* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.

This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me. "I volunteer worked at a nature preserve in N.E. Ohio that was constantly making efforts to keep ORV's from impacting protected habitat that was set aside for spotted turtles. The noise pollution, the air pollution and the physical destruction caused by the vehicles and ORV users is bad" say I Nancy. ORV have a productive use - on farms, for specified hunting areas for set-up of duck decoys or perhaps to haul in camp gear and haul out elk you've legally hunted. Water/Land areas MUST be protected for Earth's wildlife - it is their home nursery. Wildlife's food and shelter areas are supposed to be protected by humankind. Wildlife is threatened and much is in danger of extinction - we Humans are not (except at our own hands).

The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

- *Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
- * Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
- * Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

The ORV users need to work out deals with towns where they can cruise along highways, or with megafarms where they can race along the borders of vast stretches of cropland, plus aren't there already beaches that CURRENTLY allow motor vehicles like DAYTONA where ORV users can waste fuel. "I am a birder, my Mom is a birder, my Dad was a birder, my friends are birders. We vacation in places that we can go bird watching! Take a poll along the area of concern and many of the people you will talk to bird watch". I avoid ORV areas as the atmosphere they create is disharmonious, and polluted. Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore. I hope that Cape Hatteras remains a place to recreate and rejuvenate and enjoys God's granted grace. Thanks again for your time.

Please--once a species is gone, it is gone. Now that the disaster is unfolding in the gulf it is even more critical that we protect vital habitat for endangered/threatened/stressed birds, turtles and other wildlife. Isn't there enough destruction in the world already? Please keep our protected areas protected!

Correspondence: Mike Murray, I disagree with the entire DEIS. I support the Coalition for Beach Access' position. This whole process has been Bogus from the start. I attended most of the reg-neg meetings and to claim this DEIS came from the input gathered at reg-neg is an insult! I won't bother getting into any details

because better qualified experts already gave you advise and you just ignored it! I'm sure, in your mind, you have better things to do than read another "redundant" reply. I'm sure you would rather be doing something useful like exterminating the wildlife in the park or chasing US citizens out of their National Seashore RECREATION Area; or whatever else the alleged "enviromentals" tell you to do.
Just for the record I did not agree the consent decree either.
Nevin Thomas

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
I support the protection of birds and sea turtles as well as all wildlife. We have an obligation to protect these precious, vulnerable creatures and their environment, especially since we humans have vastly contributed to the pollution of the Earth. Nature is such an amazing gift for us to witness and enjoy, so the least we can do is provide appreciation and respect by preserving its existence. Don't emulate fast food restaurants or Walmart that encourage over consumption and mass production offering products for less even though it really just costs us more in the end. There must be balance in life or else something will have to give and it usually is detrimental. Please ban the use of ORVs in order to encourage and promote the sustainability of such pristine wildlife and in the end, ours as well. Nature is the only true connection to peace and balance that we have, and God knows we need peace in our lives. If you overdue the accessibility to this environment, you are placing the wildlife in great danger, risking their survival, and thus ultimately destroying the very reason most come to visit, besides being completely irresponsible to Earth's Natural Law that existed way before humans came to be. Why did you create this land to be recognized as a National Seashore and Park in the first place? Build an off road course some place else without stealing the home of other wildlife. That's why race tracks are built, to protect innocent bystanders.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.

ORV's are of interest only to a small group, almost entirely young males. The alternative plan would be for everyone.

This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.

The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only

This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.

* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.

* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.

This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.

The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.

* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.

* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife. I completed an extensive research project on the harmful impacts of ORV use on native ecosystems my senior year at Cornell University, and concluded from my studies that we must minimize such activities in order to protect a healthy ecosystem.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore is all-important, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
I feel ORVs have no place in National Parks. They are an assault on nature. Please consider a complete ban of their use. If not, then adopting an alternative plan would be better than nothing.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.

* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.

This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.

The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.

* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.

* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.

It appears "D" plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.

We need the the following principles followed if you decide not choose to enact Alternative D:

*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife without having to face the noise and fright caused when they approach. All visitors include those who use the beach for walks and picnics. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.

* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.

* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The birds and wildlife have a limited habitat. The people on off-road vehicles disrupt that habitat and they can certainly find less damaging places to ride.
I am a birdwatcher and hiker who values our special national places. Please consider protecting the seashore with the best practices. When disasters like the BP oil spill in the Gulf can happen, we need desperately to protect our seashores.
Thank you for allowing these comments.

Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
Really, this is a no-brainer! This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Correspondence: I was planning on going to Hatteras in June. It looks beautiful, but really only want to kite with my wife. We have traveled to many destinations for kiting. The short of it is this; Kiting isn't a cheap sport. Thusly, kites have a little extra coin. They make great tourists. Last, it is a clean, quiet sport.

Correspondence: I appreciate the opportunity to comment on National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support Alternative D if modified to provide greater pedestrian access, which was identified in the DEIS as the environmentally preferred alternative. This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principals should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
Provide Equal Access for All Visitors: Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
Put Natural Resources First: Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
Establish and Meet Clear Goals for Wildlife Recovery: A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Provide Equal Access for All Visitors: Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
Put Natural Resources First: Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
Establish and Meet Clear Goals for Wildlife Recovery: A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Correspondence: I appreciate the opportunity to comment on National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support Alternative D if modified to provide greater pedestrian access, which was identified in the DEIS as the environmentally preferred alternative. This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principals should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
Provide Equal Access for All Visitors: Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
Establish and Meet Clear Goals for Wildlife Recovery: A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Correspondence: I appreciate the opportunity to speak out on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support Alternative D if modified to provide greater pedestrian access, which was identified in the DEIS as the environmentally preferred alternative. This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principals should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
Provide Equal Access for All Visitors: Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
Put Natural Resources First: Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
Establish and Meet Clear Goals for Wildlife Recovery: A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities.  Not only is Cape Hatteras in need of more restrictions for ORV use, but ALL eastern shoreline areas should be protected, especially where endangered species nest.

Correspondence: I appreciate the opportunity to comment on National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support Alternative D if modified to provide greater pedestrian access, which was identified in the DEIS as the environmentally preferred alternative. This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
 The following principals should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
 Provide Equal Access for All Visitors: Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
 Put Natural Resources First: Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent

with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.

Establish and Meet Clear Goals for Wildlife Recovery: A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Correspondence: Our barrier islands provide crucial habitat to sea turtles, wildlife, and a broad diversity of birds. It is our responsibility to guard and protect this area. Human interference, by allowing more Off Road Vehicles and man-made structures only serve to upset this ecosystem.
In light of the recent Gulf oil spill, and with possibility of future oil/gas drilling off the Atlantic coast line, our barrier islands and it's wildlife are threatened even further.
Please work to keep the wild areas wild. Visitors to the Outer Banks that truly love the area want it to be preserved, not turned into just a tourist area with buildings, walkways, roads, cars, off-road vehicles, and other noisy activities.
Access facilities and equal access planning should be consistent with overall planning to PROTECT our important barrier islands and Atlantic coastline. I suggest that access facilities and walkway building need not be expanded, just improve those that already exist. This may end up costing less from National Parks budget as well.
The above comments are my own.
C. Andrews, Charlottesville, VA
[The comments below are as stated by the Defenders of Wildlife website:
Put Natural Resources First: Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.

Establish and Meet Clear Goals for Wildlife Recovery: A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Correspondence: I appreciate the opportunity to comment on National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support Alternative D if modified to provide greater pedestrian access, which was identified in the DEIS as the environmentally preferred alternative. This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.

The following principals should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
 Provide Equal Access for All Visitors: Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.

Put Natural Resources First: Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.

Correspondence: I really don't understand the point of driving vehicles on the beach? We know where the car's place is, on the road. Please do something about this and help save numerous animals such as sea turtles and other endangered animals. Thank you.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.

This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.

The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.

* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.

* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.

This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.

The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.

* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.

* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.

This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.

The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.

* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.

* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.

We must provide sanctuaries for wildlife where ORV's are not allowed; this planet has always been large enough for all to live in peace and it is only man's greed and selfishness that has destroyed so much. ORV's have their place but they should not be allowed everywhere; we must care for the other

creatures and their God-given right to have a safe place to live their lives.

This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.

The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

Mr. Murry I have deleted the form message as I'm sure you've memorized it by now.

I have only in the last 7 years started to visit your beautiful seashores. They are a haven of serenity for me. I would really like to see your beaches free of unnecessary vehicles all together. I understand the Park Service should utilize ORV's, in fact it's always a pleasure when they come by. I also understand that the local population has become accustomed to using their beaches as they see fit, but sometimes with familiarity comes complacency. We need to become a society that isn't so self centered, We need to look at the whole picture and do the right thing for everyone and the environment.

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and hope for a balanced final plan for all visitors that better protects the natural resources of the Seashore.

Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I appreciate the opportunity to comment on National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support Alternative D if modified to provide greater pedestrian access, which was identified in the DEIS as the environmentally preferred alternative. This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principals should underpin the park's formulation of its final plan, should it not choose to enact Alternative D: PLEASE PLEASE PLEASE Provide Equal Access for All Visitors: Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
Put Natural Resources First: Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
Establish and Meet Clear Goals for Wildlife Recovery: A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principals should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
Provide Equal Access for All Visitors: Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
Put Natural Resources First: Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
Establish and Meet Clear Goals for Wildlife Recovery: A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Correspondence: I appreciate the opportunity to comment on National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support Alternative D if modified to provide greater pedestrian access, which was identified in the DEIS as the environmentally preferred alternative. This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.

Correspondence: With the oil gushing in the Gulf protecting clean habitat is more important than ever. Personally I think none of the beach should be used for ORV's ! But that being obviously impossible if the beach is saved from the oil lets save the beach! Please!
I appreciate the opportunity to comment on National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support Alternative D if modified to provide greater pedestrian access, which was identified in the DEIS as the environmentally preferred alternative. This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principals should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

Put Natural Resources First: Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.

Establish and Meet Clear Goals for Wildlife Recovery: A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Correspondence: I appreciate the opportunity to comment on National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support Alternative D if modified to provide greater pedestrian access, which was identified in the DEIS as the environmentally preferred alternative. This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principals should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
Provide Equal Access for All Visitors: Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.

As a frequent visitor of the Outer Banks, I appreciate the opportunity to comment on National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support Alternative D if modified to provide greater pedestrian access, which was identified in the DEIS as the environmentally preferred alternative. This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.

The following principals should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

Provide Equal Access for All Visitors: Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.

Put Natural Resources First: Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.

Establish and Meet Clear Goals for Wildlife Recovery: A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.

Off-road vehicle access is a privilege and not a right. Where it can be done responsibly without harming sensitive wildlife and negatively affecting the enjoyment of the park by other people, it is fine. But where there is a conflict between off-road vehicle use and protecting sensitive wildlife (particularly birds, whose populations are already in steep decline throughout the country), the decision should always go to the activities that have the least negative impacts on the environment.

It should be emphasized that off-road vehicle usage does not just negatively affect wildlife, but it negatively affects many (human) visitors and their ability to enjoy the beaches in a variety of ways as well (noise, pollution, safety, etc). Many people come to Cape Hatteras from across the country for the ability to enjoy the stunning natural beauty of the area, and to so observe rare birds and other wildlife. With off-road vehicles roaring through the areas and regularly scaring off wildlife, there will be much less incentive for people to come and enjoy the area for its natural beauty.

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to us.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles. As divers and birders, this issue is very important to us.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
Thank you for the opportunity to provide these comments. We will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

 I totally agree. We're up against the problem of human encroachment on natural habitats; we need more protected wild life areas. This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
 The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

Correspondence:	<p>As an avid angler on the North Carolina seashore, I am strongly opposed to the National Park Service (NPS) preferred alternative, Alternative F, in the DEIS and urge you to make significant changes to the preferred alternative in order to provide both reasonable resource protection and reasonable public access to public land. Recreational fishing is one of the most enjoyable American pastimes, and Cape Hatteras National Seashore has some of the best surf fishing locations on the east coast ? accessible only by ORV.</p> <p>Alternative F is the most restrictive management option to date, far exceeding any sense of balance between resource protection and public access and betraying all promises made to the public regarding recreational uses in the seashore. The majority of the provisions included within the preferred alternative far exceed anything proposed by a majority of the Negotiated Rulemaking Committee, including excessively large resource closures (buffers), unnecessary year-round and floating closures, and the lack of access corridors around or through resource closures.</p> <p>In order to restore balance to the DEIS, I highly recommend that the NPS revisit the proposal put forth to the Negotiated Rulemaking Committee in December of 2009. It provides the necessary protections for wildlife resources while having the support of a majority of the local community. Without reasonable ORV access, responsible anglers like me, and the local economy that is supported by recreational fishing, suffer greatly. I urge you to provide a better balance between resource protection and recreational uses by incorporating the December 2009 recommendations from the Negotiated Rulemaking Committee into the preferred alternative.</p>

Correspondence:	<p>I would like to comment to the NPS (DEIS) which I feel is flawed. Some point in particular that I strongly disagree with.</p> <p>I disagree with the routes and areas. Why has NPS never made public a list of reported incidents?</p> <p>On page 210 no piping plover deaths have been attributed to general ORV's. Most of all cases have involved NPS ORV's.</p> <p>I disagree with closures due to birds; I disagree with the killing or capture of other native animals to save birds.</p> <p>Why close massive areas when only 3% of interference is attributed to humans whether in an ORV or pedestrian.</p> <p>Cultural/historical values, I disagree with the DEIS when they only have 2 paragraphs out of the 800 page document devoted to this.</p> <p>I disagree with the socioeconomic analysis. The visitor count should have been with the Cape Hatteras National Seashore Recreational Area, only; not Fort Raleigh and the Wright Brothers National Memorial.</p> <p>There is incomplete data since they did not use data from the first full year of the consent decree (2009).</p> <p>I strongly disagree with the restrictions on pets on page 136; I can't understand why the pets on 6 foot leashes would pose a problem, (none that I have ever heard of).</p> <p>Why was alternative F attributed to the advisory committee? Whom the negative regulation was discontinued.</p>

 I agree with you that Piping Plover needs to be protected, but I disagree with some of the ways that you are protecting them. You, yourself said that the Piping Plover will not nest in grass, so why not plow up the grass rather than move the stakes closer each year to the ocean.
 We all know that the outer banks always have hurricanes, over wash that entirely wash away nests and baby birds. In the past 1970's and early 80's the maintenance people always plowed up the grass (especially around the pond and the point) so the birds could nest and use the pond for water, therefore, freeing them from over wash and hurricanes.
 This allows the people to use the ocean and birds be safe at the pond.
 Sincerely, Nancy Giannotti

 Dear Mike,
 My husband and I agree with the DEIS statement "protect and preserve natural and cultural resources on page 1. Cape Point is a great cultural experience for young people and adults alike. The shoals and graveyard of the Atlantic are of great historical significance. This area should be accessible by ORVS to preserve the culture of this area.
 Sincerely,
 Merrill T. Griffin

 Dear Mike, My husband and I agree with the DEIS statement "ORV'S have long served as a primary form of access for many portions of the beach in the seashore and continue to be the most practical means of access and parking for many visitors" (page 1). Pedestrian access only harms grandparents with young grandchildren as is nearly impossible to carry all the items needed for a great beach experience for them across a long stretch of soft hot sand. We abide by all the wildlife enclosures and clean the beach when needed. Please continue to allow ORV's for beach access.
 Sincerely,
 Merrill T. Griffin 4/24/2010

 - New ramps 32.5 to ramp 38 do NOT AGREE NO CLOSURES NEEDED. - Cape Point DO NOT AGREE to March 15th to September 15th closure. ANY BIRDS NESTING WOULD MOVE TO BETTER PROTECTED AREAS. - 0.2 mile South Ramp 4 to Oregon Inlet Pond. DO NOT AGREE ON CLOSING March 15th to July 31st. Nesting birds will find and nest in inland waters where better protected. - I DO NOT AGREE with consent agreed upon. Need to reverse this and get back to common sense. - I purchased a house in 1986 and then RETIRED HERE in 1999. Main reason is I like to fish and use open beaches and do not think NPS or JUDGE BOYLE has any business to change to what we have now!!

 RE: Seashore Access Plan
 Dear Mr. Murray,
 I am sure you have not received many if any letters agreeing with the Park service plan to again close sections of the beach to ORV traffic. The plan is impressive in length and content. Pages 222 ? 257 clearly identify problem areas of use conflict between nature and man.
 This also is in opposition to the beach access closure proposed.
 Now just turned 60, I look back to my access to the beaches from Nags Head to Ocracoke over the many years. My youth, early marriage, two children growing up, have produced many memories of our ORV experiences. I can remember going onto the beach at the old Coast Guard station at the Oregon Inlet Bridge and driving on the beach all the way to Buxton lighthouse.
 I have met many friends on the beach, some fishing early spring and others early winter, some in the heat of the summer. The one thing I have found in my many years of cumulative time spent on the beach is there is no one time of the year to enjoy the beach. The beach is used blue skies and hurricanes' alike, heat of the summer and coldest winter day or night.
 The economy of OBX is sole dependent on beach access. Without the beach and access thereto many residents will be without work. The current economy as it is has created harm to OBX's economy, but there is clear evidence that the prior year beach closures have also added to this situation. I believe in protecting nature. I admit I am not the one to make the decision what measure to use in protecting birds and turtles or humanity.
 I respectfully ask is there not a reasonable way to give access to the entire beach if limited to only direct ramp to water edge back 100 to 150 from the ocean. The Outer Banks Seashore provides experience through the entire year. Your proposals eliminate prime fishing experiences for the entire family during peak seasonal fish migrations, both spring and fall.
 I see your office is in Manteo. Currently my wife and I reside (second home) in Manteo Marina across from the replica ship on Festival Island. Our boat name is Sea Venture. You will see our 2 labs on the back deck. Please feel free to come by. We would both enjoy meeting you.

Correspondence: To whom it may concern: Public beach access for the Cape Hatteras National Seashore is not only a right of US Citizens, but must be preserved in order to continue the way of life for those who live on Hatteras Island. The impact on the tourist industry and the fishing industry will be severe to say the least. Please take into consideration the generations who have enjoyed this unique, pristine stretch of beach and the generations to come who will be unable to enjoy it. Every effort is made by the vast majority of visitors and locals on this island to preserve the natural habitat that exists there. We realize that in order for this island to stay as it is, we must co-exist with the species that thrive there. That being said, to remove human interaction from the equation will not make a significant impact on the survival of species who existence is not threatened currently. Please consider the will of the majority who love this island for what it is, and not the will of the minority who seek only to eliminate human interaction wherever it exists. If we allow this to occur on this small stretch of sand, they will only require in the future that we allow the Atlantic ocean to take back our sandbar completely... something the NPS has proven time and time again that it is in support of by not repairing fallen dune-lines that protect not only many millions of dollars in investments, but the other species who thrive there as a result. Thank you for your consideration of our rights as Americans to free and open beach access for all. Remember, were it not for the tourist and fishing market on the island, the islanders will surely face absolute poverty.

Correspondence: This letter comes to you hoping that you are intelligent and open minded re the Outer Banks ORV Rules.
The Outer Banks pioneer families donated this marvelous seashore area to the Federal Government for a National Recreation Area, as a perpetual hope that all people would be able to enjoy the fishing, swimming, shelling and boating advantages. On top of that list was their own families and descendents.
If the proposals of the special interest groups that are determined to close this National Seashore Recreational area for populating birds or whatever narrow minded reasons they can fabricate become policy, those who have called the OBX their home for generations will be literally pushed out of their homeland by strangers. They will be unable to make a living if the tourist industry suffers, and suffer it will. Most tourists are fishermen, or beach lovers. If they are unable to do either activity except in a tiny designated area or by an entrance ticket, they will seek other shores. I can assure you we will if this is proclaimed.
The other methods the descendents use to provide for their families are fishing, trapping crabs, etc. or taking fishing charters. Much of this provides fresh fish for area restaurants. It is not economically feasible in these days of high gas prices to even consider transporting their catch to the remote populated cities. Once again, these people will suffer as they join the ranks of unemployed Americans who would like to work and have a political policy doing more harm than good.
Life is not all black and white. Sometimes one must consider the greater good. Given the choice of letting people live, work and have their lives uninterrupted in their homeland or chasing birds hoping you can corral them into a designated area doesn't sound like much of a hard choice.
There are many unemployed Americans in cities that are unable to find work. You live on the Outer Banks; you know hardship will befall these people. They cannot just pick up and leave their homes, their traditions, their families.... they don't want to and they lack the funds to start over from scratch. In decades past, their ancestors had to be hard working and have great survival skills just to remain there. Do not let their efforts to have land for their descendents to enjoy have been in vain. This is your responsibility.
Let us keep America the Home of the Free.
Thank You,
Most Sincerely,
Bob & Becky Sharp 893 N. Homestead Lane Lancaster, KY 40444

Correspondence: As an avid angler on the North Carolina seashore, I am strongly opposed to the National Park Service (NPS) preferred alternative, Alternative F, in the DEIS and urge you to make significant changes to the preferred alternative in order to provide both reasonable resource protection and reasonable public access to public land. Recreational fishing is one of the most enjoyable American pastimes, and Cape Hatteras National Seashore has some of the best surf fishing locations on the east coast ? accessible only by ORV.
Alternative F is the most restrictive management option to date, far exceeding any sense of balance between resource protection and public access and betraying all promises made to the public regarding recreational uses in the seashore. The majority of the provisions included within the preferred alternative far exceed anything proposed by a majority of the Negotiated Rulemaking Committee, including excessively large resource closures (buffers), unnecessary year-round and floating closures, and the lack of access corridors around or through resource closures.
In order to restore balance to the DEIS, I highly recommend that the NPS revisit the proposal put forth to the Negotiated Rulemaking Committee in December of 2009. It provides the necessary protections for wildlife resources while having the support of a majority of the local community. Without reasonable ORV access, responsible anglers like me, and the local economy that is supported by recreational fishing, suffer greatly. I urge you to provide a better balance between resource protection and recreational uses by incorporating the December 2009 recommendations from the Negotiated Rulemaking Committee into the preferred alternative.

Dear Supt. Murray,
I have been diving and surf fishing at the outer banks for over 40 years; it is one of the most enjoyable things I have ever done. The banks are not only beautiful, but they are the best surf fishing place anywhere.
I hope a resolution can be found so that I may continue to pursue this, along with many others.
Thank You, Mr. Robert L. Wright Jr. 1003 Kendale Circle Chesapeake, VA 23322-6872

I do not agree with the DEIS ORV Version F. Statistics show that when humans are present in certain areas predation in those areas is slowed and decreased greatly. Placing 1000 foot buffers makes threatened animals more prone to predation. Several military bases, which are government ran, only have 30 feet buffers around endangered animals. Closing the beaches would be an economical disaster on residents of Hatteras Island. Don't people have the same rights as animals? Seems like some compromise could be made for all.
Dale Smithson Resident

Correspondence: I appreciate the opportunity to comment on National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support Alternative D if modified to provide greater pedestrian access, which was identified in the DEIS as the environmentally preferred alternative. This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principals should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
Provide Equal Access for All Visitors: Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
Put Natural Resources First: Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
Establish and Meet Clear Goals for Wildlife Recovery: A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
Please do all you can to protect wildlife and their habitats.

Correspondence: I am a bird lover, own and organic market and fought to stop aerial pesticide spraying in favor of integrated pesticide management and cared for over a doz blue bird boxes at my previous home near Assateague NP in MD. I now live in Buxton NC right at the hot seat of this debate and sign up to 3 petitions a day for animal , environment and sustainable agriculture, organic standards etc. I have a good idea now when birds & turtles nest at our

beaches and have seen them first hand coming in to lay their eggs . Yes I can see closure times for off road vehicles during this time only but closing them at other times or not allowing horse or pedestrians access to the beaches is wrong,it is our park like any other park. You have to remember there are huge tracks of Pea Island here and Okracoke island beaches that are not accessible with tremendous areas for bird nesting. I also do not want to see the construction of any walkways. The only thing the locals have here is the beach and it is being threatened not by the off roads vehicles but by the proposed oil drilling and the huge spill in the gulf. This is by far a much more serious threat and the locals here do not seem motivated to fight the drilling. This group wants drilling and to ride on the beach year round. I believe it should be closed during nesting season and only during nesting season,the # of vehicles if shown to be increasing should be limited to approx. what the levels are now .If there were not so many other nesting areas I would feel differently. It seems the park service want to close the best fishing areas like the point,shoals area and the inlet . The fact is the huge fishing vessels are the real threat to the fisheries not these fisherman. I do not know why the park is after the best fishing spots but its wrong. I cant agree on this action ,it is way too extreme,I live here and I know this for a fact there is NO REASON to close the beach after breeding season all the birds and turtles leave ,I walk the beaches when they are almost desolate all year so I think I know the facts. Please focus on the oil drilling and getting this nation off petrochemicals. If we had bio diesel running our ferries,boats and being sold to all these 4 wheel truck life would be much better for the wildlife here,this is our real problem,this filthy diesel here.Secondly the Dawn commercials making themselves look like heros cleaning oiled otters etc. is itself a petrochemical that is easily replaced by vegetable based detergents such as 7th generation ,sun & earth ,Dr. Bronners etc. These commercials are the biggest hypocrisy I have ever seen. These large corporations are ruining our environment from their petrochemicals to their perfumes and chemicals. These are such worse problems to our wildlife than the fisherman here that catch whatever the limit imposed is. These proposals are suspect because they are beyond rational or fair,limiting #s of vehicles and seasonal closures are reasonable . I also do not believe people should be required to pay a fee for a fishing permit ,I love to grow my garden and fish conservatively and it should be free as the creator meant it to be ,Chris J.Wade

Correspondence: I appreciate the opportunity to comment on National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support Alternative D if modified to provide greater pedestrian access, which was identified in the DEIS as the environmentally preferred alternative. This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principals should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
Provide Equal Access for All Visitors: Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
Put Natural Resources First: Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
Establish and Meet Clear Goals for Wildlife Recovery: A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. Correspondence:	<p>I appreciate the opportunity to comment on National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support Alternative D if modified to provide greater pedestrian access, which was identified in the DEIS as the environmentally preferred alternative. This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.</p> <p>The following principals should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:</p> <p>Provide Equal Access for All Visitors: Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.</p> <p>Put Natural Resources First: Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.</p> <p>Establish and Meet Clear Goals for Wildlife Recovery: A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.</p>

This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this

approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.

Put Natural Resources First: Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.

Establish and Meet Clear Goals for Wildlife Recovery: A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Correspondence: I appreciate the opportunity to comment on National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support Alternative D if modified to provide greater pedestrian access, which was identified in the DEIS as the environmentally preferred alternative. This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principals should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
Provide Equal Access for All Visitors: Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
Put Natural Resources First: Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Correspondence: April 22, 2010 Dear Mike,
Please try to be as reasonable as possible when dealing with us ? property owners in Kmashat Shores.
We all love the beach and we want to help you in the Park Service.
Some folks go off the deep end when they don't get their way. Just help us all you can to save our beach.
I am 87 years old and can't walk down to the beach anymore. So when my kid's come to take me in their four wheel drive cars do to the beach. I rally look forward to that trip.
Everyone has a story
Sincerely Elaine W. Markham

Correspondence: 4/21/2010
 Mike Murray, Supt. Cape Hatteras National Seashore 1401 National Park Dr. Manteo, N.C. 27954
 Dear Sir:
 Reference: Pgs 121-127 Closures Due to Birds
 Since a tide change is 6 hours from high to low tide, then the exposed sand for ORV use is approximately 3 hours for each tide, (normal conditions). This timed corridor can be established for conditional ORV use (dependent upon wind/water conditions) on most beaches. This is especially true from Cape Point South to and below Ramp 49, wherein this beach is very flat, (accessible from Ramp 45). While being a narrow corridor it serves the nationally famous east coast hot spot for access to Cape Point for all to continue to enjoy.
 Since Plovers do not nest in water or water washed shores it would be the perfect solution for this beach section.
 Thanks You
 E.J. Schwester P.O. Box 425 Frisco, N.C. 27936

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
 This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are extremely important to me.
 The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
 *Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
 * Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
 * Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
 Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.

* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.

The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.

* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.

* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. Correspondence: Written Public Comment on CHNSRA ORV DEIS Submitted by:

Alan Pitt Richmond, VA May 7, 2010

To Whom It May Concern:

Thank you for the opportunity to submit a written public comment on the CHNSRA ORV DEIS. I would also like to take this opportunity to thank Superintendent Mike Murray, Cyndy Holda, and all the CHNSRA staff involved in bringing this matter to a close.

Firstly, the 90-day time period to read, digest, and comment on an 800 page document that took over a year to produce seems quite understated for a document of this scope and magnitude. Also, this is not just a ruling on ORV use within the park, as it also sets guidelines on where pedestrians and pets can access the beaches, and also goes so far as to describe where differing types of recreation can occur. (See kite flying/kiteboarding)

The enabling legislation for CHNSRA declares the park to be a recreational area for humans to enjoy, and it is clear the intent of the area was such, and not that of a Wildlife refuge, which seems to be the desire of those who have brought lawsuits against the NPS pursuant to this discussion.

Said legislation also includes two very important and contradictory statements that are both being addressed within the DEIS, although inconclusively. Enabling Legislation:

"Except for certain portions of the area, deemed to be especially adaptable for recreational uses, particularly swimming, boating, sailing, fishing, and other recreational activities of similar nature, which shall be developed for such uses as needed, the said areas shall be permanently reserved as a primitive wilderness and no development of the project or plan for the convenience of visitors shall be undertaken which would be incompatible with the preservation of the unique flora and fauna or the physiographic conditions now prevailing in this area.

"?when title to all the lands, except those within the limits of established villages, within boundaries to be designated by the Secretary of Interior within the area of approximately one hundred square miles on the islands of Chicamacomico [Hatteras], Ocracoke, Bodie, Roanoke, and Collington, and the waters and the lands beneath the waters adjacent there to shall have been vested in the United States, said areas shall be, and is hereby, established, dedicated, and set apart as a national seashore for the benefit and enjoyment of the people and shall be known as the Cape Hatteras National Seashore."

CHNSRA had seemingly struck a balance between these two divergent mandates from the park inception through the implementation of the Interim Plan in 2007, and the associated FONSI. That being the case, the only valid reason for this entire discussion is to determine how these two will work together, and not the total elimination of either.

Executive Orders 11644 and 11989, which mandated ORV management within all applicable NPS units, were in fact largely ignored by the CHNSRA NPS until the submission of the 1978 version, which mysteriously vanished before being added to the federal Register. This in no way should be held against the ORV user group, but rather against the CHNSRA staff of that era. Had they followed through on the issue at that time, we would not be engaging in this discussion today.

The fact that the Interim Plan received a FONSI is very telling, and indicative that the NPS had the right management plans in place all since the issuance of the pertinent EO's. Species management in CHNSRA has in fact grown apace with the scientific findings concerning ESA/NC listed species as the science surrounding them has evolved. To say that CHNSRA has catered more to the ORV user group than to sensitive species is an outright falsehood, and one that has been stated repeatedly by those who categorically oppose ORV use on any beach anywhere within the U.S.

Specifics:

Listed Bird Management:

Use of the Patuxent Protocols in the creation of the size of any and all bird closures within CHNSRA utilize the very largest and longest lasting closures found anywhere in the United States. The reasons behind using such in CHNSRA, and not in locations where species like PIPL are actually endangered is rather dubious at best. Most cited sources within the DEIS state 200-300m to be adequate buffer distances for all bird species of concern within the park. I disagree with the proposed management protocols set forth in both Alt's D & F, and instead support the protocols as set forth by the interim plan.

Listed Turtle Management:

Use of non-USFWS/USGS protocols in CHNSRA have not shown any appreciable increase in turtle productivity, while unnecessarily closing larger areas of beach to ORV's AND pedestrians for longer periods of time than those used in other areas of the U.S. The USFWS protocols in use at PINWR are not only more sensible, but show better results for the species though the utilization of more common sense management techniques like breathable light abatement closures, nest enclosures against predation, and the practice of moving nests from areas where they will likely be destroyed/repeatedly inundated. I disagree with the proposed management protocols set forth in both Alt's D & F, and instead support the protocols as set forth by the interim plan, or those used by the USFWS in PINWR.

Listed Plant Management:

If Seabeach Amaranth, (SBA), has indeed been extirpated from the park since 2005, the need for a discussion around "desired future conditions" concerning it seems moot. If the area is so inhospitable to said plant naturally, it seems a wasteful folly to attempt to reintroduce it to an ecosystem that it has not flourished within. I disagree with the proposed management protocols set forth in both Alt's D & F, and instead support the protocols as set forth by the interim plan.

ORV Management:

The only proven detrimental impacts by ORV's within the seashore are those directly related to protected species during breeding/nesting/fledging periods, and those are dubious at best. All other studies included in the DEIS show long-term negligible impacts to habitat, as the very dynamic nature of a barrier island system can and do erase all traces of ORV use, many times overnight. I can sympathize with the "viewshed" issues some user group[s] may have with ORV's on the beaches, but personally I find the thousands of signs erected on the ocean beaches, beside Rt. 12, and on the soundside shoreline to be far more of an eyesore than that of a vehicle profile. I disagree with the proposed management protocols set forth in both Alt's D & F, and instead support the protocols as set forth by the interim plan.

Pedestrian Management:

This is where the DEIS fall woefully short of actual protections, as year after year the NPS resource management reports show the single largest group in violation of resource closures are pedestrians. The DEIS requires fees, permits, and an education component for ORV users, but absolutely none for pedestrians. There are also no informational signs located at the meetings of ORV areas and pedestrians area, such as at Ramp 49's meeting with the Frisco villages at Robin Lane. Pedestrians from these housing units walk as far as Cape Point to the north and Hatteras village to the south. Nowhere on the beaches are the same signs that exist at every ramp, therefore leaving the pedestrian user group oblivious to the rules and regulations with then seashore. This is a travesty that must not be allowed to continue. All ingress/egress points where pedestrian dominant beaches meet ORV dominant beaches should be required to have the same signage as every ORV ramp, minus the ramp number. How else will the user group with the greatest number of closure violations ever be educated? I disagree with the proposed management protocols set forth in both Alt's D & F, and instead support the protocols as set forth by the interim plan.

Pet Management:

Our non-human family members are already at a disadvantage in CHNSRA, as they must either be crated or leashed at all times to simply be allowed in the seashore.

Out of the ten National Seashores nationwide, there are only two in Florida that ban pets outright, which is due solely to Florida state law.

The single most troubling aspect of the entire DEIS is the recommendations within the AMOY section in Chapter 2, Page 136, Table 13, Alt F that states "Prohibition of pets within the seashore during breeding season including in front of the villages, and establishment of breeding and non-breeding SMA's would benefit the AMOY". This sentiment is repeated in reference to AMOY several more times throughout the DEIS, and a reference to PIPL on Page 66 of Chapter 2 reads "Pets should be leashed and under control of their owners at all times from March 15 to July 31 on beaches where PIPL are present or have traditionally nested. Pet's should be prohibited on these beaches from April 1 to August 31 if, based on observations and experience, pet owners fail to keep the pets leashed and under control" Nowhere in the DEIS cited studies for AMOY is there a mandate for total pet exclusion, only restraint. Also, out of the 12 National Seashores nationwide, on two deny pet entry, and both are bound to do so by Florida law, not species protection mandates. Per 2009 NPS field summaries on violations, the vast majority of closure violations involving dogs involve humans as well, as there are very few documented cases of unleashed dogs entering closures by themselves.

Make the penalties for violations severe, and enforce them, but do not deny access to the beloved members of our extended families for dubious reasons and unproven expectations. These portions of the DEIS are absolutely unacceptable, and should be stricken, as even the environmentally preferred Alternative D makes no mention of such drastic measures against our domesticated non-human family members.

Banning part of our extended family from our beaches cannot be allowed to happen. I disagree with the proposed management protocols set forth in both Alt's D & F, and instead support the protocols as set forth by the interim plan.

Fishing Management:

Having Cape Point closed for the majority of the summer season not only causes anglers to go elsewhere, but it puts the local merchants who cater to the fishing population at a huge disadvantage economically. While there may be many miles of other park shoreline open for angling, it's tantamount to going to Disneyland to be told all the major attractions are closed for the season. It's still useable, but the true attraction is now gone. May people are realizing this and not coming back to CHNSRA. Correct and prudent management of the habitat around the ephemeral ponds on Cape Point could negate the need to close this all-important visitor destination. I disagree with the proposed management protocols set forth in both Alt's D & F, and instead support the protocols as set forth by the interim plan.

Boating Management:

Boats are prohibited from landing within closures or SMA's, which creates a very dangerous situation for the boating public in the event of marine emergencies. On May 1, 2010, a human life was lost due to a capsized boat in Hatteras inlet. While only speculation, if beach users had been present that day on either point or spit to call in this accident, this loss of life may not have occurred. I disagree with the proposed management protocols set forth in both Alt's D & F, and instead support the protocols as set forth by the interim plan.

Watersports Management:

Kiteboarding has been banned within the boundaries of bird closures and SMA's, for dubious reasons. Kites are not predators to plovers, and the species will over time realize this fact and adapt accordingly. How long before surfing and windsurfing are also banned for the same nonexistent reasoning? I disagree with the proposed management protocols set forth in both Alt's D & F, and instead support the protocols as set forth by the interim plan.

Land Sports Management:

Kite flying within a certain distance of SMA's and closures has been banned, along with Frisbee and ball throwing. How long before horseshoes, bean-bag toss and Parcheesi are banned? I disagree with the proposed management protocols set forth in both Alt's D & F, and instead support the protocols as set forth by the interim plan.

Trash/Refuse Removal Management:

CHNSRA NPS staff is lucky in the fact that the ORV users remove almost every scrap of trash from beach daily, negating the need for an official NPS trash removal program within the seashore. Pedestrian beaches are another story, and areas that are closed to ORV's for a prolonged period of time show that pedestrians do not remove trash from the beaches, nor do any other user group other than ORV users. There are passages within the DEIS that suggest predators are attracted to the refuse left behind by ORV users, but this is imply not the case in CHNSRA, and these lines should be stricken from the FEIS. I disagree with the proposed management protocols set forth in both Alt's D & F, and instead support the protocols as set forth by the interim plan.

Habitat Management:

Talk of "Pilot Programs" needs to be replaced with true action items, for every growing season that passes predators are given more brush to hide within, thus negating all other resource management schemes. It is a widely accepted scientific fact that PIPL prefer the MOSH habitat of the salt ponds over that of the Cape Point beaches, yet the NPS is steadfast in not taking action in vegetation mitigation. It is done successfully in PINWR, why not within CHNSRA? I disagree with the proposed management protocols set forth in both Alt's D & F, and instead support the protocols as set forth by the interim plan, or those used by the USFWS in PINWR.

Predator Management:

Over 1,200 various predator species, have been "removed" from the CHNSRA habitat since the inception of the Consent Decree, that majority being "native" species. Not only has this huge expenditure in both life and resources shown no appreciable positive impacts toward protected species, it has

also led to less biodiversity within the CHNSRA animal kingdom. It is also a travesty to remove predator species from their habitat during their own breeding seasons, leaving behind countless litters of offspring to simply die of starvation. The early species management policies in CHNSRA also included mammalian creatures under the umbrella of protection. What has changed since that time? There can truly never be a predator-free ecosystem on these barrier islands, and it is misguided to attempt to make it such. I disagree with the proposed management protocols set forth in both Alt's D & F, and instead support the protocols as set forth by the interim plan.

Impacts:

-Environmental

The only negative environmental impacts created by ORV use are strictly species related, in particular with relation to nesting/breeding of bird species. Otherwise, pollution, noise, soil/sand/plant and viewshed impacts are long-term negligible, according to the DEIS.

-Socioeconomic

The plans set forth in Alternate F in the DEIS will have a much bigger socioeconomic impact than stated, as it will take a few years for the visiting public to sort out all the new regulations, and make the decision if they wish to return to an area that is so severely restricted.

-Cultural & Traditional

ORV's on the beach are a way of transportation and life that predates the inception of the park itself. Conrad Wirth went far to allay the concerns of the islanders in his open letter of the 1950's that this type of access would always be permitted. It was not until the era of overreaching environmental regulations that his promise died on the vine.

Conclusion:

The entire DEIS is a travesty, as it will negatively impact the island residents and visitors alike for the foreseeable future, if it goes through as designed under either Alt's D or F. Again, the park's enabling legislation states CHNSRA was created "for the benefit and enjoyment of the people". If either Alt's D or F, or a combination of the two are passed into law, this particular seashore will cease to operate under that requirement, and will become more akin to a National Wildlife Refuge than a Recreational Area.

Please do not allow this to happen to OUR seashore.

Alan Pitt Richmond, VA/Frisco. NC

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.

This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.

The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.

* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.

* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.

This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.

The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.

* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.

* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

PLEASE KEEP THE CARS OFF THE BEACHES!!!! My family and I are frequent visitors of the Cape and we HATE the cars. They are dangerous and I worry about my 3-year-old. We choose to walk along the beach and enjoy it for its natural beauty. Surely we can find a way that the year-round residents and fishermen can continue using their beach without destroying the native species and endangering visitors. (Perhaps some permitting system for locals?) If you choose poorly here, we will find some place else to take our tourism dollars. -JAK

The ORV community has been more organized and vocal in their opposition to Alternative D, but that does not mean their preference is what is right for the rest of the public or the environment, especially the rare animals that would be affected.
Please adopt Alternative D. Thank you for the opportunity to comment on this important issue.

Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.

* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.

* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.

This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.

The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.

Correspondence:	Mike Murray, Superintendent 4/23/2010 Cape Hatteras National Seashore 1401 National Park Drive Manteo, NC 27954 Dear Sir: We disagree with and whole heartedly oppose and fee based program (for ORV access) in any form to our beaches. With the recent stimulus grant to the NPS there is no earthly reason for additional money hardships to our beachgoers. We already have fishing license requirements for fisherman whom probably account for 90% of our beach use. Please, please, have this changed for the benefit of all affected. Thank you E.J. Correspondence:	In reference to the NPS DEIS, I strongly disagree with both page 7 part 1 and chapter 2- alternative: accessibility for the disabled. It suggest with a special permit for areas in front of the villages that an ORV be allowed to transport disabled persons to the beach but must return the vehicle to the street. I do not understand this concept which would make for more beach driving rather than leave the vehicle with the party at the beach. Also about the boardwalks, this is of no use to someone who cannot walk distances nor ride in wheel chairs. My husband has disabilities that restrict him of either of these options. We are here to fish as we have been for many years. The only way we can do this is to take an ORV to the beach with our fishing equipment. Both my husband and I served in the armed forces to keep our shores free and now our freedoms are being taken from us from within our own government. The provisions offered are not-applicable to him and many other disabled tax paying Americans. Please give this serious consideration and I would like a solution to this not unique situation. Thank You, Francis Halstein

Correspondence: I am placing this comment to encourage the NPS to take a serious look into the economic impact in an all ready depressed economy and the impact on enjoying the island with fishing, relaxing and simply enjoying the beauty of the ocean when considering beach closures on the Cape Hatteras Seashore. My family and I purchased a residence on the island, 1 year ago, after having enjoyed 12+ years of vacationing on the island, we opted to purchase a home in Frisco over a home in Hawaii, simply because of the relaxed and easily accessed beaches where our children can enjoy playing in the surf and sand without the crowding that comes with limited beach access. We have also enjoyed the wildlife without noticeable human impact, including the evening hatching of a sea turtle nest. I find it very interesting as to why the park service feels the need to bow down to the special interest groups that are demanding the change from the NPS, who has enjoyed many years of benefit from the very people that respect and use the beach without harming the wildlife.

Correspondence: Because the Park service Land borders the villages of Hatteras Island, they are small and not likely to get much larger, as there is no room to grow. This same factor limits the number of residents and visitors to the Island. My point is that there will never be that much traffic, that there is a need to shut it down, or even limit it.

I think ORV's can find other places to go that do not disrupt wildlife or access to quiet and natural beauty which are an important part of the parks. Having shared a path with dirt bikers, I am aware that the folks who enjoy riding dirt bikes and ORV's often like to push the limits, and trying to walk while watching to see that they didn't run into us was not pleasant. It entirely spoiled the idea of walking in the woods.

Please put Natural Resources First: Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.

The following principals should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
Provide Equal Access for All Visitors: Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.

Put Natural Resources First: Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.

Establish and Meet Clear Goals for Wildlife Recovery: A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Correspondence: I appreciate the opportunity to comment on National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support Alternative D if modified to provide greater pedestrian access, which was identified in the DEIS as the environmentally preferred alternative. This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.

The following principals should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
Establish and Meet Clear Goals for Wildlife Recovery: A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Correspondence: I appreciate the opportunity to comment on National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support Alternative D if modified to provide greater pedestrian access, which was identified in the DEIS as the environmentally preferred alternative. This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.

The following principals should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
 Provide Equal Access for All Visitors: Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
 Put Natural Resources First: Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
 Establish and Meet Clear Goals for Wildlife Recovery: A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. I know this issue is controversial. But I live on the Outer Banks and I still support this action.

Correspondence: Dear Sir or Madam,
Thank you for taking the time to read my letter. Cape Hatteras' Beach Access for ORV's should be kept open due to commerce. If they are not, our area will suffer an incredible financial loss that will affect all those who live here. Having the freedom to drive on the beach is one quality that makes Cape Hatteras unique and a tourist destination that attracts vacationers and their dollars season after season. The beaches of Cape Hatteras give an opportunity like no other for surf fishing, kite surfing, commercial fishing and horseback riding for tourists and for locals. An ample majority of visitors to the island come just for these activities. They come back year after year or several times a year, simply because these activities are allowed here and conditions are ideal.
In closing, if large portions of beaches were to be closed to public access, Cape Hatteras Island would lose major, financial and recreational qualities as well as the overall quality that makes it a special and unique escape for tourists and locals alike. Please think about what I have said and think about the welfare of the Hatteras Island community when making your decision.
Sincerely,
Alea Toledo

Correspondence: Please take into account what a significant economic effect this decision will have on this area. I am sure you can think of a way to protect the endangered species without endangering tourism in this area. Closed beaches might save some birds and turtles, but will destroy the lives of many locals. Keep the beaches open and raise awareness about nesting so that people are real careful! The birds and turtles will be fine, but us locals - we might not be. I am sure you can find common ground and keep the beaches open and preserve life on Hatteras Island as it has been for years. Please keep the beaches open!

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are

management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Please protect our nation's natural heritage so that it will be here for future generations to enjoy! Although I understand the interests of ORV enthusiasts, ORV use is extremely destructive to fragile coastal habitats and must be limited to protect the natural treasures of Cape Hatteras in perpetuity. Longterm protection of resources is the primary goal that management plans must strive to ensure.
Thank you for the opportunity to comment. I look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

To the NPS: I would like to add my voice as a member of the public to urge you to protect the habitat of waterbirds and other wildlife by banning the use of recreational vehicles on the beaches of Cape Hatteras National Seashore.
Thankyou, Rhona McLean

Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only

16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.

* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. I have seen lots of damage to lands in Washington State from unregulated ORV's, and I thus know of what I write here. You must stop these motor-heards who have no concern whatsoever for wildlife. Thank you.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
Thank you for the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras national Seashore. Of the

alternative plans presented in the draft EIS, I support the "environmentally preferred" Alternative D. This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, of critical importance to me.

The National Park Service's preferred plan, Alternative F, ORVs does not represent a fair balance for all users or wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.

* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.

The plan must also include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough analysis based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures must be implemented until recovery goals are met. These goals, and adequate management to realize them, should include migrating and wintering species, not just animals that breed there.

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I have two homes on the outer banks and have been fishing for over thirty years from Hatteras to Duck. In all those times fishing on the beach, I have never seen anybody disrespecting the environment. Industry on the outer banks consists mostly of commercial and recreational fishing and real estate and vacations. I can understand your concern about the habitat on the island, but I think the amount of land you want to close is unreasonable. Not to mention, the natural disasters like storms, tidal flooding and predators. If you go ahead with these restrictions as they are, the economy on the outer banks will suffer. Thank you

Correspondence: I disagree with permanent closure of any portion of the seashore. The landscape is so changeable that it is impossible to know the long term effects of such a ruling. For example, if a storm erodes half of, say, Hatteras Inlet, will the park service simply move barricades to make up for what is lost and take away more recreation area?

I disagree with the NPS refusal to count birds on spoil islands or on Pea Island. I think they should count both.

I disagree with NPS's policy of not moving turtle nests. I believe turtle nests in overwash areas should be immediately moved.

I think the entire piping plover program is not cost effective, particularly during our current global financial crisis. The bird yield at Cape Hatteras is simply not material to survival of the species and I resent my tax dollars being used in this elaborate, intrusive, and extravagantly wasteful expenditure of resources.

I think this plan is preposterously long, deliberately complicated and is designed only to ensure higher legal fees for litigators and more government bureaucracy. It seems even fishermen need to lawyer up before enjoying their sport. It shouldn't be that complicated. There aren't enough park rangers under the current consent decree. I'd like to know how many additional rangers, trappers, and middle managers will need to be hired to administer the new plan.

Correspondence: I am sharing with you the comments I recently submitted on the Cape Hatteras National Seashore Off-Road Vehicle (ORV) Draft Management Plan/Environmental Impact Statement (DEIS).

As an avid angler on the North Carolina seashore, I am strongly opposed to the National Park Service (NPS) preferred alternative, Alternative F, in the DEIS and urge you to make significant changes to the preferred alternative in order to provide both reasonable resource protection and reasonable public access to public land. Recreational fishing is one of the most enjoyable American pastimes, and Cape Hatteras National Seashore has some of the best surf fishing locations on the east coast - accessible only by ORV.

Alternative F is the most restrictive management option to date, far exceeding any sense of balance between resource protection and public access and betraying all promises made to the public regarding recreational uses in the seashore. The majority of the provisions included within the preferred alternative far exceed anything proposed by a majority of the Negotiated Rulemaking Committee, including excessively large resource closures (buffers), unnecessary year-round and floating closures, and the lack of access corridors around or through resource closures.

In order to restore balance to the DEIS, I highly recommend that the NPS revisit the proposal put forth to the Negotiated Rulemaking Committee in December of 2009. It provides the necessary protections for wildlife resources while having the support of a majority of the local community.

Without reasonable ORV access, responsible anglers like me, and the local economy that is supported by recreational fishing, suffer greatly. I urge you to provide a better balance between resource protection and recreational uses by incorporating the December 2009 recommendations from the Negotiated Rulemaking Committee into the preferred alternative.

Sincerely,

Laura A. Kovatch OBPA member

Correspondence: I appreciate the opportunity to comment on National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support Alternative D if modified to provide greater pedestrian access, which was identified in the DEIS as the environmentally preferred alternative. This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principals should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
Provide Equal Access for All Visitors: Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
Put Natural Resources First: Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
Establish and Meet Clear Goals for Wildlife Recovery: A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
Put Natural Resources First: Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
Establish and Meet Clear Goals for Wildlife Recovery: A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Correspondence: I appreciate the opportunity to comment on National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support Alternative D if modified to provide greater pedestrian access, which was identified in the DEIS as the environmentally preferred alternative. This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principals should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
Provide Equal Access for All Visitors: Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.

Correspondence: I LIVE IN KDH!!! I AM TIRED OF READING THE NEWS OF 'OUR' SEALIFE OR MUSTANGS HAVE BEEN RAN OVER, THEIR NEST HAVE BEEN RAN OVER. NATIVES 7 WILDLIFE WERE HERE FIRST. HUMANS, YOU NEED TO SHARE. AND ENFORCE THE BEACH LAWS. THE LIFE GUARDS DO NOT. THEIR IS NO BEACH PATROL. PEOPLE TAKE THEIR PETS OUT IN HOT SAND, AND NO ONE DOES ANYTHING. PEOPLE DISOBEY GLASS/TRASH ON BEACH. WHAT MAKES YOU THINK, THAT YOU CNA CONTROL THEM WHILE THEY'RE DRIVING. AND PROB. DRUNK? ENFORCE BEACH DRVING, BEFORE WE LOOSE EVERYTHING THAT NC HAS TO BE PROUD OF!!! NC., YOU NEED TO APPRECIATE DEFENDERS' HELP, AND THERE IS PLENTY OF ROOM FOR ANGLERS, HUMANS DO NOT NEED THE WHOLE BEACH! AND ALL THE TIME. ALLOW THE EGGS TO BE HATCHED, ALLOW THEM TIME & SPACE, & GIVE THEM ROOM TO MAKE IT TO THEIR HOME- THE SEA. PROTECT OUR PONIES/MUSTANGS. ENFORCE THE BEACH LAWS!!!, IT'S MOSTLY NOT EVEN THE NATIVES BREAKING THE LAWS, SO POST MORE SIGNS FOR THE TOURISTS!! I appreciate the opportunity to comment on National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.

Put Natural Resources First: Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.

Establish and Meet Clear Goals for Wildlife Recovery: A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Correspondence: I appreciate the opportunity to comment on National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support Alternative D if modified to provide greater pedestrian access, which was identified in the DEIS as the environmentally preferred alternative. This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.

The following principals should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
 Provide Equal Access for All Visitors: Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a

chance to rebound to its traditional numbers and diversity within the park.

We have spent our vacation every summer for decades on the Outer Banks and could not feel anymore strongly about all of this.

Correspondence: I appreciate the opportunity to comment on National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support Alternative D if modified to provide greater pedestrian access, which was identified in the DEIS as the environmentally preferred alternative. This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principals should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
Provide Equal Access for All Visitors: Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
Put Natural Resources First: Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
Establish and Meet Clear Goals for Wildlife Recovery: A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife.
Natural resources are my primary concern. Habitat protection and the providing of space for breeding, migrating, and wintering birds and other local species should be protected. Off-road vehicles not only destroy flora and fauna in the areas they traverse, but they also pollute the atmosphere in general and the air nearby, and then there's the noise pollution they create. I would prefer that ORVs be prohibited from areas of scenic beauty and places that are home to many species, animal and vegetable, and relegated to places that humans have already despoiled.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
As one who loves the outdoors and wildlife, I am writing to support the National Park Services' efforts to protect nesting birds and turtles on Cape Hatteras National Seashore by managing ORV use.
I prefer the plan with the highest impact on environmental protection, which I understand to be 'D'. What is important to me in this plan is that it sets aside areas of the Seashore for non-ORV use so that people and wildlife can enjoy the Seashore's natural resources without high-impact disturbance. The oil spill in the Gulf of Mexico has made it ever more apparent to me that we must protect our areas of natural beauty, and our wildlife, from man-made disasters and impacts. Then perhaps they will have a better chance of survival when the natural disasters come along.
Thank you for your consideration.

These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Here in Michigan, we are beginning to understand the consequences to our tourism economy of failing to provide adequate protection to the environment along our tremendous Lake Michigan shoreline with its awesome sand dunes. We hope you will not make a similar mistake.

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of nesting birds and sea turtles, which are important to me. ORVs are highly destructive, destroy nests and diminish the reproductive success of several beach-nesting animals who are suffering enough from habitat loss and degradation.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under Alternative F, prohibition of ORVs on only 16 of the 68 total miles of Seashore beach does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. *Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.

Correspondence: Thank you for the opportunity to comment on the plan to manage off road vehicle (ORV) use on the Cape Hatteras National Seashore. I urge you to adopt the "environmentally preferred" Alternative D if it is modified to provide greater pedestrian access.

Any plan that is approved should contain the following:

1. Equal Access for All Users and Wildlife. Please limit ORV access to no more than 50% of the beach year round and provide more walkways and access facilities like public parking away from the beach. This will allow wildlife a chance to rebound to traditional numbers and diversity within the park.
2. The first principal should be to protect the natural resources and wildlife of the Seashore. Recreational use should be consistent with this protection. Alternative D should be amended to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection should be based on the best scientific information, so funding studies to establish what works best should also be part of whatever alternative is selected. Wildlife disturbance buffers in Alternative D should be increased if necessary to protect breeding birds and sea turtles.
3. Establish and Meet Clear Goals and milestones for Wildlife Recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.?

Thank you for listening.

Correspondence: After reading the draft of the DEIS I would like to remind everyone that 50% of Hatteras Island is already a nature sancturay and that people and pets have a right to enjoy the ocean too. Further restricting the rights of people going to the beach & having their pets with them would destroy the very fiber of why Hatteras is so special and why so many visitors come each year. Pleae take this into consideration and do not further restrict people & pets from the beach, the animals will find a non inhabited place to lay their eggs & then we can all coexist.

Correspondence: Count me among the many who believe strongly that the current and proposed management policy is too restrictive to ORVs. I have been visiting Cape Hatteras National Seashore for over forty years. I have been able to enjoy it's beauty and splendor to its fullest. I believe there is a happy medium in mangament and we are far from that with the current and proposed closures. I am changing my life and returning to school to get a docotorate in Marine Ecology from The University of North Carolina and intend to fight for the rights of recreational users of Cape Hatteras National Seashore. You will hear from me again in the future, I assure you.

Put Natural Resources First: Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
Establish and Meet Clear Goals for Wildlife Recovery: A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Correspondence: I appreciate the opportunity to comment on National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support Alternative D if modified to provide greater pedestrian access, which was identified in the DEIS as the environmentally preferred alternative. This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me. Why the ORV users believe they should have use of the Cape Hatteras National Seashore for recreation rather than allowing the wildlife there to survive, is beyond me. Whichever plan is chosen, severe penalties for misuse by ORV and non-ORV users must be fully enforced.

The following principals should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

Provide Equal Access for All Visitors: Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.

Put Natural Resources First: Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.

Establish and Meet Clear Goals for Wildlife Recovery: A plan must include clear goals and milestones for wildlife recovery. Correspondence: Dear Superintendent Murray,

As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.

1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."

2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness..." Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the

pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.

3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.

Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

As a native North Carolinian and lover of nature especially in a pristine setting, I appreciate the opportunity to comment on National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. When I visit a place of natural beauty such as Cape Hatteras, the experience is greatly diminished when large portions of the park are open to environmentally unfriendly (and usually noisy) practices such as widespread ORV usage. Of the alternative plans presented in the draft environmental impact statement, I support Alternative D if modified to provide greater pedestrian access, which was identified in the DEIS as the environmentally preferred alternative. This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.

The following principals should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Correspondence: I appreciate the opportunity to comment on National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support Alternative D if modified to provide greater pedestrian access, which was identified in the DEIS as the environmentally preferred alternative. This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principals should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
Provide Equal Access for All Visitors: Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
Put Natural Resources First: Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
Establish and Meet Clear Goals for Wildlife Recovery: A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. Correspondence: Dear Superintendent Murray,
As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.
1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."
2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness..." Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.
3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.
Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.
1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."
2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness..."
Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.
3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.
Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.
***** Thank you very much for taking the time to protect one of America's most beautiful stretches of Atlantic seashore! Sea turtles, nesting shorebirds, and generations to come will be grateful for your action today. Thanks again!
Sincerely,
craig

Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.
1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."
2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness...."
Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.
3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.
Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

Correspondence: Dear Superintendent Murray,
PRESERVE A FEW PLACES IN AMERICA TO REMAIN TRULY NATURAL & WITHOUT MAN'S IMPRINT!
As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.
1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Correspondence:	Despite growth and change, there are still many beaches to choose from when selecting a vacation destination. So many of us treasure the Outer Banks because there are protected areas that are safe and free from vehicles. This is of benefit to us as visitors, but more importantly, wildlife is safe - and they have few places left that are safe. Please don't let the Hatteras National Seashore become one more place that we lose wildlife. Become part of the solution, not the problem!

Correspondence:	Please do not approve an Off Road Vehicle (ORV) management plan for Cape Hatteras National Seashore as it will disproportionately dedicate beach use to year-round ORV traffic at the expense of wildlife and pedestrian visitors. We need to protect wildlife habitats from harmful activities such as off road vehicles. Nature is precious - please don't allow this.

Correspondence:	I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access. This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to						

me.

The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.

* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.

* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I have vacationed three times in the Cape Hatteras region and would be very disappointed if off road vehicles were given free reign to the beach front. These machines completely disrupt the natural beauty and rhythm of the seashore. I advice you to strongly consider banning these vehicles from the beachfront.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.

This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.

The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.

* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Please do not allow Off Road Vehicles on our beaches. They cause erosion, destroy the dune strata, kills plants that provide food and shelter for certain species. They cause ruts in which sea turtle hatchlings can get stranded in and they are disturbing to people who are visiting by foot.

They have no respect for our natural environment and I urge you to keep the beaches closed. I visit the outer banks frequently and I am opposed to beach driving.

Sadly enough, if the beaches are closed to one group they must be closed to all.

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Dear Superintendent Murray,

I appreciate all you are doing to conserve wildlife in Cape Hatteras National Seashore. Numbers of shorebirds such as Piping Plover, Least Tern, and Gull-billed Tern, which all used to nest in good numbers on the NC coast have fallen drastically, and action needed to be taken, so thank you for that. In addition, you have left large areas of beach open to ORV users who, while a small minority of the users of the seashore, still deserve to be allowed to use it, and this you have done for them. Any further actions by them to try and open up these beaches not only endangers the wildlife but also infringes on the rights of non-ORV users. Thank you for your consideration, and keep our beaches among the most pristine and beautiful in the world!

Sincerely,

Robert Meehan 2712 Spencer St Durham, NC 27705

Correspondence: Dear Superintendent Murray,

As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.

1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."

2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness...."

Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.

3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.

Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

John L. Keiser

Correspondence: Please adopt a modified Alternative D of the draft Environmental Impact Statement for the Off Road Vehicle (ORV) management plan for Cape Hatteras National Seashore. Doing so will protect that which makes Cape Hatteras so special--abundant (and endangered) wildlife and the natural quiet of miles of pristine Atlantic seashore. Not doing so will disproportionately dedicate beach use to year-round ORV traffic at the expense of wildlife and pedestrian visitors.

We have known that ORV'S are destructive to the environment since the sixties; why do we continue to debate this issue, and since when do "individual rights" supercede the rights of the majority of us who do not go "off road" and who are concerned about our mutual environment. It is time that we reestablish a balanced reading of our "rights." The framers of our constitution, I'm sure, had no vision of this type of activity!

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

I'm sure the canned message was terrific, but my two cents are mine. My family and I have vacationed in the Outer Banks for many years now. Through the years I have seen commercialization and building going on at an ever increasing growth rate, it's almost exponential. The housing going up are mini-mansions. The Outer Banks is prime vacation territory. However, one of the reasons that makes it so desirable is the openness of the beaches, the beautiful dunes and scenery. It exudes peace, safety & tranquility. When you paint the picture in your mind, off-road vehicles are NOT present. I would like to see them banned. I have also been up in Corolla and see how many vehicles get stuck because the drivers do not know how to drive. I enjoy reading in my chair and watching little kids run around chasing the tide in and out while their parents keep an eye on them. I like to see the sand castles being built. I could go on and on, please contact me if you want more. I would like to see a couple of things happen. First, ban off-road vehicles. If it is absolutely necessary have a special 7-day license or seasonal license to purchase with a written test before doling them out. I loved the old visitor center before the lighthouse was moved. It was charming, quaint with the big front porch and very inviting. The new one is glossy, commercial, with a get-in, get-out atmosphere. Here's you can accomplish genuine change. You need to change the atmosphere back to make about the very special Outer Banks and not a gift shop with a few exhibits thrown in. I would suggest a webcam of a few of the secluded sites where visitors can see (but not touch or visit) the endangered species. Here is where you can educate people on why they should take care of our endangered species.. It's very difficult to care about something you know little or nothing about. I am very passionate about this topic. Environment and the education of the public. Heck, I went and got my degree in Environmental Science because of it. You need to develop an adoption program. Again, I can easily expound on this, just give a call. I want my grandchildren to have the opportunity my son had. Dear Superintendent Murray, please help to make it happen.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.

This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.

The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.

* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.

* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: Dear Superintendent Murray,

As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.

1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."

2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness..."

Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.

3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.

Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

Correspondence: Mr. Murray,

It has been brought to the attention of the kiteboarding community that a variety of plans are being considered in response to proposed environmental and ecological concerns. The Outer Banks of North Carolina is a sanctuary for many beach goers, sports enthusiasts, wildlife observers and most importantly, the natural environment. We, as a community, feel that it is important for the environment to be protected and thus understand certain steps may be needed to achieve this goal. Thank you for evaluating the options to improve the environmental conditions at one of the greatest destinations in the United States.

However, with that said, please consider your decisions carefully. Minimalist environmental management approaches have worked well throughout the United States National Parks. Closing extensive sections of beaches, the sound, and water ways will strip away the very nature and reason for why we appreciate the land in its current state. It can be said with great certainty that all frequent and casual users of this place intend to preserve its natural beauty and respect its wildlife.

We strongly feel that the Historical, Cultural, and Economic impacts of the proposed plans have not been adequately addressed by the Draft

Environmental Impact Statement (DEIS) as is required.

Should the environmental changes impact our communities sport (as it would in Plans D, E, & F) we would be forced to reconsider our frequent and environmentally friendly utilization of the Outer Banks. Other user groups such as surfers, fishermen, beachcombers, and virtually all other forms of tourism will also be discouraged from visiting Cape Hatteras if beach closures are greatly expanded. This will have a severely negative impact on the local economy and way of life that the residents of Hatteras Island have enjoyed for many generations. It will also take away something that is important to the lives of thousands of people throughout the United States and around the world. If people, and especially children, can not experience the environment how are they going to learn to help you protect the environment?

Kind Regards,
Michael McDonnell

I emphatically ask that you do not go forward with plans to allow Off Road Vehicles on Cape Hatteras. As a child growing up on the East Coast, I spent several summers at the Cape, vacationing with my family. My memories from there are splendid -- we camped and enjoyed a quiet get-away from our typically fast-paced lives.

Please do not spoil this wonderful experience for future children. We need places that are quiet, that are peaceful, that are not crowded with motor vehicles. Nature is spoiled so quickly when vehicles are permitted to make new paths and scare-off wildlife.

Please keep the Cape as majestic as it currently is. Please give our nation's children and families the opportunity to enjoy quiet, beautiful Cape Hatteras. Thank you for your consideration.

A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones. 						

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
I have spent vacations in the Outer Banks for the primary purpose of viewing wildlife. I have stayed a local hotels, enjoyed restaurants in the area, and shopped at local stores. Wildlife should be protected not only because it is a beautiful part of our national heritage, but also because of the beneficial economic impacts. This is a unique place that deserves protection - for those who love it now and for future generations.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
I fully support the information below. As a Californian who has lived at a southern California beach area during much of my childhood and who visits beaches in California and Oregon often, I am aware of the destruction to soils and wildlife caused by unrestricted use of ORVs on beaches and adjacent areas. The alternative plan D or the principles below, if included in the final plan would allow a fair amount of use for ORVs while allowing quiet beach use for others and particularly help protect wildlife in the ORV restricted areas.
Please put my name on your mailing list for updates. Thank you.

Correspondence: Dear Superintendent Murray,
As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.
1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."

0010937

2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness...."
Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.
3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals. Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.
As a bird watching visitor who cares about the condition of wildlife, I can tell you that these vehicles absolutely ruin the beach experience for walkers and are deadly to the local wildlife, which includes many threatened and endangered species.

All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points. 1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations." 2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness...." Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources. 3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals. Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

Correspondence:

Dear Superintendent Murray,

As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.

1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."

2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness...."

Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources. The silence of Cape Hatteras is in danger and must be protected. ORVs are loud and stress wildlife. ORVs cannot be part of a positive primitive visitor experience.

3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.

Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

Correspondence:	Adopt a modified Alternative D of the draft Environmental Impact Statement, protecting that which makes Cape Hatteras so special--abundant (and endangered) wildlife and the natural quiet of miles of pristine Atlantic seashore. WHY ARE WE OFFERING OUR PRISTINE PLACES OF QUIET BEAUTY TO MORE NOISY, OFF ROAD VEHICLES? WHAT IS WRONG WITH YOU PEOPLE? DO YOU NOT SEE THE VALUE OF RECREATIONAL AREAS UNLESS THEY ARE OVERRUN WITH SOME KIND OF LOUD, POLLUTING, MONSTROSITIES? THIS IS NOT RECREATION. IT IS DESTRUCTION AND MUST NOT BE ALLOWED.

Correspondence:	Dear Superintendent Murray, I am writing to encourage you to keep the Cape Hatteras National Seashore free from offroad vehicle use. The vehicles severely damage wildlife and native vegetation, as can be seen on the beaches of Western Washington. Please keep off road vehicle use limited. Cape Hatteras is a beautiful park, and I would hate to see it damaged in the way the beaches of Washington have been damaged. Sincerely, Andrew Putnam 8153 4th Ave SW Seattle, WA 98115

Correspondence:	This is my second attempt to send a note. I am in favor of keeping the beaches open and free as they were intended to be as a "Recreational Area" Cape Hatteras national Recreational Area is not a bird preserve. I favor its return to the people who recreate there. I protest the obvious vendetta against ORV use, and recreational use, in favor of thinly veiled "protection" for non endangered species. I feel Judge Boyle should have been taken off the case as he is obviously prejudiced against the intended uses of the National Seashore of the past. I believe the economic and recreational intentions of the seashore should be maintained. Best available science should be used..not subjective emotional science by prejudiced environmentalists.. I have sent a prior note with more information..but it was refused by the national park site..hmm Bob Mead.

Correspondence: Dear Superintendent Murray,

As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.

- 1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."
- 2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness...." Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.
- 3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.

Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

Correspondence: In addition to the comments below, I'd like to add that one of the wonders of the National Park system is its peace and quiet. There is no good reason to ever open any of them up to off-road vehicles. There are plenty of other places people can ride these noise-makers without infringing on the rights of the rest of us to some quiet time. I find it very interesting that people want to go to these places and then destroy what makes them special.

I am writing against the idea of approving an Off Road Vehicle (ORV) management plan for Cape Hatteras National Seashore. I used to work as an Urban Park Ranger in Brooklyn, NY and was on Piping Plover detail for most of the summer. The protected beaches of Brooklynn included Canarsie Beach which was heavily used by ORV illegally. The water around the beach always had an oil & gas sheen on top and the beach itself was filthy from people eating and repairing their vehicles. The ORV users felt entitled to the area, which was so bizarre because they're from Brooklyn, the most densely populated NYC borough. We couldn't get rid of them because we didn't have the manpower to catch them. Canarsie Beach remains an eyesore to this day. North Carolina & the surrounding areas of Cape Hatteras aren't as populated as Brooklyn. Let the people go have their rides somewhere other than a beach - like their own backyard. I completely approve of emergency services using ORV to help park patrons requiring first aid. Other than that - North Carolina is a big place. Go use your ATV somewhere else.

Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.
1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."
2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness..." Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.
3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.
Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.
***** Thank you very much for taking the time to protect one of America's most beautiful stretches of Atlantic seashore! Sea turtles, nesting shorebirds, and generations to come will be grateful for your action today. Thanks again!
Sincerely,
Mark D. Paul

Correspondence: Dear Superintendent Murray,
As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore.
My husband and I visit the CHNS regularly and I treasure its wild feeling and the lack of development. The last thing I want to see there is turtles flattened by ORV's. The last thing I want to experience is air polluted by fumes from ORV's. I want a wild experience and I want to know the park's wildlife is safe today and for the future.
Of course the seashore isn't just important to me--it is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches.
All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with sandy beaches, salt marshes and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.
1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."
2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness...."
Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.
3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.
Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

Correspondence: Ladies and Gentlemen:

Please do NOT allow Off Road Vehicles onto the precious Cape Hatteras National Seashore. This would be an unwise and dangerous move. The glory of our wildlife and the peace and quiet of walking tourists and visitors is at stake here. I can't imagine a more destructive way to manage the seashore than to allow motorized vehicles.

I am fully against this potential move to allow ORV.

Thanks for listening. There is no need for ORVs to be on this glorious piece of seashore.....not now and not ever.

Correspondence: Dear Superintendent Murray,
I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. Although I now live on the West Coast, I have many friends in North Carolina and frequently visit the Outer Banks. Living close to a largely overdeveloped coastline, I appreciate all the more the unspoiled beauty of the National Seashore.
I am very troubled by the alternatives presented in the draft environmental impact statement which privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.
1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."

Correspondence: Dear Superintendent Murray,
 As a member of the National Parks Conservation Association and a supporter of national parks, I am submitting comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource, cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches.

0010958

I am greatly concerned to see that all the alternatives in the draft environmental impact statement privilege ORV use over all other visitors. This unbalanced proposal fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant.

Of the six alternative plans outlined in the draft, I do support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.

1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."

2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness...."

Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.

3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.

Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

Correspondence: Cape Hatteras is a fragile environment and will only suffer from the development of an off-road track. Those of us who appreciate the quiet, the birds and the unique environment there are horrified at the thought that the National Park Service would think of such an intrusion into the natural environment of this very special coastal area. Please do not risk the destruction of the areas set aside expressly as primitive wilderness. It's what we know and love about Cape Hatteras National Seashore. Please don't ruin in by letting in all sorts of motorized vehicles which will not only disturb the ecology of the area but also bring the wrong kinds of visitors to the lower part of seashore. As one who lives in a town that is invaded by motorcycles during the summer, I beg of you to let Cape Hatteras remain a pristine seashore environment.

Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.

3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.

Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

Correspondence: Please, stop. Just stop with the wilderness trashing, the habitat destruction, the mass extinction of species. And what for? So a bunch of motorheads can drive offroad? Is there no end to the madness? I wish I could find another planet to live on. Seriously, this planet cannot support the sheer number of people living on it, much less the idiotic things they do endlessly in the name of greed and infantile, selfish entertainment. Just stop.

Correspondence: Dear Superintendent Murray,
 As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.
 1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."
 2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness...."
 Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.
 3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.
 Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

Correspondence: Dear Superintendent Murray,
 I grew up in Virginia in a family that camped on the Outer Banks. As a Girl Scout I also spent many weekends there and after I was married, while living in North Carolina and elsewhere, my husband and I loved to vacation there. As campers and pedestrians we support the NPCA and their efforts to keep this beautiful area as natural as possible.

Correspondence: Dear Superintendent Murray,

I am from Bainbridge Island, WA and believe we must preserve and protect our National parks and wilderness areas.

As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.

1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."

2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness..."

Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.

3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.

I have been on many areas of the WA and OR coast that are not in the national park system and allow ORVs as well as cars on the beach. This is disturbing to the people who visit there as well as any sea life on the shore. I also think it is dangerous to allow motor vehicles where people, especially children, walk and play. I would hate to see this happen at Cape Hatteras.

Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

Correspondence: Please do not let off-road vehicles on the beaches of Cape Hatteras National Seashore. This would be a serious mistake.

As a Floridian, I know personally how vehicle traffic, including off-road vehicles, affect those places we turn to for the kind of recreation only nature can provide, and vehicles of any kind detract significantly from that recreational experience. Off-road vehicles have more than enough places where their presence is not detrimental to everyone else's experience.

As a part-time North Carolinian and someone who has spent time at CHNS, I cringe at the idea of off-road vehicles despoiling that wonderful bit of our natural world.

Correspondence: Please reduce and limit ORV usage. ORVs are highly destructive to the environment. They will destroy the fragile dunes and increase erosion. Everyone else will have to listen to their noise, smell their exhaust and pick up the trash they leave behind. Just look at what happens in the West when ORV's are left to destroy our great natural heritage.
With best wishes from Colorado,
Tobias Schunck

Correspondence: Off-Road Vehicles are an abomination in our national parks. They are noisy and polluting and degrade the physical environment, frighten the wildlife, can endanger humans, and have no place in a nature reserve that should provide people with the opportunity to be closer to their natural environment, undisturbed by loud man-made noise and pollution.
I strongly urge that the Cape Hatteras National Seashore Management Plan set a goal of phasing out all ORVs within the borders of the Park.

Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."
2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness...."
Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.
3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.
Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

Correspondence: I urge you to put strong regulations in place to control ORV use.
The ORV users were one of the active groups who stopped what is now Big Cypress from becoming the Miami-Dade airport.
However, although the organized groups are careful, individuals have caused so much damage in areas of Big Cypress that they have had to be closed to ORV use.
Without effective and enforced regulations, the beach areas will be destroyed, along with nesting areas and the ability to walk and enjoy the beach.

Dear Superintendent Murray,

As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.

1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."

2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness...."

Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.

3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.

Correspondence: Dear Superintendent Murray,
 As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.
 1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."
 2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness...."
 Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.
 3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.
 Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

Correspondence: Please keep our beautiful pristine shores without cars that destroy our beaches, wildlife, and plants and create noise pollution. We already have to be careful with our children on the beaches of Cape Carteret due to car traffic on the beach. Some of the drivers are teens and young adults who try to drive as fast as they can in the sand. It is beyond a nuisance.

Correspondence: Dear Superintendent Murray,

Last year my family and I visited Cape Hatteras in late June. We stayed in Hatteras Village and had a fantastic time. We so enjoyed all the beautiful wildlife, the peaceful ocean, and the fantastic sunsets over the sound. We love the less "touristy" locations and Cape Hatteras was the perfect beach for us.

Correspondence: To Whom it May Concern:

Please do not allow off road vehicles on Cape Hatteras beaches! There are so few pristine beaches of beauty for people to walk. There are so few havens for wildlife left.

Cape Hatteras is one of my favorite places in the entire world (and I have travelled a great deal). What I love about it is the naturalness of it - the fact that I can walk and walk and just be in nature without vehicles. This is a precious place and you have the power to keep it that way.

My father spent most of his career working for the National Park Service. He ended his career as an Assistant Director of the National Park Service. He is the one who brought us to Cape Hatteras when I was a child. He would be greatly saddened to see a change such as this instigated at Cape Hatteras.

Please consider the ramifications of your actions. If we don't protect our lands and seashores, who will?

Thank you,
Virginia Swem

Correspondence: Dear Superintendent Murray,

As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.

Other National Parks do not allow ORV use by visitors. I can't imagine seeing uncontrolled quad runners dashing across sacred Battlefields or zipping along the Santa Fe trail that is protected as a National Monument. There are SO MANY other places for people to run these noisy, polluting machines...Cape Hatteras is definitely NOT one of the places where this is appropriate!!!

1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."

2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness...."

Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, NOT ORV USE. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.

3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.

Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

Correspondence:	<p>The beaches at Cape Hatteras NC are beautiful. My husband and I return every year to enjoy all aspects of these pristine beaches. So far, the balance between relaxing, fishing and vehicles on the beaches are fairly well balanced. Changing the balance will make what most people enjoy disappear from their Cape Hatteras experience and will drive many more people away than allowing more off-road vehicles will attract. In addition to the human element on the beaches, there is also the wildlife that must be considered. Cape Hatteras is an important spot on the migration flight paths of many birds. Increased off-road vehicles will unfortunately destroy habitat and result in decreased wildlife population. I also have a personal concern with the dunes. These are so fragile that it would take very little to destroy the dunes and therefore the island itself.</p> <p>We are members of the National Parks Conservation Association and support America's national parks. We have always been proud of what our national parks have accomplished and the goals that were set to preserve our unique parks. Please reconsider your decision to increase off road vehicle traffic in this truly beautiful spot.</p>

Correspondence:	<p>Cape Hatteras National Seashore is for the use and enjoyment of ALL Americans, not just off road vehicle users. When I go to the beach, I want to see and hear the surf and wildlife, not dodge off road vehicles and listen to them roar across the sand. I want to smell the fresh sea air, not exhaust fumes. None of these things matter to off road vehicle drivers, so let them drive their vehicles somewhere else -- somewhere those of us who want to enjoy the seashore as it don't have to see, hear, or smell them. If off road vehicles are allowed at Cape Hatteras, I will no longer have any desire to visit... or support the Park Service.</p>

Off-road vehicles are antithetical to the preservation of "primitive wilderness." ORV enthusiasts have ample areas open for the enjoyment of their hobby. The dwindling number of wild places in America need to be preserved for the benefit of wildlife and the ecosystems in which they live and for low-impact recreation.
Thank you for your consideration,
Chris Warner

Correspondence: It is crucial to the health of our world that we preserve all the turtles and shore birds possible. One of many big problems with the health of our oceans is the burgeoning jellyfish over abundance which interfere with the breeding cycle of many of our native species of fish. We know we need to feed people as well as keep our fisherman able to sustain their livelihood. We have to have a healthy balance in sea life for the healthy environment -for the very health of all of us. Turtles are endangered and so are many kinds of shore birds. The gulf coast disaster is going to bring a huge loss of life currently to breeding sea turtles and certainly will affect shore birds because of the enormous oil spill closing in on Louisiana's shore line even if the capping off that's being worked on does work because the amount of oil is such an extremely large amount! This is serious business -we all want to have healthy food to eat and environments that will sustain us, not harm us all!

I do not feel that ORV belong in protected areas like these. There is plenty of other land for these vehicles. Please work to help the National Parks remain the last outposts of wilderness that we have in our busy urban society. Thank you!!

Correspondence:	Is there no place that you will protect and keep sacred? Why are you allowing the selfish people who are burning hydrocarbons to ruin OUR national parks? You folks allow logging, gas drilling, and now destructive recreation that you know very well to be disruptive, if not deadly, to many species. We need places to escape from the areas where we live and work, many of which are industrial disasters. You are supposed to protect OUR parks, not only for us but for the children and grandchildren to come. If the native people of this land had been such horrible stewards, there would be no wild places. I guess there would also be no gas, oil, coal, trees, clean waterways for this generation to exploit. This isn't rocket science. If someone paves over half of your backyard and now wants the rest for riding four wheelers, are you going to let them take the little remaining lawn, trees, and garden? Where is your conscience? Where, indeed, is your common sense?

I look forward to seeing an improved final ORV management plan. As an ORV user, I believe the most beautiful and cherished regions should be kept pristine by allowing only low-impact groups to access specific areas. With that said, there ought to be ample areas for all well-represented groups to find their recreational outflow.

Dear Superintendent Murray,

As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.

1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."

2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness...."

Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.

3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals. Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

Correspondence: Vehicles at Cape Hatteras

A little of basic coastal Geology. You can drive a bulldozer on the beach between tide lines and nothing will happen. But have a person walking on the dunes and a huge blowout can occur. This is pretty simple. Allow vehicles on the beach with huge fines for anyone crossing or in the dunes. This is a National Seashore, lets protect it for the citizens and not let a few ruin it. Thanks, Jim Watson

Correspondence:	<p>I respectfully request that you deep-6 the plan to allow off-road vehicles on Cape Hatteras' beach. Beaches are ecologically important areas and are undeserving of the noise and intrusion that is inherently part of off-roading. At this most ecologically important and fragile time, this nation should not be considering ANYTHING that would compromise the fragility of our shores. The massive BP oil spill in the Gulf of Mexico is expected to move round the Florida Keys and as far up as the North Carolina and Virginia shorelines, possibly further. We are in uncharted territory here. NO OFF-ROAD VEHICLES!!!</p>

Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.
1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."
2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness..."
Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.
3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.
Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

Correspondence: The National Park Service (NPS) NOT TO approve the Off Road Vehicle (ORV) management plan for Cape Hatteras National Seashore that will disproportionately dedicate beach use to year-round ORV traffic at the expense of wildlife and pedestrian visitors.
Please do not approve this! My comments are we have a responsibility to preserve wildlife for future generations to enjoy. For my daughter and future

grandchildren have the same right we have to enjoy wildlife. If we continue to destroy what will be left for future generations, this is the ethical, moral and responsible thing to do, there are plenty of places to enjoy off road vehicles, places what do not distress wild life. In Homestead, FL they have a race track, and large parking lot unused baseball park.

My final words are please lets all do the responsible and ethical, and moral thing, not only for our children, but also for wildlife that we so enjoy when we are enjoying nature. Sincerely Julia L. Lemus

Correspondence: DONT LET OFF ROAD VEHICLES DOMINATE CAPE HATTERAS NATIONAL SEASHORE!
 The National Park Service (NPS) is on the verge of approving an Off Road Vehicle (ORV) management plan for Cape Hatteras National Seashore that will disproportionately dedicate beach use to year-round ORV traffic at the expense of wildlife and pedestrian visitors.
 We only have a few days left to stop this from happening! The public comment period will close on May 11 and if national park advocates--like you--fail to take action, Cape Hatteras National Seashore will be dominated by ORV use for the next 20 years!
 NPCA seeks an ORV management plan that places greater emphasis on pedestrian access and wildlife management, especially with regard to endangered sea turtles and shorebirds.

Correspondence: I have owned a home in Hatteras for the last 10 years. I derive income from this house as a rental property when we are not there. If there is a "significant" cut back on the pedestrian/ORV/pet access to beach areas, then there will be a significant negative financial impact to this area because that is what visitors COME to Hatteras to do--use the beaches to the fullest. Clearly, endangered species--unique to the OBX beach area--need to be protected. If the scientific/environmental community comes up with CONCLUSIVE evidence that major restrictions are warranted to protect those species, then those restrictions should be implemented. However, I would be CERTAIN that the scientific evidence is CONCLUSIVE as to the level of beach restrictions. If there is ANY uncertainty, then I would request more minimum restrictions than maximum. Certain aspects of an area ARE what an area is all about. If you go to a mountain, you expect to climb. If you go to a forest, you expect to walk through trails. If you go to the ocean, you expect access to that water. THAT is what Hatteras is--a beach surrounded by water and a strip of land. Recommendation: Start with minimum restrictions and you can always make them more expansive. See if the endangered species co-exist with the population. Start with major restrictions and you will gut the area from a financial standpoint, take away the essence of what makes OBX "special" and , possibly NOT have any major impact on the endangered species. Thank you.

Correspondence: To allow the use of Cape Hatteras for off road vehicles is as irresponsible as BP not installing safety measures on their oil rigs, the beaches are for everyone and allowing ORV's will seriously impact the environment for the "fun" of a few. Our planet is struggling to survive us as it is, we are the stewards of this world and we must act responsibly to care for our environment and allowing oil burning vehicles onto beaches and parks is not the way to be responsible.

In closing, Cape Hatteras has always been one of my favorite national parks. The beauty, the peace and quiet along a lesser used piece of beach, and most of all watching and enjoying the pelicans and other wildlife. Please protect our park for all to enjoy and continue to preserve this natural area above all else.

Sincerely, Carol J Bochert

Correspondence: As a tour guide for Kauai ATV, I would take tourists on well defined trails to see the back country of Kauai. The key words are well refined trails. This keeps the ATVs from going into critical habitat areas but allows for the education to the public of the needs of the habitat. Hawaii has the highest percentage of endangered or lost species in the US. With these well defined paths to travelin, the endangered plants and animals are protected. Both the environment and the ATVers can get what they want.

The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.
1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."
2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness...." Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.
3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.
Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

Correspondence: Dear Superintendent Murray,
 Yes, this is a form letter suggested by the NPCA. I'm using it because it has all the important information. But I'm not just mindlessly forwarding this to you. I'm dismayed that such a small but vocal group of ORV enthusiasts could take precedence over the overwhelming majority of people who wish to enjoy this area for its peace and beauty -- not to mention our species' responsibility for the welfare of other species. As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. Correspondence: I have had the rare privilege of seeing the impact of humans in many places around the globe as well as the opportunity to view environmental issues from many perspectives, including oil and gas exploration. My background also included work as a summer seasonal at Gulf Islands NS. This experience provided a glimpse of the multiple use forces at play in the NPS, and the ecology of areas such as the Cape Hatteras NS. My considered opinion is that we cannot afford to allocate space in the limited confines of Cape Hatteras NS for this activity. If there is a venue for ORV, let it be built inland on less sensitive land and run by commercial enterprises. Stewardship suggests that ORV activities must be assigned a very low priority in any NPS entity and certainly not in this area that is already so heavily impacted. To accommodating this activity will only serve to perpetuate this high impact practice.
 I would be delighted to talk further about this issue. My contact information is below. Thank you for your consideration.

Correspondence: My family has been going to the outer banks for over 20 years and while it's natural appeal still shines, too much of the land has been developed for commercial and rental development. Even more disturbing has been the decline of the natural fauna due to habitat loss and vehicle use in the still wild areas. The more motorized vehicles are allowed to penetrate the preserved areas, the more the wildlife is disturbed and damaged. These areas need to be restricted to pedestrian access only in order to preserve the wildlife that some many people come here to experience. Allowing any Off Road Vehicles into wildlife areas can be catastrophic to the local fauna. Adopting a plan that would increase ORV use would be a mistake that would lead to declining wildlife, degrading ecosystems and finally a decline in tourism. These areas need to be protected from vehicle damage in order to continue to have this wonderful area to live and visit.

Correspondence: Dear Superintendent Murray,
As a recent visitor to Cape Hatteras National Seashore it is vital that the seashore be protected for its wilderness setting. Recreational impact should be minimal and leave the land as undisturbed as possible. ORV use is in conflict with this perspective.
As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with

its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. Correspondence: ORV traffic should never override the needs of wildlife or pedestrians. ORV's are noisy, destructive to the environment and spew fumes into air. Quite frankly they should not be allowed in any national park area, but if they must be allowed, their access should be limited and heavily regulated. Think of birds, people along a quiet beach watching and listening to the waves roll in. Do you suddenly want to hear the loud noise of an ORV and smell the fumes from the engine? There are plenty of places for ORV's to go, there are getting to be fewer and fewer places that we can all go for peace and quiet and communing with nature. Please consider your actions carefully.

Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.

1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."

2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness..."

Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.

3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.

Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

Very Respectfully, Sandra K. Lynne Member, NPCA

Correspondence: This is atrocious. It does not take a rocket scientist to realize that wildlife will be smashed to death by ORVs. As a lifelong resident of California, I have seen the uninhabited beach in my area slowly disintegrate from a thriving tidepool community into lifeless sand and rocks. People move here and don't even know what was there before so they think everything is just fine when in fact dozens of species have gone extinct from the shore in only 2 decades. I cannot even fathom the long term consequences for a beach that allows ORVs on it. It will be lifeless in a matter of months.

make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.

1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."

2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness...."

Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.

3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.

Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

Correspondence: Dear Superintendent Murray,

As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.

1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."

Correspondence: We already have an impending disaster with the oil spill. Hatteras is one of the few places on the continental us where one can enjoy tranquility and peace on clead pristine beaches. What kind of message are we sending by allowing that to be destroyed by oil/gas gussling vehicles. HOW IRONIC! YOU have the responsibility to PROTECT our public lands. NOW DO IT! The Park Service should be spearheading the concept that the natural world can be enjoyed without using entertainment that contributes to pollution, global warming, and turns up the USA's disgusting appatite for more oil. So what is your choice? Protecting our resources or Promoting Big oil If it is the second, then why do we need to support the NPS????!

Correspondence: There are so few pristine locations left along the United States coastline. I feel that it is our duty to protect our valuable coastline areas as they are home to a wide variety of animal and plant life that deserve an undisturbed habitat. It is hard to police the use of off-road vehicle usage and unfortunately there are people who will take advantage of any new regulations around off-road usage that may cause harm to themselves and the coastline areas around them.

We need to consider the environmental impact whenever decisions such as these are raised. Considerations that need to be made in a thoughtful and informative manner, and that do not cater too much to any special interest group.

I hope that after careful consideration you will determine that there is truly no real benefit to opening the Cape Hatteras Recreational Area coastline to off-road vehicles, and will preserve this area for current and future generations to enjoy.

Thank you for your time and consideration!

Correspondence:	<p>As a volunteer, I have worked with several environmental groups repairing sites that ORV's devastated. It takes only one ORV to do damage that might take 10 people to repair in 10 hours. There are already hundreds of miles of trails set aside for snowmobiles and other ORV machines. It defies logic that these noisy, polluting, and damaging machines are given permission to further devastate land and animal and plant life. Who are the powerhouses behind this permission? Surely, no one who lives in the area. Those in favor of ORVs should have to visit their activity and access the damage left behind. Are we such a rich country that we have nothing better to do or spend our money on than clean up after the spoiled and the ignorant ? WE have plenty of natural disasters to attend to and right now we are all worried about the BP spill and the coal mines that practice poor judgement. The list gets longer every day. Why would our Secretary of Interior or Congress or our President even let this preventable trouble emerge as a vote or a consideration?</p>

Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.
1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."
2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness..." Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.
3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.
Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

Correspondence: Good afternoon. I write as a person who visited the Outer Banks every summer as a child, and looked forward to it the rest of the year. The beautiful shoreline, beach and sound side, were the primary reason I grew up to be an avid supporter of National Parks, wild coastlines, and Mother Nature herself. Please do not let this fantastic natural resource be spoiled by off-road vehicles of any kind. The cost in habitat degradation, breeding disruption, and aesthetic compromise is far too great. The area should be protected as the beautiful, peaceful, fecund place that it ought to remain. Thank you. Sincerely, Lindsay Suter, AIA, LEED AP, Yale University

Correspondence: Dear Superintendent Murray,
As a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off-Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.
1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Correspondence: It has been brought to the attention of the kiteboarding community that a variety of plans are being considered in response to proposed environmental and ecological concerns. The Outer Banks of North Carolina is a sanctuary for many beach goers, sports enthusiasts, wildlife observers and most importantly, the natural environment. We, as a community, feel that it is important for the environment to be protected and thus understand certain steps may be needed to achieve this goal. Thank you for evaluating the options to improve the environmental conditions at one of the greatest destinations in the United States of America.
However, with the aforementioned said, please consider the responses you choose carefully. Minimalist environmental management approaches have worked well throughout the United States' National Parks. Closing extensive sections of beaches, the sound, and water ways will strip away the very nature and reason for why we appreciate the land in its current state. It can be said with great certainty that all frequent and casual users of this place intend to preserve its natural beauty and respect its wildlife.
We strongly feel that the Historical, Cultural, and Economic ramifications of the proposed plans have not been adequately addressed by the Draft Environmental Impact Statement (DEIS) as is required.
Should the environmental changes impact our communities' sport (as it would in Plans D, E, & F) we would be forced to reconsider our frequent and environmentally friendly utilization of the Outer Banks. Other user groups such as surfers, fishermen, beachcombers, and virtually all other forms of tourism will also be discouraged from visiting Cape Hatteras if beach closures are greatly expanded. This will have a severely negative impact on the local economy and way of life that the residents of Hatteras Island have enjoyed for many generations. It will also take away something that is important to the lives of thousands of people throughout the United States and around the world.
If people, and especially children, can not experience the environment how are they going to learn to help you protect the environment?

Correspondence: Dear Superintendent Murray,

Although I have not visited the beaches of Cape Hatteras, I love them as an historic and immeasurably valuable treasure of our eastern seaboard. I associate Cape Hatteras with an amusing encounter in France. An artist told me of her American friend who lived in "Capattara". It took me a while to figure out that she meant "Cape Hatteras", pronounced as French. I can only imagine what the artist's American friend must think about the noise and destruction that always accompanies off road vehicles. I am shocked at the thought that alternatives are being entertained that would allow for this kind of degradation of the environment. The fact that people buy off road vehicles does not automatically mean they have a right to drive them wherever they wish.

As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. Correspondence: My wife and I are relative new comers to the Outer Banks of NC. We discovered this veritable paradise in 2003 and have been frequent visitors to lower Hatteras Island since. We enjoy the area so much that we purchased ocean front property in Hatteras Village. Although we continue to make our home

in Rockville, MD, we spend several months each year seeking to enjoy the National Seashore in our area. Our primary recreational activities relative to the beach include fishing, with the assistance of our ORV, and walking on the beach (during which we routinely pick up trash for later disposal in our dumpster). The beach, along with its recreational opportunities, is what brings us to the Outer Banks! Although we love birds and animals and enjoy viewing them, we believe that society's desire to protect and preserve selected species of birds and other wildlife needs to be "balanced" against legitimate human access to the unique recreational opportunities offered by National Seashore beaches on the Outer Banks. We therefore disagree with any beach management approach, which would prevent human access to and recreational use of beaches!! I cannot make this point too emphatically! We believe that there are always creative ways available to manage human activities while protecting threatened and endangered species. The challenge for our legislatures, our courts and regulatory authorities is to find a reasonable compromise, which recognizes that people are the highest order of beings..., and deserve to be given priority.

We strongly disagree with the "NPS Preferred Alternative F" because we consider it to be too restrictive of human recreational access. It does not demonstrate why such a severe level of restriction is needed. There is no proven scientific basis that any shorebird requires a 1,000 meter or larger buffer zone to prevent harm from human presence. Any buffer requirement should start as small as practicable, such as 10-20 meters. A buffer size should only be increased with the support of valid video-documented evidence that the existing buffer size is insufficient to prevent physical harm to the species. "Harm" should not include occasional "defensive posturing" or other normal and routine actions, including flight.

Pedestrian foot traffic such as anglers, surfers, beachcombers, runners, etc., which are commonly seen on beaches, should always be allowed on beaches. Any proposed buffer zones for pedestrians should be substantially smaller than corresponding buffer zones that pertain to vehicles. No protection scheme should include a ban on foot traffic/pedestrian use! There is no evidence that shorebirds or other species are harmed in any way by pedestrians when given a small buffer zone to protect nesting activity. Logic would indicate that a bird would typically not choose to nest in an area or amidst any level of activity, which it found to be uncomfortable or disruptive to its reproductive routine.

Outer Banks NPS-managed beaches should be an example of smart co-existence and balanced management practices, not extremist bans and excessive management practices driven by fear of punitive law suits. The current process appears to be driven, in part, by "single-issue groups", who would seek to restrict the rights and recreational opportunities of the majority solely to further their well intended, but extreme views of appropriate conservation measures.

We agree with and support the positions established by the Coalition for Beach Access (see <http://www.obpa-nc.org/position/statement.pdf> and <http://www.obpa-nc.org/position/assessment.pdf>).

We agree with and support the positions established by Dare County, NC (see <http://www.hatterasislandtimes.com/PDFs/DCDEIS.pdf>).

Thank you for extending the opportunity for public comment. I trust that you will weigh our views carefully in finalizing any regulatory regimes, which would restrict our access to land which we as U.S. Citizens own in common.

Sam & Edith McKeen

Correspondence:	I am writing to comment on the Cape Hatteras National Seashore. Natural beauty is always irrevocably damaged by the introduction of motor vehicles. Beaches, deserts, mountains and wilderness areas provide a life-sustaining beauty, peace and quiet only as long as they are left free of noise and air polluting vehicles. Even if your only concern is money, the natural environment will draw many more tourists if you don't sell out to the small, noisy and obnoxious few who think all enjoyment comes from speed and noise. I urge you to keep the Cape Hatteras National Seashore vehicle free.

Correspondence:	Don't you have any respect for the natural earth? You have to destroy everything? You don't have enough places to ride your noisy, stinky vehicles? Are you crazy? Can't you find someplace else to ride your vehicles? Like a road. Cement. Not pristine wilderness. Not where wildlife live. Not where people are trying to get away from the noise and traffic. Is that the purpose of this? So you can destroy the quiet and beauty of nature? Is that the thrill? I think human beings are reverting backwards sometimes.

Correspondence: Please revise ORV (Off-Road Vehicle) management plans for Cape Hatteras National Seashore to protect the pristine qualities of one of the most beautiful stretches of Atlantic Coast in the United States. ORV use is inappropriate at Cape Hatteras National Seashore and should not be allowed to impair the visitor experience and degrade the natural resources protected by the National Park Service. ORV use will prevent all visitors from experiencing the special qualities of Cape Hatteras and will cause irreversible harm to the wildlife and natural resources of a treasured park. Please eliminate and certainly please do not grant expanded ORV access in Cape Hatteras National Seashore. Thank you for considering my point of view.

Correspondence: I am opposed to the current plan to allow ORV traffic on the Cape Hatteras beaches. As someone who enjoys walking the beach, watching the birds, and listening to the roar of the waves -- in short, nature -- I object strongly to turning Cape Hatteras into another location for the noisy fume-spewing, gas-guzzling machines that dominate the rest of our lives! The National Park Service should be working to protect our natural heritage, not fill it with the same metal mess that clutters the rest of our landscape.
The ORV use plan for Cape Hatteras is like booking helicopter flights over the Grand Canyon -- if you eliminate the natural environment (by filling it with "civilization") you eliminate an essential part of our national character.
Please ditch this plan! Let the metal-heads go elsewhere.
Sincerely, Linda Day

Correspondence: Gentlemen/women:
The wild character of a large share of the magnificent beaches in the Southeast have already been destroyed by overuse and vehicle traffic. Places for quiet contemplation are rare nowadays.
And as stress mounts in our modern world, we must act to protect such places that allow future generations to collect their thoughts, reflect, and think productively. Here's a typical comment from visitors to the Cape Hatteras National Seashore: "My husband and I FINALLY found a beach that we completely and absolutely loved."
I therefore urge you to keep our Cape Hatteras National Seashore completely off-limits to ORV traffic.
Sincerely, Thomas A. Wiewandt

Correspondence: As a frequent traveller to that area for many years, I would beg that you give priority to the human and wildlife whole do not want to be assaulted by the huge noise pollution that atv's and motorbikes bring to National Parks areas. There would be NO relaxation, and little wildlife observations to be had, if this noise is given more priority than the natural setting of the park. There should be no reason for giving "noise" and "park destruction", as inevitably occurs with these machines, ANY priority in our Parks, particularly Beach & Dune areas. Parks are for PEOPLE, NOT machines !!!

Thank you

Correspondence: As a supporter of national parks I wish to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to consider family vacationers, bird watchers, and many other people who enjoy undeveloped beaches or to conserve and protect the wilderness, birds, and turtles that make this area nationally significant.

The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."

Congress specifically designated Cape Hatteras a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness...." Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.

Accordingly, the final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.

Of the six alternative plans outlined in the draft, I strongly support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.

1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."

2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness...."

Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.

3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.

Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

Respectfully,
Wendy Jewell

Correspondence: Dear Superintendent Murray,
I have rode my fat-tire bicycle with friends on the Cape Hatteras sands during the cool Spring weather for a few years. I marvel at its serene and majestic natural beauty -- I believe the off-road vehicle predominance would compromise one of the great experiences that makes me coming back to visit your coastline.
As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.
1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."
2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness...."
Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.
3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.
Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.
I really hope you'll choose this plan! Thank you so very much!
Christiane

Limit ORV usage to second or third-quality public land if people simply must pursue such a noise and exhaust pollution creating form of recreation. Animals hate ORVs and so do the vast majority of people, and we as a country will not enjoy the continued economic benefits of international and domestic ecotourism if our natural places become polluted, compromised, or unenjoyable because of the noise and other nuisances posed by ORVs. Not only are they nuisances offensive to wildlife and park visitors who are trying to get away from internal combustion engines and their pollution if only for a little while, they are quite dangerous as well to operators, passengers, and people in the vicinity, as a review of legal cases involving ORV accidents and injuries amply demonstrates.</p> <p>Thank you for the opportunity to provide these comments. Correspondence:	<p>Dear Superintendent Murray,</p> <p>As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with</p>						

its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.

1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."

2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness...."

Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.

3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.

Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

Correspondence: In Plan F, why are non-endangered species, such as American Oystercatchers, Least Terns and Colonial Waterbird given pre-Nesting closures and buffers up to 300 meters? As stated in a previous comment, reasonable measures should be taken to preserve wildlife, however a 300 meter buffer is excessive, and needs to be reevaluated. Instead of a 300 meter buffer, a 30 meter buffer should be considered. The 30 meter buffer will provide more than adequate protection from pedestrians, and off road vehicles. What scientific evidence supports the recommended 300 meter buffer?
I ask for the opportunity to prove that human interaction has, in any way, negatively impacted the breeding habits of plovers, oystercatchers, terns, waterbirds, etc. The economies of Dare & Hyde counties are in disarray because of the Consent Decree, and the NPS' unwillingness to consider those in economic plight is disappointing and disheartening.

Correspondence: My stance is simple: Cape Hatteras belongs to wildlife and people. In a world where natural resources for the peaceful co-existence of mankind and wildlife are shrinking, it is imperative that we fiercely protect nature's gems with every fiber of our being. The onslaught of ORV's will most assuredly destroy this precious gift. The decision to permit this to occur is both asinine and bizarre, showcasing little regard for yet another of nature's sanctuaries...a foolish mistake with damning repercussions that will be quickly realized. God has provided a brilliant opportunity to cherish, love and protect this natural splendor; failure to do what's right is an insult to God and a fierce blow to the face of humanity. Come now--do you REALLY THINK this is appropriate?

Correspondence:	<p>Dear Superintendent Murray,</p> <p>Below is the official letter from NPCA but my thoughts are more personal. Cape Hatteras is the US park that my family has enjoyed the most often. We have vacationed there many, many times throughout the years, the latest time being last Thanksgiving. My question is how does allowing off the road vehicles(OTRV) on the beaches improve the park or improve the experience of the average visitor? I dont understand allowing OTRV in any parks. They are noisy,polluting, and tear up the ground and ruin bird, turtle, etc habitat and nesting grounds. Over the years, I had maybe seen only one vehicle on the beach. But in November I saw several and that was pretty far "off-season." If I were a parent of small children, I would be especially leery of going to a beach where there were OTRV everywhere.</p> <p>As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. Correspondence:	<p>Dear Sir or Madam:</p> <p>I understand that the National Park Service (NPS) is about to approve an Off Road Vehicle management plan for Cape Hatteras National Seashore that</p>				

would disproportionately dedicate beach use to year-round ORV traffic at the expense of wildlife and pedestrians. This would be a desecration of our natural environment, akin to encouraging skimobile traffic at Yellowstone or driving in any of our National Parks. America has become far too concerned with the combustion engine in the last century, putting its glorious natural resources in peril. Let's keep Nature natural. Off Road Vehicle use should be carefully limited at Cape Hatteras and elsewhere in the Parks system. Please come up with a management plan that places greater emphasis on pedestrian access and wildlife management, especially with regard to endangered sea turtles and shorebirds, and less on noisy, polluting, environmentally damaging Off Road vehicles.

Correspondence: I've attached a form letter that conveys my feelings but I would like to say when I spend money on a vacation it's to go to a beach (I live in the desert) and the last thing I want to see and hear is motors running and reckless individuals tearing up the beaches. I vacation on the sea shores for peace and tranquillity and to watch the wildlife. If I can get a glimpse of a dolphin or a whale, even better. Building sand castles is another favorite. Please don't allow Off Road Vehicles on the beaches. The beaches are an escape from vehicles and peace and CRV's do not mix. As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.

- 1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."
- 2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness...." Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.
- 3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.

Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

Correspondence: My wife and I vacation on the Cape often. Friends of our have a home just north of the seashore. We love the quiet of the sea and the pristine nature of the beach. It is unacceptable to allow OFF ROAD VEHICLES to intrude on this area. Not only is it bad for the beach, the wildlife, and our safety. It runs counter to the long term interest of the Park and to the Seashore. I would hope that we can somehow keep from destroying this link with our natural history, and our american heritage.

Correspondence: Dear Superintendent Murray,
As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.

- 1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."
- 2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness...." Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.
- 3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals. Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

***** Thank you very much for taking the time to protect one of America's most beautiful stretches of Atlantic seashore! Sea turtles, nesting shorebirds, and generations to come will be grateful for your action today. Thanks again!

Sincerely,
Gary W Feemster

Correspondence: I would like to post my dismay that you're planning to allow ATVs on National Park Service beaches at Cape Hatteras. I believe that the parks should be a place where we can have peace and quiet, and get away from the motorized activity and noise that surrounds us in our day to day lives. Please vote against this measure, and keep the beaches clean and quiet. Only police and park service vehicles should be on these beaches.

Correspondence: I have been vacationing at the Outer Banks before there were million dollar beach houses lining the coast. It's an amazing place - a place of great PEACE. Can you only imagine laying out enjoying the sun/ocean and some person (talking or texting) on a phone, not paying attention, driving on the beach because some law allowed him to - runs you over!! That's what could potentially happen if this ruling passes. You are not able to ensure everyone's safety and off roading where people vacation is a stupid idea. Me and my family will continue to vacation in NC (particularly OBX). If this ORV plan passes it may limit my time in Cape Hatteras...And tourist dollars are in demand. Thank you for your time, Aimee

Correspondence: Off-road vehicle use is often destructive of the environment and of wildlife habitat. ORVs can also inhibit free use of the areas they share with other,

non-vehicular users. What wildlife wants to nest next to a roaring two-cycle engine that scoots by at any time? Who wants to picnic there or hike there? OVR owners have no place in the midst of such areas, and I hope you vote to exclude them. They are not intended for truly wild places. They do best in areas already brutalized beyond repair by other uses. Bicycles yes, two-cycle gasoline driven vehicles, no.

Correspondence:	Please consider the consequences of opening up your beautiful beaches for ORV use. Here in Utah an unquantifiable and unimaginable amount of damage has been done to our wild lands due to ORV use. Once an area is opened for ORV use, the area becomes less habitable for native plant and animal life. After dirt roads are formed they become paved roads and then "development" occurs. Quiet places in nature are getting harder to come by. Please preserve your open land for future generations to enjoy. Sincerely, J.D. Maret

Correspondence:	The word "public" means for the public/general use. Not for one special group's use. We see this happening to our local parks, where organized corporate sports teams are taking over all the open spaces with astro turf, lighting, etc., etc. All at taxpayer expense. Now the "Public" can't walk their dogs, have picnics, or fly a kite because they will be in the way of the Special Ones. This is politics at the lowest levels. Leave public land alone. Not everyone will be happy if they can't drill oil or whatever on public land, but that's the point. No one person or group can dominate it, either. Get it? Obviously you don't. Or you don't care.

Correspondence:	Dear Superintendent Murray: As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the opportunity to submit comments on the draft plan to manage Off Road Vehicle ("ORV") use on the beaches of Cape Hatteras National Seashore ("Seashore"). The Seashore is a nationally significant resource with its sandy beaches, salt marshes and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points: 1. The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations." 2. When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness...." Accordingly, Congress' intent was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and permit ORV use only if it can occur without harming wilderness and wildlife resources. 3. The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals. Thank you for the opportunity to comment. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

Correspondence:	My entire family is very strongly against permitting more Off Road Vehicle use in the Cape Hatteras National Seashore. I have watched over the years the alarming increase in the number of vehicles tearing up the beaches, making walking less safe, rendering the air foul with exhaust fumes, replacing the sounds of the ocean and birds with the roar of gunning engines and tearing up the habitat of creatures that need the space between the water's edge and dunes. In other words, ORVs are a highly destructive intrusion to the Cape Hatteras National Seashore. Please do not open the seashore to further ORV use. Keep gasoline engines on the paved roads not on the beaches. My family even urge you to stop it altogether. Sincerely,						

Charles Maddox

Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.
Even apart from the environmental impact of ORVs, I can think of few things more likely to ruin a visit to this beautiful place, one for which the Old North State is known and of which we are justifiably proud, than seeing and hearing noisy ORVs and watching them leave tire tracks all over the place. The very idea depresses me more than I can say! Cape Hatteras National Seashore is meant to be a wilderness area. There are plenty of places ORV enthusiasts can go and make all the noise and fumes they want to, particularly their own PRIVATE PROPERTY. Please don't let this pristine area be ruined for visitors current and future. Please!!
Sincerely,
Tar Heel resident and taxpayer, Nancy C. Foster Greensboro, NC

Correspondence: Off-road vehicles should not be admitted to ANY of our national parks! They are the toys of people who have no appreciation of the natural beauty around them and are just seeking the transient thrills of racing up and down difficult terrain. How can you officials be ignorant of the environmental destruction wrought by such machinery?? -- Especially in a sandy environment. Moving on from problems in destruction of the terrain -- what about all of the wildlife, much of it endangered and dependent upon specific limited ecosystems? What can you be thinking of?? Listen to the scientists and environmentalists and not to the corporations profiting from the sales of such "toys"!

Correspondence: I appreciate the opportunity to comment on National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support Alternative D if modified to provide greater pedestrian access, which was identified in the DEIS as the environmentally preferred alternative. This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principals should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
Provide Equal Access for All Visitors: Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
Put Natural Resources First: Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
Establish and Meet Clear Goals for Wildlife Recovery: A plan must include clear goals and milestones for wildlife recovery. Where there are

management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Correspondence:

I appreciate the opportunity to comment on National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support Alternative D if modified to provide greater pedestrian access, which was identified in the DEIS as the environmentally preferred alternative. This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.

The following principals should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

Provide Equal Access for All Visitors: Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, more than half of the beach should be available year round for non-ORV users and wildlife.

ORV's take more than their fair share of resources when used. As a general guideline, I'd encourage a plan that pro-rates a particular usage profile based on its (negative) impact on the environment. Walking seems the least impact. Overnight stays would be next. And way up the list would be ORV usage. Consequently, I'd suggest only a small part of the 68 total miles would be appropriate for ORV use.

Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.

Put Natural Resources First: Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.

Establish and Meet Clear Goals for Wildlife Recovery: A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.

Put Natural Resources First: Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.

Establish and Meet Clear Goals for Wildlife Recovery: A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Correspondence: As a resident of North Carolina and a frequent visitor to national parks and Cape Hatteras specifically, I appreciate the opportunity to comment on National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support Alternative D if modified to provide greater pedestrian access, which was identified in the DEIS as the environmentally preferred alternative. This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.

The following principals should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

Provide Equal Access for All Visitors: Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.

Put Natural Resources First: Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Correspondence: Dear Superintendent Murray,

As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.

1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."

2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness..."

Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.

3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.

Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.

Put Natural Resources First: Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent

with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.

Establish and Meet Clear Goals for Wildlife Recovery: A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Correspondence: I appreciate the opportunity to comment on National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support Alternative D if modified to provide greater pedestrian access, which was identified in the DEIS as the environmentally preferred alternative. This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principals should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
Provide Equal Access for All Visitors: Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
Put Natural Resources First: Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. Correspondence: I believe the following statment fully expresses my feelings: The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."
When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness...."
Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.
The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.
Thank you for the opportunity to comment.

Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.
 3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.
 Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.
 Sincerely, Mark Hotchkiss

Correspondence: Dear Superintendent Murray,
 As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.
 1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."
 2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness...." Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.
 3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.  ***** Thank you very much for taking the time to protect one of America's most beautiful stretches of Atlantic seashore! Sea turtles, nesting shorebirds, and generations to come will be grateful for your action today.
 Brgds,
 Rick Roberson 832-368-1065

Correspondence:	I thought your department was supposed to protect public spaces. Why are you even considering allowing off road vehicles on the Cape Hatteras National Seashore??? These vehicles will do nothing except ruin fragile eco-systems. They have always been banned because they are horribly destructive, disturb everybody and everything, and are only used by a tiny minority of people. Use common sense. Do not allow these things!!!!

Correspondence:	I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access. This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to ME, MY family and MY friends as well as most Americans who only wish to enjoy America's NATURAL beauty and not the man-made ones. We have too many places for those already. What's next...NASCAR on the beaches? The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D: *Provide Equal Access for ALL Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does NOT represent a FAIR BALANCE for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park. * Put Natural Resources FIRST. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles. * Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones. Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.

* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.

* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.

Correspondence: I visit Hatteras often in my 4WD, and enjoy driving on the beaches. But what I go to the Outer Banks for is the unspoiled, open beaches and wildlife. I would gladly give up my drives on the sand if it meant the beach would not become a thoroughfare with animal and bird carcasses. Please do not expand any off-road driving privileges on these beautiful islands. You know that people will always abuse the laws and I fear for the fragile ecosystem.

Correspondence: Most people go to a beach to relax and enjoy the sound of the ocean's waves, not to hear the obnoxious rumble of ORVs.
Aside from the noise issue, there are safety and environmental issues to consider as well.
With ORVs allowed to buzz across a beach, there is the risk and liability of injuries to those trying to enjoy the beach, and to the ORV drivers and/or riders themselves. That, along with the contaminants that ORVs will leave on the beach (oil, , fuel, tire fragments, etc.), will ruin the beach for not only people, but for the native inhabitants as well - the animals and sea life that reside there.
Please do not allow ORVs on the beach!

Correspondence: Dear Superintendent Murray,
As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.
1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all

visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."

2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness...."

Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.

3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.

Personally, I think the idea of ANY vehicle other than a bicycle should not be allowed near any beach or sand dunes on the North Carolina coast.

Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

Correspondence: Cape Hatteras National Seashore will be dominated by ORV use for the next 20 years if people let it happen. I am totally opposed to this. I would like a management plan that places greater emphasis on pedestrian access and wildlife management, especially with regard to endangered sea turtles and shorebirds and other wildlife. It is necessary to keep the environment in its natural state so that people and animals alike can enjoy and live with nature without interference from ORV use or from any other kind of destruction.

Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.
1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."
2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness..."
Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.
3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.
Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

Correspondence: Based on my experience of with living with access to both a national wildlife refuge and a national seashore, I wish to express with all the force at my command my opposition to expanding their use by any form of vehicular traffic. Even the limited vehicular access here, fills the beach with ruts making walking very difficult. Though I am not longer to walk the beach as I once did and realize that expanded vehicular access might enable me to get me back on it, I prefer that the beach keep its untrampled character. No! to the plan under consideration>

Correspondence: Dear NPS,
I and my family have been visiting the Outer Banks for many years. One favorite things is to go to the Cape Hatteras National Seashore because of its being maintained in the wild and one can appreciate the land and the sea before we ever walked on planet earth. There is a certain calm at the National Seashore that allows one to listen for the sound of birds and the crash of the surf.
I am writing to express my opposition to the National Park Service opening the National Seashore to Off Road Vehicles. Even though it is being proposed as an ORV management plan, once they are allowed it will be difficult to police and keep them from going off the road, across dunes, and causing untold damage to flora and fauna.
If it does come to pass that this ORV management plan is approved it will signal the end of our trips to the Outer Banks. I cannot understand how such a proposal can even be considered for a National Park. Please work to preserve the national parks and not destroy them through ORV's having the run of the park.
Sincerely,
Thomas J. Rowan

Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."

2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness..."

Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.

3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.

Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

Sincerely, Karen L. Vasily

Correspondence: Dear Superintendent Murray,

As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.

1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."

2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness..."

Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.

I have lived close to Galveston beaches here in Texas for almost 20 years. Besides being a polluted abomination peppered with tar balls, a lot of the beaches are open to vehicles. It's ugly and people don't seem to respect the land when they're in a vehicle. Whether it's on-road or off-road vehicles, their use encourages reckless behavior and disregard for wildlife and pedestrians. Those of us who have spent time on peaceful expanse of unpolluted Carolina beaches can only feel shame at what we are capable of turning it into. Don't start down the road of letting the beaches of Cape Hatteras National Seashore turn into what's happened here.

Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

Correspondence: To whom it may concern:

As an avid beach walker, I would be incredibly upset if I had to deal with ATV's and other such vehicles racing around and disturbing the natural environment around me. It would most likely cause me to find another beach to visit. I understand that there is a desperate need to increase the funding for our national parks, however if we do so at the expense of the parks themselves, eventually it will have been pointless for the parks will have been ruined. Not only will the people visiting be disturbed, but the animals will be driven away by the sound and actions of off road vehicles. Please try to keep in mind that while some people who enjoy using ATV type vehicles have respect for the environment, many find entertainment in chasing down animals and hunting. These are not the types of activities that should be permitted inside a national park.

Sincerely, Mandi Adkins

Correspondence: As a species, we are busy using up what our planet could have sustained for centuries and from which it may have rebounded, were we not so busy chewing it up.

We are the destructive force that will bring it all down and we don't seem to care as long as we can have that man made stuff called money, that we can't eat and won't sustain life of a kind.

When will we be smart enough to realize that: GOD gave us one planet to live on and we have abused that gift. GOD may have had a plan but we've trampled it for sure.

Please don't let motor vehicles destroy that beautiful shore. Thank you.

Correspondence:	Please restrict ORV use as much as possible at Cape Hatteras and elsewhere. As a hiker and outdoors person, I have been continually shocked and horrified by the damage and noise created by ORV users, who seem determined to use not only their designated areas but anywhere else as well. One vehicle can be heard for an enormous distance, spoiling the experience for everyone, and trails become rutted, scarred, and unusable. The person on foot is always a little bit on guard, waiting for a vehicle to suddenly appear behind them. Birds and other wildlife flee the noise and exhaust smells.

ORVs do so much damage to any area that they travel over, except maybe very rocky areas. That beautiful sandy beach would be destroyed by those machines.

There needs to be places of peace and quiet for both humans and wild life. Please do all that you can to preserve this valuable area.

***** Thank you very much for taking the time to protect one of America's most beautiful stretches of Atlantic seashore! Sea

turtles, nesting shorebirds, and generations to come will be grateful for your action today. Thanks again!
Sincerely, Joanne Hesselink

Correspondence:	I would like to see stringent controls on ORV use on Cape Hatteras National Seashore. If they have to be allowed at all they need very strict controls to minimize damage to nesting birds and plant life. It is unfortunate that we have a populace that values ORV recreation as it is environmentally destructive and not conducive to the quiet and peacefulness I desire when visiting the beach. Certainly the life forms that need an undisturbed home do not appreciate ORV molestation.

Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."

2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness...."

Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.

3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.

We live near Lake Grapevine & it took many years for our shore line & wildlife to recover from the effects of off road vehicles use. Their presences made the shore line a noisy, dangerous place to be for people & wildlife, not to mention the mountains of trash left every weekend.

Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

Thank you very much for taking the time to protect one of America's most beautiful stretches of Atlantic seashore! Sea turtles, nesting shorebirds, and generations to come will be grateful for your action today. Thanks again!

Sincerely, Sherry Blackshear

I know we live in a mechanized world and many people like to go fast and make a lot of noise, but must only those people be given preferential treatment in all of our natural and wild areas? Please leave this beautiful and fragile park as a safe haven for wildlife and people who are refreshed by the soothing of the waves, the cries of birds, and the opportunity to renew our connection with the earth in peace.

Thank you very much for taking the time to protect one of America's most beautiful stretches of Atlantic seashore! Sea turtles, nesting shorebirds, and generations to come will be grateful for your action today. Thanks again!

Sincerely,

Anne Eversoll Murphy, North Carolina 28906

Correspondence: To Whom It May Concern,

I've become aware that the NPS is considering allowing off road vehicles on Cape Hatteras National Seashore. I strongly oppose this.

I have been visiting Cape Hatteras my entire life and make several trips there a year. I love it because it offers a glimpse of the unique landscape of North Carolina's Outer Banks in its relatively pristine, untouched state. The Outer Banks are quickly losing many of their natural treasures and Cape Hatteras is a small preserve of that wild, completely unique landscape.

I feel off road vehicles would greatly degrade Cape Hatteras. Noise alone would harm the appeal of the shore. But the vehicles would likely have a much harsher environmental impact. I'm sure fragile sand dunes, migratory bird and turtle nesting sites, and protected sea oats would quickly fall victim to joyriders. Not to mention the smell of exhaust fumes on the normally aromatic sea breeze.

I understand many people enjoy riding off road vehicles, but many others enjoy Cape Hatteras for its natural beauty. I know my family and I love it for its untouched state and many bird watchers and photographers do as well. The attraction of an undeveloped seashore brings money to the area and preserves part of the unique Outer Banks' ecosystem.

There are so few undeveloped beaches in this country, please leave this one unharmed. It is a special place that my family and I love and it is worth keeping as it is. Thank you.

Sincerely, Alex Vactor

Correspondence: Pleasestrictly limit or, even better, prohibit the use ORVs, ATMs and all other motorized vehicals from all our beaches. The damage they do we cannot allow. They are nosiy, dirty, and too often driven by people who don't care about other people, wildlife, plant life, or the damage they are doing to the ecology of the beaches. They will not stop on their own so laws are needed to prevent misuse and distruction of irreplaceable wild places. Our environment is under huge pressure from every direction and it is important that the parks department protect all its area from those who would destroy it.
Please do not open any beach anywhere to motorized vehicles of any kind.
Thank you

Correspondence: Dear Superintendent Murray,
As an avid appreciator of our American landscape and as a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.
1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."
2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness..." Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.
3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.
Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

Correspondence: I would not consider visiting a seashore that allows off road vehicles on it's beaches. Pedestrian visitors and wildlife / environmental imapact should be the primary concerns of the NPS at Cape Hatteras national Seashore. ORV use in primitive wilderness areas should not be allowed. The reason Cape Hatteras is a park is because of it's natural beauty. ORV use will damage that natural beauty for present and future generations to enjoy should they be given access to what was established as a primitive wilderness area. The noise alone would ruin the natural serenity of the Cape and the damage caused by leaking oil / gas and fumes would be equally as bad. But worst would be the impact of wheels on the landscape and plants. Those who ride ORV's for recreation do not ride them to stay on designated trails or roads. They like to test the off road capabilities of their vehicles. A national treasure like Cape

Hatteras is not a place for such vehicles.
 Thanks you for listening and considering my comments.

Correspondence: As an avid user of our National Parks, I treasure them as a place, not just of beauty, but also tranquility. Most U.S. citizens spend their lives bombarded by noise --- in our cities, restaurants, places of employment, even our city parks. The experience of solitude and the ability to hear the sounds of nature clearly are getting more and more difficult to find ANYWHERE other than in our National Parks.
 I encourage you to strictly limit the use of ATV's at Cape Hatteras and America's other National Parks. I am writing from an area that is currently developing lands heavily damaged due to strip mining as ATV recreation areas. Although it pains me to say it, these lands, which can never be sufficiently reclaimed, are a more suitable place for ATV activity.
 I am looking to the National Park Service to preserve some ability for Americans to escape the barrage of noise that is now a part of everyday life. Please don't let us down.
 Sincerely,
 Patricia L. Hudson 3507 Kesterwood Drive Knoxville, TN 37918

Correspondence: NO, NO, NO, NO! Not a good policy to let a small percentage of the population take over a whole location. Once motorized vehicles are allowed, all other forms recreation will leave. Sort of like if you allow ski boats on a lake, the canoes, kayaks and sailboats leave. Not a good policy. I own a 4x4 and do a lot of OHV, but in a proper manner, in designated areas.

Correspondence: Dear Superintendent Murray,
 As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.
 1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."
 2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness...."
 Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.
 3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.
 Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.
 Sincerely, Joe Michalowski

Correspondence: Greetings Superintendent Murray,
Thank you for offering the chance to provide comments on the draft plan to manage Off Road Vehicles at the Cape Hatteras National Seashore. As you know this is a very beautiful area that is significant to vacationers and bird watchers, as well as those who just appreciate the lack of development in the area.
I am concerned about the environmental impact of the plans that seem to favor Off Road Vehicles to the detriment of other park visitors as well as the wildlife and scenic opportunities that the area allows. For this reason I would support Alternative D if it could be modified to recognize and include the following:
1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."
2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness..."
Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.
3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.
Thank you very much for the opportunity to provide these comments and for taking the time to sort these out. I truly appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.
Cordially yours, Catherine Johnston

Correspondence: Please keep ORVs off the Cape Hatteras beaches. There are certainly plenty of other areas where these people and their noisy, destructive toys can make a mess. Beach areas should be for foot traffic and be areas of undisturbed quiet away from vehicular traffic. Also these areas need to be protected for the wildlife that need this as a breeding area. We need to protect plant life also. Man has already harmed the Earth too much. We are combating a large oil eruption in the Gulf caused by man's greediness and lack of regulation of corporations. Please keep these ORVs out of this area. Thanks. The world is watching!

Correspondence: Dear Superintendent Murray,

As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. As a child, my family would vacation in Cape Hatteras and I remember many hours just walking the beach with my family, picking up shells, swimming, looking at the sea birds and to have that peace and serenity changed would be devastating. The last time that I

was on the Outer Banks, I unknowingly went to a beach to do the same only to find that it was a beach that allowed vehicles. As a pedestrian, I felt unsafe and not peaceful whatsoever. Vehicles really impact and promote erosion of the beachfront and make it uninhabitable for the animals that would naturally be there. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.

1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."

Correspondence: Dear Superintendent Murray,
As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement give precedence to ORV use over all other visitors. Here in Alaska, we can clearly see the detrimental effects of unmanaged ORV (ATV) use in the wetlands, and on the tundra. There is no such thing as low-impact when it comes to the use of off-road vehicles. They leave marks. They scar the land. Overall, your approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.
1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."
2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness..."
Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.
3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.
Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.
Sincerely, Cari Sayre and Dave Johnston Talkeetna, Alaska

Correspondence: Dear Superintendent Murray,

I grew up vacationing on the Outer Banks of North Carolina. My grandmother grew up in nearby communities and my mother was raised in Elizabeth City. Every summer of my youth, we spent a week or two in the Outer Banks. I have especially fond memories of the pristine national seashore. I am horrified at the thought that this beach will disproportionately dedicate beach use to year-round ORV traffic at the expense of wildlife and pedestrian visitors. Please protect wildlife and the serenity of the beaches.

As a member of the Sierra Club and National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. Correspondence: Dear Superintendent Murray,

As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore.

In a nutshell, I'm against allowing ORVs use of the area. A few reasons are: ORVs do damage to the terrain, they pollute (noise and airborne pollutants), and they are disruptive to those who want to "get away from it all."

The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.

1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Correspondence: Dear Superintendent Murray,

As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. I have seen first-hand the kind of damage that ORVs have inflicted on natural landscapes in upstate New York, on Long Island. I am very concerned to hear that ORVs may soon have year-round access to the beaches of the Cape Hatteras Nation Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who

enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Correspondence: As a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore.
I am very concerned that your plan will give too much use to off-road vehicles. A sea shore should be a place to appreciate the ocean and the wildlife that is around. There are many places where these vehicles can be driven where they would not detract from the environment or destroy the ecology. When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness..." Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.

Correspondence:	I feel that Off Road Vehicles should be on a very limited basis. The rigs that are used for this enjoyment are anything but clean. They are regularly						

coated in grease and oil and frequently have leaks of various chemicals. To limit the damage to environment and to keep the tranquility of the area for people walking the beaches and in the area these vehicles should be kept in a restricted use category. I don't feel that they should be banned completely, because I too enjoy off road recreation, but I also am aware of the potential damage that they can cause when an area is opened up to excessive use for these types of vehicles.

Thank you for taking the time to consider my opinion and thoughts among the others sharing their thoughts.

Correspondence: Dear Superintendent Murray,
I am a citizen, a voter, a community activist, and I have always been a lover of beaches, wilderness, and wildlife. I am a big fan of the National Park system and the National Wilderness system, and I regularly visit our parks and wilderness areas as a camper, hiker and birdwatcher. In brief, I object to wide scale use of our parks for off road motorized vehicles since such use is always detrimental to habitat and wildlife.
As a member of the Moveon.org and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.
1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."
2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness...."
Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.
3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.
Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.
Very truly yours, Richard P Stowell

Correspondence: Fossil-fueled ORVs are unnecessary toys that contribute to pollution, and are noisy and destructive. Those who use them should not be accorded privileged status on public lands. ORVs contribute to obesity and allow users to access (and disfigure) public lands without any specific commitment to acquisition, maintenance and remediation of damage to those lands. ORV access is an expensive "frill" that favors oil companies and vehicle manufacturers at the expense of the environment, the national parks budget, and in these economically troubled times, tax monies that could be better spent keeping the parks themselves open, staffed and maintained.

Correspondence: Approving an off road vehicle use on this beach would do permanent damage to wildlife and also be dangerous for pedestrian traffic. We must preserve as many places as possible without vehicle use to keep nature as it was meant to be enjoyed and protected for future generations. There are plenty of other locations people can drive their vehicles without doing so at the Cape Hatteras National Seashore. If vehicles are allowed to drive in this area, there will also be a major increase in trash. This will not only destroy the beauty of the area, but also endanger wildlife by consuming, get caught in it and just general trashing the area. I strongly urge you to NOT allow this to happen by NOT allowing vehicle traffic.

Correspondence: I find it unbelievable that ORV would be allowed free roam over the beaches throughout the year. People come to the Outer Banks to relax and walk along the various beaches, not have to move out of the way of vehicles or hear/smell exhaust.
Not only would this affect the vacationers in a negative way, but what of the plants and wildlife that come to the beaches to nest, roost, or actually live there? Haven't we done enough to destroy beautiful places? Haven't we pushed our way onto enough space? Is it too hard to leave some alone?
Please do not allow this to go through.

Correspondence: Dear Superintendent Murray,
As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. I am unsure why ORV use continues to plague our undeveloped areas. There are plenty of alternatives currently for ORV use, and it seems unnecessary to subject further areas to harm from off-road motoring.
The Seashore is a nationally significant resource with its sandy beaches, salt marshes and maritime woods on the storied Outer Banks of North Carolina, where I have friends and family. This area is valued by family vacationers, bird watchers and those of us who simply enjoy undeveloped beaches and the opportunity to get away from the noise and chaos of city life. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors, which honestly baffles me. This approach seems unfair and unbalanced, and it fails to conserve and protect the wilderness, birds and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points:
1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."
ORV use is known to be environmentally destructive, and I again fail to understand the need for more ORV areas.
2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason: "Except for certain portions of the area, deemed to be especially adaptable for recreational uses ... the said area shall be permanently reserved as a primitive wilderness..." The intent of Congress was clearly to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.
Wilderness is a decreasing and valuable commodity.

3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.
Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations, and I appreciate the opportunity to provide feedback. I look forward to seeing an improved final ORV management plan. Thank you.

Correspondence: Dear Superintendent Murray,
Motorized land vehicle be they cars, ATVs, motorbikes have NO place anywhere on Public Lands except for roads. The ONLY exception I would make is for disabled access.
The rest below is NCPA boiler-plate which I endorse as the next best option to what I have stated above.

===== As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.

1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."

2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness...."

Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.

3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.

Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

Correspondence: Dear Superintendent Murray,
As a member of the NPCA and a supporter of national parks as well as a visitor and vacationer to the Carolinas and their shores, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. YOU of course know how special a resource this area is, with its sandy beaches, salt marshes, and maritime woods on the well known Outer Banks. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped and less traveled beaches. All of the alternatives presented in the draft environmental impact statement would dramatically change that for this place, since they privilege ORV use over all other visitors. All these possibilities realistically fail to conserve and protect the wilderness, birds, and turtles that are a large part of what make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it can be modified to include the following points.
1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the required by law to leave the resource "unimpaired for the enjoyment of future generations."
2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness..." Clearly the intent of Congress was to protect the visitor experience of primitive wilderness. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.
3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.
Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. As a former Federal natural resources planner, manager and supervisor, I feel strongly due to personal experience, that ORV have little place inside of National Parks, Refuges or Recreation Areas.

When and where allowed, ORV need to be tightly controlled, supervised and the resources protected - whether beach erosion, water, wildlife, habitat, noise or air pollution.

Whatever vehicles are allowed should be strictly inspected for not only safety, but noise and emissions suppression.

The beaches of America and our precious Federal lands and parks are much more important than a few hours or days of fun for individuals tearing up a beautiful natural resource and damaging the quality of experience for the majority of visitors.

Thank you very much for your consideration.

Mike Mecke

Correspondence: Dear Superintendent Murray, As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. My first boss and mentor was under enormous stress at work. He had two ways to relax: (1) he loved to race in road rallies, and (2) he loved to take his family to Cape Hatteras, park the car and spend a week camping on the beach. When I had a family, I took them to Cape Hatteras and we, too enjoyed the solitude and the opportunity to connect with the real world. I believe that it's critically important to preserve this resource as free of off-road vehicles as possible. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points. 1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Correspondence: I urge you to reconsider any plans for Cape Hatteras National Seashore, which would allow year round access for off road vehicles (ORV's) at the expense of pedestrians and wildlife. Allowing beaches to be degraded by ORV's with negative impacts to sea turtles, shore birds and other coastal wildlife, could not be considered as acceptable management of these natural resources. A much greater emphasis on wildlife and pedestrian use, minimizing ORV intrusions, is what is required for this area. Please do the right thing by formulating a minimum impact ORV plan which the area can sustain in the long term.

Sincerely,

As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.

- 1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."
- 2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness...." Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.
- 3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.

Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

Correspondence: Please don't allow Off-road vehicles to spoil the Cape Hatteras National Seashore. Such a move can only result in damage to fragile areas, including plants and wildlife, not to mention disturbance to pedestrians and sightseers.
The national parks and reserves should be places of natural vistas and experiences, not havens for roaring motors and speeding vehicles. There are plenty of other areas for people enjoying that sort of thing to recreate. Please leave some room for peace, quiet and enjoyment of beauty in our country!

Correspondence: Why the policy you are establishing called an "ORV Access Policy" instead of a "Human access policy"? The policy is about primarily about excluding people from using the parts of the National Recreational Area and not about controlling the safe and environmentally responsible use of ORVs. Why is not more of your plan based on science? Best available science is a buss word and has nothing to do with the actual use of scientific findings. Your us of statistics is laughable. You main use of science and statistics is anecdote. Your proposed policy will almost certainly have very little affect on the populations of the plovers and oyster catchers. There is no effort made to balance the cost against the rewards
It seems that your policy now and in the recent past is based on the self-interest of the park service and a few small groups. You have not taken into account the history, nature and communities of the area.
It seems that the NPS has sytematically ignored the historic use of the area, the good of people that vacation on the Outer Banks and the people that live there.
The NPS has continually talked fairness on the one hand and promoted a single viewpoint on the other. The good of the park, the wildlife, the visitors and the people that live there should be of primary concern. Clearly that has not been the primary concern of the NPS.

Correspondence: Dear Superintendent Murray,

I grew up on the Gulf coast of south Texas and enjoyed Padre Island National Seashore many times as a young boy. Today, I live on the coast of southern California, where I still enjoy the splendor of beautiful beaches. The beaches of North Carolina's Cape Hatteras National Seashore are similarly a nationally significant resource, featuring sandy beaches, salt marshes, and maritime woods on the storied Outer Banks. This area is cherished by family vacationers, bird watchers, and many other people who enjoy wild beaches unspoiled by development that has overtaken so much of our coastal regions.

I am thus deeply troubled that all the alternatives presented in the draft environmental impact statement to manage off-road vehicle (ORV) use on the beaches of Cape Hatteras National Seashore unduely grant ORVs disproportionate use over all other visitor uses. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points:

1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all

visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife MUST take precedence over a single form of recreation--ORVs--and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."

2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason: "Except for certain portions of the area, deemed to be especially adaptable for recreational uses..., the said area shall be permanently reserved as a primitive wilderness...."

Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.

3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.

I am not opposed to ORV use. It is an activity that I enjoy myself. But there is a time and a place for everything in life, and the pristine beaches of Cape Hatteras National Seashore are not the place for this activity--any more than one would ride a quad into a cathedral!

While I enjoy ORVs, I value the almost-sacred, spirit-renewing effect of our National Park system. It was a truly original American idea, born of the most basic democratic principles that our greatest national resources are to be left as they are for all Americans to enjoy for ever. My family has travelled across our great country so many times enjoying scores of national parks for our vacations, improving our bonds as a family as well as our affection for the beauty of our nation and its central tenets of resource stewardship for all people, for all time.

I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. Please ensure that the primary focus of Cape Hatteras National Seashore is to ensure the unimpaired enjoyment of people without motorized recreation. There are frankly plenty of places which are far more appropriate for such ORV activity. I look forward to your response and seeing an improved final ORV management plan.

Thank you for the opportunity to provide feedback on this vitally important matter.

Correspondence: Earth's environmental history is rife with decisions made in favor of human preferences & activities--usually at the expense of other species. The condition of the planet shows unmistakably that these policies have not only cost innumerable species their habitats & often their very existences--but that we have actually endangered the biosphere itself.
I think it's time we start giving other species a voice in decisions which intimately affect their well-being & very survival; indeed, our own status is inextricably tied with theirs...

Correspondence: As a supporter of National Parks, I would like to comment on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore.
This beach is loved by vacationing families, bird watchers and local residents. I'd like to know why ORV users are given priority use of this beach? This is unfair to everyone else. This plan does not protect birds or turtles or any other wildlife.
I support Alternative D with a few changes. Wildlife must be protected over ORV's. This area must be permanently reserved as a primitive wilderness and must be used to achieve wildlife recovery efforts. Foot traffic should be given preference over ORV users and ORV use must be kept to a minimum in a restricted area of the beach.
Thank you.

Correspondence:	Just a quick note to tell you I am against extended off road vehicle use at the Cape Hatteras National Seashore. While I am not against ORV's, the segment of population that uses these is small and should not be allowed to dominate the seashore to the extent that others can not enjoy the peace and tranquility of the area. Especially now that the oil slick is contaminating other shores, we need to keep as much clean seashore available for public use. Birds may migrate from the Gulf so extended ORV use would also endanger that.

This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points. 1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations." 2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness...." Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources. 3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals. Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

Correspondence: Regarding the Cape Hatteras National Seashore ORV Plan, I humbly request that you not add or expand the usage of any motorized vehicles in this peaceful and mostly pristine wilderness area. National Parks comprise a mere 3.6% of the US land area, and many parks already suffer from heavy vehicle traffic, including snowmobiles and ATV's. Our daily lives are filled with enormous amounts of noise and stimulation. Is it too much to ask that a few unspoiled sanctuaries be preserved where one can actually collect his thoughts and enjoy a moment of serenity in a beautiful natural setting? Thanks for this opportunity to comment, Charlie Pick Northfield, IL

Correspondence: To Whom It May Concern:
Given noise and oil pollution, we need no vehicles of any kind on any protected beaches or parks. I oppose allowing spoiled Americans' who don't know how to enjoy themselves without their toys having such use. People need to learn to be quiet and enjoy the natural setting. They might just learn something they can't learn while sporting around on their toys. Leave nature to itself. We've done enough damage. Sincerely, Terry L. Barber

Correspondence: Off road vehicles do major damage to the landscape. They should have a very restricted area in which to do that damage. Our National Seashores are not the place for Off Road vehicles. I can't believe that our National Park Service would even consider opening up these protected lands to that kind of destruction! Please keep the beaches and the seashore for the use of pedestrians to enjoy and see wildlife. Thank you, Tom Coddington

It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.

3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.

My experience of people who use off road vehicles is that they do not have much respect for the environment or the wildlife in the areas in which they are riding. It is just their intent to go into an area, tear it up and leave the largest footprint they can leave without any regard for others who come after them. It is wrong to allow off road vehicles in the Cape Hatteras area because these people will just destroy what everyone has worked so hard to protect.

Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

Correspondence: Dear Mr. Murray,

The wildlife and awe inspiring natural beauty that exists on Cape Hatteras is there for us to enjoy because we have protected it. Please, please, please do not allow more access to ORV's. My family in Ohio has them and enjoys using them. However, anyone who observes areas where ORV's have wider access knows that wildlife populations are altered and decreased and the natural beauty of the area is diminished. There are millions of acres and miles of trails already available to ORV use. Please preserve Cape Hatteras from the negative effects.

Thank you for your consideration, Nolan F. Hines
