in remote areas of the beach provide shelter from lighting, a place to get out of the heat and emergency transportation for an ill/injured child or elder. ORVs have been used on the Hatteras Island beaches for decades without any resource conflict. It is imperative that ORV use be recognized for exactly what it is: A historical means of access to an area for recreational opportunities. The use of an ORV is not considered a recreational activity in this Recreational Area. ATVs are not permitted.These recreational opportunities sought, allow the public to enjoy the Seashore's resources and values. Denying access to recreational opportunities, many of which are specifically protected in the Enabling Legislation, denies the Seashore's current visitors the opportunity to enjoy the park's resources and values and denies future generations the opportunity to enjoy the park's resources in direct violation of Park Services Management Policies. There is no evidence that ORV beach access causes any unacceptable environmental impacts in the park. Often, traces of ORV access are erased by wind and tide in a matter of hours.
The beaches within the Cape Hatteras National Seashore Recreational Area offer high recreational value to the public. While all of the beaches are suited and commonly used for swimming, sunbathing, wading, shelling and fishing, some beaches are uniquely more favorable for some specific activities. These specific areas should have minimal and flexible buffers for birds and turtles because ORV Closure is the Least Significant Factor Affecting Nest Survival. Humans and ORVs can coexist in harmony with birds and turtles. Scientific studies prove that human and ORV presence have an insignificant impact on nesting. Predators, Tides and Storms account for nearly all the lost nest in CHNSRA. Human presence benefits birds and turtles because Human presence decreases predator presence and increases nest survival rates. Prime historical recreation areas that require guaranteed public ORV access under the plan must include: Buxton to Cape Point ? World Famous Surf Fishing on Cape Point ? Prime water sports ? Favorite gathering area for locals and visiting families ? Prime Birding area ? Prime shelling area Cape Point to the Frisco Village line (South Beach) ? Prime

child-safe swimming area south of Cape Point to Frisco village ? Favorite gathering area for "locals" and visiting families ? Prime shelling area ? Prime horseback riding area ? Recreational and commercial cast-netting at Cape Point ? Sunbathing ? Water sports ? Snorkeling ? Birding Ramp 55 to/including Hatteras Spit (Hatteras Inlet) ? Prime fishing area from ramp 55 around Hatteras Inlet spit ? Ramp 55 to/including Hatteras Spit (Hatteras Inlet) ? Recreational and Commercial cast-netting ? Prime family gathering area for visitors in the Hatteras Village area ? Water sports ? Birding Turtle Nests should be relocated from ORV corridors in these prime historical recreation areas.

I agree with these Shorebird / Water bird Buffers: Species Breeding Behavior/ Nest Buffer ORV Pass-through Unfledged Chicks Piping Plover 50 m 30 m 200 m American Oystercatcher Flush + 15m Flush + 15m Flush + 15m Least Terns 30 m 30 m 30 m Other Species CWB 30 m 30 m 30 m
MAXIMUM Piping Plover Unfledged Chick Buffers Establish a 200 meter buffer / Closure around the unfledged chick(s) location. Adjust buffer as needed when chicks are mobile. Establish ORV/Pedestrian access corridors. Vehicles may be allowed to pass through portions of the protected area that are considered inaccessible to PIPL chicks because of steep topography, dense vegetation, water or other obstacles. Morning access to the points and spits may be delayed until chicks have been located if the access corridor passes between the waterline and through the buffer area that would otherwise be closed. Reopen access corridor outside of pre-nesting area after chicks fledge. Remove pre-nesting closure 2 weeks after all chicks in the area have fledged.

MAXIMUM American Oystercatcher Unfledged Chick Buffers Establish a 30 meter buffer/closure around the unfledged chick(s) location. Adjust buffer as needed when chicks are mobile. Monitor daily. Establish ORV/Pedestrian access corridors. Buffers/closures will be removed after AMOY chicks have fledged (observed flight of 30 meters).

MAXIMUM Colonial Water birds Unfledged Chick Buffers Establish a 30 meter buffer/closure around the chick(s) location. Adjust buffer as needed when chicks are mobile. Monitor daily. Establish ORV/Pedestrian access corridors. Buffer/closure will be removed after all chicks have fledged.

I believe the Four-wheel drive vehicles allowed to drive on the Recreational Area beaches should be registered, licensed, and insured and comply with inspection regulations within the state, country or province where the vehicle is registered. All-Terrain Vehicles (ATVs) should be prohibited. ATVs are defined as a type of off highway vehicle that travels on three or more low-pressure tires; has handle-bar steering; and has a seat designed to be straddled by the operator.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.

This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.

The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.

* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.

* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.

* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Correspondence: To whom it concerns,
For over 75 years my family has been travelling to the Outer Banks and Hattaras National seashores. We have always had access to to the beach for fishing and recreational trips that our family has taken. Since the age of 10, I have been included in those trips and we have always been able to have Off Road Access onto the beaches of Oregon Inlet, Hattaras and Ocracoke. Beach access is an important part of our families recreational plans every year during the spring, summer and fall. From National Park Service Camp grounds, private camps, houses and hotels our family brings currently 2 generations of fishing, shopping and 5 to 7 trips per year to this great national seashore. Our recreational money is spent in the local economy and we seek free access to the beaches for our trips. With 3 young kids and fishing gear, we realize the privilege we enjoy by being able to drive on the beach with our 4 wheel drive vehicles.
We hope that you will work hard to keep our beach access open and work to keep the traditions of beach access and driving on these beaches a priority in any plan created for the Hattaras National seashore.
Thank you,
Kevin C. Paulson

This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to

me.

The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.

* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.

* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Correspondence: Cape Hatteras National Seashore holds a unique ecological, recreational and economic value. I believe that beaches are a public resource and should be held in the public trust for their preservation.
 Cape Hatteras National Seashore provides some of the best recreational resources on the East Coast, including surfing and fishing, but I recognize that if not regulated correctly ORV use may detrimentally affect migratory species that nest in the area. I believe that a balance between access and preservation can be achieved and that allowing continued access with improved management of ORV use to the National Seashore is the optimal solution for this area.
 I support Alternative C, a balanced solution that benefits the animal species while guaranteeing humans can continue to enjoy and protect this most-precious coastal resource for years to come.

Correspondence: Dear Sir or Madam, I view with great concern the proposed new plan for beach access on the Cape Hatteras National Seashore. My family and I have visited the park multiple times a year for the past forty years. We love the beach and want to maintain its spirit and beauty. As a bird watcher, nature photographer, past member of the Audubon Society, and a concerned citizen, I have supported the temporary plan of the Cape Hatteras National Seashore to protect the piping plover even when it meant closing some sections of the beach during breeding and fledging season. However, the proposed plan goes far beyond what I believe is necessary to protect a bird whose population is actually increasing. My primary concerns are as follows:
 1. The 1,000 meter closure allocated to a piping plover unfledged chick seems excessive. As a citizen I can not support an area larger than a square mile for one nest. The 300 meter restriction for the oyster catcher, a bird that is not threatened, also seems excessive. 2. Pets, including dogs on leashes, will not be permitted on the beach between March 15 and July 31. I know that pets can harm ground nesting birds but not when they are leashed. This ruling will impact use of the beach without doing anything to help the birds. 3. Large sections of the beach will be closed to even pedestrians during the March 15 and July 31 period. This seems excessive. 4. Off road vehicles will be prohibited year round at the Hatteras and Ocracoke Inlet areas. This too seems excessive. I believe that it is important to protect wildlife, but I also believe that such protection must be viewed as rational by the general population such that the political body will continue to support it. Thank you, Archibald L. Fripp, PhD

Correspondence: I disagree with the piping plover brood requirement of 1,000 meter pedestrian/ORV closure in all directions and the 300 meter American Oystercatcher that is not a federally threatened species. Clearly there is room for everyone and every species on this island without these severe restrictions. Reasonable alternatives should be considered that are fair to both the people and the wildlife that occupy on this island.
 I disagree with the rule in Alternative "F" concerning pets on the beaches on Cape Hatteras National Seashore. I believe that pets should be allowed on the beach on leashes during peak hours and allowed to run freely off hours while being observed by their owners as to not offend any other people or wildlife on the beaches. Pet owners can be educated with respect to the environment.
 I strongly disagree with Alternative "F" concerning ORV's being prohibited year round between ramps 23 and 27 and with the restrictions on night driving between May 1 and November 15th. I have fished these beaches all of my life and I have respected the environment always. This would be a personal loss for both myself and my family and I would consider moving from the island if this occurs. This is a National Park and to restrict it to this degree is quite simply not fair to anyone. The areas noted on p.121 that are targeted for restriction between March 15th and July 31st are some of the most beautiful places on the island. I have spent countless days with friends and family there. Please find a reasonable alternative.
 One last note. I found very little information in Alternative "F" concerning the preservation of the cultural resources which I consider a very important issue that deserves more attention than this report provided.
 Thank you,
 Timothy J Cantwell

Correspondence: My first surfing trip was to the outer Banks in 1985. I was not even old enough to drive, an older person took me, a friend, and his own kids. I've been back many times since, camping, renting hotel rooms, and houses and just enjoying all the Outer Banks has to offer. I'll be back one day soon with my own kids...hopefully.
I support a balanced option that recognizes the economy of the Outer Banks depends on people coming to visit to surf and fish. Alternative "C" best represents that viewpoint.
While I am not an ORV enthusiast myself, I typically travel to the Outer Banks with people owning such vehicles. I frankly could not imagine a trip there without the luxury of driving down the beach a bit to find an area a surf break to ourselves. it just would not be the same Outer Banks to me.
In the intervening years since that first trip in 1985, I spent a summer working for the US Fish and Wildlife Service in Assateague Island, Virginia. My

0008938

duties included endangered bird surveys, and explaining to Refuge visitors about the habits of and the importance of birds like Piping Plovers. Most importantly I would convey how human activity disturbed these birds.
I continue these practices in my daily life in coastal NJ, making sure humans understand their impact and doing what is possible to protect Plovers from Sandy Hook to Sea Girt, NJ.
I understand it is just easier for you to say "No" in order to protect birds. But the National Park Service is in the business of protecting wild areas for the enjoyment and recreation of visitors. It is a National Wildlife Refuge where wildlife is to be preserved at all costs. Trust me I know the difference because Assateague has both on the same island.
Please balance recreational use with bird protection. I have been following this in the news from afar and it seems up until now the recreational users have not been properly represented and the bird lovers have had an undue influence on the process.
John Weber

Correspondence: I implore you to NOT restrict access by people or ORV's to ANY CHNS beach areas. As a social scientist I can speak knowledgeably and empirically to the negative impact such restrictions will have not only to local but regional economies and cultures. As a participant in the recent Sea Grant Charter Fishing Economic Impact Study it was proven that charter fishing ALONE brings in millions of dollars of revenue annually to North Carolina. Beach restrictions would adversely impact this critical industry already reeling from a recession. And this is only ONE example. There is absolutely no doubt that restrictions will significantly curtail tourism, the primary source of income for the entire NC coastal region. Such restrictions made on invalid or at least questionable science provided by groups who have little real human/visceral investment in the NC coast will not solve the ecological concerns that ALL citizens and residents of the region already have. The assumption seems to be that local residents do not care about the ecology; nothing could be further from the truth. Sustainability means ensuring future generations have an environment and conditions that enhance their lives. To make a choice to restrict access to the beaches completely ignores the fact that people just the same as birds, turtles and fish are a part of the ecosystem and if their livelihoods and cultural identities are taken then there will be no culture, and thus no people/humans in the future to benefit from that sustainability. In a democracy, ALL impacted and concerned voices must be heard, and reasonable and accountable actions taken as a result of actually listening to such voices. If restrictions are implemented as a result of the political pressures of biased and powerful groups with little or no resident members and no cultural ownership versus citizens who have cultural roots, a highly vested interest in conservation and absolute reliance on the NC coast for basic survival then the NPS will be DIRECTLY responsible for thousands of people losing jobs, incomes, housing, cultural roots and any chance of a sustainable future where people and the environment can co-exist. The outcome will be devastating. Ironically, the result also includes having no reason for an NPS.
Dr Tim Hatcher

Cape Hatteras National Seashore provides some of the best recreational resources on the East Coast, including surfing, but I recognize that if not regulated correctly ORV use may detrimentally affect many things, including migratory species that nest in the area. I believe that a balance between access and preservation can be achieved and that allowing continued access with improved management of ORV use to the National Seashore is the optimal solution for this area.
Limiting access of ORV according to migration patterns of local treasured species, and requiring a license system for ORV are reasonable requirements that would allow the public to share in the responsibility of caring for the beach we love. Fishing licenses and permits for fires are good models already in place, and a similar solution can manage ORV access.
I strongly support Alternative C, a balanced solution that benefits the animal species while guaranteeing humans can continue to enjoy and protect this most-precious coastal resource for years to come.

Correspondence: Dear Mr. Murray:

ORV use/access to the Cape Hatteras National Seashore (CHNS) is important to all visitors of the CHNS. The reason it is so appealing is it allows visitors to access remote parts of the Park to enjoy, fishing, bird watching, surfing, sun bathing and many more activities. Access to these remote areas, wilderness, is what is appealing to CHNS. No other place on earth offers beach access and with it the feeling of freedom and remoteness. The beauty of south point on Ocracoke along with the history that goes with it can not be enjoyed from Highway 12. Hatteras Inlet can not be enjoyed from the parking lot at Ramp 55. The best surf fishing spot in the world, Cape Point, can not be enjoyed by Park visitors if it is closed during the Spring and Summer.

The need for action is understandable. With visitors increasing yearly an ORV management plan is necessary for park management. In the past I think you could see that visitors to the park acted responsibly. There were violations but I think statistics will prove that vehicle operation in the park was for the most part done responsibly. When people visit a National Park it is inherit to act responsible to both the Park and the wildlife in the Park. The fact that this land was set aside by your Fore Fathers creates a sense of responsibility to preserve this land.

What is not understandable is how the ORV management plan process has been forced upon all sides by one group. The group that is for the greatest restrictions has used their leverage to get what they want. Lawsuits and inconsistent science seems to dominate their efforts. Park access should not be limited based on threats and smoke and mirrors.

1. A Piping Plover or Oyster Catcher can nest on Cape Point and you close a large section of the beach but when they nest next the highway nothing is done? Why the closure then? 2. How come some animals can be killed to protect others? 3. What if raccoon or fox advocate groups wanted to visit the park and they found that their favorite species to watch was being killed to protect another group's favorite species?

Alternative F seems to be a plan based on compromise. As long as the SMAs do not get out of control and create large unnecessary closures I think the plan will work. Whatever plan is selected I hope it will be a logical one. Common Sense based on reality should rule the plan. Educating ORV operators should be a priority. Keep beach access a top priority for the people to enjoy the park and for the people who live on Hatteras Island and Ocracoke.

Please do not implement a restrictive plan based on the inconsistent issues of one group with an agenda to limit access.

Sincerely,
Brandon Christie

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.

This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.

The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.

* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.

* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I am a coastal NC resident, and a regular visitor to the Outer Banks (and Core Banks). I value our local ecosystem, our national natural resources, and the ability of our citizens and visitors to enjoy both.

Cape Hatteras National Seashore holds a unique ecological, recreational and economic value. I believe that beaches are a public resource and should be held in the public trust for their preservation.

Cape Hatteras National Seashore provides some of the best recreational resources on the East Coast, including surfing and fishing, but I recognize that if

not regulated correctly ORV use may detrimentally affect migratory species that nest in the area. I believe that a balance between access and preservation can be achieved and that allowing continued access with improved management of ORV use to the National Seashore is the optimal solution for this area.

I support Alternative C, a balanced solution that benefits the animal species while guaranteeing humans can continue to enjoy and protect this most-precious coastal resource for years to come.

Sincerely,
Ben Whitlock

Correspondence: I disagree with any alternative that predetermines restricted areas for ORV/pedestrian access without considering actual nesting within those areas each year. Pg (i) ? I disagree with the characterization that ORV for recreational purposes only resulted in the last half century due to increased accessibility to the barrier islands; that generalization can be made for beach recreation as a whole. Pg (i) ? I disagree that there has been "a decline in most beach nesting bird populations on the Seashore since the 1990's." There is no data to support this vague generalization. Pg (ii) ? I disagree with the stated purpose of DEIS to manage ORV use/access, as the alternatives also regulate pedestrian access and pet use. This DEIS seeks to restrict and regulate all human related access and interaction with nesting species along the Seashore. Pg (ii) ? I disagree this DEIS studied, considered, or otherwise addressed the stated purpose to protect and preserve "cultural resources." There are less than 2 pages of this document referencing cultural resources or protecting human inhabitant's use of the natural resources. Pg 55 ? I disagree that Alternative F included input from the Advisory Committee. I disagree with Alt D in its entirety as it seeks to almost complete restrict or eliminate ORV access. I disagree with any pedestrian restriction greater than 30 meters from a nesting or unfledged species within non-wildlife "village" beaches or waterfront areas. I disagree with ORV or pedestrian buffer zones for non-threatened or otherwise not protected species (pg 121-127). Pg 136 ? I disagree with Alt F where it prohibits pets in the Seashore including in the front of villages. Pg 136 ? I disagree with the finding that Alt A will lead to long term moderate to major adverse impacts, first that it neglects to recognize elements of the 1978 Draft Interim Plan included in this alternative provide buffers and restrictions, and second that while in affect the many species including non-indigenous ones thrived.
As a visitor to the NC Seashore for the last 30 years and a current Hatteras Island home owner I hope the NPS and involved parties can implement a rational beach and shoreline use plan that does not overtly prohibit ORV, pedestrian, or monitored pet access which makes this such a unique and enjoyable region. I suggest that any plan include continued data collection to analyze how ORV or pedestrian traffic directly impact nesting species compared to other natural adverse occurrences. Further, that data should be compared to other regions to the north and south, which have limited to no access and no significant human involvement to promote the breeding of so many species. Consider many identified species successfully nest and fledge within populated village areas without the use of buffer zones, and that prohibiting access or use in many of the popular natural areas is needlessly punitive to residents and visitors. Finally, consider that there is little or no evidence that current or increased ORV/pedestrian restrictions will further promote protected species, which have thrived during the last 30 plus years under the interim plan.
Please keep ORV, pedestrian, and monitored pet access open to the park beaches and shoreline in the spirit of the 1978 Draft Interim Plan so that humans and wildlife can all enjoy it.

Correspondence: I am a long time visitor to the outer bank of NC and find that the real beauty of the banks is being taken away from the very people who pay the bill for the federal parks, the tax payer. We love this area because of the way everybody that drives on the beach take care of the it and clean up any mess they find. The very beautiful miles of beach, the wildlife, the swimming, fishing and the idea that we can get away from the hotel area and the noise. As a person that sends as much time as I can out doors this area is god gift. I have never seen a person that tries to kill the wildlife here and can not believe that a answer with the park service can not be worked out. PLEASE stop the few steal this treasure from us that love and respect the outer banks

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: First of all, I must say that this document is ridiculously long, and repeats itself in many places. It is extremely difficult to read through in any kind of timely manner. I have been very disappointed with the performance of the NPS in regards to ORV usage on the CHNS, beginning with their mismanagement of the ORV usage plan following the original executive order.
 As far as the new management plan goes, I would like to see a combination of alternatives that have been presented added to alternative F. Foremost, I would like to see the permit system implemented as soon as possible, with the proceeds being split between ORV trail maintenance and education, and wildlife habitat maintenance. I believe that the carrying capacity restrictions are extremely unrealistic, however, especially when it comes to enforcement issues. There are simply too many beach access points, and it would require too many NPS personnel to monitor beach usage. The only place I have seen this work is at the Assateague N.S., but they have only one beach access point. Assateague has also been successful at putting ORV permit money back into seashore improvements. They provide free air for tires, and an overnight on-beach parking area with trash removal for fisherman.
 Trail maintenance would also help to alleviate one of the major concerns of ORV users leaving designated roads to avoid standing water. The majority of standing water problems I have witnessed are the result of ruts and large depressions (sometimes filled over 1 foot deep with water) caused by a lack of trail maintenance. Users simply cannot risk getting stuck in these remote areas of beach trail. The areas I have specifically witnessed are the trails that access Hatteras inlet, and sound-side trails on Ocracoke. I have also seen several ramps, including the popular one leading out to Cape Point, become virtually impassable either due to ruts or soft sand conditions that could have been controlled by NPS if they had a trail maintenance budget.
 I would also like to add that ORV issues on the CHNS are not like ORV issues experienced by other national parks. Most of those issues are caused by irresponsible recreational users. On Cape Hatteras, ORV use is simply a transportation issue. Very few people are simply joyriding on the beach. Most are using their vehicles to get to a fishing spot, or to find a place to sunbathe. ATVs should absolutely remain prohibited. The permit system would help to discourage casual users, and hopefully reduce seasonal beach traffic.
 I agree the beach permit should have an educational element to it. This element should be in the form of a pamphlet guide outlining safe and preferred beach driving procedures. These procedures should encourage using existing track sets on the upper and/or lower beach, encouraging drivers to remain off the middle section of beach as much as possible. This would hopefully allow for increased numbers of ghost crabs to have safe, livable beach habitat, and would also improve the aesthetic value of the beach in general. Assateague is a good example of this. Wide areas of beach have few tracks in the middle.
 Some forms of recreation are simply going to have priority over others. Fishing should be at the top of the list. Users wishing a pristine environment, or excellent bird-watching opportunities can go to Pea Island or the Alligator River NWRs. Night-sky star-gazers have a myriad of possible viewing locations that do not involve the CHNS, and should not even be listed on the EIS. Fishermen and hunters have always been this country's first line of defense for natural resources, and we will continue to be so. Tax dollars from our equipment goes directly into state and federal wildlife habitat programs. The other users cannot boast this, and in fact when similar taxes were proposed for their recreational equipment, they were shot down. Finally, the punitive system for nesting area tampering needs to end immediately. The enclosure spaces are derived from scientific data, yet when one of the sites has a sign knocked down, NPS imposes a punitive size increase that is completely arbitrary, and in fact favors the anti-ORV use activists. Would a fisherman be foolish enough to damage one of these areas knowing that the size of the beach closure would be increased? Of course not. I know I would report anyone I saw immediately, as would other fishermen. This policy is simply ridiculous, and shows a lack of understanding by NPS personnel.
 Thank you for your consideration.

Correspondence ID: 733 **Project:** 10641 **Document:** 32596
Name: Newhard, Jim

Correspondence Type: Web Form
Correspondence: As an OVR beach fisherman my comments are as follows:
 1) the 1000 meter radius around a bird nest is excessive. That closes a mile of beach. There are many places along the outer banks that aren't even a mile

wide between the ocean and the sound. Will Rt.12 be closed? I believe a more realistic number, say 100 meters, which still gives the birds 2 football fields, is sufficient. Is there scientific fact that shows the 1 mile circle is required? Also, if a piping plover nested in a planter in a McDonalds parking lot would the 1000 meter radius be enforced? I think not.

2)No pets. I don't currently own a pet but have taken my dog to the beach in Delaware in the past. We have the 6 foot leash rule. Dogs must be kept on a 6 foot leash. As long as this rule is enforced it should keep the wildlife safe. No need to establish new laws, just enforce the current ones.

3)Is there proof that seasonal beach closings help the bird population? Delaware has seasonally closed parts of Cape Henlopen State Park for more than a decade with no improvement of bird populations. More bird nests are destroyed by storms and predation than by ORV's. Again, are these beach closings backed by fact or are they asked for on the whim of special interest groups.

In closing I would like to say that myself and my family have been vacationing in the outer banks for 25+ years, myself 2 or 3 times a summer. My son will continue this with his family. Future generations will follow. I would hope that they will be able to enjoy the beaches with the same rights that I have. If these rights are taken away there will be no reason for us to vacation in the outer banks thereby the economy will be losing several thousands of dollars in beach house rental, fuel, grocery spending, bait and tackle purchases, not to mention fishing licenses. I just ask that you look at the proposal fairly and from both sides and make a decision based on facts.

Thank you.
Jim Newhard

Correspondence: My family and I have enjoyed the Cape Hatteras Recreation Area for over 40 years usually visiting 2 to 3 times a year. We enjoy surf fishing and the pristine natural environment.
We are always careful to observe National Park Service signs rules and always leave the area we visited cleaner and more litter free than when we arrived.
Cape Hatteras is a national treasure enjoyed by many thousands who spend time and money on the Outer Banks.
We believe that the greatest threat to protected birds is from natural predators and from the natural environment, not from visitors.
It is unthinkable that the Recreation Area (as originally named) would be banned or severely restricted to human use in order to protect protected, but not endangered- birds who are thriving on Cora June Island and in other un-regulated locations.
We believe that the Consent Decree was crammed down the throats of Dare County and the residents. It was consented to only with the fear that a total ban on beach access could be the Courts alternative. It was the lesser of two evils.
We do not object to reasonable permitting requirements for ORV's and to closures for turtle nesting protection.
Prime surf fishing recreation areas should be protected for the taxpayers use - Cape Hatteras, Ocracoke and Pea Island are treasures and the public's use must never be denied.
There is a compromise position allowing protection of bird nesting areas while allowing ORV access for fishing, bathing etc.
Please work to find the compromise.

Cape Hatteras National Seashore provides some of the best recreational resources on the East Coast, including surfing and fishing, but I recognize that if not regulated correctly ORV use may detrimentally affect migratory species that nest in the area. I believe that a balance between access and preservation can be achieved and that allowing continued access with improved management of ORV use to the National Seashore is the optimal solution for this area.

I support Alternative C, a balanced solution that benefits the animal species while guaranteeing humans can continue to enjoy and protect this most-precious coastal resource for years to come.

Correspondence:	<p>By choice, we do not own a 4-wheel drive vehicle, but we walk the beach nearly every day. Several years ago during one such excursion, we were about to enter a vehicle corridor on Ocracoke's south point when we were stopped by a wildlife official. As a Ford Expedition rumbled through the corridor, she tried to explain how two retirees on foot were more disruptive to the environment than a mini-tank. That position made no sense then, nor does it make sense now, and it cannot possibly be supported scientifically.</p> <p>Ocracoke is vastly different from Buxton, Avon, Kitty Hawk, Corolla or Duck. The plan notes that the new restrictions would have some impact on small businesses. Ocracoke has nothing but small businesses. It never will have a Walmart, Lowe's, Target or McDonald's.</p> <p>What you enact now will affect every aspect of village life here. Please consider carefully before trying to make regulations that apply equally to the entire Outer Banks. They never will be equal.</p>

Correspondence:	<p>There has been alot of noise over the past few years about driving on the beach on the outer banks. My understanding is that it is because of birds and turtles that nest there. Fishing, which involves driving on the beach, is the very thing that makes the outer banks attractive to most people. It is one of the few places on this planet that is still as it was hundreds of , maybe thousands of years ago. The government has taken away most of the freedom that our forfathers fought to maintain since the moment they stepped on to this contenient. this is another example. I would like for my children and thiers to be able to enjoy what little bit of gods country is left.</p> <p>I don't really understand how places like ocracoke and cape lookout will stay in business if driving on the beach is restricted because of some bird watchers. I don't know maybe it is the rich who keep this place alive and not the comman folk who like to fish. I have been going to the outer banks ever since I have learned about it. I spend somewhere in the area of 4-6k every year down there either with my buddies fishing or with my family and I can tell you now that if it wasn't for the surf fishing, driving on the beach, I can find better places to spend my money. When you start screwing the very people who keep your businesses alive, the fisherman, you are asking for trouble.</p> <p>Most likely this change will take place and you will slowly squeeze the breath out of the small business man who is tring to survive, then the rich people can watch all the birds and turtles they want to. By the way I have never seen any dead turtle on the beach that were run over by a vehicle and I have never seen anyone chasing birds. A matter of fact all the people I know that fish down there frown upon this type of activity.</p>

Correspondence: It seems to me if there was an issue with human activity and animals (birds,turtles) on the outer banks of NC we would have seen a huge impact years ago. What we are seeing is inconsistent reports of to the good or bad; this is not enough data to make a good judgement call to change anything from the way it has been for years. Please do not let money or politics persuade this judgement, we all have seen these decision made to many times and we have all been hurt from poor judgements. Real longterm data and possibly a fieldtrip for the ones who make the final decision would be the best way come to a correct decision. Our ancestors worked very hard to bring wonderful things to us and it only takes a few seconds to tear it down.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.

This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.

The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

- *Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
- * Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
- * Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I have been a visitor to the Cape Hatteras Seashore for 37 years and have witnessed the changes that have come with beach access. To visitors and residents alike, these changes are unnecessary and unfair.

The beach access under the Consent Decree is too restrictive. The NPS preferred alternative essentially mimics the current rules, and would be too restrictive as well. For other alternatives all access to the most popular and attractive locations on the Seashore would be denied. When the Cape Hatteras National Seashore Recreation Area was created the federal government made certain pledges. The government intended the Seashore to be for the enjoyment of people, and pledged that beach access would be maintained at customary levels. Access has been steadily eroded over the years, mile after mile banned or limited, and the public's enjoyment has suffered. My enjoyment has suffered. This is a violation of the government's pledge. NPS's preferred alternative "F" would continue this ongoing violation of the public trust, spoiling the intent of Congress.

The enabling legislation did not intend for the principal function of the Seashore to be its value as a wildlife preserve. The Seashore was preserved for recreation. There are many other areas on the outer banks that serve refuge functions, as intended by the government.

One example of bias in the DEIS is the title of alternative "D", "Increased Predictability". This is quite deceitful. It is not an advantage for the public to easily know they will be consistently excluded from all SMAs forever. It should be titled "Most Restrictive", because that is what it is.

I note there is no compelling evidence in the DEIS or elsewhere that shows that the current or proposed restrictions are having or would have any beneficial effect for the species. I also note no evidence exists proving an adverse impact of humans on the species. Natural forces and conditions on the Seashore, such as predation, storms, and suitable habitat, are the determinant of success or failure for species of concern, not humans. The DEIS is supposed to provide best available science but it does not. This violates NEPA requirements.

There is, however, absolutely no doubt that the restrictions are having a negative effect on people by reducing their enjoyment of the Seashore. This has had direct adverse socio-economic impacts in the surrounding communities. Significant loss of tourism business on which the Seashore villages depend for the very livelihood has occurred. These are measured impacts but they are not properly documented in the DEIS.

I object to the existing restrictions and the adoption of any restrictions that would deny even more access. Species protection in the days prior to the Consent Decree was fair and adequate. The degree of access the public enjoyed needs to be restored.

Correspondence: I have lived in Hatteras my whole life. My entire families well-being and livelihood depends entirely on tourism, fishing and surfing. Since I was a teenager I have been driving my jeep down the beach at ramp 55 daily to surf and enjoy the gifts that were given to me for livng on such a beautiful island. I don't expect a decision to be made based on surfing and my love of our secluded beaches, but I truly believe that if too much regulation is passed considering beach driving the economy of this island and our surrounding communities will get so bad most locals will be forced to move away. It's understandable to protect the wildlife but not to the extent where it's ruining PEOPLE's lives. Closing too many beaches will deplete the tourism

enough that my business will be ruined and everyone else in my family will not only have to find new jobs but will also have to live in places and ways different than they have spent their entire lives. Hatteras's economy depends solely on tourists who love to fish, surf and just enjoy the oceans beauty. If too many beaches are closed to the public it will cause a domino effect starting with visitors not wanting to drive the distance to Hatteras simply to have the same pleasures as Nags Head and Wilmington and other NC beaches. The unique part that brings people all the way to Hatteras is the immense amount of secluded coastline that they can pull right up to. When they stay north in town because they can't do this anymore the fishermen will make less money. The restaurants and hotels and real estate companies will struggle and this will force many natives to relocate or live a hard life of poverty. IT saddens me that the treasures that make someone like me and so many others love this place are being threatened to be taken from us for issues that are uncertain. My main question is what would be worse for everyone: If things were left the way it has always been in this situation or if all the beaches were shut down? To me the answer is clear as day....

Correspondence: I would like to comment on the proposed legislation that is pushing to close the beaches of the Cape Hatteras National Seashore. I understand the need to look out after nature and to try preserve the habitat that surrounds these animals, but I can't quite understand how by saving these animals we help those who call this area home? The residents of the Seashore have invested their lives by producing and providing the supplies necessary for tourist, fishermen, fisherwomen, family members and so on to visit this great Seashore. By taking away the access to the beach for these visitors will impact the economy of the Outer Banks to the point of desertion. I feel that no one will be able to sustain their lively hood or be able to provide for their families in the way they currently are use to.

I believe that people who are passionate about issues and causes fail to see the other side that is effected. We create blinders and only focus on the goal of which we feel is the best choice. Preserving the environment is important, but not at the expense of peoples' lives. Should there be restriction and preservation, yes there should, but not at the expense of the citizens of the Seashore. Compromise and come up with a solution that benefits both parties. There will be some giving and taking on issues however a solution should be the focus.

Correspondence: There is no reason that the Seashore Villages/visitors, and wildlife can't live together in harmony. The traditional cultural importance of the surf zone access to Outer Banks Seashore Villages/visitors is just as important as the sanctuary for the wildlife. Both have been done together for decades without interference, or detriment to either. But the fact is, the greatest impact of these closures is to the human's cultural experience, the economy, and the way of life. Those 3 greatly out-weigh the immeasurable affect on wildlife. And I say immeasurable because the numbers show that there has not been a positive affect on the wildlife under the consent decree. Therefore, I am for keeping the ORV/pedestrian access to the beaches open.

Human's Cultural Experience:

? NPS Guidelines state; "A Traditional Cultural Property designation can and should be based on patterns of land use that reflect cultural traditions valued by the long term residents of the local community."

? NPS Guidelines state: "A landscape can also constitute Traditional Cultural Property if it is a location where a community has traditionally carried out economic or other cultural practices important in maintaining its historic identity."

? The DEIS describes ORV access as historical in nature (pg.83) and also both predating the Seashore and as being integral to the public use by both residents and visitors. The document also illustrates and captions historical commercial fishing (pg. 18), historical recreational fishing (pgs. 15, 260) and historical general recreational activities (pg. 259).

? The surf zone has long been not just a location for traditional economic activities, but also cultural activities as well. Collectively these activities are components of an unbroken pattern of land use that extend back many generations before the establishment of the Seashore and remain integral to the fabric of the historically unique Outer Banks communities.

Economy:

? It is clear that the socioeconomic impact on the Seashore villages due to beach closures for ORV and pedestrians will be great. The DEIS, has inaccurately analyzed the data (pg 270-281; 561-598) which results in misleading and sometimes erroneous conclusions. As per the DEIS:

* The ROI (Region of Influence) incorporates the Northern Beach communities, including Southern Shores and Duck. These areas are almost completely disconnected for ORV use and access issues relating to the Seashore. Therefore they should not be included in the data.

* Inclusion of the Northern Beaches in the analysis significantly dilutes estimates of economic impact of Seashore Villages.

* Analysis of economic impact to the Seashore Villages appears to be significantly down played. Emphasis in the DEIS is on the ROI-wide or county-wide level impacts.

* It is clear that the overwhelming majority of negative impacts will be felt by small businesses in the Seashore Villages. The DEIS shows only the

overall economics interests within the greater ROI.

* Economic analysis in the DEIS do not use data from the first full year of the Consent Decree (2009).

* Many 2008 visitors were either unaware of the scope and breadth of the Consent Decree beach closures, or had already made plans/reservations (I was one of them).

* Actual business survey data rather than model projections for economic impact for Seashore Villages businesses are not available in the DEIS.

* Overall visitor counts include a large percentage of visitors who vacation in the Northern Beach communities and recreate on the non-federal beaches outside of the Seashore

* Visitors who patronize the Fort Raleigh National Historic Site and the Wright Brother's National Memorial but do not visit the actual seashore areas need to be factored out. Currently they are included in the visitor counts.

Way of Life:

? On August 17th, 1937, an Act of Congress establishes the Cape Hatteras National Seashore to provide recreational access to the general public.

? On June 29th, 1940, Congress amends the enabling legislation and the words "Recreational Area" are added to further emphasize the recreational nature of the seashore as a destination for beachgoers and fisherman.

? The people of Hatteras Island have repeatedly been promised access and guaranteed use of the recreational area. In 1953, U.S. Department of Interior Secretary Oscar Chapman issued an order directing the acquired land to be "administered, protected, and developed by the National Park Service for National Seashore recreational purposes for the benefit and enjoyment of the people."

? Many local residents remember the solemn promise made by former Park Service Director, Conrad Wirth. In an open letter to the people of the Outer Banks, Wirth assured, "There will always be access to the beach for all people, whether they are local residents or visitors." He gave his word to the people of Hatteras that access to the beaches would never be denied in creating this new recreational area.

? NPS has stated; "ORVs have long served as a primary form of access for many portions of the beach in the Seashore and continue to be the most practical means of access and parking for many visitors." (pg 1)

? Pedestrian only areas discriminate against individuals with limited mobility due to age or physical impairments, families with small children, and those wishing to engage in activities requiring recreational equipment.

 Ocracoke, NC - Monday, April 26, 2010, 9:00 am to 11:00 am Buxton, NC - Monday, April 26, 2010, 5:00 pm to 8:00 pm Kill Devil Hills, NC - Tuesday, April 27, 2010, 6:00 pm to 8:00 pm Raleigh, NC - Wednesday, April 28, 2010, 6:00 pm to 8:00 pm Hampton, VA - Thursday, April 29, 2010, 6:00 pm to 8:00 pm
 Outer Banks Chapter Statement on ORV Access in Cape Hatteras
 The Outer Banks Chapter of the Surfrider Foundation recognizes the unique ecological, recreational and economic value of the Cape Hatteras National Seashore. We further recognize that beaches are a public resource and should be held in the public trust for their preservation. We understand that for decades the Park Service has allowed access to Cape Hatteras National Seashore beaches by Off Road Vehicles (ORV) with minimal restriction or oversight and that if not regulated correctly ORV use may detrimentally affect migratory species that nest in the area. The Outer Banks Chapter supports beach preservation and protection efforts, but feel that a temporary and or permanent ban on ORV access to these beaches could have an immediate detrimental impact on the Outer Banks economy, and severely limit public access to groups that appreciate, use, and support the protection of these coastal resources. We believe that a balance between access and preservation can be achieved.
 It is difficult for one that has not spent significant time on the Outer Banks to consider how limited access to beaches would become without ORV use, access that is the very reason that people from all over the world come to the Outer Banks to visit. In our small community where much of the oceanfront has been developed by homes, this small stretch of National Park is truly one of the last protected places to enjoy the unique resources on Hatteras Island. Hatteras Island offers world class surfing and fishing, much of which can be attributed to its remote location that is accessible only by ORV's. At this time the Outer Banks Chapter of Surfrider Foundation believes that allowing continued access with improved management of ORV use to the National Seashore is the optimal solution for this area.
 The Outer Banks Chapter implores all parties involved in this issue to find a balance between access, protection and preservation. We recommend managing access of these areas through a combination of permitting, limiting the number of vehicles, and closures when necessary to protect the migratory species that use this area seasonally. The Outer Banks Chapter of Surfrider Foundation supports protection and preservation, and in this unique situation does support the reasonable use of ORVs to allow public access to this area.

Correspondence: Cape Hatteras National Seashore is a unique place, one like no other in the country. I have enjoyed the National Seashore in and around Cape Hatteras for years and I believe access is one of the things that makes Cape Hatteras unique for visitors from all over the country. I have 25 or so friends that have all at some point in their life taken at least one trip to Cape Hatteras and being able to access the unspoiled National Seashore is a big part of what keeps them going back again and again. It would be a shame to deny access for future generations. Cape Hatteras National Seashore provides some of the best recreational resources on the East Coast, including surfing and fishing, but I recognize that if not regulated correctly ORV use may detrimentally affect migratory species that nest in the area. I believe that a balance between access and preservation can be achieved and that allowing continued access with improved management of ORV use to the National Seashore is the optimal solution for this area. We must find a balance that will keep Cape Hatteras economically viable for the residents and businesses while at the same time preserving it for future generations.

I support Alternative C, a balanced solution that benefits the animal species while guaranteeing humans can continue to enjoy and protect this most-precious coastal resource for years to come.

I have been a visitor to the Cape Hatteras Seashore for 39 years and have witnessed the changes that have come with beach access. To visitors and residents alike, these changes are unnecessary and unfair.

The beach access under the Consent Decree is too restrictive. The NPS preferred alternative essentially mimics the current rules, and would be too restrictive as well. For other alternatives all access to the most popular and attractive locations on the Seashore would be denied. When the Cape Hatteras National Seashore Recreation Area was created the federal government made certain pledges. The government intended the Seashore to be for the enjoyment of people, and pledged that beach access would be maintained at customary levels. Access has been steadily eroded over the years, mile after mile banned or limited, and the public's enjoyment has suffered. My enjoyment has suffered. This is a violation of the government's pledge. NPS's preferred alternative "F" would continue this ongoing violation of the public trust, spoiling the intent of Congress.

The enabling legislation did not intend for the principal function of the Seashore to be its value as a wildlife preserve. The Seashore was preserved for recreation. There are many other areas on the outer banks that serve refuge functions, as intended by the government.

One example of bias in the DEIS is the title of alternative "D", "Increased Predictability". This is quite deceitful. It is not an advantage for the public to easily know they will be consistently excluded from all SMAs forever. It should be titled "Most Restrictive", because that is what it is.

I note there is no compelling evidence in the DEIS or elsewhere that shows that the current or proposed restrictions are having or would have any beneficial effect for the species. I also note no evidence exists proving an adverse impact of humans on the species. Natural forces and conditions on the Seashore, such as predation, storms, and suitable habitat, are the determinant of success or failure for species of concern, not humans. The DEIS is supposed to provide best available science but it does not. This violates NEPA requirements.

There is, however, absolutely no doubt that the restrictions are having a negative effect on people by reducing their enjoyment of the Seashore. This has had direct adverse socio-economic impacts in the surrounding communities. Significant loss of tourism business on which the Seashore villages depend for the very livelihood has occurred. These are measured impacts but they are not properly documented in the DEIS.

I object to the existing restrictions and the adoption of any restrictions that would deny even more access. Species protection in the days prior to the Consent Decree was fair and adequate. The degree of access the public enjoyed needs to be restored.

In the interest of protecting bird nests, beach access for fishermen on the OBX has been far too restricted. You can protect birds and still allow people to surf fish. Why must there be so vast a buffer zone around nests? Where is the "science" supporting this? When I have surf fished MA and NJ the buffer zones around nests are much smaller and whole beaches have not needed to be shut down. And to not allow fishing access at night is ridiculous--surf fishing is largely a night time pursuit.

Why are vast areas of beach closed to even walking on? This has not been done elsewhere either, that I know of.

Hatteras and Ocracoke have the finest surf fishing for Red Drum on the planet and people like myself are willing to spend hundreds and/or thousands of dollars a year in the local economy to pursue these fish, but the Park Service restrictions to beach access have made that impossible.

On the north end of Hatteras at Pea Island there are already miles and miles of beach that is closed to ORV use and is set aside as a wildlife refuge. I do not support turning the rest of the OBX into just a bird refuge also. I thought the National Sea Shore was supposed to be a recreational area?

I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.

This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.

The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at

least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.

* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.

* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: My wife and I, and our family and friends, have been enjoying North Carolina's Outer Banks for more than 40 years. We rent houses in the spring and fall of the year, and enjoy surf fishing and the serene environment. In fact, since the fish are not always biting, we enjoy bird watching almost as much as catching fish. I'm now retired, but was once a Biology teacher, and canoe guide and instructor for the Chesapeake Bay Foundation. My wife heads up our county's Litter Council. We are very concerned with protection and preservation of our environment. We want our grandchildren to enjoy the Outer Banks as we have done for so long. There are very few places left on the Atlantic coast that offers one the ability to drive to remote places on the beach and enjoy fishing and bird watching all at the same time. I love fishing of all kinds, but none so dear as surf fishing. I have shared my love of this area and the great fishing with more than 100 other people over the years. Their first hand experience motivates them to protect this environment. I was happy that a compromise solution was reached last year. We rented a house in Avon for the entire month of October and fished every day, except one.

The limited access was a nuisance, but did not affect our ability to enjoy our stay. I just returned from a 4 day outing with several friends, and the increased limited access was more than a nuisance. I don't like fishing right next to other fisherman, and the limited access concentrates fisherman and the impact. If the restricted areas continue to increase in size and numbers, it will diminish the surf fishing experience to a point that I and others like me will stop coming. I'll do more boat fishing instead, which I believe has a more devastating impact on the environment overall. This won't happen overnight. Slowly, the number of surf fisherman will decline. The local tackle shops, who are struggling to survive now having to compete with on-line purchasing, will decline. As a result, the availability of fresh bait (critical) will decline, driving more fisherman away. There must be a better solution.

Correspondence: I'm really opposed to any ORV on the outer banks.. Hatteras National Seashore. Ecologically, his is a very fragile environment. It is tough enough to have winds and storms for wildlife to deal with.. without the invasion of human traffic, oil spills and other man induced interruptions.
 If the owners of ORV want to recreate, they have lots of other territory..
 Sorry folks. Let's walk it.. or ride in a golf cart.. and save our fragile environments, ecology and future for our children Once it's gone.. it's gone..
 I say no to a compromise.. nobody wins.. especially those who can't cast their vote..
 Most respectfully,
 Harriet Bellerjeau ..

Correspondence:	Dear NPS, I disagree with the DEIS for the following reasons: 1. I believe the 1000 m buffers for Piping Plovers is unreasonable, excessive and not based on any proven scientific evidence. Assateague island, MD uses 200 m buffers. There has not been any significant increase in birds under the Consent Decree. 2. I disagree with the DEIS view on the impact of Alternative F to the socio-economic status of Cape Hatteras. Under the Consent decree, businesses have suffered. I know many people who will not return to the Outer Banks if they can not fish, swim, or surf their favorite beaches on the island. 3. I disagree with the DEIS view on pets. Dogs on leashes pose no threat to birds or turtles. 4. I agree with management but I feel the DEIS is not fair and balanced. Cape Hatteras was promised as a recreational area. There needs to be access to the surfzones.

Correspondence:	I strongly believe that closing the recreational beaches of the Outer Banks is a bad idea. I don't think there is enough strong evidence for wildlife rescue to take such drastic action on an area that has been open to the public for as long as it has. For instance, natural disasters and ferrel animals are noted to be a major harm to wildlife in the area. To compare the mass disruption from that and an off road vehicle accidentally running over a nest is not really comparing apples to apples. I believe that there are many other ways to help the wildlife rather than assuming it's caused by human harm. As a surfer, an environmentalist, fisherman and a beach visitor, it's beyond me why this has all the sudden become an issue to the extreme. Also, I would like to request the National Park Service to continue studying how these closures are affecting species survival in hopes of looser, more effective restrictions in the future. If I were to agree on any one of the options, it would be "Alternative C"

Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.

* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.

* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: First and for most,,Closing the beaches on the outer banks to pedestrian and ORV traffic would be disasteris to the economy and the lively hood of the people living there. I myself go to the outer banks twice a month to fish drive and spend time with family and friends on the beach. My family and I have met some very nice people there. In the years that I have been going to the outer banks I have yet to see a bird or turtle that have been run over. I just don't think it happens as much as we are made to think that it does. Going thru with this plan is about the crazeest thing that I have ever hereed. Who ever is making the decision needs set back and take a moment to get there head on strate. PLEASE PLEASE return the outer banks to the plan that the Park servtce has used for years. Please lesson to the people that this will hurt the most,the people that live there..
 Thank you for letting me commit Henry C Sapp Jr csapp1@cox.net

Correspondence: Cape Hatteras National Seashore Recreational Area DEIS Comment The legislation states: "said area shall be, and is, established, dedicated, and set apart as a national seashore recreational area for the benefit and enjoyment of the people and shall be known as the Cape Hatteras National Seashore Recreational Area." The enabling legislation created the park as a Recreation Area not a Wildlife Refuge. Areas such as Pea Island National Wildlife Refuge on Hatteras Island were created to provide habitat and protection for endangered and threatened species. Finding a way to guarantee unrestricted public beach access for pedestrians and ORV that coexists with wildlife needs to be the highest priority. I believe ORV & pedestrian corridors should be maintained with adequate monitoring through temporary resource closures to provide access to the beach. Because of the distances involved, ORV access corridors are required so citizens can travel to their desired destinations within the Recreation Area. ORVs have historically served as the primary form of access for many portions of the beach in the Recreation Area, and continue to be the most practical means of access for most visitors to Hatteras Island. To limit ORV access would discriminate against individuals with limited mobility due to age or physical impairments, families with children, senior citizens and those wishing to engage in activities requiring recreational equipment such as Fishing, surfing, birding, swimming and family gatherings. Equipment needed for recreating in popular areas of the park cannot be easily carried on foot through miles of deep sand on a hot summer day by even the fittest individual without the risk of heat stroke, dehydration, physical exhaustion or even death. For example: Water, Food, Beach toys, umbrellas, beach chairs, coolers, fishing poles, tackle boxes, water-sports boards, first aid kit, cameras, binoculars, etc... ORVs in remote areas of the beach provide shelter from lighting, a place to get out of the heat and emergency transportation for an ill/injured child or elder. ORVs have been used on the Hatteras Island beaches for decades without any resource conflict. It is imperative that ORV use be recognized for exactly what it is: A historical means of access to an area for recreational opportunities. The use of an ORV is not considered a recreational activity in this Recreation Area. ATVs are not permitted.These recreational opportunities sought, allow the public to enjoy the Seashore's resources and values. Denying access to recreational opportunities, many of which are specifically protected in the Enabling Legislation, denies the Seashore's current visitors the opportunity to enjoy the park's resources and values and denies future generations the opportunity to enjoy the park's resources in direct violation of Park Services Management Policies. There is no evidence that ORV beach access causes any unacceptable environmental impacts in the park. Often, traces of ORV access are erased by wind and tide in a matter of hours.

The beaches within the Cape Hatteras National Seashore Recreational Area offer high recreational value to the public. While all of the beaches are suited and commonly used for swimming, sunbathing, wading, shelling and fishing, some beaches are uniquely more favorable for some specific activities. These specific areas should have minimal and flexible buffers for birds and turtles because ORV Closure is the Least Significant Factor Affecting Nest Survival. Humans and ORVs can coexist in harmony with birds and turtles. Scientific studies prove that human and ORV presence have an insignificant impact on nesting. Predators, Tides and Storms account for nearly all the lost nest in CHNSRA. Human presence benefits birds and turtles because Human presence decreases predator presence and increases nest survival rates. Prime historical recreation areas that require guaranteed public ORV access under the plan must include: Buxton to Cape Point ? World Famous Surf Fishing on Cape Point ? Prime water sports ? Favorite gathering area for locals and visiting families ? Prime Birding area ? Prime shelling area Cape Point to the Frisco Village line (South Beach) ? Prime child-safe swimming area south of Cape Point to Frisco village ? Favorite gathering area for "locals" and visiting families ? Prime shelling area ? Prime horseback riding area ? Recreational and commercial cast-netting at Cape Point ? Sunbathing ? Water sports ? Snorkeling ? Birding Ramp 55 to/including Hatteras Spit (Hatteras Inlet) ? Prime fishing area from ramp 55 around Hatteras Inlet spit ? Ramp 55 to/including Hatteras Spit (Hatteras Inlet) ? Recreational and Commercial cast-netting ? Prime family gathering area for visitors in the Hatteras Village area ? Water sports ? Birding Turtle Nests should be relocated from ORV corridors in these prime historical recreation areas. South Beach is an unproductive Plover nesting area so access should be open year round to South Beach.

I support resource protection for shorebirds and sea turtles based on Peer Reviewed science. Who better to advocate preservation of area wildlife than the people whose lives and futures are intertwined to the success of each species?

I would support these Shorebird / Water bird Buffers: Species Breeding Behavior/ Nest Buffer ORV Pass-through Unfledged Chicks Piping Plover 50 m 30 m 200 m American Oystercatcher Flush + 15m FLush + 15m Flush + 15m Least Terns 30 m 30 m 30 m 30 m Other Species CWB 30 m 30 m 30 m MAXIMUM Piping Plover Unfledged Chick Buffers Establish a 200 meter buffer / Closure around the unfledged chick(s) location. Adjust buffer as needed when chicks are mobile. Establish ORV/Pedestrian access corridors. Vehicles may be allowed to pass through portions of the protected area that are considered inaccessible to PIPL chicks because of steep topography, dense vegetation, water or other obstacles. Morning access to the points and spits may be delayed until chicks have been located if the access corridor passes between the waterline and through the buffer area that would otherwise be closed. Reopen access corridor outside of pre-nesting area after chicks fledge. Remove pre-nesting closure 2 weeks after all chicks in the area have fledged. Ample scientific evidence and precedent exists to support a 200 meter buffer. As part of the NEPA process, I formally requests the National Park Service to provide peer-reviewed science that justifies a 1,000 meter closure in all directions.

MAXIMUM American Oystercatcher Unfledged Chick Buffers Establish a 30 meter buffer/closure around the unfledged chick(s) location. Adjust buffer as needed when chicks are mobile. Monitor daily. Establish ORV/Pedestrian access corridors. Buffers/closures will be removed after AMOY

chicks have fledged (observed flight of 30 meters).

MAXIMUM Colonial Water birds Unfledged Chick Buffers Establish a 30 meter buffer/closure around the chick(s) location. Adjust buffer as needed when chicks are mobile. Monitor daily. Establish ORV/Pedestrian access corridors. Buffer/closure will be removed after all chicks have fledged. I believe the Four-wheel drive vehicles allowed to drive on the Recreational Area beaches should be registered, licensed, and insured and comply with inspection regulations within the state, country or province where the vehicle is registered. All-Terrain Vehicles (ATVs) should be prohibited. ATVs are defined as a type of off highway vehicle that travels on three or more low-pressure tires; has handle-bar steering; and has a seat designed to be straddled by the operator. The science offered to support the environmentalist positions does not justify the extreme ORV and pedestrian access restrictions proposed in the DEIS. I believe ORV access to Cape Point, South Beach and Hatteras Inlet should not be restricted. The proposed 1,000 meter pedestrian/ORV closure in all directions for a piping plover unfledged chick brood is extreme and scientifically unjustified. This equals approximately 771 acres per brood. The plover closure should be reduced to 200 meters. The Oystercatcher is not a federally threatened species and the proposed 300 meter pedestrian/ORV closure is extremely excessive. The Oystercatcher closure should be reduced to 15 meters. In my opinion, there is no scientific justification to deny human entry into large areas of the recreation area and severely restricting the public's access to all portions of the beach. I urge you to preserve our beaches, protect natural resources with common sense policies, but not prohibit ORV use and pedestrian access to any portion of the Cape Hatteras National Seashore Recreational Area at any time. Remember, the National Seashore Recreation Area was established for the benefit and enjoyment of the people of this country. How can future generations enjoy the area if access is severely restricted? CORRIDORS are vital in providing access while managing resources. MANAGEMENT BUFFERS must be based on peer-reviewed science. NON-ENDANGERED BIRDS should NOT have the same protection as if endangered. TURTLE MANAGEMENT would benefit from nest relocation and other practices. So, please save the communities of Hatteras Island and preserve the historic & cultural way of life of the people on this island for future generations to experience. There are many miles of unpopulated barrier islands on the east coast that are better suited to enhance shorebirds and turtles than Hatteras Island.

Thank You

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.

Correspondence: I disagree with the proposals you are making that will limit the rights of people who use the recreational values of the National Seashore in lieu of the rights for a few birds. A few birds who when they do breed are frequently lost due to mother nature anyway.
You close sections of the beach and infringe on the rights of how many individuals because of a few birds who for whatever reason didn't get the message that the rest of them have left. They've migrated away to a better place to live.
The rights of a few, sometimes one bird, oversees those of hundreds of families?? This is wrong. When most of these plovers have chosen on their own to move away from the area because the conditions are not conducive to breeding. They want to live where they can see for long stretches of beach. They don't want to nest near dunes or sea oats.
Mother nature frequently wipes out their nests when there's higher than normal tides. This can happen multiple times. Give it up. There will be moon tides, northeasters and hurricanes. The majority of the birds have more sense than the humans who are trying to keep them where they shouldn't be. There will be feral cats who prey on the birds.
Another point I want to disagree with is the banning of dogs from the National Seashore. People drive their vehicles to the water's edge to fish, swim and sunbath, thus using the national parks as they were intended to. Many of these peoples groups and families include dogs. It is unfair to punish all for the actions of a few who would allow their dogs to bother the birds. Again a few birds have more rights than people and their dogs? You have a leash policy in effect, enforce it.
I deem it necessary to mention that the land over which you are planning policies for was given by the locals to the federal government for use by all persons as a recreational area. It was not given for use as a bird preserve. When you give more rights to the birds than the people, it's a bird ares not people area. It was given with the express intent that no development could ruin the beauty of the land and so that all people could continue to always

enjoy all that the National Seashore has to offer not just a few birds.

In light of this economy we are in I also cannot imagine why you would want to impose more restrictions that will effect the livelihoods even more of those who live in the area. Closing beaches and taking rights away from people to bring a leashed pet will only cause them to vacation elsewhere where they don't have such restrictions. This will hurt the local economy even more.

I respectfully ask you to reconsider whose rights are at stake here. The rights should go be in accordance for what the land was appropriated for from the beginning. It was set aside for people's use not for just birds.

Correspondence: This is a few paragraphs from my daughter's college research paper that pretty much sums it up.
The Nerve of People Wanting to Enjoy the Beach Imagine growing up in one of the East Coast's most beautiful and popular vacation spots. The weather is mild, the area is surrounded by beaches, the wildlife is thriving, and the landscapes are breathless. Your entire life is here; you were born here, you have raised your children here, and you and your spouse own a small business in town. Where you live is not simply considered your address, it is what makes you who you are. You live for the beautiful days when you can walk along the beach or sit out on your porch in the morning and read the newspaper. This area is a part of you.
Now think of being denied some of these activities that you have always loved. There are signs prohibiting use of certain areas you would usually walk your dog or take your children to play. Your favorite beach is blocked off from people by fences and you are now not allowed to drive your young children onto the beach anymore. Your business starts to decline because of the sudden decrease in tourists. Suddenly, a group of strangers are taking away one of the most important things in your life, under reasons that seem somewhat extreme. This unfair and tragic situation is occurring right now in the Cape Hatteras National Seashore Recreational Area (CHNSRA). The people who have been living here for many years and who have continually taken care of the wildlife in this area are now being denied access to their beaches by unreasonable environmentalists who are very skeptical. The natives are insulted by the claims the environmentalists are making against them. They are creating harsh and false statements against the natives and saying that the beaches are not being taken care of properly. In many instances the people of the CHNSRA are portrayed as people who are purposely destroying the beaches because they simply do not care about the environment.
Most of these people love the outdoors and hold a very special place in their heart for the wildlife and beaches where they live. They have the deepest respect for nature and appreciate it more than many other people in world. These people have devoted their lives to preserving this wildlife, and they do not need to join any fancy groups or call themselves environmentalists to prove it. The area where they live is one of the most important things in their lives. Long before Hatteras Island was ever designated by the Federal Government as a National Seashore Recreational Area, the local residents were already proven leaders in protecting wildlife (Preserve Beach Access). They are concerned that soon they will not be able to enjoy the outdoors anymore because of the new access restrictions that have been issued by these environmentalist groups.
Although there are a few people who are exceptions to this, the environmentalists are harping on these exceptions and making the minority seem like the majority. These societies write articles claiming the cruelty and ignorance of the people who are living there. Many of the natives who respond negatively to the environmentalist are not negative about the environment; they are simply angered by these people. The few instances where the natives respond negatively to the environmentalists cannot be used to generalize how these people feel about the environment. It is simply unfair for the people of these societies to generalize the people who obviously are strongly bound to nature as people who want to destroy it. The environmentalists fear the extinction of the organisms that inhabit these beaches, such as the piping plover, loggerhead sea turtle, and seabeach amaranth, which are currently endangered (Cape Hatteras). They claim the people living here are the cause of the declines in these animal populations, when this is obviously untrue. This decrease has nothing to do with humans and people cannot be considered the natural enemy of wildlife. The natural enemies are the animals that eat these animals as prey, such as foxes. Although it is unfortunate to witness strong predators eating the weaker prey, this is the natural way of life (Preserve Beach Access).
Not only are the natives angry about beach access being denied, but the tourists of this area are upset also. Being able to drive on the beach was a huge part of the CHNSRA's tourist attraction and history. Fishermen who need a lot of equipment greatly appreciated this privilege. Elderly people, small children, and other physically disabled people could also positively take advantage of this. My family has been taking vacations to the CHNSRA for many years now. Because of the allowance of ORVs on the beach at the time, I was able to experience the beach and hold a fishing rod for the first time when I was only eight months old. Today, nature is a huge part of my life and I plan on studying marine biology in the future. Although he did not live in Cape Hatteras, the beach was a huge part of my Grandfather's life also. He loved to fish and just simply be outside by the beach. Even though at his very old age he could not walk very well and could not stay in the sun for long periods of time, he was able to fish on the shores of Cape Hatteras a few more times before he passed away. This would not have been possible if my family was not allowed to drive on the beach.
Now that this privilege is being denied, the tourist rate has decreased exponentially. Most of the shops and markets here are locally owned and therefore the natives rely on the tourism for success in their businesses. If the beach denials continue and the tourist industry continues to decline, many of the natives fear that they will have to move somewhere else in order to make a living and support themselves and their families. This idea devastates many, since this area really is one of the most important things in their lives.
Although this issue seems small, if this continues everyone could be affected. The people whose lives revolve around nature all over the world could

begin to be denied their privileges also. Beaches all over could begin to be shut down due to this idea that humans are the reason for the extinction of animals. The only answer to this problem is education. By teaching people about their environment and the creatures that live here, more people will have respect for where they live. Rashly denying people their beach access is not helping the situation at all.

Correspondence: Folks,
My family and I live 800 miles from Ocracoke Island and have been making the long journey to the Outer Banks for over 30 years for vacations. My grown children and grandchildren also now vacation in the Outer Banks. Besides the peace and quiet the main reason we make the trip is the opportunity to drive to our favorite fishing spots on the beach. Not many places offer this opportunity. Without ORV access to the beach, Ocracoke becomes just another fishing spot. The past several years we have spent the entire months of May and October on Ocracoke. Along with the time we spend on the Island, we spend over \$10,000 for the local economy. We will not continue this long tradition if we do not have access to the entire beach. The Island is too small to cram all fishermen and women into a smaller geographical area.
Most fishermen and women are protectors of nature and respect all forms of life by the sea. We understand the need to ensure that certain species survive and prosper. Unfortunately when politics and money force the direction of the argument, the species fall in their order of importance. In reading the results of the current consent decree, there appears to be no benefit of closures to the species being protected. Don't let politics and money provide false hope.
Education and Law Enforcement will result in a much more successful result for all. My family is counting in you making a rational decision for all species, including the Human species. Thank you.

Correspondence: Cape Hatteras National Seashore Recreational Area DEIS Comment

The legislation states: "said area shall be, and is, established, dedicated, and set apart as a national seashore recreational area for the benefit and enjoyment of the people and shall be known as the Cape Hatteras National Seashore Recreational Area."
The enabling legislation created the park as a Recreation Area not a Wildlife Refuge. Areas such as Pea Island National Wildlife Refuge on Hatteras Island were created to provide habitat and protection for endangered and threatened species.
Finding a way to guarantee unrestricted public beach access for pedestrians and ORV that coexists with wildlife needs to be the highest priority. I believe ORV & pedestrian corridors should be maintained with adequate monitoring through temporary resource closures to provide access to the beach. Because of the distances involved, ORV access corridors are required so citizens can travel to their desired destinations within the Recreation Area. ORVs have historically served as the primary form of access for many portions of the beach in the Recreation Area, and continue to be the most practical means of access for most visitors to Hatteras Island. To limit ORV access would discriminate against individuals with limited mobility due to age or physical impairments, families with children, senior citizens and those wishing to engage in activities requiring recreational equipment such as Fishing, surfing, birding, swimming and family gatherings.
Equipment needed for recreating in popular areas of the park cannot be easily carried on foot through miles of deep sand on a hot summer day by even the fittest individual without the risk of heat stroke, dehydration, physical exhaustion or even death. For example: Water, Food, Beach toys, umbrellas, beach chairs, coolers, fishing poles, tackle boxes, water-sports boards, first aid kit, cameras, binoculars, etc... ORVs in remote areas of the beach provide shelter from lighting, a place to get out of the heat and emergency transportation for an ill/injured child or elder. ORVs have been used on the Hatteras Island beaches for decades without any resource conflict. It is imperative that ORV use be recognized for exactly what it is: A historical means of access to an area for recreational opportunities. The use of an ORV is not considered a recreational activity in this Recreational Area. ATVs are not permitted. These recreational opportunities sought, allow the public to enjoy the Seashore's resources and values. Denying access to recreational opportunities, many of which are specifically protected in the Enabling Legislation, denies the Seashore's current visitors the opportunity to enjoy the park's resources and values and denies future generations the opportunity to enjoy the park's resources in direct violation of Park Services Management Policies. There is no evidence that ORV beach access causes any unacceptable environmental impacts in the park. Often, traces of ORV access are erased by wind and tide in a matter of hours.
The beaches within the Cape Hatteras National Seashore Recreational Area offer high recreational value to the public. While all of the beaches are suited and commonly used for swimming, sunbathing, wading, shelling and fishing, some beaches are uniquely more favorable for some specific activities. These specific areas should have minimal and flexible buffers for birds and turtles because ORV Closure is the Least Significant Factor Affecting Nest Survival. Humans and ORVs can coexist in harmony with birds and turtles. Scientific studies prove that human and ORV presence have an insignificant impact on nesting. Predators, Tides and Storms account for nearly all the lost nest in CHNSRA. Human presence benefits birds and turtles because Human presence decreases predator presence and increases nest survival rates. Prime historical recreation areas that require guaranteed public ORV access under the plan must include: Buxton to Cape Point ? World Famous Surf Fishing on Cape Point ? Prime water sports ? Favorite gathering area for locals and visiting families ? Prime Birding area ? Prime shelling area Cape Point to the Frisco Village line (South Beach) ? Prime child-safe swimming area south of Cape Point to Frisco village ? Favorite gathering area for "locals" and visiting families ? Prime shelling area ? Prime horseback riding area ? Recreational and commercial cast-netting at Cape Point ? Sunbathing ? Water sports ? Snorkeling ? Birding Ramp 55 to/including Hatteras Spit (Hatteras Inlet) ? Prime fishing area from ramp 55 around Hatteras Inlet spit ? Ramp 55 to/including Hatteras Spit (Hatteras Inlet) ? Recreational and Commercial cast-netting ? Prime family gathering area for visitors in the Hatteras Village area ? Water sports ? Birding Turtle Nests should be relocated from ORV corridors in these prime historical recreation areas. South Beach is an unproductive Plover nesting area so access should be open year round to South Beach.
I support resource protection for shorebirds and sea turtles based on peer reviewed science.
I agree with these Shorebird / Water bird Buffers: Species Breeding Behavior/ Nest Buffer ORV Pass-through Unfledged Chicks Piping Plover 50 m 30 m 200 m American Oystercatcher Flush + 15m Flush + 15m Flush + 15m Least Terns 30 m 30 m 30 m Other Species CWB 30 m 30 m 30 m
MAXIMUM Piping Plover Unfledged Chick Buffers Establish a 200 meter buffer / Closure around the unfledged chick(s) location. Adjust buffer as needed when chicks are mobile. Establish ORV/Pedestrian access corridors. Vehicles may be allowed to pass through portions of the protected area that are considered inaccessible to PIPL chicks because of steep topography, dense vegetation, water or other obstacles. Morning access to the points and spits may be delayed until chicks have been located if the access corridor passes between the waterline and through the buffer area that would otherwise be closed. Reopen access corridor outside of pre-nesting area after chicks fledge. Remove pre-nesting closure 2 weeks after all chicks in the area have fledged.
Ample scientific evidence and precedent exists to support a 200 meter buffer. As part of the NEPA process,
*** I formally requests the National Park Service to provide peer-reviewed science that justifies a 1,000 meter closure in all directions.
MAXIMUM American Oystercatcher Unfledged Chick Buffers Establish a 30 meter buffer/closure around the unfledged chick(s) location. Adjust buffer as needed when chicks are mobile. Monitor daily. Establish ORV/Pedestrian access corridors. Buffers/closures will be removed after AMOY chicks have fledged (observed flight of 30 meters).
MAXIMUM Colonial Water birds Unfledged Chick Buffers Establish a 30 meter buffer/closure around the chick(s) location. Adjust buffer as needed when chicks are mobile. Monitor daily. Establish ORV/Pedestrian access corridors. Buffer/closure will be removed after all chicks have fledged.
I believe the Four-wheel drive vehicles allowed to drive on the Recreational Area beaches should be registered, licensed, and insured and comply with inspection regulations within the state, country or province where the vehicle is registered. All-Terrain Vehicles (ATVs) should be prohibited. ATVs are defined as a type of off highway vehicle that travels on three or more low-pressure tires; has handle-bar steering; and has a seat designed to be straddled by the operator. The science offered to support the environmentalist positions does not justify the extreme ORV and pedestrian access restrictions proposed in the DEIS. I believe ORV access to Cape Point, South Beach and Hatteras Inlet should not be restricted. The proposed 1,000 meter pedestrian/ORV closure in all directions for a piping plover unfledged chick brood is extreme and scientifically unjustified. This equals approximately 771 acres per brood. The plover closure should be reduced to 200 meters. The Oystercatcher is not a federally threatened species and the proposed 300 meter pedestrian/ORV closure is extremely excessive. The Oystercatcher closure should be reduced to 15 meters. In my opinion, there is no scientific justification to deny human entry into large areas of the recreation area and severely restricting the public's access to all portions of the beach. I urge you to preserve our beaches, protect natural resources with common sense policies, but not prohibit ORV use and pedestrian access to any portion of the Cape Hatteras National Seashore Recreational Area at any time. Remember, the National Seashore Recreation Area was established for the benefit and enjoyment of the people of this country. How can future generations enjoy the area if access is severely restricted? ORV CORRIDORS are vital in providing access while managing resources. **MANAGEMENT BUFFERS** must be based on Peer-Reviewed Science. **NON-ENDANGERED BIRDS** should NOT have the same protection as if endangered. **TURTLE MANAGEMENT** would benefit from nest relocation and other practices.
So, please save the communities of Hatteras Island and preserve the historic & cultural way of life of the people on this island for future generations to experience. There are many miles of unpopulated barrier islands on the east coast that are better suited to enhance shorebirds and turtles than Hatteras Island.
Thank You

Correspondence: Being from NJ where the beaches are very crowded and vehicles are not allowed on the beach, we have enjoyed many years on the beautiful Ocracoke Beaches. My friends and family have truly loved the freedom of taking our SUV's on the beach, picnicing and enjoying the surf. Do not let this ordinance pass prohibiting vehicles and dogs on the beach. Ocracoke will definitely lose much of their tourist trade. My family and friends, will not be taking an 11 hour drive down to the Outer Banks to sit on the beach any longer if we are going to have the same restrictions we now have in New Jersey. Believe me, we will just stay in New Jersey and give our own State our hard earned vacation money. North Carolina will lose out on the much needed tourist revenue if these restrictions are put into place.

Correspondence: I'm a retired N.C. Wildlife Officer. I have worked the entire coast of N.C. at some point in my career, including the CHNSS. I have also enjoyed fishing and camping on our N.C. coast. And after 30 years of doing wildlife law enforcement work, I have seen it is possible to use our natural resources without abusing them. The plans of the NPS to greatly restrict access to the ocean by all persons, is going way to far in its attempt to protect the natural resources. Being involved in wildlife research myself in the past, I know it is easy to gather facts to favor one opinion or another, and then use those facts to make regulations that one group or another wants implemented. I feel thats going on here, and it is having a very negative affect on many peoples lives. Enviornmental extremists should not have this much influence on the NPS policies and regulations.

Correspondence: CHNS Recreational Area DEIS Comment

ORV CORRIDORS are the best way in providing access while managing resources. MANAGEMENT BUFFERS must be based on Peer-Reviewed Science. NON-ENDANGERED BIRDS should NOT have the same protection as if endangered. TURTLE MANAGEMENT would benefit from nest relocation.

Finding a way to guarantee unrestricted public beach access for pedestrians and ORV that coexists with wildlife needs to be the highest priority. I believe ORV & pedestrian corridors should be maintained with adequate monitoring through temporary resource closures to provide access to the beach. Because of the distances involved, ORV access corridors are required so citizens can travel to their desired destinations within the Recreation Area. ORVs have historically served as the primary form of access for many portions of the beach in the Recreation Area, and continue to be the most practical means of access for most visitors to Hatteras Island. To limit ORV access would discriminate against individuals with limited mobility due to age or physical impairments, families with children, senior citizens and those wishing to engage in activities requiring recreational equipment such as Fishing, surfing, birding, swimming and family gatherings.

The enabling legislation created the park as a Recreation Area not a Wildlife Refuge. Areas such as Pea Island National Wildlife Refuge on Hatteras Island were created to provide habitat and protection for endangered and threatened species.

Equipment needed for recreating in popular areas of the park cannot be easily carried on foot through miles of deep sand on a hot summer day by even the fittest individual without the risk of heat stroke, dehydration, physical exhaustion or even death. For example: Water, Food, Beach toys, umbrellas, beach chairs, coolers, fishing poles, tackle boxes, water-sports boards, first aid kit, cameras, binoculars, etc... ORVs in remote areas of the beach provide shelter from lighting, a place to get out of the heat and emergency transportation for an ill/injured child or elder. ORVs have been used on the Hatteras Island beaches for decades without any resource conflict. It is imperative that ORV use be recognized for exactly what it is: A historical means of access to an area for recreational opportunities. The use of an ORV is not considered a recreational activity in this Recreational Area. ATVs are not permitted. These recreational opportunities sought, allow the public to enjoy the Seashore's resources and values. Denying access to recreational opportunities, many of which are specifically protected in the Enabling Legislation, denies the Seashore's current visitors the opportunity to enjoy the park's resources and values and denies future generations the opportunity to enjoy the park's resources in direct violation of Park Services Management Policies. There is no evidence that ORV beach access causes any unacceptable environmental impacts in the park. Often, traces of ORV access are erased by wind and tide in a matter of hours.

The beaches within the Cape Hatteras National Seashore Recreational Area offer high recreational value to the public. While all of the beaches are suited and commonly used for swimming, sunbathing, wading, shelling and fishing, some beaches are uniquely more favorable for some specific activities. These specific areas should have minimal and flexible buffers for birds and turtles because ORV Closure is the Least Significant Factor Affecting Nest Survival. Humans and ORVs can coexist in harmony with birds and turtles. Scientific studies prove that human and ORV presence have an insignificant impact on nesting. Predators, Tides and Storms account for nearly all the lost nest in CHNSRA. Human presence benefits birds and turtles because Human presence decreases predator presence and increases nest survival rates. Prime historical recreation areas that require guaranteed public ORV access under the plan must include: Buxton to Cape Point ? World Famous Surf Fishing on Cape Point ? Prime water sports ? Favorite gathering area for locals and visiting families ? Prime Birding area ? Prime shelling area Cape Point to the Frisco Village line (South Beach) ? Prime child-safe swimming area south of Cape Point to Frisco village ? Favorite gathering area for "locals" and visiting families ? Prime shelling area ? Prime horseback riding area ? Recreational and commercial cast-netting at Cape Point ? Sunbathing ? Water sports ? Snorkeling ? Birding Ramp 55 to/including Hatteras Spit (Hatteras Inlet) ? Prime fishing area from ramp 55 around Hatteras Inlet spit ? Ramp 55 to/including Hatteras Spit (Hatteras Inlet) ? Recreational and Commercial cast-netting ? Prime family gathering area for visitors in the Hatteras Village area ? Water sports ? Birding Turtle Nests should be relocated from ORV corridors in these prime historical recreation areas. South Beach is an unproductive Plover nesting area so access should be open year round to South Beach.

I support resource protection for shorebirds and sea turtles based on peer peer reviewed science.

I agree with these Shorebird / Water bird Buffers: Species Breeding Behavior/ Nest Buffer ORV Pass-through Unfledged Chicks Piping Plover 50 m 30 m 200 m American Oystercatcher Flush + 15m Flush + 15m Flush + 15m Least Terns 30 m 30 m 30 m 30 m Other Species CWB 30 m 30 m 30 m MAXIMUM Piping Plover Unfledged Chick Buffers Establish a 200 meter buffer / Closure around the unfledged chick(s) location. Adjust buffer as

needed when chicks are mobile. Establish ORV/Pedestrian access corridors. Vehicles may be allowed to pass through portions of the protected area that are considered inaccessible to PIPL chicks because of steep topography, dense vegetation, water or other obstacles. Morning access to the points and spits may be delayed until chicks have been located if the access corridor passes between the waterline and through the buffer area that would otherwise be closed. Reopen access corridor outside of pre-nesting area after chicks fledge. Remove pre-nesting closure 2 weeks after all chicks in the area have fledged.

Ample scientific evidence and precedent exists to support a 200 meter buffer. As part of the NEPA process,

*** I formally requests the National Park Service to provide peer-reviewed science that justifies a 1,000 meter closure in all directions.

MAXIMUM American Oystercatcher Unfledged Chick Buffers Establish a 30 meter buffer/closure around the unfledged chick(s) location. Adjust buffer as needed when chicks are mobile. Monitor daily. Establish ORV/Pedestrian access corridors. Buffers/closures will be removed after AMOY chicks have fledged (observed flight of 30 meters).

MAXIMUM Colonial Water birds Unfledged Chick Buffers Establish a 30 meter buffer/closure around the chick(s) location. Adjust buffer as needed when chicks are mobile. Monitor daily. Establish ORV/Pedestrian access corridors. Buffer/closure will be removed after all chicks have fledged.

I believe the Four-wheel drive vehicles allowed to drive on the Recreational Area beaches should be registered, licensed, and insured and comply with inspection regulations within the state, country or province where the vehicle is registered. All-Terrain Vehicles (ATVs) should be prohibited. ATVs are defined as a type of off highway vehicle that travels on three or more low-pressure tires; has handle-bar steering; and has a seat designed to be straddled by the operator. The science offered to support the environmentalist positions does not justify the extreme ORV and pedestrian access restrictions proposed in the DEIS. I believe ORV access to Cape Point, South Beach and Hatteras Inlet should not be restricted. The proposed 1,000 meter pedestrian/ORV closure in all directions for a piping plover unfledged chick brood is extreme and scientifically unjustified. This equals approximately 771 acres per brood. The plover closure should be reduced to 200 meters. The Oystercatcher is not a federally threatened species and the proposed 300 meter pedestrian/ORV closure is extremely excessive. The Oystercatcher closure should be reduced to 15 meters. In my opinion, there is no scientific justification to deny human entry into large areas of the recreation area and severely restricting the public's access to all portions of the beach. I urge you to preserve our beaches, protect natural resources with common sense policies, but not prohibit ORV use and pedestrian access to any portion of the Cape Hatteras National Seashore Recreational Area at any time. Remember, the National Seashore Recreation Area was established for the benefit and enjoyment of the people of this country. How can future generations enjoy the area if access is severely restricted?

So, please save the communities of Hatteras Island and preserve the historic & cultural way of life of the people on this island for future generations to experience. There are many miles of unpopulated barrier islands on the east coast that are better suited to enhance shorebirds and turtles than Hatteras Island.

Thank You

Correspondence: April 26, 2010 Michael Murray Superintendent Outer Banks Group National Park Service

Re: Comments on DEIS
Dear Superintendent Murray,

The proposed plans do not:

1. Sufficiently identify criteria for establishing pedestrian only access beaches with high "NPS Values".
2. Identify high or moderate NPS "Value" areas.
3. Acknowledge the negative impact of scenic features and natural visibility caused by off road vehicles.

Please consider these points when formulating the final ORV plan.

Sincerely,

Jim Lyons

Routes & Areas

1. Introduction

This proposal evaluates and synthesizes pertinent information to establish criteria in forming an ORV management plan. The goal of these comments is to help formulate a coherent, functional ORV management plan.

Proposal:

8 Gives consideration to the following four distinct pedestrian access users: 1. ORV users seeking pedestrian access from starting from ORV trails 2. Pedestrians that enter the Seashore from their home, rental house or motel 3. Pedestrians seeking easy egress 4. Pedestrians seeking a remote NPS experience with high NPS Values

8 Gives consideration to ORV access users seeking: 1. ORV access in front of villages 2. Access to highly popular high use areas 3. Remote areas

8 Takes into consideration economic, historical and logistical use

8 Proposes many popular areas for ORV access

8 Presents criteria for selecting pedestrian areas

8 Identifies areas for pedestrian access

8 Presents applicable laws that pertain to pedestrian access and NPS values

2.Rational For Pedestrian Only Access With Consideration To An ORV Management Plan

An ORV management plan for Cape Hatteras National Seashore (CHNS) must establish areas that guarantees visitors an opportunity to experience NPS Values (as described in Management Policies 2006) to a high degree in addition to minimizing recreational conflicts. In April 27, 1999 a precedent was set in CHNS where visitor use conflicts were addressed and a recreational activity regulated as a result. The NPS banned Personal Water Craft (PWC) use in CHNS because of visitor use conflicts and impairment of NPS values. "Probably the strongest complaints come from land-based visitors. Beach walkers, people looking for shells, birdwatchers, sunbathers, artists, photographers, or those who simply stand on the shore to appreciate the visual beauty and natural sounds of the Seashore voice frequent complaints about the behavior of PWC operators and the noise PWCs produce. The natural sounds of the barrier island environment are a prime component of the seashore experience and PWCs often intrude upon this experience." (1) Some visitors find a similar recreational conflict with ORV use on the Seashore beaches. They find that the visual beauty and natural sounds of the Seashore are impaired by ORV use. Even lightly traversed ORV beaches will have ruts in the sand disfiguring the day-to-day physiographic process of the beach. At night, vehicle lights from ORVs can create a recreational conflict with pedestrians on Park beaches. The Enabling legislation for CHNS clearly intended for this Park to be preserved as remote seashore. ("permanently reserved as a primitive wilderness")(2). ORV use has enabled large numbers of visitors to drive to areas of CHNS that otherwise would have been seldom visited, diminishing a wilderness experience.

Establishing high NPS Value and Pedestrian Only Access (POA) areas in CHNS will not exclude anyone or deny appropriate recreational activities ("swimming, boating, sailing, fishing, and other recreational activities of similar nature")(2) to the Seashore. The CHNS Enabling legislation is not specific to the type of access needed to engage in these recreational pursuits. ORV use is one of several historical means of access and should be considered when it is equitably balanced with non-ORV access and complies with NPS Policy, Acts of Congress and Executive Orders.

The following documents address NPS Values: Management Policies 2006, The 1916 Organic Act, The 1970 National Park System General Authorities Act, as amended in 1978, The Cape Hatteras National Seashore Enabling Legislation, Executive Order 11644 and United States Code (3).

It should not be taken as a given that all of the high value areas in CHNS will be ORV routes. Management Policies 2006 outlines rational and attributes for NPS Values. The Organic Act places a high value on the no-impairment standard and includes identified NPS values subject to the no impairment standard as well as resource issues. The Cape Hatteras Enabling Legislation intended this park to be managed for a diverse set of recreational activities as long as those activities do not impair resources or NPS values. ("no development of the project or plan for the convenience of visitors shall be undertaken which would be incompatible with the preservation of the unique flora and fauna or the physiographic conditions now prevailing in this area")(2) Physiographic conditions are an identified NPS value. ("physical processes that created the park and continue to act upon it" 1.4.6

Management Policies 2006)(3) When deciding locations of ORV routes and areas it is equally important to consider the quality and establishment of POA areas. Suitable areas that address NPS values have to be identified, provided and protected.

With consideration of NPS Policy, Acts of Congress and Executive Orders, listed below are criteria for establishing POA beaches that address NPS values and areas in CHNS that meet those criteria.

3. Criteria

Suggested Criteria For Establishing Pedestrian Only Access Only Beaches With High "NPS Values"

1. Outside of ORV trails or Routes 2. Quality Beaches Scenic features; natural visibility, both day and night; natural landscapes; natural soundscapes and smells") a. In an unaltered state with minimal adjacent infrastructure, b. Natural coastal and dune building processes, c. Observable wildlife resources, d. Wide beach with minimal degree of slope, 3. Ease of egress, all egress through NPS property with ramps, boardwalks or established breaks through the dune 4. Traditional pedestrian beaches, beaches that have been used extensively for pedestrian access only in the past and have suitable established parking infrastructure 5. Diversity of experience a. Areas convenient to NPS services b. Remote areas

4. Areas

High NPS "Value" areas 1. Bodie Island Spit, 2. The south groin in Buxton to Cape Point, 3. Cape Point to the Frisco village line, 4. Ramp 55 to Hatteras Inlet, 5. The North end of Ocracoke Island (Hatteras Inlet), 6. The Ocracoke Pony Pen south to the NPS Campground 7. South Point (Ocracoke).

Moderate "NPS Value" areas 1. South Salvo to North Avon 2. South Avon to approximately 1 mile North of the Buxton Village line 3. Frisco Bathhouse to Hatteras Village 4. Other areas of Ocracoke.

5. Routes

A. Bodie Island

CAHA northern boundary to 2 miles south first NPS ORV ramp designated as Ramp 2 _ Pedestrians access only _ Ramp 1 for emergency ramp only Ramp 2 south to approximately 200 m north of Oregon inlet campground _ ORV access

200 m north of Oregon Inlet campground to 200 m south of Oregon Inlet campground _ Seasonally ORV access (Date to coincide with opening and closing of Oregon Inlet campground) _ Seasonal pedestrian access only _ Construct new Ramp 200 m south of Oregon Inlet campground

New Ramp south of OI campground to southern most point of Bodie Island _ ORV access

Soundside Bodie Island _ Status Quo _ Establish minimum widths on sound side ORV routes and cul-de-sac with sufficient turning width that vegetation is unimpaired

B. Hatteras Island

Rodanthe, Waves, and Salvo to Ramp 23 _ Seasonal pedestrians access only _ Seasonal ORV access _ Dates to be determined by Villages Subcommittee or NPS _ Construct handicapped accessible, pedestrian boardwalk just north of Ramp #23 _ Add a new ramp 2 miles south of Ramp 23 Ramp 23 to new Ramp (2 miles south of Ramp 23) _ Pedestrians access only _ Construct handicapped accessible, pedestrian boardwalk just south of Ramp 23 New Ramp (2 miles south of Ramp 23) to Relocated Ramp 34 _ (Ramp 34 to be relocated 2 miles north of Avon village line. _ Construct handicapped accessible, pedestrian boardwalk just south of Ramp 34 _ ORV access

Relocated Ramp 34 to Avon Village Line _ Pedestrians access only _ Construct handicapped accessible, pedestrian boardwalk at Relocated Ramp 34 Avon Village north boundary to Avon Village south boundary _ Seasonal pedestrians access only _ Seasonal ORV access _ Dates to be determined by Villages Subcommittee or NPS Soundside, South end of Salvo to North end of Avon _ Status quo _ Establish minimum widths on sound side ORV routes and cul-de-sac with sufficient turning width that vegetation is unimpaired

Relocated Ramp 38 to New Ramp (located 2 miles south of relocated Ramp 38) _ Relocate ramp 38 to 1 mile north of the Haulover _ Establish new Ramp 2 miles south of Ramp 38 _ Pedestrian access only _ Construct handicapped accessible, pedestrian boardwalk at both ramps

New Ramp (2 miles south of relocated Ramp 38) to Buxton north boundary _ ORV access

Buxton Village north boundary to Buxton Village south boundary _ Seasonal pedestrians access only _ Buxton Village south boundary starts at north groin at Old Coast Guard Base _ Seasonal ORV access _ Dates to be determined by Villages Subcommittee or NPS _ Establish emergency Ramp at Buxton Village north boundary

South Buxton boundary To Ramp 43 _ Pedestrians access only

Ramp 43 to New Ramp 49 _ Open to ORVs _ Move Ramp 49 to 500 m east of eastern boundary of NPS Frisco Campground _ Construct a new interdunal road to connect relocated ramp 49 with campground entrance road

Ramp 49 to Ramp 55 _ Pedestrians access only _ Construct a parking lot and handicapped accessible pedestrian boardwalk board walks at old ramp 49 site. _ Expand existing parking lot at Ramp #55

Ramp 55 to Hatteras Inlet _ ORV access

Frisco Soundside _ Status quo _ Establish minimum widths on sound side ORV routes and cul-de-sac with sufficient turning width that vegetation is unimpaired

Hatteras Inlet soundside _ Status quo _ Establish minimum widths on sound side ORV routes and cul-de-sac with sufficient turning width that vegetation is unimpaired

C. OCRACOKE ISLAND

Hatteras Inlet (North End of Ocracoke) to Ramp 59 _ Pedestrians access only _ Relocate Ramp 59 to MP 64 _ Establish 2 hiking trails from enhanced parking area at NC Ferry docks and relocated Ramp 59

Relocated Ramp 59 to North End Turnout _ ORV access

North End Turnout Ramp to Ramp 70 _ Pedestrians access only _ Move Ramp 70 to Ocracoke Day use area _ Establish Parking areas and handicapped accessible, pedestrian boardwalk and bath room facilities at North End Turnout and at Ramp 70 _ Improve parking lot and handicapped accessible, pedestrian boardwalk and tail at old Ramp 67 site

Ocracoke Day use Area (relocated ramp 70) to southern most point of South Point (Ocracoke Inlet) _ ORV access Ocracoke Island, Soundside _ Status quo _ Establish minimum widths on sound side ORV routes and cul-de-sac with sufficient turning width that vegetation is unimpaired

1. L3425 (CAHA) April 27, 1999 Memorandum To: Files From: Superintendent, Outer Banks Group Subject: Determination on Appropriateness of Personal Watercraft Use at Cape Hatteras National Seashore Probably the strongest complaints come from land-based visitors. Beach walkers, people looking for shells, birdwatchers, sunbathers, artists, photographers, or those who simply stand on the shore to appreciate the visual beauty and natural sounds of the Seashore voice frequent complaints about the behavior of PWC operators and the noise PWCs produce. The natural sounds of the barrier island environment are a prime component of the seashore experience and PWC often intrude upon this experience.

2. The Cape Hatteras National Seashore Enabling legislation

The Cape Hatteras National Seashore Enabling legislation (1. (Aug. 17, 1937, ch. 687, Sec. 4, 50 Stat. 670; June 29, 1940, ch. 459, Sec. 1, 54 Stat. 702; Mar. 6, 1946, ch. 50, 60 Stat. 32.) emphasizes recreational opportunities for visitors to the Seashore, "except for certain portions of the area, deemed to be especially adaptable for recreational uses, particularly swimming, boating, sailing, fishing, and other recreational activities of similar nature, which shall be developed for such uses as needed, the said area shall be permanently reserved as a primitive wilderness and no development of the project or plan for the convenience of visitors shall be undertaken which would be incompatible with the preservation of the unique flora and fauna or the physiographic conditions now prevailing in this area . . ."

3. Management Policies 2006 (<http://www.nps.gov/policy/mp/policies.html>) "1.4.3 The NPS Obligation to Conserve and Provide for Enjoyment of Park Resources and Values "The fundamental purpose of all parks also includes providing for the enjoyment of park resources and values by the people of the United States. The enjoyment that is contemplated by the statute is broad; it is the enjoyment of all the people of the United States and includes enjoyment both by people who visit parks and by those who appreciate them from afar. It also includes deriving benefit (including scientific knowledge) and inspiration from parks, as well as other forms of enjoyment and inspiration. Congress, recognizing that the enjoyment by future generations of the national parks can be ensured only if the superb quality of park resources and values is left unimpaired, has provided that when there is a conflict between conserving resources and values and providing for enjoyment of them, conservation is to be predominant. This is how courts have consistently interpreted the Organic Act. 1.4.5 (1.)"

"1.4.6 What Constitutes Park Resources and Values" "The "park resources and values" that are subject to the No-impairment standard include * the park's scenery, natural and historic objects, and wildlife, and the processes and conditions that sustain them, including, to the extent present in the park:

the ecological, biological, and physical processes that created the park and continue to act upon it; scenic features; natural visibility, both in daytime and at night; natural landscapes; natural soundscapes and smells; water and air resources; soils; geological resources; paleontological resources; archeological resources; cultural landscapes; ethnographic resources; historic and prehistoric sites, structures, and objects; museum collections; and native plants and animals; * appropriate opportunities to experience enjoyment of the above resources, to the extent that can be done without impairing them; * the park's role in contributing to the national dignity, the high public value and integrity, and the superlative environmental quality of the national park system, and the benefit and inspiration provided to the American people by the national park system; and * any additional attributes encompassed by the specific values and purposes for which the park was established"

"1.4.7.1 Unacceptable Impacts * be inconsistent with a park's purposes or values, or * impede the attainment of a park's desired future conditions for natural and cultural resources as identified through the park's planning process, or

*create an unsafe or unhealthful environment for visitors or employees, or * diminish opportunities for current or future generations to enjoy, learn about, or be inspired by park resources or values, or * unreasonably interfere with

1. park programs or activities, or 2. an appropriate use, or 3. the atmosphere of peace and tranquility, or the natural soundscape maintained in wilderness and natural, historic, or commemorative locations within the park. 4. NPS concessioner or contractor operations or services."

8.1 General

"Many different types of uses take place in the hundreds of park units that make up the national park system. Some of those uses are carried out by the National Park Service, but many more are carried out by park visitors, permittees, lessees, and licensees. The 1916 Organic Act, which created the National Park Service, directs the Service to conserve park resources "unimpaired" for the enjoyment of future generations. The 1970 National Park System General Authorities Act, as amended in 1978, prohibits the Service from allowing any activities that would cause derogation of the values and purposes for which the parks have been established (except as directly and specifically provided by Congress). Taken together, these two laws establish for NPS managers (1) a strict mandate to protect park resources and values; (2) a responsibility to actively manage all park uses; and (3) when necessary, an obligation to regulate their amount, kind, time, and place in such a way that future generations can enjoy, learn, and be inspired by park resources and values and appreciate their national significance in as good or better condition than the generation that preceded them. (Throughout these Management Policies, the term "impairment" is construed to also encompass "derogation.") "

Executive Order 11644 Executive Order 11644 requires that ORV use must be promulgated in National Parks that do not include specially sanctioned ORV use in the enabling legislation for that park (CHNS). The executive order specially requires establishing policies and procedures to ensure that off-road vehicles on public lands will be controlled and directed to protect the resources of those lands, promote the safety of all users of those lands, and minimize conflicts among those users.

"(a) (3): Areas and trails shall be located to minimize conflicts between off-road vehicle use and other existing or proposed recreational uses of the same or neighboring public lands, and to ensure the compatibility of such uses with existing conditions in populated areas, taking into account noise and other factors. (a) (4): Areas and trails shall be located in areas of the National Park system only if the respective agency head determines that off-road vehicle use in such locations will not adversely affect their natural, aesthetic, or scenic values."

U.S.C. Code 16 U.S.C. Section 1a-1 states, "The authorization of activities shall be conducted in the light of the high public value and integrity of the National Park System and shall not be exercised in derogation of the values and purposes for which these various areas have been established, except as may have been or shall be directly and specifically provided by Congress."

Correspondence: Cape Hatteras National Seashore holds a unique ecological, recreational and economic value. I believe that beaches are a public resource and should be held in the public trust for their preservation.

Cape Hatteras National Seashore provides some of the best recreational resources on the East Coast, including surfing and fishing, but I recognize that if not regulated correctly ORV use may detrimentally affect migratory species that nest in the area. I believe that a balance between access and preservation can be achieved and that allowing continued access with improved management of ORV use to the National Seashore is the optimal solution for this area.

I support Alternative C, a balanced solution that benefits the animal species while guaranteeing humans can continue to enjoy and protect this most-precious coastal resource for years to come.

ORV CORRIDORS are the best way in providing access while managing resources. MANAGEMENT BUFFERS must be based on Peer-Reviewed Science. NON-ENDANGERED BIRDS should NOT have the same protection as if endangered. TURTLE MANAGEMENT would benefit from nest relocation.

Finding a way to guarantee unrestricted public beach access for pedestrians and ORV that coexists with wildlife needs to be the highest priority. I believe ORV & pedestrian corridors should be maintained with adequate monitoring through temporary resource closures to provide access to the beach. Because of the distances involved, ORV access corridors are required so citizens can travel to their desired destinations within the Recreation Area. ORVs have historically served as the primary form of access for many portions of the beach in the Recreation Area, and continue to be the most practical means of access for most visitors to Hatteras Island. To limit ORV access would discriminate against individuals with limited mobility due to age or physical impairments, families with children, senior citizens and those wishing to engage in activities requiring recreational equipment such as Fishing, surfing, birding, swimming and family gatherings.

The enabling legislation created the park as a Recreation Area not a Wildlife Refuge. Areas such as Pea Island National Wildlife Refuge on Hatteras Island were created to provide habitat and protection for endangered and threatened species.

Equipment needed for recreating in popular areas of the park cannot be easily carried on foot through miles of deep sand on a hot summer day by even the fittest individual without the risk of heat stroke, dehydration, physical exhaustion or even death. For example: Water, Food, Beach toys, umbrellas, beach chairs, coolers, fishing poles, tackle boxes, water-sports boards, first aid kit, cameras, binoculars, etc... ORVs in remote areas of the beach provide shelter from lighting, a place to get out of the heat and emergency transportation for an ill/injured child or elder. ORVs have been used on the Hatteras Island beaches for decades without any resource conflict. It is imperative that ORV use be recognized for exactly what it is: A historical means of access to an area for recreational opportunities. The use of an ORV is not considered a recreational activity in this Recreational Area. ATVs are not permitted. These recreational opportunities sought, allow the public to enjoy the Seashore's resources and values. Denying access to recreational opportunities, many of which are specifically protected in the Enabling Legislation, denies the Seashore's current visitors the opportunity to enjoy the park's resources and values and denies future generations the opportunity to enjoy the park's resources in direct violation of Park Services Management Policies. There is no evidence that ORV beach access causes any unacceptable environmental impacts in the park. Often, traces of ORV access are erased by wind and tide in a matter of hours.

The beaches within the Cape Hatteras National Seashore Recreational Area offer high recreational value to the public. While all of the beaches are suited and commonly used for swimming, sunbathing, wading, shelling and fishing, some beaches are uniquely more favorable for some specific activities. These specific areas should have minimal and flexible buffers for birds and turtles because ORV Closure is the Least Significant Factor Affecting Nest Survival. Humans and ORVs can coexist in harmony with birds and turtles. Scientific studies prove that human and ORV presence have an insignificant impact on nesting. Predators, Tides and Storms account for nearly all the lost nest in CHNSRA. Human presence benefits birds and turtles because Human presence decreases predator presence and increases nest survival rates. Prime historical recreation areas that require guaranteed

public ORV access under the plan must include: Buxton to Cape Point ? World Famous Surf Fishing on Cape Point ? Prime water sports ? Favorite gathering area for locals and visiting families ? Prime Birding area ? Prime shelling area Cape Point to the Frisco Village line (South Beach) ? Prime child-safe swimming area south of Cape Point to Frisco village ? Favorite gathering area for "locals" and visiting families ? Prime shelling area ? Prime horseback riding area ? Recreational and commercial cast-netting at Cape Point ? Sunbathing ? Water sports ? Snorkeling ? Birding Ramp 55 to/including Hatteras Spit (Hatteras Inlet) ? Prime fishing area from ramp 55 around Hatteras Inlet spit ? Ramp 55 to/including Hatteras Spit (Hatteras Inlet) ? Recreational and Commercial cast-netting ? Prime family gathering area for visitors in the Hatteras Village area ? Water sports ? Birding Turtle Nests should be relocated from ORV corridors in these prime historical recreation areas. South Beach is an unproductive Plover nesting area so access should be open year round to South Beach.

I support resource protection for shorebirds and sea turtles based on peer reviewed science.

I agree with these Shorebird / Water bird Buffers: Species Breeding Behavior/ Nest Buffer ORV Pass-through Unfledged Chicks Piping Plover 50 m 30 m 200 m American Oystercatcher Flush + 15m Flush + 15m Flush + 15m Least Terns 30 m 30 m 30 m Other Species CWB 30 m 30 m 30 m MAXIMUM Piping Plover Unfledged Chick Buffers Establish a 200 meter buffer / Closure around the unfledged chick(s) location. Adjust buffer as needed when chicks are mobile. Establish ORV/Pedestrian access corridors. Vehicles may be allowed to pass through portions of the protected area that are considered inaccessible to PIPL chicks because of steep topography, dense vegetation, water or other obstacles. Morning access to the points and spits may be delayed until chicks have been located if the access corridor passes between the waterline and through the buffer area that would otherwise be closed. Reopen access corridor outside of pre-nesting area after chicks fledge. Remove pre-nesting closure 2 weeks after all chicks in the area have fledged.

Ample scientific evidence and precedent exists to support a 200 meter buffer. As part of the NEPA process,

*** I formally requests the National Park Service to provide peer-reviewed science that justifies a 1,000 meter closure in all directions.

MAXIMUM American Oystercatcher Unfledged Chick Buffers Establish a 30 meter buffer/closure around the unfledged chick(s) location. Adjust buffer as needed when chicks are mobile. Monitor daily. Establish ORV/Pedestrian access corridors. Buffers/closures will be removed after AMOY chicks have fledged (observed flight of 30 meters).

MAXIMUM Colonial Water birds Unfledged Chick Buffers Establish a 30 meter buffer/closure around the chick(s) location. Adjust buffer as needed when chicks are mobile. Monitor daily. Establish ORV/Pedestrian access corridors. Buffer/closure will be removed after all chicks have fledged.

I believe the Four-wheel drive vehicles allowed to drive on the Recreational Area beaches should be registered, licensed, and insured and comply with inspection regulations within the state, country or province where the vehicle is registered. All-Terrain Vehicles (ATVs) should be prohibited. ATVs are defined as a type of off highway vehicle that travels on three or more low-pressure tires; has handle-bar steering; and has a seat designed to be straddled by the operator. The science offered to support the environmentalist positions does not justify the extreme ORV and pedestrian access restrictions proposed in the DEIS. I believe ORV access to Cape Point, South Beach and Hatteras Inlet should not be restricted. The proposed 1,000 meter pedestrian/ORV closure in all directions for a piping plover unfledged chick brood is extreme and scientifically unjustified. This equals approximately 771 acres per brood. The plover closure should be reduced to 200 meters. The Oystercatcher is not a federally threatened species and the proposed 300 meter pedestrian/ORV closure is extremely excessive. The Oystercatcher closure should be reduced to 15 meters. In my opinion, there is no scientific justification to deny human entry into large areas of the recreation area and severely restricting the public's access to all portions of the beach. I urge you to preserve our beaches, protect natural resources with common sense policies, but not prohibit ORV use and pedestrian access to any portion of the Cape Hatteras National Seashore Recreational Area at any time. Remember, the National Seashore Recreation Area was established for the benefit and enjoyment of the people of this country. How can future generations enjoy the area if access is severely restricted?

So, please save the communities of Hatteras Island and preserve the historic & cultural way of life of the people on this island for future generations to experience. There are many miles of unpopulated barrier islands on the east coast that are better suited to enhance shorebirds and turtles than Hatteras Island.

Thank You

In my opinion, there is no peer reviewed scientific justification to deny human entry into large areas of the recreation area and severely restricting the public's access to all portions of the beach. I urge you to preserve our beaches, protect natural resources with common sense policies, but not prohibit ORV use and pedestrian access to any portion of the Cape Hatteras National Seashore Recreational Area at any time. Remember, the National Seashore Recreation Area was established for the benefit and enjoyment of the people of this country. How can future generations enjoy the area if access is severely restricted?

ORV CORRIDORS are the best way in providing access while managing resources. MANAGEMENT BUFFERS must be based on Peer-Reviewed Science. NON-ENDANGERED BIRDS should NOT have the same protection as if endangered. TURTLE MANAGEMENT would benefit from nest relocation.

Finding a way to guarantee unrestricted public beach access for pedestrians and ORV that coexists with wildlife needs to be the highest priority. I believe ORV & pedestrian corridors should be maintained with adequate monitoring through temporary resource closures to provide access to the beach. Because of the distances involved, ORV access corridors are required so citizens can travel to their desired destinations within the Recreation Area. ORVs have historically served as the primary form of access for many portions of the beach in the Recreation Area, and continue to be the most practical means of access for most visitors to Hatteras Island. To limit ORV access would discriminate against individuals with limited mobility due to age or physical impairments, families with children, senior citizens and those wishing to engage in activities requiring recreational equipment such as Fishing, surfing, birding, swimming and family gatherings.

The enabling legislation created the park as a Recreation Area not a Wildlife Refuge. Areas such as Pea Island National Wildlife Refuge on Hatteras Island were created to provide habitat and protection for endangered and threatened species.

Equipment needed for recreating in popular areas of the park cannot be easily carried on foot through miles of deep sand on a hot summer day by even the fittest individual without the risk of heat stroke, dehydration, physical exhaustion or even death. For example: Water, Food, Beach toys, umbrellas, beach chairs, coolers, fishing poles, tackle boxes, water-sports boards, first aid kit, cameras, binoculars, etc... ORVs in remote areas of the beach provide shelter from lighting, a place to get out of the heat and emergency transportation for an ill/injured child or elder. ORVs have been used on the Hatteras Island beaches for decades without any resource conflict. It is imperative that ORV use be recognized for exactly what it is: A historical means of access to an area for recreational opportunities. The use of an ORV is not considered a recreational activity in this Recreational Area. ATVs are not permitted. These recreational opportunities sought, allow the public to enjoy the Seashore's resources and values. Denying access to recreational opportunities, many of which are specifically protected in the Enabling Legislation, denies the Seashore's current visitors the opportunity to enjoy the park's resources and values and denies future generations the opportunity to enjoy the park's resources in direct violation of Park Services Management Policies. There is no evidence that ORV beach access causes any unacceptable environmental impacts in the park. Often, traces of ORV access are erased by wind and tide in a matter of hours.

The beaches within the Cape Hatteras National Seashore Recreational Area offer high recreational value to the public. While all of the beaches are suited and commonly used for swimming, sunbathing, wading, shelling and fishing, some beaches are uniquely more favorable for some specific activities. These specific areas should have minimal and flexible buffers for birds and turtles because ORV Closure is the Least Significant Factor Affecting Nest Survival. Humans and ORVs can coexist in harmony with birds and turtles. Scientific studies prove that human and ORV presence have an insignificant impact on nesting. Predators, Tides and Storms account for nearly all the lost nest in CHNSRA. Human presence benefits birds and turtles because Human presence decreases predator presence and increases nest survival rates. Prime historical recreation areas that require guaranteed public ORV access under the plan must include: Buxton to Cape Point ? World Famous Surf Fishing on Cape Point ? Prime water sports ? Favorite gathering area for locals and visiting families ? Prime Birding area ? Prime shelling area Cape Point to the Frisco Village line (South Beach) ? Prime

child-safe swimming area south of Cape Point to Frisco village ? Favorite gathering area for "locals" and visiting families ? Prime shelling area ? Prime horseback riding area ? Recreational and commercial cast-netting at Cape Point ? Sunbathing ? Water sports ? Snorkeling ? Birding Ramp 55 to/including Hatteras Spit (Hatteras Inlet) ? Prime fishing area from ramp 55 around Hatteras Inlet spit ? Ramp 55 to/including Hatteras Spit (Hatteras Inlet) ? Recreational and Commercial cast-netting ? Prime family gathering area for visitors in the Hatteras Village area ? Water sports ? Birding Turtle Nests should be relocated from ORV corridors in these prime historical recreation areas. Correspondence: Cape Hatteras National Seashore holds a unique ecological, recreational and economic value. I believe that beaches are a public resource and should be held in the public trust for their preservation.
Cape Hatteras National Seashore provides some of the best recreational resources on the East Coast, including surfing and fishing, but I recognize that if not regulated correctly ORV use may detrimentally affect migratory species that nest in the area. I believe that a balance between access and preservation can be achieved and that allowing continued access with improved management of ORV use to the National Seashore is the optimal solution for this area.
I support Alternative C, a balanced solution that benefits the animal species while guaranteeing humans can continue to enjoy and protect this most-precious coastal resource for years to come.
Thank you,
Joyce Marcus joycemarcus@hotmail.com

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: Thank you for allowing the public to comment on this proposal. While I agree that an ORV and Pedestrian Management program is warranted in the Cape Hatteras National Seashore and Recreational Area, several aspects of these proposals seem to be ill-thought out and inconsistent with the original intentions of the Park Service when the seashore was designated as a park in the 1930s.
Most striking is the lack of recognition of the cultural significance and cultural history associated with ORV and Pedestrian use of this area. With ample historical evidence that this access is a "way of life" on Hatteras Island and Ocaroke, it is quite unsettling and disappointing to see this aspect being ignored, even though it is one of the aspects that by definition should be strongly considered in the DEIS. Before making such a sweeping change in

policy that will dramatically negatively impact such a wide range of citizens, I would like to see empirical data that suggests this way of life has significantly negatively impacted the shorebird and turtle population. Unfortunately, even using the USPS data, this argument cannot be made effectively. As a follow on to this comment, the empirical evidence that states that ORV and pedestrian use is detrimental to wildlife in the area is shaky, at best. Unfortunately, it seems the USPS and their Predator Removal Program is killing many more animals than the ORV and Pedestrian traffic. This inconsistency is unacceptable, in my opinion.

I am in favor of buffers around nesting areas, but the 1000M Proposed buffer will effectively close any beach, due to the geographic characteristics of these narrow beaches. I also have serious concerns with the data collection techniques used to determine these alternatives. Not counting the adjacent spoil sites and islands, some less than a few miles from impacted areas, leads to skewed data. These islands and their shorebird populations MUST be counted to arrive at factually correct data points.

One of the most dramatic inconsistencies I see in the document concerns the economic impact that is described in the Region of Influence (ROI). Using economic and visitor data from the North Beaches (Corolla/Duck) to support the position that these alternatives will not have dramatic negative economic impacts is wrong. Only data from the towns on Hatteras Island and Ocracoke should be used. To surmise that visitors from the Northern Beaches will visit Hatteras Island and Ocracoke consistently during their vacation is incorrect. I would like to see the justification for including these communities in the economic impact study, if there is such justification. As a lifelong visitor to both the Northern Beaches and the islands, I just don't see it. Northern Beach visitors rarely travel south of Nags Head, and if so MAY designate one day of their five to visit Hatteras and Ocracoke, not five. The limits on Pedestrian traffic, totally outlawing any foot traffic on the beach, is Draconian and not supported by any data in a consistent fashion. Studies do show, that without foot traffic and ORV traffic, certain predators (one the USPS cannot target with their Predator Removal Program (i.e. Ghost Crabs) will in fact have dramatically easier access to shorebird and turtle eggs. Simply put, the data collected so far, even using USPS studies, does not show an adverse negative impact on local shorebird and turtle populations. So why is this access being reduced/eliminated?

To eliminate access to one of the best fishing, surfing, kiteboarding, and birdwatching areas on the east coast will effectively bankrupt the local economy and eliminate hundreds of jobs, and effectively doing away with cultural traditions that have been in place for many years.

No Pets in the park? That is completely inconsistent with the original declaration of this area being a recreation area when it was designated as such in the 1930's.

This area was designated as a recreation area, not a sanctuary. Why it need to be designated a sanctuary at this point, is not clear. The shore birds in question are not on the endangered species list, and different turtle nesting protections, ones that have been used in other areas with great success, need to be implemented here prior to eliminating all access to this great area.

I am in agreement that an effective management program needs to be developed for this unique area. I strongly feel the proposed alternatives do not adequately address the dramatic cultural and economic impacts that will effectively destroy this way of life. At the very least, I feel that the underlying data supporting many of the positions be more thoroughly reviewed and corrected before making a decision of this magnitude.

I have been experiencing this way of life since I was born, and have spent a large part of my 48 years on the Outer Banks. I feel I have the experience pertaining to this way of life that makes me qualified to comment on this issue.

Again, thank you for allowing these comments on the DEIS.

Sincerely,

Jon Gregory "Greg" Purkey

Correspondence: Hello.

I am a retired Federal employee, and many of my years were spent working as a National Park Service Ranger. I have also been an angler all my life, and I began surf fishing the Outer Banks from an old Ford Bronco in 1977. Cape Hatteras National Seashore was created to be a recreational area. Preserve the area, but also let visitors enjoy it for recreation. Humans and wildlife share the resource. We have Wildlife Refuges, such as Pea Island, where wildlife comes first. As such, I am in favor of continued beach access by ORVs. I understand that there need to be some restrictions for wildlife or safety in some cases. However, I am opposed to any permanent closures of any parts of the Seashore, and I am opposed to the restriction of night driving. Some of the best surf fishing is at night! I am not opposed to operators of the beach needing a permit to drive on the beach. That would allow education of visitors. I think the plan proposed by the Coalition For Beach Access makes much more sense, and is far easier to read, than the DEIS proposals. To me, the CFBA plan makes the most sense for continuing the Seashore's function of recreation combined with preservation. Lastly, the OBX is not the last possible nesting grounds available for east coast shore birds. I also fish Virginia's barrier islands, which are totally undeveloped, and it is a nesting bird's paradise. There are miles of deserted beaches and marsh, and there are plenty of birds that use this area. Thanks you for your consideration.

Correspondence: My CHNSRA DEIS Comments:

Finding a way to guarantee unrestricted public beach access for pedestrians and ORV that coexists with wildlife needs to be the highest priority. I believe ORV & pedestrian corridors should be maintained with adequate monitoring through temporary resource closures to provide access to the beach. Because of the distances involved, ORV access corridors are required so citizens can travel to their desired destinations within the Recreation Area. ORVs have historically served as the primary form of access for many portions of the beach in the Recreation Area, and continue to be the most practical means of access for most visitors to Hatteras Island. To limit ORV access would discriminate against individuals with limited mobility due to age or physical impairments, families with children, senior citizens and those wishing to engage in activities requiring recreational equipment such as Fishing, surfing, birding, swimming and family gatherings. In my opinion, there is no peer reviewed scientific justification to deny human entry into large areas of the recreation area and severely restricting the public's access to all portions of the beach. I urge you to preserve our beaches, protect natural resources with common sense policies, but not prohibit ORV use and pedestrian access to any portion of the Cape Hatteras National Seashore Recreational Area at any time. Remember, the National Seashore Recreation Area was established for the benefit and enjoyment of the people of this country. How can future generations enjoy the area if access is severely restricted? ORV CORRIDORS are the best way in providing access while managing resources. MANAGEMENT BUFFERS must be based on Peer-Reviewed Science. NON-ENDANGERED BIRDS should NOT have the same protection as if endangered. TURTLE MANAGEMENT would benefit from nest relocation. The enabling legislation created the park as a Recreation Area not a Wildlife Refuge. Areas such as Pea Island National Wildlife Refuge on Hatteras Island were created to provide habitat and protection for endangered and threatened species. Equipment needed for recreating in popular areas of the park cannot be easily carried on foot through miles of deep sand on a hot summer day by even the fittest individual without the risk of heat stroke, dehydration, physical exhaustion or even death. For example: Water, Food, Beach toys, umbrellas, beach chairs, coolers, fishing poles, tackle boxes, water-sports boards, first aid kit, cameras, binoculars, etc... ORVs in remote areas of the beach provide shelter from lighting, a place to get out of the heat and emergency transportation for an ill/injured child or elder. ORVs have been used on the Hatteras Island beaches for decades without any resource conflict. It is imperative that ORV use be recognized for exactly what it is: A historical means of access to an area for recreational opportunities. The use of an ORV is not considered a recreational activity in this Recreational Area. ATVs are not permitted. These recreational opportunities sought, allow the public to enjoy the Seashore's resources and values. Denying access to recreational opportunities, many of which are specifically protected in the Enabling Legislation, denies the Seashore's current visitors the opportunity to enjoy the park's resources and values and denies future generations the opportunity to enjoy the park's resources in direct violation of Park Services Management Policies. There is no evidence that ORV beach access causes any unacceptable environmental impacts in the park. Often, traces of ORV access are erased by wind and tide in a matter of hours. The beaches within the Cape Hatteras National Seashore Recreational Area offer high recreational value to the public. While all of the beaches are suited and commonly used for swimming, sunbathing, wading, shelling and fishing, some beaches are uniquely more favorable for some specific activities. These specific areas should have minimal and flexible buffers for birds and turtles because ORV Closure is the Least Significant Factor Affecting Nest Survival. Humans and ORVs can coexist in harmony with birds and turtles. Scientific studies prove that human and ORV presence have an insignificant impact on nesting. Predators, Tides and Storms account for nearly all the lost nest in CHNSRA. Human presence benefits birds and turtles because Human presence decreases predator presence and increases nest survival rates. Prime historical recreation areas that require guaranteed public ORV access under the plan must include: Buxton to Cape Point ? World Famous Surf Fishing on Cape Point ? Prime water sports ? Favorite gathering area for locals and visiting families ? Prime Birding area ? Prime shelling area Cape Point to the Frisco Village line (South Beach) ? Prime child-safe swimming area south of Cape Point to Frisco village ? Favorite gathering area for "locals" and visiting families ? Prime shelling area ? Prime horseback riding area ? Recreational and commercial cast-netting at Cape Point ? Sunbathing ? Water sports ? Snorkeling ? Birding Ramp 55 to/including Hatteras Spit (Hatteras Inlet) ? Prime fishing area from ramp 55 around Hatteras Inlet spit ? Ramp 55 to/including Hatteras Spit (Hatteras Inlet) ? Recreational and Commercial cast-netting ? Prime family gathering area for visitors in the Hatteras Village area ? Water sports ? Birding Turtle Nests should be relocated from ORV corridors in these prime historical recreation areas. South Beach is an unproductive Plover nesting area so access should be open year round to South Beach. I support resource protection for shorebirds and sea turtles based on peer reviewed science. I agree with these Shorebird / Water bird Buffers: Species Breeding Behavior/ Nest Buffer ORV Pass-through Unfledged Chicks Piping Plover 50 m 30 m 200 m American Oystercatcher Flush + 15m Flush + 15m Flush + 15m Least Terns 30 m 30 m 30 m Other Species CWB 30 m 30 m 30 m MAXIMUM Piping Plover Unfledged Chick Buffers Establish a 200 meter buffer / Closure around the unfledged chick(s) location. Adjust buffer as needed when chicks are mobile. Establish ORV/Pedestrian access corridors. Vehicles may be allowed to pass through portions of the protected area that are considered inaccessible to PIPL chicks because of steep topography, dense vegetation, water or other obstacles. Morning access to the points and spits may be delayed until chicks have been located if the access corridor passes between the waterline and through the buffer area that would otherwise be closed. Reopen access corridor outside of pre-nesting area after chicks fledge. Remove pre-nesting closure 2 weeks after all chicks in the area have fledged. Ample scientific evidence and precedent exists to support a 200 meter buffer. As part of the NEPA process, *** I formally requests the National Park Service to provide peer-reviewed science that justifies a 1,000 meter closure in all directions. MAXIMUM American Oystercatcher Unfledged Chick Buffers Establish a 30 meter buffer/closure around the unfledged chick(s) location. Adjust buffer as needed when chicks are mobile. Monitor daily. Establish ORV/Pedestrian access corridors. Buffers/closures will be removed after AMOY chicks have fledged (observed flight of 30 meters). MAXIMUM Colonial Water birds Unfledged Chick Buffers Establish a 30 meter buffer/closure around the chick(s) location. Adjust buffer as needed when chicks are mobile. Monitor daily. Establish ORV/Pedestrian access corridors. Buffer/closure will be removed after all chicks have fledged. I believe the Four-wheel drive vehicles allowed to drive on the Recreational Area beaches should be registered, licensed, and insured and comply with inspection regulations within the state, country or province where the vehicle is registered. All-Terrain Vehicles (ATVs) should be prohibited. ATVs are

defined as a type of off highway vehicle that travels on three or more low-pressure tires; has handle-bar steering; and has a seat designed to be straddled by the operator. The science offered to support the environmentalist positions does not justify the extreme ORV and pedestrian access restrictions proposed in the DEIS. I believe ORV access to Cape Point, South Beach and Hatteras Inlet should not be restricted. The proposed 1,000 meter pedestrian/ORV closure in all directions for a piping plover unfledged chick brood is extreme and scientifically unjustified. This equals approximately 771 acres per brood. The plover closure should be reduced to 200 meters. The Oystercatcher is not a federally threatened species and the proposed 300 meter pedestrian/ORV closure is extremely excessive. The Oystercatcher closure should be reduced to 15 meters.

So, please save the communities of Hatteras Island and preserve the historic & cultural way of life of the people on this island for future generations to experience. There are many miles of unpopulated barrier islands on the east coast that are better suited to enhance shorebirds and turtles than Hatteras Island.

Thank You

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
Our Piping Plovers are current Canaries in the Coal Mine for our Eastern seashores. Please support this plan for our sake and that of our descendants. This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I understand the need to preserve species and develop a balance between nature and human interests. However, I feel that the possibility of losing access to the beaches of Hatteras Village will significantly effect the residents of this village. They are already experiencing a negative impact from the down economy - this will only push them further away from just trying to feed their families and rake out a living. A huge tourist draw to this area is surf fishing. When tourists cant drive down to the beach they will quit coming. This will effect rental properties and then you will see more and more homes foreclosing and a reduction in purchases. It is unbelievable to me that a better compromise cannot be made. I have supported areas being closed during nesting sitings, but the thought of having a schedule in stone is upsetting. You would still close the beaches even if no nesting was underway??? A huge reason I love Hatteras Village is bringing my dog to the beach to swim. I am a responsible pet owner and never allow my dog to chase birds or enter the dune areas. Hopefully the representatives making the final decisions will consider the impact on the residents of Hatteras Village and make the right fair decision.

Correspondence: As a frequent visitor to the Outer Banks, I understand that Cape Hatteras National Seashore holds a unique ecological, recreational and economic value. I believe that beaches are a public resource and should be held in the public trust for their preservation.
Cape Hatteras National Seashore provides some of the best recreational resources on the East Coast, including surfing and fishing, but I recognize that if not regulated correctly ORV use may detrimentally affect migratory species that nest in the area. I believe that a balance between access and preservation can be achieved and that allowing continued access with improved management of ORV use to the National Seashore is the optimal solution for this area.
I support Alternative C, a balanced solution that benefits the animal species while guaranteeing humans can continue to enjoy and protect this most-precious coastal resource for years to come.
Sincerely,
Melissa Kay Davis

Correspondence: I am opposed to Alternative F. I do not understand the justification for the restrictiveness of this proposal. I support the Coalition for Beach Access Proposal. The Cape Hatteras National Seashore was established as a RECREATIONAL area - and should remain a RECREATIONAL area. From all that I have read, nothing in science supports the restrictions proposed in Alternative F (or the consent decree we have been living under for two years, either). Let's do what the National Seashore was established for - and use it for recreation.

Correspondence: I am in support of free and open beach access of the Cape Hatteras National Seashore Recreational Area. This park was granted by congress in 1937 as a recreational area for the public and should still be as such today (Aug. 17, 1937, ch. 687, Sec. 1, 50 Stat. 669; June 29, 1940, ch. 459, Sec. 1, 54 Stat. 702.) By severely restricting access to both ORVs and pedestrians, it has and will continue to have a major negative impact on the entire economy for the region and with no real positive benefit to the wildlife in the area.

The areas that people access the beaches are not areas of nesting terrestrial wildlife. Previous methods of protecting sea turtles were fair and effective,

and many users supported these efforts. The science so far has proven that the temporary interim plan has shown no sort of positive result to the wildlife being protected. How can the Consent Decree be justified with these results?

These restrictions, if continued, will cause the economy to collapse for these areas of Dare and Hyde county. Bankruptcies, more foreclosures, crime, etc., will become more commonplace. The people of the area will not be able to sustain, and at the same time there will be no real positive result in numbers for the wildlife. No benefit at all.

No one wants to see the wildlife negatively affected by having beach access, not the beach goers, no one. But this is not the way to help restore the numbers of certain wildlife in the area.

I want H.R. 718 and S 1557 to be restored!

Thank You, John D. Barker II

Correspondence: I am a frequent visitor to Cape Hatteras, and have always been impressed by the pristine beauty and the wonderful ecological balance the shoreline. please forgive the "form letter" that follows, but the folks at Surfrider have summed up my concerns perfectly. Cape Hatteras National Seashore provides some of the best recreational resources on the East Coast, including surfing and fishing, but I recognize that if not regulated correctly ORV use may detrimentally affect migratory species that nest in the area. I believe that a balance between access and preservation can be achieved and that allowing continued access with improved management of ORV use to the National Seashore is the optimal solution for this area. I support Alternative C, a balanced solution that benefits the animal species while guaranteeing humans can continue to enjoy and protect this most-precious coastal resource for years to come.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access. This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me. The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I am totally against the proposed DEIS alternative F because of the following: Regarding ORV usage, it is the most restrictive of the alternatives. From the NPS own reports, restrictive ORV routes not only don't work, they have the opposite effect. In 2009, the number of Piping Plover and Oystercatcher chicks fledged was down from the previous year by 1 and 3 chicks respectively. Although ORV routes in the late spring and summer of 2008 were restricted under the "consent Decree", the spring nesting had already begun. 2009 is the first full year by which comparisons can be made. 2007 nesting season (without ORV restrictions) was the most successful Plover breeding season in over 20 years. Please allow common sense to prevail and return the ORV management to Alternative A

Correspondence: I believe the Coalition to Preserve Beach Access position sums up the feeling of many vacation in the Cape Hatteras area. I am a lover of the outdoors and enjoy nature's beauty but I do not believe the path the Sierra Club and other organizations are taking is in the best interest of anyone. These organizations seem to believe that nature is best observed from my TV rather than letting citizens out into the environment.
Thank you

Correspondence: I am in favor of a permit system managed by the Park Service which would protect endangered wildlife but also provide access to the public on a limited basis. I used to go to Ocracoke and fish in the surf, but it has become so crowded it is not as enjoyable. I would like to see a program where a permit could be applied for a certain area of beach, ex. Ocracoke island, or from ramp x to ramp y. The number of vehicles could be kept to a limit by doing this, but the public could still use and enjoy the area.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
I visit the Cape Hatteras National Seashore Park at least once or twice a year, and the reason for my visits is to observe wildlife, specifically birds of Outer Banks. It concerns me greatly to think that this unique assemblage of species will be threatened by the selfish demands of a very small but vocal group of citizens -- the ORV users who insist on the ability to drive anywhere they want, any time they want, regardless of the danger to both wildlife and other citizens who prefer to enjoy the beach on foot.
When I visit the Cape Hatteras area, I'm not alone. I lead trips for college students and people in the Piedmont who are interested in birds. Without the diversity of birdlife found on Hatteras Island and vicinity, these trips would not happen.
I feel that there are issues of safety, of equal access for citizens with different interests, and of wildlife conservation that are all on the table here. It seems obvious to me that only Alternative D, modified to provide greater pedestrian access, addresses these three issues correctly and reasonably.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This alternative plan would in less disturbance of wildlife, which are important to me. The various creatures that seek refuge and nesting sites here may also be "outsiders" but they are citizens of the world. Their continued presence is vital to environments far from our shores - vital to us.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

Have you seen the Ken Burns series "National Parks"? We should not squander the opportunities this seashore offers for the citizens of the east coast to learn the value of wild places.

Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only

16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.

* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.

* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

I have seen the effects of ORV's on beaches throughout the South -- especially north Florida, where law enforcement is only sporadic and ORV's are abundant. From what I can tell, it doesn't matter what's on the beach -- baby birds, sea turtles, thriving plants, anything -- because somebody on an ATV will run it over with barely a look. You really, really, need to put nature above recreation in this case.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: My grandparents operated the Avon Pier in the 1960's when all there was to do was fish both from the pier and by the surf. It has become a tradition for many families to travel to the outer banks for some of the best fishing memories that could ever be recorded. I know wildlife preservation is equally important. I do not support closing the beaches to ORV's or pedestrian traffic under any circumstances. There is plenty of room for both humans and wildlife historically and now. There was similar conversation back in the 60's regarding these types of issues and it drastically impacted the economy. As a result, my grandparents had to seek other avenues for financial support. I wished that Avon could go back to what it was in the 1960's when spending the summer with my grandparents was truly what a vacation should be.

Correspondence: In regards to ORV's allowed on the Cape Hatteras National Seashore and parts therein...I am afraid people are the one's deeply suffering. The National Park Service is ill-equipped and seriously negligent (according to the local's who live & work in this area). They have been caught tampering with nests to manipulate closures. How can this be fair? The local Outer Banks economy is suffering even more than everyone else statewide. How can people expect to pay their property taxes & maintain life when they have no tourist income that they have relied upon for years? You have cut off their livelihood.
I am handicapped so therefore the only way I can make it out to fish is with the use of 4-wheeled drive. If you ban driving on the beach, you will be essentially cutting me off from my favorite sport and place of solitude.
I have no biology degree but I can read the reports listed and see their flaws...and there are many. This is not a conservationist issue...it is an issue of people wanting to implant a bird that is not native and should not be in this area. If someone loaded up trucks with feral cats & dogs and turned them loose on the Outer Banks...you would make great strides to exterminate them. Something that is not native should not be allowed to take up nest and breed for the sole purpose that it exists. Keep the beaches open as they had been way back in the past...when our tax dollars paid the Park Service to do just that....be a service to it's citizens and not the Beach Bird Police.

Correspondence: I am a native of NC and I have fished the coast for 30 years. I had such an unpleasant experience last year (2009) due to excessive beach closures to ORV use that I have serious doubts about ever fishing the OBX again. I cannot believe that a few individuals have convinced the rest that ORV use has such a huge impact on beach birds. While I do think that some careless few have caused damage, I also think the whole picture needs to be examined. I might add that I spent quite a bit of money on house rental, fuel, fishing supplies, restaurants and other things while I was there. I brought an extended family of 8 and the lack of available fishing areas really spoiled things for us. I also want to add that fishing most areas requires ORV use to access with fishing gear, bait, coolers, etc. Please remove all ORV restrictions. Thank you for your consideration.

The majority of tourists to the NC shore are there for the chance to observe wildlife in their natural habitats and to enjoy the peace and beauty of the beach. It seems to me that to allow one group (ORV users) preferred treatment over another (shorebirds and those of us who treasure our natural landscapes) is a terrible way to manage our resources. Its time for all of us to start behaving like the stewards of the planet that we should be.

Correspondence: Preservation of our vital seashore area requires that we limit our human footprint to the greatest extent possible. Too much of our nation's seashore has been spoiled because of small development setback requirements and the use of ORVs. When considering the recreational use of any seashore area, the environment concerns must take priority over economic concerns. This is equivalent to putting scientific knowledge ahead of business concerns. Please limit the use of ORVs on the Outer Banks. We have already destroyed too much of our seashore heritage and now it is time to be good custodians of what is left of our natural shore areas.

Correspondence: Not everyone who lives in the Outer Banks is a screaming redneck. There are those of us who believe it is imperative to protect endangered species. That said, I believe there should be some sort of CONTROLLED access to the beaches in the national park land. I personally have not driven on the beaches in years because they have been overwhelmed by morons driving drunk, playing redneck music at full volume, throwing beer cans and trash all over, waving confederate flags and generally behaving miserably. It is impossible to drive on the beaches to simply enjoy their quiet beauty or go

fishing. I would gladly sacrifice all of those yahoos for one turtle or bird.

Correspondence: I have traveled to the Outer Banks, specifically Ocracoke over 60 times in the past 21 years. My family has become avid surf fishermen and enjoy driving our ORV responsibly on the beach. I have seen the utmost respect for the environment by ORV drivers. Vacationers enjoying ORV travel on the beach are not destroying the environment, but enjoying it in a way that is respectful to nature. I would like to see a plan drawn up to include ORV driving based on REAL scientific facts, not on MADE-UP information by heavily funded special interest groups. Just because ORV traffic may not be appropriate for some national parks, does not mean ORV traffic should be banned or heavily curtailed on the Outer Banks National Seashore. Banning ORV travel would be devastating to the Ocracoke economy. Almost all of the people on the island depend on tourism, and fishing/ORV beach driving is what brings so many people to the island. Seven years ago I purchased a home on the island which I rent out to help pay the mortgage and be able to vacation there often. It has been more difficult to rent out my home due to the bad economy over the past year, I can't even imagine how banning ORV driving will affect our being able to rent out our home in the future. Banning ORV travel will affect the rental companies, homeowners, hotels, restaurants, shops, construction workers, maintenance workers... which in turn affects families raising children and caring for the elderly. Everything I have read, leads me to believe the ORV driving ban is being influenced by special interest groups that have no ties to the Outer Banks. These groups have an agenda and the money to fight for it, and they are not basing their push on REAL EVIDENCE, but on a philosophy not everyone agrees with. Please take the homeowners, businesses, vacationers and real scientific evidence into consideration when making a decision on ORV travel so that it has a positive impact on the people who live and vacation there. Thank you

Correspondence: Dear NPS,
I disagree with the DEIS because it is simply not fair to the people. The buffers for piping plovers and non-endangered bird species are far too restrictive

and not based on peer reviewed science. The negative economic impact to Cape Hatteras is huge. Culture and customs of Cape hatteras are based on beach access and will be greatly affected by the preferred alternative F restrictions. The NPS needs to do the right thing and create a fair and balanced management plan.

Culture and customs of Cape hatteras are based on beach access and will be greatly affected by the preferred alternative F restrictions. The NPS needs to do the right thing and create a fair and balanced management plan.

Correspondence:	I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access. This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me. The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D: *Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.						

* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.

* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: As a Floridian I am outraged this proposal has even reached a discussion of true debate. Historically, as a state our citizenry, across political lines, oppose drilling off our shores. NO DRILLING! Of any kind. No exploratory, no testing, no "What if we put the rigs under the water so you can't see them?". Keep the tricks and slight of hand. We protect our Paradise. Provisionally, the consequences of lapses in constitution, China oil leak in the Great Barrier Reef and even more recently the tragedy in the Gulf off Louisiana stand as reminders. As we speak the oil in the Gulf is making its way closer to the National Refuge just off the coastline. It is an inevitability. They argue the science as if it could never happen. It happens all the time!!!!!! It only takes once to cause years of devastation. No DRILLING!

Correspondence: I recently received the 810 page book on the National Park Draft Environmental Impact Statement. Although I have gone thru only 400 pages, I am appall (to fill with dismay or horror or shock) by The National Park Service. This is an out right attack on the Citizens of North Carolina and any tourist that may visit the Outer Banks since 1937 and the years too follow. Suggesting or Limiting O R V Access (the state or quality of being approachable: accessibility) is also making it less fortunate for handicap visitors. I was Born in North Carolina (1946), a disabled Veteran- Three tours in Viet Nam 1965 thru 1969 I being single is Racial profiling since I am the only driver. For me to enjoy the Outer banks it is unquestionable for me to enjoy the Oceanside beach, if I am requested to only have a seat in the sand, is a National Park employee going to be accessible to drive my vehicle back to a parking area and then bring my vehicle back to me when I am ready to leave. With Million of visitors including the rapid explosion of Spanish only spoken visitors, I do not see any information on the DEIS available in Spanish, and not to instruct them is another Racial Profiling for lack of Spanish signage on the National Park Service area and any printed material by the National Park Service or the United States Government. All the Outer Banks Businesses, cannot count for income if the word gets out that The National Park Racial Profiles tourist and Native Born Citizens. I also oppose the suggested increase of up to 1000 meters for any Piping Plovers. I oppose closing O R V lane's and suggest if any Loggerhead Nesting Turtles be immediately move to a safer location from any astronomical tide (full Moon or North Easter Storm), reference- South Carolina- <http://www.follyturtles.com/> Beach Program, I enjoy seeing and keep a local update of the Turtle Protection, Sighting and Moving off Nesting eggs if in Harms way. I am also appall fo a Fine of \$ 150.00 if you are seen observing a Nesting Site. How can you education our Next Generation if you cannot show them a visual inspection and markings of a Located Turtle Nest. I see alot of Turtle Nest in North Carolina, South Carolina and Florida, no evidence of someone destroying a nest, If I was to observe any destroying of Nest, any National or State Park Official would be Notified. I oppose any Restriction for non endangered or none threatened species not on the National Park or Government List. Richard O. Charlotte, North Carolina

Correspondence: 1) Why cant we regulate the number of ORV per square mile better. -create a ten day pass to non-locals sold only in tackle shops. -Dare and Currituck should be able to acquire year long passes for the same amount as the ten day pass. The pass should be looked at as a means to create funds to help solve the environmental situations we are dealing with right now. -those who use the beach to fish with nets and beach launched boats should not have to pay a dime. The struggle the waterman has now days to make ends meet is getting to the point that all our seafood will have to be shipped in just like our oil and steel.

2) Why is it that because tourists can't watch where they are going or follow our counties rules, our beach ramps are shut down? The ramp at Coquina is one of the most famous ones to be shut down each year because of irresponsible people.

-there is talk about expanding the parking lot size and creating more access for people to walk in a controlled way like rats on to the beach.

CASE TO LOOK AT

Assateague Island located south of Ocean City, Maryland developed a way to co-habitat with the animals environment being created and access for ORV created to go around (key word AROUND) that environment. On the right day the entire beach located from either OREGAN INLET to CAPE POINT could be closed due to the limited or poorly located access point, do to the new and predictable nesting sites that have been being tract over the last few years. -how is it that you feel that people walking on the beach could or would be less destructive in larger numbers than organized regulation of land and animal since we are mammals

3) How is it that with statistics stating that nest failure is predominately due to non-human interference, but the Autobon Society thinks that closing the beaches will increase the number of birds yet closing the beaches will in fact shut down our beaches, families, children, their education through loss of revenue tax dollars. That is more than any family who is grateful and proud to call the Outer Banks and the surrounding areas home can endure.

4) At what point (number of birds) do or would you say that your efforts could be called a success? Then what amendments would you add to open or loosen the restrictions of regulation to a successful co-habitation.

5) Why is it that the Autobon Society will spend an ungodly amount of money on closing beaches? Has Habitat Construction away from the human traffic been considered? Nature is to be nature.

6) The ORV closure states that the distraction is more detrimental to Turtle nesting. A possible solution could be instead of shutting the economy on the Outer Banks down by closing our beaches, Biology student internships could go 24/7 during the nesting season. I know this will work because there are documented reports on such matters. Marines have a slogan; Leave no man behind. Well, I guess you have forgotten that and the men, women, and children of the Outer Banks are being left behind in a slow economy as it is. Closures cut down on our tourist levels which is what our season economy strives on.

7) I am , or should I say used to be, a mate on a charter boat. A big part of the reason I am not going to be this year is the decrease in the number of people coming to the Outer Banks looking to fish on charter boats. That is a direct result of the beach closures that have taken place for the last two years. People don't spend all that money just to fish on a boat for one day, they also like to surf fish which is something they are prevented from doing with the closures. The fishermen and women that make up the fleets and serve our community can't keep their boats afloat without people coming to the area to fish. Without our beaches we are a few steps away from having to become some other kind of tourist destination such as Atlantic City which is not family oriented and nothing I want my children raised in.

I would love to hear responses from you or if I can answer any questions you may have please get in touch with me: Kenny Russell 252-216-7569

Correspondence: I have sent one response already.I own rental property on Ocracoke.I just started explaining to my wife about some of the rules about use of the beach by humans.She replied no one will want to come.I think her impression is correct.I have placed my home on the market on Ocracoke and am more determined to sell than before, even if I have to reduce the price.When you combine these rules that are weighted more in favor of the birds than the people who want to use the island you end up with an island that loses some of its appeal.It is unfortunate that all theses rules were put in place during the worse economic crisis since the great depression.It is rather ironic that the government though the judicial branch has been able to afford more protection to birds than our government has afforded its citizens in that wall street was unregulated.We also have a congress who failed to pass a public option for universal health care.It might be better to be a bird in this country than a person.Perhaps abandoning the island altogether and making it a bird sanctuary makes the most sense and takes away the confusion.My wife read this and said, it will not do any good to say these things and I know she is right.Nevertheless as one citizen speaking with a small voice who will fall among the other soon to be ignored voices it feels good to say what I feel even if it is not worth the paper it is written upon.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.

This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.

The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.

* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.

* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: Hello, My name is Elmars Tomins. I live in Cary,NC. I go to the seashore a few times a year. I don't fish, I don't own a business or have any financial interests there. I simply want to be able to enjoy our coast. The concept of no people on the seashore for the sake of the birds makes me question what in the world is going on? Is the situation so dire that we must now ban people from our coastline - ORV or not? Please keep our beaches OPEN to people and ORV's. It is embarrassing for me to tell people that I know in other states and countries about what is going on regarding seashore access in North Carolina. Sincerely, Elmars Tomins Cary, North Carolina

Correspondence: Dear Sir, The Cape Hatteras National Seashore Recreational Area is an area for all people, not special interest groups. The decision to close and limit access to beach driving is based on emotional response and not scientific fact. Driving on the beach has always been restricted to the sand and not the dunes, which would not effect the shore bird population regardless.
The Plover and the Oyster catcher are not a species that is endangered and thrives in areas not related to Cape Hatteras National Recreational Area and there is no proof that the plovers have ever nested or bred there in the past. The all-out assault against natural predators with daily tallies posted for all to see seems to be ignored by the special interest groups; why is that? The special interest groups must not care about any other creatures that naturally inhabit the Cape Hatteras National Recreational area. There is evidence that the presence of humans on the beaches aides in the deterence of natural predators; this is significant.
Closing the beaches because of nesting turtles could be better served by close monitoring rather that wholesale closing of the beaches. The turtle studies personnel know, to the day, when turtles hatch and closing the beaches for a few days for that purpose only would seem to be more appropriate.
I have never seen nor heard the special interest groups support the beaches for anything other than their own interests. The OBPA, NCBBA, and the Cape Hatteras Anglers Club continually support efforts to clean the beaches, provide community support, and promote conservation of the Outer Banks. It is appalling, that for the benefit of the few, the whole must suffer. By closing or severely limiting the beach access, the special interest groups have deprived the local business's from their livelihood. These business's depend on the fishermen and tourists for thier income. It is apparent that special interest groups do not care, as is evident from closed stores and the economic downturn due to lack of visitors. It is also of concern that the National Parks system condones and bows to special interest groups and does not consider the whole picture.
As a long time visitor to the outerbanks(35years) it concerns me greatly that emotion and special interest groups will deprive future generations of the beauty and recerational opporunities provided by the Outer Banks. Recend the driving ban and practice conservation to peserve this area for generations

to come.
Respectfully submitted, Harry W. Anderson

Correspondence: I write this as a natural resource manager and a lifetime resident of NC. I do not make these comments as an official representative of the state agency I work for, nor do my opinions necessarily represent the opinions of my employing agency. I managed a state recreation area with a similar beach access and ORV plan and I learned to drive on the beach at Ocracoke Island. I can completely understand the longstanding attachment to driving on the beach. However, 30 years ago there was not near the amount of traffic and visitation on the outer banks as there is today. There are some practices that cannot withstand the test of time and without regulation will compromise the natural resources that we enjoy. Beach driving is a practice that needs to be left behind in the last century. Working on the coast I have talked to a great many people from across the nation who think we are nuts to allow vehicles on our beaches. I enjoy fishing on the beach and I and my family have been disturbed by the actions of beach drivers. For every responsible beach driver there is another wanting to see what his vehicle is capable of. There is a profound damage to the resource from beach driving. If off road driving was allowed in the great smoky mtns NP or in fields along the Blue Ridge Parkway there would be a national outcry. There are a vocal group of merchants and beach drivers that will never stop advocating for absolute unbridled access to beach driving. These are the same interests who would develop every square inch of the outer banks if there was a dollar to be made. This is a national park, not a county rec. area and I am concerned that these meetings (other than possibly the one in Raleigh) do not represent the wishes of the nation's visitors to this outstanding scenic and biological area. The Outer Banks beaches at one time used to all be as beautiful as Portsmouth Island or Shackleford banks but in the heavily driven areas they are covered in cigarette butts, shreds of mudflaps, and trash. The beach driving groups do pick up a lot of trash, much of it that washes up from boats. The Outer Banks should be designated as a wilderness area like Shackleford Banks. The people up in arms about losing tourism dollars are promoting a brand of tourism that is unsustainable- it is based on packing as many people into an environmentally fragile yet dynamic area as possible. If you are dead set on allowing vehicle traffic, I would only allow it in the fall and the winter after bird and turtle nesting season is over. The majority of beach drivers in the summer months are not there to fish, they are there to drink, avoid walking on the beach, and so they can haul as much gear as possible to the remotest beach they can reach, completely defeating the purpose of it being a national park. Just call it a national parking lot.

Correspondence: I am 69 years and have been visiting the Outer Banks of North Carolina since was a child. At present I will average three to four visits a year which includes a extended family vacation[about 20 people]. We very much enjoy being able to drive on the beach,swimming,fishing and just relaxing. Our visits and not only enjoyable for us they help the local economy and the North Carolina. I understand that we must have some rules and regulations to protect the environment but I cannot how closing off the beach access is going to help any endangered wildlife, just the opposite will be true. The taxes provided by a thriving local economy help provide that protection, sustain the wildlife and maintain the beaches. I move to central Virginia in 1962. The white tail deer and wild turkey population was low. Primarily due to the management efforts of the Virginia Game Commission and user fees,license, and taxes the population of both and thriving Surely a plan can be developed that will allow my children and grandchildren to be able to drive on the beaches and to enjoy the Outer Banks as much as I have.

Correspondence: Hello. I have been a regular visitor to the Outer Banks with my family (Buxton, Frisco, Hatteras Village, Ocrokoke) for the past 25 years. I am an avid fisherman and my preference is to drive my SUV on the beach and surf fish. I am sure that I have had a huge impact on the economy of the lower Outer Banks in my lifetime.
The reason that I drive 6-7 hours down to the outer banks is mainly because of the ease of getting all of my fishing gear onto the beach.
I am also an avid environmentalist. Most of the fishermen that I have met in the Outer Bank are also avid environmentalists. In all of my years fishing at Cape Point, Hatteras inlet, Billy Mitchell area and Ocracoke Island I have never come in contact with one of the nesting birds.
I urge the decision makers to re-think the closing off of the best fishing spots in the world to vehicle traffic. If these areas are closed off I will be forced to take my vacation dollars elsewhere. If I am going to have to park my truck and haul all of my fishing gear several hundred yards in order to fish, I can do that at any other beach on the east coast of the United States without having to drive 6-7 hours.
When making important decisions like closing off these fishing areas, I hope that you will consider how this will impact the economy of the lower Outer Banks. Think of all the property owners who will be forced into foreclosure. Think of all the stores and restaurants who will be forced to close their doors.
Thanks for listening to my comments and please feel free to contact me if you would like to discuss further.
Sincerely, Steve Combs 301-933-3429

Correspondence: Dear Sir or Madam, I have read the Cape Hatteras National Seashore Recreational Area Draft Off-Road Vehicle Management Plan/Environmental Impact Statement. The plan has is a cause for great concern. I believe the steps outlined in the plan, specifically closing beaches for a 1,000 meters in all directions to preserve specific bird nesting sites, are draconian and unnecessary in the extreme. According to the draft plan, human activities only account for 3% of nest disturbances. Closing the beaches will have a negligible impact in fostering protected species. I also do not fully understand the restriction on having leashed dogs on the beach. This restriction appears to be both gratuitous and arbitrary. I would like to point out that closing the beaches will have a massive detrimental impact on property owners in the area. I own two beach houses and we operate them as a business. We depend on the income from our summer rentals to pay the debt on these houses. At the same time, we employ numerous people both directly and indirectly to care for the houses and maintain them. If the measures outlined in the plan are adopted, our business in the Outer Banks will be jeopardized. We may well be driven into bankruptcy. I believe the plan is based on unsound science, flawed assumptions and greatly underestimates the negative consequences of the plan. The fact that only two paragraphs out of a total of 810 pages are devoted to the economic impact of the plan speaks for itself. Thank you for you attention to this matter. Alex Keto

Correspondence: Cape Hatteras Management Team, As a long term solution there should be no driving on the beach however this is Hatteras so it's as natural to drive on the beach as it is to look over your shoulder and see the lighthouse! Having commented on that if the lighthouse was not relocated and whereby managed accordingly it may have been taken by Mother Ocean never to be seen again (until maybe the construction of another). Super project guys and well done! I'm confident the RIGHT laws will be passed limiting the off road traffic to certain designated sections of the region. I can't imagine not seeing the fishing crowd out on the point so that'll be an absolute mandatory section, maybe one way in & out? Same for the vast other possible sections of even just Buxton, one way on the beach, one way off the beach. It's apparent not everyone will be pleased and happy about the regulation but it's a solid step in the direction of future preservation of natural seashore life. If it disappears it can't be reconstructed so please manage it accordingly.
 Respectfully,(NC land owner) Steve Stillman

 To Whom It May Concern:
 I stand in support of HR 718. As a long time North Carolina resident, and current property owner in Avon, NC, I have enjoyed, and hope to continue to enjoy this treasured area National Seashore and Recreation Area at Cape Hatteras NC, along with other Americans and the general public, for years to come. That is why I am making this public comment.
 NPS closures due to birds and turtles have been historically satisfactory and the science is there to prove it. This recent action is unwarranted.
 Coalition for Beach Access DEIS Assessment: * Pedestrian/ORV Routes -Most Restrictive Ever * Closures Due to Birds -Most Restrictive Ever * Closures Due to Turtles -Most Restrictive Ever * Night Driving -Most Restrictive Ever * Pet Activities -Most Restrictive Ever * Benefits to Resources -Negligible * Impairment to Visitor Experience -Major * Impairment to Local Economy -Major
 As members of OBPA, my husband David and I share in the beliefs outlined by OBPA, that the very purpose of the DEIS as set forth in the National Environmental Policy Act (NEPA) is to protect and preserve natural and cultural resources in the federal decision making process. In the DEIS, the statement "protect and preserve natural and cultural resources" appears in the first sentence of the first page of the plan, in the Purpose of the Plan section, and numerous times thereafter. Yet, the 800 page document devotes only two paragraphs to analysis of cultural resource issues.
 Why does the DEIS ignore the traditional cultural importance of surf zone access to Outer Banks communities? These published criteria clearly define the traditional use and cultural value of the Outer Banks surf zone.
 NPS Guidelines state: "A Traditional Cultural Property designation can and should be based on patterns of land use that reflect cultural traditions valued by the long term residents of the local community."
 NPS Guidelines state: "A landscape can also constitute Traditional Cultural Property if it is a location where a community has traditionally carried out economic or other cultural practices important in maintaining its historic identity."
 The DEIS describes ORV access as historical in nature (pg. 83) and also both predating the Seashore and as being integral to the public use by both residents and visitors. The document also illustrates and captions historical commercial fishing (pg.18), historical recreational fishing (pgs. 15, 260) and historical general recreational activities (pg. 259).These same traditional cultural activities are featured on the front cover.
 The surf zone has long been not just a location for traditional economic activities such as surf dory seine net fishing but also other cultural activities as well. These include general beach recreation activities, social gatherings, weddings, funerals and hook and line recreational/subsistence fishing. Collectively these activities are components of an unbroken pattern of land use that extend back many generations before the establishment of the Seashore and remain integral to the fabric of the historically unique Outer Banks communities. Further yet, the continuation of this traditional pattern of land use is central to maintaining the historic identity of these same communities. Why has the NPS failed to appropriately address the traditional cultural value of surf zone access? The NPS failure stands in direct violation of its legal responsibility under Section 106 of the NEPA and the NEPA framework as a whole.
 The socioeconomic data and analyses in the DEIS (pg 270-281;561-598) result in misleading and sometimes erroneous conclusions. Critical weaknesses in the analyses pertain to: 1) statistical definition of the Region of Influence (ROI); 2) incomplete visitation/business survey data (p.566); 3) erroneous recreational user data; 4) inflated overall Seashore visitor counts pertaining to beach use; and 5) flawed key assumption concerning the maintenance of access under Alternative F. These flaws are directly manifested in both the Effected Environment and Socioeconomic Impact sections of the DEIS.
 Region of Influence (ROI):
 The ROI incorporates the Northern Beach communities, including Southern Shores and Duck. These areas are almost completely disconnected from ORV use and access issues relating to the Seashore
 Inclusion of the Northern Beaches in analysis significantly dilutes estimates of economic impact on the Seashore Villages
 Analysis of economic impact to the Seashore Villages appears to be significantly down played. Emphasis in DEIS is on the ROI-wide or county-wide level impacts
 Nowhere is it clearly addressed that the overwhelming majority of negative impacts will be felt by small businesses in the Seashore Villages rather than by overall economic interests within the greater ROI.
 Incomplete Data on Visitation/Business Surveys:
 Economic analyses in the DEIS do not use data from the first full year of the Consent Decree (2009).
 Many 2008 visitors were either unaware of the scope and breadth of Consent Decree beach closures, or had already made plans/reservations
 Actual business survey data rather than model projections for economic impact for Seashore Villages businesses are not available in DEIS Overall Visitor Counts Overall visitor counts appear to include visitors to Fort Raleigh National Historic Site and the Wright Brothers National Memorial.
 A large percentage of these visitors vacation in the Northern Beaches communities and recreate on the non-federal beaches outside of the Seashore. Visitors who patronize the Fort Raleigh National Historic Site and the Wright Brothers National Memorial but do not visit the actual seashore areas need to be factored out. Maintenance of Future Access to Cape Point and South Point Ocracoke All socioeconomic analyses related to Alternative F are

predicated on the assumption that access corridors will remain open for at least an appreciable portion of the visitor high season. Under Alternative F, the access corridors will be subject to Resource Closures based on buffers similar or identical to the Consent Decree. Unless some predictability of access to Cape Point and South Point Ocracoke can be assured, economic analyses predicated on assumption of access are fundamentally flawed.

Summary:

The definition of the Region of Influence (ROI), faulty data on economic activity generated by specific type recreational activity, incomplete visitation/business survey data, inflated overall Seashore visitor counts pertaining to beach use, and flawed key assumptions concerning the maintenance of access under Alternative F, all lead to inaccurate conclusions in the socioeconomic analyses. Specifically, these inaccuracies can be seen as understating the negative socio-economic impact of the Seashore Villages. Further, this negative impact will be absorbed almost entirely by Small Businesses. Neither of these important aspects of the management alternatives are adequately presented in the DEIS.

Feel free to make this public comment available to all. If there are questions, please feel free to contact me at:

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
For the past twenty-three years I (and my staff) have monitored Piping Plovers, terns, and oystercatchers for the Massachusetts Audubon Society, the National Audubon Society, and/or the Goldenrod Foundation. I have conducted studies and reviewed the literature on all aspects of human impacts to beach-nesting and migratory species of shorebirds. This experience leads me to conclude that any off-road vehicle use in the beach habitats of these birds harms these species of birds, diminishes the quality and quantity of their habitats, and in general alters the natural processes at play in forming healthy, natural barrier beach ecosystems. To see detailed diagrams on how off-road vehicles damage these resources please see diagrams and other scientific literature available on my website: www.goldenrod.org. Using the search bar type in off-road vehicle.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: We as a family of 14 have been vacationing on the Outer Banks for the past 5 years. We stay on Hatteras Island. We started going to Hatteras instead of places like Myrtle Beach because we like to fish and the overall experience of being able to drive to remote locations like the Point and Hatteras Inlet. I have a few questions: (1. We as a family will not continue to vacation at the Outer Banks if NPS preferred plan, or worst, for access is put in place. We spend around \$10,000 with rental and local businesses each summer. We are only one family of many who fill this way. Why is this negative impact that will be felt by small businesses and villages not clearly addressed. (2. Why is there a 1000 meter buffer for pipping plover that is left in place based on were it was born. I think a smaller buffer that moves where the bird forages would be more logical. Instead of shutting down the beach completely there still could be corridors for vehicles to pass. (3. Why are non-endangered or non threatened species like the American Oystercatcher used to close more and more area each year? These birds flourish on the dredge and spoil islands which are in the same ecosystem as the RECREATIONAL AREA and are nor adequately considered by the NPS. (4. Why will the NPS not adopt a more proactive stance used by other east coast locations to encourage turtle nesting success?

Correspondence: I am a regular visitor to the Outer Banks and enjoy use of the beach including access via ORV. I am not in favor of adding more restrictions as I feel they are already quite limiting as is. Additional restrictions will be far more damaging to the fragile Outer Banks economy than any species. Therefore I recommend you adopt Alternative A or B and not impose any more new restrictions.

Correspondence: I just recently retired and live in Florida. I have vacationed and fished on Hatteras Island for the last 47 years and I have owned an oceanfront home in Frisco for the last 30 years. I am quite concerned about several proposals in the current document. We fish from the surf and do much of our Drum fishing at night. Your proposal to not allow night driving from May 1 thru Nov 15 (Page 104 of the document)and not allow ORV's between ramps 23 and 27, Hatteras Inlet, and Ocracoke Inlet (page 97 thru 101 of the document) effectively eliminates some of the best surf fishing beach anywhere in the world. In addition a 1000 meter pedestrian and ORV closure zone around Piping Plover nests and 300 meters around Oyster Catcher nests (Page 121 thru 127 of the document)is far to large an area to close. In some parts of Hatteras island 1000 meters would run from the ocean to the sound! I also own a well trained Black Lab. Our dog goes everywhere we go, Sleeps at the foot of my bed and has never been in a kennel and never will be! Your

0008991

proposal to ban pets leashed or unleashed from March thru July 31st (page 136 of the document) is also wrong.

The proposed rules I have outlined above need to be eliminated or significantly modified. I also rent my property in Frisco and the above rules, if not changed, will keep surf fisherman away as well as pet lovers. This group of vacationers spend a lot of money and their loss as vacationers will hurt an already hurting economy on Hatteras Island. Also the large beach closures, due to nesting birds, will also start to chase away the prime time vacationers if they cannot access the beach in front of a house they are paying big dollars to rent !!!

I currently reside in Englewood Florida and on the gulf beaches here there are similar concerns for nesting turtles and birds. In this area the nests are roped off with signs, approx 20 feet in every direction, and dogs must be kept on a leash. There are fines for anyone that disturbs a nest. This solution is working while still allowing vacationers to access the beach.

Please modify these items as I fear that once the vacationers and Fishermen are lost it will be very difficult to get them back.

Bruce Bridenbaker

Correspondence:	I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access. I personally treasure our National Parks for their ability to preserve habitat for endangered wildlife, especially birds. I also believe humans should be able to enjoy the parks and that there is great importance in fostering a widespread love and respect for nature and natural places. However, the interaction between humans and habitat should never impact wildlife in a negative way, and humans should follow the "leave no trace" model whenever possible. I would be in favor of eliminating ORV use across the board, as I can't see how their use is anything but disruptive. Therefore, I would ask that the Park Service move towards the alternative that is most favorable for wildlife, and always put the interests of wildlife ahead of those of humans. We have so much space at our disposal, there's no reason we can't selflessly give back a piece here and there. Thank you for listening.

This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park. * Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles. * Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones. Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence:	I am a life long visitor to the Outer Banks, Cape Hatteras Island, in particular. I have been extremely disappointed in the way the beach access issue has been handled in the last 2 years. The "environmental" groups that have hijacked the entire process and abused the courts to impose their agenda on an area of great interest to all citizens, residents and tourists alike has damaged the local economy and culture far more than any hurricane or natural disaster has ever affected it. The closing of numerous small businesses and tourism based businesses is concrete evidence of that. These groups have used draconian measures to over regulate and deprive tax paying citizens of the right to access some of the most desirable recreational areas on the east coast for little or no benefit to the environment or wildlife. Virtually all of these actions have been taken with no input from the very people who support the National Park Service and in such a manner as to make it impossible to affect a fare and reasonable outcome. It's a blatant example of too much power being awarded to too few special interests. If you are trying to foment disrespect for the park service and environmentalism you have succeeded on a grand scale. Glenn Stevenson / Stevenson Uniform Service Inc.

Correspondence:	To whom it may concern, I have just returned from a one week vacation in Cape Hatteras NC with 4 others from Canada. We were there to participate in surfing and kite surfing along the sea shore and sound. It was apparent to us that the local outdoor enthusiasts are very concerned about proposed limitations to the use of the sea shore. I admit I have not read in detail the lengthy document detailing alternative proposed plans to sea shore access. It is clear to me however that several local residents of the outer banks are concerned that access to the sea shore may be limited by these plans. I wish to offer my support to those who strive to keep the sea shore open. The OBX shore line is a magnificent natural wonder that can be enjoyed in a non destructive fashion. Most of the use of the shore line is, as far as I can see, low impact activities such as surfing, swimming, kite surfing, etc. Participants in these sports are generally very attentive to the environmental impact of their use of natural resources. The OBX attracts thousands of						

tourists to the area from all over the world. It is one of the cleanest areas I have had the pleasure to visit. North Carolina should be proud of its care and maintenance of the region.

I hope that those considering this plan give weight to the continued and future enjoyment of this shore line by outdoor enthusiasts, both from within the US and beyond. Limiting access to either the ocean or sound side would be a great loss to water sport enthusiasts, as well as the local economy.

Correspondence:	I support reasonable access to the shoreline by means of ORV in Cape Hatteras. I would support a plan that is flexible and reasonable in its identification and management of areas that may have nesting migratory birds and other wildlife but would not ban access altogether. I would hope the Service would implement a plan that is narrowly tailored and is no broader than necessary in protecting such wildlife but be tailored to not be overly burdensome on recreational activities which, in large part, depend on ORV access. Thanks, Mike Tinyk

Correspondence:	I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access. This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me. The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D: *Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park. * Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. Correspondence:	Comment Off-Road Vehicle Management Plan I disagree with subject plan. I am a life long vacationer to the Outer Banks, Cape Hatteras Island in specific. I am extremely disappointed in the way the beach access has been handled. I will be very upset if our (group of 5 - 7 people) annual kiteboarding vacation to the Outer banks is effected in a negative way. The current beach access is the only reason why we chose this destination as our number one vacation spot over VA and FL. Mark my words, Tourism from Canadian visitors WILL suffer greatly! Jason from Quebec Canada.

Correspondence:	This is a national seashore created FOR THE PEOPLE and is not a wildlife refuge. Beach drivers will respect nests after they are identified and posted. The beach should NOT BE POSTED because of suitable habitat, but only for identified actual nests. Turtles are not a problem due to the location of their nests. Birds can and do nest adjacent to the highway so beach traffic does not disturb their site choices. Please give us back our beach.

Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
My husband and I use North Carolina beaches every summer. Since 1990 on our first trip, we have noticed more and more vehicles on the beach. This has caused significant damage in many areas, and we feel this should be corrected.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
I am a long-time, repeated visitor to the Hatteras area. I go as often as I can because of the national seashore and the wildlife it protects. The wild places are what makes the entire area worth driving to rather than going to a place like Myrtle Beach or Wilmington. The national seashore is one of the most visited national parks in the world. It is the collective property of everyone in the United States. It is the most beautiful stretch of beach in the world. It draws tourists from around the world to see species that have been wiped out at other places that lack the protective status of the national seashore. Thus, the rules of the national park should prioritize keeping the environment pristine so that the long-term economic, environmental, and social interests of our state and country are preserved. All of the whiner arguments about access to fishing are short-sighted. I love fishing too, but not if my truck destroys endangered wildlife habitat. I could just as well go to Myrtle beach to drive on the dunes.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. Correspondence: Cape Hatteras National Seashore holds a unique ecological, recreational and economic value. I believe that beaches are a public resource and should be held in the public trust for their preservation.
Cape Hatteras National Seashore provides some of the best recreational resources on the East Coast, including surfing and fishing, but I recognize that if not regulated correctly ORV use may detrimentally affect migratory species that nest in the area. I believe that a balance between access and preservation can be achieved and that allowing continued access with improved management of ORV use to the National Seashore is the optimal solution for this area.
I support Alternative C, a balanced solution that benefits the animal species while guaranteeing humans can continue to enjoy and protect this most-precious coastal resource for years to come.
Thank you.

Correspondence: I disagree with the proposed solutions for restricting access of large areas of the park to the public. As an aid kite-surfer, Cape Hatteras is a kite-surfing mecca. People from all over the world visit this location for this reason alone. Those travelers boost the local economy and make Cape Hatteras a kite-surfing icon. Restricting access will force potential tourists to go to other places such as Cabarete in the Dominican Republic which is well known for their kite-surfing. California already suffers from a lack of funding and if this passes it will make North Carolina more like California.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are

management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: Mr. Superintendent,

I had an opportunity to speak at the public meeting in Raleigh today. Thank you. I spoke on behalf of my children, ages 3 and 5. I spoke about how they love the beach house. I spoke how my children wouldn't know the beach unless we went to Hatteras. I spoke of finding hidden treasure and ship wrecks that my children wouldn't otherwise see because of limited access. I spoke from my heart. I spoke for my children. I spoke for my son who wished me luck and told me on the way out the door to come and speak, "mommy when your done can we go to the beach?" But I didn't say what I had intended to say. Mr. Superintendent, I simply request that that beaches of Cape Hatteras National Seashore remain open for all. The NPS does its job to protect its resources and wildlife. Pea Island exists as a refuge for birds. The birds have a designated space. Additionally the Park Rangers do their best by putting up buffers for birds and turtles. Let the people have free and open access. It's also our beach to enjoy. We have witnessed the rangers in action. We saw some commotion on Cape Point one morning, as we were looking for a spot to enjoy. My husband stopped the truck and talked to some folks standing around. We found out there was an injured turtle trying to get to shore and the NPS was keeping people back so the turtles could find their way. We hung around for a while and watched. We never saw anything exciting, but we sure had a very inquisitive 4 year old asking us questions. "Mommy what happened to the turtle? How did it get hurt? What are those people doing? Is the turtle going to be OK? How big is the turtle? What kind of turtle is it?" For the rest of the weekend we talked about turtles and how we should respect them, and take care to leave them alone so they can do what nature does best. We talked about the turtle nesting areas and why it is important to obey the signs and stay outside the area the NPS has roped off. Now at age 5, I listen to him explain to his now 3 year old sister about the turtle nesting areas. We would never had that experience, or such an impactful conversation at such a young age if we weren't able to access and drive on the beach. We discover so much through our children. Our children discover so much by being kids and enjoying the beach. My kids are all about Cape Hatteras. Both times I was pregnant we visited Hatteras and Cape Point. Our favorite spot though is the ramp just north of Avon. At 8 months pregnant it was so awesome to be able to drive on the beach, relax in the salt air, feel the sand on my feet, and be happy! I didn't have to worry about waddling out on the beach over a boardwalk, through the sand, carrying a chair, water, towels, food, and a cell phone at 8 months pregnant. I could load up in the truck, go to the beach and enjoy. I didn't even have to get out of the truck, which was good because it was December, and cold. It is nice to be able to drive on the beach in the winter, in the warmth of your vehicle and watch: watch the birds, the waves, the fog roll in, the wind blow the sand, the salt mist form on the windshield. The beach changes each moment right before our eyes. It is peaceful. When my children were born they each visited Hatteras within the first month of life. They don't remember but that was each of their first vacation. Five and three years later it is their favorite place on earth. As my kids have grown we explore new adventures on the island. We have followed the ruts formed by other vehicles pretending we were trains. We race in them pretending we are race cars. We go so fast that we fall. We fall into the soft sand. Oh, to be three years old again. We play Black Beard, pretending we are pirates looking for buried treasure. We play princess, after we build big sand castles. We go fishing and catch "hundreds of croaker". My son was so amazed that you could even hear them croak. We showed them a shipwreck only accessible by truck because it would have been too long a walk for a small child. We have picked up more smooth shiny rocks than sea shells because the rocks are better, and most of the seashells are too small or broken. We have watched the fisherman reel in big fish and small sharks. We have scouted for shark teeth and horseshoe crab shells. We jump over the small white water as it rushes up on shore. We watch daddy surf on the waves and look forward to the day when the kids can surf. We end some evenings by relaxing by a camp fire and roasting hotdogs for dinner. The adventures are endless because each time we go to the beach it is always different, yet peacefully it's the same beach that we have always enjoyed. Recently my family participated in North Carolina Big Sweep at the park that I work at for the Town of Cary. We picked up so much trash around our lake. My children felt proud to be a part of cleanup. We talked about how we were saving the ducks, squirrels, turtles, rabbits, deer and other wildlife. When we visit the National Seashore they see trash and want to pick it up. Sometimes we pick it up and carry it back with us. Driving down Highway 12 to Avon we pass through Pea Island. We see so many birds. We have stopped a couple of times and walked the trail. We talk about the birds, where they go to sleep, what they eat, where they fly, why do they come here; again inquisitive kids make for teachable moments. Pea Island is for the birds. Why close so much of the beach? I spoke after my mother tonight in Raleigh. She took me to Cape Hatteras as a child and now she has the opportunity to still create memories in Hatteras with me, and now also her grandkids. She said something that struck a chord with me tonight in her address to you. She doesn't want her grandkids to see Cape Hatteras through a book. After experiencing it first hand, to take it away from them would be devastating. To only experience it through a book is disheartening. Imagine, the smell of the book, the feel of the paper, the sound of the crisp pages turning, the beauty of a sunset 10 years ago with the sun glistening off the grassy dunes. Now, imagine the smell of the ocean, the feel of the cool sand and water, the sound of the waves crashing on the shore, the sound of birds in the distance, the breeze blowing down the beach, and the sun glistening golden off the sea oats as the sun sets over the dunes. Which would you rather experience: Sea Oats or a picture of brown grass on a dune? Paper or Sand? Cool refreshing ocean breeze or your AC? I know my children learn more from visiting Cape Hatteras about how the world works than they do at home seeing pictures of the ocean in a book. I speak for my children who would be deprived of the teachable moments that arise from each visit to the National Seashore. Please keep our beaches open so that my children and children of all ages (we are all children when we go to Cape Hatteras) can enjoy, learn and appreciate nature!

Thank you for the opportunity to speak on behalf of my children who would most likely only ask, "Why".

Sincerely,

Tracey Filomena and my two kids.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
Wildlife, in my opinion, is not a suitable driving surface. With smaller carapace surface area than an ATV/ORV, sea turtles and other crustaceans stand a smaller chance of survival than humans. As such, unless the creatures are provided with said vehicles to enable their coexistence with humans, they should be allowed to carry on their biological tasks without being flattened by unobservant humans. At last count, the planet had several billion humans, I think that alone is sufficient evidence that wildlife needs all of the help it can get.
The following principles should underpin the park's formulation of its final plan:
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are

management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. Correspondence: Dear Sir, Madam -
I am a kitesurfer.
I am (was) planning to visit North Carolina (Hatteras) to kitesurf later this year. I now understand there is a proposal to restrict kitesurfing/beach access in the area.
May I urge you to take a minimalist approach in this regard. Kitesurfing is a relatively environmentally friendly sport involving the consumption of no hydrocarbons during the activity (obviously one usually needs to drive to and from locations).
The concern about disturbance to birds by kites is in my view way overdone. As a practitioner of the sport for many years I have seen a huge variety of species co-existing with kites with apparently no ill effect whatsoever. Is there any evidence at all of long-lasting adverse effects on bird life from kites? Lastly, I would point out that the US (like the UK) has an obesity and inactivity crisis. Environmental protection should be balanced against the positive benefits of encouraging participation in sports and making the facilities (including beaches) available to do so.
I do hope you will keep Hatteras' beaches open and available for use and I look forward to being able to visit them.
Feel free to contact me if you have any questions.
Yours faithfully,
James Barabas London, England

Correspondence: The goal of most environmentally conscientious folks is to preserve the coastal environment for our wildlife AND for humans to enjoy as well. These are compatible goals. In my opinion, the National Park Service's preferred plan does not do this but rather it merely reflects the pressure of the lawsuit brought by the environmental groups (Southern Defenders of Wildlife, Audubon Society, etc.) These groups receive monies as a result of their "sky is falling" press releases often with questionable statistics. Where is the unbiased objective science behind their claims? As a retired Government Operations Research Analyst, I am appalled at the lack of scientific rigor behind the DEIS also. The economic impact "calculations", for example are not centered on the areas that are the hardest hit by these beach closures; rather the numbers are diluted by the inclusion of larger areas that are farther removed from the closures and therefore have received less impact. On the other hand, the calculations for the numbers of nesting birds, etc. is based solely on the closure areas and do not take into account the numbers of nests on Pea Island and the spoil islands. I consider myself an environmentally conscientious citizen and I know that residents on these banks are likewise. We walk the beach, picking up trash, calling for help when injured birds and whales and dolphins are found, and explaining to some the importance of local beach laws. So it is hard to accept the NPS preferred option under this flawed analysis and also because it will cause a much greater economic impact than outlined and it penalizes those who care for and preserve this fragile environment day to day. Would not education programs, law enforcement, and other more proactive and positive measures be more likely to succeed and keep our beaches open for all to enjoy? The lessons learned on our beaches could carry over to other environmentally fragile areas and be a win-win for all. Closing the beaches sends the message that humans cannot be trusted to do the right thing. The NPS preferred option is the old "stick" option

when our coast needs the "carrot" option. Seek out and punish those who do damage to our wildlife and beaches and encourage others to preserve, protect and ENJOY our beaches.

Correspondence: Sir/Ma'am,
 Good morning. I just recently heard about the proposed plans for the Cape Hatteras National Seashore. While I applaud your attempts to protect the seashore, and the different species that live there, these plans seem almost too restrictive.
 I am a kitesurfer. Generally I ride in the Dewey Beach areas in Delaware. Kitesurfing is an environmentally low impact sport. The only hydrocarbons consumed are those from our vehicles when we drive from DC to get to our destination. To minimize this, me and several of my friends carpool. I realize there is some concern for our "large kites" flying over and scaring birds. However, 90% of the time we are far from shore, and never anywhere near the birds in question.
 At least a couple times a year, I make the drive down to Cape Hatteras for some vacation time from DC, and to do some kitesurfing in one of the United States foremost kitesurfing locations. This is bringing hard earned cash to the area. The plans that have been proposed will stop our people from coming down.
 Please consider going with the least restrictive of the plans. I understand the desire to save the wildlife, but at the same time, we would like to continue to enjoy these areas for recreational use.
 Thank you for your time and consideration in this matter.
 Sincerely, Michael D Marchand

Correspondence: To Whom It May Concern: Preserving and protecting the Cape Hatteras National Seashore Recreational Area is a concern for all whether it be year round residents or vacationing visitors. While the need for rules and regulations regarding access to Cape Hatteras are needed, the scope of these rules need to be kept in perspective in regard to what is best for the community and environment. A set of balanced regulations that would still allow access to all areas of the park and protect the environment would be ideal. Please keep access to the park open for all to enjoy one of the most treasured and beautiful areas in the world. Thank you.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
 This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
 The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
 *Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
 * Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
 * Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent

degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: 29 April 2010 Sir,
I would like to commend the NPS for putting together an ORV plan for the Cape Hatteras National Seashore. I believe that this plan should take into account the primary objective for the establishment of a National Seashore. i.e. as stated in the establishing legislation "areas shall be, and is hereby, established, dedicated, and set apart as a national seashore for the benefit and enjoyment of the people." To that end, I would like to offer the following comments on the proposal:
1. I believe that Alternatives C, D, E, and F are far too restrictive in most of the areas addressed. This is in regard to allowing recreational access on the part of the public. I object to those limiting restrictions for ORV use in those alternatives. 2. I believe that Alternatives A or B are more than acceptable and provide the best compromise options. 3. I believe that the speed limits proposed in option B are better. 4. I have no problem with SMAs. However, I believe that there is no need to close the entire beach. Since the sea birds nest in the dunes, the lower beach (just above the high water mark) should remain open to both ORV and pedestrian traffic. Just as it is for sea turtle nests. 5. I agree that ORV access should be restricted seasonally in the village areas because of higher pedestrian usage. 6. ORV traffic should be restricted in some areas for safety or wetlands reasons. Access should be restricted to established ramps. 7. Additional ramps and pedestrian accesses would be nice but are not necessary. I would recommend against additional vehicle ramps. 8. Educational material could help users appreciate the seashore more and explain the reasons for some of the restrictions. 9. There appears to be no restrictions in these alternatives regarding driving on/in the dunes. The dunes need to be protected above all else as they are the "Keepers of the Kingdom." Violators should be severely prosecuted. 10. Night driving restrictions are apparently instituted to protect the nesting Sea Turtles. With a permit requirement that had an education part (NO FEE), this restriction should not be necessary. In any case, access should be granted 1 hour prior to sunrise, at a minimum. 11. I believe that establishing a proper carrying capacity is time consuming, expensive, and counterproductive. It will take much needed resources to establish, monitor and enforce! It will have a very large negative Public Relations impact (anti NPS) on anyone so restricted! 12. I believe that there should be NO Fees, for Anything!! 13. I believe that if there are too many restrictions placed on ORV and pedestrian access/usage, it will be highly unpopular and will encourage people to park beside the road and hike across the dunes to the water. This will defeat the purpose of this plan, ultimately be detrimental to all wildlife and help to destroy the dunes! 14. As with Pea Island Notional Wildlife Refuge, I believe that there should be provisions put in place for "dune replenishment." This may not be needed every season but is certainly needed! I would suggest that it include some type of "sprigging" newly refurbished areas with Sea Oats.
The Audubon Society and other lobbying groups don't pay taxes to support the NPS. I DO!! My vote should count a lot more than theirs! I would like to reemphasize that a National Seashore is for the people first. It is NOT a National Wildlife Refuge. From your draft Plan: Visitation to the seashore is basically increasing. This IS the economic mainstay for Hatteras Island and Ocracoke. The piping plover population is increasing. The number of sea turtle nests is increasing. Alternative A/B is working! There is very little difference in the impacts of any of the alternatives either short or long term.
When something isn't broken, Don't fix it!"
Thank you,
E. Glenn White 110 Lake Herrin Ct. Yorktown, Va. 23693

Correspondence: Dear Sir / Madam,
I have recently moved to the DC area from New York. I moved here because of employment opportunities, but another great reason was that I will be closer to the best kitesurfing/kiteboarding area in the East Coast.
I have been kiting for about 4 years now and I am looking forward to visiting North Carolina and enjoy the open terrain it has to offer. Please do not deny access to kiteboarders/kitesurfers for we, as a community, enjoy the water and environment around us.
Bi-annually, we, the kiting community, visit the beaches we use and clean up any trash or unkempt areas. This helps out in the long run not jsut for us but for the whole beach area. If we set the example of cleaning up after yourself, people follow.
Please do not terminate the use of the beaches for kilters. We beg of you to think a little more on the topic and even come down and see how people treat the area.

0009003

Thank you for your time and I hope I will be able to visit and ride in North Carolina very soon,
Brendan P. Childs Project Manager Defense Advanced Research Projects Agency

Let the birds make adjustments as needed. They will find alternative locations or will not survive. Either is acceptable. Heck, beach homeowners are expected to find alternative locations or make necessary adjustments or they too will not survive. It is time to come to grips with reality.
We all enjoy the birds but
People are important and quality of life is important and if there are not piping plovers that my life's experiences will not be damaged significantly.
People have rights and in my opinion, people should have greater rights to enjoy. Yes, we should use good judgement and make wise decisions but at the end of the day, piping plovers, etc. may not really be needed.

Correspondence: Dear Sir / Madam -
I have been a visitor to Cape Hatteras once or twice a year for the last 25 years or so. It is a wonderful place that is relatively far from the crowds of the East Coast, and I have enjoyed windsurfing and kiteboarding there immensely.
While I understand that wildlife needs to be adequately protected, I ask that you give reasonable consideration for the kites and boardsailors who currently use both the ocean and sound-side for their recreational activity. We are a group that is largely non-destructive to the wildlife, indeed the clean water and wildlife are some of the main reasons that we go to Hatteras.
During the Spring and Fall months the wind and waves of Hatteras are some of the best in the world for kitesailing. Please limit your restrictions to beach access to the minimum so that we can continue to enjoy this special place.
Thanks,
Paul Kelley Annapolis, MD

Correspondence: The struggle to preserve our planet and its inhabitants is a dynamic and complex ever changing process. As humans we act on our ability to think dynamically and complex in conceptualizing different ideas into a reality. These ideas, though with good intention, sometimes do not represent the best possible idea. If we really take all perspectives into account we can come up with a better balanced plan to protect both our beaches and its inhabitants from undue harm, but also protect the ability for us who rely on this area for income, food, shelter and fun to continue having access to Cape Hatteras's one of a kind seashore.
Recently it has come to my attention that the National Park Service is proposing some ideas to protect and preserve Cape Hatteras. In this plan is a variety of different options that are outlined as two no-action alternatives (A and B) and four action alternatives (C,D,E and F). I applaud the N.P.S. for its recognizing the importance of making sure Cape Hatteras is secure for the next 10 to 15 years. I respect nature, and I love Cape Hatteras. I am concerned though about the restriction of beach access proposed throughout this bill. So I hope that what ever plan is brought to reality, that it also considers the people who depend on this place for the reasons stated above. For what is the purpose of preserving and protecting something if it cannot be enjoyed at the same time?
Cape Hatteras is a one of a kind destination not only for the United States, but many of our friends from afar. I am writing on behalf of a community that relies on Cape Hatteras beach access remaining open year round. This community is comprised of people who respect our planet and who's joy comes from a sport that is one of the most green friendly activities one could possibly participate in. It is called kiteboarding/kitesurfing. I being part of this community fully understand both the need to protect but also the need to respectfully use Cape Hatteras for fun. Make no mistake, fun is not the only reason I am writing this today. Residents of Cape Hatteras area fully depend on the income kiteboarders bring to Cape Hatteras. With this income they support the states tax structure and economy, not to mention their own livelihood.
Obviously, I can't speak for everyone that will be affected by beach access being closed but I hope that the N.P.S. reads this and realizes maybe their cure is worse than the disease. So I argue for the position of creating a better balanced plan that preserves not only Cape Hatteras and its inhabitants, but also and just as much so, its human inhabitants ability access it. I argue that the kite's we fly have no long term affect on the environment or its inhabitants. Any disturbance to the local fish and birds is almost immediately undone once the animal realizes that we are no threat. This is no different to a natural disturbance by another native animal. If Cape Hatteras is more or less "closed down" to the public, another imbalance would be created perhaps worse than the one the N.P.S. believes exists today.
Please understand that I am an advocate of preservation and conservation. I respect nature and the gift Cape Hatteras is, not only for pleasure but for its beauty and uniqueness. But I do not support a plan that would close beach access to the public and prevent the ability for we who rely on Cape Hatteras remaining open year round. I hope that the N.P.S. and Cape Hatteras National Seashore fully understand the harm that will come from any extremist type action. A balance must be held, I hope that you factor this large voice to keep the beach access open when weighing your options.
Best of luck in your decision, Shawn Keating

Correspondence: My father and I love to surf fish. He is 76 y/o. As you know, there is a lot of equipment you need to do this. I am asking that you leave the beach access open, so we both can enjoy many more trips together.
I can say we've never run over any birds, turtles, or sea life. We always pick up any trash we see and bring it out.
Closing ORV access to the beaches will stop many fishermen, like my dad from enjoying what they love to do.
Do the right thing and please don't shut down our beaches to ORV's.
Thank you David Young (son) Ollie Young (father)

Correspondence: Sirs and Madams,
 I am writing to you concerning the proposed beach access regulations for the OBX, Hatteras seashore. I understand and appreciate the efforts that are being made to save this fragile environment and habitat for endangered species. Nothing is more important than preserving life and nature on our planet and everything is connected in some way. Human beings can often be selfish in this respect, and I will agree there needs to be some control of the situation. I also believe there should be some balance to these issues where reasonable human activities can coexist with nature. I have made over 20 trips to the OBX to enjoy the beaches, the sound - windsurfing and kitesurfing, and enjoying the unique natural surroundings. It would be very sad if we can not continue to enjoy this wonderful place, and for it to become off limits to future generations. While I urge you to consider the plan that allows for access for recreation I also support your efforts to improve and preserve nature. People may need to adapt to some strict rules to make this work, and some activities may need to be curtailed. However I feel that some activities are very benign and should not be banned altogether with some of the more obvious and damaging activities. We humans are also part of the ecosystem and we also deserve to commune with our natural environment. It may not be possible to make everyone happy with new rules, but please consider an approach that will be effective in your efforts but also gain the support of so many people who live or visit there. We all need to work together on this problem. In ending, I support the concepts of Plan C, which could probably also be further improved.
 Sincerely
 Roberto Villate

Correspondence: As a long time visitor to the Cape Hatteras National Seashore, I am firmly opposed to permanent beach closures in any manner. I feel that some of the proposed alternatives are rather draconian and go overboard, and while it is important to presevere seashore wildlife, the longterm economic impact of beach closures would be devastating to the local economy and not provide for the public good. I have spent many a vacation dollar in this area and would cease to do so if unable to access the beaches. In conclusion, please don't limit access to public lands.

Correspondence: I am a Virginia resident but frequent Hatteras all the time. Though I am only 45 minutes from Virginia Beach, Va and could save gas and time by using this beach. I chose to drive the 2 hours to Hatteras for the only beach experience that I can enjoy and that is driving on the beach in my SUV. I have had the pleasure of this for the last 20 years. My family and I enjoy going to the beach in Hatteras with friends for surfing, fishing, and swimming; we also vacation there annual in the rental cottages. I do not feel that it is necessary to close the beaches or limit access to people or vehicles for the preservation of these birds. I live close to a water way and have the same birds that nest in my yard every year. I do not have to quarantine of my yard just to protect them and yet they return every year. Charles Darwin made an amazing discovery that you might have heard of, it's called evolution. The birds will and can survive in a co-existing environment with us. As with any species it learns to adapt to a changing environment for survival. If the beaches are closed or limited than you will create bigger problems. Let's save the birds, but is that worth the expense of ruining the surrounding towns on Hatteras. If the beaches are closed or restricted to no off road vehicles than I'm sure places like Waves, Salvo, etc. will loose the much dependent on tourist business. I can honestly say for myself and the majority of my friends and family that if we cannot drive on the beach than we will not go to Hatteras, NC. I will be forced to find some other place to spend my money and vacation with my family and friends. I do not support the plan for parking lots as I can only see this making things worse by forcing people to walk over dunes to get to the beach. To me this would hurt the environment worse. Not to mention the construction and up keep of these areas. I know in this time of economic hardship, that I do not appreciate my tax dollars being spent in such a manner. Since this is Federal property my hard earned Virginia dollars will support whatever decision is made. If I have to chose a plan, then I would have to support Alternative C, which allows for minimal closure and continues to allow over road vehicles on the beach. There is just no other type of experience like being able to drive on the beach with your family and spending a day at the beach. My children have grown up with no other beach experience other than Hatteras. I hope you make the right decision for the people and towns that survive on the beach activities.

Correspondence: Cape Hatteras National Seashore holds a unique ecological, recreational and economic value. I believe that beaches are a public resource and should be held in the public trust for their preservation. Cape Hatteras National Seashore provides some of the best recreational resources on the East Coast, including surfing and fishing, but I recognize that if not regulated correctly ORV use may detrimentally affect migratory species that nest in the area. I believe that a balance between access and preservation can be achieved and that allowing continued access with improved management of ORV use to the National Seashore is the optimal solution for this area. I support Alternative C, a balanced solution that benefits the animal species while guaranteeing humans can continue to enjoy and protect this most-precious coastal resource for years to come.

Correspondence: Please do not close the beaches in North Carolina. My husband and I have visited the beaches of North Carolina throughout our life together and they are an important part of both of my daughters' lives - we took them to the beaches there at starting at the age of 5 weeks (they are now 18 and 20). My daughters grew up not only seeing the beauty of the beaches but also we made it out responsibility to teach them to protect and respect the beach - with enjoyment comes responsibility. Every visit ended with a walk along the beach - picking up trash washed ashore. We joined the NC Beach Buggy Association and the Surf Rider Foundation as a family - all because of the mission to protect our beaches to ensure years of enjoyment. Our youngest daughter even received the Newport News Mayor's Outstanding Youth Award partly because she was telling classmates about her involvement with the organizations, her desire to respect the beaches and our family ritual of cleaning the beach. She is now entering Virginia Tech as a Natural Resource Conservation student - mainly because of her love of the beach and desire to continue her visits. PLEASE keep the beaches open for our future generations to enjoy and learn to respect. I cannot imagine what would happen to the economy on Hatteras Island if you allow the beaches to close - families have been living and visiting there for generations,no one would be there to experience the beauty and the history what a shame that would be.

Correspondence: I am a simple home owner, not a lawyer, but I do have an educated opinion. What the government is trying to do on Hatteras Island is just plan wrong. After some research I have come to the conclusion that the beach closures that are being considered make no sense. There is no way it can possibly help any birds in any way. I also have a home in NJ and we have over 100 piping clovers nesting along our shores and they are doing very well without the large areas of restriction that is being asked for on Hatteras Island. No one that drives and or fishes the beach is of any threat to nesting birds. We may actually be of help by keeping some of the natural predators away by our presence. Also, the economic impact to the area could be pretty bad. The economy is bad enough. Everyone wants to protect these birds but what they are proposing will do little or no good. This is not the best area for them to nest to start with. I could go on and on but I am sure you have heard it all. I just wanted to go on record as being totally opposed to this nonsense. I cannot believe what they are asking for. Please stop this insanity and lets come up with a plan that makes sense. The people behind this are going way to far. I do not know exactly where they are getting there money from but I am willing to bet that many who have donated to them would not agree with how they are spending it in this case. By the way I am 65 and am trying to finally take some time off of work to fish and enjoy these beautiful beach's and now some idiots are trying to close them. This is just another case of another group of people going way to far with what they think is right. Someone has to stop them. If I owned a business on the island or even worse if I was one of the people who had donated there land with promises from the government of free and open access I would really be upset with all this. Just one more government lie. I sure home common sense and decency prevail.

Correspondence: I was first brought to the Outer Banks as a child in 1955. I have been privileged to vacation here almost every year. My parents bought a building lot in Salvo on Hatteras Island in 1976. Since they are both deceased, my husband and I have inherited the property and are building a house there to live year round. It saddens me to think that now I am able to live a life long dream of being a resident of Hatteras Island, we and our family may not be able to enjoy this beautiful beach as we had planned. It doesn't seem right that the Park Service can change the rules of open beaches, as was promised when this area was first designated as a National Seashore, to so many restrictions that the economy of the area has been greatly affected. My greatest concern is that vacationers will stop coming to Hatteras Island because of the beach closures, and the value of our property will be very much diminished. We had hoped our property would increase in value and be an investment we could pass on to our children, but this is definitely in jeopardy. Will the Park Service be able to reimburse all the land owners of Hatteras Island for their property devaluation?
I realize we are responsible to protect the wildlife here on the island, but I'm sure that can be accomplished without such extreme measures that are affecting the local businesses. I ask you to please choose Alternative A for your immediate Plan/EIS. Thank you for your time.
Sincerely, Elaine Haines

Correspondence: To Whom It May Concern:
It has been brought to the attention of the EastKB (East Kiteboarding www.eastkb.com) community that a variety of plans are being considered in response to proposed environmental and ecological concerns. The Outer Banks, North Carolina is a sanctuary for many beach goers, sports enthusiasts, wild life observers and most importantly, the natural environment. We, as a community, feel that it is important for the environment to be protected thus understand certain steps maybe needed to achieve this goal. Thank you for evaluating the options to improve the environmental conditions at one of the greatest destinations in the United States of America.
However, with the aforementioned said, please consider the responses you choose carefully. Minimalist environmental management approaches have worked well throughout the United States' National Parks. Closing extensive sections of beaches, the sound, and water ways will strip the very nature

and reason for why we appreciate the land in its current state. It can be said, with great certainty, that all frequent and casual users of this place intend to preserve its natural beauty and respect its great wilderness.

The proposed plans affect many groups of people ? we urge that you keep in mind the desires of all parties involved, as a significant change in the way the Outer Banks environmental situation is handled may result in a significant decrease in utilization of the land.

Should the environmental changes impact our communities' sport we would be forced to reconsider our frequent and environmentally friendly utilization of the Outer Banks. Please read our "Field Report" section of our Forums page to gauge how many people travel to the Outer Banks annually; these people help support the environment, local business and the local economy.

Kiteboarding is an environmentally friendly (quiet, no pollution and very little, if any, waste) activity which we are proud to partake in. We respect the environment and look forward to participating with those individuals charged with changing the way the current environmental issues are handled. We look forward to your consideration and hope to continue our frequent and ecologically friendly use of this wonderful destination.

Kind Regards, Jane Peterson

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.

Thank you for the opportunity to provide these comments. As a graduate of UNC-Chapel Hill and someone who hopes to return to NC someday, I really care about what happens along the shore there. It's where I first learned to love birding.

Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.

Regardless of the dangers to the wildlife, I would appreciate a quiet place to enjoy the seashore without ORV users running wild!

Thanks,
diane

The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.

The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.

Correspondence: To Whom It May Concern:

It has been brought to the attention of the EastKB (East Kiteboarding www.eastkb.com) community that a variety of plans are being considered in response to proposed environmental and ecological concerns. The Outer Banks, North Carolina is a sanctuary for many beach goers, sports enthusiasts, wild life observers and most importantly, the natural environment. We, as a community, feel that it is important for the environment to be protected thus understand certain steps maybe needed to achieve this goal. Thank you for evaluating the options to improve the environmental conditions at one of the greatest destinations in the United States of America.

However, with the aforementioned said, please consider the responses you choose carefully. Minimalist environmental management approaches have worked well throughout the United States' National Parks. Closing extensive sections of beaches, the sound, and water ways will strip the very nature and reason for why we appreciate the land in its current state. It can be said, with great certainty, that all frequent and casual users of this place intend to preserve its natural beauty and respect its great wilderness.

The proposed plans affect many groups of people ? we urge that you keep in mind the desires of all parties involved, as a significant change in the way the Outer Banks environmental situation is handled may result in a significant decrease in utilization of the land.

Should the environmental changes impact our communities' sport we would be forced to reconsider our frequent and environmentally friendly utilization of the Outer Banks. Please read our "Field Report" section of our Forums page to gauge how many people travel to the Outer Banks annually; these people help support the environment, local business and the local economy.

Kiteboarding is an environmentally friendly (quiet, no pollution and very little, if any, waste) activity which we are proud to partake in. We relish our time in the natural environment and look forward to participating with those individuals charged with changing the way the current environmental issues are handled. We look forward to your consideration and hope to continue our frequent and ecologically friendly use of this wonderful destination.

Kind Regards,
Dean Holden 10 Rodney Road Dover, DE 19901

Correspondence: I am opposed to the DEIS plan for pet management. The no pet rule during high season will further the negative impacts of the beach closure. Why can't a person using the campground bring their dog?
I am opposed to the way the NPS does predator control. The wanton killing of hundreds of indigenous mammals each year for the benefit of other wildlife is wrong. Has the NPS addressed the effects of the removal of the mammals on the rest of the ecosystem?
I am opposed to the massive buffers created by the NPS. There is not another park that allows for a 2000m closure for the plover.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
Alternative D would offer the majority of beach users more opportunities for enjoying the beach and would result in fewer disturbances to wildlife, nesting birds in particular. I feel strongly that we should share our beaches with the wildlife that depend on them, and that there are certain activities that are not compatible with such sharing.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.

This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.

The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.

* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Correspondence: Beach driving on Hatteras Island has been a tradition since before the creation of the National Seashore. My family and I visit Hatteras & Ocracoke Islands at least 3-4 times a year, and have been doing annual trips since the late 1980's. Driving on the beach to surf fish, surf and now kitesurf has been something that fully reinforces the edge of the world feel. Nowhere else in the country can you ride for miles looking for the perfect rip for casting your bait, the perfect peak for paddling out and surfing for hours, the perfect tidal pool for the kids to play in. Closure of the beaches to off road vehicles in order to protect migratory birds is silly. The birds typically nest in the dune line, above the high tide lines. Most vehicle traffic along the beach is along or below the high tide line. Riding in the soft sand along the dunes is a good way to get stuck. Common sense indicates that the birds can nest and not be disturbed by vehicles. If the birds nest below the high tide line, Maybe Darwin had a point. Keep the vehicles away from the dunes, keep the dogs on leashes, heavily fine vehicles in the dune line, mostly apply common sense. In praise of common sense and rational rules. Pete Chileas

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access. This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me. The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Only Alternative D gives enough protection to the endangered wildlife along this marvelous coast as well as protection to pedestrian traffic. I have plenty of bad experience with ORV traffic running myself and friends off of trails on beaches and in the woods in upper peninsula Michigan as well as witnessing the damage to fragile environments that they leave behind. I have also witnessed them purposely harassing wildlife in Alaska. Please restrict them as much as you legally can and police them carefully where they are allowed. Thank you for this opportunity to comment.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

As a resident of Massachusetts, I feel the threat towards our beaches very closely. The industrial and urban sprawl is getting to be out of control, and this plan would help protect the wildlife and natural state of beaches like the ones that I love. I hope that you support this plan.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
 This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife. As a birder, I value opportunities to get out in our national parks and experience the beauty and serenity of the natural world. For me, this is possible only where motorized are excluded.
 The following principles should guide the park's formulation of its final plan, should it not choose to enact Alternative D:
 *Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach.  My husband and I stayed on the Outer Banks many times. We feel that birds and turtles need their own space and they don't need vehicles on "their" space. Please support Alternative D.

Many years ago (in the 1960's) I was fortunate enough to spend a whole month camping on Cape Hatteras. I was only 12 yrs old but it made an indelible impression on me. The area has no doubt changed greatly and I doubt for the better.

ORV use degrades pretty much any environment where it's allowed. I've seen it in person in the Dunes NRA in Oregon where I live. I've also taken care of many of the injured users in the operating room where I used to work. It's a mindless and resource intensive, polluting activity.

Please act for the greater good and do everything in your power to protect the land and all that depends upon it in your management area.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

ORV's have no place in an area deemed to be "natural." Granting ORV access in effect is a giveaway to those few on ORVs, as their presence makes the area unusable by anyone else.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a final plan that takes into account the greater good and so better protects the natural resources of the Seashore.

Correspondence: I support a balanced approach to free and open beaches with reasonable wildlife management. I disagree with a number of the measures proposed in Alternative F which is the preferred option of the NPS. The piping plover unfledged chick buffer of 1,000 meters is totally unreasonable, both in scope and size. I agree with the American Oystercatcher management conceptually, but again disagree with the set required closure space of 300 meters. These measures are not realistic in achieving beach use for visitors. The proposal results in total wildlife use only. The culture around ORV use on Hatteras, particularly the southern beaches, is ingrained as a tradition for HI. Not being able to use the beaches with ORV, at night, without undue restrictions is like saying you can no longer clam at Cape Cod. It is outrageous for those who understand and know its tradition. NPS has neglected its duty to seriously consider the impact of these proposals on the culture of the island and the resulting severe negative impact on the local economy and way of life. Prohibiting vehicles year round from two of the best fishing spots, Hatteras and Ocracoke inlet beaches is again, outrageous. No islander could conceive that as a reasonable approach. What they have to give up is not balanced with the protection of wildlife. Overall, night driving to access surf fishing is a staple of the local economy. It just cannot be a reasonable solution to protecting wildlife. We have observed beach closures for the past 2 years and have been impacted negatively in our desire to use the beach in its traditional form. We are protective of the areas marked off by the NPS for bird and turtle enclosures and would report and prevent any damage to them. The islanders have lived with wildlife from the beginning of time --- the point is they have lived with wildlife - not given up their way of life for them and it is not balanced to place these draconian measures on the island. This area, specifically the southern beaches below Nags Head, are unlike any other in the world, and people come there for that very reason. The Alternative F proposals would ruin the visitor experience enjoyed for 150 years and badly hurt the local economy. You cannot look at the southern beaches and northern beaches together for considering economic impact and beach use. They are much too different to lump together. Some conclusions based on visitor experience based on northern beach tourism just do not apply south of Nags Head. Management of wildlife resources will require resources (money, programs, people). Is that the reason such draconian measures are proposed? In other words, has the proposal been developed with the idea of saving money rather than giving tax-paying citizens their due access? Who can be against protections for wildlife? Most people want to see protection and are willing to give in some areas to achieve both ends --- beach access and better habitat. It can't be implemented at the expense of a unique lifestyle on the Outer Banks.

These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
I am a firm believer that "beaches are meant for walking, not driving." Alternative D would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
Yet I realize that the National Park Service must make accommodations for others who do not completely--if at all--share this attitude. The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well

as breeding ones.

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me. As a person living in the Rocky Mountain west I have personally witnessed the destruction unregulated ORV use can have on wildlife and the environment. This ORV use should be stopped altogether or significantly curbed.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

As a former National Park Ranger, I feel the best way to serve the NPS mission of providing for the enjoyment of the park "in such manner and by such means as will leave them unimpaired for the enjoyment of future generations" is to preserve the true nature of the park by limiting ORV use. Losing the birds and sea turtles for which Cape Hatteras is famous would be a tragedy, and would certainly lessen the unique value of the park.
Thank you very much for the opportunity to provide these comments. I hope that you will choose a balanced final plan for Cape Hatteras that best protects the natural resources of the Seashore.

Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
I am a native and resident of NC and have visited Cape Hatteras every year for the past 30 years. The natural beauty and wildlife are awe-inspiring. To think that birds and turtles are to suffer because of something as mindless as ORV is disgusting.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.

* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.

* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

 We have threats to wildlife increasing everywhere, and it makes perfect sense to decrease the threats in the places that we can - like Cape Hatteras.
 Thank you for considering my perspective.

Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife.
We have become a nation of fat people. Riders of ORV's should not be allowed on the Seashore unless they weigh at least 75 pounds less than the vehicles on which they are riding. ORV parking areas should be provided next to the scales on which their riders are weighed, and if the riders are too large they must park their ORV's and be allowed access only as Seashore pedestrians.
Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.

The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunities for non-ORV users of the beaches and result in less disruption of wildlife, which are my principal priorities.
The following points should inform the park's creation of its final plan, should it not choose to enact Alternative D:
* Put Natural Resources First. Above all else, protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide greater opportunity for non-ORV users of the beaches and result in less disturbance of wildlife.
I believe that the following principles should be the basis for the park's formulation of its final plan, should it not choose to enact Alternative D:
* Provide equal access for all visitors. Under the National Park Service's preferred plan (Alternative F), ORVs would be prohibited year round on only 16 of the 68 total miles of seashore beach. This gives a disproportionate amount of the beach to ORV use. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. This approach, combined with more walkways and better access facilities, would provide balanced access for all visitors. Pedestrians and families could more safely enjoy the seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put natural resources first. Protecting the natural resources and wildlife of the seashore should come first, and recreational use should be consistent with this protection. The National Park Service's preferred plan fails to set aside adequate year-round non-ORV areas for wildlife, including breeding, migrating, and wintering species. The wildlife disturbance buffers in the preferred plan are minimum buffers and should be increased to protect breeding birds and sea turtles.
* Establish and meet clear goals for wildlife recovery. A seashore management plan must include clear goals and milestones for wildlife recovery. Although there are management targets in the DEIS, they need to be based on the potential of the seashore to support wildlife rather than on its recent degraded abilities. In areas where birds, turtles, and plants are not coming back as planned based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals as well as adequate management to achieve them should be for migrating and wintering species as well as breeding ones.
Thank you for the opportunity to provide these comments. I

These creatures are increasingly facing huge threats. They already live on the fringes of society. We need to protect what little habitat they have to survive.

Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
Vehicles are already EVERYWHERE! We spend billions per year to maintain roads we already have...can't we simply LEAVE THESE AREAS ALONE? Is there NO WHERE for wildlife or people to escape the noise and destruction of any type of vehicle??!
* Put Natural Resources First. This should be all that needs to be said! Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I'm sending this to you in regards to Cape Hatteras. My family as been going here for the last 40 years and I would hate to see the next generation loose this special place. The people of the island depend on tourist visiting every year and with the current state of closers people have quit coming. I have a few thing to say that could help. Cape Point is what everyone comes to see and I know wildlife frequents this place to make nests, but with the harsh environment that summer storms and extreme high tides no nest survive. I would like to see the area around the salt ponds cleared for a bird habitat. When it was cleared before, birds used it and flourished. As for turtle nest, they should be moved to a safer location that already has closers and not many people frequent. If this happen, Cape Point would never have to close and this would help the local economy rebound. Dredge Islands are over run with birds of all kinds and should be counted. These islands should be encouraged to be built and should be maintained. Night time driving has done nothing but help and should be reinstated. With people on the beaches at night, predators do not have a chance to feed. I'll go a long with a beach driving permit. Carolina Beach does it and it has helped slow the traffic down. Please remember everything proposed is doing exactly what the Special Interest Groups are pushing for and taking our right from us. How many of the people wanting us off the beach have ever stepped foot on a beach at Hatteras at all? Now I'm sure by all the phone calls, letters, and emails you receive daily from those of us that frequent the island to fish, go shelling and for family vacations you will see why we are fighting this so hard. Many of us do not even live there and think of this special place as our home. This country was founded by people like us not Special Interest Groups.

Correspondence: Dear Sir, Madam -

I am a beach enthusiast and a kitesurfer.

I am planning to visit North Carolina (Hatteras) to kitesurf later this year, however I now understand there is a proposal to restrict kitesurfing/beach access in the area.

May I urge you to take a minimalist approach in this regard. Kitesurfing is a relatively environmentally friendly sport involving the consumption of no hydrocarbons during the activity (obviously one usually needs to drive to and from locations). We are constantly looking to protect and maintain the launch sites in order to enjoy this "green Sport."

The concern about disturbance to birds by kites is in my view is way overdone. I do not believe that the occasional kite being launched on the beach only to be flown on the water has a significant affect on the birds/nesting spots. I would urge you to consider the other dangers that exist such as other predators and beach erosion.

Lastly, I would point out that the US (like the UK) has an obesity and inactivity crisis. Environmental protection should be balanced against the positive benefits of encouraging participation in sports and making the facilities (including beaches) available to do so.

I do hope you will keep Hatteras' beaches open and available for use and I look forward to being able to visit them.

Sincerely,
[Nicholas Vornle] Southerm, Connecticut

ORV's are unnatural, unsustainable, and have no place in our National Parks any more than they would in our National museums or any other of our nation's treasured places. We don't allow hunting, because it creates an unsafe atmosphere within the parks, putting both people and nature at risk.

ORV's are just as deadly, perhaps moreso, to wildlife than guns. They kill indiscriminately, maime the land, destroy the soil structure, and leave a tire-track waste land in their paths. I demand we have NATIONAL PARKS, not national parking lots!

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.

* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
As a travel agent with a focus on ecotourism, I know the economic benefits of having wildlife for travelers to view. I know that birding brings in huge income to areas where birds are protected and beaches are a prime spot for them to nest and raise chicks. ORV's have many places to drive at high speeds. Beaches are not the right place Please do all you can to protect the beaches for wildlife
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.

Off Road Vehicles are an abomination. They should be outlawed for recreational use and restricted to use by farmers and those who manage herds. I have seen the peace and tranquility of much formerly wild land ruined by these mechanical monsters, and I fear that mankind is rapidly losing its sacred heritage, its 'connectedness' with nature.

This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.

The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. * Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.

This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.

The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.

* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.

* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.

For many of us that have health or disability issues, the shore is not a friendly place. With the addition of ORVs it can be hazardous. Our intent in visiting is to enjoy the nature of the shoreline and area vice dealing with mass motored vehicles. There should be an area allowed for the pristine quality of nature itself.

This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.

The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.

A very large fraction of our Atlantic coast has been totally devoted to mass recreation and development of resorts, with wildlife driven from their habitat. Alternative D is needed to preserve beaches in close to their natural state. This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.

The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach.  ORV use on a beach can be dangerous. In Florida, several people on the beaches have been injured by ORVs and automobiles. ORV use on any beach anywhere should be the exception, not the rule. Beaches belong to the wildlife that use them and humans should tread lightly there.
 Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

We need to preserve the wildlife (including plants) at Cape Hatteras and motor vehicles are NOT wildlife. I think they should be kept out completely.

* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. It is wrong to allow a few people to destroy the peace and quiet, the safety of children, the habitat for seabirds and the biodiversity of native plants that are essential to the health of the seashore ecosystem.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This is my country. I was born here and have lived in many parts of this country and vacationed in many others. An 84% decline in waterbirds is totally unacceptable. Since when is any idiot who is able to get their hands on an ORV able to defy our laws and damage our native plants and animals? Here in Minnesota we are altogether familiar with this problem. These witless wonders go out and destroy property and wildlife because we cannot watch all the area 24/7. Please help save our part of the planet for the future. Thank You.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. * Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Dear Superintendent Murray,
Of the proposed plans for the management of ORV use at Cape Hatteras National Seashore, we support the "environmentally preferred" Alternative D. The natural resources and wildlife of the Seashore should be protected, and recreational use should be consistent with this protection.
Thank you for the opportunity to comment on the plan.

Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
I have spent time walking on some of these beaches and ORV use clearly needs to be more restricted, to preserve the quiet beauty and the wildlife of these park areas. Beaches are not roadways! This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
I am writing at the urging of the Audubon Society, whose position I support fully. For years I have been asking myself why we, as a society, allow jet skis on rivers, motorboats on lakes, motorized vehicles on beaches, and snowmobiles in national Parks. At some point in the last century many Americans developed an addiction to motor sport, probably at the same time we became a throw away culture. Both are forms of environmental suicide and must be reined in.

The alternative plan the audubon Society recommends would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.

The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.

* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.

* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence:	I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access. This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me. The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D: *Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park. * Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles. * Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones. Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence:	I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access. This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me. I have visited Cape Hatteras in the past to view wildlife, particularly birds, and widespread ORV use would be extremely detrimental to such pursuits. At a time when ecotourism is widespread and accounting for so many billions of dollars, and wildlife is under such siege, it is extremely important to preserve it and the impact of the nearby communities. The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D: *Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
Vehicles have millions of miles of roadways to use without using natural areas. Vehicles are not for recreation; they are for ransporation. Keep them out of natural areas. ORVs do not deserve to use the majority of beach space, while non-ORV users get little protected beach. This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.

This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.

The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

- *Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
- * Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
- * Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.

* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.

* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.

This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.

The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.

* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
- * Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.

This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.

The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

- *Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
- * Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
- * Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. The birds do not get the chance to speak for themselves. We need responsible action to prevent destruction of their breeding grounds. Preventing over use by ORV's has become a National issue almost everywhere we turn. Please protect these birds in this valuable location

* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to

me.

The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.

* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.

* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
