Correspondence: Dear Superintendent Murray,

As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.

1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."

2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness...." Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.

3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.

Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

Correspondence: COMMENTS ON Cape Hatteras National Seashore Off-Road Vehicle Management Plan / Environmental Impact Statement March 2010

GENERAL COMMENTS FOLLOW 1. I ask for a 45-DAY EXTENSION on the time to comment. These volumes are simply too big for the public to review them, digest them, and make reasonable comments within the original 60-day timeframe.

2. KEEP HATTERAS INLET OPEN TO THE MAX PRACTICAL EXTENT. It offers unique visitor experience on the island and in some respects on the entire east coast. Hatteras Inlet is the best area on Hatteras Island for fly-fishing, and casting lures for mackerel and bluefish, especially the portion of the inlet where a tidal rip develops. It is not well suited to bottom fishing because of the current, even though some try it. The "rip" at the Inlet is unique on Hatteras Island in that regard; it's not suited to bottom fishing so it offers a unique location to lure-fish (including salt-water fly-fishing and with great results. It should be possible to allow ORV access via an extended Pole Road (the old Coast Guard Road) inside the existing dune line without impact to shore birds. If anything such a road might discourage foxes and other predators. I note that you have proposed such access in some Alternatives.

3. KEEP CAPE POINT OPEN TO THE MAXIMUM PRACTICAL EXTENT. It is probably the best fishing location on the east coast. SPECIFIC COMMENTS FOLLOW: 1.NO-ACTION ALTERNATIVE. From my experience, Congress intended that the no-action alternative be technically analyzed as a worst-case condition so other alternatives could be compared to no-action. In this case, no action should be what would happen if there were literally no ORV management and vehicles drove everywhere. NPS should then discuss impacts associated with no action. These impacts should be quantitative; and they should be compared to quantitative impacts associated with other plans. For example, for Piping Plover you should state the impacts to the species for open access ORV use. What is the National implication to the overall species? (Probably very little ? the CAHA population is quite small). What is the regional implication? (Probably would result in the loss of PIPL at the Seashore). It is then possible to compare the numbers of PIPL that could be expected under various alternatives. This is the No Action Plan as Congress intended.

Your current method of comparing plans is descriptive rather than quantitative and the basis for the differing description of impacts associated with each alternative is not clear.

By examining experience at Cape Lookout National Seashore, with much less visitation and minimal ORV use, you should be able to make an estimate of what the outcome to the species would be under Alternative F under this DEIS.

With boundaries (worst case ? a true no-action; and best case-Alternative F) set, you should estimate quantitatively what the impacts are for various alternatives. How will productivity rates improve from Alternative A to Alternative F? How will populations fare under all alternatives?

The lack of qualitative analysis indicates a lack of rigor in the scientific analysis and questions the validity of the DEIS. It presents the appearance of opinions rather than science.

While Alternatives A&B are legitimate options, I am opposed to calling Alternatives A&B "no-action" alternatives. They include many actions and are not the intent of Congress for a true no-action Alternative.

2. DEIS, Table 1, page 8. The goal of 1.5 chicks per pair for Piping Plover productivity seems too optimistic.

To establish a goal for Plover productivity one could look at Cape Lookout National Seashore. The Barrier islands of the Cape Lookout National seashore are not inhabited and there is only limited vehicle usage so it should represent the high end of productivity for Piping Plover in North Carolina. Heat-stress and weather are the primary factors for low fledge rates noted at Cape Lookout in their Annual Piping Plover Report. These conditions would certainly also apply to Cape Hatteras. The highest fledgling success rate ever recorded at Cape Lookout Seashore was 0.92 (chicks fledged per pair) in 2004.

Yet, the DEIS simply uses FWS information and sets a 5-yr average goal of 1.5 chicks per pair as a long term goal. That's more than 50% higher than an uninhabited area that has almost no ORV. Since the goals established for Cape Hatteras under the DEIS appear unreasonably high, it appears that NPS is currently assessing unreasonably high impacts associated with ORV use in Cape Hatteras Seashore.

Further, the study titled "GIS-based analysis of human disturbance on piping plover abundance, distribution and productivity on the barrier islands of Long Island, New York" by SK Thomsen, May 2006 found productivity of 1 for areas completely restricted from ORV use; in cooler climates where productivity would be high; with large Plover populations (in the hundreds); and over a three year period that averaged out variability of productivity. This best case scenario only resulted in productivity rates of 1.0, therefore, the DEIS goal of 1.5 is not reasonable.

These high goals also seem to imply that the impacts of ORV are being overstated in the DEIS.

More reasonable goals should be established.

3. Regarding, PIPL productivity, the study titled, "GIS-based analysis of human disturbance on piping plover abundance, distribution and productivity on the barrier islands of Long Island, New York" by SK Thomsen, May 2006 is most appropriate to the DEIS and it should be discussed and referenced in the DEIS.

4. One of the findings of the study titled, "GIS-based analysis of human disturbance on piping plover abundance, distribution and productivity on the barrier islands of Long Island, New York" by SK Thomsen, May 2006 was that Piping Plover productivity in areas where there were no ORV restrictions was the same as those in areas closed to ORV. The paper stated "No consistent pattern of differences in mean productivity was observed among the three levels of ORV access (Table 4). The level with the highest productivity was unrestricted access in 2003, seasonal access in 2004, and restricted access in 2005. Likewise, the level with the lowest productivity also varied from year to year. Differences were significant in 2003 (ANOVA, $f = 5.55$ $p=0.004$) and 2005 ($f = 3.17$ $p= 0.043$), but not 2004 ($f=1.07$ $p= 0.344$). However, when all years were pooled together mean productivity was not significantly different between levels of ORV access (0.951 0.05 SE in restricted access, 1.011 0.08 in seasonal access and 1.061 0.15 in unrestricted

access; ANOVA $f=0.37$ $p=0.689$." Table 4. Mean Productivity for each category of ORV access compared to overall year 2003 2004 2005 Overall restricted 0.8 1 0.08 0.98 1 0.09 1.07 1 0.11 0.951 0.05 seasonal 1.29 1 0.16 1.19 1 0.14 0.66 1 0.12 1.011 0.08 unrestricted 1.5 1 0.35 0.8 1 0.25 1.0 1 0.22 1.061 0.15 overall 0.96 1 0.07 1.03 1 0.07 0.931 0.08

The study is important because it extends over several years; is based on the latest technological advances using GIS; is rigorous in its statistical analysis; and examines large populations so results are statistically significant.

Surely NPS experience at Hatteras Seashore would support a lower buffer that would still protect the Plover. The more conservative buffers proposed under the DEIS seem to conflict with prior smaller buffers and an NPS FONSI for the Interim Plan under Alternate A.

5. Please modify the DEIS to allow intensive monitoring of Piping Plover chicks as a future Option/possibility to the 1000M buffer currently required.

As an alternative to the 1000M buffer used in the DEIS for Plover chicks, even conservative FWS guidelines do allow smaller buffers if intensive management (consisting of more observation) is applied to PIPL. While the FWS guidelines indicate that a qualified biologist should do the monitoring, with proper training, any reasonably intelligent volunteer or summer intern should be able to provide observation necessary to allow smaller buffers. Closure areas would be moved if broods were mobile.

I feel the DEIS should address this possibility as an Option under any of the plans, so that if a suitable system of monitoring (either by NPS personnel, by volunteers, or perhaps paid observers) could be developed later, it would already be covered under the EIS.

NPS should balance visitation with conservation. FWS guidelines do not balance these needs, since the FWS charter is solely conservation. As noted in FWS discussions, their buffers are recommendations ? not law.

In general, all of the buffers are overly conservative and I am opposed to these unnecessarily restrictive buffers.

6. The DEIS describes, Alternative A as No Action: Continuation of Management under the Interim Protected Species Management Strategy?. Further described as, "management of ORV use and access at the Seashore would be a continuation of management based on the 2007 FONSI for the Interim Strategy?"

If you have a "Finding of No Significant Impact" for Alternative A; and alternative A is the least costly; and it has the least restriction to the public's use of the Park; NPS should recommend Alternative A. This calls into question earlier management strategies and why (assuming they had FONSI's) this EIS was performed and why there has been such a large change in direction by NPS.

Perhaps there is a good reason that the EIS conflicts with previous FONSI's. If it isn't already covered in the DEIS, the reasons should be explained in the DEIS document.

7. Page xlvi, Table TABLE ES-3. SUMMARY OF ALTERNATIVE ELEMENT, 1st column, bottom of the page: "Impacts of the Alternative to Preservation Values" (for Alternate A), the DEIS states that "As a result of the long-term minor to major impacts to protected species, impacts to preservation values would be long-term moderate adverse."

The statement that "impacts to preservation values would be long-term moderate adverse" does not seem compatible with a prior "Finding of No Significant Impact" for this alternative. Please explain why this conclusion is different from past decisions. The DEIS must clarify this discrepancy or it appears that the scientific conclusions from past analysis have been changed solely due to pressure from outside the NPS.

8. Of the Alternatives presented, I feel that Alternative A best serves the public and protects the environment. a. If you look at past history, Piping Plover populations went down across all of NC not just in CAHA (in fact the curves are nearly identical). I point this out because other areas of NC are subject to only minimal ORV use and PIPL left those areas too, either because of habitat loss from erosion (from increased storm activity that has lowered the beach too much) or simply global warming. b. I think NPS did a good job of balancing the environment and public access prior to the consent decree.

9. Regarding, "Alternative B ? No Action: Continuation of Terms of the Consent Decree Signed April 30, 2008, and amended June 4, 2009?." follow the terms described under alternative A, except as modified by the provisions of the consent decree?

Alternative B pits environmental interests vs. beach-driving interests and encourages both parties to do the wrong thing. Those supporting driving on the beach are encouraged to harm PIPL and those who want no-ORV access are encouraged to vandalize shorebird signs so that protected areas are increased in size.

Rather than pitting the 2 interests, you should look to align the interests of all sides. NPS and FWS should take a hard look at establishing a take limit. Take limits are allowed under the Endangered Species Act due to economic hardship. A "Take-limit" would set a predetermined limit for taking of Plover (and other species) by ORV. The idea would be to lower buffer zones to allow more public access, but increase buffer zones if there was a Take. The beach going public would then have an incentive to protect shorebirds rather than harm them. To protect their own interests those who want to continue driving on the beach would become enforcers protecting shorebird interests rather than the current us vs. them mentality. Some education of the public would be required under this idea so a permit system for all beach driving would be probably be required.

10. ALTERNATIVE F: MANAGEMENT BASED ON ADVISORY COMMITTEE INPUT. I am opposed to Alternative F. It does not balance visitation with protection of resources, but instead goes much further than needed to conserve resources.

11. Part 1, Draft Off-Road Vehicle Management Plan / EIS, Table 8. Summary of Alternative Elements, Page, 113, Pets. The DEIS states: "Alternative C: Pets would be prohibited within all Nonbreeding Shorebird SMAs that are otherwise open to recreational use." Regarding the term "Otherwise open to recreational use", my comment is: For all plans when an area is open to recreational use, pets should be allowed on leash in those areas. Visitors bring pets on vacation. Visitors bring pets in their ORV and walk those pets for exercise. It seems to be extreme overkill to allow recreation in an area, but not pets on leash. The proposed buffers cover pets as well as pedestrian.

This pet management philosophy is carried into all subsequent plans and my comment also applies to D, E, and F.

12. DEIS, Part 2, Page 210, Paragraph Human Activity. Your data shows there were only 5 dog violations of nesting plover closures in 2008 (NPS 2009b). You noted 19 dog violations in the pre-nesting closures in 2009. The wording of the data changes for each year so it is not clear whether the trend is up or down. Overall, this is a very small number of violations and it indicates that the Pet restrictions proposed are not needed. The word is getting out and return visitors are concerned about natural resources. Again, I am opposed to restricting pets as proposed in Alternatives C, D, & F.

13. DEIS, Part 2, Page 211. The DEIS states, "For example, a study conducted on Cape Cod, Massachusetts, found that the average distance at which piping plovers were disturbed by pets was 46 meters (151 feet), compared with 23 meters (75 feet) for pedestrians." 46 meters is well below the buffers listed for Plover. It would appear that even with a reasonable safety factor, pets should pose little problem as long as leash rules are followed. It is likely that FWS guidelines included pets as a consideration when setting recommendations for Buffers. Again, I am opposed to restricting pets as proposed in Alternatives C, D, & F ? it is not supported by reasonable interpretation of the science.

14. Page 90, Chapter 2: Alternatives, Top of Page, Paragraph: Provide an Area for Off-Leash Dogs This paragraph states "Creation of off-leash areas would not be consistent with 36 CFR 2.13 and would require promulgation of a special regulation allowing off-leash dog use, which is outside the scope of the plan/EIS." It would seem to be simple enough to cover the possibility of an off-leash area under the DEIS and go thru the process to promulgate a special regulation later. I oppose leaving this out of the DEIS. The DEIS is not a regulation per se, so inclusion of the possibility of an off leash area in the EIS wouldn't mean that it would become regulation until the proper CFR process was completed and even then it might be opposed so it might never become a reality. If it were included in the DEIS, then a major step would have been taken to modify the CFR later if it were found to be viable.

15. Map 5 of 7, page 179 of the DEIS shows that for Alternative F you have proposed an intra-dune road to Hatteras Inlet. It is not clear how accurate the mapping is, but the distance to the Inlet from the Parking area scales as 1 mile. This is an unacceptably long distance for Pedestrians, especially children, to walk in hot weather when carrying fishing gear. Any alternatives that show a parking area and pedestrian access to the beaches should minimize walking distance. For ORV's the pedestrian access can be very close, unlike those for paved areas.

16. DEIS Part 2, Chapter 3: Affected Environment, Page 190, the DEIS states that dredge spoil sites are ideal habitat as follows: "(8) Natural conditions of sparse vegetation and little or no topographic relief mimicked in artificial habitat types (e.g., dredge spoil sites)." Yet just a few Pages later you counter this positive statement concerning dredged material with an incorrect one.

On the last sentence of page 211, continuing onto page 212 you state, "A recent study theorized that beach nourishment projects may negatively impact plover habitat because the resulting dredge spoil is often fine-grained, reducing the availability of pebbles and cobbles, which are a preferred substrate for nesting plovers (Cohen, Wunker, and Fraser 2008)."

This statement is not valid for habitat at Cape Hatteras Seashore ? there is no pebble or cobble substrate on Cape Hatteras. This study probably applies to New England where the Plover is most prevalent. On Hatteras shorebirds prefer to nest in areas of high shell content and dredged material from areas close to Hatteras (ocean or sounds) are likely to contain relatively high shell-quantities that are preferred by Plovers and other shorebirds.

These points are important because dredged material from the ferry channel to Ocracoke have been used with considerable success to nourish the beach near Ramp 55 in the past. Material was coarse sand and shell ? ideal bird habitat on Hatteras.
Please delete those statements that don't apply to Cape Hatteras Seashore.

Correspondence: Dear Superintendent Murray,
As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.
1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."
2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness...."
Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.
3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.
Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness...."
Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources. Moreover, as I'm sure you are aware, ORV use in the Seashore was allowed to the extent it was consistent with existing uses of local residents. This is a far cry from current recreation-based ORV use.
3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.
Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.
There is an abundance of National Forest areas where ORV use is allowed for this recreational purpose. Most, if not all National Parks do not allow this use because of the damage to the fragile resources. Please consider these factors before a final draft of the rules for the management of the Cape Hatteras National Seashore.
Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

Correspondence: I disagree with many issues about the DEIS. I think you need to throw it out and use the Coalition for Beach Access's suggestions as a guideline instead as best alternative to your DEIS.
 Lack of access denies continuation of cultural & educational resources & the tradition of lifesaving on Hatteras Island. Foremost in my mind is the current closures in place at Hatteras Inlet. A recent case in point at Hatteras Inlet, on 1 May 2010 the overturning of the F/V Tiderunner resulted in 6 people flailing for their lives in view of the beach.
 Had people been allowed to recreate there on the beach on that beautiful sunny Saturday as people have done on Hatteras Island for centuries, people would have seen the accident and could have made a phone call and the crew and family of the Tiderunner might gone home together, all alive, that evening. Instead adults & children had no choice but to brave the seas until offshore fleet arrived four hours later.
 The drowning death of Mr Aaron would have been prevented if Hatteras point was accessible.
 Shame on you Park Service for being bullied into this irresponsible, draconian plan imposed upon us without adequate public input by Judge Boyle. I feel that you & all those factions that pushed for these closures are all responsible for Mr Aarrons death.
 State-listed "species of concern," do not require the extensive 1000-meter buffers and beach closures mandated for federally listed species. When was the recreational area of Cape Hatteras Nat'l Seashore designated a wildlife refuge? I thought Pea Island was the refuge?!!
 And why are you taking such herculean measure to keep turtle nests where they are laid when most the storms wash them away just as they are about to hatch, why not relocate them to perhaps a safe location instead of closing access to the beach for virtually 2 months?
 The fact that the science in your DEIS or lack thereof extrapolated just what serves the special interest groups instead of looking at the overall effect these overzealous closures have on all wildlife, residents & visitors to Hatteras Island is disturbing & terrifying when I consider all the implications to my life and community.
 I have walked & drove the beaches here on Hatteras for over 46 years. I have seen the changes, both positive and negative effects. I think the current hypermanagement of the lands & wildlife of Cape Hatteras is severely out of balance.
 As a daily visitor & dog walker at our beaches at Cape Hatteras, I find it disturbing that you plan to prevent leashed pets at the park. Why must all pets be discriminated against? I board dogs here on Hatteras. Where are we supposed go for our daily dog walking meditations?
 It is not okay with me that the park service continues the practice of exterminating perceived predators of a single species of shorebird. Your trapping & killing the wildlife is appalling.
 It is also not okay with me that park service thinks its okay to rope off beach here to protect some critters(but okay to exterminate others?) only to raze the landscape & disturb habitat elsewhere to accommodate parking lots and interdunal roads.
 Did you notice in the past 2 years that the ORV closures on the beach resulted in more vegetation establishing itself thus making the habitat less desirable for nesting? ORV access in the past actually kept the plant vegetation down on the beach thus the birds picked the wide open spaces created by sea & maintained by vehicles in the first place!
 It's obvious the birds had no problem with the ORVs in years before this consent decree so I feel that park service should go back to the way it had been in the past with minimum sized buffers on mammals nests.
 As diverse as Hatteras Island is, there are plenty resources here to accommodate the needs of both people & wildlife in a balanced & responsible manner in peaceful coexistence.
 Thanks for considering my comments. namaste

Correspondence: I strongly support Alternative F of the DEIS.
 While a case for expanded off-road vehicle access and a priority for recreational use is being pursued by many, including the impact restricted ORV access and recreational use may have on the local economy, the fundamental purpose and higher priority in the establishment of the Cape Hatteras Seashore must be observed: the protection and preservation of the natural environment and the natural resources it contains.
 Alternative F is a means to pursue the fundamental purpose of the Seashore in way that future generations will appreciate -- persons of all generations and all interests; not a narrow interest in ORV access and fishing, to be enjoyed by only a few.
 Thank you.

Correspondence: COMMENTS ON ALTERNATIVE F (NPS Preferred Alternative)
 Re: Closures due to Birds
 I disagree with the NPS' buffer for the Piping Plover of 1000 meters. I belive a buffer of 200 meters would be more than enough. I also do not think that we should have buffer zones for birds that are not on the endangered list.
 Re: Closures due to Turtles
 I disagree with the NPS closure of 105 meters for Turtles. I believe that Turtle nests can be relocated with great success when they are in an area that is not safe. Turtle relocation is very successful in other states.
 Re: Pet Restrictions
 I strongly disagree with the NPS' position on pet restrictions. I believe that all pets should be allowed on the beach. Dogs should be on a 6' leash.

Correspondence: COMMENTS ON ALTERNATIVE F (NPS Preferred Alternative)
 Re: Closures due to Birds
 I disagree with the NPS buffer for the Piping Plover of 1000 meters. I believe a buffer of 200 meters would be more than appropriate as no where else in any park, state or federal, are closures for any type of bird 1000 meters. Also I disagree with closures for birds that are not on the endangered species list but only species of concern.
 Re: Closures due to Turtles
 I strongly disagree to the 105 meter wide closure for Turtle nests. Closures should be 10 meters square during the day. Also the night driving restrictions are not needed because there has been no documented adverse effects that have been caused by night driving on the beaches. Nesting Turtles have not been killed by night driving on the beaches and there has been no loss of nests due to human activity that occurred frequently. A pro-active Turtle nest night watch program would certainly assure no ORV impact on Turtle nests. Relocation of Turtle nests due to weather events have been successful in many other beach areas similar to Cape Hatteras Seashore. False crawl statistics do not support the theory that light pollution is a significant problem in the area. Also it is well known that predator and nest enclosure practices encourage ghost crabs which are a primary predator of Turtle nest eggs.
 Re: Pet Restrictions
 I strongly disagree with the restriction of access of pets on the beach anytime for dogs and horses. The dogs should be kept on a 6' leash and the horses should be properly supervised by their owners or handlers. There is no documentation that I know of that relates to horse back riding on the beach creating any adverse effect on nesting birds or turtles. There should be daytime law enforcement patrol to better monitor any violations regarding the lack of properly supervised pets.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
 This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
 The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
 *Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
 * Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
 * Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
 Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore. This is something we can do to help wildlife and park visitors. Roaring around in an off road vehicle provides entertainment for only a few. Who really NEEDS an ORV, anyway.

This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
Put Natural Resources First: Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
Establish and Meet Clear Goals for Wildlife Recovery: A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Correspondence: Dear Superintendent Murray,
As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.
1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."
2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness..."
Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.
3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.
Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

Correspondence: Every effort must be taken to protect our precious lands and seas. Fossil fuels are the primary sources of our current consumption, but we must put in stricter regulations to clamp down on oil and coal company CEOs who take shortcuts to make more obscene profits. Alternative methods like solar, wind and nuclear (done the safe way) must be SERIOUSLY looked at.

Correspondence: First of all please know that I believe in the protection of endangered species. That being said, I want you to know that I have enjoyed many wonderful vacations at the Outer Banks. These vacations have provided myself and my children with memories so vivid and special. I am upset that my future vacations are in jeopardy due the closure of the beautiful beaches. Why do the measures to protect these birds have to be so drastic? Do you realize what this will do to an already failing economy? How many people will be out of jobs? How many homeowners will be unable to pay their mortgage due to families having to make the decision to vacation elsewhere while their homes have no renters for the season? I would like to know specifically the names of the people responsible for this along with their contact information. In studying the impact on the piping plover, has anyone studied the impact on the many lives that depend on the tourist industry? Does this not make one sit back and think how unfair and unjust this would be to the wonderful people of the Outer Banks? When do birds become more important than people? One more question--is the Piping Plover native to this area? In doing some research I found that it is not. Why can't there be a compromise? A safe area for these species and beach access for the rest of us? I don't want to vacation anywhere but here. Please don't force me to do so.

Correspondence: Thank you for considering my comments. I do not believe that off road vehicles have a place in Cape Hatteras National Seashore Park. Since it was set aside by congress to be retained as "primitive" and, as such, to be preserved as a place for those seeking a wilderness experience. Hikers and birders that seek a natural setting away from being subjected to inappropriate things like ORV's. I do not believe they have a place there. They create pollution, are simply too loud, and would ruin the very nature of the "out of the way" experience most of us seek in such a wonderful place.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I appreciate the opportunity to comment on National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. As a resident and truly green business owner on Hatteras Island I believe Defenders Of Wildlife has misrepresented the situation regarding ORV usage.. During the winter of 2008-09, while Ocracoke Island replaced all of the bridges on route 12, all traffic had to be diverted to the beach. After the completion of the bridges and subsequent opening of route 12, there was no evidence on the beach of the massive amount of traffic the beach bore. Responsible beach driving is the norm on these beaches, with a vast majority of the ORV drivers and occupants having respect for all species and their nesting areas. With common sense management, that allows access with regulation would be optimum, but highly unlikely.

For Defenders to paint this grim picture here on Hatteras Island, of ignorant, gritty locals and uncaring, hotrodding ORV drivers makes me wonder what kind of spin they have been putting on other crucial matters.

As a long time activist, greenpeace supporter and volunteer, I can honestly say that all is not what it seems here. I strongly support any and all causes that confront injustice, expose fraud and or greed. In this case I believe Defenders is spoon feeding well intended folks a position on a crucial issue, that is not in their best interest.

People who live and work on Hatteras Island, in this case, know better. I am insulted by Defender's position and they should be embarrassed. There was a time when I respected their position out of hand. I know better now.

Defenders are taking issue with beach driving, but they are missing the point. This is about access, period. This forum is quaint, but we all know what's coming. Permanent beach closures are our future and we better get used to it. Shore birds and turtles are simply convenient tools used to wrest control of this last American stand of freedom. Shame on you Defenders Of Wildlife

The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.</p> <p>1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all</p>						

visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."

2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness...."

Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.

3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.

Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

Correspondence: I love the Hatteras sound and usually visit once per year from Portland, OR. I have stayed in various towns including Avon and Waves. I have been going to visit on windsurfing or kitesurfing vacations, usually with a group of friends who make the same voyage. I have traveled to OBX for 35 years and support maintaining open access to the beaches for all recreational use. Please maintain access! Sincerely, Kenneth Lie

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence:	<p>Why are huge buffer zones that restrict pedestrians/ORV's that are instituted on Cape Hatteras on land monitored by NPS not the same as for Pea Island National Wildlife Refuge. Do pedestrians not disturb the Piping Plovers in the Refuge? It seems to me that if the substantial buffers that are required in one instance should be followed through all the way around. Or, do the "birds" not necessarily need buffer zones that are the size of many football fields? Unless, of course, pedestrians do not truly interfere with the birds as is stated by SELC, et. al. Why doesn't the U.S. Fish & Wildlife Service have to monitor breeding pairs and track this information the same as required of NPS. These numbers and data are significantly important to justify the claims asserted that the numbers are down. As pedestrians are pushed away from Cape Hatteras then beach combing and shelling are certainly going to become more attractive on the Refuge.</p> <p>The extreme restrictions under the Consent Decree and Alternative F do not represent what our forefathers deemed the purpose of the Cape Hatteras National "Recreational" Seashore. Measures have been adequate under the Interim Management Strategy to allow for Pedestrian/ORV Beach Access and due the duty to protect the species of concern.</p>

Correspondence:	<p>Dear Superintendent Murray,</p> <p>As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.</p> <ol style="list-style-type: none"> 1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations." 2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness...." Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources. 3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals. <p>Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.</p>

Correspondence:	<p>I lived on Bodie Island from age 4 to age 9 (1963-68). Walking on those serene beaches was the highlight of my childhood. When I turned 50, I realized my dream of returning, sharing that wonderful place with my husband and children. They were enchanted, as I have been nearly all my life. They loved the beaches of Bodie and Ocracoke Islands. We weren't there when the turtles were renewing their lives, but we were in awe of the multitude of life forms that those beaches support. These beaches are fragile. Where there were three dunes in front of my home, there is now only one. So many life forms depend on these islands. Allowing motorized vehicles endangers all the the wildlife. It also ruins the experience for so many human visitors. Vehicles are already allowed in too many places. Please preserve this incredible place and do not expand the areas where vehicles are allowed. Thank you for taking care of our wilderness and our future.</p>

Correspondence:	<p>To whom it may concern:</p> <p>Now that I've spent time on beaches with off road vehicles and cars, I've learned how rude they are to others. It was very disruptive and disturbing trying to walk on the beach with these vehicles zipping around causing the sand to fly in my face and hair.</p> <p>The other disturbing thing about these people is when they got themselves stuck in the water and waves, they actually expected help from the rangers on the beach. I did not want to help them. I prefer just stay stuck.</p> <p>Please don't let another beach get taken over by rude, smelly, obnoxious motorized vehicles on the beach. Give 'em a race track.</p>

Correspondence: Dear Mr. Murray,
I have been a visitor and now a resident of the Outer Banks for the past 26 years. One of the primary reasons that I came here for, was to be able to use the National Park without a myriad of unnecessarily strict regulations. I participate in a number of recreational activities that make Cape Hatteras National Seashore a truly unique environment. I am in favor of protecting the wildlife, but within reason and not at the exclusion of humans, as proposed by the Alternative "F" Plan. The proposed plans will have a huge negative economic impact on this area. The National Parks were set up to allow for use and recreation by the public.
I disagree that ORV's should be prohibited year round in some areas.(pages 97-101) Human impact has not been proven to be the cause of any piping plover deaths and the chart shows that less than 3% of nest failures are attributed to humans. (Pages 104 and 377.)
I disagree with the 1,000 meter buffers and feel that they are larger than necessary. (Pages 121-127)
I disagree that leashed pets interfere with wildlife and feel that restricting all pets during the breeding season is unnecessary. It is shown that predators, such as opossums and ghost crabs, cause most of the damage. (page 136)
I disagree that night driving should be prohibited from May 1- November 15th. (page 104) Night driving discourages predators from foraging the nests of birds.
By imposing all of the proposed restrictions, our current use of this area will be negatively altered. The impact will be grave and much of the positive features of living here will be taken away. I will seriously consider leaving the area to find a much more reasonable balance between wildlife management and human access to our National Parks and Seashore.
I hope that we can agree to protect our resources without restricting human use to such an extreme degree.
Thank you for allowing me to comment.
Sherry Waller Nags Head, NC

Correspondence: Mr. Murray,
I, Vacation at the Outer Banks for two weeks during the summer. I have a wife and three children. Together with two other families we come, enjoy and pump a lot of money into the local econmy. We rent sound front and spend our days enjoying the sailing and paddling that brings us here. Please be very thoughtful in your decision to limit access to these activities!
It has been brought to the attention of the kiteboarding community that a variety of plans are being considered in response to proposed environmental and ecological concerns. The Outer Banks of North Carolina is a sanctuary for many beach goers, sports enthusiasts, wildlife observers and most importantly, the natural environment. We, as a community, feel that it is important for the environment to be protected and thus understand certain steps may be needed to achieve this goal. Thank you for evaluating the options to improve the environmental conditions at one of the greatest destinations in the United States of America.
However, with the aforementioned said, please consider the responses you choose carefully. Minimalist environmental management approaches have worked well throughout the United States?? National Parks. Closing extensive sections of beaches, the sound, and water ways will strip away the very nature and reason for why we appreciate the land in its current state. It can be said with great certainty that all frequent and casual users of this place intend to preserve its natural beauty and respect its wildlife.
We strongly feel that the Historical, Cultural, and Economic ramifications of the proposed plans have not been adequately addressed by the Draft Environmental Impact Statement (DEIS) as is required.
Should the environmental changes impact our communities?? sport (as it would in Plans D, E, & F) we would be forced to reconsider our frequent and environmentally friendly utilization of the Outer Banks. Other user groups such as surfers, fishermen, beachcombers, and virtually all other forms of tourism will also be discouraged from visiting Cape Hatteras if beach closures are greatly expanded. This will have a severely negative impact on the local economy and way of life that the residents of Hatteras Island have enjoyed for many generations. It will also take away something that is important to the lives of thousands of people throughout the United States and around the world.
If people, and especially children, can not experience the environment how are they going to learn to help you protect the environment?
Kind Regards, Keith Moore

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: (1) After reviewing the NPS DEIS I must disagree with any of the six alternatives within the document. I have; however, reviewed the 77 page Coalition for Beach Access Poaition Statement signed by several groups that were a part of the negotiated rule making process and it by far succeeds in furnishing the best visitor experience while maintaining the needs of protecting the fragile resources. Please consider all aspects of this alternative and put people back into the management of Cape Hatteras National Seashore Recreational Area. (2)I disagree with the extreme buffers outlined in DEIS pages 121 to 127. They must be modified to substantially reduce the minimum 1,000 meter buffer in all directions required in Alternative F for unfledged Piping Plover chicks. Dare County believes a more appropriate and yet effective buffer is 200 meters. Ample scientific evidence and precedent exists to support a 200 meter buffer. (3) I agree with the Coalition for Beach Access position statement on the DEIS. I do not believe the DEIS adequately addressed the cultural significance of access to the Cape Hatteras National Seashore Recreational Area.
Respectfully yours, Kathleen A. O'Connell

Correspondence: I wish to enter my comments in the public record on the DEIS. The purpose of the NPS is to preserve and protect the parks and wildlife of the National Seashore. That being said, where is the justification of taking the lives of one species to protect another? The NPS are eradicating any predators to the birds and turtles such as raccoons, foxes, minks, ghost crabs, etc. which are native to the Outer Banks. What gives them this right? I would think anyone such as the special interest groups, Audubon and others who are trying so hard to protect the birds would also take offense to this killing spree. The people, wildlife, birds and turtles have co-existed many years without interference from those who feel the need to put excessive restrictions in order to provide greater nesting areas for birds, who have proven by action, that the presence of people far greater protect them rather than hurt them. Case in

point. One cold night as my husband and I were fishing, a small bird came up and sat on a five gallon bucket between us in order to be near the lantern we had to stay warm and then proceeded later to get in the camper shell on the back of the truck with me for warmth. We also had a pelican come up one day and act as if it had an injured wing and would come up to us begging for fish. After giving it one or two, it then proceeded to walk normally back up by the dunes to sit and sleep as it's stomach was full! The birds are also nesting close to occupied areas such as the schools in order to feel protected from predators. Are these the actions of birds that feel threatened by people? Greater threats to these birds and turtles are storms, tides, other unpreventable acts and special interest groups. I support the Coalition Position Statement rather than the DEIS alternatives in regard to the amount of closures needed to protect the birds in questions and for the sea turtles nests and hatchlings. Our Outer Banks have always been a treasure to many who come from many States in order to be able to sit by the ocean and enjoy family time, fishing or just enjoy God's country. The areas that have allowance for ORV's are not interfering with any cottages, villages or pedestrians. For those of us who love to fish, those who are physically challenged and unable to walk any distance and those whose financial situation does not allow for spending the amount it costs to rent cottages close to the ocean, driving on the beach is their only option. Please do not take this special and treasured advantage away. The present closures are having too much of a negative impact on visitation to the Outer Banks and the economy of the island. I love the Outer Banks and have always called it my home away from home. I am hopeful for Open Access when the final management plan is enacted.

- 3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.

All in all, is it really necessary for ORV traffic on the beach. The wildlife are so limited in their territory, what is the purpose in taking away more of it, limiting them even less. Please reconsider your stand on this matter.

Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.

- 1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."

2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness...."

Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.

3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.

Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

Correspondence:	Please keep off road vehicles out of the Cape Hatteras wild areas, out of its parks, off of its beaches - We will no longer go to Cape Hatteras if off road vehicles are allowed!!! They will damage fragile ecosystems, scare away and disturb nesting birds and other wildlife. Please remember that the general population is becoming older and likes peace and quiet, so you will be catering to a few people and chasing away many (probably much wealthier) tourists and cause unnecessary damage!

Correspondence:	I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access. This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me. The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D: *Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park. * Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles. * Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones. Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I am a resident of Hatteras Island. I teach school at Cape Hatteras Elementary School and my husband is the owner/operator of a charter boat. I am writing in reference to the proposed beach closings on Hatteras Island and Ocracoke Islands. The Alternative "F" which is the preferred option of the National Park Service is entirely too restrictive. Please understand that I do care about the wildlife of my precious island. However, when the proposed plan is not based on scientific findings or information about the wildlife and it has the potential to affect the fragile economy of the island, I must speak out against the proposed plan. I disagree that any piping plover unfledged chick brood requires 1,000 meter closure in all directions. This has not been based on any scientific findings. Seven hundred and seventy-one acres per brood is preposterous. Furthermore, the plan calls for 300 meters in all directions for American Oystercatchers, which are not a federally threatened species. These huge restrictions not only affect my beach access but the thousands of tourist who come to Cape Hatteras National Seashore so they do not have to be elbow to elbow with other beach-goers. If tourist cannot enjoy the beach here, then they will take their vacations and their money elsewhere. I disagree with the socio-economic data and analyses of alternative "F". The findings are incomplete and erroneous. The result is an understatement of the effect the restrictions will have upon the island. Since my husband runs a charter boat, my family depends on strongly tourism. No beaches equals no tourist. The economical impact of the beach closings will have a devastating effect on the families and working people of the island. Finally, the alternative "F", intends to protect sea turtles. Hatteras Island has the largest closures with the lowest production of sea turtles of any beach in the US. In Florida, turtle production is higher, yet they do not have huge fines and closures protecting the nests. In places other than Cape Hatteras National Seashore, nests are routinely relocated to more secure areas to maximize the production. This should become the practice of the park on the island as well. Closing huge tracts of beach is not the answer. In closing, the wildlife plays an important role on our island but if the humans are unable to share the habitat with the animals, Hatteras Island will collapse as a community. I love Hatteras Island with all my heart, every part of it from its unequalled beauty to the people and culture. I hope that the National Park Service will not support a management plan that will bring about the end to life on Hatteras Island as we know it.

Correspondence: I disagree with the amount of pedestrian and ORV closures. There is a HUGE amount of land here on the barrier island of North Carolina that never even get touch by humans. Closing down a very small percentage of the land used by humans will have little impact on the birds but a big impact on the people. NPS has lost its way.. this is a recreation area not a bird sanctuary. Pea Island just up the road is the bird sanctuary and portsmouth island, carrot island and all the other uninhabited island on the outer banks serve as a vast area for the birds. closing down cape point, hatteras inlet and ocracoke inlet will have no effect to help the bird population, if anything the predators will have a feild day out there without humans around. The NPS is really just folding to the special interest groups and not sticking to its original mission.
I disagree with closing down ORV use areas. Why stop someone from driving near the beach (not on dune)? where is the sceince and data showing that it is harmful to anyone or anything?? The DEIS states "conflicts between motorized and non motorized users" huh? has the person who wrote that even been here? In 10 years there has only been 1 minor incident involving a stuck vehicle and pedestrian. There are plenty of pedestrian only area in front of all the villages were the people are.. why restrict beach driving?
I disagree with the closure due to birds. The data shows that HUMANS are not the problem. Science shows that Human interference is an "Insignificant Impact" . Look at the data, 54% loses due to predation. (which i predict will go up without humans in the area. which we already saw happen at ramp 34 last year) and 29% of loses are due to mother nature's storms and high tides. Come on.. look at your own data!
I disagree with Closing the beach to Pets. There is no data showing that pet on the beach is disruptive to the birds. If anything pets on the beach will certainly keep away predators, therefore keeping the birds safe.
DEIS 800 pages with only paragraphs that talk about cultural resources? while the purpose of the DEIS is to "protect and preserve natural and cultural resources" first sentence of the first page on the plan!! what happened to "traditional use and cultural practices" by long term residents of the local community. Completely ignored?
I disagree with the DEIS Socioeconomic Analysis. Bad data yeilds, Bad conclusion. The DEIS got it wrong in several areas. 1.) the statistical definition of the ROI is incorrect. 2.) the visitation/business survey data is wrong 3.) wrong recreational user data 4.) inflated beach use seashore counts 5) flawed maintenance assumptions. all this incorrect data is used to understate the real impact of the closures on the community.

Correspondence: Dear Superintendent Murray,
As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.
1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."
2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness..." Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.
3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals. Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.
***** Thank you very much for taking the time to protect one of America's most beautiful stretches of Atlantic seashore! Sea turtles, nesting shorebirds, and generations to come will be grateful for your action today. Thanks again!
Sincerely,
Toni Louwagie

I strongly disagree with the proposal that alternative F is the best for the socio-economic advancement of Dare County or the wildlife and fauna that it is suppose to protect. The proposed closures are entirely too restrictive and reflect a strong bias toward broad brush closures. I have been a ORV user of the beaches in this area from the VA line to Portsmouth Island for over 45 years and have not observed the impacts outlined in the DEIS.

More specifically the broad closures of the Hatteras Inlet, OI, and Bodies Island spits are an overt reaction that are not based on proper research and fact.

More importantly, there is overwhelming evidence that nesting is more impacted by predators than by vehicle traffic.

The DEIS is not objective and is strongly biased toward a broad band closure management strategy as opposed to a balanced and reasonable approach.

The current DEIS is more restrictive than the current consent degree and will NOT result in improved nesting success.

I strongly urge that this draft be discounted and re-written with the proper due diligence, research, and involvement of the key community stakeholders.

The strategy outlined by the draft will NOT provide reasonable assurance that the environment will be improved and will result in destroying the economy of the area. The average visitor enjoyment will also be destroyed by the drafts strategy.

I also include the below post and support the author's position on each and every detail regarding the current DEIS.

Copy of Post by Bob Eakes

May 6, 2010

Mr. Mike Murray, Superintendent Cape Hatteras National Recreational Area 1401 National Park Drive Manteo, NC 27954

Dear Superintendent Murray,

Having been a conservationist most of my life and having received numerous awards for same including a Vice Presidential Award from then Vice President Al Gore along with other awards including one from Audubon I think I am about to become something other than a conservationist.

National Park Service has never paid any attention to my community's desire to work with NPS much less recognized our community effort to work with those of differing views. I attempt one more time that which is quite impossible, bringing my point of view to this issue.

The DEIS is a major failure. Years of preparing for this moment and NPS does not even have the integrity to bring forth a plan which both provides resource protection and provides for recreational access. The DEIS greatest flaw comes from its bias and its very weak attempt to rationalize a position of non access through resource management. There are so many failures in the DEIS that it is just simpler to list same than try, yet again, to explain and argue against them.

The public meeting process was very poorly handled. No outreach or education was offered to my community and most were not qualified to respond to 900 or so pages of the DEIS. I do not understand why someone like Dr. Bert Frost, Associate Director of NPS, could not come down and explain the points of view of the DEIS to the public. After all, he has attended every meeting in Washington, DC on this issue where I have been in attendance.

Obviously he is well versed in the promises made by past directors and secretaries of interior. I hope it is well noted that after all of these years of hearing about the so called other side of this issue and how many people are upset and complaining about off road vehicle; that the public meeting attendance had almost no participation except for paid environmental lawyers and lobbyist and only a couple of those. Yet, my community was well represented. I know you are smart enough to know that when the paid plaintiffs in the so called consent decree agree with the DEIS then NPS has crossed a line of fairness and equity.

The List:

The Interim Strategy was both approved by NPS and USFWS as a means of progressing through and to the DEIS. This strategy plan was sold to our community as a defense against a lawsuit and would allow NPS and all to participate in a fair plan. Needless to say NEPA, FONSI, Chapter 7, NPS promises, and all the work put into this are worthless.

The Consent Decree was done behind closed doors with no participation by my community. I was not consulted or asked about the consent decree. My recommendation was not to sign. Repeatedly the CHNS communication's person has stated that all is well and everybody happy with the consent decree. After all, everyone signed off on it. Not one soul is happy on Hatteras Island about the consent decree. The penalty provision of the decree is ridiculous and presumes my community is guilty and punishable for all resource closure violations. That NPS enforcement has had no effect and made little or no effort to catch the perpetrators of consent decree violations simply enhances the chances that the perpetrators are either environmentalist or NPS personnel. Not one resource violation under the consent decree has harmed the resource in any manner according to you, the superintendent.

Negotiated Rule Making was a failure. My community, many times over, came to the negotiating table only to find that the plaintiffs in the consent decree could not comment because they were in litigation (they should have been replaced). When the plaintiffs finally had their way with the consent decree and us, they simply would not participate in a meaningful discussion. Over and over again and again we met only to waste our time. To finally get to the DEIS and have it presented as coming from reg neg is an affront and an insult. The vast majority did not approve the position the DEIS has taken and only yet again it was manifested by the plaintiffs. Other criticisms of the reg neg process came on the very weak and often times influenced professional speakers who gave their renditions on birds and so on. I can hear most of it right now, "turtle hatchlings whose nest are moved appear to be less vigorous than unmoved turtle hatchlings". Of course a non moved nest which floods and kills all the hatchlings will have even less vigorous turtles than one moved. It is really poor management of the ESA to allow the states to manage turtles while killing thousands of unhatched eggs. Again, it was transparent that banning access was the desire of NPS and hence most of the presenters had real problems coming up with excuses to do so. A stumbling bunch they were.

NPS legal counsel argued throughout reg neg a very resounding defense of why access would and should be denied. Every consultation and question

came back with the same answer: sorry, we have to close Hatteras Island. Again, the repetitiveness from the solicitors only highlighted the bias and did not help reach any accord. The current director, Mrs. Obama the President's wife, executive orders on making recreational fishing sustainable, and every other positive about recreational fishing just made no difference.

The enabling legislation which was decades after the Organic Act is very clear that recreation is the main function of this recreational area. I find it amazing that NPS takes an old act and uses it to supersede what congress wanted and intended. The concept of preserving for future generations public resources would mean a desire to protect cultural and historical use both recreational and other for this area. The DEIS again brings none of this discussion forward. In the enabling legislation were grave concerns and promises made about commercial fishing since it was the only method the islanders had for making a living and so protections were offered. If interpreted correctly, the concerns were for the local citizens to be afforded protection in order to make a living but of course today NPS only looks at commercial fishing and their misinterpretation and their closures do not even take in commercial fishing access.

The traditional use of the beach and seashore is being completely ignored. While the DEIS tries to give a very mundane oversight of transportation use through out the 1940's and up to today, it fails. CHNRA was one of the very first surf fishing Mecca's in the world. The photo of the guys on the front of the DEIS has a picture of my father and friends with red drum caught just after World War II. The traditional use of the beach to fish and recreate was and is history. Hunting shorebirds for profit and recreation was also a part of that history. Long before NPS began trying to manage and close the beach the locals were profiting from taking visitors to hunt and fish and to also furnish the same visitors with food and lodging.

Promises made by NPS are simply worthless. Past directors, secretaries of interior, regional directors, superintendents, and even the present director's desires are worthless to the bureaucrats in NPS. I have had promises from a great many of you that this process would be fair and above board and it is not. There are many in NPS who should be publicly censured and fired. Pink slips given and not simply transferred to another park but retirement funds taken away, health insurance canceled, and pay checks stopped because this is what my community is suffering. To think that I helped sell my community on promises from you and the director about fairness is just a joke.

The Protocols were written for a superintendent who was only trying to cover his liabilities. The protocols do not factor in a balancing act between recreational access and resource protection and they also do not take economics into account. The protocols were promoted from within local NPS by NC Audubon and recommended upward and onward by the weakest of weak resource managers. His incompetence is the reason for regulations today. When the protocols writer Dr. Irwin spoke at reg neg I asked the question of why ESA restrictions were being enforced on non listed species and he replied he just did not know why. This appears to be the first time ever. While little effort has been made to take a realistic look at the protocols the defense of same by NPS has come many times over. Sandy Hamilton, plan writer, stated she had peer reviewed the protocols (like she is qualified) and this sort of sums up the problem we all have with the protocols. Influenced and written by the plaintiffs and never peer reviewed.

North Carolina's position is in support of our community. Both the NC Wildlife Resources Commission and the NC Marine Fisheries Commission with minor reservation are in support of the access point of view. This may surprise some who attended reg neg but the position stated by the biologist from NCWRC was his own and not the formal position by the state. I find it highly disturbing that NPS places such a high priority on the species of concern list generated by North Carolina while the state does not. The list is only there for increased monitoring of the species if needed and no further restrictions are recommended or suggested. I also find it disturbing that NPS picks and chooses its species for regulation from the list. There are at least two other species in the seashore which are on the list. One of the species is located at NPS headquarters and nothing is being done to protect it there (Outer Banks king snake). At least put a sign up there to slow down and help a fellow species out. USFWS while playing a role at reg neg, many times over stepped into the arena of recreational punishment. Many of the arguments and renderings made by USFWS were simply assumptions not borne by fact and even sometimes not understood by the renderer. The best example I can give is of Pete Benjamin, local field supervisor, recounting that at least 25% of turtle nest in CHNRA are not found by employees. Even though this was not supported by local NPS turtle experts the argument was still the only reason given for night time driving restrictions. If Benjamin were right, the 50 year goal set for this area of gaining 25 additional nest has been met and we achieved this with no restrictions whatsoever. Again the point of this is he is denying access without proper studies or even using adaptive management processes to achieve the closings.

My Recommendations Are:

NPS should acknowledge that the DEIS is only here to deny access. Predation, storms, and interference by outside monitors and guest are the real reasons for the lack of birding success in the area. The DEIS continues to promote the theory that there are more vehicles on the beach today than ever before. This is just supposition. The bluefish runs in the early eighties had much greater numbers of people and vehicles on the beach. I well remember the nineties with the island's resource manager giving what appeared to be bird watching tours of piping plover nest. Twenty or thirty people with their binoculars and scopes up close and personal to the nest and whoops, we flushed one. Oh well, there is another nest at Hatteras Inlet and maybe we can be more careful. Hurricane charts mirror the decline of plovers in the nineties but these tables are simply discounted in the DEIS. Predators are now being killed by the thousands and one can only imagine the resurgence of ghost crabs and the harm future generations of plovers will face by this menace. The protocols make reference to 25 predators killed the first year of management that this should help increase bird numbers. I wonder if they ever imagined thousands being killed (sort of like mowing your grass). Through out reg neg I listened to the best of my community leaders and most experienced beach users give recommendations which would help increase populations of shore birds in the seashore only to hear these same recommendations discounted until guess what? We are becoming a community of "we don't give a damn" conservationist. What a joke to try to help the birds while Audubon and the rest of the environmentalist sit silent. They were not at reg neg to help the resource but to close the beaches.

1. Develop an average of closure buffers after the plan been approved. Until such time as an ARM study can be done utilize the access buffers offered by the access lobby. Surely NPS will have the desire and need to enforce these buffers on other parks and recreational areas. Objective viewing of the birds and their reaction to intrusion by either pedestrian or vehicle shows without question the suggested buffers under alternative F to be vastly too large. Any unbiased person can walk up to an American oyster catcher and note that it is not disturbed until only a few meters away. The same scenario happens while driving slowly past. The number 1, 2, and 3 nesting sites for least terns in this county are on the roofs of various department and grocery stores. Least tern populations are going up year after year and they seem content to nest amongst us. Why the great penalty?

2. Bird Populations should be managed by area. I well remember the hysteria brought forth by the plaintiffs about black skimmers being extinct in CHNRA. Oh my God, guess what? They simply moved 500 yards off and on to a spoil site just off the sound in Hatteras. Last year there were 500 or more nest of black skimmers on the north end of Hatteras Island which were not included in NPS reports. If NPS is going to succumb to the lies and hype of the environmental lobby; at least try to manage with some kind of honesty.

3. Turtle management should be maintained by NPS. The great amount of nest lost to water emersion is unacceptable to my community and leads only to questioning why local managers of NPS would listen to one biologist from the state when such vast numbers of eggs are being destroyed. I grow really tired of even worrying about the credibility of NPS. Many years lost eggs account for 50% of the total laid eggs and last year's 37% is a disgrace. The state of South Carolina with a much greater number of nests too manage lost 7% last year. The only clear reason I see for the present management is the bias of the state biologist against vehicle use. By the way, this same biologist did a study (the grant was worth hundreds of thousands of dollars) which showed that moving the nest caused the hatchlings to be less vigorous in his opinion. Of course a dead egg is even less vigorous than a moved egg. It is just ridiculous.

4. Night time restrictions are again not founded in science but simply in mixing assumptions and then using the mix for a rule. For example, 70% of all turtle nest are in non vehicle areas already. Therefore 30 nest are in vehicle areas and 15 of these will be moved. All of this nighttime closure for the 15 nest out of the 56,000 plus east coast turtle nest. Alternative F recommends night time closure one month before turtles arrive and 3 months after they quit nesting. This is just not acceptable. Not allowing campfires on the open beach but allowing campfires in front of the first row of village rental cottages smacks of pay offs for those same few owners who lobbied for both vehicle and pedestrian access restrictions. The very most basic study of false turtle crawls in closed, open, and village area show no justification for nighttime closure. After all, there never has been a turtle or nest harmed in the area by vehicle nighttime traffic (NPS has no study on use). All of the assumptions made are just that, assumptions.

5. Flexibility is not being shown in the DEIS. The flexibility for future managers shown in the interim strategy is not shown here. The future will close vast areas to all even though those areas may change and have little benefit to the birds. Today areas are closed which could be open and much criticism of NPS alleviated yet those areas are closed because of inflexible buffers.

6. I find no discussion about "take" in the DEIS. Realizing that the DEIS was written with the predetermined thought process of a no take seashore, the lack of this discussion surprises me. I know this seashore cannot be managed without a provision for take. For all the failures of the consent decree and all the animosity created by NPS, there has been no take in this seashore since the interim strategy was created according to the superintendent.

7. The disabled, old, and infirm will pay a great price for the DEIS. Local NPS has neither studies nor inclination to understand its customers and users. Interpreters and managers do not get involved with the public. Sure the fee gathering spots such as the Cape Hatteras Lighthouse and Wright Memorial or even the campgrounds may be easy places to generate information but the beach user is not studied. This does not surprise me since upper management is never seen on Hatteras or Ocracoke Island. There will be a grave injustice done to the handicapped under the DEIS.

8. The economic study done for NPS is a travesty. The consternation shown throughout reg neg by the hired economist was the same as that of many of the so called professional presenters. They were asked to develop a study which shows no harm. I personally had to lay off 25% of my staff and have now lost over a million dollars in sales because of consent decree restrictions. This amount will increase under the DEIS since it is even more restrictive. Note that Hatteras Island's recession started with the consent decree and not when the rest of the country's recession started. I also grow weary of hearing about how hard this is on NPS. There is not an employee in NPS who has lost a nickel over the consent decree or a night's sleep. The economic harm will be and is in the hundreds of millions of dollars to Dare and Hyde County.

9. Change the name from: Cape Hatteras National Recreational Area to The Cape Hatteras Special Interest Group Area - National Audubon Only Birds Area!

Sincerely yours,

Bob Eakes, President Red Drum Tackle Shop, Inc. PO Box 1354 Buxton, NC 27920

Correspondence: Dear Superintendent Murray,
As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.
1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."
2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness...."
Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.
3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.
Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

Correspondence: Why should we need to comment on the off road vehicle management. Your the National Park Service you are suppose to protect these areas. The only ORV management plan that should take place is one of elimination. Why place our wildlife in greater danger. People come to enjoy the beauty not destroy it. Please do not allow further endangerment of our endangered sea turtles and shorebirds. There are so many areas for people to ride off road why do it in these fragile areas. DO NOT ALLOW OFF ROAD VEHICLES ON THE SHORE.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
 This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
 The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
 *Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
 * Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
 * Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
 Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.
1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."
2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness...."
Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.
3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.
Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan

Correspondence: I have been a home owner @ 27241 Dory Road Salvo, N.C. since 1984 and I would like to continue to enjoy the beauty of Cape Hatteras with my wife,three daughters and grandchildren. Please consider everyone and their rights and the results of your action on their life as they continue to try to make a living in these difficult times. I have been visiting this area for nearly 40 years and have always respected and obeyed the state and federal laws of the land as I feel most people do. I am not a member of a group other than a natural born citizen that works hard for a living and pays taxes and is

willing to work with others to achieve a common goal. I would like to see all the energy I have seen on this front put into a positive effort such as replacing the Bonner bridge, but that is another story. Please do the right thing to be fair to all concerned that love Cape Hatteras. Sincerely, William Keenan

Correspondence: It would be a travesty to allow off road vehicles onto the beaches at Cape Hatteras. I have seen vehicle traffic on other U.S. beaches such as Daytona and it completely spoils that natural feel of the beach. Vehicle traffic would also introduce more pollution not only in the air but from any liquids or oils dripping from engines, not to mention noise pollution and safety hazards. The beach is a place of relaxation, enjoyment, and inspiration--whether by walking, boating, surfing, sunbathing--it's not a race track. Please spare this magnificent stretch of American coastline from such a devastating ruin. Thank you, Janet Carper

Correspondence: I am very concerned by comments I have read that vehicles driving on the Cape Hatteras beaches are significantly destroying turtle and bird nests in and under the sand they are driving on. Personally, I have no sympathy for ORV operators' desire to drive on sensitive beach habitat. The birds, turtles and other animals that use the beaches for nesting and other habitat activities should have first priority and should be protected from any and all interference. After that, I enjoy vacationing on beaches and have visited Cape Hatteras several times. I do not appreciate trying to use a beach that I have to "share" with vehicular traffic. Therefore, I am unhappy that there are comments saying that ORV's are being given preference in beach use. That just is not right.

Correspondence: Send Your Comments Today!
DEADLINE TUESDAY!!
(The link above will take you to the National Park Service's Planning, Environment, and Public Comment Site) Dear John,
URGENT: DON'T LET OFF ROAD VEHICLES DOMINATE CAPE HATTERAS NATIONAL SEASHORE!
The National Park Service (NPS) is on the verge of approving an Off Road Vehicle (ORV) management plan for Cape Hatteras National Seashore that will disproportionately dedicate beach use to year-round ORV traffic at the expense of wildlife and pedestrian visitors. We only have a few days left to stop this from happening! The public comment period will close on May 11 and if national park advocates--like you--fail to take action, Cape Hatteras National Seashore will be dominated by ORV use for the next 20 years!
NPCA seeks an ORV management plan that places greater emphasis on pedestrian access and wildlife management, especially with regard to endangered sea turtles and shorebirds.
Take Action Now: Submit your comments to the NPS by midnight (Mountain Time), Tuesday, May 11, and urge them to adopt a modified Alternative D of the draft Environmental Impact Statement, protecting that which makes Cape Hatteras so special--abundant (and endangered) wildlife and the natural quiet of miles of pristine Atlantic seashore.
Here's how to submit your comments to the Park Service:
1) To comment, please click here. This link will take you to the National Park Service's Planning, Environment, and Public Comment Site. The page you will see displayed is the Cape Hatteras National Seashore Draft ORV Management Plan/EIS comment page.
2) After filling in your personal information, simply cut and paste the sample letter below into the NPS comment form; we highly encourage you to add your own comments as well.
3) After completing the comment form, make sure to click the "Submit" button found at the bottom of the page.

Correspondence: I have been going to Hatteras for years. My mother was born in Manteo, NC and still lives in state. Please reconsider establishing this ORV plan. There are too many unintended consequences of disturbing the wildlife, especially the sensitive vegetation of the Outer Banks that prevent beach erosion and provide a habitat for unique species. This plan is poorly written, completely misguided, a terrible misappropriation of protected lands, and an unnecessary risk to a national resource; beauty! Please hear the people and so do not proceed with such a disregard for the environmental future of the Outer Banks.
Moreover, you must consider the effects on the people visiting by noise pollution. I lived in Rocky Mount, NC for 10 years and remember how loud and smelly ORV's can be. Poorly maintained ORV's wreak of gasoline odors and sound like Biker Week in Daytona. People go to the Outer Banks to escape

the hassle and bussle of more commercialized beach vacation spots. All thngs considered please kill this proposal and think as well as act responsibly.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence:

I am currently a homeowner on Hatteras Island have been visiting Cape Hatteras National Seashore for over 25 years. I agree that there needs to a predictable and fair plan for accessing our beaches. There are several items that need to be addressed that will help provide a balanced and reasonable plan to protect and provide access to our national seashore shores.

- 1) Large, inflexible buffers (p.121-127). These buffers that are being considered in the DEIS of 1,000 meter buffer in all directions for the piping plover is to large to allow a balance of human use of the seashore as stated in the original "Park Enabling Legislation". The DEIS does not cite any peer-reviewed science in supporting such large closures and these extremely large buffers are not used in other federal and state areas for the piping plover! A more appropriate & effective buffer would be 200 meters
- 2) Non-endangered species, such as American Oystercatchers, Least Terns and Colonial Water birds are given Pre-Nesting closures and buffers up to 300 meters. Birds that are not listed as endangered should not be afforded the level of protection given to ESA (Endangered Species Act) protected species. Instead of 300 meter buffers for these birds, a more appropriate buffer would be 30 meters
- 3) Corridors are a vital tool in providing access while managing resources. They provide a small path around temporary resource closures in order to provide access to open area that would otherwise be blocked. In alternative F Corridors are only allowed in ML-2 portions of SMA's and are subject to resource closures at any time. In a more reasonable approach Corridors should be permitted throughout the seashore during the entire breeding and nesting season including ML-1 portions of SMA's. These corridors would provide valuable access without impairment or damage to protected resources
- 4) Turtle Management (Pg.125, 392-396) DEIS claims North Carolina Wildlife Resources Commission turtle guidelines will be followed. The National Park Service should consider turtle management practices successfully used in other federal and state areas to achieve nesting success. More proactive measures include relocating nests to more desirable locations, which is routinely and successfully done in other areas and this would allow better access to beach areas for visitors enjoyment and night driving and fishing.
- 5) Prohibition of Pets (p136) in the seashore during bird breeding season, including in front of the villages. No pets in public areas, beaches, campgrounds, sound-front, foot trails, park maintained roads from March 15 -July 31 The DEIS does not cite any peer-reviewed science supporting that such a ban on pets would have any positive impact on the breeding birds over the current rules of pets on 6ft leash.
- 6) Year Round Closures: Hatteras Inlet, North End Ocracoke Island, Ramp 27-Ramp 30 (Salvo) are set to be closed year round to ORV, I am most familiar with the Hatteras inlet area and this area does not have the characteristics of prime habitat for the plover and the other supposed reason for the closure was the need for a pedestrian only area. It would not be economically or environmentally feasible to pave "pole road" and create parking lots in a beautiful and natural setting at the Hatteras Inlet. The need for pedestrian only areas is addressed in adjacent 15 miles of beach on Pea Island, which never gets included in the amount of beach for pedestrian only and is also a wildlife refuge.
- 7) Economical Impact: the negative economical impact of the "consent decree" has been profound and well documented. Any projected financial losses from these changes will only affect the businesses that are on Hatteras and Ocracoke islands and the impact studies should reflect that and not be spread across the region to lessen the negative financial impact on the villages.

Regards
Paul Burch

Correspondence:	<p>Dear Superintendent Murray,</p> <p>As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.</p> <p>1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."</p> <p>2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness...."</p> <p>Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.</p> <p>3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.</p> <p>Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.</p> <p>Thank you very much for taking the time to protect one of America's most beautiful stretches of Atlantic seashore! Sea turtles, nesting shorebirds, and generations to come will be grateful for your action today. Thanks again!</p> <p>Sincerely, Liz Ritter</p>

Correspondence:	Every year for at least 15 years now we have been making a pilgrimage to the Outer Banks, for us it is a place of refuge, recreation, relaxation and restoration. Cape Hatteras National Seashore is a national treasure that must be preserved but there must be a balance between preservation and access. I believe that Alternative F can provide a solution that will benefit all the creatures that live and play there, protecting the beaches while allowing us to enjoy them.

Correspondence: Dear Superintendent Murray, As a life-long supporter of the National Park system, I strongly, strongly urge you to preserve the Cape Hatteras National Seashore's delicate ecosystem by severely restricting the use of off-road vehicles. When my family vacationed at Hatteras many, many years ago, I loved it; my enjoyment of its pristine beauty is still a fond memory. Its sandy beaches, salt marshes and woods are a critical natural resource for the Outer Banks. I understand that off road vehicles could potentially be given preferential treatment to all other visitor uses of the area, which include family vacationers, birders, and others who enjoy nature. It strikes me that this plan not only is unfair to other visitors, it is also hugely damaging as off-road vehicle use tears up fragile ecosystems, destroying the wilderness and various animal habitats. Other visitor uses have much less significant impact. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points:

- 1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations." If ORV use does not do this, it should not be allowed.
- 2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness...." Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.
- 3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.

Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

Name: Cupples, Amy P
Received: May,09,2010 22:35:31
Correspondence Type: Web Form
Correspondence: My name is Amy Cupples. I am 30 years old and reside in Altoona, Pennsylvania. I am a member of the NCBBA and have been visiting and vacationing at the Cape Hatteras National Seashore on the Outer Banks of North Carolina literally my whole life. I feel like the wind has been taken out of my sails knowing that someday I may not be able to come to my favorite place on Earth. The Outer Banks is an addiction to me. I need it as much as the air I breathe. It's a place of traditions, family, and being one with nature. Is it true that someday I might not be able to visit the most beautiful, tall black & white tower where my husband proposed to me? Is it true that Hatteras Inlet may be closed year round, the place where my husband & I honeymooned and caught fish together and made new memories? Is it true that I may not be able to bring my dog, Marina, to a place that she loves just as much as me? Is it true that someday my future children will not be able to walk these beaches and build sand castles such as I did while vacationing as a little girl? Is it true that my grandmother's dying wish for her family to congregate at the Outer Banks (her favorite place for family and fishing) to celebrate her life may not be honored due to the plan that may come into effect? This certainly does NOT seem fair. WE are people and WE have rights and freedoms and traditions. Our country is based on traditions and I have the tradition of coming to the Outer Banks every year with my entire family which includes my pet. Do you recognize the effect this will have on the local economy if you do not allow people that live and visit here to bring their pet? There seems to be a lot of bias in the DEIS document. Why do we give rights to some animals but not others? There's more protection for a bird than some government officials and I find it outlandish. Why are we making rules for ALL people instead of punishing those that simply do not follow the rules? The leash mandate of 6 feet for pets is sufficient. As a visitor to this beautiful beach, I always utilize common sense and help to clean the beaches. I also volunteer for the beach cleanups at least twice a year. I believe it is important to preserve this land for its historical and cultural value. Most of those who come here are nature lovers or have a love for the outdoors. They respect the land and everything in it. I know that I come here for the beauty of the ocean, the peaceful beach walks, the intoxicating air and ocean breezes, and the amazement I get looking at the million stars in the night sky. Is it fair that as an American citizen with the same rights and

freedoms as any other American be denied my right to access and recreate in this National Park? Is it fair that every good memory I have exists here and someday I may NEVER be able to make more with my family?

The answer is NO. It is not fair! Please consider my comments and please help me to save my beach!

Sincerely,
Amy Cupples

Correspondence:	I am against closing any public lands to "protect" so called endangered species. The waco environmentalist have been closing land all over the country in an attempt to keep people that don't meet with their approval from enjoying the outdoors in a manner that suits them best. Please do not close any more lands to off road vehicles. It would cripple an industry and ruin outdoor adventures for many people if you close any more lands.

Correspondence:	I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access. I want decreased OVR use and OVR FREE zones with a plan for recovery of wildlife and birds as well as zones for breeding, wintering and migrating wildlife with increased buffer zones for protection. Also include followup studies to increase the buffer areas as necessary to protect the wildlife recovery and establishment. Please no expansion of OVR areas, but decrease these areas as our national wildlife is dying. This is important to me and I will be following the progress on this Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
 This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me. I have visited Cape Hatteras National Seashore six times personally, and family members have often vacationed there as well. It saddens me to think that the wildlife and serene setting has been affected by ORVs.
 The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
 *Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
 * Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
 * Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
 Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore. Please regulate the ORV use. I look forward to visiting there again in hopes that the wildlife and the serenity will have been restored.

Correspondence: I plan on visiting Cape Hatteras later this year and would not be happy to find it ruined by ORV's everywhere. Cape Hatteras is a beautiful place that needs our protection so the wildlife can thrive and be there for generations to come. Allowing ORV's would be counterproductive to the welfare of this environment. Please do not allow them to devastate this gorgeous place. Thank you, Lisa Allen

Correspondence: Beaches, shorelines, and associated areas (e.g., sand dunes) are natural wonders that everyone can enjoy (both shoreline residents and shoreline visitors/vacationers).
 Besides the "draw" of the pounding waves and surf, people visit beaches to see wildlife and sometimes to experience silence and solitude. Vehicles and ATVs can absolutely ruin the idyllic setting of a beach, and off road vehicles should be BANNED.

Correspondence: Dear Superintendent Murray,
 I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore.
 ORV use ought not to be privileged over protection of the wilderness, birds and turtles. The woods, beaches and salt marshes must be preserved for wildlife and people, not for ORV use.
 Of the six alternative plans outlined in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.
 1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."
 2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness..."
 Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.
 3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.
 Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Correspondence: I am a resident of North Carolina who enjoys recreational opportunities offered by the Cape Hatteras National Seashore and Recreational Area. Reasonable and safe pedestrian and vehicular access to the beach is essential to participate and enjoy these resources and opportunities. I also support restrictions and conditions necessary to protect the birds, sea turtles, and other biota that are supported by scientific data and can make the Seashore home for part of the year. I believe the favor alternative (#7) advanced by the NPS is more restrictive than necessary to meet protection of the Seashore. I have read and agree with the proposal to manage ORV's on the Seashore prepared and submitted for consideration by the Coalition for Beach Access. My position is that the NPS accept this alternative or at least postpone a final decision on the ORV Plan pending further review and negotiation on the counter points raised by the Coalition for Beach Access.
Please don't take away one of the most historic places in the country.

We have coexisted with the wildlife in this region for hundreds of years. Please afford us the opportunity to continue to do so safely.
I also suggest that if necessary, force drivers to buy a permit and attend a class on ORV use each year. I would gladly pay to have this done to support proper and fair conservation of the beaches. This would satisfy proper education on safe driving and use of the beaches and what to do if endangered wildlife are sighted.

Correspondence: Dear Superintendent Murray,
As a member of the National Parks Conservation Association and a supporter of our national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (O.R.V.) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege O.R.V. use over all other visitors. The reason for this I cannot even begin to comprehend. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize these following points.
1) The National Park Service cannot and should not ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations of Americans and protecting its wildlife must take precedence over one form of recreation (O.R.V.s), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."
2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... the said area shall be permanently reserved as a primitive wilderness..."
Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not O.R.V. use. It is absolutely essential that the N.P.S. protect the pedestrian visitor experience to Cape Hatteras and allow O.R.V. use only if it can occur without harming wilderness and wildlife resources.
3) The final Plan/Environmental Impact Statement must assert N.P.S. authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.
Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final O.R.V. management plan.

Correspondence: Dear Superintendent Murray,
As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. Ban all ORVs is the nice, simple answer. Why should a bunch of idiots in ORVs be allowed to terrorize everyone else on our beaches and destroy the coastlines?
The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. The policy should be reversed 180 degrees: Screw ORVs!
Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.
1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations." 2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness...."
Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.
3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.
Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.
There should be an investigation into who benefits from ORV sales ... probably some already too rich jerk-offs of the corrupt and fascist corporatocracy.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: To Whom it May Concern,

I am a semiretired former hi-tech business owner and a full time resident of Kill Devil Hills, NC and now work in Rodanthe from the early spring through late fall teaching kiteboarding. We moved to the Outer Banks three years ago with our daughter to enjoy this unique location. I strongly believe that the highly restrictive proposed beach access plans provide extremely limited, if any environmental benefit in relation to the negative economic impact they will have on an already stressed local economy.

The intent of the national parks and seashore was, and is to provide recreational access to the public while taking a balanced approach to environmental concerns. I believe that the Interim Beach Access Plan that has been in place for numerous years has achieved that goal and that a small minority of environmental extremists are trying to convince the public otherwise. All of my fellow Outer Banks Residents supported the Interim plan. No one that I know living here or visiting here supports the proposed highly restrictive plans. My fellow residents and visitors I meet all want the protect the environment but they also want to be balanced and pragmatic in that effort.

I urge you to support to least restrictive plan that is closest to the previous iterim plan

Regards, Dave Kurtz 224 Sunset Dr Kill Devil Hills, NC 27948

Correspondence: I appreciate the opportunity to comment on National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support Alternative D if modified to provide greater pedestrian access, which was identified in the DEIS as the environmentally preferred alternative. This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.

The following principals should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

Provide Equal Access for All Visitors: Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.

Put Natural Resources First: Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.

Establish and Meet Clear Goals for Wildlife Recovery: A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Mike Murray Cape Hatteras National Seashore 1401 National Park Drive Manteo, NC 27954 Phone: 252-473-2111, ext 148
Dear Mr. Murray,

After reviewing the Cape Hatteras National Seashore Off-Road Vehicle Management Plan Draft Environmental Impact Statement, it is my understanding that the use of ORVs is necessary for the public enjoyment of the park. However, it seems the park needs to embrace and consider more options of handling the vehicles, so the natural habitats of the area can be undisturbed. There are many good reasoning's for how the continued use of the vehicles can change to protect the park, and make it friendlier to visitors. The section Elements Common to All Alternatives are very good ideas of how to handle the use of the motor vehicles. The enforcement of the use of ORV within the park must be continued and enhanced to create a safe environment for visitors and animals alike. The use of ORV is necessary for the park, and for the visitors as well. I would agree that the use of vehicles should be continued for the convenience of the guests. There are environmental consequences for using the vehicles on the fragile areas of the park. The most important is the overall look of the park, but also the wildlife that have established a habitat within the area. The amounts of endangered species that live within the park are subject to danger while ORVs are in use. I think that the area needs to respect the animals and keep the ORVs away from the habitats as much as possible. Viewing of the natural habitats should be allowed, but by walking rather than driving to held preserve the homes of the animals. Also, it is important that the area of the park be monitored and be aware of the conditions of the area, so the risk of damaging the area and ORVs can be reduced. The park should only be open when days are nice to reduce the amount of traffic and reduce the amount of damage that ill-weathered days may have. It is most important that the vehicles be monitored to ensure there is little damage within the park. Overall, the DEIS of Cape Hatteras is very important so I could know more about the area. It is important for the endangered species and for the well being of the park that the ORVs be designated a route through the park to resemble other parks throughout the country. This will not only reduce the amount of impact cars have upon the beach, but also the limit the impact they have on the habitats of the animals. The DEIS has very many good ideas and suggestions of how to correctly balance the coexistence of the vehicles and the wildlife, while still offering a pleasant place to visit. The history of Cape Hatteras is important for the surrounding area as well for the people who come to enjoy it. However, the well being of the endangered species must all be an important factor of deciding how to correctly deal the vehicles. Without the animals that have made Cape Hatteras a wildlife site seeing area, there is no more park. Sincerely, P. Clark pocxt4@mail.missouri.edu

Correspondence: ORV's are not supposed to be in serene parks like this. Congress designated this area as a park, for wildlife safety and pedestrian access. How, if you introduce ORV's everywhere, can wildlife or pedestrians be safe???
 Another point, wildlife recovery is a major goal, not ORV freedom. These ORV's threaten to derail these recovery plans and I am ashamed to think that Americans are going to lose yet another wild place!
 Please protect our natural places. They are increasingly disappearing and there have been such bad decisions which sacrifice wildlife and nature for short-term human profit and development. Cape Hatteras cannot fall prey to an other bad decision and I beg you to consider my comments and reject ORV's in this special place.
 Thanks.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
 This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
 The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
 *Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
 * Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
 * Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
 Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: Dear Sir,
 It is incomprehensible that recreational motor vehicles are permitted at all in nature; not to speak of in a National Park area. This must be stopped immediately. Motor vehicles have more than enough roads to drive on. Aside from the obvious disturbance to all other life forms, including humans, it must be absolutely clear now with the overwhelming data on climate change, that the first action to be taken must be to bar all entertainment use of internal combustion engines. Not only would carbon dioxide emissions be significantly reduced, but incentive would be given for sitting less and actually using the human body more for the movement for which it has evolved (the legs are not simply decorative appendages). The increase of human and ecosystem wellbeing would be inestimable, and the catastrophic US health and health care system would benefit immeasurably. Everyone wins.

Correspondence: I have been a property owner on Hatteras Island since 1984.
 I would like to note alternative "F" is far too restrictive and unnecessary.

I implore you to consider the coalition's ORV management plan and NOT plan "F".

This is a National Park and recreation area funded by American Taxpayers dollars, for the American People to responsibly enjoy. It is also a natural wildlife area where people and animals co-exist in harmony and always have.

This whole attack on our lives is so insane I can only think this cannot possibly be about the birds, and it's not.

Remember the saying; When bad decisions are made or ones that don't make sense, something else is going on? Usually money.

This is all about certain animal rights groups suing the Govt. using the power of the Endangered Species Act and lining their pockets with millions of taxpayer dollars in the process. I think by now everyone understands this.

Until we modify this Act and remove the incentive for these groups to sue the Govt. this kind of thing will never end. My question is who's next? Maybe your back yard...

Every property owner, resident and business owner is here on the OBX not because it's an easy life but because we love this place exactly as it is and take very personally any abuse of this area with regard to property or wildlife.

Most of us are bird and wildlife lovers and go out of our way to pick up garbage or dangerous items on the beach, call the police or Park service when we see someone breaking rules and help any animal in trouble.

If we fish or hunt we do it responsibly. We take care of our Island. The whole idea that the wildlife is in any kind of trouble here is ludicrous.

Sincerely,

Lee Cortese

Correspondence: Dear Superintendent Murray,

As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.

- 1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."
- 2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason. "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness...." Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.
- 3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.

Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

***** Thank you very much for taking the time to protect one of America's most beautiful stretches of Atlantic seashore! Sea turtles, nesting shorebirds, and generations to come will be grateful for your action today. Thanks again!

Sincerely,

Mike Jaklitsch

Correspondence: Dear National Park Service,

My wife and I are writing to voice our concerns on the Draft ORV Management Plan/EIS for Hatteras Island.

Our family has enjoyed spending summers at this national seashore for more than decade. As residents of Virginia, we have endured the long drive to Hatteras each season because we appreciate the natural beauty of the island, including the wildlife and minimal commercial development.

We agree with the plan's objective of providing additional protections for endangered species like the piping plover in undeveloped areas. We do not agree, however, with the extent of the proposed restrictions, particularly the provisions that would restrict access for pedestrians and pets to the beaches alongside the developed villages, such as Hatteras Village.

It is inherently unjust for the NPS to change the rules regarding beach access for pedestrians and pets in the villages when so many families and businesses have made investments there with the understanding that the beach is the main reason people visit. My family invested a large portion of our life savings to purchase a semi-oceanfront home in Hatteras Village in 2008. The value of the home, and the seasonal rentals it generates, is entirely dependent on access to the beach. Our guests pay sizable weekly rents to walk out our doorstep on to the beach for sunbathing, swimming, kite flying, surf fishing and walking their dogs. (About 15 percent of our guests bring their dogs.)

Thousands of home owners just like us, up and down Hatteras Island, are very concerned that the proposed NPS plan could result in beach closures directly outside our homes. Most of us are entirely dependent on a steady flow of rental income to be able to afford the mortgages on these properties. A loss of beach access, even for 1-2 months a year, would severely disrupt our rental income for the year. In my family's case, we would no longer be able to afford the property and would be forced into foreclosure or a short sale, given that its value would be significantly less than the purchase price due to its reduced rental potential.

I urge you to reconsider this part of the plan and remove all language that would potentially restrict pedestrian and pet access to the beaches in the villages. Any adopted restrictions on ORV and pedestrian access in the undeveloped areas will be hard enough for nearby property owners and businesses to endure. The potential of losing access to the sand and surf directly outside our doorsteps would be financially and emotionally devastating.

Sincerely,
 Andrew Weaver Leesburg VA

Correspondence: I live in Salvo, NC, one of the villages surrounded by the Cape Hatteras National Seashore. I have made several previous comments concerning my displeasure with the overall DEIS and especially with the NPS preferred alternative. The DEIS as a whole misrepresents the effect that the preferred alternative will have on the quality of life within the villages of Hatteras and Ocracoke Islands. I have experienced a major reduction in the quality of life here since the NPS started the Negotiated Rulemaking process. I have especially seen the quality of life experience a major decline since the Consent Decree was put into effect. I have seen this major decline in relationships between neighbors, between residents, visitors and NPS personnel, within local businesses, and even within my church. I have personally seen how out of touch the NPS is with the people living within the Seashore and the way NPS actions affect them. The NPS has obviously noticed the negative effect on quality of life of their employees living on Hatteras Island as evidenced by their need to build a fancy recreation center on NPS property for those employees. The NPS must take into consideration quality of life issues when determining beach access restrictions at Cape Hatteras. The major effect these restrictions have should lead the NPS to choose the least possible restrictions rather than the most restrictive.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.

This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.

The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

- *Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
- * Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
- * Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: May 10, 2010

As long time visitors to the Outer Banks, homeowners in Rodanthe, NC for 10 years and restaurant owners in Waves, NC for five years, we have a vested interest in and a responsibility to carefully review the plans to manage the resources that comprise and define our community. We appreciate this opportunity to comment on the Draft Environmental Impact Statement (DEIS) addressing beach access and regulating ORVs on the Cape Hatteras National Seashore.

The issue of beach access involves much more than just folks wanting to drive on the beach. The National Park Service has a responsibility to protect the natural resources and wildlife while simultaneously providing and preserving the public's right to current and future access at the Cape Hatteras National Seashore Recreational Area.

With that understanding, we see Dare County's recommendations regarding the DEIS as reasonable and achievable. We urge the National Park Service to make changes in their preferred alternative F that incorporate the provisions outlined in Dare County's position statement. These specifically address the following:

- ? CORRIDORS are a vital tool in providing access while managing resources ? MANAGEMENT BUFFERS must be based on peer-reviewed science ?
- NON-ENDANGERED BIRDS should not have same protection as if endangered ?
- TURTLE MANAGEMENT would benefit from nest relocation and other practices

These changes will serve the goals of all ? preserving the historical, cultural and recreational gift that has been Hatteras Island since it was established by Congress as a National Seashore.

We believe, as does Dare County and many reputable scientists and citizens, that these changes will be beneficial to the long term success for wildlife, enhance the visitor experience and improve the lives of those living near and visiting the Cape Hatteras National Seashore Recreational Area by ensuring access while maintain and protecting the fragile resources of these barrier islands.

We are unaccustomed to opposing the efforts of "environmentalists," and honestly wonder why this is the case when our ultimate goals are essentially the same. The science offered to support the environmentalist positions in this case simply does not justify the extreme pedestrian and ORV access restrictions proposed in the DEIS. We cannot support their efforts to pressure the National Park Service into a policy of denying human entry (both pedestrian and ORV) into large areas of the park and severely restricting the public's access to all portions of the beach. There is room for both public use and resource management. Extreme positions benefit no one.

We urge the National Park Service to incorporate into its preferred alternative F the recommendations presented by the Dare County position paper. This will ensure that this stretch of land remains true to its intended purpose and heritage for the wildlife and people who share it.

Respectfully submitted,
Matthew and Jodie Kamins Rodanthe, Hatteras Island, North Carolina

Correspondence: The Outer Banks has a special place in my heart. As a child my family went on vacation in Buxton where we camped and rode on the beaches in my Uncle's old Jeep. We were able to appreciate the beach by riding out to the point and fishing along the coast. These are memories that I have shared with my children. I have introduced my husband and children to the wonderful beach at the Outer Banks and look forward to carrying on the tradition as my children have children. If the access to the beaches are taken away we will not be able to keep this tradition going. Please do not take this adventure away from the many families that have made memories along the Outer Banks Coast.

All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that

make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.

1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."

2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness..."

Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.

3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.

Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

***** Thank you very much for taking the time to protect one of America's most beautiful stretches of Atlantic seashore! Sea turtles, nesting shorebirds, and generations to come will be grateful for your action today. Thanks again!

Sincerely,
James O'Shell

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: "I am a resident of Virginia and a Property Owner in Buxton, NC who enjoys recreational opportunities offered by the Cape Hatteras National Seashore and Recreational Area. Reasonable and safe pedestrian and vehicular access to the beach is essential to participate and enjoy these resources and opportunities. I also support restrictions and conditions necessary to protect the birds, sea turtles, and other biota that are supported by scientific data and can make the Seashore home for part of the year. I believe the alternative (#F) advanced by the NPS is more restrictive than necessary to meet protection of the Seashore - i.e. 'no' on NPS alternative.

I have read and agree with the proposal to manage ORV's on the Seashore prepared and submitted for consideration by the Coalition for Beach Access. My position is that the NPS accept this alternative or at least postpone a final decision on the ORV Plan pending further review and negotiation on the counter points raised by the Coalition for Beach Access." - ie. 'yes' on the Coalition for beach Access proposal.

Thank You
Richard A Brady

Correspondence: I am a resident of North Carolina aged 60 who has utilized the beaches of North Carolina all my life. I very much appreciate the beauty of the beaches and I am as concerned about maintaining them for future generations for the use of all our citizens and visitors. I have been very concerned with the beach closures and limited access by the NPS in recent years which has limited access to the Parks by many of our citizens.
I support reasonable and safe pedestrian and vehicular access to our beaches. I also support protection of our birds, sea turtles and other protected species. I have read the various options presented for access and I do not support #7 advanced by NPS, because it is too restrictive.
I support and recommend that the NPS approve and adopt the proposal submitted by the Coalition for Beach Access. It is well thought out, supports access to all our citizens and meets the objectives for protection of our wildlife, but at the same time provides reasonable and acceptable access.
Thank you for your consideration.

Correspondence: To whom it may concern:
My name is Joseph Kavanagh, I am a resident of Frisco, Charter Boat owner/operator, and user and visitor of Cape Hatteras National Seashore Recreational Area.
The purpose of the letter is to make Public Comment on the Cape Hatteras National Seashore Recreational Area Draft Off-Road Vehicle Management Plan / Environmental Impact Statement.
My first comment concerns the fact that the Economic Impact analysis component of the planning process is not completed. This is the single most important component to the planning process and was supposed to be completed for public comment in conjunction with the DEIS. As a local businessman, and park user, without this most important piece of the document, the rest of the DEIS is useless.
The Beaches of the Cape Hatteras National Seashore Recreational Area are our keystone attraction for visitors to our area. Limiting access in any way will have a devastation impact on our local economy, and already has. Without the Economic Impact Analysis components of the planning process, this plan cannot move forward.
The DEIS is largely based upon management of species that are not legally required to have any specific protection in place. These are Non-endangered, Non-Threatened species and there is no legal basis for such large closures based upon these species.
Other species listed by the State of North Carolina as "Species of Concern" have impacted beach access with large closures. The State of North Carolina Wildlife Resources Commission has recently come forward and stated that this was not the intent of calling these species "species of concern". These populations are healthy. There is no legal basis for management based on these species.
The proposed closures for piping plovers are too large and inflexible. It has been shown that Plovers do not really need such large buffers for successful nesting.
The National Park Service in drafting the DEIS has failed to consider other areas of the Recreational Area that are not accessible for vehicles as bird areas that are part of this same ecosystem. These include, isolated barrier islands in the sound and ocean, dredge islands, areas of Pea Island and Portsmouth.
The DEIS sets a precedent by manipulating nature in several ways such as Predator control, relocation of turtle nests for weather, set aside for Sea Beach Amaranth and others, but will not manipulate nature when favorable for access by human park users.
In summary, this DEIS sets a management precedent for this Recreational Area to be turned into a nature preserve. This is not the purpose or the intent of a Recreational Area. The Cape Hatteras Recreational Area was created to preserve access to our seashore for all people, not for poorly planned turtle and bird management.
Please consider the humans first in management of MY federal lands.
Thank you for this opportunity to comment.
Sincerely,
Joseph D. Kavanagh, III

Correspondence: Superintendent Murray,
As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource and one of the most beautiful, protected areas of the Outer Banks. The seashore attracts a range of visitors: fishermen, bird watchers, kite flyers, seashell pickers, surfers, families vacationing, people enjoying the water. Don't get my wrong, I love driving my old Jeep on the beach but, some area's should have restrictions on ORV use. Enough of the beach is already permissible for such use. The national seashore, and the dunes need all the conservation help that they can get. I support the "environmentally preferred" Alternative D, if it is modified to recognize several points: 1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence; 2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness...."; 3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources to achieve wildlife species recovery goals. Thank you for the opportunity to provide these comments, I look forward to seeing an improved final ORV management plan.

Correspondence: Mike Murray, Superintendent Cape Hatteras National Seashore Park 1401 National Park Drive Manteo, NC 27954 May 9, 2010
Re: Cape Hatteras National Seashore Recreational Area Draft Off-Road Vehicle Management Plan/EIS
Dear Mr. Murray:
This letter is sent to you as a public comment under your draft EIS referred to above.
As a frequent Cape Hatteras National Seashore visitor for many years , I have participated in all but one of the activities cited in the Figure 23 Visitor Activity Survey Results (Page 260). I would like to continue enjoying the recreation at the seashore for the remainder of my years, however I am gravely concerned that the preferred proposed Alternative F will severely impede this. As stated in the Act, Congress established the Seashore in 1937 as a national seashore for the enjoyment and benefit of the people, and to preserve the area. (page iv). Although I agree with the premise of protecting the natural resource, Alternative F would do so at the expense of humans, as well as the local economy and culture. .
Specifically my comments on the proposed plan:
1) I disagree: Page 121. To completely prohibit pedestrian access in sections of the national seashore, runs completely contrary to the basis upon which the Park was founded, for recreation. Pre-Nesting Closures All species: All designated Breeding Shorebird SMAs will be posted as pre-nesting closures using symbolic fencing by Mar 15 at sites involving piping plover, Wilson's plover, and/or American oystercatcher; and by Apr 15 at sites involving only colonial waterbirds. The NPS will determine the configuration of specific pre-nesting closures based on an annual habitat assessment. Pre-nesting closures would be adjusted to the configuration of the Nonbreeding Shorebird SMAs for the respective sites (as described later in this table) if no breeding activity is seen in the area by Jul 31, or 2 weeks after all chicks have fledged, whichever comes later. Pre-nesting closures will not be modified in cases where the beach erodes into the buffered habitat. ORVs, pedestrians, and pets are prohibited within all resource closures, including pre-nesting closures. ML1: SMAs managed using ML1 measures would not allow ORV or pedestrian access when pre-nesting closures are in effect. ML2: The Bodie Island Spit, Cape Point, and South Point Ocracoke SMAs would be managed using ML2 measures in action alternatives C, E, and F. Once pre-nesting closures are implemented at these sites, a narrow ORV access corridor (where ORV use is permitted) or a pedestrian access corridor (where ORV use is not permitted) would be established. Upon the first observation of breeding activity, the standard buffers (please refer to table 11, Shorebird/Waterbird Buffer Summary) will apply, which depending upon the circumstances may close the access corridor. The Bodie Island Spit access corridor would follow the ocean shoreline to the inlet. The Cape Point access corridor would follow the ocean shoreline from ramp 44 south to the point, then west approximately 0.2 mile along the ocean shoreline. The South Point Ocracoke access corridor would follow the ocean shoreline south from ramp 72 to the inlet. Exact configuration of the corridor would be determined by NPS staff based on the annual habitat assessment. The ORV access corridor at ML2 sites will generally be no more than 50 meters wide above the high tide line (alternative E may include a designated pass-through zone where no stopping or recreation would be permitted in order to minimize disturbance). An ML2 pedestrian access corridor would generally be below the high tide line and would in no case be more than 10 meters above the high tide line. Pets, as well as kite flying, ball and Frisbee tossing, and similar activities, will be prohibited in the access corridors or pass-through zones (in alternative E only) while the pre-nesting closure is in effect.
2) I disagree. I find the proposed 1000 meter buffers cited on pages 121 ? 127 unnecessarily restrictive and arbitrary. The use of such large buffers will cause people to be forced into smaller areas, with a subsequent greater impact on resource in the area. In addition, the expansion of the buffers as a punitive measure for infractions is also arbitrary. Please do not punish all for the offenses of one.
3) I disagree. The complete prohibition of ORVs, year round, pp 97-101, is entirely unnecessary, and will also impede human ability to partake of many recreational activities in the stated areas between ramps 27-30, Hatteras Spit, Ocracoke Inlet and others.
4) I disagree. Pets have been part of my, and continue to be part of many visitors' recreation and vacation experience. I disagree with the proposal to completely prohibit pets at the seashore beaches during "breeding season" from March 15th to July 31st. Page 136. Pets on a leash will not interfere with wildlife protection measures.
5) I disagree. It has not been proven scientifically that human interference is extensively responsible for damage to turtles and nesting birds, (less than 3%) so the prohibition against night driving for over half of the year is unnecessarily restrictive. P 104, P 377. No piping plover deaths have been attributable to ORVs.
6) Page 468, I disagree. Access should be provided through all species management areas. Buffers should move with the species, instead of being expanded.
Thank you for the opportunity to provide comments on the proposed plan. I look forward to a reasonable resolution of the issues, one that the Park, the Visitors, the natural Resources and the Local Culture and Economy will find reasonable and sustainable.
Sincerely,

Frank M. Harvey

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.

Correspondence: Dear Superintendent Murray,

As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.

- 1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."
- 2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness..." Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.
- 3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.

Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

Correspondence: Thank you for taking time to review my comments on the DEIS. I realize a great deal of work has gone into creating the Alternatives A through F. I have a number of concerns about the Park Service's preferred alternative F.

I disagree with the 1000 meter pedestrian/ORV closure in all directions for piping plover unfledged chick brood (p. 121-127). As stated in the Virginian Pilot on May 9,2010, "no scientific reasoning" has been presented "for this management strategy." The impact of this rule could cause closures not just in ORV areas but may close the beach in front of houses. The financial impact of visitors renting ocean front/ocean side houses and being unable to walk out on the beach in front of "their house" would devastate Hatteras Island.

I disagree with the 300 meter pedestrian/ORV closure in all directions for any American Oystercatcher nest or brood, as the Oystercatcher is not a

federally threatened species (p121-127). Again, the unnecessary closure of beaches and consequent lack of access to the beach and ocean for pedestrians (and ORVs) is not sensible. I live in on Pamlico (north Avon). Last year the beach was closed directly in front of our house due to Least Tern nesting. As we are the farthest north set of houses we could walk slightly south and still get to the beach, but if buffer areas are extended -- and used for non federally threatened species it is highly likely the beach would be closed in front of ocean front houses that visitors have rented.

I disagree with the Alternative F rule that No pets, including dogs, will be permitted on Cape Hatteras National Seashore lands including the beaches between March 15th and July 31st (p 136). This rule has no benefit for the preservation of birds or turtles. If people are allowed in an area, than a dog on a leash is of no environmental concern. I have heard numerous times from visitors on the island that they come to Hatteras because we are "pet friendly" on the beach. We own an Ocean front home that allows pets. In the spring every week of rental is with visitors with pets. Should this rule be put in place Hatteras Island's spring and summer business will be adversely impacted as individuals will find somewhere else to vacation. Additionally many homeowners have pets and walking on the beach is the only place we have to exercise our dogs. We have very limited sidewalks and no walking trails on Hatteras Island.

I agree that the NPS needs to have a viable management plan for OUR park lands. I encourage all involved to take a balanced approach. Thank you in advance for your review of my comments.

Correspondence Type: Web Form
Correspondence: The Coastal Conservation Association North Carolina wishes to comment on the recently released Draft Environmental Impact Statement (DEIS) on the ORV Management plan for Cape Hatteras National Seashore Recreation Area (CHNSRA) issued by the National Park Service (NPS). The objective of CCA is to conserve, promote and enhance the present and future availability of these coastal resources for the benefit and enjoyment of the general public. As such the thousands of members and volunteers of CCA NC and their nearly three quarters of a million associated recreational anglers are very disappointed in the six options for ORV management on CHNSRA. First of all the document itself is very difficult to follow in its 800+ pages. The tragedy is that none of the six options reflect the wishes of the vast majority of the CHNSRA visiting public and CCA NC. While there are preferred environmental and NPS options, there is no pro-access preferred option. The CHNSRA was established specifically for the American public to enjoy the seashore. To propose no option which provides a maximum access option certainly violates the spirit and perhaps the letter of the laws establishing this national park. Without serving the visiting public, the NPS has failed in its responsibility to our citizens. All the options presented in the DEIS seek to restrict public access well beyond any reasonable or legal requirement.

It is clear that significant facts have been ignored in the preparation of this DEIS. The success of turtle nesting and piping plover nesting and fledging is virtually unchanged since the de facto ORV plan was implemented in 1978. The primary causes of failed nesting and fledging are overwhelmingly predation and weather events which have occurred for hundreds of years. ORV caused mortality is a fraction of 1%. The USFWS and NPS personnel have caused more plover mortality. Yet, the NPS chooses to attack those users who are very sensitive to the wildlife in the CHNSRA.

The DEIS options all include restrictions which, when implemented as they have been under the consent decree, will unnecessarily close miles and miles of beach access both from the ocean and sound side. The many options describe no action which can circumvent a nesting closure in order to access an open area of the beach. Thus, while a stretch of waterfront may be "open" it is inaccessible. This represents nothing more than verbal trickery and masks the true available waterfront.

The specifics of option F, the NPS preferred option, require at least some comment as commenting on all options would extend beyond the available space and time constraints. Overall, the DEIS suggests there would be 52 of 68 miles of the waterfront "open" to ORV access but it is not clear that this includes any calculation of sound side access for ORVs or pedestrians. CCA NC strongly believes the "buffer" or closure areas suggested for piping plovers in various stages of nesting and fledging are beyond excessive. For nesting piping plovers 50 meters is more than adequate and as is 200 meters for unfledged chicks. To suggest that unfledged chicks of a bird that is less than 1 foot tall requires over a mile of seashore is ludicrous! All this with no pass through or corridor around these areas closes vast areas of the CHNSRA to the American public. All other shore birds should be allocated no more than 30m for nesting and 30m for unfledged chicks with pass through corridors as there is no legal requirement to provide excessive buffers. In addition, the NPS fails to recognize the role played by the spoil islands behind Bodie Island, Hatteras Island, Pea Island National Wildlife Refuge and Ocracoke Island in the breeding of shore birds. These areas are typically with a few hundred yards of the CHNSRA and harbor large populations of shore birds. If the NPS truly wants to help the population of piping plovers they should investigate the usage of large cages placed around the nests to keep predators out of the nests. These are used in the Northeast where the major piping plover nesting takes place. The NPS and the USFWS seem content to kill hundreds of other wildlife to try to protect piping plovers but refuse to implement simpler techniques improve shore bird breeding success while improving access as well.

Option F describes measures required to "improve turtle breeding success". Many of the restrictions described in option F have little basis in peer reviewed science. For example, there is no evidence that night driving of ORVs has any impact on turtle nesting or hatchling survival. There have been no female turtles killed by ORVs. To protect turtle nests and improve hatchling success, CCA NC recommends relocation of turtle nests when they are laid in areas exposed to weather events. Using the fences used on the Pea Island National Wildlife Refuge that are keyhole shaped are more effective for turtle hatchlings and would allow continued use of ORVs at night.

The surf zone of CHNSRA has been used for a hundred years for the purposes of swimming, sunbathing, fishing, birding and shelling. ORV usage is critical to the pursuit of these activities as much of the surf zone would be inaccessible without ORVs. The NPS, throughout the DEIS, seeks only to restrict ORV usage without proposing ways to improve access for ORVs and providing expanded habitat for those species which are threatened or endangered. It seems the NPS has forgotten the CHNSRA was established as a recreation area. Pea Island National Wildlife Sanctuary is for wildlife, yet under the de facto rules in place from 1978, there has been little difference in the successful breeding of piping plovers or endangered sea turtles. CCA NC urges you to revert to those rules put in place in 1978 to provide maximum access for ORVs and the American citizens.

Respectfully submitted,
Stephen Ammons Executive Director CCA NC

As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.
1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."
2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness...."
Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.
3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.
Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.
***** Thank you very much for taking the time to protect one of America's most beautiful stretches of Atlantic seashore! Sea turtles, nesting shorebirds, and generations to come will be grateful for your action today. Thanks again!

Sincerely,
Rob Fursich

Correspondence: I will not be using the 35,000 characters available for commenting on this issue. However, what I will say is for the past two decades my family has been enjoying fellowship with one another a few weeks out of the year on the outer bank beaches of North Carolina. To that fact, we also are among those that enjoy venturing onto the beaches with our ORVs. Almost everyday we are on the outer banks we find ourselves piling as many of us in a few vehicles with our beach necessities and head out on Beach access 34. We drive out, find a nice place to park the vehicles and spend all day fellowshipping with one another along what we consider the most beautiful shoreline in the world. If the ability to enjoy the outer banks in this way was hampered or taken away, it just will not be the same. We understand that we want to take care of the beaches and all the wildlife and environment encompassed in that but that can be done without taking away what we consider the best parts about what makes this place great. We do our best to care for the area that we venture out on everyday while in the outer banks and are sure to watch out for any type of wild life that may be present at the time. Please allow for open access to the beaches that we love so dear. Thank You!

Correspondence: I cannot imagine not being able to fish from the shore on Ocracoke Island. I cannot go out on boats due to seasickness, thus surf fishing is my joy. The continued unreasonable closures deny me and others from the experiences of fishing and enjoying the beauty of surf. In addition, the commerce, livelihood, and way of life of families are at stake. These are people, not numbers! My comments are brief, but sincere and strong. Keep the beaches open for all people.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I basically agree with the Dare County DEIS Position Statement. I do think that both sides of this issue need to strike a more middle point. For those who want unlimited access- those days are over. Things change, and resources need to be protected; however, the measures proposed to protect those resources appear to me to be just as extreme as those championed by those who want complete and open access. Two questions are brought to mind after I read the Dare County Statement. The first question is (and this addresses the point in the Position Statement about Management buffers), who are the people who are counting/observing the various species? More importantly, how many of these counters/observers are there? There is a lot of territory to cover on Hatteras Island which leads me to believe that there must be some extrapolation as to the (potential) numbers of endangered species. In a situation that has the potential to cripple an economy, where the effects will be felt in Raleigh, I think that there has to be a bipartisan group that thoughtfully and realistically observes and then sets standards to ensure that the rights of both sides of the issue are protected without going to extremes. The second question is (and this addresses the point in the Position Statement about Turtle Management), why treat Hatteras Island differently than other areas of the east coast with larger turtle populations? Finally, Hatteras Island was originally set aside as a recreational area for the American public. I don't think we can lose sight of that. I do think that this island can still be used by the American public while protecting our resources if a rational middle point(s) can be established.

Correspondence: My wife and I have first visited Hatteras Island in 1968 and have been in love with the area ever since. We spent our honeymoon there, and feasted on fish caught at Cape Point in celebration of our marriage. We have been visiting at every opportunity ever since and currently keep a camper there year round. The beach closures have had a serious negative impact on our use and enjoyment of the area. This is an area that we have supported through the taxes we have paid and we feel we are entitled to free access as has been the heritage of the area since the park was established by congress as a RECREATIONAL area.

The closures are irresponsible and will make future enjoyment and use of the area seriously degraded. We had always hoped to eventually share with our grandchildren (and thus future generations) the wonderful place Hatteras Island had always been but if the DEIS is finalized as is, the Islands will never be as accessible or enjoyable as they had been since before the NPS was formed.

I strongly urge the NPS to carefully consider the Coalition for Beach Access Cape Hatteras National Seashore Recreational Area ORV Access Environmental Impact Position Statement. The positions stated in that document and its attachments represent a common sense, reasonable approach to address two of the most significant responsibilities the National Park Service must fulfill within the ORV Management Plan.

These responsibilities are: 1) The protection of resources without impairment to or from the visiting public and 2) the protection of Traditional, Cultural, Recreational and Commercial values for the visiting public with limited disruption.

The goals written by Congress in the enabling legislation that created the Recreational Area recognized these responsibilities. The Coalition is confident ORV access to the beaches has not historically adversely affected the Recreational Area environment. The Coalition is equally confident that, in the future, the ORV management plan guidelines it endorses will not negatively impact the environmental qualities that were responsible for the creation of the Cape Hatteras National Seashore Recreational Area and its continued popularity.

Thanks, Jack Lewis

Correspondence:

The Coastal Conservation Association North Carolina wishes to comment on the recently released Draft Environmental Impact Statement on the ORV Management plan for Cape Hatteras National Seashore Recreation Area issued by the National Park Service. The objective of CCA is to conserve, promote and enhance the present and future availability of these coastal resources for the benefit and enjoyment of the general public. As such the thousands of members and volunteers of CCA NC and their nearly three quarters of a million associated recreational anglers are very disappointed in the six options for ORV management on CHNSRA. First of all the document itself is very difficult to follow in its 800+ pages. The tragedy is that none of the six options reflect the wishes of the vast majority of the CHNSRA visiting public and CCA NC. While there are preferred environmental and NPS options, there is no pro-access preferred option. The CHNSRA was established specifically for the American public to enjoy the seashore. To propose no option which provides a maximum access option certainly violates the spirit and perhaps the letter of the laws establishing this national park. Without serving the visiting public, The NPS has failed in its responsibility to our citizens. All the options presented in the DEIS seek to restrict public access well beyond any reasonable or legal requirement.

It is clear that significant facts have been ignored in the preparation of this DEIS. The success of turtle nesting and piping plover nesting and fledging is virtually unchanged since the de facto ORV plan was implemented in 1978. The primary causes of failed nesting and fledging are overwhelmingly predation and weather events which have occurred for hundreds of years. ORV caused mortality is a fraction of 1%. The USFWS and NPS personnel have caused more plover mortality. Yet, the NPS chooses to attack those users who are very sensitive to the wildlife in the CHNSRA.

The DEIS options all include restrictions which, when implemented as they have been under the consent decree, will unnecessarily close miles and miles of beach access both from the ocean and sound side. The many options describe no action which can circumvent a nesting closure in order to access an open area of the beach. Thus, while a stretch of waterfront may be "open" it is inaccessible. This represents nothing more than verbal trickery and masks the true available waterfront.

The specifics of option F, the NPS preferred option, require at least some comment as commenting on all options would extend beyond the available space and time constraints. Overall, the DEIS suggests there would be 52 of 68 miles of the waterfront "open" to ORV access but it is not clear that this includes any calculation of sound side access for ORVs or pedestrians. CCA NC strongly believes the "buffer" or closure areas suggested for piping plovers in various stages of nesting and fledging are beyond excessive. For nesting piping plovers 50 meters is more than adequate and as is 200 meters for unfledged chicks. To suggest that unfledged chicks of a bird that is less than 1 foot tall requires over a mile of seashore is ludicrous! All this with no pass through or corridor around these areas closes vast areas of the CHNSRA to the American public. All other shore birds should be allocated no more than 30m for nesting and 30m for unfledged chicks with pass through corridors as there is no legal requirement to provide excessive buffers. In addition, the NPS fails to recognize the role played by the spoil islands behind Bodie Island, Hatteras Island, Pea Island National Wildlife Refuge and Ocracoke Island in the breeding of shore birds. These areas are typically with a few hundred yards of the CHNSRA and harbor large populations of shore birds. If the NPS truly wants to help the population of piping plovers they should investigate the usage of large cages placed around the nests to keep predators out of the nests. These are used in the Northeast where the major piping plover nesting takes place. The NPS and the USFWS seem content to kill hundreds of other wildlife to try to protect piping plovers but refuse to implement simpler techniques improve shore bird breeding success while improving access as well.

Option F describes measures required to "improve turtle breeding success". Many of the restrictions described in option F have little basis in peer reviewed science. For example, there is no evidence that night driving of ORVs has any impact on turtle nesting or hatchling survival. There have been no female turtles killed by ORVs. To protect turtle nests and improve hatchling success, CCA NC recommends relocation of turtle nests when they are laid in areas exposed to weather events. Using the fences used on the Pea Island National Wildlife Refuge that are keyhole shaped are more effective for turtle hatchlings and would allow continued use of ORVs at night.

The surf zone of CHNSRA has been used for a hundred years for the purposes of swimming, sunbathing, fishing, birding and shelling. ORV usage is critical to the pursuit of these activities as much of the surf zone would be inaccessible without ORVs. The NPS, throughout the DEIS, seeks only to restrict ORV usage without proposing ways to improve access for ORVs and providing expanded habitat for those species which are threatened or endangered. It seems the NPS has forgotten the CHNSRA was established as a recreation area. Pea Island National Wildlife Sanctuary is for wildlife, yet under the de facto rules in place from 1978, there has been little difference in the successful breeding of piping plovers or endangered sea turtles. CCA NC urges you to revert to those rules put in place in 1978 to provide maximum access for ORVs and the American citizens.

I am the Vice president of the Durant Station Condominium Association, a 33-unit condominium project located on nearly 2 acres of ocean-front land in Hatteras Village, NC. Our Association consists of families who own these properties for personal recreational use, as well as to generate rental income. After rebuilding the project in its entirety following total destruction by Hurricane Isabel in 2003, we currently have sizable financial and emotional investments in this area of the Outer Banks. We are obviously directly affected by any form of restriction on the use of recreational assets of the area, with the National Seashore Beaches being the primary attraction! The beaches, along with their recreational opportunities, are the primary reason people visit the Outer Banks! Although we value birds and animals and enjoy viewing them, we believe that society's desire to protect and preserve selected species of birds and other wildlife must be "balanced" against legitimate human access to the unique recreational opportunities offered by National Seashore Beaches on the Outer Banks. We therefore disagree with any beach management approach, which would prevent human access to and recreational use of these beaches!! We believe that there are always creative ways available to manage human activities while protecting threatened and endangered species.

We strongly disagree with the "NPS Preferred Alternative F" because we consider it to be unnecessarily restrictive of human recreational access. It does not demonstrate why such a severe level of restricted access is needed or desirable. There is no proven scientific basis that any shorebird requires a 1,000 meter or larger buffer zone to prevent harm from human presence. Any buffer requirement should start as small as practicable, such as 10-20 meters. A buffer size should only be increased with the support of valid video-documented evidence that the existing buffer size is insufficient to prevent physical harm to the species. "Harm" should not include occasional "defensive posturing" or other normal and routine actions, including flight. Pedestrian foot traffic such as anglers, surfers, beachcombers, runners, etc., which are commonly seen on beaches, should always be allowed to occur on beaches. Any proposed buffer zones for pedestrians should be substantially smaller than corresponding buffer zones that pertain to vehicles. No

protection scheme should include a ban on foot traffic/pedestrian use! There is no evidence that shorebirds or other species are harmed in any way by pedestrians when given a small buffer zone to protect nesting activity. Logic would indicate that a bird would typically not choose to nest in an area or amidst any level of activity, which it found to be uncomfortable or disruptive to its reproductive routine. Vehicular access should also be preserved to the unique geography at the point and inlets to insure all visitors have an opportunity to appreciate and enjoy their beauty and uniqueness.

We agree with and support the positions established by the Coalition for Beach Access (see <http://www.obpa-nc.org/position/statement.pdf> and <http://www.obpa-nc.org/position/assessment.pdf>).

We agree with and support the positions established by Dare County, NC (see <http://www.hatterasislandtimes.com/PDFs/DCDEIS.pdf>).

We are looking to the NPS to establish and preserve a reasonable balance between the needs of wild life to reproduce and propagate their species and the rights of the public to access and enjoy its National Treasures, e.g., the Outer Banks National Seashore Beaches. The majority of residents and visitors do not seek out the relatively remote southern Hatteras Island areas simply to observe birds or turtles, although many of us enjoy both. Rather, the inherent enjoyment offered by accessing the beach in a variety of ways, including fishing, comprise arguably the primary attraction.

It can be all too easy to lose track of the "big picture" when working through highly complex and contentious resource allocation issues. Please do not lose sight of the fact that the humans, e.g., U.S. Citizens, are entitled to receive priority consideration in the non-destructive use and enjoyment of the Outer Banks' unique recreational resources.

The protocols put into place by the NPS to manage Outer Banks beaches should be an example of smart co-existence and balanced management practices, not extremist bans and excessive management practices driven by fear of punitive law suits. The current process appears to be driven, in part, by "single-issue groups", who would seek to restrict the rights and recreational opportunities of the majority solely to further their well intended, yet extreme and unnecessarily restrictive views of appropriate conservation measures.

Thank you for the opportunity to comment. Please weigh our views carefully in finalizing any regulatory regimes, which would restrict our access to land, which we as U.S. Citizens own in common.

Andrew Martof Vice President Durant Station Condominium Association, Inc

Correspondence: Dear Superintendent Murray, As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. I fully support the stance of the National Parks Conservation Association on this matter as described below. *** TODAY, when natural habitats are so scarce and vulnerable, we must err on the side of preservation over use.***
 "All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.
 1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations." 2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness...." Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources. 3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals."
 Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

 2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness...." Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.
 3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.
 Ecosystems are extremely delicate and with the Gulf Oil Spill's unknown effect on wildlife it should be obvious we need to protect our pristine and precious habitats for generations to enjoy. ORV have no place in our primitive wilderness or parks. ORV are offensive not only to human enjoyment of

nature they are offensive to the delicate ecosystems they destroy.

Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

Correspondence:	I am a resident of Charlottesville, VA and also own a home in Ocracoke, NC. My family and I enjoy the recreational opportunities offered by the Cape Hatteras National Seashore and Recreational Area. There should be reasonable and safe pedestrian and vehicular access to the beach but not as restricted as the NPS's preferred alternative F. I don't believe this alternative has adequately addressed the economic impact on the area. Neither does it use very good science when protecting birds that are not on the endangered species list. I have read and agree with the proposal to manage ORV's on the Seashore prepared and submitted for consideration by the Coalition for Beach Access. My position is that the NPS accept this alternative or at least review and negotiate on the counter points raised by the Coalition for Beach Access.

Correspondence:	Please think carefully about what you are doing. If you allow ATV's access to this beautiful eco-important area it will ruin it for the wildlife that survive there. Atv's destroy the land and plants they cross. Their noise pollution harms nature lovers enjoyment of the natural sounds of the area. The air pollution from the ATV engines is a harm to the environment. Please keep this great natural area free from ATV harmful effects .

Correspondence:	I am not in favor and oppose all of the alternatives A-F for the ORV management plan for the Cape Hatteras National Seashore Recreational Area on the DEIS. None of these alternatives truly balance the need for balancing the recreational use and the wildlife for CHNSRA. I fully support and agree with the alternative as presented by the Coalition for Beach Access. Coalition for Beach Access DEIS Assessment dated 4/13/2010. One specific area that I do not agree on in alternative F that is favor by NPS is the buffers used. The buffers used are excessive and not based on any peer reviewed science not are they based on any already successful and much less restive methods used by other NPS management at locations where the Piping Plover is much more prevalent. I strongly disagree with shorebirds that are included in Alt F that are not listed under the Endangered Species Act. NPS has not justification for including these species and in fact is not even supported by North Carolina Wildlife Resources Commission. A second area that I do not agree with in alternative F is the night time restrictions and overall management of Turtles on CHNSRA. I do support Sea Turtle Management ? A Common Sense Approach for the Cape Hatteras Seashore Recreational Area Authors: Larry Hardham Bob Davis May 05, 2010. This document represents exactly how turtles should be managed on CHNSRA. One specific example is that Alt F support night time closures of Beaches for extended periods of time. There is no peer reviewed science that supports this restriction including no proven benefits. Moving nests from areas where over washes destroy turtles nest every year will far out weigh current management practices and results. Lastly, I do not agree with NPS practices to trap and kill thousand of other native animals to protect any species on CHNSRA.

Correspondence:	I am a lifelong resident of Hatteras Island (Hatteras Village) and during my 46 years I have witnessed many changes, but the change that is in the wind now is one of grave concern. How can a few lawyers dictate what the vast majority of the people can do in a national seashore recreational area that was created under the premiss that all would always have access to? I have had the luxury of being raised in this wonderful and diverse place but it worries me that the closurer of our beach access will not allow me to afford my 10 year old daughter the same advantages of growing up here. We have taught her that the wildlife is just doing what is natural and the mentality that these creatures do not belong here is wrong. We have coexisted for generation after generation, and I believe have gotten along just fine. A small bird that is not native to this area does not need the equivalent of a small city block to roam. I remember as a child that there were a lot of pheasant on the island and the next thing you know they are all gone. Surely the lawyers won't try to pin this on ORV or pedestrian access. No, it was the NPS that got rid of a non native species. It seems stange to me that this handful of people can use the failure of implementing an orv management plan to close cripple the economy of an entire area. I firmly believe if Hatteras inlet was not closed on 05/01/2010 that a life might possibly have been spared as someone would have seen the accident and been able to report it much sooner than it was discovered. In closing, I would ask you to do the right thing and allow what was promised to my ancestors when this park was opened. Thank you Charlie H. Barnett

Correspondence:	I have been to Cape Hatteras and was appalled to see the damage done to beaches by ORV's. The callous disregard for shorebird nesting and sea turtles habitat cannot go on. The species dependent upon our coastal areas deserve our top priority, not the visitors who seek to abuse the resource for their own selfish reasons. Improve education on why protecting habitat is so critical for survival of these species; improve pedestrian access so that people have more opportunities to observe and witness the shore without the disturbance of motorized vehicles. Curtail access to ORV's to a smaller segment of the area and eliminate access in all areas where birds and turtles are nesting. Science and law, not political pressure should guide the NPS in making decisions about these essential resources. Pea Island is not enough habitat!

Correspondence: Dear Superintendent Murray,

As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.

1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."

2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness...."

Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.

3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.

Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.

This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.

The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.

* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.

* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.

My wife and I have been a property owners in Salvo since the early 70's. I am also an avid bird watcher and very interested in the welfare and conservation of all wildlife.

I feel compromise and good judgment are the keys to providing both protection of wildlife and recreational opportunities for visitors and natives. There should be no reason why both the wildlife and visitors can coexist, provided that are critical times, wildlife is not disturbed or threatened.

I personally do not see the need for ORVs to have free reign to joy ride anywhere on the beach. Again, we need compromise.

Regards, -Joe and Sally Byrnes

Of the alternative plans presented in the draft environmental impact statement, I support Alternative D if modified to provide greater pedestrian access, which was identified in the DEIS as the environmentally preferred alternative. This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, both of which are important to me.
Limiting the use of Off Road Vehicles on the beach would enhance the ability of pedestrians and swimmers and sunbathers to enjoy these beaches. Many is the time I have come out of the water to find my beach blanket with all my clothes had been run over by some truck. If you limit the use of off road vehicles say for example to the immediate area of a beach access ramp rather than permitting them to drive up and down the beach, the fisherman would still be able to get their gear to the water's edge without causing issues to other beachgoers and wildlife.
The following principals should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
Provide Equal Access for All Visitors: Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife, and off road vehicle should be confined to the area in the immediate vicinity of the beach access ramps. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore and wildlife could have a chance to rebound to its traditional

numbers and diversity within the park.

Put Natural Resources First: Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. The following principals should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
Provide Equal Access for All Visitors: Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.

Put Natural Resources First: Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.

Establish and Meet Clear Goals for Wildlife Recovery: A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Correspondence: I appreciate the opportunity to comment on National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support Alternative D if modified to provide greater pedestrian access, which was identified in the DEIS as the environmentally preferred alternative. This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.

Correspondence: Dear Superintendent Murray, as an avid National Park visitor, I am alarmed by your plan to allow ORV use in Cape Hatteras National Seashore. ORV use is not consistent with the mission of the park, it will destroy natural resources, and it will make the park not very enjoyable for any other kind of user. Please reconsider this devastating proposal. Sincerely, Barbara Diederichs.

Correspondence: Dear Superintendent Murray,
As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.
1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."
2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness..."
Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.
3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.
Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

Correspondence: Dear Superintendent Murray,
I urge you to place the interests of the animal and plant life of Cape Hatteras National Seashore over those of human use, and place low-impact human access and use (such as access by foot) over that of high-impact human activity such as off road vehicle use. Frankly, I would prefer that all recreation motorized vehicle access be ended.
As a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. Correspondence:	First, I want to state that I adamantly oppose the severe ORV restrictions to out Outer banks. My grandfather shared it with my father, my father shared it with me, and I'm now sharing it with my children. I spend at least 4 weeks a year out there, fishing up and down the beach, and always participate in cleaning up the refuse that washes ashore. I'm a bird lover in addition to a fisherman, and respect their areas, but feel the bird scenario has gotten out of control and led to the conversion of what's intended to be a recreational area, into an over controlled government nuisance. Last week, I received a letter from DOW, asking me to write you and complain about ORV's and that they endanger turtles and birds. They claimed they were using a "science based" study. This request went to people across America, most whom have never been to the Outer Banks. I'm sure some will take the time to do it. But in reality, there's NO scientific study that supports their claims, and there's no bona fide economic impact study either. I just returned from the OBX, along with 18 of my friends, where we cut our trip short because of the very limited access to surf fishing. This is the same group of guys that have been fishing together since 1973 and converge from Michigan, Connecticut, Maryland, South Carolina, New Jersey, and of course North Carolina. i can tell you that we are disgusted with the actions of the NPS, and the attempts by Audubon, DOW, and SELC to take away our rights to enjoy our lands, in the name of fake science.

Correspondence:	What is wrong with people in this country? We have witnessed the destruction of so much of our precious land and animals. Why would we even consider allowing off road vehicles on one of our national seashores? When will we say enough is enough and stop allowing the abuse to our nation's treasures? We have a responsibility to protect not only our seashores, but all the animals that this will affect. Please vote against this and keep the Cape Hatteras National Seashore protected from off-road vehicles.

Correspondence:	In establishing a final plan for Cape Hatteras, the Park Service must follow law and science in guaranteeing adequate space and protections for wildlife. The Park Service can do so while still allowing responsible beach driving in some areas so that all visitors can fully enjoy this national treasure. The final rules should improve public access to the beaches for pedestrians and people with disabilities by adding boardwalks, parking spaces, and public facilities to enhance visitor enjoyment in balance with wildlife conservation efforts.

Correspondence:	I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access. I ask that any plan that is approved will do the following: Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. Many users like myself do not use the beach when ORVs are present. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park. Additionally, it should be noted that people like me stay away due to the ORV use - so any claim that non-motorized use "harms" the economics of the area is simply irrational. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Any other alternative does not address the significant findings that ORV use harms wildlife, and that the wildlife has been doing much better with more restrictions in place. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles. Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. Correspondence: I think we need to wake up and start to take notice of what we are doing to our home with motor vehicles. Motor vehicles do not belong on the beach any more than raw sewage and trash. It is a place where birds feed, breed and turtles lay their eggs. the ocean is an important source of our food and should be kept clean and healthy. One way to help do that is to keep the shores healthy for wildlife. The beach is a place people can go for serenity, exercise and renewal without excessively degrading the habitat. Vehicles do not belong on the Cape Hatteras National Seashore.
Thank you for the opportunity to comment.
Sincerely,
Jenny Wilder

Correspondence: Many of our irreplaceable natural areas in North America are being threatened by irresponsible O.R.V. use. I urge you to put the needs of vulnerable wildlife species first in the planning and management of the splendid Cape Hatteras N.S., and the needs of the full spectrum of human visitors second. Unfortunately, irresponsible O.R.V. users create annoyance for other visitors and may even at times jeopardise their safety as they walk about the site. It

is time to prohibit O.R.V. use altogether, or at the very least to restrict it to areas where it does not threaten wildlife, degrade their habitat, and greatly detract from the enjoyment of many other classes of human visitors.

Correspondence: Superintendent Murray,
as a former Park Service employee, I am concerned about the possibility of the peace and tranquility of Cape Hatteras Nat.Seashore being destroyed by a potential onslaught of off-road vehicle usage.
When Congress opened this great area, it was with the understanding that PRIMARY emphasis would be towards at least most of the National Seashore being preserved as a PERMANENT, primitive wilderness area. I just don't see HOW off-road vehicles can NOT have a severely damaging affect on not only the wildlife, but also on the persons who go to Cape Hatteras for a renewed feeling of peace of mind and TOTAL tranquility. Off-Road users have tremendous access to thousands of square miles of National Forest and B.L.M. land, without invading even more of the National Park land than what they already have.
Thanks and Sincerely,
Steve Chelewski

Correspondence: Dear National Park Service,
It is important to keep National Treasures like the Cape as they are for future generations to see as those before us have viewed them and as we have had the privilege to enjoy them. Keep development under control: let it happen elsewhere rather than spoil the Cape and our heritage for all time by development.

Correspondence: I strongly disagree with the DEIS plan as it does not adequately take into account the cultural component of resource management that ORV access beaches has been a significant constant multi-generational use.
The NPS plan fails to appropriately address the traditional cultural value of surf zone access. The NPS failure stands in direct violation of its legal responsibility under Section 106 of the NEPA and the NEPA framework as a whole.
In over 40 years of visiting the cape, my father taught me to fish at the Cape Point and I have taught my own children there as well. Our extended families and the vast majority of visitors respect and adore the natural habitat and wildlife present on the Cape. My own family and I have personally spent many hours lifting turtles over 2 foot iron dredging pipes in the 1970's to allow them to reach the ocean. The proposed plan does not include sufficient "proactive management" of these resources, said interventions which would provide a more effective alternative to achieve the goals of preservation then the extreme sequestering of these habitats.
The extraordinarily large and arbitrary buffer zones which are not based on scientifically validated criteria, and the lack of consideration of sound alternatives ensure the only outcome of the management is extreme restrictions and de facto closure to ORV access.
Alternatives used successfully elsewhere, such as ORV corridors combined with proactive management measures will produce better preservation results without devastating the local shore economies and will allow the continued historically and culturally significant use; essential to maintaining the cultural fabric and historical identity of the southern Cape's shore communities.
Again, The NPS plan therefore does appropriately consider the traditional cultural value of these resources. The NPS failure stands in direct violation of its legal responsibility under Section 106 of the NEPA and the NEPA framework as a whole.

Correspondence: I strongly disagree with Alternative F of the DEIS. I believe in the protection for shorebirds and sea turtles but the buffers for the birds in alternative F are too extensive and should be scaled back to a more reasonable level and access corridors should be allowed in all cases so that the public can access the open beach areas down the beach line.
I agree with the Dare County Board of Commissioners position on the DEIS

Correspondence: Dear Superintendent Murray,
As a supporter of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.
1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."
Regards,
Michael Bartell
2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of

the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness...."

Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.

3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.

Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
I would love for my children to be able to see them some day!
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Finally, motor vehicles do not belong on any beach, particularly not a federally protected beach.

Correspondence: As a concerned citizen and user of NPS lands, I object to the use of ORVs on the beaches of Cape Hatteras. My family and I come to NPS areas to escape the noise and pressures of everyday life. ORVs have no place in the NPS system. They cause noise and air pollution and will disturb, and damage, sensitive coastal systems and wildlife. Please turn away this threat to our parks.

Correspondence:	<p>I am commenting on the DEIS plan, specifically Option F. I feel the 1,000 meter setback around plover nests is unnecessarily harsh and based on no known scientific fact. In addition, the 200 meter setback for birds not on any endangered list is arbitrary and unnecessary. Further, closing the southern end of Hatteras Island and the northern end of Ocracoke where there are no plover nests, is baffling at best. I and my family and dogs have enjoyed Hatteras Island for 40 years. We love the fact that much of it is undeveloped and that nature abounds. Unfortunately the efforts of some well meaning people to "protect" a certain species of bird have overreached that which is needed to protect the birds and will have a huge impact on our ability to continue to enjoy this recreation area. Thank you for you time. Susan Russell</p>

Correspondence:	<p>To Whom It May Concern:</p> <p>I am writing to voice my opinion as to which alternative management plan should be used for the Cape Hatteras National Seashore Off-Road Vehicle Management Plan. As an undergraduate at the University of Missouri studying environmental science, protecting the vital and unique characteristics of the environment are of utmost importance to me. However, I am not insensitive to recreational uses of the environment, such as off-road vehicles, and the potential economic benefits that these uses could bring to the area. For both of these reasons, seasonal management of the off-road vehicles (ORV), or alternative C, seems to be the best middle ground that could be reached.</p> <p>Seasonal management of ORV usage would allow for protected wildlife and habitat to have an additional safeguard against interference from visitors during the critical times of the breeding and hatchling/fledgling stages. These stages are critical for the continuation and development of these species, and as such should be a priority in the management plan of these areas. With these species being protected, Cape Hatteras is more diverse in its wildlife and plant life. This makes the habitat more stable and thus more likely to be withstand environmental changes that may affect the area. These species also offer unique opportunities for visitors to engage, and continue to engage, with endangered species that may not be encountered in many other public locations.</p> <p>The seasonal management plan's careful consideration of wetlands offers the least impact out of all the alternatives. For the local wetlands, impacts are kept to a negligible level in both the short and long-term outlook. This is a huge advantage for the area, since wetlands are known to be one of the habitats with the highest biodiversity, along with rain forests and coral reefs. This high biodiversity will stabilize the environment and offer many wildlife-based sight-seeing opportunities to visitors. Wetlands will also help prevent shoreline erosion, a large problem in areas that have been drained or altered from their natural wetland state. A small note: although signage is not guaranteed to prevent people from impacting an area by driving off the specified ORV routes, it is far superior to no public statement acting as a deterrent.</p> <p>Floodplains are also a vital water resource that should be well-considered in a management plan. In the seasonal management plan, floodplains would have a minor impact in the long-term due to construction of parking lots. This is advantageous since of all developments to be made, parking lots will not be severely affected by flood waters. It is suggested, however, that no other developments such as buildings be made in this area. Also, using materials that reduce water runoff will minimize the impact of having paved surfaces in this area.</p> <p>The seasonal management alternative also allows for predictability for ORV users. It is important for visitors to have some predictability so that their</p>						

trip can be planned accordingly. By offering some ORV trails that are open year round, there are always opportunities to go off-roading. However, with seasonally open trails, it gives visitors the chance to experience new sites. This will entice visitors to continue to come back, offering both economic incentives and protection for the wildlife.

Also, with the seasonal management plan offering more restraints than the current plan, less of the area is likely to be impacted by ORVs. With less impact made from people and ORVs, the habitat and wildlife is more likely to thrive and remain healthy. This would allow for people for generations to continue to visit a unique and intricate environment without degrading the land.

Overall, out of all the alternatives for a management plan for the Cape Hatteras National Seashore Off-Road Vehicle Plan, seasonal management combines the best of environmental protection and recreational use of the area. It is for that reason that I urge you to consider this plan over others, as it offers the most overall benefits.

Thank you for your time.

Sincerely,
Caroline Tanner

Correspondence: Dear Superintendent Murray,
As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. I have long had a respect for Cape Hatteras' wild beaches and my parents spent their honeymoon there in the 1950s precisely because of this wildness. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.
1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations." As a frequent visitor to New Jersey beaches, including Island Beach State Park, I have seen the impact of ORVs on our few remaining wild beaches.
2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness..."
Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.
3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.
Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

Correspondence: As a resident of North Carolina and a visitor to the Outer Banks from my home in the mountains it is important to me to protect our resources as well as the rights of North Carolinians local to the area as I hope all would respect my rights in Western North Carolina. After reading the Environmental Impact Statement I would support Alternative D: Increased Predictability and Simplified Management. Off road vehicle use has long lasting effects on environmental quality for plants and animals which outweighs the reduced ability to utilize the beaches and dunes as one wishes.

Correspondence: I welcome the opportunity to comment on the National Park Service's (NPS) Off Road Vehicle (ORV) management plan for Cape Hatteras National Seashore.
When I think about Cape Hatteras National Seashore: I think of waves, shorebirds, solitude and sea turtles. Overall, a natural experience at a protected seashore.
As someone who frequents many NPS locations across the United States, I feel the plan as currently proposed will disproportionately dedicate beach use to year-round ORV traffic at the expense of wildlife and pedestrian visitors.
I own and use an ORV. However, I have seen firsthand the abuses that unlimited ORV use can bring to deserts, seashores, forests and other places best left in a natural state.
Therefore, I strongly feel that this plan should be rejected and a new ORV management plan that places greater emphasis on pedestrian access and wildlife management, especially with regard to endangered sea turtles and shorebirds.
I also think many Americans are missing an opportunity to experience some solitude in their daily lives. They discover this often in our National Parks.
Therefore, please help maintain a reasonable balance for all users of Cape Hatteras National Seashore.
Please keep my involved in this decision making process.
Thank you and best regards,
Paul Luehrmann

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.

Put Natural Resources First: Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.

Establish and Meet Clear Goals for Wildlife Recovery: A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Sea Turtles and shore birds are taking enough of a beating from the horrific oil spill in the Gulf Coast. Lets give them all the help we can by making North Carolina's shores more friendly and safe for them and the people who love them.

Correspondence: I appreciate the opportunity to comment on National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support Alternative D if modified to provide greater pedestrian access, which was identified in the DEIS as the environmentally preferred alternative. This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.

The following principals should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

Provide Equal Access for All Visitors: Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.

Put Natural Resources First: Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. As a beachgoer, I've seen what happens when reckless and/or distracted drivers speed and make the pedestrian/wildlife experience not very fun. There are areas where folks can use their vehicles but the beach should be peaceful, quiet, and most of all, an undisturbed home for the wildlife that call it home. Allowing these vehicles this access is very short-sighted. If we make the place inhospitable, the reason people come to visit will die or leave, and then everyone loses.

Correspondence: I DISAGREE with what the environmentalist groups that are trying to shut down are beaches. the amount of land that they are trying to shut down for one nest is ridiculous. 771 acres for one nest is way to much. If this bill gets passed then the people on Hatteras Island will have to leave, there will be no more jobs to support the locals. this island lives off the tourist that come down to vist one of the best beaches on the east coast, and if the beach gets shut down, then tourist wont come down witch will end every thing on the island. SO ITS SIMPLE THE PEOPLE OR THE BIRDS!

Correspondence: I disagree with this bill that is trying to be passed throughout the National Park Service. The biggest factor that I disagree with is the area that they are trying to inclose. They are trying to take 771 acres from the NATIONAL PARK, passed by the Nixon Presidency, saying that in some areas of the states, there should be National Parks, for all people to visit and enjoy. During his presidency, Nixon tried to stress the factor of people having a place to enjoy. With the plan that the Government is trying to pass, it will not only endanger the people who live on Hatteras Island, but the tourist that make this Island what it was made out to be. The tourist industrilized factor of the Island is the main factor throught the life here. Without business here, everything here would go to ruin. Not only would the business be ruined, but also the environment. The economy here and the people who live here would suffer because the Beach is their home. Horses, dogs, and any other animal that needs exercise could not recive as much as they needed if the Beaches were closed. Due to having a horse on this Island, it would ruin my training abilities with my young horse. The birds also have places to live, other than just the Beach. They live not only on the beach but on Bird Island in the sound side, but of course they are not counted! This is the wrong bill to pass here! It will destroy many places here and make a harder living for the Original ISLANDERS here!

Mike Murray, Superintendent Cape Hatteras National Seashore 1401 National Park Drive Manteo, NC 27952
Dear Mr. Murray:
My sister resides on Hatteras Island. Over the years, my children and myself have visited the Cape Hatteras National Seashore many times. I love the beauty of the island, and have enjoyed the experience of participating in many beach activities. I have many wonderful memories of watching my children learn to windsurf, kiteboard, and paddleboard at the beach. We enjoyed several evening bonfires after a day collecting seashells and playing at the shoreline. These experiences truely enriched our lives. I do not know of any other place where a family can have the opportunity to enjoy these activities together.
I feel that the Cape Hatteras National Seashore Recreational Area should be protected, but am now aware that with the NPS DEIS access to the beaches will be greatly decreased, and completely limited in some areas; therefore I am in disagreement with large inflexible buffers p.121-127.
I hope that the Recreational use of this Park is not destroyed.
Sincerely,
Nancy K. Hardison 5116 Blackwater Road Virginia Beach, VA 23457

Correspondence: I've been going down to Cape Hatteras for over 35 years & have specifically enjoyed being able to go out on the beach at the Salvo ramps. I live on the Cheasapeake Bay in Va. Beach and unfortunately our beach is littered with tons of cigarette butts, plastic bottles, & dog poop whereas the Salvo beaches have always seemed litter free. I think a lot of the ORV users are very cognizant of the importance of a clean beach and are also very respectful of the wildlife that calls those beaches their home! On a sadder note some of the nicest people I've met are the locals who depend on the fishermen & surfers dollars to make a living. In the last few years many of the folks are no longer there because of declining numbers by people such as myself who really only visit so we can cast a line or catch a wave or two while having the convenience of having our vehicle only a few steps away!! After reviewing the plans I cast a vote for Plan C! Thank you for your consideration in this matter! Sincerely, Phil Curtin

Correspondence: Dear Superintendent Murray,
As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.
1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."
2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness..." Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.
3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.
Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

Correspondence: It seems to me that the Alternative F is a far too extreme measure. It results in some permanent closures to ORV use in prime fishing areas as well as other public use. Use by everyone should have their designated time and place allowing those who want to visit areas with no ORV use the opportunity to do so during specified times of year, and those who enjoy ORV use should likewise have full access during certain times of the year. Personally, I think the way the NPS has been handling resource closures and access by ORV users is working fine, so I see no reason to change it.
Until sound science is available to support further changes, the existing program should continue, or be adopted in a regulatory format. Also, I actively support the use of nest relocation for sea turtles as it seems to be the most viable means of effecting resource recovery. They do it in SC and FL all the time and have excellent results. The OBX seashore destruction due to storms is probably the biggest reason for turtle nest damages and loss, not ORV use.
Whatever is adopted, some common sense approaches need to be applied. Obviously, the most popular surf fishing periods are Late September thru December, so ORV traffic has to be available for that period with as limited resource closures as possible. The summer time has lots of beach goers, so ORV use should be more limited during those times due to the sheer numbers of folks that are there. People are not opposed to temporary closures at any time as long as there are some areas available for ORV use. You have to have some ORV use areas and simply work the resource closures around them. It shouldn't be that hard to figure out and the NPS has been doing a pretty good job so far. But these new measures are too extreme and need to be modified some more to better accommodate the ORV users.

Correspondence: I fully respect the fact that the preservation of wildlife is very important. Although, I also believe that allowing unconditional access to these beaches is far more important for our local economy and customs. Is there not a way to find some kind of balance rather than just blocking off access altogether? The absurdly large size of the current/proposed buffers seems irrational and also seems like a lazy way out of finding a solution that would truly work to make all parties content. I personally would like to carry on the uniqueness of beach access to my children and their children to come as well. Please take the time to re-consider the people and the beaches we so love.

Correspondence: - I don't agree with any portion of the DEIS. - Specifically: - Camp Lejeune N.C. has 9 endangered species on the base. One of these is the red cockaded woodpecker. When this bird nests it gets a 200 ft buffer zone. Please explain why a piping plover (not endangered) gets a thousand meters! Unless I'm mistaken the Marine Corps and NPS fall under the same federal guidelines. (pg 121-127) - Please explain why Hatteras Inlet is to be closed year around when historically there is little to no bird activity there. If it had not been closed there is a very good chance that the boat that flipped in the inlet last week would have been spotted and a human life would have been saved. - You do not adequately consider alternate areas for birds such as dredge and spoil islands. These would have much less impact on recreational activities. Please explain your thought process on this. (pg 124) - Why does NPS not adopt more proactive measures used at other east coast locations to encourage turtle nesting? Again, at Camp Lejeune, a turtle nest gets a

3' by 3' closure. Why are closures on Hatteras so extremely extensive? (pg 392-396) - I strongly urge you to look at Camp Lejeune's endangered species management plan. If their closures were as extensive as yours, the Marines would have precious little or no where to train. (pg 121-127) -Why not clear vegetation off the point and at the inlets to provide plenty of room for procreation as well as recreation? I will gladly volunteer my time to assist in this. - Why is the hook closed? Is it so people can't hear your trapper/shooter in there killing selected species? Who mandated you the right to play God with animals on Hatteras Island? - I strongly disagree with the prohibition of pets on the park at any time. If you enforce the restrictions you already have in place (6 ft leash) there won't be a problem. (pg 136) - Nowhere have you clearly addressed that the OVERWHELMING ECONOMIC IMPACT will be felt by the full time residents and businesses in the seashore villages within the region of influence. Why not?

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence:	National parks, including beaches, must be kept safe for wildlife. Humans seem to think that no species is as important as their few moments of fun or pleasure. This is a bad idea for everyone. Vehicles have no place on a beach, where people walk, rest, look for peace and serenity. Passing this would be a lose/ lose proposition.

Correspondence:	<p>Dear Superintendent Murray,</p> <p>First, I have visited the area several times since my sister and her husband live so close. I go to the parks for peace and quiet (tranquility) away from the city noise, cement and stress; I also enjoy the wildlife and birds, and they don't make much noise and are beautiful. To me, the beaches will be more damaged and a place that is not enjoyable. Let us (we the public) have a few places that are stress free and undamaged, except by mother nature. KEEP OUR PARKS BEAUTIFUL AND QUIET!</p> <p>As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.</p> <ol style="list-style-type: none"> 1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations." 2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason. "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness..." Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources. 3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals. <p>Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.</p>

Correspondence: Please. There are so few naturally beautiful places left for the animals to be safe and for people to find tranquility. If you allow these Noisy, smelly, dangerous vehicles on the beach and in the park, you have destroyed yet another haven that we have.
These vehicles will also cause pollution. Leaking oil and anti-freeze, they will poison the ground. Their huge unforgiving tires will rip the earth up and smash fragile eco-systems. The noise will drive the visitors away. Is this what you really want? Don't you see the world is beginning to perish? Please save this little slice of heaven from destruction. Thank you for your consideration.

Please accept this letter as my comment5 on the ORV DEIS before you at this time.
After reviewing the NPS DEIS I must disagree with any of the six alternatives within the document.
I have; however, reviewed the 77 page Coalition for Beach Access Poaition Statement signed by several groups that were a part of the negotiated rule making process and it by far succeeds in furnishing the best visitor experience while maintaining the needs of protecting the fragile resources.
Please consider all aspects of this alternative and put people back into the management of Cape Hatteras National Seashore.
Sincerely Nicholas M Belcastro

Correspondence: Vacationers and locals have the right to enjoy the beaches and have great respect for nesting areas. To my knowledge, this has been going on for decades and I cannot recall a single time that nesting areas have been disrespected.
Regulations have now been put in place to keep everyone off the Nationsl Seashore and Hatteras Island beaches during peak vacation and fishing seasons. I have seen no evidence that any nesting areas have intentionally been disturbed and certainly a compromise on using this land can be obtained if both parties on each side of this issue are willing to listen to the other.
The economy of the Outer Banks is suffering as is most of this great country and preventing public access will place further hardships on the locals

who's livelihoods depends on vacationer and their dollars.

I urge both sides of this issue to bring compromises to the table and work on a strategy to protect nesting and the people who love and respect the beauty of the OBX.

Correspondence: I have been visiting Cape Hatteras National Seashore for just over 25 years now. I first began when I was invited annually to vacation with friends. It then turned into vacationing with others and taking my own vacation down there. I now have the fortune of owning a home there. This allows my family to frequently go down there annually. My children, all under 15 years old, have had the pleasure of escaping the commercialism of most vacation areas and enjoying and appreciating the beauty of the Park as well as appreciating the value of playing on the beach all day and entertaining themselves with just good ole fashion fun with friends.
I disagree with the servery of the environmental protection actions with the current proposals. I believe the same goals can be reached for environmental preservation without sacrificing the economic livelihood of what is truly an American treasure. To strip this area of its historic fishing industry and tourism would be a sad commentary. Compromise and proper management/enforcement implementation can equate to all parties goals being attained.

Correspondence: The Coastal Conservation Association North Carolina wishes to comment on the recently released Draft Environmental Impact Statement on the ORV Management plan for Cape Hatteras National Seashore Recreation Area issued by the National Park Service. The objective of CCA is to conserve, promote and enhance the present and future availability of these coastal resources for the benefit and enjoyment of the general public. As such the thousands of members and volunteers of CCA NC and their nearly three quarters of a million associated recreational anglers are very disappointed in the six options for ORV management on CHNSRA. First of all the document itself is very difficult to follow in its 800+ pages. The tragedy is that none of the six options reflect the wishes of the vast majority of the CHNSRA visiting public and CCA NC. While there are preferred environmental and NPS options, there is no pro-access preferred option. The CHNSRA was established specifically for the American public to enjoy the seashore. To propose no option which provides a maximum access option certainly violates the spirit and perhaps the letter of the laws establishing this national park. Without serving the visiting public, The NPS has failed in its responsibility to our citizens. All the options presented in the DEIS seek to restrict public access well beyond any reasonable or legal requirement.
It is clear that significant facts have been ignored in the preparation of this DEIS. The success of turtle nesting and piping plover nesting and fledging is virtually unchanged since the de facto ORV plan was implemented in 1978. The primary causes of failed nesting and fledging are overwhelmingly predation and weather events which have occurred for hundreds of years. ORV caused mortality is a fraction of 1%. The USFWS and NPS personnel have caused more plover mortality. Yet, the NPS chooses to attack those users who are very sensitive to the wildlife in the CHNSRA.
The DEIS options all include restrictions which, when implemented as they have been under the consent decree, will unnecessarily close miles and miles of beach access both from the ocean and sound side. The many options describe no action which can circumvent a nesting closure in order to access an open area of the beach. Thus, while a stretch of waterfront may be "open" it is inaccessible. This represents nothing more than verbal trickery and masks the true available waterfront.
The specifics of option F, the NPS preferred option, require at least some comment as commenting on all options would extend beyond the available space and time constraints. Overall, the DEIS suggests there would be 52 of 68 miles of the waterfront "open" to ORV access but it is not clear that this includes any calculation of sound side access for ORVs or pedestrians. CCA NC strongly believes the "buffer" or closure areas suggested for piping plovers in various stages of nesting and fledging are beyond excessive. For nesting piping plovers 50 meters is more than adequate and as is 200 meters for unfledged chicks. To suggest that unfledged chicks of a bird that is less than 1 foot tall requires over a mile of seashore is ludicrous! All this with no pass through or corridor around these areas closes vast areas of the CHNSRA to the American public. All other shore birds should be allocated no more than 30m for nesting and 30m for unfledged chicks with pass through corridors as there is no legal requirement to provide excessive buffers. In addition, the NPS fails to recognize the role played by the spoil islands behind Bodie Island, Hatteras Island, Pea Island National Wildlife Refuge and Ocracoke Island in the breeding of shore birds. These areas are typically with a few hundred yards of the CHNSRA and harbor large populations of shore birds. If the NPS truly wants to help the population of piping plovers they should investigate the usage of large cages placed around the nests to keep predators out of the nests. These are used in the Northeast where the major piping plover nesting takes place. The NPS and the USFWS seem content to kill hundreds of other wildlife to try to protect piping plovers but refuse to implement simpler techniques improve shore bird breeding success while

improving access as well.

Option F describes measures required to "improve turtle breeding success". Many of the restrictions described in option F have little basis in peer reviewed science. For example, there is no evidence that night driving of ORVs has any impact on turtle nesting or hatchling survival. There have been no female turtles killed by ORVs. To protect turtle nests and improve hatchling success, CCA NC recommends relocation of turtle nests when they are laid in areas exposed to weather events. Using the fences used on the Pea Island National Wildlife Refuge that are keyhole shaped are more effective for turtle hatchlings and would allow continued use of ORVs at night.

The surf zone of CHNSRA has been used for a hundred years for the purposes of swimming, sunbathing, fishing, birding and shelling. ORV usage is critical to the pursuit of these activities as much of the surf zone would be inaccessible without ORVs. The NPS, throughout the DEIS, seeks only to restrict ORV usage without proposing ways to improve access for ORVs and providing expanded habitat for those species which are threatened or endangered. It seems the NPS has forgotten the CHNSRA was established as a recreation area. Pea Island National Wildlife Sanctuary is for wildlife, yet under the de facto rules in place from 1978, there has been little difference in the successful breeding of piping plovers or endangered sea turtles. CCA NC urges you to revert to those rules put in place in 1978 to provide maximum access for ORVs and the American citizens.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
I lived and worked on the Outer Banks for many years. During that time I witnessed the disappearance of many beach nesting bird colonies on both Hatteras and Ocracoke islands. It is clear that the National Park Service is not doing an adequate job of protecting wildlife and their habitats when it comes to the beach.
While providing for recreational use may be part of the mission of Cape Hatteras National Seashore, that does not mean un restricted use of all areas at the expense of wildlife. ORVs should be kept out of areas that are important to wildlife. The entire seashore should be evaluated for its potential wildlife value and people should be kept out of prime bird nesting areas.
At Cape Cod National Seashore, it was found that the more area ORVs were restricted from, the more habitat was utilized by piping plovers. At Assateague Island National Seashore, ORVS are kept off a large portion of the beach throughout the entire bird nesting season. The lack of and adequate policy at Cape Hatteras NS is a black mark upon the Service's record. For years management at CAHA has failed to protect the wildlife which has been entrusted to it. The time has come for bold action. Service managers need to stand up to the bullies in the ORV special intersst groups and do the right thing for wildlife. The national seashore belongs to everyone. It was created to protect the beautiful beaches of coastal North Carolina for the enjoyment of future generations. Without the colonies of nesting birds the seashore will be but a shadow of its original self and the NPS will have failed in the mission given it by the American people.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
Dear Superintendent Murray,
I am grateful to be able to submit comments on this very important issue. I lived and worked in Dare County in 1981 and 1982 and my family has vacationed on the Outer Banks - renting houses from Carova to Ocrakoke for many years. The area that I cherish most is the area south of the Bonner Bridge to the southern tip of Hatteras. We are all very lucky that the federal government had the foresight to preserve the natural areas on these outer banks by establishing National Parks. I think we all probably realize that, had this not been done, we would be looking at miles of condos, houses and strip malls.
I have been aware of the controversy over the use of ORV's on the beach for several years. The anger and vehemence of some of the people who think they have an automatic right to drive on the beach as they please is, quite frankly, scary.
I know that the Park Service has sought to come up with a plan that is reasonable for everyone who uses the beach and, at the same time, protective of the natural coastal environment.
I am writing to urge the Park Service to select Alternative D which will provide and protect use of the beach by those of use who use the beach for walking, swimming, sunning, relaxing and spending time with our families - for simple enjoyment of the natural beauty of a beach which has not been developed.
I have always had concerns about the impacts on the beach and on wildlife caused by driving on the beach. I know that many people take this privilege for granted and are entrenched in their opposition to even limited restrictions.
My husband and I enjoy surf fishing. I have fished in the surf since I was a child. But, we do not feel the need to drive to the very spot that we want to fish and are willing to walk - even at a distance - to get to the place where we want to fish.
I also enjoy bird-watching and have made many trips to the Hatteras National Seashore to bird. I am keenly aware of the need to protect nesting areas of the piping plover, oystercatchers, skimmers and other shore birds. Please, whatever you do, protect these species by prohibiting ORV beach-driving in nesting areas AT LEAST during nesting season.
Please select the option which will most protect the precious natural resource that we all enjoy and limit ORF access to the greatest "reasonable" extent.
Thank you for this opportunity. I understand that those in favor of getting the most access for ORF's have campaigned to get a large number of comments in favor of their position. I think we all know that these types of campaigns don't necessarily reflect the most thoughtful alternative or protect the greater public interest.
My understanding is that the Park Service is leaning towards Alternative F, but I believe that this alternative does not adequately protect enjoyment and use for non-driving beach-goers and for protection of wildlife and habitat. Those of us whose enjoyment is disturbed by ORV use should be able to have available year round at least half the beach for non-ORV use and wildlife. Beach walkers and families - who pay hard-earned money to the local economy - would be able to safely enjoy this national public treasure and protect it for future users.
Sincerely,
Jane Oliver 446 Henley Road Chapel Hill, NC 27517

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.

This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.

The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.

* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.

* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I live in Richmond, Va. but I have a non-rental home in Salvo, NC 27219 Ocean Spray, Salvo NC. I visit as often as possible for I love the fishing and the time on the beach. My life loves the beach and the shelling. I am most distraught with the process esp. the lies being posted by the Defenders of Wildlife and the Audubon society. I now have little feeling of what the American Indian went through. End this ludicrous process and do what is correct for the inhabitants of Hatteras Island and the guest to this island. I am tired of hearing about those who want changes and never been to this island.
I am opposed to all the present ideas posted by the NPS. They have failed us miserably. The research is not reliable because there have been no validation by a proper research group. The NPS wants to close areas and esp. points that have never had a Piping Plover. The distances being permitted by the NPS are over kill in comparison to what other NPS have done. No bird needs a thousand meters or 70 plus acres. The indiscriminate killing of other animals.
Man kills less than 3% of the birds and percentage of this is by those banding the birds. You have stated that 80% of the bird population is killed by other predators, ground and air, and weather. Weather is a key factor in bird population decline on the outer banks.
I am 63 with one bad knee and I cannot see myself walking over the dunes carrying the stuff needed. Walking in sand swells my knee quicker than

anything else I walk on.

I cannot trust the NPS even when it comes to handicap access. At South Beach, mile post 43.4 the last street in Salvo the NPS permitted a gentleman to build a ramp to the dunes if it was made accessible to the public. That ramp is not handicap accessible. This occurred soon after my son had met with Mike Murrays office and they stated they were committed to access for the handicap. So much for their promises, all my son wanted was a way to drive his wheel chair to the dunes so he could observe the ocean. This ramp is one street from our house. If I cannot trust the NPS to do follow handicap laws then what can I expect when it comes to running our beaches.

Do what is right for the citizens of America and as a veteran of the Vietnam War I wanted freedom, not what I am seeing now. Defenders of Wildlife have ruined the process and are guiding the NPS, NPS stand up for America and do what is correct - open the beaches!!!!!!!!!!!!!!!!!!!!

Correspondence:	<p>I appreciate the opportunity to comment on National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support Alternative D if modified to provide greater pedestrian access, which was identified in the DEIS as the environmentally preferred alternative. This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.</p> <p>The following principals should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:</p> <p>Provide Equal Access for All Visitors: Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.</p> <p>Put Natural Resources First: Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.</p> <p>Establish and Meet Clear Goals for Wildlife Recovery: A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.</p>

Correspondence:	<p>I think that Alternative F is a little extreme. In particular, I have these concerns: Why are leashed dogs c at any time. A dog that is leashed is under the control of its owner and cannot endanger wildlife. In general I feel the ORV restrictions go too far. Man and nature have co-existed here for many years. As business owners my fiance and I depend on tourists who come to our island expect ORV beach access. I disagree with the night driving ban...fishermen should be allowed access to the beach before dawn. The traffic will not be nearly as heavy as late in the day and should not effect it much, if any. I realize that there must be compromise but let it come from all sides and let common sense prevail!</p>

Correspondence:	<p>Dear Superintendent Murray,</p> <p>My family and I have greatly enjoyed the National Parks over the years, appreciating the multitude of opportunities to experience the diversity of our great nation in its natural state. We continue to work on our goal of visiting ALL the National Parks. As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.</p> <ol style="list-style-type: none"> 1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations." 2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... the said area shall be permanently reserved as a primitive wilderness..." Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources. 						

3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.

Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

***** Thank you very much for taking the time to protect one of America's most beautiful stretches of Atlantic seashore! Sea turtles, nesting shorebirds, and generations to come will be grateful for your action today. Thanks again!

Sincerely,
EJ Howe

Correspondence: I can think of no better way to spread invasive plants on a National Seashore than to allow ORV access to it. In addition to what they bring in, they can go anywhere, gathering plant parts and distributing those parts over the whole area. Surely there are plenty places they can go that are already so disturbed that they will do little additional harm.
The Cape Hatteras National Seashore is not a place that should allow ORVs.

Correspondence: Dear Superintendent Murray,
As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.
1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."
2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness...."
Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.
3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.
Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan. Personally, having seen (and heard) the destruction that ORV can do to an area, I am amazed and disappointed that you would even consider allowing them in Cape Hatteras. This is not Daytona nor your local road track. The noise alone is enough to disturb not only humans but certainly any wildlife that is present. JUST WHAT WERE YOU THINKING TO EVEN CONSIDER THIS? ***** Thank you very much for taking the time to protect one of America's most beautiful stretches of Atlantic seashore! Sea turtles, nesting shorebirds, and generations to come will be grateful for your action today. Thanks again!
Sincerely,
VIRGINIA C. MARS

Correspondence: Dear Superintendent Murray,
As a frequent user of national parks, I want to comment on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras

National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to fulfill the mission of the National Park Service. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.

- 1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."
 - 2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... the said area shall be permanently reserved as a primitive wilderness...." Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.
 - 3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.
 - 4) As a pediatrician I am acutely aware of our children's need for safe and healthy physical activity. Promoting ORV use sends precisely the wrong message. Park policies should support activities that will engage families with children in physical activity that burns calories, not fossil fuels.
- Sincerely, Claudia C Prose MD MPH Chapel Hill NC

I support this work of Larry Hardham & Bob Davis, they have spent many years finding a solution for the turtle problem in CHNSRA.
<http://www.obpa-nc.org/turtles/TurtleMgmtProgram.pdf>
The above paper goes into the reasons the NPS has failed to do the job they were tasked to do by USFWS & NCWRC. CHNSRA turtle biologists have allowed almost half of the turtle nests laid in this Park to simply fail because they decided to take no action.
Nowhere else in the Loggerhead turtle breeding range, has so little been done to so many turtles. Cape Hatteras National Seashore is the laughing stock of other National Parks.
Other Seashores can say; "at least we are not doing what CHNSRA is doing" as a reply that they (other Seashores) need to do more for protection.
Take responsibility for your failures and fix the glaring lack action, it is the least you can do.

Correspondence: DEIS COMMENT 5 10 10 NESTING AMOY & PLOVER
Plover & Oyster-catcher chicks are "precocial." From what I read from your biologists, once these chicks hatch, they never try to get back into their eggshells. With the empty shell being useless, the nest the shell fragments are in is also useless. It means nothing to the chicks.
I can't find a reason why bird biologists hold the nest site sacred until these chicks are killed by nature, or fledge and fly away. I observe that the majority of nests are not close to the main food sources. Is that because the eggs do not flee as well as a chick does in the presence of a predator?
Do the parents built their nests in precarious locations because predators hold the high ground?
The nest site doesn't need to be protected after the chicks hatch, as they have no reason to hold it dear. When the adults lead the chicks on the long hot march to food, do they look back at the nest?
Jim Harris 92 South Dogwood Tr. Southern Shores NC 27949-3838 252 261 4990

Correspondence:	The North Carolina State-listed "species of concern," - such as the American oystercatcher - do not require the extensive buffers and beach closures mandated for federally listed species such as the piping plover. The piping plover is the only seashore bird species protected under the federal Endangered Species Act. The 1,000-meter buffers required in all directions around an unfledged piping plover chick is not based on any scientific reasoning behind this management strategy. A more reasonable buffer would be 200 meters and in line with buffers used in other northeast coastal states. The resource closures are so large that, in some cases, they block access to open beach for not only ORVs but also for beachcombers, surfers, horseback riders, anglers and swimmers and severely limits access by the handicapped. Corridors around closures so public access to open beaches can be maintained, and decrease buffers for non threatened species from 300 meters to 30 meters need to be enacted. The Cape Hatteras National Seashore was established for the benefit of the people.

Correspondence:

Dear National Park Service,

As a lifelong visitor to the Outer Banks of North Carolina, myself and my family have a deep appreciation for the beauty and natural resources of Cape Hatteras National Seashore. In regards to the ORV Management Plan, I urge you to fully consider the importance of the recreational users, and fellow taxpayers and supporters of the National Seashores and Park. Beach vehicle access is an important asset of not only the Seashore but the well being of the entire economy and the residents of the Outer Banks. If beach vehicle use is significantly reduced or eliminated, the entire Outer Banks region will suffer from the ill effects of reduced tourist interest.

In your review of ORV Access, please place an emphasis on the economic and emotional aspect of reducing beach vehicle access. The over whelming majority of users appreciate the National Seashore and Parks, and leave them a better place than they found them.

Sincerely,
David B. Goode

Correspondence: I do not believe that the NPS should select the most restrictive alternative, alternative F. This alternative is even more restrictive than the current decree filed in April 2008. The NC outer banks is a unique environment and beach access makes our beached more unique. My family and friends have always treasured the ability to drive on the beaches. This is unique to the outerbanks and restricting this ability would be detrimental to all visitors to these beaches. The current restrictions proposed by the NPS are excessive. Please allow the owners, thier families, guests and visitors the right to enjoy the outerbanks as it has always been cherished.
Thank you, Ben Micham and family

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more oppportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
I do not get to visit the outer banks as much as I would like, but the park one of the most beautiful ocean sites that I have visited. The birds and turtles were there first, and need to have some protection from humans. People were born with 2 feet for walking, and unless they have a disability, and can't experience the national seashore any other way, ORV use should not be allowed. They only harm the animals that live and breed there.
This alternative plan would provide more oppportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
 This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
 The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
 *Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
 * Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
 * Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
 Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: Dear Superintendent Murray,

As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.

1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."

2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness..." Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.

3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals. Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

Sincerely,

Mrs. Lil Judd

Correspondence:

The Coastal Conservation Association North Carolina wishes to comment on the recently released Draft Environmental Impact Statement on the ORV Management plan for Cape Hatteras National Seashore Recreation Area issued by the National Park Service. The objective of CCA is to conserve, promote and enhance the present and future availability of these coastal resources for the benefit and enjoyment of the general public. As such the thousands of members and volunteers of CCA NC and their nearly three quarters of a million associated recreational anglers are very disappointed in the six options for ORV management on CHNSRA. First of all the document itself is very difficult to follow in its 800+ pages. The tragedy is that none of the six options reflect the wishes of the vast majority of the CHNSRA visiting public and CCA NC. While there are preferred environmental and NPS options, there is no pro-access preferred option. The CHNSRA was established specifically for the American public to enjoy the seashore. To propose no option which provides a maximum access option certainly violates the spirit and perhaps the letter of the laws establishing this national park.

Without serving the visiting public, The NPS has failed in its responsibility to our citizens. All the options presented in the DEIS seek to restrict public access well beyond any reasonable or legal requirement. It is clear that significant facts have been ignored in the preparation of this DEIS. The success of turtle nesting and piping plover nesting and fledging is virtually unchanged since the de facto ORV plan was implemented in 1978. The primary causes of failed nesting and fledging are overwhelmingly predation and weather events which have occurred for hundreds of years. ORV caused mortality is a fraction of 1%. The USFWS and NPS personnel have caused more plover mortality. Yet, the NPS chooses to attack those users who are very sensitive to the wildlife in the CHNSRA. The DEIS options all include restrictions which, when implemented as they have been under the consent decree, will unnecessarily close miles and miles of beach access both from the ocean and sound side. The many options describe no action which can circumvent a nesting closure in order to access an open area of the beach. Thus, while a stretch of waterfront may be "open" it is inaccessible. This represents nothing more than verbal trickery and masks the true available waterfront. The specifics of option F, the NPS preferred option, require at least some comment as commenting on all options would extend beyond the available space and time constraints. Overall, the DEIS suggests there would be 52 of 68 miles of the waterfront "open" to ORV access but it is not clear that this includes any calculation of sound side access for ORVs or pedestrians. CCA NC strongly believes the "buffer" or closure areas suggested for piping plovers in various stages of nesting and fledging are beyond excessive. For nesting piping plovers 50 meters is more than adequate and as is 200 meters for unfledged chicks. To suggest that unfledged chicks of a bird that is less than 1 foot tall requires over a mile of seashore is ludicrous! All this with no pass through or corridor around these areas closes vast areas of the CHNSRA to the American public. All other shore birds should be allocated no more than 30m for nesting and 30m for unfledged chicks with pass through corridors as there is no legal requirement to provide excessive buffers. In addition, the NPS fails to recognize the role played by the spoil islands behind Bodie Island, Hatteras Island, Pea Island National Wildlife Refuge and Ocracoke Island in the breeding of shore birds. These areas are typically with a few hundred yards of the CHNSRA and harbor large populations of shore birds. If the NPS truly wants to help the population of piping plovers they should investigate the usage of large cages placed around the nests to keep predators out of the nests. These are used in the Northeast where the major piping plover nesting takes place. The NPS and the USFWS seem content to kill hundreds of other wildlife to try to protect piping plovers but refuse to implement simpler techniques improve shore bird breeding success while improving access as well. Option F describes measures required to "improve turtle breeding success". Many of the restrictions described in option F have little basis in peer reviewed science. For example, there is no evidence that night driving of ORVs has any impact on turtle nesting or hatchling survival. There have been no female turtles killed by ORVs. To protect turtle nests and improve hatchling success, CCA NC recommends relocation of turtle nests when they are laid in areas exposed to weather events. Using the fences used on the Pea Island National Wildlife Refuge that are keyhole shaped are more effective for turtle hatchlings and would allow continued use of ORVs at night. The surf zone of CHNSRA has been used for a hundred years for the purposes of swimming, sunbathing, fishing, birding and shelling. ORV usage is critical to the pursuit of these activities as much of the surf zone would be inaccessible without ORVs. The NPS, throughout the DEIS, seeks only to restrict ORV usage without proposing ways to improve access for ORVs and providing expanded habitat for those species which are threatened or endangered. It seems the NPS has forgotten the CHNSRA was established as a recreation area. Pea Island National Wildlife Sanctuary is for wildlife, yet under the de facto rules in place from 1978, there has been little difference in the successful breeding of piping

plovers or endangered sea turtles. CCA NC urges you to revert to those rules put in place in 1978 to provide maximum access for ORVs and the American citizens.

Correspondence:	<p>I am a North Carolina resident, have fished to Outer Banks for 50+ years, am a scientist and an environmental consultant, as such I am strongly opposed to the National Park Service (NPS) preferred alternative, Alternative F, in the DEIS and urge you to use Alternative A in order to provide both reasonable resource protection and reasonable public access to public land. The previously used Interim Plan provided both. Recreational fishing is one of the most enjoyable American pastimes, and Cape Hatteras National Seashore has some of the best surf fishing locations on the east coast ? accessible only by ORV.</p> <p>Alternative F is the most restrictive management option to date, far exceeding any sense of balance between resource protection and public access and betraying all promises made to the public regarding recreational uses in the seashore. The majority of the provisions included within the preferred alternative far exceed anything proposed by a majority of the Negotiated Rulemaking Committee, including excessively large resource closures (buffers), unnecessary year-round and floating closures, and the lack of access corridors around or through resource closures. There is no scientific evidence that these huge resource closure areas are needed. Indeed, there are studies that have shown that proximity to humans reduces predation to the point that survival rates are higher.</p> <p>In order to restore balance to the DEIS, I highly recommend that the NPS revisit the proposal put forth to the Negotiated Rulemaking Committee in December of 2009. It provides the necessary protections for wildlife resources while having the support of a majority of the local community. Please stand up to the environmental extremist that have sued you and counter them with science and reason. Without reasonable ORV access, responsible anglers like me, and the local economy that is supported by recreational fishing, suffer greatly. I urge you to provide a better balance between resource protection and recreational uses by incorporating the December 2009 recommendations from the Negotiated Rulemaking Committee into the chosen alternative.</p>

Correspondence:	<p>1) After reviewing the NPS DEIS I must disagree with any of the six alternatives within the document. I have; however, reviewed the 77 page Coalition for Beach Access Poaition Statement signed by several groups that were a part of the negotiated rule making process and it by far succeeds in furnishing the best visitor experience while maintaining the needs of protecting the fragile resources. Please consider all aspects of this alternative and put people back into the management of Cape Hatteras National Seashore Recreational Area. (2)I disagree with the extreme buffers outlined in DEIS pages 121 to 127. They must be modified to substantially reduce the minimum 1,000 meter buffer in all directions required in Alternative F for unfledged Piping Plover chicks. Dare County believes a more appropriate and yet effective buffer is 200 meters. Ample scientific evidence and precedent exists to support a 200 meter buffer. (3) I agree with the Coalition for Beach Access position statement on the DEIS. I do not believe the DEIS adequately addressed the cultural significance of access to the Cape Hatteras National Seashore Recreational Area.</p>

Correspondence: As a former 20 year resident of the The Outer Banks Chamber of Commerce,I vehemently disagrees with the validity of the economic impact analysis included in the Draft Environmental Impact Statement for proposed new rules for access to the Cape Hatteras National Seashore. Not only does the analysis not adequately convey the economic impact of the proposed Alternative F, it fails to address any of the alternatives listed in the DEIS. The data is incomplete,misleading and the statements of what are supposed to be facts are without sound basis.
This is truly a beautiful and unique area BECAUSE people are allowed access. You will destroy the Outer Banks way of life if you find in favor of birds over people!

Correspondence: I have been visiting the Outer Banks of NC since I was a child. I have spent every vacation there since I was in grade school. I have spent considerable amounts of money on each trip and fish from the shore, boats, and piers from Kitty Hawk to Hatteras. I feel the NPS must protect the taxpayers right to use our own land. We must keep our access to driving on the beach, it is our land and our right.
Thank you
Chris M Jones

Correspondence: Mike Murray, Superintendent Cape Hatteras National Seashore 1401 National Park Drive Manteo, NC 27954 Superintendent Murray: We are writing you today to make formal comments on the Cape Hatteras National Seashore Recreational Area Off-Road Vehicle Management Plan Draft Environmental Impact Statement, specifically Alternative F, created by the National Park Service with input from the negotiated rulemaking advisory committee. Before commenting on the contents of the document, we would like to call attention to the shocking exclusion of useful data to determine the potential economic impact of Alternative F. The DEIS suggests "F" will have revenue impacts on small businesses "at the low end of the estimated range rather than the high end." From our conversations with small business owners on Hatteras Island, any restriction in access will have severe economic impacts to their families, as the closures in the past years have. In an already disastrous economy, the actions taken by the Court and the Service have proved devastating to all businesses and residents on Hatteras Island. For anyone to claim differently would be either a misguided statement of ignorance or just a pure falsification of the truth. The last names of the original settlers of Hatteras Island can be found in the phonebook to this day. These families have been rooted in this community even before the founding of our nation. Today, their livelihoods are being threatened by that government. After consulting with the elected leaders of Dare County, we would like to comment on the four critical aspects of the DEIS, the first being the vitally important management tool of corridors. In the past during a closure, our offices were able to work with you and your staff to create corridors around resource closures. These alternative paths are indispensable to the continued movement of pedestrians and vehicles. Also, the corridors allow visitors to access an open area that may be sandwiched between two closed areas. These corridors have limited negative impacts to the protected species, but they are crucial to providing access during closure periods. We stand with Dare County in requesting that corridors be maintained for pedestrians and vehicles in all areas of the Cape Hatteras National Seashore Recreational Area throughout the entire breeding and nesting season. Page 2 May 4, 2010 NORTH CAROLINA GENERAL ASSEMBLY ? RALEIGH, NORTH CAROLINA When reviewing the management of any wildlife species by the state of North Carolina, anyone can see our management plans are based on reliable and reputable science and data. Political whims are not entered into the formula for the management of species by our State. We are concerned that political inclination is the reason for and basis of the management buffers within the DEIS. A 1,000-meter buffer in all directions of an unfledged piping plover chick represents 771 acres of closed beach. This seems a bit arbitrary and capricious when managing a species. We have yet to read any scientific reasoning behind this management strategy. We would argue a buffer of 200 meters would be just as effective for the survival of a piping plover chick without the extreme penalization of the residents and visitors of Hatteras Island. Another confusing issue in the buffers listed in the DEIS is the equal and even more protective status given to species not on the endangered species list. Birds listed as North Carolina species of concern should not be given protected status under the Endangered Species Act. We have spoken with both the Chairman and Executive Director of the North Carolina Wildlife Resources Commission regarding this matter. Both have informed us that these unnecessary protections were never the intent of the Commission's participation in this process, nor a requested outcome. They have also informed us that other species of concern are not given ESA status on other federal lands. Pre-nesting closures should be exclusively for the piping plover, the only federally listed threatened bird species. Also, non-ESA listed birds should not have buffers of 300 meters. The county feels a more appropriate buffer would be 30 meters. We also spoke with NCWRC regarding the inclusion of all birds in the ecosystem being counted when doing any type of management plan. Currently, birds on dredge spoil islands located adjacent to the Park are not being included in the population figures. They agree these islands have no predation and are ideal locations for nesting. To not include the populations of these islands is disingenuous to the intent of this process. The last technical portion of our comments centers on the treatment of the nests of endangered sea turtles within the Seashore. We would urge the Park Service to allow for the relocation of nests to higher beach elevations. The United States Fish and Wildlife Service practices this management tool in Pea Island National Wildlife Refuge, as do other management agencies on state and federal lands. The Seashore has lost over 46% of the nests laid in the last 11 years, while South Carolina relocated 40.1% of their nests during 2009, finishing the year with only a 7.7% loss of nests. To not allow for the relocation of nests puts both the users of the parks and the turtle hatchlings at competitive disadvantages. The key to any management plan is flexibility. Without the ability to change user patterns while keeping access open, the Cape Hatteras National Seashore Recreational Area will become but a memory to generations of users from across the globe. We would say that nowhere in our great nation can individuals enjoy the beauty and serenity of our coast as in the Seashore. For decades, families have been coming to Hatteras and Ocracoke Islands to utilize this area as President Roosevelt envisioned. Page 2 May 4, 2010 I strongly support the views and comments of Senator Basnight and Dare County Government as outlined in this letter.
Sincerely, David Dunvan

Correspondence: Use of vehicles on beaches to access remote areas and camping/fishing/vacationing opportunities is a common practice in some coastal areas of NC. Whether pro-recreational vehicular use on the beach or against, no one wants to see this biologically fragile terrain degraded. Many of these environmentally sensitive areas are beyond the protective safety net of federal regulation. Cape Hatteras NP is a small part of the NC coastline that can be protected, and therefore should be.
The present calamity in the Gulf of Mexico surrounding the BP's Lease 206 at Deepwater Horizon shows the futility of mankind's ability to predict accidental environmental harm from our endeavors. The US Dept of Interior exempted BP's Gulf of Mexico drilling operation from a detailed environmental impact analysis last year, after three reviews of the area concluded that a massive oil spill was unlikely. Consequently, BP was allowed, in effect, to police itself.
WHOOOPS.
OVR users want the same "rights" that BP has in the Gulf...to use "The People's" resources while being allowed to police themselves: "Just give us access and we promise not to drive when and where we really REALLY want to drive!"
Turtles? WHOOOPS.
Piping Plover Nests? WHOOOPS.
Granny? WHOOOPS.
Seriously, all efforts to protect our planet are really just semi-uneducated guesses. Alternative D appears to provide the most restrictions on ORV use therefore insures the greatest predictability of environmental consequences.
I want ORV access our beaches to be controlled/regulated as much as legally possible: to minimize the potential for environmental harm. I urge the NPS to manage Hatteras National Seashore with a view toward limiting any vehicle impact foot print on the shore, thereby limiting the level of environmental impact. Given the options: I urge adoption of Alternative D.
-Jim Oliver

Correspondence: I am an avid outdoorsman. I enjoy everything the outdoors has to offer. Beaches to the Mountains the outdoors offers so much in the form of activities and entertainment for adults and children alike. I believe it is important to protect the outdoors and its inhabitants with all resources available. At the same time it is equally as important to protect our ability to access these areas. They are for everyone to see and enjoy. If there is a medium ground that can be achieved that will show promise for continued wildlife growth and well being as well as support vehicle traffic so that others can easily enjoy what the outdoors has to offer there should be no expense to great to come to such a resolution. To say we have to further restrict beach access in order to better protect the local wildlife needs to be examined very carefully.
 I would hate to see further restrictions as far as access is concerned unless everyone can be assured that there is no other reasonable alternative.

Correspondence: Dear Superintendent Murray,
 As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.
 1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."
 2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... the said area shall be permanently reserved as a primitive wilderness..."
 Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.
 3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.
 Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.

This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.

The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.

* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.

* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

When my wife and I travel to Cape Hatteras, we do not go to watch people tear up the ocean side with their ORV abuse. We go to see the wildlife that utilizes this unique National Seashore and to experience the tranquility conveyed by the setting. We have frequently had our experience ruined by ORV use and ask that you set aside additional areas to be ORV-free zones, accessible only by foot traffic. The unique wildlife that utilizes these areas will expand in population, attracting more visitors to this wonderful area.

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I appreciate the opportunity to comment on National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support Alternative D if modified to provide greater pedestrian access, which was identified in the DEIS as the environmentally preferred alternative. This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.

The following principals should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

Provide Equal Access for All Visitors: Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only

16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.

Put Natural Resources First: Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.

Establish and Meet Clear Goals for Wildlife Recovery: A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Correspondence: Please protect our wildlife and specifically the imperiled sea turtles! I urge you to find a positive solution other than off road vehicles within Caper Hatteras national Seashore! Especially with the horrific impact of BP's oil spill, now more than ever we NEED to protect our wildlife! PLEASE do your part toda!!!I appreciate the opportunity to comment on National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support Alternative D if modified to provide greater pedestrian access, which was identified in the DEIS as the environmentally preferred alternative. Correspondence: Following is an excerpt from a May 9, 2010 Virginian-Pilot news article by Catherine Kozak:
Numerous shorebirds in Cape Hatteras National Seashore are given higher levels of protection in a proposed off-road vehicle management plan than what the law ever intended the birds to have, a state wildlife official said.
State-listed "species of concern," - such as the American oystercatcher - do not require the extensive buffers and beach closures mandated for federally listed species such as the piping plover, said Gordon Myers, the executive director of the North Carolina Wildlife Resources Commission.
Myers said that's beyond the intent of the state law: the state designation is supposed to be more of a call to action for a species.
The Wildlife Resource Commission, he said, will voice its objections to the use of state "species of concern" lists to trigger ORV management strategies under the federal Endangered Species Act.
That is of concern to us because it's apples and oranges," he said. "To treat it as synonymous with threatened and endangered is not congruent."
Thought this was interesting

Correspondence: As a resident of Maryland, I travel to the Outer Banks each spring and fall to surf fish, primarily in the areas of Buxton and Ocracoke. I consider the recreational sport of surf fishing, including Off Road Vehicle access to public beaches, an important part of our country's culture and heritage that must be preserved. I also recognize the need to protect our natural resources including endangered species that may be impacted by these activities.
After reading the Draft EIS, I was disappointed that there was not a more reasonable, middle-ground approach to maintaining public access while protecting natural resources and protected species.
My recommendations include: 1. Maintaining year-round, day and night access to key recreational areas such as The Point, Hatteras Inlet and Ocracoke South Point. 2. Designating key access corridors for pedestrians and vehicles that are available year round. 3. In other areas that do not have "key"

designations, implement temporary closures as necessary based upon nesting activities. 4. Allow for the relocation of sea turtle nests from any area to designated wildlife preservation areas that are restricted from pedestrian or vehicular traffic. 5. Limiting wildlife buffers to more reasonable limits (from 1,000 meters to 300 meters) around verified nests that are not within such distance from a designated full year access corridor.

Correspondence: As an avid fisherman and frequent visitor to the Cape Hatteras National Seashore and Recreation Area I am in total disagreement with the DEIS that has been given to us. . . i might add with way to little time to really digest this monster... but thats another show... ALSO would really like to see the full name used when referring to this island in paradise... it was founded as a RECREATIONAL AREA for driving/fishing/camping/etc.. it was not intended to be used as a pawn in environmentalists attacks on a way of life
The buffers you are requiring for birds (1000 meters?) are really unfounded .. any data shown is bias and not really "true hard evidence"..
if anything Pea Island is all that is needed for birds/turtles and for that matter the dredge islands have more safer nesting areas than any other part of the islands.. an those birds are not counted..
how bout the birds on the roofs in nags head.. you gonna shut down those beaches.. the beaches in front of birders homes.. no. you wont.. nps is afraid of dow/autobon/selc....
also .. when are you planning of trying to make an effort in finding out who is destroying the roped off areas..or is it that you know who it is.. but not going to bother them??

Correspondence: I live in the village of Avon, which is located in the middle of the Cape Hatteras National Seashore Recreational Area. I believe that closing our beaches is a classic example of bird-lover concerns gone mad. The closings will do the following things:
1. Destroy a cultural way of life that has been lived by generations of Hatteras Island residents.
2. Economically harm many residents who are already suffering under a severe recession. Children here are going to bed hungry. The lack of concern for the well being of good people is astounding, inexcusable, and infuriating.
3. Cause people to hate their government even more than they already do, and for perfectly understandable reasons.
4. Deprive thousands of visitors the harmless enjoyment of a Federal Recreational Area. This includes fishermen, windsurfers, surf boarders, shell collectors, swimmers, kite boarders, kayakers, and children playing in the sand at ocean's edge.
5. Kill an island to save a bird.

If you are going to shut down our beaches, you should also go shut down the beaches at Ocean City, Maryland and Atlantic City, New Jersey and all the others. We are being singled out and punished for no sound reason, only for the pleasure of the radical, extremist bird-lovers. Go pick on all the other beaches, too, and see what backlash you get.

The lack of consideration for the serious economic harm that is being done to us is criminal and needs to be fixed.

Correspondence: Dear Superintendent Murray,
As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.

- 1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."
- 2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness...." Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.
- 3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.

Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

Correspondence: Superintendent Murray: I am writing you today to make formal comments on the Cape Hatteras National Seashore Recreational Area Off-Road Vehicle Management Plan Draft Environmental Impact Statement, specifically Alternative F, created by the National Park Service with input from the negotiated rulemaking advisory committee. Before commenting on the contents of the document, we would like to call attention to the shocking exclusion of useful data to determine the potential economic impact of Alternative F. The DEIS suggests "F" will have revenue impacts on small businesses "at the low end of the estimated range rather than the high end." From our conversations with small business owners on Hatteras Island, any restriction in access will have severe economic impacts to their families, as the closures in the past years have. In an already disastrous economy, the actions taken by the Court and the Service have proved devastating to all businesses and residents on Hatteras Island. For anyone to claim differently would be either a misguided statement of ignorance or just a pure falsification of the truth. The last names of the original settlers of Hatteras Island can be found in the phonebook to this day. These families have been rooted in this community even before the founding of our nation. Today, their livelihoods are being threatened by that government. After consulting with the elected leaders of Dare County, we would like to comment on the four critical aspects of the DEIS, the first being the vitally important management tool of corridors. In the past during a closure, our offices were able to work with you and your staff to create corridors around resource closures. These alternative paths are indispensable to the continued movement of pedestrians and vehicles. Also, the corridors allow visitors to access an open area that may be sandwiched between two closed areas. These corridors have limited negative impacts to the protected species, but they are crucial to providing access during closure periods. We stand with Dare County in requesting that corridors be maintained for pedestrians and vehicles in all areas of the Cape Hatteras National Seashore Recreational Area throughout the entire breeding and nesting season. When reviewing the management of any wildlife species by the state of North Carolina, anyone can see our management plans are based on reliable and reputable science and data. Political whims are not entered into the formula for the management of species by our State. We are concerned that political inclination is the reason for and basis of the management buffers within the DEIS. A 1,000-meter buffer in all directions of an unfledged piping plover chick represents 771 acres of closed beach. This seems a bit arbitrary and capricious when managing a species. We have yet to read any scientific reasoning behind this management strategy. We would argue a buffer of 200 meters would be just as effective for the survival of a piping plover chick without the extreme penalization of the residents and visitors of Hatteras Island. Another confusing issue in the buffers listed in the DEIS is the equal and even more protective status given to species not on the endangered species list. Birds listed as North Carolina species of concern should not be given protected status under the Endangered Species Act. We have spoken with both the Chairman and Executive Director of the North Carolina Wildlife Resources Commission regarding this matter. Both have informed us that these unnecessary protections were never the intent of the Commission's participation in this process, nor a requested outcome. They have also informed us that other species of concern are not given ESA status on other federal lands. Pre-nesting closures should be exclusively for the piping plover, the only federally listed threatened bird species. Also, non-ESA listed birds should not have buffers of 300 meters. The county feels a more appropriate buffer would be 30 meters. We also spoke with NCWRC regarding the inclusion of all birds in the ecosystem being counted when doing any type of management plan. Currently, birds on dredge spoil islands located adjacent to the Park are not being included in the population figures. They agree these islands have no predation and are ideal locations for nesting. To not include the populations of these islands is disingenuous to the intent of this process. The last technical portion of our comments centers on the treatment of the nests of endangered sea turtles within the Seashore. We would urge the Park Service to allow for the relocation of nests to higher beach elevations. The United States Fish and Wildlife Service practices this management tool in Pea Island National Wildlife Refuge, as do other management agencies on state and federal lands. The Seashore has lost over 46% of the nests laid in the last 11 years, while South Carolina relocated 40.1% of their nests during 2009, finishing the year with only a 7.7% loss of nests. To not allow for the relocation of nests puts both the users of the parks and the turtle hatchlings at competitive disadvantages. The key to any management plan is flexibility. Without the ability to change user patterns while keeping access open, the Cape Hatteras National Seashore Recreational Area will become but a memory to generations of users from across the globe. We would say that nowhere in our great nation can individuals enjoy the beauty and serenity of our coast as in the Seashore. For decades, families have been coming to Hatteras and Ocracoke Islands to utilize this area as President Roosevelt envisioned. As you move forward with your plan, you must remember the promises made by previous directors and superintendents and protect the access for residents and visitors alike.

Sincerely, Teddy Kramer

Correspondence:	Dear Sir or Madam. I am opposed to closure of the Cape Hatteras National Seashore for any reason other than Natural Disaster. My family has owned property in Salvo since 1961, I have spent most of my life enjoying the Beach and the Lifestyle of Hatteras Island. My first experience was living in a trailer where the Chicamicomico Fire Station is now. Joesph and Marylin Midgett had a Texaco Station on the Highway on the corner of RT 12 and the pier road. Times have changed and I agree to issues needing regulation. I am in support of a Licensing for vehicles using the beaches. I am in support of educating the users of of the seashore the need for co-existence with the wildlife and habiat of the Island as a requirement for beach driving. I see no need to list a bunch of excuses that have been already argued. My reason is purely personal. Regards Randall L Pearson

Correspondence:	1) I disagree: Page 121. To completely prohibit pedestrian access in sections of the national seashore, runs completely contrary to the basis upon which the Park was founded, for recreation. 2) I disagree. I find the proposed 1000 meter buffers cited on pages 121 ? 127 unnecessarily restrictive and arbitrary. The use of such large buffers will cause people to be forced into smaller areas, with a subsequent greater impact on resource in the area. In addition, the expansion of the buffers as a punitive measure for infractions is also arbitrary. Please do not punish all for the offenses of one. 3) I disagree. The complete prohibition of ORVs, year round, pp 97-101, is entirely unnecessary, and will also impede human ability to partake of many recreational activities in the stated areas between ramps 27-30, Hatteras Spit, Ocracoke Inlet and others. 4) I disagree. Pets have been part of my, and continue to be part of many visitors' recreation and vacation experience. I disagree with the proposal to completely prohibit pets at the seashore beaches during "breeding season" from March 15th to July 31st. Page 136. Pets on a leash will not interfere with wildlife protection measures. 5) I disagree. It has not been proven scientifically that human interference is extensively responsible for damage to turtles and nesting birds, (less than 3%) so the prohibition against night driving for over half of the year is unnecessarily restrictive. P 104, P 377. No piping plover deaths have been attributable to ORVs. 6) Page 468, I disagree. Access should be provided through all species management areas. Buffers should move with the species, instead of being expanded.

Correspondence:	Dear Superintendent Murray, We have substantial space in this world for vehicles, even ORV. However, we do not have substantial space free of them. For the preservation of this simple luxury of a vehicle free space, the animals and environment, as well as the individuals who hope to enjoy this National Seashore please do not allow ORV use on these beaches! The freedom to be free of something is just as significant as the freedom to enjoy a thing.

Correspondence:	I have been coming to Hatteras Island for the past 32 years, faithfully every year for a week, and many weekends throughout each year. Bypassing through Nags Head to enjoy the beaches filled with nature is the reason I choose to come to Hatteras year after year. In fact, I call it my "Home Away from Home". I believe that most people like myself, respect nature's activities. Roping off sections of the beach which have nests is fine and absolutely understandable, but to close the beach to vehicles is unfair. In any aspect of nature, there are always predators when there are nests or young ones involved. I sometimes think having the ORV's on the beach might actually divert some predators from bothering the nests and young. It would break my heart to see the beach closed to vehicles... I think we can live together with nature. Isn't that the beauty of Hatteras Island?

Correspondence:	As a property owner for over 25 years and some day permanent beach resident, I would like to comment on the on going debate concerning the closure of beach access. I love all wild life and there is nothing more relaxing than driving out to the beach and watching the birds, and occasionally we get a rare look at sea life. To fish or just to have the family together on the beach in the wonderful environment is a way of making memories that will last a lifetime. The actions of few should have made the law abiding beach goers pay for their total disregard for this wonderful strip of beach. Please reconsider your decision to close beach access.

Correspondence:	Dear Superintendent Murray, As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches, not to mention the animals that call it home. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. I cannot even imagine seeing ORV's at the beach--I think it would destroy everything people love about going to the beach, and would destroy animal habitat as well. Overall, I think this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, but only if it is modified to include and recognize the following points. 1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of						

future generations."

2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness...."

Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.

3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.

Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

Correspondence: While I support protection of endangered species and am concerned about the general well-being of the environment I am most concerned with the negative impacts that have already been/are yet to be realized by the natives and long-term residents of Hatteras Island. We are owners of a vacation home on this beautiful island and have made several recent trips there in preparation for rental season. It is sad to see the many businesses that have been forced to close as a result of the domino effects of this project. Many of these businesses have existed for generations. Even the few (restaurants) that typically remain open year-round are now closing during off-season in order to remain viable. At what point are human lives being considered above those of species whose habitats are being protected? Who will step up to the plate to ensure assistance to those who love Hatteras Island but can no longer afford to live or work there?

Correspondence: I have been visiting Hatteras Island since I was 10 years old. I remember my dad bringing me down to fish off the beach and have loved the island ever since. Now that I am 30, we bring my entire extended family down twice a year. Oddly enough I am employed by Phipps Conservatory in Pittsburgh, PA. Yes, the same Henry Phipps that gave the land to the NPS for the recreation use of the people is also the founder of my place of employment. Being a nature lover, Mr. Phipps wanted to educate and show the people how plants, animals and people could coexist with each other. The NPS is going against his wish by creating the DEIS. During our bi-annual visits, we would always set up a spot on the beach near the point. This has been a tradition that we've always look forward to as the snow falls in winter here in the north. Speaking from a tourist point of view, closing the beaches would greatly impact our decision to come to the Cape Hatteras National Seashore. If our family is not able to access the beautiful beaches the island is famous for, there is no reason we should drive 10+ hours to sit at in our rental home for a week. My father and I attended the DEIS meeting in Buxton, NC on 4/26 and were very proud of the residents who had so many facts and reports to show that the recent closures of the past two years have not made a difference in the plover breeding success yet the NPS continues to penalize these residents to appease several special interest groups. I have been following this issue since the beginning and know it will crush the economy of the island if DEIS alternatives are passed. Based on personal experience,

I know my family's \$5,000-\$7,000 a year we spend on rentals, food, tackle shops and at restaurants will not return. As bad as I feel for the business owners, we can't justify the trip and expenses if we are not allowed on the beaches we come to enjoy. Many of the people who spoke at the meeting have lived on the island for generations and the economic impact of the Neg Reg has brought many of them to harder times than they've already been experiencing. Instituting further restrictions will only destroy the island economy more. It the hope of me and my family (as well as many other families) that the NPS realized the damage done over the past few years and begin to repair the relationships with the dedicated residents and scores of visitors by allowing beach access to all. The NPS is supposed to work for the people, not against them. With all the negative things happening in the world, Hatteras Island was our retreat, even if just for a week or two, to get away from it all and enjoy one of the most beautiful places in the world together. We can't imagine life without out it.

Correspondence: As a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. I was surprised to see all of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.
1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."
2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness...."
Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources, from my experience this is currently impossible.
3) I have seen first hand what ORV use does to a pristine environment, the degradation is horrific. From the several places I have seen, some in a beloved park near my home, it would appear there is a choice: either ORV use or an environment people can enjoy for quiet activities and where plant, aquatic and animal life is respected.
4) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.
Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

Correspondence: After comparing the alternatives offered for the management of Cape Hatteras National Seashore, I favor Alternative D - the environmentally preferred option - for the following reasons: 1) As noted by the Draft ORV Management Plan, this is alternative offers the greatest predictability. The issue of ORV use on CHNS has generated much controversy and conflict. Once a clear and relatively simple and straight-forward plan is adopted, most of the conflict will die down and all parties will move on. 2) Other alternatives include too many ambiguous measures that will result in further conflict. For example, Alternative F - the NPS favored alternative - states that "...circumstances could close that access corridor ...when shorebird breeding activity is observed..."(Table 10). ORV users and environmentalists are likely to have very different views at to what constitutes breeding activity that ought to result in the closure of an access corridor. Subjective measures such as these are likely to result in many more years of escalating hostilities between stake-holders. 3)Alternative D represents a simpler plan that will, consequently, be less costly to the NPS and taxpayers. This documents table estimates that Plan D will cost \$566,000 less per year than Alt F, the NPS favored option (see Table. 4)Alternative D still leaves 40% of all CHNS beach available for ORV use year-round (see page 114). 5)Finally, I favor Alternative D because it is the best option for protecting and sustaining vulnerable and threatened wildlife. Whenever human recreational interests come into conflict with the very survival of other species, we ought to choose the course that is least harmful to animal populations. The on-going tragedy in the Gulf of Mexico is a clear example of the harm that can result when the actions of humans go wrong.

Correspondence: My family has traveled to the Outer Banks for over 10 years. We consider this our home away from home. And as fate would have it, my parents retired there. I hope that my children would one day experience the thrill of their Grandpa driving on the point for a picnic and fishing. Given, We do not come to the OBX to drive on the beach, but it is an integral part of our Island experience. Just this past November, my family and I were able to drive to 'our spot' along the coast (just north of Avon) and spent all day fishing and storytelling. We cleaned up after ourselves, as always, then headed back to civilization at sun down. That (to me)? is the Outer Bank. Not the light houses, not the wind sports, but getting away from it all and grounding yourself with family and nature.
I myself am a wildlife fan. I completely support wildlife preservation. My parents instilled this into my upbringing, as well as being a long time Boy Scout. However, I have become disappointed in the fact that the NPS seems too muscle out the people to support a somewhat-prospective preservation issue. I feel that there is some merit in your report, and the general scope is true. However I think the 'pork' of the findings and recommendations for beach access are extremely obtuse. You can't expect to restrict beach access to the people because the general findings of extreme preservationists feel that species, some that even are non-native, decided to show up. It is unethical, and frankly un-American.
I really hope that the committee will find a happy-medium between the preservationists, and the rest of us. I feel that the fate of the OBX depends on this decision. Please think of your childhood here. Please think of my family. Please think of the children. Please do not let this statement pass without major revisions.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I am a supporter of national parks and do not like seeing them mismanaged for the pleasure of a few. I am submitting comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.
1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."
2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness...."
Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.
3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.
Drivers of Off Road Vehicles can use private property for their recreational activities, they do not need to destroy the wildlands. Cape Hatteras is a special place and needs to remain so.

Correspondence: The use of motorized vehicles in the park -- except for emergencies and fire -- is a totally unacceptable use of the area in question. Aside from being a nuisance due to noise and a hazard to those who walk the area, needless pollution due to oil and fuel leaks will result. The ability to carry in more food containers, and other disposables will add to the mess; from sad experience, I know these will not all be carried out, and the sheer amount will increase trash along the shore.
Also, destruction of dunes and other sensitive areas will be more prevalent; once in the more irresponsible riders will not be content with just "authorized" areas. They never are. And I know -- as do you -- that the park Service does not have the budget or manpower to effectively control such people. I wish it were otherwise; it is not.
Don't ruin this park, please!

Correspondence: I was born and have live for all of my 56+ years in the state of North Carolina. I have always been respectful of our state's resources and wildlife. I have

also always been a recreational fisherman and particularly enjoy time on the outer banks. I find all of you draft alternatives to be excessively punitive to fisherman. Without ORV access I nor my children and newly born grandson can truly enjoy our state's great treasure. I support the proposal to manage ORV's on the seashore submitted for consideration by the Coalition for Beach Access. My recommendation is the NPS accept this alternative. Short of this I request you postpone a final decision on the ORV plan pending further review and honest/open negotiation on the counter points. Short of this alternative F with specific changes is my second recommendation. Specifically: 1) 1000 meters enclosures have no scientific justification. 200 meters is commonly acceptable. 2) Protecting non-endangered species, the American oyster catcher, equivalent to the piping plover is just plain wrong! 3) Turtle protection should favor the collection and captivity hatching. This is practiced in southern states with great success. 4) Providing reasonable access corridors is required to provide citizens beach access while protecting wildlife. 5) The total true impact to the coastal economy is not realistically represented in the DEIS and is huge. 6) Restricting pets on a 6 foot lease should be allowed. Threats by Derb Carter (stating in Raleigh that option D is the only legally defendable alternative) should not deter you from providing balanced access while protecting wildlife.

Correspondence: The Cape Hatteras National Seashore is one of the greatest assets of our beautiful Outer Banks. It has been used and enjoyed by locals and visitors alike since its formation. Its value to our local economy is immense. Now it seems that the "rights" of a few birds and reptiles threatens to replace the rights of human beings to continue to enjoy access to this national treasure, even though humans and nature have managed to share this area very successfully for so long. It has been abundantly clear that the so called "environmentalist" have long had an agenda to close access to these areas - and now have a strong "foot in the door" towards this goal. There just seems to be no common sense applied to this issue in terms of beach closures, size of closures, extension of closures - but most importantly to the promises made back when the park was established that it would be an area always open to the public.
The saddest part of all is to think of my daughter who will only be able to look at the pictures of her grandfather, Ray Couch, catching puppy drum at the point and hearing stories about his fishing days with Aycock Brown on the beaches of the Seashore.....and very possibly never be able to experience the same type of access and freedoms that they treasured and lived for.
My family loves and respects nature and we also love and respect our beaches. I do not believe that one has to be to the exclusion of the other.

Correspondence: As a full time resident and small business owner on Ocracoke Island, North Carolina, I am writing in opposition to the dismissive, uninformed and unfeeling position taken in the DEIS on page 561, paragraph three, under "Assumptions, Methodology, and Impact Thresholds", on the effect of the proposed alternatives on the economy of the Outer Banks of North Carolina. Particularly distressing are the dismissive and unevaluated assumptions of the economic impact of the proposed alternatives on the individuals and businesses in the effected area, specifically Ocracoke Island and Hatteras Island.
May I ask how the writers of this DEIS proposal recommend or suggest that business on Ocracoke Island, reached only by boat or air, and acclaimed nationally and internationally for its beaches (in 2007 named the best beach in the entire country and the 5th best beach in the world by "Dr Beach"), "provide alternate products and services"?
Ocracoke is an island inhabited by about 800 people full time, supported mainly by various types of tourism based on small, locally owned and operated lodgings,restaurants, charter boats, ecology tours, tackle and gift shops and small scale commercial fishing. How can this economy, infrastructure and culture based on low key tourist traffic and fishing suddenly develop an industrial base, when the only way on and off the island for people and supplies is by a 40 minute ferry ride from the north, a 2 1/2 hour ferry ride from the west or private boat or plane?
The last sentence in this paragraph is as follows "If individuals visit other sites outside the Seashore, then these regions would experience an increase in business while businesses in the ROI would experience a decrease." My interpretation of this statement is that if the people of Ocracoke and Hatteras Islands lose their jobs, homes and businesses, become bankrupt and are forced to leave the islands, many with the graves of their ancestors who lived here as far back as the 1700's, it is okay with the environmentalists, federal bureaucrats, devoted protectors of wildlife and their lawyers as long as 0.52 piping plover fledglings a year have virtually unrestricted access to 12 miles of undeveloped beach and tourists spend their time and money elsewhere. Not only have visits by shellers, birders, fishermen and beach enthusiasts in general and their families decreased drastically with the current constant changes in beach openings and closings and have caused a loss of income to island residents and businesses, but business properties are now virtually unsaleable.
The title of the CAPE HATTERAS NATIONAL SEASHORE AND RECREATIONAL AREA PROJECT was administratively shortened to "shorter title of "Cape Hatteras National Seashore" in all correspondence, except formal memoranda and documents which require the correct, full name- --" in a memorandum dated May 10, 1954.
This recreational area was established, maintained, cared for, respected, loved, supported and enjoyed thru hundred of years by caring, thoughtful visitors and dedicated residents who realized their livelihood and enjoyment of the way of life they loved depended on maintaining the beaches, animals, birds, sea life and marshes of this very special place. Environmental activists and their lawyers who have no real, actual physical involvement, "standing" or knowledge of this very special place should not be allowed to so drastically change lives and denigrate the area.
Unless the 6 proposed alternatives in the current DEIS are reevaluated to include an actual and comprehensive evaluation of the economic impact of the proposed drastic changes in the economic environment of the Outer Banks, with thought, concern and appropriate weight given to the human element with the lives and financial well being of the human residents given appropriate respect, I recommend only support and approval of Alternative A.

Correspondence: Sir: I have enjoyed the outer banks of North Carolina for many years, initially with my parents, with my 8 children and currently with my 24 grandchildren. In all those years, I have seen the care and concern of the local residents as well as the multitude of visitors for the environment. The respect for the wildlife has always been foremost in peoples minds. I was appalled at the actions taken by the National Park Service, acting at the behest of high price political lawyers, whose only concern were the fees from those with political ambitions. I have always been a very great supporter of the National Park Service,feeling that they are the most under rated, under funded,segment of the government. I am amazed at the reaction taken in the Cape Hatteras Seashore area.This action if allowed to continue will forever tarnish the image of the Service, as one who bows to the wills of the political few and the high price legal vultures. To destroy one of the most beautiful areas of the country, with invalid assessments,as well as the economy of an entire area would be unconscionable. I would respectfully ask that you stick to your long standing values of protecting the public areas and the wildlife therein without pandering to the will of persons or organizations with personal agendas. I must also say that I as well as others have lost all respect for the Audobon Society and will never contribute one cent to their endeavors. Believe me that sentiment is shared by multitudes. Thankyou for the opportunity to express my views.

Correspondence: I appreciate the opportunity to comment on National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support Alternative D if modified to provide greater pedestrian access, which was identified in the DEIS as the environmentally preferred alternative. This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principals should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
Provide Equal Access for All Visitors: Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
Put Natural Resources First: Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
Establish and Meet Clear Goals for Wildlife Recovery: A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent

degraded abilities. Where birds, turtles and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Correspondence: I appreciate the opportunity to comment on National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support Alternative D if modified to provide greater pedestrian access, which was identified in the DEIS as the environmentally preferred alternative. This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principals should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
Provide Equal Access for All Visitors: Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
Put Natural Resources First: Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
Establish and Meet Clear Goals for Wildlife Recovery: A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Correspondence: I am a person who comes to the outer banks on vacation every year. I cannot tell you how much I love coming to this area. I have not read the document in question since I am not an expert in protecting wildlife. But as one of the people who uses the beach, I am one of the people who could contribute to the problems for the wildlife that you are attempting to protect. There has to be some balance between people and the wildlife since we are all entitled to utilize the resources and enjoy the beauty of this planet. I can tell you that the people who do frequent the beaches are extremely respectful of the rules that exist. We understand the need for them and abide by them at all times. If the beach was no longer convenient for us to use, we travelers would not come to the area. It seems to me that the wildlife and people currently coexist in this area very well. It would be better if the plan had some flexibility to it as suggested by the senators from North Carolina. Part of what attracts people to the area is the natural beauty that has been preserved by the Forest Service. So we are not looking for the rules to be less strict. Only that the rules allow both people and animals to coexist in peace.

Correspondence: Dear Superintendent Murray,
As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.
1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."
2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness..."
Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.
3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals. Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.
Sincerely,
A Concerned Citizen

Correspondence: I disagree with not allowing pets on the beaches. If a pet is kept on a leash, then there will be no harm to the wildlife. There are no sidewalks in the Hatteras area so it would be dangerous to walk on the roads. It would be a shame to lose a human life when they are trying to walk their pet due to a car hitting them when they could have been safe on the beach.
As a visitor to the Outer Banks, the fact that dogs were allowed on the beach in Hatteras Island attracted us to the area. We used to vacation in Southern Shores where they are not allowed on the beaches, so we quit visiting there. (They do have sidewalks.) This would cause pet owners to not want to vacation in the area which would cause a burden economically to homeowners renting their homes, rental companies, restaurants, stores, etc.

Karen and John Hartrampf 58883 South Beach Drive Box 781 Hatteras, NC 27943
Mr. Mike Murray, Superintendent Cape Hatteras National Seashore 1401 National Park drive Manteo, NC 27954
Dear Superintendent Murray
We write to urge you to decide in favor of keeping all beaches included in the Cape Hatteras National Seashore CLOSED to driving if they are located within the villages or other residential areas. We are homeowners for the past 12 years here, and have first- hand experience with the dangers to life and limb that accompany beach driving where swimmers and other beachgoers are present.
Although beach driving is a long tradition here, it arose out of necessity because of the lack of paved roads until relatively recently. Hatteras Islanders have eagerly embraced other improvements such as the electric co-op and water service. Nor do they spurn Hwy 12 as their main transportation artery. Why do they then demand unfettered access to the beach for cars and trucks?
We, too, enjoy beach driving for surf fishing in safe, designated areas. But a visit to these spots will reveal the deep ruts that are unsightly, disruptive to wildlife, and impossible for all but the hardiest to walk in without difficulty.
Enough! We feel the NPS, in a laudable effort to be fair, has now expended too much of the taxpayers' money, and wasted 2 years in fruitless "Negotiated Rulemaking." Please rule responsibly in this matter, and preserve our Cape Hatteras National Seashore and its flora and fauna for the people.
Fervently for our Seashore,
John and Karen Hartrampf

Correspondence: Mr. Murray,

It has been brought to the attention of the kiteboarding community that a variety of plans are being considered in response to proposed environmental and ecological concerns. The Outer Banks of North Carolina is a sanctuary for many beach goers, sports enthusiasts, wildlife observers and most importantly, the natural environment. We, as a community, feel that it is important for the environment to be protected and thus understand certain steps may be needed to achieve this goal. Thank you for evaluating the options to improve the environmental conditions at one of the greatest destinations in the United States of America.

However, with the aforementioned said, please consider the responses you choose carefully. Minimalist environmental management approaches have worked well throughout the United States' National Parks. Closing extensive sections of beaches, the sound, and water ways will strip away the very nature and reason for why we appreciate the land in its current state. It can be said with great certainty that all frequent and casual users of this place intend to preserve its natural beauty and respect its wildlife.

We strongly feel that the Historical, Cultural, and Economic ramifications of the proposed plans have not been adequately addressed by the Draft Environmental Impact Statement (DEIS) as is required.

Should the environmental changes impact our communities' sport (as it would in Plans D, E, & F) we would be forced to reconsider our frequent and environmentally friendly utilization of the Outer Banks. Other user groups such as surfers, fishermen, beachcombers, and virtually all other forms of tourism will also be discouraged from visiting Cape Hatteras if beach closures are greatly expanded. This will have a severely negative impact on the local economy and way of life that the residents of Hatteras Island have enjoyed for many generations. It will also take away something that is important to the lives of thousands of people throughout the United States and around the world.

If people, and especially children, can not experience the environment how are they going to learn to help you protect the environment?

Kind Regards, Brian Kimsey

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.

This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.

The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this

approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.

* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.

* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.

It is very important to me for there to be more opportunity for non-ORV uses of the beaches and for less disturbance of wildlife, which I believe this alternative plan would provide.

Please see the following list of important concerns that need to be addressed in the final plan if the Alternative D act is not approved.:

*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least HALF of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.

* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan does NOT set aside adequate areas that are FREE of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are very few and should be increased if necessary to protect breeding birds and sea turtles.

* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and objectives for wildlife recovery. Where there are management targets in the DEIS, they need to be upgraded on the basis of the potential of the Seashore to support wildlife rather than on the degree of support the Seashore shows presently. On the basis of annual reviews that indicate that birds, turtles, and plants are not coming back as planned, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

In my humble opinion, the National Parks do not exist only for human recreational activities but also for preservation of the wildlife and the habitat that supports it. If we do not actively protect an environment such as the National Seashore, how can we experience it, appreciate it, or treasure it?

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: To think that the National Park Service is even considering an expanded restriction of any kind for Beach Access to the Cape Hatteras National Seashore is setting a dangerous precedent in our time. Current conservation and environmental policies at the CHNS are completely adequate in safeguarding the habitat of all sea and shore birds and other wildlife inhabiting the beaches and connected areas.

Allowing so called environmental organizations to come in and dictate policy based on incorrect science is appalling. There is a current trend in the United States of so called environmental organizations filing law suits against various other businesses, industries and organizations in order to push their own agenda and force their ideals upon others. In almost all cases their so called facts are based upon bias and directed science, not scientific fact based on complete and documented research that includes all pertinent information available. They only wish the outcome as they see it, not as reality

exists.

I have had direct involvement with so called environmental organizations with which to base my opinions. I had spent 10 years volunteering with one such organization here in California. Their views are a good example of the whole of current "environmentalism" in the United States that forces ideals that have no basis of absolute fact. They wish to "save" something that is not in danger of being lost, in any way, which always has a damaging effect on certain businesses, industries and the economy overall.

I am all for conservation but is there a reason that we have to go overboard? I live and work at the beach. I've not seen any need for excessive conservation efforts because there has always been a good balance between humans and wildlife that coexist in those areas. People go to the beaches to be able to interact with nature, not destroy it.

The visitors and locals who use the Cape Hatteras National Seashore have shown that they have a healthy respect for the wildlife that inhabits the area. Why there has to be a change in policy based on nothing other than some organizations beliefs is beyond me.

Thank you, Greg Smith Los Osos California

Correspondence:	Dear Park Managers, Does this document take into account sea level rise and the break-up of the Outer Banks into multiple islands? Dr. Stan Riggs predicts multiple new inlet formation in the near future and the end of Highway 12 as the one transportation link. With new inlets there will be new habitat at new locations and these areas would need resource protection management. I do support pedestrain access, where appropriate and with disturbance buffers, along the shoreline in areas that are closed to vehicles for resource protection. I hope to take my daughter to the seashore as visitors and walk out to the point without tire ruts and vehicles, at certain times of the year. It doesn't have to be all access or no access (no vehicles and no pedestrains). Thank You.

I discovered our Outer Banks as a child, but didn't really come to fully appreciate them until I became an adult. We have fewer and fewer unspoiled places such as this to relax, reflect, and enjoy the beauty of creation. I understand the need to preserve our natural resources, but what's the use if we're denied access to them? The Outer Banks aren't just a great place to fish - although that is definitely the case! They are a great place to connect with nature. The people I've encountered in the remote areas, such as Cape Point on Hatteras Island, love and respect the land. They do not destroy it, as seems to be the thinking of those trying to deny access to it. They drive where permitted, and leave the other areas undisturbed, and peacefully co-exist with the wildlife and foliage. What a shame it would be if the areas were no longer accessible - think of what the future generations would miss out on! It's hard enough to get our kids today to leave the video games and go outside - why take away one of the most wonderful, special places on earth in which they can learn and grow, experience nature at its best? Please don't let this happen! Find a happy medium by which we may still share in the beauty and awe of the Outer Banks!

Where birds, turtles and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well

as breeding ones.

Sea turtles need this protection. With the oil spill in the Gulf threatening them so much more, this management of ORV in the Cape Hatteras would be very beneficial to the turtles and the other wildlife in the area.

Correspondence:	<p>Written Public Comment Addendum, 5/10/2010 Submitted by Alan Pitt To whom it may concern:</p> <p>In light of recent revelations concerning NC "Species of Special Concern" shorebird species, specifically American Oystercatchers, (AMOY), Least Terns, (LETE), and the ESA threatened Piping Plover, I wish to make an additional comment beyond my original dated 5/7/2010.</p> <p>Pursuant to the following newspaper article: http://hamptonroads.com/2010/05/orv-plan-gives-too-much-space-some-species-critics-argue Excerpts in relation to AMOY et al protection distances are discussed by NCWRC Executive Director Gordon Myers, as published in the "Virginia-Pilot" online newspaper, authored by Catherine Kozak,(cate.kozak@pilotonline.com), (Referenced link above) "State-listed "species of concern," - such as the American oystercatcher - do not require the extensive buffers and beach closures mandated for federally listed species such as the piping plover, said Gordon Myers, the executive director of the North Carolina Wildlife Resources Commission. Myers said that's beyond the intent of the state law; the state designation is supposed to be more of a call to action for a species. The Wildlife Resource Commission, he said, will voice its objections to the use of state "species of concern" lists to trigger ORV management strategies under the federal Endangered Species Act. "That is of concern to us because it's apples and oranges," he said. "To treat it as synonymous with threatened and endangered is not congruent." " Given this information, along with the stance of the NCWRC in relation to AMOY buffer distances, I respectfully request that the AMOY buffers are reduced or eliminated outright, along with any other NC listed "Special Concern" species such as Least Terns. (LETE) Continued: " "In a letter about the 810- page draft plan sent to park Superintendent Mike Murray on Tuesday, state Sen. Pro Tempore Marc Basnight of Manteo and state Rep. Timothy Spear of Creswell also questioned the 1,000-meter buffers required in all directions around an unfledged piping plover chick. " "We have yet to read any scientific reasoning behind this management strategy," the legislators wrote, adding that a more reasonable buffer would be 200 meters." " I agree with and support the recommendations set forth by Sen. Pro Tempore Basnight and NC US Rep. Spear, that the 1K meter buffers for PIPL be reconsidered at 200 meters.</p>						

Continued:

""Basnigh and Spear support Dare County's request to establish corridors around closures so public access to open beaches can be maintained, and to decrease buffers for non threatened species from 300 meters to 30 meters.

Resources commission director Myers said the Park Service has always looked at numerous factors in determining its resource protection needs, including state lists. But until the draft plan stated - on page 419 - that the agency was managing state-listed species similarly to federally listed species, its policy had never been in black and white, he said." "

I agree with and support the recommendations set forth by Sen. Pro Tempore Basnigh and NC US Rep. Spear, that the 300 meter buffers be reconsidered at 230 meters for any and all NC Species of Special Concern.

In addition, the recommendations within the AMOY section of the DEIS in Chapter 2, Page 136, Table 13, Alt F that states "Prohibition of pets within the seashore during breeding season including in front of the villages, and establishment of breeding and non-breeding SMA's would benefit the AMOY". Due to revelations per the NCWRC recommendations, I respectfully ask that the AMOY pet recommendations be thoroughly and completely removed from the FEIS and final ORV ruling.

Also, a reference to PIPL on DEIS Page 66 of Chapter 2 reads "Pets should be leashed and under control of their owners at all times from March 15 to July 31 on beaches where PIPL are present or have traditionally nested. Pet's should be prohibited on these beaches from April 1 to August 31 if, based on observations and experience, pet owners fail to keep the pets leashed and under control"

Again, due to revelations pre the NCWRC recommendations, I respectfully ask that these PIPL pet recommendations be thoroughly and completely removed from the FEIS and final ORV ruling.

Please see to it that our extended family members, IE our pets, are not unfairly excluded from our national seashore.

Alan Pitt Richmond, VA/Frisco, NC

Correspondence: To Whom It May Concern:
Pea Island is a National Wildlife Preserve already established since 1938 for the preservation of wildlife. The seashores of Hatteras Island were put aside for public recreation.
The American people do not want these seashores taken away from their families. If this continues, we will find ways to get your people out of office and restore order. This is another example of the misuse of power in our government. It is not your right to take these seashores from the people of America.
As civilized and educated people, we can find ways to share the seashore with the animals that inhabit it.
Thank you for your consideration.

Correspondence: Dear Superintendent Murray,
As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.
1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."
2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness..."
Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.
3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.
Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

Mike Murray, Superintendent Cape Hatteras National Seashore 1401 National Park Drive Manteo, NC 27954
Dear Superintendent Murray:
We are writing with regard to the proposed Cape Hatteras National Seashore Recreational Area Off-Road Vehicle Management Plan Draft Environmental Impact Statement, Alternative F. After lengthy and careful review of the above referenced document, related documentation, scientific data and discussion with residents and business owners, we have come to the conclusion that the DEIS, Alternative F, as proposed is flawed and lacks the balance necessary to maintain harmony between the wildlife we seek to protect and the rights of the residents, visitors and business owners of the region.
First, we have serious concerns as to the scientific basis for the sprawling piping plover buffer zones proposed in Alternative F. In that regard, we must support the Coalition for Beach Access' and Dare County's positions on this matter. To require a buffer zone of 1000 meters is unnecessary and scientifically unfounded. A more reasonable, scientifically supported buffer zone would allow the species to thrive and still allow visitors and residents access to enjoy the beach and support the local economy. We would request that relocation efforts be allowed for endangered sea turtle nests as well, especially in light of the fact that nests can and have been successfully relocated in other states resulting in minimal loss. There are more reasonable buffer zones and relocation alternatives to consider which result in a much more balanced proposal.
Second, Off- Road Vehicle access has been the cornerstone of this beach's visiting public and the backbone of the local economy. Severely limiting ORV access denies the citizens of this country the right to the enjoyment of all this serene and beautiful beach has to offer. ORV access is the reason this beach doesn't have huge ugly parking lots, numerous man-made walkways and bathroom/snack facilities. Visitors pack what they need in their vehicles, they fish, swim, sport, shell, bird and enjoy this beautiful beach and then they pack up and leave only tire tracks which are washed away by the tide, leaving the beach again untouched, clean and breathtaking in its beauty . We have been visiting this area for many years, spending two weeks at a time during various seasons and each time, we are struck by the harmony that has been achieved between the management of the park, the visitors and the wildlife. The current management plans have effectively and fairly handled ORV access issues with informed decisions, respect for the wildlife we come here to observe and the flexibility they need to maintain balance. To remove ORV access and management's flexibility to change user patterns and implement corridors to maintain access will effectively close this beach and eventually destroy the local economy while slowly crumbling the rich culture that these barrier islands hold.
Third, after speaking with residents, business owners and reviewing the numerous affidavits attached to Dare County's Position Statement, we find it incomprehensible that Alternative F can claim that the projected economic result of its proposal is "negligible to moderate". Businesses began failing in direct correlation to the issuance of the District Court's Consent Decree, NOT when the nation's economy began to falter. Affidavit after affidavit testifies to the fact that customers and visitors have been angered by the beach closings and have indicated they will not be back if they can't use the beach.
In summary, we would urge the National Park Service to reconsider its proposed restrictive covenants and keep in mind the original intent and promises made to the people of this region when this park was first established by Congress in 1937. A balance can be achieved without destroying an entire region's livelihood. We all want the wildlife to flourish as well as preserve the people's right to enjoy this unique seashore experience. Let's leave our tire tracks like we've been doing for decades and come back another day to a breathtaking sunrise.
Sincerely,
Dave and Donna Lawson Boyette House Condominiums 45 Ocean Road, Unit B, Ocracoke Island P.O. Box 239 Marydel DE 19964 302-670-4461

Correspondence: National park Service:
Please don't close the Hatteras Beaches. Closing the beaches will have a devastating effect on the tourism industry of the Outer Banks, NC. Outer Banks hotels, restaurants, tackle shops, charter boats, gas stations, grocery stores, etc. all rely on the tourism industry. If the beaches are closed, all of these industries will suffer.
I come down to Hatteras 10+ times a year. I spend money at NC hotels, restaurants, tackle shops, gas stations, and grocery stores. If you close the beaches, I will not come back. I am sure that a lot of other folks feel the same way.
Sincerely,
Brian Sechrist

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more

balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: Off road vehicles have no place on fragile expanses of beach such as Cape Hatteras. They disturb the wildlife and the peace of those who like to walk in solitude with only the sound of the surf. These vehicles are unbelievably destructive and should be confined to places where those who want to enjoy silence or quiet conversation and beautiful scenery don't come. Thank you for your attention to this very important matter.

Correspondence: As one who visits the Outer Banks for birds and solitude, as well as summer swimming, I urge you to minimize beach ORV use. There is no reason to allow joy riding which can take place many other places at the expense of other beach users, both human and animal/bird. Fishermen can walk like the rest of us, and really want their cars for beer and boomboxes. (The best fishing is in mid-autumn anyway.) At the very least, they should be severely curtailed during the bird and sea turtle nesting season. These people do far more damage than their relatively small numbers would suggest, and seem to have more political weight than their numbers warrant. Extensive ORV use has no place on a National Seashore, and if allowed at all, should be greatly limited in space and season of the year. You don't have the personnel to police when and where they go, so it is best simply to prohibit them. ORV users have no respect for other beach users who try politely to explain when they are out of bounds and creating habitat damage.

Correspondence: Dear Superintendent Murray,
As a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.
1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."
2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness..."
Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.
3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.
Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

Correspondence: I am a resident of Virginia who vacations at Nags Head and Ocracoke several times a year with my family. I believe the Dare County DEIS Position Statement is preferable to the National Park Service's Preferred Alternative (F).
I have been coming to the Outer Banks for 30 years, and part of our experience is driving on the beach and fishing, which we have always done responsibly.
Please accept the Dare County guidelines or at least postpone making a permanent decision without further study.
Thank you.

Correspondence:	<p>I'm sorry, but I received this information too late to thoroughly review the DEIS. However, I think it is imperative that we do as much as possible to keep these nesting/breeding grounds from being overrun by ATV's and other unnecessary human disturbances. While, it is not necessary for people to operate ATV's on the beaches, it is necessary for the birds and turtles to nest there in order to perpetuate their species. Personally, I would rather the ATVs go extinct than the birds and turtles. As an individual who enjoys listening and watching wildlife, I abhor the intrusion of noisy machinery tearing up the beaches. These ecosystems are too delicate to sustain that kind of abuse, and it is destroyed for the rest of us who appreciate it, as well as the wildlife who depend upon it. They need to take their ATV's elsewhere and, if they can't find another place to wreak havoc, good.</p>

Correspondence:	<p>I appreciate the opportunity to comment on National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support Alternative D if modified to provide greater pedestrian access, which was identified in the DEIS as the environmentally preferred alternative. This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.</p> <p>The following principals should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:</p> <p>Provide Equal Access for All Visitors: Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.</p> <p>Put Natural Resources First: Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.</p> <p>Establish and Meet Clear Goals for Wildlife Recovery: A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones. It is just dismal how many sea turtles have died and are suffering unspeakably due to the continued pumping of 5,000 gallons of oil since April 15, into the gulf off the coast of Louisiana. Please help these majestic, magnificent creatures find a safe haven at your beautiful Cape Hatteras with safer, more protective guidelines prohibiting ORVS. Thank you. Judy Stobbe</p>

Correspondence: I appreciate the opportunity to comment on National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support Alternative D if modified to provide greater pedestrian access, which was identified in the DEIS as the environmentally preferred alternative. This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
 The following principals should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
 Provide Equal Access for All Visitors: Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
 Put Natural Resources First: Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
 Establish and Meet Clear Goals for Wildlife Recovery: A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Correspondence: Dear Superintendent Murray,
 As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.
 1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."
 2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason. "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness..." Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.
 3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals. Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

Correspondence: If the Federal Government is so worried about protecting wildlife, you might try stopping all off shore drilling. One oil spill will destroy more wildlife than ten years of running over the nesting grounds with vehicular traffic. You all need to get your priorities straight. I would think this last episode with BP's oil well in the gulf would be sufficient enough for the govt. to halt production of any additional wells. I understand Virginia is trying to get new drillings passed off shore of their coast. I believe the fishermen and most of the recreational users of the Outer Banks Beaches deserve to use the shoreline as it has been used for generations. I feel your temporary closures and roping off areas are more than sufficient to protect the wildlife. Some of

these species are far from endangered and I sincerely believe the Govt. is hyping that up a bit to much. The Plover in question is very prevalent in other parts of the county. Texas has an abundance of them. They may be scarce in N.C., but they are far from endangered. Use some common sense and not just listen to the one sided versions by the various wildlife groups. You will destroy the fragile economy of the Outer Banks if you pass these restrictions. You might as well close down all the tourist traffic from the hotels at Nags Head from going swimming on the beach. Same principles apply to the wildlife on those beaches. Close it all and see how fast the tax dollars shut down going to the state and government coffers.

Correspondence:	I'm concerned about this plan because I understand that the area is a major sea turtle habitat. Baby turtles have difficulty navigating tire tracks on their (already somewhat treacherous) journey to the safety of the water. I'm also concerned that female turtles will be frightened of the bright lights and loud noises and will not nest properly. Please also consider people who would like to visit the beach (especially with small children) to enjoy the peace and quiet offered by wilderness. Almost everywhere else we go is saturated with vehicle noise - please keep this place the serene place it has always been.

Correspondence:	<p>1) Page 201: I disagree with the NPS statement: "Even with resource closures in place, protected species are still at risk [from pedestrians and ORVs]." No Piping Plover deaths have been attributed to ORVs. ORV violations continue to decrease as signage and education improve. Pedestrian violations are much more significant than ORV violations. It seems to me that any transgressions into protected area are the result of lack of NPS manpower and enforcement than the public purposely and willfully violating out of bounds areas.</p> <p>2) Page xxiv: I question the statement of as per the DEIS: "Carrying capacity would be a 'peak use limit' determined for all areas based on the linear feet of beachfront?" If you close off huge sections of the beach, you force more people into smaller areas, potentially resulting in more resource impairment and diminished visitor experience.</p> <p>3) Page xix and page 23: I am against having two different closures rules pertaining to the North facing beaches (North side) and the South facing beaches (South side) as per the grid outlined in Alternative "F". I disagree with the NPS proposal to close the beaches in villages of Frisco, Hatteras and Ocracoke Villages to ORV access longer than the traditional May 15 to September 15 period for the Northern beaches, even though seasonal visitor statistics are similar for all villages. Please, make them the same: May 15 -> September 15.</p> <p>4) Page 1: I agree with your statement "ORVs have long served as a primary form of access for many portions of the beach in the seashore, and continue to be the most practical means of access and parking for many visitors." However, pedestrian only areas discriminate against individuals with limited mobility due to age or physical impairments, families with small children, and those wishing to engage in activities requiring recreational equipment (boogie boards, beach umbrellas, beach chairs, coolers, fishing rods and tackle, etc)</p> <p>5) Page 53: I disagree with the special use permit proposed guidelines. It is impractical to allow the transportation of disabled visitors to the village beaches and then require the vehicle to be returned to the street or parking area. This necessitates the disabled person to have a driver to drop him (or her) off, then drive to a parking area, then trudge a long distance to the site of the drop off, then trudge the long distance through the sand back to get the vehicle. Suppose the handicap person wants to go to the beach, is capable of driving himself, yet cannot find another person to go with him? Does he now not go to the beach? This rule creates unnecessary hardships and risks in the event of an emergency as well.</p> <p>6) Page 121 ? 127. I strongly disagree with the buffers as presented. We must allow for pass-thru corridors. The beach is linear with the ocean buffering on one side and the dune line on the other. For example - If you pinch off access on one side of a 4 mile linear beach and pinch off access on the other side of the 4 mile section of beach with no corridor, then you effectively have closed off all 4 miles of the beach because you CAN'T get there. The proposed bird buffers are too large, blocking access to the interior sections from the two "buffered" ends. I propose ORV pass-thru only corridors and to use breeding / nesting buffer distances to establish ORV pass through only corridors to ensure beach access in a way that does not hinder resource protection. I believe pass through corridors should be maintained for pedestrians and ORVs in all areas of the Cape Hatteras National Seashore Recreational Area throughout the entire breeding and nesting season. Corridors are vital to providing access in a way that does not hinder resource protection. Piping Plover unfledged chicks buffer should move with the brood as it relocates to reliable food source, not expanded. The 1,000 meter distance for the piping plover is way too large and not based upon peer reviewed science. A more rational distance would be 200 meters per other sites in the nation for the piping plover. Ample scientific evidence and precedent exists to support a 200 meter buffer. Buffers for other species, including American Oystercatchers, Least Terns and Colonial Waterbirds must also be changed. An effective 30 meter buffer should be established for these species rather than the 300 meter closure outlined in the DEIS. NON-ENDANGERED BIRDS should not have same protection as if endangered. Not allowing ORV access is paramount to denying the public access to these beaches.</p> <p>7) Page 468: I disagree with the limitations imposed on pedestrian and ORVs. Corridors or bypasses should be provided thru, around or below high tide line in all SMAs during entire breeding season to maintain access.</p> <p>8) Page 124: I strongly disagree with the NPS slant of providing for over protection of resource management over that of the public's right to access the beaches. Pro-active initiatives include: Vegetation Management, Habitat Management, Enhanced Predator Management, Colonial Water bird social attraction, Piping Plover check fledge rate, Piping plover chick buffer distance, and pass-through buffers during the incubation period. Opportunities to implement less restrictive closures as a result of the above initiatives should be considered more frequently than the 5-year periodic review process identified in the DEIS.</p> <p>9) I disagree with the NPS Resource Management Pedestrian / ORV Closure Policies. These policies address the least significant factors affecting nest survival with little chance to have more than negligible impact. For example: the AMOY Nest Failures are predominately due to non-human events. Using your own stats, the mammalian predation is 54%, Storm / Lunar Tides: 29%, Nest Abandonment: 6%, Avian Predation: 5%, and Ghost Crab Predation: 3%, So what is the percentage due to human interference: just 3%! It's insignificant, yet the NPS wants to ban humans when their actions provide very little influence on the success rate of breeding birds and turtles.</p> <p>10) I disagree with the stats of breeding plovers and the other birds in the Park when the NPS does not adequately consider locations neighboring the Recreational Area that are part of the same ecosystem, namely dredge and spoil island that are located just yards away and within sight of the seashore. These birds are part of the same ecosystem and should be included. Those spoil islands, developed by man from dredging the waterways in the Pamlico Sound for channel upkeep are slammed full of birds. The reason why so many birds? NO PREDATORS. SO, birds are not as stupid as one might think. You have to count these birds and incorporate them in the stats when the NPS is talking about any so called decline in breeding pairs in the National Park.</p> <p>11) Page 1: I do not think the DEIS responsibly addresses the cultural resource issues. The very purpose of the DEIS as set forth in the National Environmental Policy Act (NEPA) is to protect and preserve natural and cultural resources in the federal decision making process. In the DEIS, the statement "protect and preserve natural and cultural resources" appears in the first sentence of the first page of the plan, in the Purpose of the Plan section, and numerous times thereafter. Yet, the 810 page document devotes only two paragraphs to analysis of cultural resource issues. As a resident of Hatteras Island, we of the Hatteras Island community have always gotten together on the south beach on weekends to enjoy the beach with our cookouts, gatherings, tanning, games, fishing, and surfing. Now the DEIS is proposing closing off most of the south beach during the summer</p>						

which is the traditional period we local people use the beach. The continuation of this traditional pattern of land use is central to maintaining the historic identity of our island communities.

12) Pages 270-281; 561-598: I strongly disagree with your economic analysis of the impact of the DEIS. The region of influence (ROI) incorporates the Northern Beach communities, including Kill Devil Hills, Kitty Hawk, Southern Shores and Duck. These areas are almost completely disconnected from ORV use and access issues relating to the Seashore. ? Inclusion of the Northern Beaches in analysis significantly dilutes estimates of economic impact on the 8 Seashore Villages

? Analysis of economic impact to the Seashore Villages appears to be significantly down played. Emphasis in DEIS is on the ROI-wide or county-wide level impacts.

? Nowhere is it clearly addressed that the overwhelming majority of negative impacts will be felt by small businesses in the Seashore Villages rather than by overall economic interests within the greater ROI.

On page xlvi, Alternative F is characterized as having a "negligible to moderate" adverse impact on small businesses. I strongly disagree with this statement.

I believe the negligible to moderate projection is inaccurate and relies on economic surveys that has not yet been published. Furthermore, this material is not expected to be added to the DEIS until after the public comment period has ended.

Based upon the economic harm we have already experienced under the consent decree, Dare County projects the economic impact of Alternative F to be substantial.

Beach closures have already had a devastating and unfair impact on many Dare County Businesses, causing foreclosures, bankruptcies, lay-offs, cutbacks, expensive refinancing, and depleted college funds and savings accounts.

Even businesses whose revenue has stayed level or showed a modest increase have accomplished this at a costly price. Many have had to cut back employee hours, forego much-needed capital improvements, and sacrifice profits.

Pages 270-286, 561-598: The socio-economic data and analyses are incomplete and erroneous and result in an understatement of the effect the restrictions will have upon the Island, the region and the state of NC. The US Park Services answer: Businesses will have to "adapt" to the new rules. (p.383) The negative economic impacts of the decree ARE KNOWN, so to say that the added restrictions would have negligible to moderate impact is indefensible.

13) Overall Visitor Counts - Overall visitor counts appear to include visitors to Fort Raleigh National Historic Site and the Wright Brothers National Memorial. A large percentage of these visitors vacation in the Northern Beaches communities and recreate on the non-federal beaches outside of the Seashore. Visitors who patronize the Fort Raleigh National Historic Site and the Wright Brothers National Memorial but do not visit the actual seashore areas need to be factored out.

Maintenance of Future Access to Cape Point and South Point Ocracoke: All socioeconomic analyses related to Alternative F are predicated on the assumption that access corridors will remain open for at least an appreciable portion of the visitor high season. Under Alternative F, the access corridors will be subject to Resource Closures based on buffers similar or identical to the Consent Decree. Unless some predictability of access to Cape Point and South Point Ocracoke can be assured, economic analyses predicated on assumption of access are fundamentally flawed.

Why would a group of surf fishermen want to come to Hatteras Island to surf fish if they are not sure they can access the prime fishing grounds at Cape Point? The answer is they won't come. If they don't come, they don't rent vacation homes and spend their money on Hatteras and Ocracoke Islands.

The definition of the Region of Influence (ROI), faulty data on economic activity generated by specific type recreational activity, incomplete visitation/business survey data, inflated overall Seashore visitor counts pertaining to beach use, and flawed key assumptions concerning the maintenance of access under Alternative F, all lead to inaccurate conclusions in the socioeconomic analyses. Specifically, these inaccuracies can be seen as understating the negative socio-economic impact of the Seashore Villages. Further, this negative impact will be absorbed almost entirely by Small Businesses. Neither of these important aspects of the management alternatives are adequately presented in the DEIS.

14) Page 136: I strongly disagree with your pet restriction proposals. The "prohibition of pets in the Seashore during bird breeding season including in front of the villages." = No Pets in public areas ?beaches, campgrounds, soundfront, foot trails, park maintained roads -from March 15 ?July 31. I propose allowing pets on 6 foot leashes year-round in all areas open to pedestrians or ORVs. 15) Pages 125; 392 ? 396: SEA TURTLES. I disagree with the stats and procedures proposed. I think endangered sea turtles would benefit from management practices now in use at other federal seashores that are more proactive in efforts to achieve nesting success. This includes relocating nests to more desirable locations as is done in other state and federally controlled areas.

The Cape Hatteras National Seashore Recreational Area is on the northernmost fringe of turtle nesting locations for the southeast, accounting for about 1% of all turtle nests. Proposed buffer areas are not needed for protection of the turtles and amount to overprotection.

16) Pages 97- 101. I strongly disagree with proposals in this section saying that ORVs will be prohibited year round between ramps 27 and 30, at Hatteras Inlet (Hatteras Spit), Ocracoke Inlet (North Ocracoke Spit) and various other locations.

Not allowing ORV access is paramount to denying the public access to these beaches. They are located miles from the nearest parking or paved road area and too far to access on foot. As a matter of course, there has been no breeding of piping plover or other endangered species at the Hatteras Island Inlet (spit) area in the past 6 years.

17) Page 104: I disagree with the proposed night time driving closures. Per your proposals, night driving will be prohibited between May 1 and November 15th, forcing visitors off of the beaches early in the evening and preventing sunrise surf fishermen access in the morning. I propose a more moderate night time ban if one is needed, perhaps from June 1 ? September 15 with times being 1 hour after sunset and 1 hour before sunrise to allow beach goers to gather their stuff and exit the beach area.

Certainly more proactive measures such as relocating nests prone to weather and ocean events would dramatically increase the nesting success rates.

18) Page 121: I disagree with the proposed beach closings, including pedestrian access from March 15 until July 31 in 8 different beach locations which have traditionally been available. Please leave these areas open to beach walkers, shell collectors and those that want to access the beaches in these areas.

Conclusion:

Please, incorporate access corridors through any SMA so we can get to the open beach beyond. Incorporate the birds into the count that nest on the spoil islands. Base your buffer zones on peer reviewed science and scale them back to more reasonable distances as discussed.

It is neither logical nor reasonable to spend so much time, money and energy to overprotect a bird (Piping Plover) in the Cape Hatteras National Seashore that is on the southernmost fringe area of its breeding ground. That goes for the loggerhead turtle that is in its northernmost breeding area.

Let's scale back the buffer zones. You can always increase at a later date.

The USPS is leaning way over the line on over protection and not enough on the public's right to enjoy the beaches of the National Seashore. The proper balance is not achieved in the propose DEIS and needs to be modified so that the proper balance of reasonable resource protection and access to the beaches of the National Park is achieved. I could sum it up by saying "Protect, not Prohibit."

Correspondence: Me and my family have visited Hatteras Island for some 20 years. We fell in love with the island and its culture so much that seven years ago we decided to buy a future retirement property on the island. We are deeply concerned that the recent action, initiated by a non-resident, special interest lobby group will change, for the negative, not only the island's culture but may totally destroy its economy as well.

While we are not great fishermen, we do like to fish occasionally and appreciate and respect others whose sole passion is fishing.

While we have a four wheel drive vehicle, we do not consistently drive up and down on the beach - but when we do, we love the freedom to do so.

While we do not have a dog, we do understand (as long as they are controlled) that others like to have their pets with them on the beach.

We are greatly disturbed that the proposed legislation would severely restrict or even in some cases totally eliminate these activities in certain areas and/or in certain places, needlessly.

0012207

We are aware of the need to protect wildlife - particularly if it is endangered, but not at any cost, when other more logical methods can be found. We also strongly disagree that anyone has the right to kill one species of wildlife to protect another.

Some parts of Hatteras Island are inhabited and have been inhabited for many years by humans. Some parts, like Pea Island are not. In addition, the wilderness has reclaimed islands such as Portsmouth and most of Ocracoke Island. While there is no question that it is possible to totally turn Hatteras Island into a wilderness - the question is why and at what cost. This is what we believe that this 810 page document does not address adequately.

This whole legislative action was spawned by a legal action by an external, special interest lobby group suing the National Park Service. If this legislation does go through, and it will damage the island's culture and economy - who will pay for the cost of future litigation and damages against the NPS? Since the NPS is a government agency - I do not want the double jeopardy of being both damaged by the legislation and having to pay for its defense. Furthermore who will pay for the cost of the enforcement - which judging from the last few years has been unconscionable, given what little result they have achieved and that is not counting the economic damages that the temporary legislation has already caused.

Here are some suggestions that I believe do make sense;

1. Get an agreement that is legally binding that will ensure that the Audubon Society will pay for all litigation and damages that may come as a result of this legislation. I am sure that they will not agree. Therefore the NPS in drafting this legislation should listen to the residents and the people that this legislation will directly and indirectly affect, and not to some external special interest lobby group.
2. Get the Audubon Society to pay for the cost of enforcement for any legislation - if they won't, then there can be no enforcement unless the residents, who pay the taxes agree.
3. More practical is moving the few endangered animals to areas where they are not in human contact - this has and is being done right now. There is plenty of room.

Correspondence: Dear Superintendant Murray,

I introduced myself to you at the Lost Colony Chamber function on Friday. I apologized to you for some of the rude and emotional behavior displayed recently by a few Hatteras Island residents even though I do admire their passion.

I just read Stewart Couch's comments and I appreciate his efforts and agree with his thoughts and comments on this crucial matter. I have not put in the time that he and others like Sam Hagedon (he was with me on Friday) have by attending all the Negotiated Rulemaking Meetings, etc. So in a way I feel like I am riding on coat tails here, but nevertheless, I am a law abiding, tax paying citizen who works every day and enjoys each moment spent on Hatteras Island.

Here is my simple thought and only comment: You have heard it all, from all sides. I am trusting you to do the right thing. I believe you to be an honest man with no hidden agenda. If I am correct, you will find a way to return peace and harmony to our community (and their guests), who have lived in harmony with nature for a long, long time. That is the right thing to do and I believe you know that.

Thank you, Dottie Reed

Correspondence: Dear Superintendent Murray,

As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.

- 1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."
 - 2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness...."
- Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.
- 3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.

Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

Thanks for your time,
Cynthia Gillette

Correspondence: I have been visiting the Outer Banks for the past 45 years, first with my parents, now with my own family, and friends. You must find a way to protect, not prohibit access to the beaches, for all who love, work, live and visit these beaches. One of the greatest walking beaches on the east coast of the Americas is from the Cape Hatteras Lighthouse to the Point. Keep the beaches open for the people and let the people will protect them!!!

Correspondence: My comments concern the DEIS of the Off-Road Vehicle Management Plan prepared by the National Park Service (NPS) for the Cape Hatteras National Seashore Recreation Area.

- 1) Page 201: I disagree with the NPS statement: "Even with resource closures in place, protected species are still at risk [from pedestrians and ORVs]." No Piping Plover deaths have been attributed to ORVs. ORV violations continue to decrease as signage and education improve. Pedestrian violations are much more significant than ORV violations. It seems to me that any transgressions into protected area are the result of lack of NPS manpower and enforcement than the public purposely and willfully violating out of bounds areas.
- 2) Page xxiv: I question the statement of as per the DEIS: "Carrying capacity would be a 'peak use limit' determined for all areas based on the linear feet

of beachfront?" If you close off huge sections of the beach, you force more people into smaller areas, potentially resulting in more resource impairment and diminished visitor experience.

3) Page xix and page 23: I am against having two different closures rules pertaining to the North facing beaches (North side) and the South facing beaches (South side) as per the grid outlined in Alternative "F". I disagree with the NPS proposal to close the beaches in villages of Frisco, Hatteras and Ocracoke Villages to ORV access longer than the traditional May 15 to September 15 period for the Northern beaches, even though seasonal visitor statistics are similar for all villages. Please, make them the same: May 15 -> September 15.

4) Page 1: I agree with your statement "ORVs have long served as a primary form of access for many portions of the beach in the seashore, and continue to be the most practical means of access and parking for many visitors."

However, pedestrian only areas discriminate against individuals with limited mobility due to age or physical impairments, families with small children, and those wishing to engage in activities requiring recreational equipment (boogie boards, beach umbrellas, beach chairs, coolers, fishing rods and tackle, etc)

5) Page 53: I disagree with the special use permit proposed guidelines. It is impractical to allow the transportation of disabled visitors to the village beaches and then require the vehicle to be returned to the street or parking area. This necessitates the disabled person to have a driver to drop him (or her) off, then drive to a parking area, then trudge a long distance to the site of the drop off, then trudge the long distance through the sand back to get the vehicle.

Suppose the handicap person wants to go to the beach, is capable of driving himself, yet cannot find another person to go with him? Does he now not go to the beach? This rule creates unnecessary hardships and risks in the event of an emergency as well.

6) Page 121 ? 127. I strongly disagree with the buffers as presented. We must allow for pass-thru corridors. The beach is linear with the ocean buffering on one side and the dune line on the other. For example - If you pinch off access on one side of a 4 mile linear beach and pinch off access on the other side of the 4 mile section of beach with no corridor, then you effectively have closed off all 4 miles of the beach because you CAN'T get there. The proposed bird buffers are too large, blocking access to the interior sections from the two "buffered" ends.

I propose ORV pass-thru only corridors and to use breeding / nesting buffer distances to establish ORV pass through only corridors to ensure beach access in a way that does not hinder resource protection. I believe pass through corridors should be maintained for pedestrians and ORVs in all areas of the Cape Hatteras National Seashore Recreational Area throughout the entire breeding and nesting season. Corridors are vital to providing access in a way that does not hinder resource protection.

Piping Plover unfledged chicks buffer should move with the brood as it relocates to reliable food source, not expanded.

The 1,000 meter distance for the piping plover is way too large and not based upon peer reviewed science. A more rational distance would be 200 meters per other sites in the nation for the piping plover. Ample scientific evidence and precedent exists to support a 200 meter buffer.

Buffers for other species, including American Oystercatchers, Least Terns and Colonial Waterbirds must also be changed. An effective 30 meter buffer should be established for these species rather than the 300 meter closure outlined in the DEIS.

NON-ENDANGERED BIRDS should not have same protection as if endangered. Not allowing ORV access is paramount to denying the public access to these beaches.

7) Page 468: I disagree with the limitations imposed on pedestrian and ORVs. Corridors or bypasses should be provided thru, around or below high tide line in all SMAs during entire breeding season to maintain access.

8) Page 124: I strongly disagree with the NPS slant of providing for over protection of resource management over that of the public's right to access the beaches. Pro-active initiatives include: Vegetation Management, Habitat Management, Enhanced Predator Management, Colonial Water bird social attraction, Piping Plover check fledge rate, Piping plover chick buffer distance, and pass-through buffers during the incubation period. Opportunities to implement less restrictive closures as a result of the above initiatives should be considered more frequently than the 5-year periodic review process identified in the DEIS.

9) I disagree with the NPS Resource Management Pedestrian / ORV Closure Policies. These policies address the least significant factors affecting nest survival with little chance to have more than negligible impact. For example: the AMOY Nest Failures are predominately due to non-human events. Using your own stats, the mammalian predation is 54%, Storm / Lunar Tides: 29%, Nest Abandonment: 6%, Avian Predation: 5%, and Ghost Crab Predation: 3%,

So what is the percentage due to human interference: just 3%! It's insignificant, yet the NPS wants to ban humans when their actions provide very little influence on the success rate of breeding birds and turtles.

10) I disagree with the stats of breeding plovers and the other birds in the Park when the NPS does not adequately consider locations neighboring the Recreational Area that are part of the same ecosystem, namely dredge and spoil island that are located just yards away and within sight of the seashore. These birds are part of the same ecosystem and should be included.

Those spoil islands, developed by man from dredging the waterways in the Pamlico Sound for channel upkeep are slammed full of birds. The reason why so many birds? NO PREDATORS. SO, birds are not as stupid as one might think. You have to count these birds and incorporate them in the stats when the NPS is talking about any so called decline in breeding pairs in the National Park.

11) Page 1: I do not think the DEIS responsibly addresses the cultural resource issues. The very purpose of the DEIS as set forth in the National Environmental Policy Act (NEPA) is to protect and preserve natural and cultural resources in the federal decision making process. In the DEIS, the statement "protect and preserve natural and cultural resources" appears in the first sentence of the first page of the plan, in the Purpose of the Plan section, and numerous times thereafter. Yet, the 810 page document devotes only two paragraphs to analysis of cultural resource issues.

As a resident of Hatteras Island, we of the Hatteras Island community have always gotten together on the south beach to enjoy the beach with our cookouts, gatherings, sun bathing, games, fishing, and surfing. Now the DEIS is proposing closing off most of the south beach during the summer which is the traditional period we local people use the beach. The continuation of this traditional pattern of land use is central to maintaining the historic identity of our island communities.

12) Pages 270-281; 561-598: I strongly disagree with your economic analysis of the impact of the DEIS. The region of influence (ROI) incorporates the Northern Beach communities, including Kill Devil Hills, Kitty Hawk, Southern Shores and Duck. These areas are almost completely disconnected from ORV use and access issues relating to the Seashore. ? Inclusion of the Northern Beaches in analysis significantly dilutes estimates of economic impact on the 8 Seashore Villages

? Analysis of economic impact to the Seashore Villages appears to be significantly down played. Emphasis in DEIS is on the ROI-wide or county-wide level impacts.

? Nowhere is it clearly addressed that the overwhelming majority of negative impacts will be felt by small businesses in the Seashore Villages rather than by overall economic interests within the greater ROI.

On page xlvi, Alternative F is characterized as having a "negligible to moderate" adverse impact on small businesses. I strongly disagree with this statement.

I believe the negligible to moderate projection is inaccurate and relies on economic surveys that has not yet been published. Furthermore, this material is not expected to be added to the DEIS until after the public comment period has ended.

Based upon the economic harm we have already experienced under the consent decree, Dare County projects the economic impact of Alternative F to be substantial.

Beach closures have already had a devastating and unfair impact on many Dare County Businesses, causing foreclosures, bankruptcies, lay-offs, cutbacks, expensive refinancing, and depleted college funds and savings accounts.

Even businesses whose revenue has stayed level or showed a modest increase have accomplished this at a costly price. Many have had to cut back employee hours, forego much-needed capital improvements, and sacrifice profits.

Pages 270-286, 561-598: The socio-economic data and analyses are incomplete and erroneous and result in an understatement of the effect the restrictions will have upon the Island, the region and the state of NC. The US Park Services answer: Businesses will have to "adapt" to the new rules. (p.383) The negative economic impacts of the decree ARE KNOWN, so to say that the added restrictions would have negligible to moderate impact is indefensible.

13) Overall Visitor Counts - Overall visitor counts appear to include visitors to Fort Raleigh National Historic Site and the Wright Brothers National Memorial. A large percentage of these visitors vacation in the Northern Beaches communities and recreate on the non-federal beaches outside of the

Seashore. Visitors who patronize the Fort Raleigh National Historic Site and the Wright Brothers National Memorial but do not visit the actual seashore areas need to be factored out.

Maintenance of Future Access to Cape Point and South Point Ocracoke: All socioeconomic analyses related to Alternative F are predicated on the assumption that access corridors will remain open for at least an appreciable portion of the visitor high season. Under Alternative F, the access corridors will be subject to Resource Closures based on buffers similar or identical to the Consent Decree. Unless some predictability of access to Cape Point and South Point Ocracoke can be assured, economic analyses predicated on assumption of access are fundamentally flawed.

Why would a group of surf fisherman want to come to Hatteras Island to surf fish if they are not sure they can access the prime fishing grounds at Cape Point? The answer is they won't come. If they don't come, they don't rent vacation homes and spend their money on Hatteras and Ocracoke Islands. The definition of the Region of Influence (ROI), faulty data on economic activity generated by specific type recreational activity, incomplete visitation/business survey data, inflated overall Seashore visitor counts pertaining to beach use, and flawed key assumptions concerning the maintenance of access under Alternative F, all lead to inaccurate conclusions in the socioeconomic analyses. Specifically, these inaccuracies can be seen as understating the negative socio-economic impact of the Seashore Villages. Further, this negative impact will be absorbed almost entirely by Small Businesses. Neither of these important aspects of the management alternatives are adequately presented in the DEIS.

14) Page 136: I strongly disagree with your pet restriction proposals. The "prohibition of pets in the Seashore during bird breeding season including in front of the villages." = No Pets in public areas ?beaches, campgrounds, soundfront, foot trails, park maintained roads -from March 15 ?July 31. I propose allowing pets on 6 foot leashes year-round in all areas open to pedestrians or ORVs. 15) Pages 125; 392 ? 396: SEA TURTLES. I disagree with the stats and procedures proposed. I think endangered sea turtles would benefit from management practices now in use at other federal seashores that are more proactive in efforts to achieve nesting success. This includes relocating nests to more desirable locations as is done in other state and federally controlled areas.

The Cape Hatteras National Seashore Recreational Area is on the northernmost fringe of turtle nesting locations for the southeast, accounting for about 1% of all turtle nests. Proposed buffer areas are not needed for protection of the turtles and amount to overprotection.

16) Pages 97- 101. I strongly disagree with proposals in this section saying that ORVs will be prohibited year round between ramps 27 and 30, at Hatteras Inlet (Hatteras Spit), Ocracoke Inlet (North Ocracoke Spit) and various other locations.

Not allowing ORV access is paramount to denying the public access to these beaches. They are located miles from the nearest parking or paved road area and too far to access on foot. As a matter of course, there has been no breeding of piping plover or other endangered species at the Hatteras Island Inlet (spit) area in the past 6 years.

17) Page 104: I disagree with the proposed night time driving closures. Per your proposals, night driving will be prohibited between May 1 and November 15th, forcing visitors off of the beaches early in the evening and preventing sunrise surf fishermen access in the morning. I propose a more moderate night time ban if one is needed, perhaps from June 1 ? September 15 with times being 1 hour after sunset and 1 hour before sunrise to allow beach goers to gather their stuff and exit the beach area.

Certainly more proactive measures such as relocating nests prone to weather and ocean events would dramatically increase the nesting success rates.

18) Page 121: I disagree with the proposed beach closings, including pedestrian access from March 15 until July 31 in 8 different beach locations which have traditionally been available. Please leave these areas open to beach walkers, shell collectors and those that want to access the beaches in these areas.

Conclusion:

Please, incorporate access corridors through any SMA so we can get to the open beach beyond. Incorporate the birds into the count that nest on the spoil islands. Base your buffer zones on peer reviewed science and scale them back to more reasonable distances as discussed.

It is neither logical nor reasonable to spend so much time, money and energy to overprotect a bird (Piping Plover) in the Cape Hatteras National Seashore that is on the southernmost fringe area of its breeding ground. That goes for the loggerhead turtle that is in its northernmost breeding area. Let's scale back the buffer zones. You can always increase at a later date.

The USPS is leaning way over the line on over protection and not enough on the public's right to enjoy the beaches of the National Seashore. The proper balance is not achieved in the propose DEIS and needs to be modified so that the proper balance of reasonable resource protection and access to the beaches of the National Park is achieved. I could sum it up by saying "Protect, not Prohibit."

Thank you

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
I DISAGREE with the entire proposed plan to manage ORV usage on the Cape Hatteras National Seashore. The Cape Hatteras community relies on tourism to support and maintain its economy. Given the current state of our nation's economy, fewer and fewer citizens are taking vacations. For the people that do decide to vacation at Cape Hatteras, they will currently find the number of beaches to enjoy very limited thus potentially turning them away for good. I frequent the area and was most recently there at the end of April, and I must admit, I was very disappointed with the number of beaches I could visit. Closing the beaches, as outlined in the proposed plan, will hurt an economy that is already hurting. DO NOT CLOSE THE BEACHES...the local economy depends on it!
Thank you,

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.

* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.

* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.

As you may have realized, this message is generated from the Audubon Society web site, and as a concerned citizen, I am answering their call to comment. However, please know I am speaking foremost as a long time lover and frequenter of the Cape Hatteras National Seashore.

This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.

The Hatteras seashore is a "national" treasure and you must do whatever you can to protect its silence and space and wild nature. I realize the parks are multi-use, but as stewards of the earth we are the ones who make decisions about which animals survive and thrive and which do not, which spaces are full of quiet and calm and which are full of noise and activity, and which areas focus on the non-human world and which focus on us.

Your department will have the final say in all of this. You must choose wisely and you must choose the option that best preserves the essential nature of the Hatteras Seashore. One stroll down those wonderful beaches would teach you it is a place both of contemplation and brute natural force. Either one is harmed by too much intrusion from men and machines.

The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.

* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Correspondence: As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.

- 1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."
- 2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness...." Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.
- 3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.

Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

Correspondence: As a resident of Buxton, NC I am begging you to reconsider all of the restrictions you are proposing to put into place in the National Parks on our Outer Beaches. The restrictions are going to take away from the people the very heart of what we all live for down here. We love the birds & turtles, the woods and the beaches, the Ocean & the Sound with all our hearts. They make my soul breathe. Each day as I walk on the beach I feel refreshed and renewed. I always pick up litter that has washed up on to our beaches over the night. I enjoy watching the birds feed and I have done hours of volunteer work helping with the nesting turtles. Many of the residents have taken great pride in our beaches and have done hours of volunteer work at the light house, teaching tourists to fish, trail walks, bird club (I personally took many tourists in my own car to view the birds with the bird club), litter pick up, You name it we've done it. There has become a great divide between the Park Service and the people over the past 3 years because of what the people feel is a threatening behavior (guns on the beach!) and unreasonable restrictions with little to no respect for the people. No matter where you go in this world there is always a fool or two who act irresponsibly and treat others and the land with disrespect but the very large majority don't. I personally always stop people from parking or kiting in the wrong place, drive too fast on the beach or are leaving trash behind. We all know there are not enough of you to keep an eye on everyone all the time so we try to help out as responsible citizens who love this area. When you become so unreasonable about making new restrictions and passing laws you loose all of that wonderful citizen support and help! We love here because we don't want to live in a police state. We have managed for many years to keep the beauty of our simple life. Please do not take that away from us!!! Many, many of the residents who live here will lose their ability to make a living down here and be simply able to survive. We aren't talking about extravagant people or life styles but hard working , patriotic, law abiding families who love God and their country. These people will lose everything when their businesses dry up and their property values plummet. How can you even coudsider doing what you propose and still sleep at night? There are reasonable and lawfull ways to protect us and the birds and turtles --- You know it and I know it! Most sincerely, Susan Righter

Correspondence: My comments regarding the DEIS statement for management of the Cape Hatteras National Seashore are as follows and are being provided by a NC state resident and a visitor of Cape Hatteras National Seashore for close to 30 years.
None of the alternatives listed in the DEIS make any sense to me due to the fact that Cape Hatteras is a National Recreational Seashore. The research I have done regarding the creation of Cape Hatteras suggests that the only reason it exists as a park today is to be a recreational resource for the people of the United States. The proposed alternatives give very little regard to the recreational aspects of the seashore. I find this incredibly irresponsible of the NPS to provide a group of plans that do not suit the very nature of the parks existence.
It is my understanding that the proposed alternatives came from a negotiated rulemaking organization that met many times to try to reach an agreement on park management but failed to do so. I also know that it was of great importance to the group that they be able to negotiate in good faith outside the restricted confines of a courtroom. Yet the first thing several environmental groups did was to file suit against the NPS asking for additional protective measures. This, in my opinion tainted the entire process and put recreational advocates at a severe disadvantage. Therefore it comes as no surprise to me to see that many of the proposed alternatives in the DEIS favor the views of environmental organizations. I was highly disturbed to learn that the NPS did absolutely nothing to the environmental groups following their lawsuit even though it was in direct violation of the agreements made by all parties at the start of negotiated rulemaking. The fact that tax money ultimately paid for the plaintiffs legal bills is upsetting to the highest degree possible.
Off Road vehicles have been used as a traditional means of access to many areas of the seashore since the creation of motorized vehicles and beach travel has long been an established norm at Cape Hatteras. Taking this away will severely impact those that have grown to use this form of recreation on the beach. Wildlife, pedestrians and vehicles have coexisted for decades at Cape Hatteras and to date, I have not been able to find any science that suggests beach driving or walking on the beach has any impact on wildlife. Though many special interests groups will argue the opposite, they are simply arguing, they have proven nothing.
I am all for a plan that provides all seashore users with access to the beach. Not all users want ORV access so I completely agree that areas in front of the towns can, and for safety reasons, should be closed, at least seasonally, to ORV traffic. Other areas that have traditionally been used as ORV access areas for fishing and other beach uses should be opened unconditionally. Those areas should include Oregon Inlet, Cape Point, Hatteras Inlet and Ocracoke Inlet. The areas of beach that have established ramp access and are not in front of established villages should remain open. Areas used by surfers, wind surfers, and kite boarders should also remain open unconditionally. I would completely support pedestrian corridors, or even vehicle access corridors in areas where pedestrian and vehicle use might jeopardize safety. Bird nesting areas that are currently in effect are far too broad and should be resized. The latest data provided by NPS show the beneficial results of the Consent Decree closures to be negligible at best. It is obvious that large closure buffers are not the answer and that another approach is in order. Traditional bird nesting areas near cape point have become flooded due to NPS management mistakes and should be returned to a more natural state which is what wildlife prefers anyway. There are far too many alternative strategies to increasing wildlife nesting opportunities. To point to limiting off road vehicle traffic as the only means of increasing bird nesting is very irresponsible. Furthermore, most if not all shore bird deaths are directly caused by storms or predation by local wildlife. ORV or pedestrian closures cannot prevent this from happening.
In summary, please understand that my comments in general favor recreational access for all varieties of recreational needs throughout the park, with reasonable protections for wildlife where needed and when needed. Recreational users have always coexisted with wildlife in the park, past management strategies have worked well. Consent Decree strategies have been far too restrictive and have provided no real benefit.
Thank you Eric T. Blanks

Correspondence: Dear Superintendent Murray,
As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.
1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all

visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."

2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness..."

Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.

3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.

Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

Correspondence: Dear Superintendent Murray,
 Thank you for the opportunity to provide these comments. My wife and I appreciate the hard work and dedication of the National Park Service in preserving America's natural and cultural heritage for future generations.
 I am a member of the National Parks Conservation Association and a supporter of national parks, and I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. As did my father before me, I find the Seashore to be a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. It seems that all of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.
 1) The National Park Service must recognize that conserving Cape Hatteras for future generations and protecting its wildlife should take precedence over one form of recreation (ORVs). Any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."
 2) The intent of Congress in establishing Cape Hatteras clearly was to protect the visitor experience of primitive wilderness, not ORV use ("Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness..."). The NPS needs to protect the pedestrian visitor experience to Cape Hatteras and should allow ORV use only if it can occur without harming wilderness and wildlife resources.
 3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, , to achieve wildlife species recovery goals in response to information produced by monitoring and analysis.
 We look forward to seeing an improved final ORV management plan.

Correspondence: The Cape Hatteras beach access plan should protect nature and the environment first and secondarily allow equal access to all, which means that off-road vehicles should not take priority. Alternative D is the best to accomplish the NPS goals and to preserve irreplaceable birds and turtles that must have this habitat to survive. Additional pedestrian access is desirable, which would be open to all, but ORV access should be strictly limited to prevent damage and loss of wildlife.

Correspondence: Mr. Murry,
 As a frequent and long time visitor to the nations parks system, especially Cape Hatteras National Seashore I am deeply disturbed at some of the positions the NPS is proposing in the DEIS plan published on March 12 2010. I understand and agree with the NPS duties to protect and preserve our natural resources. My main area of concern is when in the protection of these resources the NPS over steps its bounds, and in the case of the CHNS, completely restricts the public to the point that this wonderful magnificent resource cannot be enjoyed by most citizens who wish to spend time there. My main issues of concern are as follows and I have several questions which I don't think you addressed in the original DEIS plan.
 ? I disagree with the restrictions (as proposed in Alternative "F" p. 97-101) of the ORV access between ramps 27 and 30 at the Hatteras Inlet, Ocracoke Inlet, and all other locations in the park. There must be a method to allow pedestrian and ORV access points to these areas without disturbing the natural resources. ? I disagree with the severe restrictions (as proposed in Alternative "F" p. 104) not allowing night driving in the park. Over the past 40 years I have witnessed and enjoyed hundreds of sunsets and sunrises which cannot be viewed from any other areas in the park with the same majestic experience. These night closures would significantly reduce the time that the many fishermen can enjoy the resources at a time of day (during the PM hours) when the fishing can be the most productive and active. Given the right instruction on how to access these areas I know that all the individuals I have seen over the years could enjoy the park without disturbing the natural resource. ? I disagree with the prohibition of pedestrian access (as proposed in Alternative "F" p. 121) at the 8 different park locations from March 15 to July 31 each year. These locations have traditionally been available for all to enjoy. The removal of such large tracks of the park limits the overall positive experience that the park has to offer and significantly reduces ones desire to return to the seashore. ? I disagree with the drastic and large restrictions (as proposed in Alternative "F" p. 121-127) put on the public's ability to access certain parts of the beach when a piping plover or American Oystercatcher nest or brood exists in the park. These closures of such large tracts of park lands makes enormous parts of the park non accessible by the public. There must be a common sense compromise which both protects the natural resource and does not prohibit pedestrian and ORV access to some of the most valued parts of the park to visit. ? I disagree with the NO PET restriction (as proposed in Alternative "F" p. 136) from March 15 to July 31. This restriction must be reconsidered with a more stringent enforcement of the current 6' leash rule, year round. Over the 40 years I have been enjoying CHNS my family and hundreds of park guests I have seen and obeyed the current pet rules with no damage to the natural resource. You must consider that too many individuals, the only important thing in their lives is their pets. These individuals treat their pets as one of their family and would treat the park with the same respect. I disagree with the restriction of public

access with their pets in front of the many homes and businesses in the many towns that share, respect, and have been the primary caretakers of this area even before the NPS was there. I disagree and take real exception to the NPS analyses of the socio-economic impact of the actions taken in the DEIS and the negative drasitic effect it will have on the region and the state of N.C. as stated on p. 270-286 , 561-598. For the NPS to state as they do on p. 383 that the local region will have to "adapt" to the new rules I find insulting to the hardworking people in the region who have nothing but the best interest of the park for their entire lives. I have seen the effects of what some of the types of restrictions imposed over the last couple of years by the Federal Court Consent Decree will do to the local region. The loss of business, jobs, homes, and the noticeable loss of tourism has all been a direct effect to the restrictions on park access. The NPS proposal in the DEIS, Alternative "F" is more restrictive then the Consent Decree and therefore could be more damaging then what's already in place. There are many alternatives used in our society to allow public use to coexist without disturbing our natural resources. Many of these approaches the NPS uses in other parks in the park system. In Alternative "F" of the DEIS plan the NPS is taking the more restrictive approach at the expense of the public use. There is no credible science to back up the NPS plan in Alternative "F" and a less restrictive approach must be taken to allow both public use and resource management of one of the nation's most valuable resource.

Correspondence: I have just become aware of the highly restrictive measures being considered for the protection of the fragile shore areas of the park(s) in question. Although I have unfortunately not made it down to the Hatteras area, from Vermont, in a couple years I do greatly enjoy vacationing in that area. I appreciate that you are thinking seriously on what is necessary in order to protect the natural area. However from my look at the proposal i am very concerned that it goes way too far in excluding human recreational uses. I come to the area in order to windsurf and enjoy the shore area. I believe its possible to protect the area while still allowing access for human recreation. Its important to look at each impact. I think something like ATV's are known to be quite destructive to plant life for instance, as well as being generally really annoying because they have a large sounds foot print for a whole area. however many uses by careful people are not as destructive.
i support the views of Dottie and the Coalition for Beach Access DEIS Assessment as written in their report dated 4/13/2010, which i copy below.
Do not protect the area at the expense of all human enjoyment, especially the ones that are shown to have a minimal impact. those human activities that are shown to have the most impact are the ones that should be limited the most.
i hope i am able to continue vacationing in the Hatteras seashore area, something i wont do if many of the policies in question are implemented.
thank you for your time and consideration
gideon turner burlington, vermont

Mike Murray, Superintendent Cape Hatteras National Seashore Park 1401 National Park Drive Manteo, NC 27954 May 9, 2010

Re: Cape Hatteras National Seashore Recreational Area Draft Off-Road Vehicle Management Plan/EIS

Dear Mr. Murray:

This letter is sent to you as a public comment under your draft EIS referred to above.

As a frequent Cape Hatteras National Seashore visitor for 25 years and an Avon Village property owner since 1993, I have participated in all but one of the activities cited in the Figure 23 Visitor Activity Survey Results (Page 260). I would like to continue enjoying the recreation at the seashore for the remainder of my years, however I am gravely concerned that the preferred proposed Alternative F will severely impede this. As stated in the Act, Congress established the Seashore in 1937 as a national seashore for the enjoyment and benefit of the people, and to preserve the area. (page iv). Although I agree with the premise of protecting the natural resource, Alternative F would do so at the expense of humans, as well as the local economy and culture. .

Specifically my comments on the proposed plan:

- 1) I disagree: Page 121. To completely prohibit pedestrian access in sections of the national seashore, runs completely contrary to the basis upon which the Park was founded, for recreation. Pre-Nesting Closures All species: All designated Breeding Shorebird SMAs will be posted as pre-nesting closures using symbolic fencing by Mar 15 at sites involving piping plover, Wilson's plover, and/or American oystercatcher; and by Apr 15 at sitesinvolving only colonial waterbirds. The NPS will determine the configuration of specific pre-nesting closures based on an annual habitat assessment. Pre-nesting closures would be adjusted to the configuration of the Nonbreeding Shorebird SMAs for the respective sites (as described later in this table) if no breeding activity is seen in the area by Jul 31, or 2 weeks after all chicks have fledged, whichever comes later. Pre-nesting closures will not be modified in cases where the beach erodes into the buffered habitat. ORVs, pedestrians, and pets are prohibited within all resource closures, including pre-nesting closures. ML1: SMAs managed using ML1 measures would not allow ORV or pedestrian access when pre-nesting closures are in effect. ML2: The Bodie Island Spit, Cape Point, and South Point Ocracoke SMAs would be managed using ML2 measures in action alternatives C, E, and F. Once pre-nesting closures are implemented at these sites, a narrow ORV access corridor (where ORV use is permitted) or a pedestrian access corridor (where ORV use is not permitted) would be established. Upon the first observation of breeding activity, the standard buffers (please refer to table 11, Shorebird/Waterbird Buffer Summary) will apply, which depending upon the circumstances may close the access corridor. The Bodie Island Spit access corridor would follow the ocean shoreline to the inlet. The Cape Point access corridor would follow the ocean shoreline from ramp 44 south to the point, then west approximately 0.2 mile along the ocean shoreline. The South Point Ocracoke access corridor would follow the ocean shoreline south from ramp 72 to the inlet. Exact configuration of the corridor would be determined by NPS staff based on the annual habitat assessment. The ORV access corridor at ML2 sites will generally be no more than 50 meters wide above the high tide line (alternative E may include a designated pass-through zone where no stopping or recreation would be permitted in order to minimize disturbance). An ML2 pedestrian access corridor would generally be below the high tide line and would in no case be more than 10 meters above the high tide line. Pets, as well as kite flying, ball and Frisbee tossing, and similar activities, will be prohibited in the access corridors or pass-through zones (in alternative E only) while the pre-nesting closure is in effect.
- 2) I disagree. I find the proposed 1000 meter buffers cited on pages 121 ? 127 unnecessarily restrictive and arbitrary. The use of such large buffers will cause people to be forced into smaller areas, with a subsequent greater impact on resource in the area. In addition, the expansion of the buffers as a punitive measure for infractions is also arbitrary. Please do not punish all for the offenses of one.
- 3) I disagree. The complete prohibition of ORVs, year round, pp 97-101, is entirely unnecessary, and will also impede human ability to partake of many recreational activities in the stated areas between ramps 27-30, Hatteras Spit, Ocracoke Inlet and others.
- 4) I disagree. Pets have been part of my, and continue to be part of many visitors' recreation and vacation experience. I disagree with the proposal to completely prohibit pets at the seashore beaches during "breeding season" from March 15th to July 31st. Page 136. Pets on a leash will not interfere with wildlife protection measures.
- 5) I disagree. It has not been proven scientifically that human interference is extensively responsible for damage to turtles and nesting birds, (less than 3%) so the prohibition against night driving for over half of the year is unnecessarily restrictive. P 104, P 377. No piping plover deaths have been attributable to ORVs.
- 6) Page 468, I disagree. Access should be provided through all species management areas. Buffers should move with the species, instead of being expanded.

Thank you for the opportunity to provide comments on the proposed plan. I look forward to a reasonable resolution of the issues, one that the Park, the

0012214

Visitors, the natural Resources and the Local Culture and Economy will find reasonable and sustainable.
Sincerely,

Correspondence:	The EIS doses not fully address the economic impact to the region and the recommendations of Alternate "F" does not appear to take into consideration that our family has not been to the Outer Banks since the closures and we need to drive on the beach to allow my father who has Parkinson's disease an opportunity to fish. He can not walk and driving him to the beach and letting him fish from the vehicle is the best therapy we can give him. Please reinstate the interim plan to assist the elderly who need access to the beach for there well being. The interim plan did a great good job in balancing wildlife protection and providing needed therapy to elderly fishermen like my dad. The Recreational Area was designed to be for Recreation first and foremost. Tim Shields and Family

Correspondence:	Dear Mr. Jarvis, I am writing this e-mail with comments on the Draft Environmental Impact Study. I am a home owner on Hatteras Island in Buxton, N.C., with a legal residence in Bloomingdale, IL. I also have been visiting Hatteras Island every year since 1985. Please accept the following: 1) The impacts of this plan will affect millions of US citizens. Even here in Illinois, we constantly meet many people that have visited or have recurring visits Hatteras Island. They rave about the open access and space for their wanderings and enjoyment for either viewing wild nature or outdoor activities. 2) There should not be any closures of any of the beaches in any of the established villages for any reason except human life safety. Any bird, animal, or reptile that is endangered or threatened that chooses to establish a presence in an area of danger to its survival, does nothing to perpetuate the gene pool necessary for survival of that species. If a threatened species established a presence in Washington, DC the city would not be shut down, the species would be removed and relocated. This should be the only option and that should happen within 2 days of establishment. 3) The pet restriction on the seashore is ill conceived. Trained pets that are either leashed or disciplined to stay in the immediate proximity of their owners are no threat to anything. The pet ban language should be eliminated. 4) Vehicular closures should be confined to the beaches in the established villages from May thru November and to remote areas that have established nests. Once again, if a species established a presence on Interstate 95, it would be relocated and the Interstate would not be closed. As this Statement is written, if all of the aspects are accepted, there will be millions of dollars spent on enforcement and legal activities. These funds would be much better spent on species relocation to the vacant areas and shoals in the Pamlico, Albemarle, and Currituck Sounds or establishment of new ones. There are thriving natural areas in the sounds that are predator and activity free where species compete for life and space as they have since the dawn of life on Earth. The survivors of the natural processes are the species that adapt to conditions around them. This is scientific fact. Please contact me with any questions.

Correspondence:	In efforts to effectively manage the bird nesting areas and turtle egg laying areas on Cape Hatteras National Seashores it is IMPERATIVE that the park service not only work with the locals who depend on open and accessible beaches for their livelihoods but keep the beaches open to the public who depend on those areas for recreation. Corridors will allow access to the beaches while maintaining a most adequate 200 feet around nesting areas. 1000 feet is not only excessive but cannot be substantiated with science nor evidence. Please keep people in mind when making a final vote. The economy has so many americans out of work, out of money, out of hope. To add unnecessarily to these problems will compound this issue and make it increasingly difficult for the locals and those visitors that gain summer work around our beachse to make a living, which sustains their families. It's about the PEOPLE! Birds are important but not as important as PEOPLE. Thank you. Sandra Wallace

Correspondence:	I am providing comments on behalf of the Durant Station Condominium Association, Inc., a 33-unit condominium project located on nearly 2 acres of ocean-front land in Hatteras Village, NC. I am the President of this Association, which is composed of families who own these properties for personal recreational use, as well as to generate rental income. After rebuilding the project in its entirety following total destruction by Hurricane Isabel in 2003, we all currently have sizable financial and emotional investments in this area of the Outer Banks. We are obviously directly affected by any form of restriction on the use of recreational assets of the area, with the National Seashore Beaches being the primary attraction! The beaches, along with their recreational opportunities, are the primary reason people visit the Outer Banks! Although we value birds and animals and enjoy viewing them, we						

believe that society's desire to protect and preserve selected species of birds and other wildlife must be "balanced" against legitimate human access to the unique recreational opportunities offered by National Seashore Beaches on the Outer Banks. We therefore disagree with any beach management approach, which would prevent human access to and recreational use of these beaches!! We believe that there are always creative ways available to manage human activities while protecting threatened and endangered species. We ask that regulatory authorities simply exercise sound logic and common sense.

We strongly disagree with the "NPS Preferred Alternative F" because we consider it to be unnecessarily restrictive of human recreational access. It fails to demonstrate why such a severe level of restricted access is needed or desirable. There is no proven scientific basis for asserting that any shorebird requires a 1,000 meter or larger buffer zone to prevent harm from human presence. Any buffer requirement should start as small as practicable, such as 10-20 meters. A buffer size should only be increased with the support of valid video-documented evidence that the existing buffer size is insufficient to prevent physical harm to the species. "Harm" should not be defined to include occasional "defensive posturing" or other normal and routine actions, including flight, which birds typically exhibit.

Pedestrian foot traffic such as anglers, surfers, beachcombers, runners, etc., which are commonly seen on beaches, should always be allowed to occur on beaches. Any proposed buffer zones for pedestrians should be substantially smaller than any corresponding buffer zones that apply to vehicles. No protection scheme should include a ban on foot traffic/pedestrian use! There is no evidence that shorebirds or other species are harmed in any way by pedestrians when given a small buffer zone to protect nesting activity. Common sense would indicate that a bird would typically not choose to nest in an area or amidst any level of activity, which it found to be uncomfortable and/or disruptive to its reproductive cycle.

We agree with and support the positions established by the Coalition for Beach Access (see <http://www.obpa-nc.org/position/statement.pdf> and <http://www.obpa-nc.org/position/assessment.pdf>).

We agree with and support the positions established by Dare County, NC (see <http://www.hatterasislandtimes.com/PDFs/DCDEIS.pdf>).

The current situation compels the public to rely on the NPS to establish and preserve a reasonable balance between the needs of wild life to reproduce and propagate their species and the rights of the public to access and enjoy its National Treasures, e.g., the Outer Banks National Seashore Beaches. The majority of residents and visitors do not seek out the relatively remote southern Hatteras Island areas simply to observe birds or turtles, although many of us enjoy both. Rather, the inherent enjoyment offered by beach access in its many forms, including fishing, certainly comprises the primary attraction.

It can be all too easy to loose track of the "big picture" when working through highly complex and contentious resource allocation issues, such as are currently being addressed. Please do not lose sight of the fact that humans, e.g., U.S. Citizens, are entitled to receive priority consideration in the non-destructive use and enjoyment of the Outer Banks' unique recreational resources.

The protocols put into place by the NPS to manage Outer Banks beaches should be an example of smart co-existence and balanced management practices, not extremist bans and excessively conservative management protocols driven by fear of punitive law suits. The current process appears to be forced upon us, in part, by "single-issue groups", who would seek to restrict the rights and recreational opportunities of the majority solely to further their well intended, yet extreme and unnecessarily restrictive views of appropriate conservation measures.

Thank you for the opportunity to comment. Please weigh our views carefully in finalizing any regulatory regimes, which would restrict our access to land, which we as U.S. Citizens own in common.

Correspondence: To whom it my concern Regarding National Seashore access in Cape Hatteras NC.,

I have been travelling to Cape Hatteras for the past 18 years making a bi-annual trip for windsurfing/kitesurfing during the spring and fall. The conditions combined with the expansive, natural coastal setting make it one of the best places in the world for these water sports.

I do not oppose regulation that restricts large impact change to the local seashore, such as large construction projects for massive residential communities or industrial development. And I support protecting animals, birds and endangered species and their breeding/local habitat.

My view is such that regulations can be placed in logical places within the national seashore Park whilst still allowing access to non-motoized activities within or adjacent to these protected areas.

Regards,
Grant Bennet

Correspondence: To whom it may concern,

this is another example of the government falling prey to powerful lawyers and lobbying groups, ignoring the rights of its citizens to use national parks by twisting rules and regulations to fit the minority special interest groups.

the Cape Hatteras National seashore has long been a favorite for the outdoors enthusiasts that do more to support parks and recreation areas than any other group in the nation. we are the people that Teddy Roosevelt had in mind when he selected beautiful areas within our great nation to preserve for the citizens of America and travelers from all over the world to access and enjoy. unfortunately, special interest groups/eco terrorists have taken these beautiful areas that offer so much and use acts passed by government to protect endangered species as a vehicle to launch their illconceived plans with falsly supported statistics.

unfortunately, the average citizen that enjoys these facilities the most doesn't have the funds and contacts to hire powerful law firms and lobbyist to expose these frauds for who they are.

please, before you make a rash decision think about the hardworking people that pay your salaries that you are supposed to represent and allow them access to our national parks. also, think of the people in the Outer Banks who's livelihoods depend on access to these parks and the immense pleasure we all gain from that access. there is plenty of room for both people and birds to coexist

Correspondence:	<p>Mr. Murray, I have been coming to the Outer Banks fishing for over 25 years. After reading through the DEIS it saddens me to think that those trips could soon come to an end. As a family, we fish when we go on vacation. We'll rent a house for a week, buy our groceries bait and supplies from the local island stores, then head out to the beach in our ORV to fish. If beach access is restricted or prohibited, and we cannot access The Point or South Ocracoke then we will find places other than CHNS to vacation. A plan needs to be put in place that supports recreation while conserving and protecting wildlife. Buffer areas that are expansive, that close areas of the beach due to their size (from the water to the dunes) and that are not based on sound scientific data will not be supported. I feel that any closures must have a ORV corridor so that one nest, while still being protected, will not close miles of beaches.</p> <p>Signed, Hap Clayton Stanley, NC</p>

Correspondence:	<p>I am a veteran along with many others who have given part of their lives to protect and to service the people of the United States of America. I have done so with pride in my country and it's freedoms. The present situation in the outer banks is more than unfair, it is a complete disregard to the people who live and try to make a home for themselves and their children. To completely forgo the mandates of the people as the seashore being set aside for the use of the people by the president is, in my opinion, uncalled for. The people I have had the pleasure of knowing and living with on the island are for the most part conservationists and sportsman. I have yet to see or hear of any flagrant disregard for life of the birds or the turtles by any of them. To just put boundaries up when a tire print or foot print is in the area of a nest is not only unfair, but totally unfair to the people who live there. Come on, for years they have been living with the birds and the turtles with little or no problem. Then one person starts a bunch of stuff and brings to light the fact that the park service did not do its job in forming the guidelines for the island and now all those who live and vacation there are being penalized for this... The United States is a government by the people and for the people, majority rules etc.. not special interest groups. If I can see where they are being abused or killed or mistreated, as a sportsman I would take up the cause, but it is not, and has not been done. So why, all the threats and the assault on the freedoms of the people now??? Keep em open, maintain them, but keep em open. The birds are still nesting and will continue to nest, it is nature...and in the hands of God, not committees or government..</p>

Correspondence:	<p>Dear Superintendent Murray,</p> <p>As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.</p> <ol style="list-style-type: none"> 1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations." 2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness..." Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources. 3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals. <p>Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.</p>

Correspondence:	<p>I disagree with much of the plan and hope that a more balanced, reasonable approach is taken that shifts the thrust of this proposal from turning the area from a recreational area to a wildlife sanctuary.</p> <p>Specifically I disagree with the provision that prohibits pets on the beach during the period 15 March to 31 August each year. This virtually eliminates certain visitors, not to mention locals, from recreational activities with their pets for no apparent reasons. There are reasonable alternatives in place currently -i.e. leash requirement.</p> <p>Our family has been coming to the Outer Banks, specifically Hatteras Island as visitors (and property owners) since the 1950's. We have seen changes - both good and ill- over the years. While it would be ideal to return to a more pristine period it is difficult to "unring the bell". As mentioned, a more</p>						

balanced approach is needed to ensure the park service fulfills its role as manager of a recreational area versus a preserve. I hope more rational forces prevail in the end.

Thank you for listening.

Richard and Charlotte McCray, and family Huntington, WV

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan is much better both for humans and for the wildlife, and I urge you to support Alternative D.
If the park decides to enact another plan, it should be sure to have the following requirements:
*Provide Equal Access for All Visitors. If ORV use is continued within the park, half or more than half of the beach should be available year round for non-ORV users and wildlife. It would then be easier for families, walkers, and animals to enjoy the surroundings.
* Put Natural Resources First. Our first priority should be to protect the natural resources and the wildlife. Right now, the preferred plan fails to set aside adequate areas that are free of ORV use. We must do all we can to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities.
Thank you for the opportunity to provide these comments. I will be closely following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.

With only 2,000 breeding pairs of Threatened Piping Plover from Newfoundland to No. Carolina, greater protection from disturbance is warranted.

While visiting Hatteras during May 2005, we noted no plovers in areas accessible to OHVs; all plovers seen were in areas closed to vehicles. Restricting OHV use will also benefit a host of wildlife including sea turtles.

I support Alternative D if modified to provide greater pedestrian access.

Sincerely, Tom Leskiw 5440 Cummings Road Eureka, CA 95503

Correspondence: Dear Superintendent Murray,

As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.

1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."

2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness..."

Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.

3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.

Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

***** Thank you very much for taking the time to protect one of America's most beautiful stretches of Atlantic seashore! Sea turtles, nesting shorebirds, and generations to come will be grateful for your action today. Thanks again!

Correspondence: I disagree with adoption of Alternative F I agree and support adoption of Alternative A I agree with ORV permits at no charge. I disagree with penalizing the public with increased buffers due to the activities of a few individuals. I agree that that Regulatory Flexibility Act must be considered in the implementation of any rules. I disagree with night driving currently rules in effect. There is no data that supports that this has an effect on turtles. I agree that turtle nests should be moved to Pea Island which is a wildlife sanctuary. I disagree that there is little economic impact. As a rental home owner I can attest to the reduction in weeks rented since the DEIS has been implemented. Especially in the spring and fall fishing periods. People are less willing to take a risk of not being able to use their vehicles to fish or participate in beach activities. The reduction in my home is 25%. I disagree in the use of Northern beach economic date to support this program. Proper date needs to be considered and this should be from Hatteras and Ocracoke Islands. I disagree that ORV are a threat to Piping Plovers. In the past few years 6 died from natural causes none from ORV's and 6 from pedestrians. Although I do not condone any deaths this represents .07%. I disagree that non threatened species are give extreme buffers as though they are threatened. Gordon Myers Ex Dir of the NC Wildlife Commission stated that this is a misuse of the intent for "species of concern". 1000 and 300 meter buffers are excessive. These should be reduced to 200 and 30 I disagree with pet and horse being excluded from the beaches. Pets should be allowed on the beach with leashes. Horses should be permitted also as they are in the control of the rider. I disagree with the killing of one specie in order to protect another .If this is an environmental way of protecting one from another then they need to rethink their priorities. I agree that corridors for ORV should

be provided throughout the beach area. I do not agree with the impression that this National Recreational Seashore adoption was to exclude and restrict humans from access to these exquisite beaches. The spirit and intent was to preserve the beaches wildlife and to live within reasonable bounds that would preserve nature, the environment and public. I disagree with closures to Bodie Island spit Caope Point and the Ocracoke North beach at Hatteras Inlet as well as th south beach. I disagree that NO AREA should be closed year round> this is excessive

Correspondence: Do not allow off-road vehicles on Cape Hatteras National Seashore. They are loud, dangerous, emit toxic fumes, tear up the landscape, and deprive their riders of much-needed exercise.
 Ear-splitting ORVs shatter the scenic and tranquil beauty of Cape Hatteras National Seashore. This park should be for everyone's quiet enjoyment, and protection of wildlife.

Correspondence: Please keep the beaches at Hatteras Island open. This is a great natural resource that should be enjoyed by all. There are other ways to keep the birds and other wildlife safe. Most of the people using these beaches are good stewards of nature and want to preserve the natural beauty and life on the shorelines. We have been vacationing there for over 20 years. It is a great, safe, beautiful place for families. I think we can find ways to cohabitate with the endangered wildlife without closing beach access to people. I don't know all the pros and cons, just know that tourism is a way of life for islanders and closing the beaches would have negative impact on their ability to make a living.
 Please, find a way to make it work for all!!

Correspondence: 1) Page 201: I disagree with the NPS statement: "Even with resource closures in place, protected species are still at risk [from pedestrians and ORVs]." No Piping Plover deaths have been attributed to ORVs. ORV violations continue to decrease as signage and education improve. Pedestrian violations are much more significant than ORV violations. It seems to me that any transgressions into protected area are the result of lack of NPS manpower and enforcement than the public purposely and willfully violating out of bounds areas.
 2) Page xxiv: I question the statement of as per the DEIS: "Carrying capacity would be a 'peak use limit' determined for all areas based on the linear feet of beachfront?" If you close off huge sections of the beach, you force more people into smaller areas, potentially resulting in more resource impairment and diminished visitor experience.
 3) Page xix and page 23: I am against having two different closures rules pertaining to the North facing beaches (North side) and the South facing beaches (South side) as per the grid outlined in Alternative "F". I disagree with the NPS proposal to close the beaches in villages of Frisco, Hatteras and Ocracoke Villages to ORV access longer than the traditional May 15 to September 15 period for the Northern beaches, even though seasonal visitor statistics are similar for all villages. Please, make them the same: May 15 -> September 15.
 4) Page 1: I agree with your statement "ORVs have long served as a primary form of access for many portions of the beach in the seashore, and continue to be the most practical means of access and parking for many visitors."
 However, pedestrian only areas discriminate against individuals with limited mobility due to age or physical impairments, families with small children, and those wishing to engage in activities requiring recreational equipment (boogie boards, beach umbrellas, beach chairs, coolers, fishing rods and tackle, etc)
 5) Page 53: I disagree with the special use permit proposed guidelines. It is impractical to allow the transportation of disabled visitors to the village beaches and then require the vehicle to be returned to the street or parking area. This necessitates the disabled person to have a driver to drop him (or her) off, then drive to a parking area, then trudge a long distance to the site of the drop off, then trudge the long distance through the sand back to get the vehicle.
 Suppose the handicap person wants to go to the beach, is capable of driving himself, yet cannot find another person to go with him? Does he now not go to the beach? This rule creates unnecessary hardships and risks in the event of an emergency as well.
 6) Page 121 ? 127. I strongly disagree with the buffers as presented. We must allow for pass-thru corridors. The beach is linear with the ocean buffering on one side and the dune line on the other. For example - If you pinch off access on one side of a 4 mile linear beach and pinch off access on the other side of the 4 mile section of beach with no corridor, then you effectively have closed off all 4 miles of the beach because you CAN'T get there. The proposed bird buffers are too large, blocking access to the interior sections from the two "buffered" ends.
 I propose ORV pass-thru only corridors and to use breeding / nesting buffer distances to establish ORV pass through only corridors to ensure beach access in a way that does not hinder resource protection. I believe pass through corridors should be maintained for pedestrians and ORVs in all areas of the Cape Hatteras National Seashore Recreational Area throughout the entire breeding and nesting season. Corridors are vital to providing access in a way that does not hinder resource protection.
 Piping Plover unfledged chicks buffer should move with the brood as it relocates to reliable food source, not expanded.
 The 1,000 meter distance for the piping plover is way too large and not based upon peer reviewed science. A more rational distance would be 200 meters per other sites in the nation for the piping plover. Ample scientific evidence and precedent exists to support a 200 meter buffer.
 Buffers for other species, including American Oystercatchers, Least Terns and Colonial Waterbirds must also be changed. An effective 30 meter buffer should be established for these species rather than the 300 meter closure outlined in the DEIS.
 NON-ENDANGERED BIRDS should not have same protection as if endangered. Not allowing ORV access is paramount to denying the public access to these beaches.
 7) Page 468: I disagree with the limitations imposed on pedestrian and ORVs. Corridors or bypasses should be provided thru, around or below high tide line in all SMAs during entire breeding season to maintain access.
 8) Page 124: I strongly disagree with the NPS slant of providing for over protection of resource management over that of the public's right to access the beaches. Pro-active initiatives include: Vegetation Management, Habitat Management, Enhanced Predator Management, Colonial Water bird social attraction, Piping Plover check fledge rate, Piping plover chick buffer distance, and pass-through buffers during the incubation period. Opportunities to implement less restrictive closures as a result of the above initiatives should be considered more frequently than the 5-year periodic review process identified in the DEIS.
 9) I disagree with the NPS Resource Management Pedestrian / ORV Closure Policies. These policies address the least significant factors affecting nest survival with little chance to have more than negligible impact. For example: the AMOY Nest Failures are predominately due to non-human events. Using your own stats, the mammalian predation is 54%, Storm / Lunar Tides: 29%, Nest Abandonment: 6%, Avian Predation: 5%, and Ghost Crab Predation: 3%,
 So what is the percentage due to human interference: just 3%! It's insignificant, yet the NPS wants to ban humans when their actions provide very little influence on the success rate of breeding birds and turtles.
 10) I disagree with the stats of breeding plovers and the other birds in the Park when the NPS does not adequately consider locations neighboring the

Recreational Area that are part of the same ecosystem, namely dredge and spoil island that are located just yards away and within sight of the seashore. These birds are part of the same ecosystem and should be included.

Those spoil islands, developed by man from dredging the waterways in the Pamlico Sound for channel upkeep are slammed full of birds. The reason why so many birds? NO PREDATORS. SO, birds are not as stupid as one might think. You have to count these birds and incorporate them in the stats when the NPS is talking about any so called decline in breeding pairs in the National Park.

11) Page 1: I do not think the DEIS responsibly addresses the cultural resource issues. The very purpose of the DEIS as set forth in the National Environmental Policy Act (NEPA) is to protect and preserve natural and cultural resources in the federal decision making process. In the DEIS, the statement "protect and preserve natural and cultural resources" appears in the first sentence of the first page of the plan, in the Purpose of the Plan section, and numerous times thereafter. Yet, the 810 page document devotes only two paragraphs to analysis of cultural resource issues.

As a resident of Hatteras Island, we of the Hatteras Island community have always gotten together on the south beach on Sunday to enjoy the beach with our cookouts, gatherings, surf bathing, horse shoes and foot races, fishing, and surfing. Now the DEIS is proposing closing off most of the south beach during the summer which is the traditional period we local people use the beach. The continuation of this traditional pattern of land use is central to maintaining the historic identity of our island communities.

12) Pages 270-281; 561-598: I strongly disagree with your economic analysis of the impact of the DEIS. The region of influence (ROI) incorporates the Northern Beach communities, including Kill Devil Hills, Kitty Hawk, Southern Shores and Duck. These areas are almost completely disconnected from ORV use and access issues relating to the Seashore.

? Inclusion of the Northern Beaches in analysis significantly dilutes estimates of economic impact on the 8 Seashore Villages

? Analysis of economic impact to the Seashore Villages appears to be significantly down played. Emphasis in DEIS is on the ROI-wide or county-wide level impacts.

? Nowhere is it clearly addressed that the overwhelming majority of negative impacts will be felt by small businesses in the Seashore Villages rather than by overall economic interests within the greater ROI.

On page xlvi, Alternative F is characterized as having a "negligible to moderate" adverse impact on small businesses. I strongly disagree with this statement.

I believe the negligible to moderate projection is inaccurate and relies on economic surveys that has not yet been published. Furthermore, this material is not expected to be added to the DEIS until after the public comment period has ended.

Based upon the economic harm we have already experienced under the consent decree, Dare County projects the economic impact of Alternative F to be substantial.

Beach closures have already had a devastating and unfair impact on many Dare County Businesses, causing foreclosures, bankruptcies, lay-offs, cutbacks, expensive refinancing, and depleted college funds and savings accounts.

Even businesses whose revenue has stayed level or showed a modest increase have accomplished this at a costly price. Many have had to cut back employee hours, forego much-needed capital improvements, and sacrifice profits. That is certainly the case with Hatteras Realty.

Pages 270-286, 561-598: The socio-economic data and analyses are incomplete and erroneous and result in an understatement of the effect the restrictions will have upon the Island, the region and the state of NC. The US Park Services answer: Businesses will have to "adapt" to the new rules. (p.383) The negative economic impacts of the decree ARE KNOWN, so to say that the added restrictions would have negligible to moderate impact is indefensible.

13) Overall Visitor Counts - Overall visitor counts appear to include visitors to Fort Raleigh National Historic Site and the Wright Brothers National Memorial. A large percentage of these visitors vacation in the Northern Beaches communities and recreate on the non-federal beaches outside of the Seashore. Visitors who patronize the Fort Raleigh National Historic Site and the Wright Brothers National Memorial but do not visit the actual seashore areas need to be factored out.

Maintenance of Future Access to Cape Point and South Point Ocracoke: All socioeconomic analyses related to Alternative F are predicated on the assumption that access corridors will remain open for at least an appreciable portion of the visitor high season. Under Alternative F, the access corridors will be subject to Resource Closures based on buffers similar or identical to the Consent Decree. Unless some predictability of access to Cape Point and South Point Ocracoke can be assured, economic analyses predicated on assumption of access are fundamentally flawed.

Why would a group of surf fisherman want to come to Hatteras Island to surf fish if they are not sure they can access the prime fishing grounds at Cape Point? The answer is they won't come. If they don't come, they don't rent vacation homes and spend their money on Hatteras and Ocracoke Islands.

The definition of the Region of Influence (ROI), faulty data on economic activity generated by specific type recreational activity, incomplete visitation/business survey data, inflated overall Seashore visitor counts pertaining to beach use, and flawed key assumptions concerning the maintenance of access under Alternative F, all lead to inaccurate conclusions in the socioeconomic analyses. Specifically, these inaccuracies can be seen as understating the negative socio-economic impact of the Seashore Villages. Further, this negative impact will be absorbed almost entirely by Small Businesses. Neither of these important aspects of the management alternatives are adequately presented in the DEIS.

14) Page 136: I strongly disagree with your pet restriction proposals. The "?prohibition of pets in the Seashore during bird breeding season including in front of the villages." = No Pets in public areas ?beaches, campgrounds, soundfront, foot trails, park maintained roads -from March 15 ?July 31.

15) Pages 125; 392 ? 396: SEA TURTLES. I disagree with the stats and procedures proposed. I think endangered sea turtles would benefit from management practices now in use at other federal seashores that are more proactive in efforts to achieve nesting success. This includes relocating nests to more desirable locations as is done in other state and federally controlled areas.

The Cape Hatteras National Seashore Recreational Area is on the northernmost fringe of turtle nesting locations for the southeast, accounting for about 1% of all turtle nests. Proposed buffer areas are not needed for protection of the turtles and amount to overprotection.

16) Pages 97- 101. I strongly disagree with proposals in this section saying that ORVs will be prohibited year round between ramps 27 and 30, at Hatteras Inlet (Hatteras Spit), Ocracoke Inlet (North Ocracoke Spit) and various other locations.

Not allowing ORV access is paramount to denying the public access to these beaches. They are located miles from the nearest parking or paved road area and too far to access on foot. As a matter of course, there has been no breeding of piping plover or other endangered species at the Hatteras Island Inlet (spit) area in the past 6 years.

17) Page 104: I disagree with the proposed night time driving closures. Per your proposals, night driving will be prohibited between May 1 and November 15th, forcing visitors off of the beaches early in the evening and preventing sunrise surf fishermen access in the morning. I propose a more moderate night time ban if one is needed, perhaps from June 1 ? September 15 with times being 1 hour after sunset and 1 hour before sunrise to allow beach goers to gather their stuff and exit the beach area.

Certainly more proactive measures such as relocating nests prone to weather and ocean events would dramatically increase the nesting success rates.

18) Page 121: I disagree with the proposed beach closings, including pedestrian access from March 15 until July 31 in 8 different beach locations which have traditionally been available. Please leave these areas open to beach walkers, shell collectors and those that want to access the beaches in these areas.

Conclusion:

Please, incorporate access corridors through any SMA so we can get to the open beach beyond. Incorporate the birds into the count that nest on the spoil islands. Base your buffer zones on peer reviewed science and scale them back to more reasonable distances as discussed.

It is neither logical nor reasonable to spend so much time, money and energy to overprotect a bird (Piping Plover) in the Cape Hatteras National Seashore that is on the southernmost fringe area of its breeding ground. That goes for the loggerhead turtle that is in its northernmost breeding area.

Let's scale back the buffer zones. You can always increase at a later date.

The USPS is leaning way over the line on over protection and not enough on the public's right to enjoy the beaches of the National Seashore. The proper balance is not achieved in the propose DEIS and needs to be modified so that the proper balance of reasonable resource protection and access to the beaches of the National Park is achieved. I could sum it up by saying "Protect, not Prohibit."

Thank you,

Correspondence Type: Web Form

Correspondence: Date: May 10, 2010 To: National Park Service From: Cami N. Gray Subject: DEIS Off-Road Vehicle Management Plan Comments

My comments concern the DEIS of the Off-Road Vehicle Management Plan prepared by the National Park Service (NPS) for the Cape Hatteras National Seashore Recreation Area.

1) Page 201: I disagree with the NPS statement: "Even with resource closures in place, protected species are still at risk [from pedestrians and ORVs]." No Piping Plover deaths have been attributed to ORVs. ORV violations continue to decrease as signage and education improve. Pedestrian violations are much more significant than ORV violations. It seems to me that any transgressions into protected area are the result of lack of NPS manpower and enforcement than the public purposely and willfully violating out of bounds areas.

2) Page xxiv: I question the statement of as per the DEIS: "Carrying capacity would be a 'peak use limit' determined for all areas based on the linear feet of beachfront?" If you close off huge sections of the beach, you force more people into smaller areas, potentially resulting in more resource impairment and diminished visitor experience.

3) Page xix and page 23: I am against having two different closures rules pertaining to the North facing beaches (North side) and the South facing beaches (South side) as per the grid outlined in Alternative "F". I disagree with the NPS proposal to close the beaches in villages of Frisco, Hatteras and Ocracoke Villages to ORV access longer than the traditional May 15 to September 15 period for the Northern beaches, even though seasonal visitor statistics are similar for all villages. Please, make them the same: May 15 -> September 15.

4) Page 1: I agree with your statement "ORVs have long served as a primary form of access for many portions of the beach in the seashore, and continue to be the most practical means of access and parking for many visitors."

However, pedestrian only areas discriminate against individuals with limited mobility due to age or physical impairments, families with small children, and those wishing to engage in activities requiring recreational equipment (boogie boards, beach umbrellas, beach chairs, coolers, fishing rods and tackle, etc)

5) Page 53: I disagree with the special use permit proposed guidelines. It is impractical to allow the transportation of disabled visitors to the village beaches and then require the vehicle to be returned to the street or parking area. This necessitates the disabled person to have a driver to drop him (or her) off, then drive to a parking area, then trudge a long distance to the site of the drop off, then trudge the long distance through the sand back to get the vehicle.

Suppose the handicap person wants to go to the beach, is capable of driving himself, yet cannot find another person to go with him? Does he now not go to the beach? This rule creates unnecessary hardships and risks in the event of an emergency as well.

6) Page 121 ? 127. I strongly disagree with the buffers as presented. We must allow for pass-thru corridors. The beach is linear with the ocean buffering on one side and the dune line on the other. For example - If you pinch off access on one side of a 4 mile linear beach and pinch off access on the other side of the 4 mile section of beach with no corridor, then you effectively have closed off all 4 miles of the beach because you CAN'T get there. The proposed bird buffers are too large, blocking access to the interior sections from the two "buffered" ends.

I propose ORV pass-thru only corridors and to use breeding / nesting buffer distances to establish ORV pass through only corridors to ensure beach access in a way that does not hinder resource protection. I believe pass through corridors should be maintained for pedestrians and ORVs in all areas of the Cape Hatteras National Seashore Recreational Area throughout the entire breeding and nesting season. Corridors are vital to providing access in a way that does not hinder resource protection.

Piping Plover unfledged chicks buffer should move with the brood as it relocates to reliable food source, not expanded.

The 1,000 meter distance for the piping plover is way too large and not based upon peer reviewed science. A more rational distance would be 200 meters per other sites in the nation for the piping plover. Ample scientific evidence and precedent exists to support a 200 meter buffer.

Buffers for other species, including American Oystercatchers, Least Terns and Colonial Waterbirds must also be changed. An effective 30 meter buffer should be established for these species rather than the 300 meter closure outlined in the DEIS.

NON-ENDANGERED BIRDS should not have same protection as if endangered. Not allowing ORV access is paramount to denying the public access to these beaches.

7) Page 468: I disagree with the limitations imposed on pedestrian and ORVs. Corridors or bypasses should be provided thru, around or below high tide line in all SMAs during entire breeding season to maintain access.

8) Page 124: I strongly disagree with the NPS slant of providing for over protection of resource management over that of the public's right to access the beaches. Pro-active initiatives include: Vegetation Management, Habitat Management, Enhanced Predator Management, Colonial Water bird social attraction, Piping Plover check fledged rate, Piping plover chick buffer distance, and pass-through buffers during the incubation period. Opportunities to implement less restrictive closures as a result of the above initiatives should be considered more frequently than the 5-year periodic review process identified in the DEIS.

9) I strongly disagree with the NPS Resource Management Pedestrian / ORV Closure Policies. These policies address the least significant factors affecting nest survival with little chance to have more than negligible impact. For example: the AMOY Nest Failures are predominately due to non-human events. Using your own stats, the mammalian predation is 54%, Storm / Lunar Tides: 29%, Nest Abandonment: 6%, Avian Predation: 5%, and Ghost Crab Predation: 3%,

So what is the percentage due to human interference: just 3%! It's insignificant, yet the NPS wants to ban humans when their actions provide very little influence on the success rate of breeding birds and turtles.

10) I disagree with the stats of breeding plovers and the other birds in the Park when the NPS does not adequately consider locations neighboring the Recreational Area that are part of the same ecosystem, namely dredge and spoil island that are located just yards away and within sight of the seashore. These birds are part of the same ecosystem and should be included.

Those spoil islands, developed by man from dredging of the waterways in the Pamlico Sound for channel upkeep are slammed full of birds. The reason why so many birds? NO PREDATORS. SO, birds are not as stupid as one might think. You have to count these birds and incorporate them in the stats when the NPS is talking about any so called decline in breeding pairs in the National Park.

11) Page 1: I do not think the DEIS responsibly addresses the cultural resource issues. The very purpose of the DEIS as set forth in the National Environmental Policy Act (NEPA) is to protect and preserve natural and cultural resources in the federal decision making process. In the DEIS, the statement "protect and preserve natural and cultural resources" appears in the first sentence of the first page of the plan, in the Purpose of the Plan section, and numerous times thereafter. Yet, the 810 page document devotes only two paragraphs to analysis of cultural resource issues.

12) Pages 270-281; 561-598: I strongly disagree with your economic analysis of the impact of the DEIS. The region of influence (ROI) incorporates the Northern Beach communities, including Kill Devil Hills, Kitty Hawk, Southern Shores and Duck. These areas are almost completely disconnected from ORV use and access issues relating to the Seashore. ? Inclusion of the Northern Beaches in analysis significantly dilutes estimates of economic impact on the 8 Seashore Villages

? Analysis of economic impact to the Seashore Villages appears to be significantly down played. Emphasis in DEIS is on the ROI-wide or county-wide level impacts.

? Nowhere is it clearly addressed that the overwhelming majority of negative impacts will be felt by small businesses in the Seashore Villages rather than by overall economic interests within the greater ROI.

On page xlvi, Alternative F is characterized as having a "negligible to moderate" adverse impact on small businesses. I strongly disagree with this statement.

I believe the negligible to moderate projection is inaccurate and relies on economic surveys that has not yet been published. Furthermore, this material is not expected to be added to the DEIS until after the public comment period has ended.

Based upon the economic harm we have already experienced under the consent decree, Dare County projects the economic impact of Alternative F to be substantial.

Beach closures have already had a devastating and unfair impact on many Dare County Businesses, causing foreclosures, bankruptcies, lay-offs, cutbacks, expensive refinancing, and depleted college funds and savings accounts.

Pages 270-286, 561-598: The socio-economic data and analyses are incomplete and erroneous and result in an understatement of the effect the restrictions will have upon the Island, the region and the state of NC. The US Park Services answer: Businesses will have to "adapt" to the new rules. (p.383) The negative economic impacts of the decree ARE KNOWN, so to say that the added restrictions would have negligible to moderate impact is indefensible.

13) Overall Visitor Counts - Overall visitor counts appear to include visitors to Fort Raleigh National Historic Site and the Wright Brothers National Memorial. A large percentage of these visitors vacation in the Northern Beaches communities and recreate on the non-federal beaches outside of the Seashore. Visitors who patronize the Fort Raleigh National Historic Site and the Wright Brothers National Memorial but do not visit the actual seashore areas need to be factored out.

Maintenance of Future Access to Cape Point and South Point Ocracoke: All socioeconomic analyses related to Alternative F are predicated on the assumption that access corridors will remain open for at least an appreciable portion of the visitor high season. Under Alternative F, the access corridors will be subject to Resource Closures based on buffers similar or identical to the Consent Decree. Unless some predictability of access to Cape Point and South Point Ocracoke can be assured, economic analyses predicated on assumption of access are fundamentally flawed.

Why would a group of surf fisherman want to come to Hatteras Island to surf fish if they are not sure they can access the prime fishing grounds at Cape Point? The answer is they won't come. If they don't come, they don't rent vacation homes and spend their money on Hatteras and Ocracoke Islands.

The definition of the Region of Influence (ROI), faulty data on economic activity generated by specific type recreational activity, incomplete visitation/business survey data, inflated overall Seashore visitor counts pertaining to beach use, and flawed key assumptions concerning the maintenance of access under Alternative F, all lead to inaccurate conclusions in the socioeconomic analyses. Specifically, these inaccuracies can be seen as understating the negative socio-economic impact of the Seashore Villages. Further, this negative impact will be absorbed almost entirely by Small Businesses. Neither of these important aspects of the management alternatives are adequately presented in the DEIS.

14) Page 136: I strongly disagree with your pet restriction proposals. The "prohibition of pets in the Seashore during bird breeding season including in front of the villages." = No Pets in public areas ?beaches, campgrounds, soundfront, foot trails, park maintained roads -from March 15 ?July 31.

15) Pages 125; 392 ? 396: SEA TURTLES. I disagree with the stats and procedures proposed. I think endangered sea turtles would benefit from management practices now in use at other federal seashores that are more proactive in efforts to achieve nesting success. This includes relocating nests to more desirable locations as is done in other state and federally controlled areas.

The Cape Hatteras National Seashore Recreational Area is on the northernmost fringe of turtle nesting locations for the southeast, accounting for about 1% of all turtle nests. Proposed buffer areas are not needed for protection of the turtles and amount to overprotection.

16) Pages 97- 101. I strongly disagree with proposals in this section saying that ORVs will be prohibited year round between ramps 27 and 30, at Hatteras Inlet (Hatteras Spit), Ocracoke Inlet (North Ocracoke Spit) and various other locations.

Not allowing ORV access is paramount to denying the public access to these beaches. They are located miles from the nearest parking or paved road area and too far to access on foot. As a matter of course, there has been no breeding of piping plover or other endangered species at the Hatteras Island Inlet (spit) area in the past 6 years.

17) Page 104: I disagree with the proposed night time driving closures. Per your proposals, night driving will be prohibited between May 1 and November 15th, forcing visitors off of the beaches early in the evening and preventing sunrise surf fishermen access in the morning. I propose a more moderate night time ban if one is needed, perhaps from June 1 ? September 15 with times being 1 hour after sunset and 1 hour before sunrise to allow beach goers to gather their stuff and exit the beach area.

Certainly more proactive measures such as relocating nests prone to weather and ocean events would dramatically increase the nesting success rates.

18) Page 121: I disagree with the proposed beach closings, including pedestrian access from March 15 until July 31 in 8 different beach locations which have traditionally been available. Please leave these areas open to beach walkers, shell collectors and those that want to access the beaches in these areas.

Conclusion:

Please, incorporate access corridors through any SMA so we can get to the open beach beyond. Incorporate the birds into the count that nest on the spoil islands. Base your buffer zones on peer reviewed science and scale them back to more reasonable distances as discussed.

It is neither logical nor reasonable to spend so much time, money and energy to overprotect a bird (Piping Plover) in the Cape Hatteras National Seashore that is on the southernmost fringe area of its breeding ground. That goes for the loggerhead turtle that is in its northernmost breeding area.

Let's scale back the buffer zones. You can always increase at a later date.

The USPS is leaning way over the line on over protection and not enough on the public's right to enjoy the beaches of the National Seashore. The proper balance is not achieved in the propose DEIS and needs to be modified so that the proper balance of reasonable resource protection and access to the beaches of the National Park is achieved. I could sum it up by saying "Protect, not Prohibit."

Thank you,

Cami N Gray Resident of Hatteras Village on Hatteras Island, NC

Correspondence: My family has lived on Hatteras Island in Hatteras Village for seven generations. There are no better stewards of the land and sea the the locals who inhabit this island. We are mindful of all living things and do what is needed to preserve and protect all creatures. To close the National Seashore is going against all of the promises that were made when the Park service first came here. We were told that our way of life would not be tampered with in any way. The selfinterest groups who wish to destroy our livelihood do not live here nor do they pay any taxes toward this community. While I may have an opinion on what goes on the the bigger outside world, I don't step in as an authority to change anyone elses way of life. We live here because we choose to. I only ask that you consider the promises made and keep them. Thank you for allowing my voice to be heard. Respectfully, Marianne O'Neal

Correspondence: Pea Island was established to be the wildlife refuge on Hatteras Island, the rest of the Cape Hatteras National Seashore was intended to be a RECREATIONAL area. The U.S. government promised this type of use to the hundreds of people who donated their land in order to create the seashore in the first place.

Why is it okay to tamper with nature in some cases but not others? It seems to okay to tamper if the actions will adversely affect park visitors, but not if the actions would actually benefit both nature and visitors. For example, it's okay to relocate turtle nests when storms are imminent, but not at other times. It's okay to set aside areas of the beach to replant "extirpated" seabeach amaranth, but it's not okay to clear vegetation at the Cape Point ponds to create a more favorable piping plover habitat (outside of the primary ORV corridor). It's okay to kill predators, but it's not okay to drive on the beach at night (which is a deterrent to predators).

My understanding is that most nest failures are caused by non-human events. For example, 54% are due to predators and 29% are due to storms and

tides. If nests can be relocated when storms are approaching, why can't they also be relocated to preserve ORV use in the seashore? Nests could be moved to the nearby dredge and spoil islands, which typically have fewer predator threats anyway.

Page vi - "Visitor experience could be affected by conflicts between motorized and non-motorized recreation users." - I have been living in Avon for almost four years and I have never heard of a single "conflict" between pedestrian and ORV users. The majority of the people who come here to use the beach as a recreational area do so with an ORV, especially those who have difficulty walking in sand. Are there any documented cases of a pedestrian being injured by an ORV on the beach?

Page vi - "Other issues related to visitor use and experience include viewsheds, aesthetics, and night skies. While the sight of ORVs can destroy the viewshed and aesthetics for some visitors, they also change the viewshed by altering the natural landscape." - And what do the signs and strings announcing closures do to the aesthetics of the seashore? I'd much rather see an ORV on the horizon than have to view the signs and strings everywhere.

Page 1 - "ORVs have long served as a primary form of access for many portions of the beach in the Seashore, and continue to be the most practical available means of access and parking for many visitors." - Pedestrian only areas discriminate against people with physical handicaps, those who have difficulty walking due to age and small children. My uncle, a fisherman recovering from a brain tumor and lung cancer, has difficulty walking in the sand from ramp parking lots to the beach. Without an ORV, he won't be able to enjoy the beach at all. I'm sure there are many other stories similar to his.

Pages 86-87 - Why does the NPS resist using some of the more proactive techniques to encourage turtle nesting? Captive rearing, routine nest relocation and hatcheries are used successfully at other East Coast locations.

Page 136 - "prohibition of pets in the Seashore during breeding season including in front of the villages" - I live in Avon. Do you mean that if I'm driving up Highway 12 between Avon and Salvo, I can't stop in one of the parking areas to allow my pet to urinate if the need arises? And I can't walk my dog on the beach? I think this is too restrictive and pets on 6 foot leashes should be allowed in the seashore year round.

Page 210 - "Even with resource closures in place, protected species are still at risk." - How many piping plover deaths have been attributed to ORVs? How many to pedestrians? How many to non-human factors?

Pages 392-396 - Why doesn't the NPS address the environmental issues that are more detrimental to turtle recovery success than ORVs/pedestrians? For example, 38.5% of nests had 0 hatchlings due to weather events. The 2009 Loggerhead Recovery Plans calls this "catastrophic."

Page 468 - "If breeding activity or scraping is observed outside of an existing closure, buffers would be expanded" - Why would the buffer be expanded instead of moved?

Socioeconomic analysis (pages 270-281 and 561-598) - The Region of Influence includes the Northern Beach communities of Southern Shores and Duck. These areas are almost completely disconnected from the seashore and any issues of ORV use. Inclusion of these communities in the ROI dilutes all estimates of economic impact to the seashore villages. Also, I can't find anywhere that the DEIS addresses that the primary economic impacts will be felt by small, locally owned businesses. Economic analyses contained in the DEIS do not appear to use all data available from the first FULL year of the 2009 Consent Decree. Visitor counts appear to include visitors to Fort Raleigh National Historic Site and the Wright Brothers National Memorial, who may or may not visit the actual seashore.

Correspondence: Alternative "F" requires far too much clearance for birds, I believe we should move incrementally (such as) starting with 200 meter clearance for a brood and studying the effectiveness of this. The people have been assured the right to access in order to recreate in our park systems year around and we need to balance the commision to protect the resource with the needs of the taxpayers who enable the resource to be protected and provide jobs for the park service. The proposals offered in Alternative "F" limit the ability to rest and recreate during the time of year when the public is most desiring and able (because of school requirements) to use the resource. "We the people" need to be the largest part of this equation. We the people of Hatteras love the culture and the wildlife as much as anyone and only desire to find reasonable policy on which to agree. The economic impact on the local businesses and property owners has not been addressed adequately or accurately, inacting such radical changes in the most severe housing crisis and economy in our history will no doubt cause more failure and more taxpayer rescue to an already disasterous economy. Please show wisdom and restraint in how you proceed with these changes, for the animals and the people.

Correspondence: I have been coming to the Outer Banks for 30 years this year. For me Hatteras Island is a place where I find solitude, a place I go to activate a recharging of my soul. It's a favorite part of my life these days to be able to have a week at what I believe is the most beautiful beach on the East coast. Once there I am finally able to let my mind reorganize and as soon as time permits I find one of my favorite spots and DRIVE down the beach where I park my SUV along side the ocean at last being able to sit with my arthritic body and melt away all the stress and pain from the long days of a tormented life.
If I can not drive to my favorite spot and sit at the ocean and look upon one of Gods greatest and most beautiful gifts, what is there for me to look forward to? I ask you, where will I go that I can access the beach and be able to do this alone. The one thing I am able to do without help, without that familiar loss of dignity.
As a citizen, a caretaker of mother earth, as a inhabitant of this planet, and as a lover of this great beach I humbly ask that it be preserved and protected as a eco-human beach. PLEASE<<<<<<Keep our beaches open!

Correspondence: My family and I have been coming to the Outer Banks and have enjoyed the seashore for the past 30 years. We have brought our children to the beach when they were little, up until they were young adults. We have driven on the beach each time we come, fished, and have total respect for the privilege to access it. My wife and I both recently retired and have filled out some of the necessary paperwork to volunteer for the park service. That is how much we LOVE the outer banks.
We totally support the local economy when we visit, grocery stores, bait shops, tackle shops, resturants, ect. If access to the beach doesn't continue the economy will fail in that area. These are the hardest working people we have ever come to know.
After all, having access to the National Seashore is out RIGHT.

Correspondence: The principle activity aided by ORV access on these beaches is best described as multiple-use. This concept has developed over many years of public experience without resource conflict. ORV operation provides the flexibility to respond to the rapid weather and ecological changes that occur along these shifting strands of sand. Weather, wind, and waves often dictate where and when a particular recreation will be practiced. The proposal also gives consideration to year-round and seasonal pedestrian use. Seasonal ORV use is contemplated only in non-peak visitation times of the year in front of villages. Year-round pedestrian closures are contemplated where pedestrian visitors can easily access and use beaches free of ORV traffic.

Correspondence: Dear Superintendent Murray,
As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Why would this be? ORVs are noisy and destructive plus they are polluting!! Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.
1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."
2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness...."
Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.
3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.
Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.
***** Thank you very much for taking the time to protect one of America's most beautiful stretches of Atlantic seashore! Sea turtles, nesting shorebirds, and generations to come will be grateful for your action today. Thanks again!
Sincerely,
Mary Heminger

Correspondence: I am against having two different closures rules pertaining to the North facing beaches (North side) and the South facing beaches (South side) as per the grid outlined in Alternative "F". I disagree with the NPS proposal to close the beaches in villages of Frisco, Hatteras and Ocracoke Villages to ORV access longer than the traditional May 15 to September 15 period for the Northern beaches, even though seasonal visitor statistics are similar for all villages. Please, make them the same: May 15 -> September 15.

I disagree with the special use permit proposed guidelines. It is impractical to allow the transportation of disabled visitors to the village beaches and then require the vehicle to be returned to the street or parking area. This necessitates the disabled person to have a driver to drop him (or her) off, then drive to a parking area, then trudge a long distance to the site of the drop off, then trudge the long distance through the sand back to get the vehicle.

I disagree with the buffers as presented. We must allow for pass-thru corridors. The beach is linear with the ocean buffering on one side and the dune line on the other. The proposed bird buffers are too large, blocking access to the interior sections from the two "buffered" ends.

I disagree with the limitations imposed on pedestrian and ORVs. Corridors or bypasses should be provided thru, around or below high tide line in all SMAs during entire breeding season to maintain access.

I do not think the DEIS responsibly addresses the cultural resource issues. The very purpose of the DEIS as set forth in the National Environmental Policy Act (NEPA) is to protect and preserve natural and cultural resources in the federal decision making process. In the DEIS, the statement "protect and preserve natural and cultural resources" appears in the first sentence of the first page of the plan, in the Purpose of the Plan section, and numerous times thereafter. Yet, the 810 page document devotes only two paragraphs to analysis of cultural resource issues.

I disagree with proposals in this section saying that ORVs will be prohibited year round between ramps 27 and 30, at Hatteras Inlet (Hatteras Spit), Ocracoke Inlet (North Ocracoke Spit) and various other locations.

Not allowing ORV access is paramount to denying the public access to these beaches. They are located miles from the nearest parking or paved road area and too far to access on foot. As a matter of course, there has been no breeding of piping plover or other endangered species at the Hatteras Island Inlet (spit) area in the past 6 years.

I disagree with the proposed night time driving closures. Per your proposals, night driving will be prohibited between May 1 and November 15th, forcing visitors off of the beaches early in the evening and preventing sunrise surf fishermen access in the morning. I propose a more moderate night time ban if one is needed, perhaps from June 1 ? September 15 with times being 1 hour after sunset and 1 hour before sunrise to allow beach goers to gather their stuff and exit the beach area.

Certainly more proactive measures such as relocating nests prone to weather and ocean events would dramatically increase the nesting success rates.

I disagree with the proposed beach closings, including pedestrian access from March 15 until July 31 in 8 different beach locations which have traditionally been available. Please leave these areas open to beach walkers, shell collectors and those that want to access the beaches in these areas.

PROTECT, NOT PROHIBIT!

Thank you!
Regards,
Edas Zemaitis

Correspondence:

My comments concern the DEIS of the Off-Road Vehicle Management Plan prepared by the National Park Service (NPS) for the Cape Hatteras National Seashore Recreation Area. Let me first state my general reaction and conclusion:

Please, incorporate access corridors through any SMA so we can get to the open beach beyond. Incorporate the birds into the count that nest on the spoil islands. Base your buffer zones on peer reviewed science and scale them back to more reasonable distances as discussed. It is neither logical nor reasonable to spend so much time, money and energy to overprotect a bird (Piping Plover) in the Cape Hatteras National Seashore that is on the southernmost fringe area of its breeding ground. That goes for the loggerhead turtle that is in its northernmost breeding area. Let's scale back the buffer zones. You can always increase at a later date. The USPS is leaning way over the line on over protection and not enough on the public's right to enjoy the beaches of the National Seashore. The proper balance is not achieved in the propose DEIS and needs to be modified so that the proper balance of reasonable resource protection and access to the beaches of the National Park is achieved. I could sum it up by saying "Protect, not Prohibit."

Here are my specific comments:

1) Page 201: I disagree with the NPS statement: "Even with resource closures in place, protected species are still at risk [from pedestrians and ORVs]." No Piping Plover deaths have been attributed to ORVs. ORV violations continue to decrease as signage and education improve. Pedestrian violations are much more significant than ORV violations. It seems to me that any transgressions into protected area are the result of lack of NPS manpower and enforcement than the public purposely and willfully violating out of bounds areas.

2) Page xxiv: I question the statement of as per the DEIS: "Carrying capacity would be a 'peak use limit' determined for all areas based on the linear feet of beachfront?" If you close off huge sections of the beach, you force more people into smaller areas, potentially resulting in more resource impairment and diminished visitor experience.

3) Page xix and page 23: I am against having two different closures rules pertaining to the North facing beaches (North side) and the South facing beaches (South side) as per the grid outlined in Alternative "F". I disagree with the NPS proposal to close the beaches in villages of Frisco, Hatteras and Ocracoke Villages to ORV access longer than the traditional May 15 to September 15 period for the Northern beaches, even though seasonal visitor statistics are similar for all villages. Please, make them the same: May 15 -> September 15.

4) Page 1: I agree with your statement "ORVs have long served as a primary form of access for many portions of the beach in the seashore, and continue to be the most practical means of access and parking for many visitors." However, pedestrian only areas discriminate against individuals with limited mobility due to age or physical impairments, families with small children, and those wishing to engage in activities requiring recreational equipment (boogie boards, beach umbrellas, beach chairs, coolers, fishing rods and tackle, etc)

5) Page 53: I disagree with the special use permit proposed guidelines. It is impractical to allow the transportation of disabled visitors to the village beaches and then require the vehicle to be returned to the street or parking area. This necessitates the disabled person to have a driver to drop him (or her) off, then drive to a parking area, then trudge a long distance to the site of the drop off, then trudge the long distance through the sand back to get the vehicle.

Suppose the handicap person wants to go to the beach, is capable of driving himself, yet cannot find another person to go with him? Does he now not go to the beach? This rule creates unnecessary hardships and risks in the event of an emergency as well.

6) Page 121 ? 127. I strongly disagree with the buffers as presented. We must allow for pass-thru corridors. The beach is linear with the ocean buffering on one side and the dune line on the other. For example - If you pinch off access on one side of a 4 mile linear beach and pinch off access on the other side of the 4 mile section of beach with no corridor, then you effectively have closed off all 4 miles of the beach because you CAN'T get there. The proposed bird buffers are too large, blocking access to the interior sections from the two "buffered" ends.

I propose ORV pass-thru only corridors and to use breeding / nesting buffer distances to establish ORV pass through only corridors to ensure beach access in a way that does not hinder resource protection. I believe pass through corridors should be maintained for pedestrians and ORVs in all areas of the Cape Hatteras National Seashore Recreation Area throughout the entire breeding and nesting season. Corridors are vital to providing access in a way that does not hinder resource protection.

Piping Plover unfledged chicks buffer should move with the brood as it relocates to reliable food source, not expanded.

The 1,000 meter distance for the piping plover is way too large and not based upon peer reviewed science. A more rational distance would be 200 meters per other sites in the nation for the piping plover. Ample scientific evidence and precedent exists to support a 200 meter buffer.

Buffers for other species, including American Oystercatchers, Least Terns and Colonial Waterbirds must also be changed. An effective 30 meter buffer should be established for these species rather than the 300 meter closure outlined in the

DEIS.

NON-ENDANGERED BIRDS should not have same protection as if endangered. Not allowing ORV access is paramount to denying the public access to these beaches.

7) Page 468: I disagree with the limitations imposed on pedestrian and ORVs. Corridors or bypasses should be provided thru, around or below high tide line in all SMAs during entire breeding season to maintain access.

8) Page 124: I strongly disagree with the NPS slant of providing for over protection of resource management over that of the public's right to access the beaches. Pro-active initiatives include: Vegetation Management, Habitat Management, Enhanced Predator Management, Colonial Water bird social attraction, Piping Plover check fledge rate, Piping plover chick buffer distance, and pass-through buffers during the incubation period. Opportunities to implement less restrictive closures as a result of the above initiatives should be considered more frequently than the 5-year periodic review process identified in the DEIS.

9) I disagree with the NPS Resource Management Pedestrian / ORV Closure Policies. These policies address the least significant factors affecting nest survival with little chance to have more than negligible impact. For example: the AMOY Nest Failures are predominately due to non-human events. Using your own stats, the mammalian predation is 54%, Storm / Lunar Tides: 29%, Nest Abandonment: 6%, Avian Predation: 5%, and Ghost Crab Predation: 3%,

So what is the percentage due to human interference: just 3%! It's insignificant, yet the NPS wants to ban humans when their actions provide very little influence on the success rate of breeding birds and turtles.

10) I disagree with the stats of breeding plovers and the other birds in the Park when the NPS does not adequately consider locations neighboring the Recreational Area that are part of the same ecosystem, namely dredge and spoil island that are located just yards away and within sight of the seashore. These birds are part of the same ecosystem and should be included.

Those spoil islands, developed by man from dredging the waterways in the Pamlico Sound for channel upkeep are slammed full of birds. The reason why so many birds? NO PREDATORS. SO, birds are not as stupid as one might think. You have to count these birds and incorporate them in the stats when the NPS is talking about any so called decline in breeding pairs in the National Park.

11) Page 1: I do not think the DEIS responsibly addresses the cultural resource issues. The very purpose of the DEIS as set forth in the National Environmental Policy Act (NEPA) is to protect and preserve natural and cultural resources in the federal decision making process. In the DEIS, the statement "protect and preserve natural and cultural resources" appears in the first sentence of the first page of the plan, in the Purpose of the Plan section, and numerous times thereafter. Yet, the 810 page document devotes only two paragraphs to analysis of cultural resource issues.

12) Pages 270-281; 561-598: I strongly disagree with your economic analysis of the impact of the DEIS. The region of influence (ROI) incorporates the Northern Beach communities, including Kill Devil Hills, Kitty Hawk, Southern Shores and Duck. These areas are almost completely disconnected from ORV use and access issues relating to the Seashore.

? Inclusion of the Northern Beaches in analysis significantly dilutes estimates of economic impact on the 8 Seashore Villages

? Analysis of economic impact to the Seashore Villages appears to be significantly down played. Emphasis in DEIS is on the ROI-wide or county-wide level impacts.

? Nowhere is it clearly addressed that the overwhelming majority of negative impacts will be felt by small businesses in the Seashore Villages rather than by overall economic interests within the greater ROI.

On page xlvi, Alternative F is characterized as having a "negligible to moderate" adverse impact on small businesses. I strongly disagree with this statement.

I believe the negligible to moderate projection is inaccurate and relies on economic surveys that has not yet been published. Furthermore, this material is not expected to be added to the DEIS until after the public comment period has ended.

Based upon the economic harm we have already experienced under the consent decree, Dare County projects the economic impact of Alternative F to be substantial.

Beach closures have already had a devastating and unfair impact on many Dare County Businesses, causing foreclosures, bankruptcies, lay-offs, cutbacks, expensive refinancing, and depleted college funds and savings accounts.

Even businesses whose revenue has stayed level or showed a modest increase have accomplished this at a costly price. Many have had to cut back employee hours, forego much-needed capital improvements, and sacrifice profits. That is certainly the case with Hatteras Realty.

Pages 270-286, 561-598: The socio-economic data and analyses are incomplete and erroneous and result in an understatement of the effect the restrictions will have upon the Island, the region and the state of NC. The US Park Services answer: Businesses will have to "adapt" to the new rules.

(p.383) The negative economic impacts of the decree ARE KNOWN, so to say that the added restrictions would have negligible to moderate impact is indefensible.

13) Overall Visitor Counts - Overall visitor counts appear to include visitors to Fort Raleigh National Historic Site and the Wright Brothers National Memorial. A large percentage of these visitors vacation in the Northern Beaches communities and recreate on the non-federal beaches outside of the Seashore. Visitors who patronize the Fort Raleigh National Historic Site and the Wright Brothers National Memorial but do not visit the actual seashore areas need to be factored out.

Maintenance of Future Access to Cape Point and South Point Ocracoke: All socioeconomic analyses related to Alternative F are predicated on the assumption that access corridors will remain open for at least an appreciable portion of the visitor high season. Under Alternative F, the access corridors will be subject to Resource Closures based on buffers similar or identical to the Consent Decree. Unless some predictability of access to Cape Point and South Point Ocracoke can be assured, economic analyses predicated on assumption of access are fundamentally flawed.

Why would a group of surf fisherman want to come to Hatteras Island to surf fish if they are not sure they can access the prime fishing grounds at Cape Point? The answer is they won't come. If they don't come, they don't rent vacation homes and spend their money on Hatteras and Ocracoke Islands.

The definition of the Region of Influence (ROI), faulty data on economic activity generated by specific type recreational activity, incomplete visitation/business survey data, inflated overall Seashore visitor counts pertaining to beach use, and flawed key assumptions concerning the maintenance of access under Alternative F, all lead to inaccurate conclusions in the socioeconomic analyses. Specifically, these inaccuracies can be seen as understating the negative socio-economic impact of the Seashore Villages. Further, this negative impact will be absorbed almost entirely by Small Businesses. Neither of these important aspects of the management alternatives are adequately presented in the DEIS.

14) Page 136: I strongly disagree with your pet restriction proposals. The "prohibition of pets in the Seashore during bird breeding season including in front of the villages." = No Pets in public areas ?beaches, campgrounds, soundfront, foot trails, park maintained roads -from March 15 ?July 31.

Hatteras Realty books approximately 13,000 rental weeks for a total of 91,000 rental nights housing approximately 700,000 visitors. The ban on pets to July 31 will seriously hurt the rentals of my vacation homes as our pet homes encompass about 30% of our rentals. I propose allowing pets on 6 foot leashes year-round in all areas open to pedestrians or ORVs.

15) Pages 125; 392 ? 396: SEA TURTLES. I disagree with the stats and procedures proposed. I think endangered sea turtles would benefit from management practices now in use at other federal seashores that are more proactive in efforts to achieve nesting success. This includes relocating nests to more desirable locations as is done in other state and federally controlled areas.

The Cape Hatteras National Seashore Recreational Area is on the northernmost fringe of turtle nesting locations for the southeast, accounting for about 1% of all turtle nests. Proposed buffer areas are not needed for protection of the turtles and amount to overprotection.

16) Pages 97- 101. I strongly disagree with proposals in this section saying that ORVs will be prohibited year round between ramps 27 and 30, at Hatteras Inlet (Hatteras Spit), Ocracoke Inlet (North Ocracoke Spit) and various other locations.

Not allowing ORV access is paramount to denying the public access to these beaches. They are located miles from the nearest parking or paved road area and too far to access on foot. As a matter of course, there has been no breeding of piping plover or other endangered species at the Hatteras Island Inlet (spit) area in the past 6 years.

17) Page 104: I disagree with the proposed night time driving closures. Per your proposals, night driving will be prohibited between May 1 and November 15th, forcing visitors off of the beaches early in the evening and preventing sunrise surf fishermen access in the morning. I propose a more moderate night time ban if one is needed, perhaps from June 1 ? September 15 with times being 1 hour after sunset and 1 hour before sunrise to allow beach goers to gather their stuff and exit the beach area.

Certainly more proactive measures such as relocating nests prone to weather and ocean events would dramatically increase the nesting success rates.

18) Page 121: I disagree with the proposed beach closings, including pedestrian access from March 15 until July 31 in 8 different beach locations which have traditionally been available. Please leave these areas open to beach walkers, shell collectors and those that want to access the beaches in these areas.

Conclusion:

Please, incorporate access corridors through any SMA so we can get to the open beach beyond. Incorporate the birds into the count that nest on the spoil islands. Base your buffer zones on peer reviewed science and scale them back to more reasonable distances as discussed.

It is neither logical nor reasonable to spend so much time, money and energy to overprotect a bird (Piping Plover) in the Cape Hatteras National Seashore that is on the southernmost fringe area of its breeding ground. That goes for the loggerhead turtle that is in its northernmost breeding area. Let's scale back the buffer zones. You can always increase at a later date.

The USPS is leaning way over the line on over protection and not enough on the public's right to enjoy the beaches of the National Seashore. The proper balance is not achieved in the propose DEIS and needs to be modified so that the proper balance of reasonable resource protection and access to the beaches of the National Park is achieved. I could sum it up by saying "Protect, not Prohibit."

Thank you,

Pages 270-286, 561-598: The socio-economic data and analyses are incomplete and erroneous and result in an understatement of the effect the restrictions will have upon the Island, the region and the state of NC. The US Park Services answer: Businesses will have to "adapt" to the new rules. (p.383) The negative economic impacts of the decree ARE KNOWN, so to say that the added restrictions would have negligible to moderate impact is indefensible.

13) Overall Visitor Counts - Overall visitor counts appear to include visitors to Fort Raleigh National Historic Site and the Wright Brothers National Memorial. A large percentage of these visitors vacation in the Northern Beaches communities and recreate on the non-federal beaches outside of the Seashore. Visitors who patronize the Fort Raleigh National Historic Site and the Wright Brothers National Memorial but do not visit the actual seashore areas need to be factored out.

Maintenance of Future Access to Cape Point and South Point Ocracoke: All socioeconomic analyses related to Alternative F are predicated on the assumption that access corridors will remain open for at least an appreciable portion of the visitor high season. Under Alternative F, the access corridors will be subject to Resource Closures based on buffers similar or identical to the Consent Decree. Unless some predictability of access to Cape Point and South Point Ocracoke can be assured, economic analyses predicated on assumption of access are fundamentally flawed.

Why would a group of surf fisherman want to come to Hatteras Island to surf fish if they are not sure they can access the prime fishing grounds at Cape Point? The answer is they won't come. If they don't come, they don't rent vacation homes and spend their money on Hatteras and Ocracoke Islands.

The definition of the Region of Influence (ROI), faulty data on economic activity generated by specific type recreational activity, incomplete visitation/business survey data, inflated overall Seashore visitor counts pertaining to beach use, and flawed key assumptions concerning the maintenance of access under Alternative F, all lead to inaccurate conclusions in the socioeconomic analyses. Specifically, these inaccuracies can be seen as understating the negative socio-economic impact of the Seashore Villages. Further, this negative impact will be absorbed almost entirely by Small Businesses. Neither of these important aspects of the management alternatives are adequately presented in the DEIS.

14) Page 136: I strongly disagree with your pet restriction proposals. The "prohibition of pets in the Seashore during bird breeding season including in front of the villages." = No Pets in public areas ?beaches, campgrounds, soundfront, foot trails, park maintained roads -from March 15 ?July 31.

We own a house that rents out as pet friendly. More than 70% of our renters bring their pets to enjoy their vacation at the beach. The ban on pets to July 31 will seriously hurt the rentals of my vacation home. I propose allowing pets on 6 foot leashes year-round in all areas open to pedestrians or ORVs.

Furthermore I can not understand why we would design a beach plan around certain animals and at the same time ban animals such as dogs from the beach. Any animal should have the same rights on the beach, not just birds and turtles. Who is fighting for the dogs rights in this case? 15) Pages 125; 392 ? 396: SEA TURTLES. I disagree with the stats and procedures proposed. I think endangered sea turtles would benefit from management practices now in use at other federal seashores that are more proactive in efforts to achieve nesting success. This includes relocating nests to more desirable locations as is done in other state and federally controlled areas.

The Cape Hatteras National Seashore Recreational Area is on the northernmost fringe of turtle nesting locations for the southeast, accounting for about 1% of all turtle nests. Proposed buffer areas are not needed for protection of the turtles and amount to overprotection.

16) Pages 97- 101. I strongly disagree with proposals in this section saying that ORVs will be prohibited year round between ramps 27 and 30, at Hatteras Inlet (Hatteras Spit), Ocracoke Inlet (North Ocracoke Spit) and various other locations.

Not allowing ORV access is paramount to denying the public access to these beaches. They are located miles from the nearest parking or paved road area and too far to access on foot. As a matter of course, there has been no breeding of piping plover or other endangered species at the Hatteras Island Inlet (spit) area in the past 6 years.

17) Page 104: I disagree with the proposed night time driving closures. Per your proposals, night driving will be prohibited between May 1 and November 15th, forcing visitors off of the beaches early in the evening and preventing sunrise surf fishermen access in the morning. I propose a more moderate night time ban if one is needed, perhaps from June 1 ? September 15 with times being 1 hour after sunset and 1 hour before sunrise to allow beach goers to gather their stuff and exit the beach area.

Certainly more proactive measures such as relocating nests prone to weather and ocean events would dramatically increase the nesting success rates.

18) Page 121: I disagree with the proposed beach closings, including pedestrian access from March 15 until July 31 in 8 different beach locations which have traditionally been available. Please leave these areas open to beach walkers, shell collectors and those that want to access the beaches in these areas.

Conclusion:

Please, keep our beaches open to humans, pets and vehicles. This is a way of life on Hatteras Island. I as well as many people believe guidelines should be in place to help protect the environment and animal population. I believe this protection and help for the environment and animals does not need to come at the expense of the people. This really just needs to be approached in a more cooperative way that would have such a negative economic effect on the area.

Correspondence Type: Web Form

Correspondence: My comments concern the DEIS of the Off-Road Vehicle Management Plan prepared by the National Park Service (NPS) for the Cape Hatteras National Seashore Recreation Area.

1) Page 201: I disagree with the NPS statement: "Even with resource closures in place, protected species are still at risk [from pedestrians and ORVs]." No Piping Plover deaths have been attributed to ORVs. ORV violations continue to decrease as signage and education improve. Pedestrian violations are much more significant than ORV violations. It seems to me that any transgressions into protected area are the result of lack of NPS manpower and enforcement than the public purposely and willfully violating out of bounds areas.

2) Page xxiv: I question the statement of as per the DEIS: "Carrying capacity would be a 'peak use limit' determined for all areas based on the linear feet of beachfront?" If you close off huge sections of the beach, you force more people into smaller areas, potentially resulting in more resource impairment and diminished visitor experience.

3) Page xix and page 23: I am against having two different closures rules pertaining to the North facing beaches (North side) and the South facing beaches (South side) as per the grid outlined in Alternative "F". I disagree with the NPS proposal to close the beaches in villages of Frisco, Hatteras and Ocracoke Villages to ORV access longer than the traditional May 15 to September 15 period for the Northern beaches, even though seasonal visitor statistics are similar for all villages. Please, make them the same: May 15 -> September 15.

4) Page 1: I agree with your statement "ORVs have long served as a primary form of access for many portions of the beach in the seashore, and continue to be the most practical means of access and parking for many visitors."

However, pedestrian only areas discriminate against individuals with limited mobility due to age or physical impairments, families with small children, and those wishing to engage in activities requiring recreational equipment (boogie boards, beach umbrellas, beach chairs, coolers, fishing rods and tackle, etc)

5) Page 53: I disagree with the special use permit proposed guidelines. It is impractical to allow the transportation of disabled visitors to the village beaches and then require the vehicle to be returned to the street or parking area. This necessitates the disabled person to have a driver to drop him (or her) off, then drive to a parking area, then trudge a long distance to the site of the drop off, then trudge the long distance through the sand back to get the vehicle.

Suppose the handicap person wants to go to the beach, is capable of driving himself, yet cannot find another person to go with him? Does he now not go to the beach? This rule creates unnecessary hardships and risks in the event of an emergency as well.

6) Page 121 ? 127. I strongly disagree with the buffers as presented. We must allow for pass-thru corridors. The beach is linear with the ocean buffering on one side and the dune line on the other. For example - If you pinch off access on one side of a 4 mile linear beach and pinch off access on the other side of the 4 mile section of beach with no corridor, then you effectively have closed off all 4 miles of the beach because you CAN'T get there. The proposed bird buffers are too large, blocking access to the interior sections from the two "buffered" ends.

I propose ORV pass-thru only corridors and to use breeding / nesting buffer distances to establish ORV pass through only corridors to ensure beach access in a way that does not hinder resource protection. I believe pass through corridors should be maintained for pedestrians and ORVs in all areas of the Cape Hatteras National Seashore Recreational Area throughout the entire breeding and nesting season. Corridors are vital to providing access in a way that does not hinder resource protection.

Piping Plover unfledged chicks buffer should move with the brood as it relocates to reliable food source, not expanded.

The 1,000 meter distance for the piping plover is way too large and not based upon peer reviewed science. A more rational distance would be 200 meters per other sites in the nation for the piping plover. Ample scientific evidence and precedent exists to support a 200 meter buffer.

Buffers for other species, including American Oystercatchers, Least Terns and Colonial

Waterbirds must also be changed. An effective 30 meter buffer should be established for these species rather than the 300 meter closure outlined in the DEIS.

NON-ENDANGERED BIRDS should not have same protection as if endangered. Not allowing ORV access is paramount to denying the public access to these beaches.

7) Page 468: I disagree with the limitations imposed on pedestrian and ORVs. Corridors or bypasses should be provided thru, around or below high tide line in all SMAs during entire breeding season to maintain access.

8) Page 124: I strongly disagree with the NPS slant of providing for over protection of resource management over that of the public's right to access the beaches. Pro-active initiatives include: Vegetation Management, Habitat Management, Enhanced Predator Management, Colonial Water bird social attraction, Piping Plover check fledge rate, Piping plover chick buffer distance, and pass-through buffers during the incubation period. Opportunities to implement less restrictive closures as a result of the above initiatives should be considered more frequently than the 5-year periodic review process identified in the DEIS.

9) I disagree with the NPS Resource Management Pedestrian / ORV Closure Policies. These policies address the least significant factors affecting nest survival with little chance to have more than negligible impact. For example: the AMOY Nest Failures are predominately due to non-human events. Using your own stats, the mammalian predation is 54%, Storm / Lunar Tides: 29%, Nest Abandonment: 6%, Avian Predation: 5%, and Ghost Crab Predation: 3%,

So what is the percentage due to human interference: just 3%! It's insignificant, yet the NPS wants to ban humans when their actions provide very little influence on the success rate of breeding birds and turtles.

10) I disagree with the stats of breeding plovers and the other birds in the Park when the NPS does not adequately consider locations neighboring the Recreational Area that are part of the same ecosystem, namely dredge and spoil island that are located just yards away and within sight of the seashore. These birds are part of the same ecosystem and should be included.

Those spoil islands, developed by man from dredging the waterways in the Pamlico Sound for channel upkeep are slammed full of birds. The reason why so many birds? NO PREDATORS. SO, birds are not as stupid as one might think. You have to count these birds and incorporate them in the stats when the NPS is talking about any so called decline in breeding pairs in the National Park.

11) Page 1: I do not think the DEIS responsibly addresses the cultural resource issues. The very purpose of the DEIS as set forth in the National Environmental Policy Act (NEPA) is to protect and preserve natural and cultural resources in the federal decision making process. In the DEIS, the statement "protect and preserve natural and cultural resources" appears in the first sentence of the first page of the plan, in the Purpose of the Plan section, and numerous times thereafter. Yet, the 810 page document devotes only two paragraphs to analysis of cultural resource issues.

12) Pages 270-281; 561-598: I strongly disagree with your economic analysis of the impact of the DEIS. The region of influence (ROI) incorporates the Northern Beach communities, including Kill Devil Hills, Kitty Hawk, Southern Shores and Duck. These areas are almost completely disconnected from ORV use and access issues relating to the Seashore.

? Inclusion of the Northern Beaches in analysis significantly dilutes estimates of economic impact on the 8 Seashore Villages

? Analysis of economic impact to the Seashore Villages appears to be significantly down played. Emphasis in DEIS is on the ROI-wide or county-wide level impacts.

? Nowhere is it clearly addressed that the overwhelming majority of negative impacts will be felt by small businesses in the Seashore Villages rather than by overall economic interests within the greater ROI.

On page xlvi, Alternative F is characterized as having a "negligible to moderate" adverse impact on small businesses. I strongly disagree with this statement.

I believe the negligible to moderate projection is inaccurate and relies on economic surveys that has not yet been published. Furthermore, this material is not expected to be added to the DEIS until after the public comment period has ended.

Based upon the economic harm we have already experienced under the consent decree, Dare County projects the economic impact of Alternative F to be substantial.

Beach closures have already had a devastating and unfair impact on many Dare County Businesses, causing foreclosures, bankruptcies, lay-offs, cutbacks, expensive refinancing, and depleted college funds and savings accounts.

Pages 270-286, 561-598: The socio-economic data and analyses are incomplete and erroneous and result in an understatement of the effect the restrictions will have upon the Island, the region and the state of NC. The US Park Services answer: Businesses will have to "adapt" to the new rules.

(p.383) The negative economic impacts of the decree ARE KNOWN, so to say that the added restrictions would have negligible to moderate impact is indefensible.

13) Overall Visitor Counts - Overall visitor counts appear to include visitors to Fort Raleigh National Historic Site and the Wright Brothers National Memorial. A large percentage of these visitors vacation in the Northern Beaches communities and recreate on the non-federal beaches outside of the Seashore. Visitors who patronize the Fort Raleigh National Historic Site and the Wright Brothers National Memorial but do not visit the actual seashore areas need to be factored out.

Maintenance of Future Access to Cape Point and South Point Ocracoke: All socioeconomic analyses related to Alternative F are predicated on the assumption that access corridors will remain open for at least an appreciable portion of the visitor high season. Under Alternative F, the access corridors will be subject to Resource Closures based on buffers similar or identical to the Consent Decree. Unless some predictability of access to Cape Point and South Point Ocracoke can be assured, economic analyses predicated on assumption of access are fundamentally flawed.

Why would a group of surf fisherman want to come to Hatteras Island to surf fish if they are not sure they can access the prime fishing grounds at Cape Point? The answer is they won't come. If they don't come, they don't rent vacation homes and spend their money on Hatteras and Ocracoke Islands.

The definition of the Region of Influence (ROI), faulty data on economic activity generated by specific type recreational activity, incomplete visitation/business survey data, inflated overall Seashore visitor counts pertaining to beach use, and flawed key assumptions concerning the maintenance of access under Alternative F, all lead to inaccurate conclusions in the socioeconomic analyses. Specifically, these inaccuracies can be seen as understating the negative socio-economic impact of the Seashore Villages. Further, this negative impact will be absorbed almost entirely by Small Businesses. Neither of these important aspects of the management alternatives are adequately presented in the DEIS.

14) Page 136: I strongly disagree with your pet restriction proposals. The "prohibition of pets in the Seashore during bird breeding season including in front of the villages." = No Pets in public areas ?beaches, campgrounds, soundfront, foot trails, park maintained roads -from March 15 ?July 31.

15) Pages 125; 392 ? 396: SEA TURTLES. I disagree with the stats and procedures proposed. I think endangered sea turtles would benefit from management practices now in use at other federal seashores that are more proactive in efforts to achieve nesting success. This includes relocating nests to more desirable locations as is done in other state and federally controlled areas.

The Cape Hatteras National Seashore Recreational Area is on the northernmost fringe of turtle nesting locations for the southeast, accounting for about 1% of all turtle nests. Proposed buffer areas are not needed for protection of the turtles and amount to overprotection.

16) Pages 97- 101. I strongly disagree with proposals in this section saying that ORVs will be prohibited year round between ramps 27 and 30, at Hatteras Inlet (Hatteras Spit), Ocracoke Inlet (North Ocracoke Spit) and various other locations.

Not allowing ORV access is paramount to denying the public access to these beaches. They are located miles from the nearest parking or paved road area and too far to access on foot. As a matter of course, there has been no breeding of piping plover or other endangered species at the Hatteras Island Inlet (spit) area in the past 6 years.

17) Page 104: I disagree with the proposed night time driving closures. Per your proposals, night driving will be prohibited between May 1 and November 15th, forcing visitors off of the beaches early in the evening and preventing sunrise surf fishermen access in the morning. I propose a more moderate night time ban if one is needed, perhaps from June 1 ? September 15 with times being 1 hour after sunset and 1 hour before sunrise to allow beach goers to gather their stuff and exit the beach area.

Certainly more proactive measures such as relocating nests prone to weather and ocean events would dramatically increase the nesting success rates.

18) Page 121: I disagree with the proposed beach closings, including pedestrian access from March 15 until July 31 in 8 different beach locations which have traditionally been available. Please leave these areas open to beach walkers, shell collectors and those that want to access the beaches in these areas.

Conclusion:

Please, incorporate access corridors through any SMA so we can get to the open beach beyond. Incorporate the birds into the count that nest on the spoil islands. Base your buffer zones on peer reviewed science and scale them back to more reasonable distances as discussed.

It is neither logical nor reasonable to spend so much time, money and energy to overprotect a bird (Piping Plover) in the Cape Hatteras National Seashore that is on the southernmost fringe area of its breeding ground. That goes for the loggerhead turtle that is in its northernmost breeding area.

Let's scale back the buffer zones. You can always increase at a later date.

The USPS is leaning way over the line on over protection and not enough on the public's right to enjoy the beaches of the National Seashore. The proper balance is not achieved in the propose DEIS and needs to be modified so that the proper balance of reasonable resource protection and access to the beaches of the National Park is achieved. I could sum it up by saying "Protect, not Prohibit."

Thank you,

Correspondence: A National Seashore Recreational Area should be an area on the nation's seashore that can be used for recreation. That is what the name implies. Birds have learned to live in harmony with humans. A Bald Eagle recently built a nest in the midst of a highway construction zone. Construction was well underway when the nest began to appear. The noise of construction was perhaps music to her ears. Along the shores of Ocracoke, how will you protect the birds from the incoming tide? Most of the vehicles that drive along this portion of the coast are near the tideline and birds are smart enough not to nest in those locations. Please leave "recreation" on our National Seashore.

Correspondence: Mike Murray, Superintendent Cape Hatteras National Seashore Park 1401 National Park Drive Manteo, NC 27954 May 9, 2010
 Re: Cape Hatteras National Seashore Recreational Area Draft Off-Road Vehicle Management Plan/EIS
 Dear Mr. Murray:
 I am writing this letter to comment on the DEIS referred to above.
 I have been a frequent visitor to the Cape Hatteras National Seashore for over 25 years and an Avon Village property owner since 1993 and have participated in most of the activities cited in the Figure 23 Visitor Activity Survey Results (Page 260). I would like to continue enjoying the recreation at the seashore for another 25 years but I am very concerned that the preferred proposed Alternative F will severely impede this. As stated in the Act, Congress established the Seashore in 1937 as a national seashore for the enjoyment and benefit of the people, and to preserve the area. (page iv). Although I agree with the premise of protecting the natural resource, Alternative F would do so at the expense of humans, as well as the local economy and culture. .
 Specifically my comments on the proposed plan:
 1) I disagree: Page 121. To completely prohibit pedestrian access in sections of the national seashore, runs completely contrary to the basis upon which the Park was founded, for recreation. Pre-Nesting Closures All species: All designated Breeding Shorebird SMAs will be posted as pre-nesting closures using symbolic fencing by Mar 15 at sites involving piping plover, Wilson's plover, and/or American oystercatcher; and by Apr 15 at sites involving only colonial waterbirds. The NPS will determine the configuration of specific pre-nesting closures based on an annual habitat assessment. Pre-nesting closures would be adjusted to the configuration of the Nonbreeding Shorebird SMAs for the respective sites (as described later in this table) if no breeding activity is seen in the area by Jul 31, or 2 weeks after all chicks have fledged, whichever comes later. Pre-nesting closures will not be modified in cases where the beach erodes into the buffered habitat. ORVs, pedestrians, and pets are prohibited within all resource closures, including pre-nesting closures. ML1: SMAs managed using ML1 measures would not allow ORV or pedestrian access when pre-nesting closures are in effect. ML2: The Bodie Island Spit, Cape Point, and South Point Ocracoke SMAs would be managed using ML2 measures in action alternatives C, E, and F. Once pre-nesting closures are implemented at these sites, a narrow ORV access corridor (where ORV use is permitted) or a pedestrian access corridor (where ORV use is not permitted) would be established. Upon the first observation of breeding activity, the standard buffers (please refer to table 11, Shorebird/Waterbird Buffer Summary) will apply, which depending upon the circumstances may close the access corridor. The Bodie Island Spit access corridor would follow the ocean shoreline to the inlet. The Cape Point access corridor would follow the ocean shoreline from ramp 44 south to the point, then west approximately 0.2 mile along the ocean shoreline. The South Point Ocracoke access corridor would follow the ocean shoreline south from ramp 72 to the inlet. Exact configuration of the corridor would be determined by NPS staff based on the annual habitat assessment. The ORV access corridor at ML2 sites will generally be no more than 50 meters wide above the high tide line (alternative E may include a designated pass-through zone where no stopping or recreation would be permitted in order to minimize disturbance). An ML2 pedestrian access corridor would generally be below the high tide line and would in no case be more than 10 meters above the high tide line. Pets, as well as kite flying, ball and Frisbee tossing, and similar activities, will be prohibited in the access corridors or pass-through zones (in alternative E only) while the pre-nesting closure is in effect.
 2) I disagree. I find the proposed 1000 meter buffers cited on pages 121 ? 127 unnecessarily restrictive and arbitrary. The use of such large buffers will cause people to be forced into smaller areas, with a subsequent greater impact on resource in the area. In addition, the expansion of the buffers as a punitive measure for infractions is also arbitrary. Please do not punish all for the offenses of one. 3) I disagree. The complete prohibition of ORVs, year round, pp 97-101, is entirely unnecessary, and will also impede human ability to partake of many recreational activities in the stated areas between ramps 27-30, Hatteras Spit, Ocracoke Inlet and others.
 4) I disagree. Pets have been part of my, and continue to be part of many visitors' recreation and vacation experience. I disagree with the proposal to completely prohibit pets at the seashore beaches during "breeding season" from March 15th to July 31st. Page 136. Pets on a leash will not interfere with wildlife protection measures.
 5) I disagree. It has not been proven scientifically that human interference is extensively responsible for damage to turtles and nesting birds, (less than 3%) so the prohibition against night driving for over half of the year is unnecessarily restrictive. P 104, P 377. No piping plover deaths have been attributable to ORVs.
 6) Page 468, I disagree. Access should be provided through all species management areas. Buffers should move with the species, instead of being expanded.
 Thank you for the opportunity to provide comments on the proposed plan. I look forward to a reasonable resolution of the issues, one that the Park, the Visitors, the natural Resources and the Local Culture and Economy will find reasonable and sustainable.
 Sincerely,
 James Daniel 12321 Meadow Drive Berlin, MD 21811

Correspondence: Dear Superintendent Murray,
 I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. I grew up in Virginia and regularly visited the Outer Banks to enjoy its natural beauty, undeveloped beaches, and birds and other wildlife. Unfortunately all of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. This approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.
 1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."
 2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of

the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness...." Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.

3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals. Thank you for the opportunity to provide these comments. I look forward to seeing an improved final ORV management plan.

Correspondence: I've called the Outer Banks home for over 13 years. I do not even own a four-wheel drive vehicle and I am saddened and dismayed by what has transpired over the past few years and even further upset by the new ORV management plan which has been developed. I pray the NPS will consider making modifications to this proposed plan. The plan is over-restrictive and will severely limit the public's ability to access and enjoy the most beautiful beaches on the east coast. The same beaches we were promised unfettered access to years ago when the National park was designated. Below are my comments pertaining to the DEIS of the Off-Road Vehicle Management Plan prepared by the National Park Service (NPS) for the Cape Hatteras National Seashore Recreational Area.

1) Page 201: I disagree with the NPS statement: "Even with resource closures in place, protected species are still at risk [from pedestrians and ORVs]." I don't recall any Piping Plover deaths that are directly related to ORVs. Furthermore, with increased signage and better education of the public I feel both protected species and humans can still share the same area

2) Page xix and page 23: I am against having two different closures rules pertaining to the North facing beaches (North side) and the South facing beaches (South side) as per the grid outlined in Alternative "F". I disagree with the NPS proposal to close the beaches for a longer amount of time in villages of Frisco, Hatteras and Ocracoke Villages (May 15 to September 15 period) for the Northern beaches. Please, make them the same: May 15 -> September 15. This way everyone is clear and consistent for the closed times, our visitors are not confused and our staff can appropriately guide our visitors. The different closure periods will do nothing but confuse visitors and result in (an unfairly) higher amt of violations!

4) Page 1: I agree with your statement "ORVs have long served as a primary form of access for many portions of the beach in the seashore, and continue to be the most practical means of access and parking for many visitors."
 Pedestrian only areas will not allow handicapped persons or families with small children to access the beaches easily. People wishing to engage in watersports which require equipment such as surf boards, ocean kayaks, fishing tackle etc will not find it easy to transport their gear to the beaches by foot. This will severely limit the recreational opportunities our beaches permit and our visitors (and residents) have grown to love and appreciate.

5) Page 53: Special use permit proposed guidelines. I do not feel this protocol effectively allows a handicapped or disabled person to access the beaches. The handicapped person must have another person drive them to the beach and walk back to the beach after they have parked their car. This is impractical, especially for someone who is accustomed to fishing alone. Furthermore, this also essentially doubles the amount of ORV traffic on the beaches. If the person could simply drive to destination, park and drive home after fishing as opposed to 2 separate trips your plan proposes.

6) Page 121 ? 127. I strongly disagree with range and the size of the buffers as presented. The proposed bird buffers are too large. What if ORV pass-thru only corridors were implemented which used breeding / nesting buffer distances to establish ORV pass through only corridors to ensure beach access in a way that does not hinder resource protection but still offered protection for nesting birds? These corridors should be maintained for pedestrians and ORVs in all areas of the Cape Hatteras National Seashore Recreational Area throughout the entire breeding and nesting season. Corridors could provide access and allow species protection.
 Piping Plover unfledged chicks buffer should move with the brood as it relocates to reliable food source, not expanded. The 1,000 meter distance for the piping plover is way too excessive and not based upon peer reviewed science. A more rational distance would be 200 meters per other sites in the nation for the piping plover.
 Buffers for other species, including American Oystercatchers, Least Terns and Colonial Waterbirds must also be changed. A 30 meter buffer should be sufficient for these species rather than the 300 meter closure outlined in the DEIS.
 NON-ENDANGERED BIRDS should not have same protection as if endangered.

7) Page 468: I disagree with the limitations imposed on pedestrian and ORVs. Corridors or bypasses should be provided thru, around or below high tide line in all SMAs during entire breeding season to maintain access.

8) I disagree with the stats of breeding plovers and the other birds in the Park when the NPS does not adequately consider locations neighboring the Recreational Area that are part of the same ecosystem, namely the dredge and spoil islands that are located just off of the seashore. These birds are part of the same ecosystem and should be included.
 Those spoil islands, developed by man from dredging the ferry Channel in the Pamlico Sound are full of birds. The reason why so many birds? NO PREDATORS. These birds are breeding successfully with no predators and are not included in the NPS stats.

9) Page 1: I do not think the DEIS responsibly addresses the cultural resource issues of Hatteras Island and the Cape Hatteras National Seashore. The very purpose of the DEIS as set forth in the National Environmental Policy Act (NEPA) is to protect and preserve natural and cultural resources in the federal decision making process. This 810 page document devotes only two paragraphs to analysis of cultural resource issues.
 Our residents and visitors have long appreciated our beaches and the family-fiendly recreational opportunities that they present. Our local economy is dependent on these same family-oriented, cultural and multi-generational beach outings. Whether it be fishing, swimming, sunning or sea shell hunting? this is a profound cultural and lifestyle impact which cannot be overlooked. The DEIS proposes to close off most of the south beach area during the summer. The same time most local residents (and visitors) use the beach. The continuation of this traditional pattern of land use is paramount to maintaining the historic identity of our island communities.

10) Pages 270-281; 561-598: I strongly disagree with your economic analysis of the impact of the DEIS. The region of influence (ROI) incorporates the Northern Beach communities, including Kill Devil Hills, Kitty Hawk, Southern Shores and Duck. These areas are almost completely disconnected from ORV use and access issues relating to the Seashore. ? Inclusion of the Northern Beaches in analysis significantly dilutes estimates of economic impact on the 8 Seashore Villages
 ? Analysis of economic impact to the Seashore Villages appears to be significantly down played. Emphasis in DEIS is on the ROI-wide or county-wide level impacts.
 ? Nowhere is it clearly addressed that the overwhelming majority of negative impacts will be felt by small businesses in the Seashore Villages rather than by overall economic interests within the greater ROI.
 On page xlvi, Alternative F is characterized as having a "negligible to moderate" adverse impact on small businesses. I strongly disagree with this statement.
 This is simply not true. Hatteras Island has already experienced severe economic hardship under the consent decree, and Dare County projects the economic impact of Alternative F to be substantial. Beach closures have already had a devastating and unfair impact on many Dare County Businesses. Many visitors have decided not to visit because they cannot use the resources they are accustomed to. Rental income suffers first but then there is a domino effect? restaurants see a drop in business, retail sales drop, etc. This domino effect has resulted in home foreclosures (both year-round homes and vacation homes), bankruptcies, job lay-offs, cutbacks, expensive refinancing, and depleted college funds and savings accounts. Many businesses

have had to cut employee hours, forgo capital improvements, and sacrifice profits. Our economy is based on tourism. Without visitors, we have no income. When visitors cannot access our beautiful beaches, they will not return.

Pages 270-286, 561-598: The US Park Services answer is both pretentious and absolutely FALSE: Businesses will have to "adapt" to the new rules. (p.383) The negative economic impacts of the decree ARE KNOWN, so to say that the added restrictions would have negligible to moderate impact is absolutely wrong.

11) Overall Visitor Counts - Overall visitor counts appear to include visitors to Fort Raleigh National Historic Site in Manteo and the Wright Brothers National Memorial in Kill Devil Hills. A large percentage of these visitors vacation in the Northern Beaches communities do not visit the National Seashore beaches. Visitors who patronize the Fort Raleigh National Historic Site and the Wright Brothers National Memorial but do not visit the actual seashore areas should not be included.

Maintenance of Future Access to Cape Point and South Point Ocracoke: All socioeconomic analyses related to Alternative F are predicated on the assumption that access corridors will remain open for at least an appreciable portion of the visitor high season. Under Alternative F, the access corridors will be subject to Resource Closures based on buffers similar or identical to the Consent Decree. Unless some predictability of access to Cape Point and South Point Ocracoke can be assured, economic analyses predicated on assumption of access are fundamentally flawed.

Why would a group of surf fishermen want to come to Hatteras Island to surf fish if they are not sure they can access the prime fishing grounds at Cape Point? The answer is they won't come. If they cannot access these areas, they simply will not visit. If they don't come, they will not rent vacation homes and spend their money on Hatteras and Ocracoke Islands. Again: Our economy is based on tourism. Without visitors, we have no income. When visitors cannot access our resources, they will not return.

12) Page 136: I strongly disagree with the DEIS pet restriction proposals. The "prohibition of pets in the Seashore during bird breeding season including in front of the villages." = No Pets in public areas beaches, campgrounds, soundfront, foot trails, park maintained roads -from March 15 to July 31.

As an avid beachcomber and dog owner, this is detrimental to public access. My dog is a huge part of my family. He is always on a leash and not allowed to roam free. Our area is a very pet-friendly destination, many families enjoy bringing their pets on vacation. I propose allowing pets on 6 foot leashes year-round in all areas open to pedestrians or ORVs. I also believe owners of pets who are not leashed and properly restrained should be fined. Responsible pet owners should not be punished by the irresponsible actions of a few. 13) Pages 125; 392 to 396: SEA TURTLES. I disagree with the stats and procedures proposed. I think endangered sea turtles would benefit from management practices now in use at other federal seashores including relocating nests to more desirable locations. The proposed buffer areas are very excessive for the protection of the turtles.

14) Pages 97- 101. I strongly disagree with proposals in this section saying that ORVs will be prohibited year round between ramps 27 and 30, at Hatteras Inlet (Hatteras Spit), Ocracoke Inlet (North Ocracoke Spit) and various other locations.

Not allowing ORV access is paramount to denying the public access to these beaches. These areas are miles away from the nearest parking or paved road area and simply too far to access on foot. There has been no record of breeding piping plovers or other endangered species at the Hatteras Island Inlet (spit) area in the past 6 years. Closing off entire areas that are not even utilized by breeding birds is OVER PROTECTION and unfair access restriction!

15) Page 104: I disagree with the proposed night time driving closures. Per your proposals, night driving will be prohibited between May 1 and November 15th, forcing visitors off of the beaches early in the evening and preventing sunrise surf fishermen access in the morning. I propose a more moderate night time ban if one is needed, perhaps from June 1 to September 15 with times being 1 hour after sunset and 1 hour before sunrise to allow beach goers to gather their stuff and exit the beach area.

Proactive measures such as relocating nests prone to weather and ocean events as well as adding reflective signage to closure areas would dramatically increase the nesting success rates.

16) Page 121: I disagree with the proposed beach closings, including pedestrian access from March 15 until July 31 in 8 different beach locations which have traditionally always been available. These areas should remain open and accessible to beach walkers, shell collectors and those that want to access the beaches in these areas.

Pismo Beach is a beautiful strand of light brown sand in California. It has had years of automobile traffic on the beach as well as dune buggies and other off road vehicles back in the dunes. Pismo Beach State Park manages the beach and Oceano Dunes State Vehicle Recreation Area manages the dunes. There was an ongoing battle over the use of vehicles in this area, but it has been solved finally with a little give and take between the conflicting groups, mainly beach goers, vehicles, fishermen, and environmentalists.

Some areas of the beach are completely closed to all vehicles except state park ranger patrols. The off road dune area is strictly managed and limited to keep the sands from becoming free to shift and move, which had been resulting in the dunes encroaching on farmland. Wildlife--plants and animals--are protected.

I suggest and even recommend that you talk with the rangers at these two state parks in order to see how this has all been accomplished. You might ask how they could improve upon the situations if they could do it over.

The following is taken directly from the Oceano Dunes State Vehicle Recreation Area Website: http://www.parks.ca.gov/default.asp?page_id=406. Not all of it is applicable, but it may be useful.

{This off road area is among the most popular and unique of California State Parks. The 5 = miles of beach open for vehicle use and the sand dunes available for off highway motor vehicle recreation are attractions for visitors from throughout the United States.

{Oceano Dunes is the only California State Park where vehicles may be driven on the beach. Passenger cars can easily drive on the northern portion of the beach.

{Four wheel drive vehicles are recommended for driving to the camping and off highway vehicle use areas in the park.

{Beach wheelchairs are available for loan at the Pier and Grand Avenue entrances to the beach.

{Surfing, swimming, surf fishing, horseback riding and bird watching are popular activities.

{Location/Directions {The recreation area is located in Oceano, three miles south of Pismo Beach off Highway 1.

{One mile south of the Pier Avenue beach ramp is Post 2, a post on the beach which marks the beginning of the off-highway vehicle riding and camping area.

{OHV's must be transported to this point before unloading. Any areas on the beach or in the dunes that are fenced or signed are closed to vehicular use because they either contain sensitive plant and animal life or are private property.

{Seasons/Climate/Recommended clothing

{Summer temperatures ? Highs: 60's and 70's; Lows: 50's; Dense morning fog

{Winter temperatures ? Highs: 50's and 60's; Lows: 40's; high winds in Spring

{The weather is often quite changeable, layered clothing is recommended.}

Thank you for reading this.

I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.

This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.

The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.

* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.

* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Subject: DEIS Off-Road Vehicle Management Plan Comments

My comments concern the DEIS of the Off-Road Vehicle Management Plan prepared by the National Park Service (NPS) for the Cape Hatteras National Seashore Recreation Area.

1) Page 201: I disagree with the NPS statement: "Even with resource closures in place, protected species are still at risk [from pedestrians and ORVs]." No Piping Plover deaths have been attributed to ORVs. ORV violations continue to decrease as signage and education improve. Pedestrian violations are much more significant than ORV violations. It seems to me that any transgressions into protected area are the result of lack of NPS manpower and enforcement than the public purposely and willfully violating out of bounds areas.

2) Page xxiv: I question the statement of as per the DEIS: "Carrying capacity would be a 'peak use limit' determined for all areas based on the linear feet of beachfront?" If you close off huge sections of the beach, you force more people into smaller areas, potentially resulting in more resource impairment and diminished visitor experience.

3) Page xix and page 23: I am against having two different closures rules pertaining to the North facing beaches (North side) and the South facing beaches (South side) as per the grid outlined in Alternative "F". I disagree with the NPS proposal to close the beaches in villages of Frisco, Hatteras and Ocracoke Villages to ORV access longer than the traditional May 15 to September 15 period for the Northern beaches, even though seasonal visitor statistics are similar for all villages. Please, make them the same: May 15 -> September 15.

4) Page 1: I agree with your statement "ORVs have long served as a primary form of access for many portions of the beach in the seashore, and continue to be the most practical means of access and parking for many visitors."

However, pedestrian only areas discriminate against individuals with limited mobility due to age or physical impairments, families with small children, and those wishing to engage in activities requiring recreational equipment (boogie boards, beach umbrellas, beach chairs, coolers, fishing rods and tackle, etc)

5) Page 53: I disagree with the special use permit proposed guidelines. It is impractical to allow the transportation of disabled visitors to the village beaches and then require the vehicle to be returned to the street or parking area. This necessitates the disabled person to have a driver to drop him (or her) off, then drive to a parking area, then trudge a long distance to the site of the drop off, then trudge the long distance through the sand back to get the vehicle.

Suppose the handicap person wants to go to the beach, is capable of driving himself, yet cannot find another person to go with him? Does he now not go to the beach? This rule creates unnecessary hardships and risks in the event of an emergency as well.

6) Page 121 ? 127. I strongly disagree with the buffers as presented. We must allow for pass-thru corridors. The beach is linear with the ocean buffering on one side and the dune line on the other. For example - If you pinch off access on one side of a 4 mile linear beach and pinch off access on the other side of the 4 mile section of beach with no corridor, then you effectively have closed off all 4 miles of the beach because you CAN'T get there. The proposed bird buffers are too large, blocking access to the interior sections from the two "buffered" ends.

I propose ORV pass-thru only corridors and to use breeding / nesting buffer distances to establish ORV pass through only corridors to ensure beach access in a way that does not hinder resource protection. I believe pass through corridors should be maintained for pedestrians and ORVs in all areas of the Cape Hatteras National Seashore Recreational Area throughout the entire breeding and nesting season. Corridors are vital to providing access in a way that does not hinder resource protection.

Piping Plover unfledged chicks buffer should move with the brood as it relocates to reliable food source, not expanded.

The 1,000 meter distance for the piping plover is way too large and not based upon peer reviewed science. A more rational distance would be 200 meters per other sites in the nation for the piping plover. Ample scientific evidence and precedent exists to support a 200 meter buffer.

Buffers for other species, including American Oystercatchers, Least Terns and Colonial

Waterbirds must also be changed. An effective 30 meter buffer should be established for these species rather than the 300 meter closure outlined in the DEIS.

NON-ENDANGERED BIRDS should not have same protection as if endangered. Not allowing ORV access is paramount to denying the public access to these beaches.

7) Page 468: I disagree with the limitations imposed on pedestrian and ORVs. Corridors or bypasses should be provided thru, around or below high tide line in all SMAs during entire breeding season to maintain access.

8) Page 124: I strongly disagree with the NPS slant of providing for over protection of resource management over that of the public's right to access the beaches. Pro-active initiatives include: Vegetation Management, Habitat Management, Enhanced Predator Management, Colonial Water bird social attraction, Piping Plover check fledge rate, Piping plover chick buffer distance, and pass-through buffers during the incubation period. Opportunities to implement less restrictive closures as a result of the above initiatives should be considered more frequently than the 5-year periodic review process identified in the DEIS.

9) I disagree with the NPS Resource Management Pedestrian / ORV Closure Policies. These policies address the least significant factors affecting nest survival with little chance to have more than negligible impact. For example: the AMOY Nest Failures are predominately due to non-human events. Using your own stats, the mammalian predation is 54%, Storm / Lunar Tides: 29%, Nest Abandonment: 6%, Avian Predation: 5%, and Ghost Crab Predation: 3%,

So what is the percentage due to human interference: just 3%! It's insignificant, yet the NPS wants to ban humans when their actions provide very little influence on the success rate of breeding birds and turtles.

10) I disagree with the stats of breeding plovers and the other birds in the Park when the NPS does not adequately consider locations neighboring the Recreational Area that are part of the same ecosystem, namely dredge and spoil island that are located just yards away and within sight of the seashore. These birds are part of the same ecosystem and should be included.

Those spoil islands, developed by man from dredging the waterways in the Pamlico Sound for channel upkeep are slammed full of birds. The reason why so many birds? NO PREDATORS. SO, birds are not as stupid as one might think. You have to count these birds and incorporate them in the stats when the NPS is talking about any so called decline in breeding pairs in the National Park.

11) Page 1: I do not think the DEIS responsibly addresses the cultural resource issues. The very purpose of the DEIS as set forth in the National Environmental Policy Act (NEPA) is to protect and preserve natural and cultural resources in the federal decision making process. In the DEIS, the statement "protect and preserve natural and cultural resources" appears in the first sentence of the first page of the plan, in the Purpose of the Plan section, and numerous times thereafter. Yet, the 810 page document devotes only two paragraphs to analysis of cultural resource issues.

As a lifelong resident of Hatteras Island, we of the Hatteras Island community have always gotten together on the south beach on Sunday to enjoy the beach with our cookouts, gatherings, surf bathing, horse shoes and foot races, fishing, and surfing. Now the DEIS is proposing closing off most of the south beach during the summer which is the traditional period we local people use the beach. The continuation of this traditional pattern of land use is central to maintaining the historic identity of our island communities.

12) Pages 270-281; 561-598: I strongly disagree with your economic analysis of the impact of the DEIS. The region of influence (ROI) incorporates the Northern Beach communities, including Kill Devil Hills, Kitty Hawk, Southern Shores and Duck. These areas are almost completely disconnected from ORV use and access issues relating to the Seashore.

? Inclusion of the Northern Beaches in analysis significantly dilutes estimates of economic impact on the 8 Seashore Villages

? Analysis of economic impact to the Seashore Villages appears to be significantly down played. Emphasis in DEIS is on the ROI-wide or county-wide level impacts.

? Nowhere is it clearly addressed that the overwhelming majority of negative impacts will be felt by small businesses in the Seashore Villages rather than by overall economic interests within the greater ROI.

On page xlvi, Alternative F is characterized as having a "negligible to moderate" adverse impact on small businesses. I strongly disagree with this statement.

I believe the negligible to moderate projection is inaccurate and relies on economic surveys that has not yet been published. Furthermore, this material is not expected to be added to the DEIS until after the public comment period has ended.

Based upon the economic harm we have already experienced under the consent decree, Dare County projects the economic impact of Alternative F to be substantial.

Beach closures have already had a devastating and unfair impact on many Dare County Businesses, causing foreclosures, bankruptcies, lay-offs,

cutbacks, expensive refinancing, and depleted college funds and savings accounts.

Even businesses whose revenue has stayed level or showed a modest increase have accomplished this at a costly price. Many have had to cut back employee hours, forego much-needed capital improvements, and sacrifice profits. That is certainly the case with Hatteras Realty.

Pages 270-286, 561-598: The socio-economic data and analyses are incomplete and erroneous and result in an understatement of the effect the restrictions will have upon the Island, the region and the state of NC. The US Park Services answer: Businesses will have to "adapt" to the new rules. (p.383) The negative economic impacts of the decree ARE KNOWN, so to say that the added restrictions would have negligible to moderate impact is indefensible.

13) Overall Visitor Counts - Overall visitor counts appear to include visitors to Fort Raleigh National Historic Site and the Wright Brothers National Memorial. A large percentage of these visitors vacation in the Northern Beaches communities and recreate on the non-federal beaches outside of the Seashore. Visitors who patronize the Fort Raleigh National Historic Site and the Wright Brothers National Memorial but do not visit the actual seashore areas need to be factored out.

Maintenance of Future Access to Cape Point and South Point Ocracoke: All socioeconomic analyses related to Alternative F are predicated on the assumption that access corridors will remain open for at least an appreciable portion of the visitor high season. Under Alternative F, the access corridors will be subject to Resource Closures based on buffers similar or identical to the Consent Decree. Unless some predictability of access to Cape Point and South Point Ocracoke can be assured, economic analyses predicated on assumption of access are fundamentally flawed.

Why would a group of surf fisherman want to come to Hatteras Island to surf fish if they are not sure they can access the prime fishing grounds at Cape Point? The answer is they won't come. If they don't come, they don't rent vacation homes and spend their money on Hatteras and Ocracoke Islands.

The definition of the Region of Influence (ROI), faulty data on economic activity generated by specific type recreational activity, incomplete visitation/business survey data, inflated overall Seashore visitor counts pertaining to beach use, and flawed key assumptions concerning the maintenance of access under Alternative F, all lead to inaccurate conclusions in the socioeconomic analyses. Specifically, these inaccuracies can be seen as understating the negative socio-economic impact of the Seashore Villages. Further, this negative impact will be absorbed almost entirely by Small Businesses. Neither of these important aspects of the management alternatives are adequately presented in the DEIS.

14) Page 136: I strongly disagree with your pet restriction proposals. The "prohibition of pets in the Seashore during bird breeding season including in front of the villages." = No Pets in public areas ?beaches, campgrounds, soundfront, foot trails, park maintained roads -from March 15 ?July 31.

Hatteras Realty books approximately 13,000 rental weeks for a total of 91,000 rental nights housing approximately 700,000 visitors. The ban on pets to July 31 will seriously hurt the rentals of my vacation homes as our pet homes encompass about 30% of our rentals. I propose allowing pets on 6 foot leashes year-round in all areas open to pedestrians or ORVs.

15) Pages 125; 392 ? 396: SEA TURTLES. I disagree with the stats and procedures proposed. I think endangered sea turtles would benefit from management practices now in use at other federal seashores that are more proactive in efforts to achieve nesting success. This includes relocating nests to more desirable locations as is done in other state and federally controlled areas.

The Cape Hatteras National Seashore Recreational Area is on the northernmost fringe of turtle nesting locations for the southeast, accounting for about 1% of all turtle nests. Proposed buffer areas are not needed for protection of the turtles and amount to overprotection.

16) Pages 97- 101. I strongly disagree with proposals in this section saying that ORVs will be prohibited year round between ramps 27 and 30, at Hatteras Inlet (Hatteras Spit), Ocracoke Inlet (North Ocracoke Spit) and various other locations.

Not allowing ORV access is paramount to denying the public access to these beaches. They are located miles from the nearest parking or paved road area and too far to access on foot. As a matter of course, there has been no breeding of piping plover or other endangered species at the Hatteras Island Inlet (spit) area in the past 6 years.

17) Page 104: I disagree with the proposed night time driving closures. Per your proposals, night driving will be prohibited between May 1 and November 15th, forcing visitors off of the beaches early in the evening and preventing sunrise surf fishermen access in the morning. I propose a more moderate night time ban if one is needed, perhaps from June 1 ? September 15 with times being 1 hour after sunset and 1 hour before sunrise to allow beach goers to gather their stuff and exit the beach area.

Certainly more proactive measures such as relocating nests prone to weather and ocean events would dramatically increase the nesting success rates.

18) Page 121: I disagree with the proposed beach closings, including pedestrian access from March 15 until July 31 in 8 different beach locations which have traditionally been available. Please leave these areas open to beach walkers, shell collectors and those that want to access the beaches in these areas.

Conclusion:

Please, incorporate access corridors through any SMA so we can get to the open beach beyond. Incorporate the birds into the count that nest on the spoil islands. Base your buffer zones on peer reviewed science and scale them back to more reasonable distances as discussed.

It is neither logical nor reasonable to spend so much time, money and energy to overprotect a bird (Piping Plover) in the Cape Hatteras National Seashore that is on the southernmost fringe area of its breeding ground. That goes for the loggerhead turtle that is in its northernmost breeding area.

Let's scale back the buffer zones. You can always increase at a later date.

The USPS is leaning way over the line on over protection and not enough on the public's right to enjoy the beaches of the National Seashore. The proper balance is not achieved in the propose DEIS and needs to be modified so that the proper balance of reasonable resource protection and access to the beaches of the National Park is achieved. I could sum it up by saying "Protect, not Prohibit."

Thank you,

Andrew DiMartino

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.

This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.

The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.

* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.

* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more

balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
Keep the beaches vehicle free, no matter whether human or engine powered. Set up a course nearby for ORV and charge a HUGE fee for access to fund the upkeep.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. Correspondence: Keep the beaches open for the next generations of outer banks visitors and residents. My father drove the family down to Cape Point starting in the early 1960's yearly. Generations of my family have worked and visited the Buxton area for decades. We understand fully what a partial beach closure would do to the economic conditions of this area.
Even a partial closure will have a negative impact on this already distressed economic region of North Carolina. Dare County makes a noble plea to the NPS to keep the beaches open. Dare County will suffer from the loss of tax revenues resulting from beach closures. The NPS must be willing to keep an open mind on the economic issues surrounding the issues of beach access. Respect of mother nature is a lesson we all should strive to teach the next generations. That is a core value that the NPS should hold close to it's heart. If we have come to the point that a total closure of an area is the only solution to the problem then we are in alot more trouble than just the issue of beach closure.
I have tried to keep an open mind and read as much as I could from both sides of this issue. There does seem to be a lack of "common sense" expressed from both sides of this issue. I understand that I "lean" towards beach access for all because that is what I have come to believe the Outer Banks of North Carolina are there for. However, I have tried to keep an open mind on the issue of wildlife protection and habitat preservations. Surely, there can be a middle ground for both parties.
I strongly plea and pray that the use of "common sense" can be achieved during this process. Both sides been to be able to understand the needs and

desires of the other and surely men can reach a middle ground of good plain common sense on this issue. The political views of a few well funded and organized groups appear to have the upper hand on beach closure. I ask the NPS to exercise good judgement on this issue. America is by far the best place on the planet to live. The Outer Banks are one of the best places in America to live and visit. Let's not lose that over an agenda that is based on political viewpoints.

Keep the beaches open to all for generations to come.

Correspondence: To The National Park Service:

I am the owner of a house in Salvo, NC and I am deeply disturbed by your decision to pursue alternative F of the DEIS. We were alarmed last year when the beach we normally use at Ramp 23 was not only closed to ORV access but was completely closed to even foot traffic. I have also learned that again this ramp will be closed for the supposed breeding season of the Piping Plover and non-threatened Oyster Catcher. We also learned that foxes, racoons, and possums were destroyed in the pursuit of preservation. I don't see how this could be viewed in any way as preservation of wildlife. What is really going on in my opinion is an act of control by the environmentalist for not necessarily control of the Outer Banks but for using this as a bargaining chip for some other cause they have down the road.

If sheer numbers of park police and funding is the majore hurdle, I for one would be for beach permits for access. It's unfortunate that under your plan my children will not be able to experience the Hatteras Island I grew up with.

Please reconsider your support for alternative F.

Thanks,

Steve Newsome

Subject: DEIS Off-Road Vehicle Management Plan Comments

My comments concern the DEIS of the Off-Road Vehicle Management Plan prepared by the National Park Service (NPS) for the Cape Hatteras National Seashore Recreation Area.

1) Page 201: I disagree with the NPS statement: "Even with resource closures in place, protected species are still at risk [from pedestrians and ORVs]." No Piping Plover deaths have been attributed to ORVs. ORV violations continue to decrease as signage and education improve. Pedestrian violations are much more significant than ORV violations. It seems to me that any transgressions into protected area are the result of lack of NPS manpower and enforcement than the public purposely and willfully violating out of bounds areas.

2) Page xxiv: I question the statement of as per the DEIS: "Carrying capacity would be a 'peak use limit' determined for all areas based on the linear feet of beachfront?" If you close off huge sections of the beach, you force more people into smaller areas, potentially resulting in more resource impairment and diminished visitor experience.

3) Page xix and page 23: I am against having two different closure rules pertaining to the North facing beaches (North side) and the South facing beaches (South side) as per the grid outlined in Alternative "F". I disagree with the NPS proposal to close the beaches in villages of Frisco, Hatteras and Ocracoke Villages to ORV access longer than the traditional May 15 to September 15 period for the Northern beaches, even though seasonal visitor statistics are similar for all villages. Please, make them the same: May 15 -> September 15.

4) Page 1: I agree with your statement "ORVs have long served as a primary form of access for many portions of the beach in the seashore, and continue to be the most practical means of access and parking for many visitors."

However, pedestrian only areas discriminate against individuals with limited mobility due to age or physical impairments, families with small children, and those wishing to engage in activities requiring recreational equipment (boogie boards, beach umbrellas, beach chairs, coolers, fishing rods and tackle, etc)

5) Page 53: I disagree with the special use permit proposed guidelines. It is impractical to allow the transportation of disabled visitors to the village beaches and then require the vehicle to be returned to the street or parking area. This necessitates the disabled person to have a driver to drop him (or her) off, then drive to a parking area, then trudge a long distance to the site of the drop off, then trudge the long distance through the sand back to get the vehicle.

Suppose the handicap person wants to go to the beach, is capable of driving himself, yet cannot find another person to go with him? Does he now not go to the beach? This rule creates unnecessary hardships and risks in the event of an emergency as well.

6) Page 121 ? 127. I strongly disagree with the buffers as presented. We must allow for pass-thru corridors. The beach is linear with the ocean buffering on one side and the dune line on the other. For example - If you pinch off access on one side of a 4 mile linear beach and pinch off access on the other side of the 4 mile section of beach with no corridor, then you effectively have closed off all 4 miles of the beach because you CAN'T get there. The proposed bird buffers are too large, blocking access to the interior sections from the two "buffered" ends.

I propose ORV pass-thru only corridors and to use breeding / nesting buffer distances to establish ORV pass through only corridors to ensure beach access in a way that does not hinder resource protection. I believe pass through corridors should be maintained for pedestrians and ORVs in all areas of the Cape Hatteras National Seashore Recreational Area throughout the entire breeding and nesting season. Corridors are vital to providing access in a way that does not hinder resource protection.

Piping Plover unfledged chicks buffer should move with the brood as it relocates to reliable food source, not expanded.

The 1,000 meter distance for the piping plover is way too large and not based upon peer reviewed science. A more rational distance would be 200 meters per other sites in the nation for the piping plover. Ample scientific evidence and precedent exists to support a 200 meter buffer.

Buffers for other species, including American Oystercatchers, Least Terns and Colonial

Waterbirds must also be changed. An effective 30 meter buffer should be established for these species rather than the 300 meter closure outlined in the DEIS.

NON-ENDANGERED BIRDS should not have same protection as if endangered. Not allowing ORV access is paramount to denying the public access to these beaches.

7) Page 468: I disagree with the limitations imposed on pedestrian and ORVs. Corridors or bypasses should be provided thru, around or below high tide line in all SMAs during entire breeding season to maintain access.

8) Page 124: I strongly disagree with the NPS slant of providing for over protection of resource management over that of the public's right to access the beaches. Pro-active initiatives include: Vegetation Management, Habitat Management, Enhanced Predator Management, Colonial Water bird social attraction, Piping Plover check fledge rate, Piping plover chick buffer distance, and pass-through buffers during the incubation period. Opportunities to implement less restrictive closures as a result of the above initiatives should be considered more frequently than the 5-year periodic review process identified in the DEIS.

9) I disagree with the NPS Resource Management Pedestrian / ORV Closure Policies. These policies address the least significant factors affecting nest survival with little chance to have more than negligible impact. For example: the AMOY Nest Failures are predominately due to non-human events. Using your own stats, the mammalian predation is 54%, Storm / Lunar Tides: 29%, Nest Abandonment: 6%, Avian Predation: 5%, and Ghost Crab Predation: 3%,

So what is the percentage due to human interference: just 3%! It's insignificant, yet the NPS wants to ban humans when their actions provide very little influence on the success rate of breeding birds and turtles.

10) I disagree with the stats of breeding plovers and the other birds in the Park when the NPS does not adequately consider locations neighboring the Recreational Area that are part of the same ecosystem, namely dredge and spoil island that are located just yards away and within sight of the seashore. These birds are part of the same ecosystem and should be included.

Those spoil islands, developed by man from dredging the waterways in the Pamlico Sound for channel upkeep are slammed full of birds. The reason why so many birds? NO PREDATORS. SO, birds are not as stupid as one might think. You have to count these birds and incorporate them in the stats when the NPS is talking about any so called decline in breeding pairs in the National Park.

11) Page 1: I do not think the DEIS responsibly addresses the cultural resource issues. The very purpose of the DEIS as set forth in the National Environmental Policy Act (NEPA) is to protect and preserve natural and cultural resources in the federal decision making process. In the DEIS, the statement "protect and preserve natural and cultural resources" appears in the first sentence of the first page of the plan, in the Purpose of the Plan section, and numerous times thereafter. Yet, the 810 page document devotes only two paragraphs to analysis of cultural resource issues.

12) Pages 270-281; 561-598: I strongly disagree with your economic analysis of the impact of the DEIS. The region of influence (ROI) incorporates the Northern Beach communities, including Kill Devil Hills, Kitty Hawk, Southern Shores and Duck. These areas are almost completely disconnected from ORV use and access issues relating to the Seashore.

? Inclusion of the Northern Beaches in analysis significantly dilutes estimates of economic impact on the 8 Seashore Villages

? Analysis of economic impact to the Seashore Villages appears to be significantly down played. Emphasis in DEIS is on the ROI-wide or county-wide level impacts.

? Nowhere is it clearly addressed that the overwhelming majority of negative impacts will be felt by small businesses in the Seashore Villages rather than by overall economic interests within the greater ROI.

On page xlvi, Alternative F is characterized as having a "negligible to moderate" adverse impact on small businesses. I strongly disagree with this statement.

I believe the negligible to moderate projection is inaccurate and relies on economic surveys that has not yet been published. Furthermore, this material is not expected to be added to the DEIS until after the public comment period has ended.

Based upon the economic harm we have already experienced under the consent decree, Dare County projects the economic impact of Alternative F to be substantial.

Beach closures have already had a devastating and unfair impact on many Dare County Businesses, causing foreclosures, bankruptcies, lay-offs, cutbacks, expensive refinancing, and depleted college funds and savings accounts.

Even businesses whose revenue has stayed level or showed a modest increase have accomplished this at a costly price. Many have had to cut back employee hours, forego much-needed capital improvements, and sacrifice profits. That is certainly the case with Hatteras Realty.

Pages 270-286, 561-598: The socio-economic data and analyses are incomplete and erroneous and result in an understatement of the effect the restrictions will have upon the Island, the region and the state of NC. The US Park Services answer: Businesses will have to "adapt" to the new rules. (p.383) The negative economic impacts of the decree ARE KNOWN, so to say that the added restrictions would have negligible to moderate impact is indefensible.

13) Overall Visitor Counts - Overall visitor counts appear to include visitors to Fort Raleigh National Historic Site and the Wright Brothers National Memorial. A large percentage of these visitors vacation in the Northern Beaches communities and recreate on the non-federal beaches outside of the Seashore. Visitors who patronize the Fort Raleigh National Historic Site and the Wright Brothers National Memorial but do not visit the actual seashore areas need to be factored out.

Maintenance of Future Access to Cape Point and South Point Ocracoke: All socioeconomic analyses related to Alternative F are predicated on the assumption that access corridors will remain open for at least an appreciable portion of the visitor high season. Under Alternative F, the access corridors will be subject to Resource Closures based on buffers similar or identical to the Consent Decree. Unless some predictability of access to Cape Point and South Point Ocracoke can be assured, economic analyses predicated on assumption of access are fundamentally flawed.

Why would a group of surf fishermen want to come to Hatteras Island to surf fish if they are not sure they can access the prime fishing grounds at Cape Point? The answer is they won't come. If they don't come, they don't rent vacation homes and spend their money on Hatteras and Ocracoke Islands.

The definition of the Region of Influence (ROI), faulty data on economic activity generated by specific type recreational activity, incomplete visitation/business survey data, inflated overall Seashore visitor counts pertaining to beach use, and flawed key assumptions concerning the maintenance of access under Alternative F, all lead to inaccurate conclusions in the socioeconomic analyses. Specifically, these inaccuracies can be seen as understating the negative socio-economic impact of the Seashore Villages. Further, this negative impact will be absorbed almost entirely by Small Businesses. Neither of these important aspects of the management alternatives are adequately presented in the DEIS.

14) Page 136: I strongly disagree with your pet restriction proposals. The "prohibition of pets in the Seashore during bird breeding season including in front of the villages." = No Pets in public areas ?beaches, campgrounds, soundfront, foot trails, park maintained roads -from March 15 ?July 31. 15)

Pages 125; 392 ? 396: SEA TURTLES. I disagree with the stats and procedures proposed. I think endangered sea turtles would benefit from management practices now in use at other federal seashores that are more proactive in efforts to achieve nesting success. This includes relocating nests to more desirable locations as is done in other state and federally controlled areas.

The Cape Hatteras National Seashore Recreational Area is on the northernmost fringe of turtle nesting locations for the southeast, accounting for about 1% of all turtle nests. Proposed buffer areas are not needed for protection of the turtles and amount to overprotection.

16) Pages 97- 101. I strongly disagree with proposals in this section saying that ORVs will be prohibited year round between ramps 27 and 30, at Hatteras Inlet (Hatteras Spit), Ocracoke Inlet (North Ocracoke Spit) and various other locations.

Not allowing ORV access is paramount to denying the public access to these beaches. They are located miles from the nearest parking or paved road area and too far to access on foot. As a matter of course, there has been no breeding of piping plover or other endangered species at the Hatteras Island Inlet (spit) area in the past 6 years.

17) Page 104: I disagree with the proposed night time driving closures. Per your proposals, night driving will be prohibited between May 1 and November 15th, forcing visitors off of the beaches early in the evening and preventing sunrise surf fishermen access in the morning. I propose a more moderate night time ban if one is needed, perhaps from June 1 ? September 15 with times being 1 hour after sunset and 1 hour before sunrise to allow beach goers to gather their stuff and exit the beach area.

Certainly more proactive measures such as relocating nests prone to weather and ocean events would dramatically increase the nesting success rates.

18) Page 121: I disagree with the proposed beach closings, including pedestrian access from March 15 until July 31 in 8 different beach locations which have traditionally been available. Please leave these areas open to beach walkers, shell collectors and those that want to access the beaches in these areas.

Conclusion:

Please, incorporate access corridors through any SMA so we can get to the open beach beyond. Incorporate the birds into the count that nest on the spoil islands. Base your buffer zones on peer reviewed science and scale them back to more reasonable distances as discussed.

It is neither logical nor reasonable to spend so much time, money and energy to overprotect a bird (Piping Plover) in the Cape Hatteras National Seashore that is on the southernmost fringe area of its breeding ground. That goes for the loggerhead turtle that is in its northernmost breeding area.

Let's scale back the buffer zones. You can always increase at a later date.

The USPS is leaning way over the line on over protection and not enough on the public's right to enjoy the beaches of the National Seashore. The proper balance is not achieved in the propose DEIS and needs to be modified so that the proper balance of reasonable resource protection and access to the beaches of the National Park is achieved. I could sum it up by saying "Protect, not Prohibit."

Thank you Ralph Hibbs

Correspondence: The priority for our pristine and protected areas should be for its ecosystem, inclusive of its native animal and plant species. Second to that it should be for low-impact recreational activity, including the presence of pedestrian users. While the use of ORVs is sometimes necessary in these environments, protected areas should not be opened-up for excessive, unlicensed and unmonitored use by motorized recreationists. ORV tours by certified personnel may be one possible compromise to accommodate those who are unable or unwilling to enjoy these ecotreasures on foot.

Yet, the 810 page document devotes only two paragraphs to analysis of cultural resource issues.
- 12) Pages 270-281; 561-598: I strongly disagree with your economic analysis of the impact of the DEIS. The region of influence (ROI) incorporates the Northern Beach communities, including Kill Devil Hills, Kitty Hawk, Southern Shores and Duck. These areas are almost completely disconnected from ORV use and access issues relating to the Seashore.
 - ? Inclusion of the Northern Beaches in analysis significantly dilutes estimates of economic impact on the 8 Seashore Villages
 - ? Analysis of economic impact to the Seashore Villages appears to be significantly down played. Emphasis in DEIS is on the ROI-wide or county-wide level impacts.
 - ? Nowhere is it clearly addressed that the overwhelming majority of negative impacts will be felt by small businesses in the Seashore Villages rather than by overall economic interests within the greater ROI.

On page xlvi, Alternative F is characterized as having a "negligible to moderate" adverse impact on small businesses. I strongly disagree with this statement.

I believe the negligible to moderate projection is inaccurate and relies on economic surveys that has not yet been published. Furthermore, this material is not expected to be added to the DEIS until after the public comment period has ended.

Based upon the economic harm we have already experienced under the consent decree, Dare County projects the economic impact of Alternative F to be substantial.

Beach closures have already had a devastating and unfair impact on many Dare County Businesses, causing foreclosures, bankruptcies, lay-offs, cutbacks, expensive refinancing, and depleted college funds and savings accounts.

Even businesses whose revenue has stayed level or showed a modest increase have accomplished this at a costly price. Many have had to cut back

employee hours, forego much-needed capital improvements, and sacrifice profits.

Pages 270-286, 561-598: The socio-economic data and analyses are incomplete and erroneous and result in an understatement of the effect the restrictions will have upon the Island, the region and the state of NC. The US Park Services answer: Businesses will have to "adapt" to the new rules. (p.383) The negative economic impacts of the decree ARE KNOWN, so to say that the added restrictions would have negligible to moderate impact is indefensible.

13) Overall Visitor Counts - Overall visitor counts appear to include visitors to Fort Raleigh National Historic Site and the Wright Brothers National Memorial. A large percentage of these visitors vacation in the Northern Beaches communities and recreate on the non-federal beaches outside of the Seashore. Visitors who patronize the Fort Raleigh National Historic Site and the Wright Brothers National Memorial but do not visit the actual seashore areas need to be factored out.

Maintenance of Future Access to Cape Point and South Point Ocracoke: All socioeconomic analyses related to Alternative F are predicated on the assumption that access corridors will remain open for at least an appreciable portion of the visitor high season. Under Alternative F, the access corridors will be subject to Resource Closures based on buffers similar or identical to the Consent Decree. Unless some predictability of access to Cape Point and South Point Ocracoke can be assured, economic analyses predicated on assumption of access are fundamentally flawed.

Why would a group of surf fisherman want to come to Hatteras Island to surf fish if they are not sure they can access the prime fishing grounds at Cape Point? The answer is they won't come. If they don't come, they don't rent vacation homes and spend their money on Hatteras and Ocracoke Islands. The definition of the Region of Influence (ROI), faulty data on economic activity generated by specific type recreational activity, incomplete visitation/business survey data, inflated overall Seashore visitor counts pertaining to beach use, and flawed key assumptions concerning the maintenance of access under Alternative F, all lead to inaccurate conclusions in the socioeconomic analyses. Specifically, these inaccuracies can be seen as understating the negative socio-economic impact of the Seashore Villages. Further, this negative impact will be absorbed almost entirely by Small Businesses. Neither of these important aspects of the management alternatives are adequately presented in the DEIS.

14) Page 136: I strongly disagree with your pet restriction proposals. The "prohibition of pets in the Seashore during bird breeding season including in front of the villages." = No Pets in public areas ?beaches, campgrounds, soundfront, foot trails, park maintained roads -from March 15 ?July 31.

15) Pages 125; 392 ? 396: SEA TURTLES. I disagree with the stats and procedures proposed. I think endangered sea turtles would benefit from management practices now in use at other federal seashores that are more proactive in efforts to achieve nesting success. This includes relocating nests to more desirable locations as is done in other state and federally controlled areas. The Cape Hatteras National Seashore Recreational Area is on the northernmost fringe of turtle nesting locations for the southeast, accounting for about 1% of all turtle nests. Proposed buffer areas are not needed for protection of the turtles and amount to overprotection.

16) Pages 97- 101. I strongly disagree with proposals in this section saying that ORVs will be prohibited year round between ramps 27 and 30, at Hatteras Inlet (Hatteras Spit), Ocracoke Inlet (North Ocracoke Spit) and various other locations.

Not allowing ORV access is paramount to denying the public access to these beaches. They are located miles from the nearest parking or paved road area and too far to access on foot. As a matter of course, there has been no breeding of piping plover or other endangered species at the Hatteras Island Inlet (spit) area in the past 6 years.

17) Page 104: I disagree with the proposed night time driving closures. Per your proposals, night driving will be prohibited between May 1 and November 15th, forcing visitors off of the beaches early in the evening and preventing sunrise surf fishermen access in the morning. I propose a more moderate night time ban if one is needed, perhaps from June 1 ? September 15 with times being 1 hour after sunset and 1 hour before sunrise to allow beach goers to gather their stuff and exit the beach area.

Certainly more proactive measures such as relocating nests prone to weather and ocean events would dramatically increase the nesting success rates.

18) Page 121: I disagree with the proposed beach closings, including pedestrian access from March 15 until July 31 in 8 different beach locations which have traditionally been available. Please leave these areas open to beach walkers, shell collectors and those that want to access the beaches in these areas.

Conclusion: Please, incorporate access corridors through any SMA so we can get to the open beach beyond. Incorporate the birds into the count that nest on the spoil islands. Base your buffer zones on peer reviewed science and scale them back to more reasonable distances as discussed.

It is neither logical nor reasonable to spend so much time, money and energy to overprotect a bird (Piping Plover) in the Cape Hatteras National Seashore that is on the southernmost fringe area of its breeding ground. That goes for the loggerhead turtle that is in its northernmost breeding area. Let's scale back the buffer zones. You can always increase at a later date.

The USPS is leaning way over the line on over protection and not enough on the public's right to enjoy the beaches of the National Seashore. The proper balance is not achieved in the propose DEIS and needs to be modified so that the proper balance of reasonable resource protection and access to the beaches of the National Park is achieved. I could sum it up by saying "Protect, not Prohibit."

Correspondence: We just recently built a investment home in Frisco and I feel the restrictions being proposed will alter the volume of renters that will visit our beaches in the future. With the economy down, the last thing we need is to drive vacationers away. My new home will end up like all other foreclosures in the area. KEEP THE BEACHES PEOPLE FRIENDLY.

Correspondence: I can understand the use of an ORV to get to a destination and back. I cannot understand driving around having "fun" ruining the landscape. Visitors will be unable to enjoy the scenic natural beauty if they have to endure wheel tracks and vehicles running up and down the beach and around other areas. Destroying flora and fauna should not be part of "fun."

Correspondence:

- Page vi "Visitor experience could be affected by conflicts between motorized and non-motorized recreation users" - Disagree. Need to provide past evidence of such incidents. This blanket statement has no facts behind it.
- Page xi "The NPS used the Negotiated Rulemaking Advisory Committee's input to create this action alternative, which is designed to provide visitors to the Seashore with a wide variety of access opportunities for both ORV and pedestrian users." - Disagree. I have reviewed this document as well as the 77 page document submitted by the Coalition for Beach Access at NEG-REG and find the Coalitions recommendations the best alternative for management of ORV use in Cape Hatteras National Resource Area.
- Page 83. "Because it is not administered by the NPS, the Seashore cannot direct the visitor use at Pea Island NWR." - Disagree - Pea Island is a prime, pedestrian-only area for visitors to the seashore. Not using this causes an overstatement of the need for more ORV free areas.
- Page 210. "Even with resource closures in place, protected species are still at risk." - Disagree - No Piping Plover deaths have been attributed to ORVs. ORV violations continue to decrease as signage and education improve. Pedestrian violations are much more significant than ORV violations.
- Page xxiv. "Carrying capacity would be a "peak use limit" determined for all areas based on the linear feet of beachfront..." - Disagree - Capacity is more restrictive on Bodie Island and Ocracoke than at Cape Point.

6. Page 265. "Figure 25 shows the distribution of ORVs across these areas on Memorial Day and the Fourth of July in 2008." - Disagree - The ORV counts provided in this data fail to show that Bodie Island Spit and Cape Point were closed to ORV access on these dates due to resource protection closures. This, therefore, increased ORV congestion at ramps 4, 43, 44 and 49.
7. Page xix. Shorter Off-Season ORV Access on South Facing Villages - Disagree - Frisco, Hatteras and Ocracoke Villages closures to ORV access are longer than the traditional May 15 to September 15 period even though seasonal visitor statistics are similar for all villages (see p.23)
8. Page 1. "ORVs have long served as a primary form of access for many portions of the beach in the Seashore, and continue to be the most practical available means of access and parking for many visitors." - Agree - Pedestrian only areas discriminate against individuals with limited mobility due to age or physical impairments, families with small children and those wishing to engage in activities requiring recreational equipment.
9. Page 58. Beach access would be provided through the issuance of special use permits for areas in front of the villages to allow ORVs to transport disabled visitors to the beach and then return the vehicle back to the street. - Disagree - Why will Special Use permits to allow the transportation of disabled visitors to the village beaches require the vehicle to be returned to the street, creating unnecessary hardships and risks in the event of emergencies?
10. Page 61. - Disagree with the relocation of Ramp 2 to 0.5 miles south of Coquina Beach as financially irresponsible. The money can be better spent to enlarge the parking lot and provide pedestrian and handicapped accessible ramps to the beach at Ramp 1 since it will be closed to ORV use to increase the "Pedestrian Only" area.
11. Page 263 - Alternative F - Disagree - This alternative ignores the longstanding need for a soundside access ramp on Bodie Island.
12. Page 468 - Restrictive Species Management Areas - Disagree - MLI is overly restrictive. Pedestrian and ORV corridors or bypasses should be provided thru, around or below high tide line in all SMAs during the entire breeding and nesting season (within guidelines) to maintain access. The buffers in MLI and ML@ are inflexible.
13. Pages 121-127 - Disagree - Buffers overall are too large. Much more restrictive than being used at Camp Lejeune for breeding buffers. Use breeding/nesting buffer distances to establish ORV pass through only corridors to ensure beach access is always maintained. Piping Plover unfledged chicks buffer should move with the brood as it relocates to reliable food source, not be expanded due to movement.
14. Page 124 - Pro-Active Adaptive Management - Agree - NPS should aggressively pursue the adaptive management initiatives identified in the DEIS with an object to improve its success with both resource protection and visitor access. The initiatives identified include: Vegetation management; Habitat Management; Enhanced Predator Management; Colonial Waterbird social attraction; Piping plover chick fledge rate; Piping Plover chick buffer distance; Pass-through buffers during the incubation period.
15. Page 124. "Should adaptive management initiatives and other research provide information that the NPS believes is an adequate basis for management changes, such changes would be evaluated and considered for implementation as part of the 5-year periodic review process described at the end of this table." - Disagree - Opportunities to implement less restrictive closures as a result of Pro-Active Adaptive Management should be considered more frequently than the 5-year periodic review process.
16. Page 125. Night Driving Restrictions - Disagree - May 1 - November 15 is too restrictive. The current period of May 1 - September 15 has worked for many years.
17. Page 125. DEIS Hatch Window Closures - Disagree - The DEIS proposals are excessive. Current practices are working well. The island residents can monitor nests via the Turtle Night Nest Watch Team. Closures should be 10 meters square during the day, Use Pea Island style keyhole pattern fence to the surf line at night.
18. Page 377. "ORV and other recreational use would have long-term major adverse impacts on sea turtles due to the amount of Seashore available for ORV use and by allowing nighttime driving on the beach." - Disagree - Major Adverse (NPS definition, p. 369) events have not occurred at the Recreational Areas - Night driving restrictions are not necessary. Nesting females have not "been killed". Complete or partial nest loss due to human activity has not "occurred frequently". Hatchling disorientation/disruption due to humans have not "occurred frequently". Direct hatchling mortality from human activity has not "frequently occurred".
19. Page 86-87 - Agree - NPS should adopt more proactive techniques used at other East Cost locations as referred to on pages 86-87: Captive Rearing, Routine Nest Relocation and Hatcheries.
20. Pages 392-396 - Disagree - NPS inadequately addresses that environmental issues are more detrimental to Turtle Recovery Success than ORVs or pedestrian.
21. Pages 270-281; 561-598 - Region of Influence (ROI) - Disagree - The ROI as defined in the DEIS incorporates the Northern Beach communities, including Southern Shores and Duck. These areas are almost completely disconnected from ORV use and access issues relating to the Seashore. Inclusion of these areas significantly dilutes estimates of economic impact on the Seashore Villages. Analysis of economic impact on the Seashore Villages appears to be down played. The Economic analysis in the DEIS do not use data from the first full year of the Consent Decree (2009). Actual business survey data rather than model projections for economic impact for Seashore Villages businesses are not available in the DEIS.
22. Page 136 - "prohibition of pets in the Seashore during breeding season including in front of the villages, and establishment of breeding and nonbreeding SMAs would benefit the American oystercatcher." - Disagree - Current restrictions of pets on a 6 foot leash are sufficient. This regulation is too restrictive.

Correspondence: Please keep beach access open to ORV's and pedestrian traffic. As a fisherman and surfer, beach access is a critical component to my decision to frequent the Hatteras Island beaches. My family has been spending vacation time in Hatteras Village for 60 years. The very thought that the 2 percent "lawyered up" minority of bird watchers, Audobon and environmental nuts will dictate beach access for the 98 percent of all other interested parties who want free and open beach access is absurd!!!! If the park service restricts beach access on Hatteras Island, you will essentially be going against virtually every resident on Hatteras Island who will all be negatively impacted by your decision. Please do not place more importance on birds than people, for it will surely help to destroy the local economy and thus the livelihoods of all island residents. Please keep beach access open and develop a plan that will continue to allow the area to thrive economically. Thanks for your consideration. Todd Andrews

Correspondence: as a long time visitor (over 40 years) i think it is time to stop these illegal closers of the cape hatteras national seashore recreational area, to ORV traffic. none of these documents, the NPS is using as an excuses for closing the seashore to all visitors superseded, the original congressional intent of the congressional act establishing the recreational area.
i think all of the current arrogant NPS people, should be replaced with more public friendly NPS people.
there has been enough money wasted on these projects, that have not given any positive results.
it is past time to clean up the camp ground and return the recreation area to full public use.
there is absolutely no excuse of the way the public has been treated, the past five years.

Correspondence: The NPS must formulate a plan that is consistent with the legislation establishing Cape Hatteras National Seashore Recreation Area. The enabling legislation for the Recreational Area states, in part, "said area shall be, and is, established, dedicated, and set apart as a national seashore recreational area for the benefit and enjoyment of the people and shall be known as the Cape Hatteras National Seashore Recreational Area". Therefore, it is important to balance resource protection with reasonable access for recreation. Corridors are a vital tool in providing access while managing resources. They provide a small path around temporary resource closures in order to provide access to open areas that would otherwise be blocked. Corridors should be permitted throughout the seashore during the entire breeding and nesting season including ML-1 portions of SMAs. These corridors would provide valuable access without impairment or damage to protected resources. Buffers, or closures, are important management practices for species recovery. However, to have long term benefit for the wildlife and the visiting public, buffers must be based on peer-reviewed science. For example, the Piping Plover, a species classified as threatened and not endangered, is given a level of unprecedented protection in Alternative F. A 1,000-meter buffer in all directions represents over 771 acres. The DEIS does not cite any peer-reviewed science in supporting such closure. A more appropriate & effective buffer would be 200 meters. Birds that are not listed as endangered should not be afforded the level of protection given to ESA (Endangered Species Act) protected species. Instead of 300-meter buffers for these birds, a more appropriate buffer would be 30 meters. Also, all birds in the same ecosystem of the seashore should be counted. This includes all the many birds on the dredge and spoil islands located just yards away and within sight of the seashore. The National Park Service should consider turtle management practices successfully used in other federal and state areas to achieve nesting success. More proactive measures include relocating nests to more desirable locations, which is routinely and successfully done in other areas.

Correspondence: Dear Superintendent Murray,
As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.
1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."
2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness...."
Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.
3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.
Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.
***** Thank you very much for taking the time to protect one of America's most beautiful stretches of Atlantic seashore! Sea turtles, nesting shorebirds, and generations to come will be grateful for your action today. Thanks again!
Sincerely, Eileen

Correspondence: Mr. Murry,
As a frequent and long time visitor to the nations parks system, especially Cape Hatteras National Seashore I am deeply disturbed at some of the positions the NPS is proposing in the DEIS plan published on March 12 2010. I understand and agree with the NPS duties to protect and preserve our natural resources. My main area of concern is when in the protection of these resources the NPS over steps its bounds, and in the case of the CHNS, completely restricts the public to the point that this wonderful magnificent resource cannot be enjoyed by most citizens who wish to spend time there. My main issues of concern are as follows and I have several questions which I don't think you addressed in the original DEIS plan.
? I disagree with the restrictions (as proposed in Alternative "F" p. 97-101) of the ORV access between ramps 27 and 30 at the Hatteras Inlet, Ocracoke Inlet, and all other locations in the park. There must be a method to allow pedestrian and ORV access points to these areas without disturbing the natural

resources. ? I disagree with the severe restrictions (as proposed in Alternative "F" p. 104) not allowing night driving in the park. Over the past 40 years I have witnessed and enjoyed hundreds of sunsets and sunrises which cannot be viewed from any other areas in the park with the same majestic experience. These night closures would significantly reduce the time that the many fishermen can enjoy the resources at a time of day (during the PM hours) when the fishing can be the most productive and active. Given the right instruction on how to access these areas I know that all the individuals I have seen over the years could enjoy the park without disturbing the natural resource. ? I disagree with the prohibition of pedestrian access (as proposed in Alternative "F" p. 121) at the 8 different park locations from March 15 to July 31 each year. These locations have traditionally been available for all to enjoy. The removal of such large tracks of the park limits the overall positive experience that the park has to offer and significantly reduces ones desire to return to the seashore. ? I disagree with the drastic and large restrictions (as proposed in Alternative "F" p.121-127) put on the public's ability to access certain parts of the beach when a piping plover or American Oystercatcher nest or brood exists in the park. These closures of such large tracts of park lands makes enormous parts of the park non accessible by the public. There must be a common sense compromise which both protects the natural resource and does not prohibit pedestrian and ORV access to some of the most valued parts of the park to visit. ? I disagree with the NO PET restriction (as proposed in Alternative "F" p. 136) from March 15 to July 31. This restriction must be reconsidered with a more stringent enforcement of the current 6' leash rule, year round. Over the 40 years I have been enjoying CHNS my family and hundreds of park guests I have seen and obeyed the current pet rules with no damage to the natural resource. You must consider that too many individuals, the only important thing in their lives is their pets. These individuals treat their pets as one of their family and would treat the park with the same respect. I disagree with the restriction of public access with their pets in front of the many homes and businesses in the many towns that share, respect, and have been the primary caretakers of this area even before the NPS was there. I disagree and take real exception to the NPS analyses of the socio-economic impact of the actions taken in the DEIS and the negative drastic effect it will have on the region and the state of N.C. as stated on p. 270-286 , 561-598. For the NPS to state as they do on p. 383 that the local region will have to "adapt" to the new rules I find insulting to the hardworking people in the region who have nothing but the best interest of the park for their entire lives. I have seen the effects of what some of the types of restrictions imposed over the last couple of years by the Federal Court Consent Decree will do to the local region. The loss of business, jobs, homes, and the noticeable loss of tourism has all been a direct effect to the restrictions on park access. The NPS proposal in the DEIS, Alternative "F" is more restrictive then the Consent Decree and therefore could be more damaging then what's already in place. There are many alternatives used in our society to allow public use to coexist without disturbing our natural resources. Many of these approaches the NPS uses in other parks in the park system. In Alternative "F" of the DEIS plan the NPS is taking the more restrictive approach at the expense of the public use. There is no credible science to back up the NPS plan in Alternative "F" and a less restrictive approach must be taken to allow both public use and resource management of one of the nation's most valuable resource.

Correspondence: I am the owner of a small retail store on the Outer Banks of North Carolina. The closure of the Cape Hatteras National Seashore will and does directly effect my business. If people are not allowed access to these areas for sunbathing, fishing, walking etc. it will prevent them from coming down. It is also my understanding that when the private residents the originally owned this land granted it the the NPS part of the original agreement with them is this land would ALWAYS be open for public access and recreation. By closing this beach it would be in direct violation of this agreement. The protection of the Pipping Plover is not needed, the species in NOT endangered and it's numbers have been increasing in the last decade. While I do agree the nest may need protection, mankind can not prevent mother nature from running it's course, which is exactly what is trying to be done! KEEP OUR BEACHES OPEN FOR THE PUBLIC TO ENJOY!!!

Correspondence: My family and myself have been enjoying the OuTer Banks for 40+ years. We have always been aware of the beach birds and turtles and any other species that might be on the beaches. Closing the beaches from Bonner Bridge to Ocracoke will cause a tremendous amount of harm to businesses and the financial stability of the Outer Banks. The birds and turtles that frequent these beaches have always been watched over buy the people that use the beaches. The data that has been used is unsupported and no proof given that any of these birds are on any endangered list. The people that want to close the Outer Banks have no other interest than to close down communities, cause people and businesses to go broke and out of business and make the whole Outer Banks a "GHOST TOWN". I plead with you to listen and pay attention to the history of these communities and their people. Leave the Parks to the people and the Park Service to run this the way it has gotten along for years.
C. H. Craddock

Subject: DEIS Off-Road Vehicle Management Plan Comments
I am a home owner in Avon N.C. and would like to include my comments concerning the DEIS of the Off-Road Vehicle Management Plan prepared by the National Park Service (NPS) for the Cape Hatteras National Seashore Recreation Area.
1) Page 201: I disagree with the NPS statement: "Even with resource closures in place, protected species are still at risk [from pedestrians and ORVs]." No Piping Plover deaths have been attributed to ORVs. ORV violations continue to decrease as signage and education improve. Pedestrian violations are much more significant than ORV violations. It seems to me that any transgressions into protected area are the result of lack of NPS manpower and enforcement than the public purposely and willfully violating out of bounds areas.
2) Page xxiv: I question the statement of as per the DEIS: "Carrying capacity would be a 'peak use limit' determined for all areas based on the linear feet of beachfront?" If you close off huge sections of the beach, you force more people into smaller areas, potentially resulting in more resource impairment and diminished visitor experience.
3) Page xix and page 23: I am against having two different closures rules pertaining to the North facing beaches (North side) and the South facing beaches (South side) as per the grid outlined in Alternative "F". I disagree with the NPS proposal to close the beaches in villages of Frisco, Hatteras and Ocracoke Villages to ORV access longer than the traditional May 15 to September 15 period for the Northern beaches, even though seasonal visitor statistics are similar for all villages. Please, make them the same: May 15 -> September 15.
4) Page 1: I agree with your statement "ORVs have long served as a primary form of access for many portions of the beach in the seashore, and continue to be the most practical means of access and parking for many visitors."
However, pedestrian only areas discriminate against individuals with limited mobility due to age or physical impairments, families with small children, and those wishing to engage in activities requiring recreational equipment (boogie boards, beach umbrellas, beach chairs, coolers, fishing rods and tackle, etc)
5) Page 53: I disagree with the special use permit proposed guidelines. It is impractical to allow the transportation of disabled visitors to the village beaches and then require the vehicle to be returned to the street or parking area. This necessitates the disabled person to have a driver to drop him (or her) off, then drive to a parking area, then trudge a long distance to the site of the drop off, then trudge the long distance through the sand back to get the

vehicle.

Suppose the handicap person wants to go to the beach, is capable of driving himself, yet cannot find another person to go with him? Does he now not go to the beach? This rule creates unnecessary hardships and risks in the event of an emergency as well.

6) Page 121 ? 127. I strongly disagree with the buffers as presented. We must allow for pass-thru corridors. The beach is linear with the ocean buffering on one side and the dune line on the other. For example - If you pinch off access on one side of a 4 mile linear beach and pinch off access on the other side of the 4 mile section of beach with no corridor, then you effectively have closed off all 4 miles of the beach because you CAN'T get there. The proposed bird buffers are too large, blocking access to the interior sections from the two "buffered" ends.

I propose ORV pass-thru only corridors and to use breeding / nesting buffer distances to establish ORV pass through only corridors to ensure beach access in a way that does not hinder resource protection. I believe pass through corridors should be maintained for pedestrians and ORVs in all areas of the Cape Hatteras National Seashore Recreational Area throughout the entire breeding and nesting season. Corridors are vital to providing access in a way that does not hinder resource protection.

Piping Plover unfledged chicks buffer should move with the brood as it relocates to reliable food source, not expanded.

The 1,000 meter distance for the piping plover is way too large and not based upon peer reviewed science. A more rational distance would be 200 meters per other sites in the nation for the piping plover. Ample scientific evidence and precedent exists to support a 200 meter buffer.

Buffers for other species, including American Oystercatchers, Least Terns and Colonial

Waterbirds must also be changed. An effective 30 meter buffer should be established for these species rather than the 300 meter closure outlined in the DEIS.

NON-ENDANGERED BIRDS should not have same protection as if endangered. Not allowing ORV access is paramount to denying the public access to these beaches.

7) Page 468: I disagree with the limitations imposed on pedestrian and ORVs. Corridors or bypasses should be provided thru, around or below high tide line in all SMAs during entire breeding season to maintain access.

8) Page 124: I strongly disagree with the NPS slant of providing for over protection of resource management over that of the public's right to access the beaches. Pro-active initiatives include: Vegetation Management, Habitat Management, Enhanced Predator Management, Colonial Water bird social attraction, Piping Plover check fledge rate, Piping plover chick buffer distance, and pass-through buffers during the incubation period. Opportunities to implement less restrictive closures as a result of the above initiatives should be considered more frequently than the 5-year periodic review process identified in the DEIS.

9) I disagree with the NPS Resource Management Pedestrian / ORV Closure Policies. These policies address the least significant factors affecting nest survival with little chance to have more than negligible impact. For example: the AMOY Nest Failures are predominately due to non-human events.

Using your own stats, the mammalian predation is 54%, Storm / Lunar Tides: 29%, Nest Abandonment: 6%, Avian Predation: 5%, and Ghost Crab Predation: 3%,

So what is the percentage due to human interference: just 3%! It's insignificant, yet the NPS wants to ban humans when their actions provide very little influence on the success rate of breeding birds and turtles.

10) I disagree with the stats of breeding plovers and the other birds in the Park when the NPS does not adequately consider locations neighboring the Recreational Area that are part of the same ecosystem, namely dredge and spoil island that are located just yards away and within sight of the seashore. These birds are part of the same ecosystem and should be included.

Those spoil islands, developed by man from dredging the waterways in the Pamlico Sound for channel upkeep are slammed full of birds. The reason why so many birds? NO PREDATORS. SO, birds are not as stupid as one might think. You have to count these birds and incorporate them in the stats when the NPS is talking about any so called decline in breeding pairs in the National Park.

11) Page 1: I do not think the DEIS responsibly addresses the cultural resource issues. The very purpose of the DEIS as set forth in the National Environmental Policy Act (NEPA) is to protect and preserve natural and cultural resources in the federal decision making process. In the DEIS, the statement "protect and preserve natural and cultural resources" appears in the first sentence of the first page of the plan, in the Purpose of the Plan section, and numerous times thereafter. Yet, the 810 page document devotes only two paragraphs to analysis of cultural resource issues.

12) Pages 270-281; 561-598: I strongly disagree with your economic analysis of the impact of the DEIS. The region of influence (ROI) incorporates the Northern Beach communities, including Kill Devil Hills, Kitty Hawk, Southern Shores and Duck. These areas are almost completely disconnected from ORV use and access issues relating to the Seashore.

? Inclusion of the Northern Beaches in analysis significantly dilutes estimates of economic impact on the 8 Seashore Villages

? Analysis of economic impact to the Seashore Villages appears to be significantly down played. Emphasis in DEIS is on the ROI-wide or county-wide level impacts.

? Nowhere is it clearly addressed that the overwhelming majority of negative impacts will be felt by small businesses in the Seashore Villages rather than by overall economic interests within the greater ROI.

On page xlvi, Alternative F is characterized as having a "negligible to moderate" adverse impact on small businesses. I strongly disagree with this statement.

I believe the negligible to moderate projection is inaccurate and relies on economic surveys that has not yet been published. Furthermore, this material is not expected to be added to the DEIS until after the public comment period has ended.

Beach closures have already had a devastating and unfair impact on many Dare County Businesses, causing foreclosures, bankruptcies, lay-offs, cutbacks, expensive refinancing, and depleted college funds and savings accounts.

Pages 270-286, 561-598: The socio-economic data and analyses are incomplete and erroneous and result in an understatement of the effect the restrictions will have upon the Island, the region and the state of NC. The US Park Services answer: Businesses will have to "adapt" to the new rules.

(p.383) The negative economic impacts of the decree ARE KNOWN, so to say that the added restrictions would have negligible to moderate impact is indefensible.

13) Overall Visitor Counts - Overall visitor counts appear to include visitors to Fort Raleigh National Historic Site and the Wright Brothers National Memorial. A large percentage of these visitors vacation in the Northern Beaches communities and recreate on the non-federal beaches outside of the Seashore. Visitors who patronize the Fort Raleigh National Historic Site and the Wright Brothers National Memorial but do not visit the actual seashore areas need to be factored out.

Maintenance of Future Access to Cape Point and South Point Ocracoke: All socioeconomic analyses related to Alternative F are predicated on the assumption that access corridors will remain open for at least an appreciable portion of the visitor high season. Under Alternative F, the access corridors will be subject to Resource Closures based on buffers similar or identical to the Consent Decree. Unless some predictability of access to Cape Point and South Point Ocracoke can be assured, economic analyses predicated on assumption of access are fundamentally flawed.

Why would a group of surf fisherman want to come to Hatteras Island to surf fish if they are not sure they can access the prime fishing grounds at Cape Point? The answer is they won't come. If they don't come, they don't rent vacation homes and spend their money on Hatteras and Ocracoke Islands.

The definition of the Region of Influence (ROI), faulty data on economic activity generated by specific type recreational activity, incomplete visitation/business survey data, inflated overall Seashore visitor counts pertaining to beach use, and flawed key assumptions concerning the maintenance of access under Alternative F, all lead to inaccurate conclusions in the socioeconomic analyses. Specifically, these inaccuracies can be seen as understating the negative socio-economic impact of the Seashore Villages. Further, this negative impact will be absorbed almost entirely by Small Businesses. Neither of these important aspects of the management alternatives are adequately presented in the DEIS.

14) Page 136: I strongly disagree with your pet restriction proposals. The "prohibition of pets in the Seashore during bird breeding season including in front of the villages." = No Pets in public areas ?beaches, campgrounds, soundfront, foot trails, park maintained roads -from March 15 ?July 31.

15) Pages 125; 392 ? 396: SEA TURTLES. I disagree with the stats and procedures proposed. I think endangered sea turtles would benefit from management practices now in use at other federal seashores that are more proactive in efforts to achieve nesting success. This includes relocating nests to more desirable locations as is done in other state and federally controlled areas.

The Cape Hatteras National Seashore Recreational Area is on the northernmost fringe of turtle nesting locations for the southeast, accounting for about

1% of all turtle nests. Proposed buffer areas are not needed for protection of the turtles and amount to overprotection.

16) Pages 97- 101. I strongly disagree with proposals in this section saying that ORVs will be prohibited year round between ramps 27 and 30, at Hatteras Inlet (Hatteras Spit), Ocracoke Inlet (North Ocracoke Spit) and various other locations.

Not allowing ORV access is paramount to denying the public access to these beaches. They are located miles from the nearest parking or paved road area and too far to access on foot. As a matter of course, there has been no breeding of piping plover or other endangered species at the Hatteras Island Inlet (spit) area in the past 6 years.

17) Page 104: I disagree with the proposed night time driving closures. Per your proposals, night driving will be prohibited between May 1 and November 15th, forcing visitors off of the beaches early in the evening and preventing sunrise surf fishermen access in the morning. I propose a more moderate night time ban if one is needed, perhaps from June 1 ? September 15 with times being 1 hour after sunset and 1 hour before sunrise to allow beach goers to gather their stuff and exit the beach area.

Certainly more proactive measures such as relocating nests prone to weather and ocean events would dramatically increase the nesting success rates.

18) Page 121: I disagree with the proposed beach closings, including pedestrian access from March 15 until July 31 in 8 different beach locations which have traditionally been available. Please leave these areas open to beach walkers, shell collectors and those that want to access the beaches in these areas.

Conclusion:

Please, incorporate access corridors through any SMA so we can get to the open beach beyond. Incorporate the birds into the count that nest on the spoil islands. Base your buffer zones on peer reviewed science and scale them back to more reasonable distances as discussed.

It is neither logical nor reasonable to spend so much time, money and energy to overprotect a bird (Piping Plover) in the Cape Hatteras National Seashore that is on the southernmost fringe area of its breeding ground. That goes for the loggerhead turtle that is in its northernmost breeding area.

Let's scale back the buffer zones. You can always increase at a later date.

The USPS is leaning way over the line on over protection and not enough on the public's right to enjoy the beaches of the National Seashore. The proper balance is not achieved in the propose DEIS and needs to be modified so that the proper balance of reasonable resource protection and access to the beaches of the National Park is achieved. I could sum it up by saying "Protect, not Prohibit."

Thank you,

Correspondence: Please keep these destructive, adolescent petrochemical machines out of our national parks, monuments, seashores, lakeshores and refuges. In this age of biodiversity collapse, we don't need more and more areas opened to these destructive machines. If people can't enjoy these areas in a restorative, non-paracitic manner, then they don't deserve to use the area.

Correspondence: Please accept this as my comment on the ORV DEIS before you at this time.
After reviewing the NPS DEIS I must disagree with any of the six alternatives within the document.
However, I have reviewed the 77 page Coalition for Beach Access Position Statement signed by several groups that were a part of the negotiated rule making process and it by far succeeds in furnishing the best visitor experience while maintaining the needs of and protecting the fragile resources.
Please consider all aspects of this alternative and put people back into the management of Cape Hatteras National Seashore.
Sincerely, Greg Sherman

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.

* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.

* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.

This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.

The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.

* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
 * Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
 Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
 This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
 The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
 *Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
 * Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
 * Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery.  As an avid ORV enthusiast, I believe that we need to place environmentally sensitive areas over the need for ORV areas. As one of the wealthiest nations, we need to preserve our precious resources. We do not need to be destructive to areas that need protection merely to have a place to play.
 Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
I know of Cape Hatteras National Seashore and the lighthouse. It is a beautiful area and I am saddened to hear of the wildlife decline there. Please protect this valuable stretch of our nation's seashore, and the wild creatures that make it their home, especially birds and turtles. Areas should be made free of off-road vehicle use as these animals are sensitive to the noise, activity and pollution.
Please partner with scientists and environmentalists in developing a plan for the Seashore. Include clear goals and milestones for wildlife recovery. Provide more access for pedestrians, hikers and families observing and enjoying nature with minimal impact. Where animals and plants are not coming back as expected, based on annual reviews, additional protective measures should be implemented until the area recovers its previous natural state. Please don't heed to respond to Cape Hatteras' cries for recovery and management. Thank you very much for this opportunity to send in my comments.

Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.

This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.

The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.

* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.

* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Yesterday I saw my first pair of Piping Plovers at Waukegan Beach in IL. However, this beach has become unsuitable for nesting plovers due to heavy human useage. Shorebirds like these need protected habitat on beaches. I visit many sites in National Parks system, and am very happy to have some places off-limits to off-road vehicles.

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore. i look farward to visiting.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.

I whole heartedly agree, that this beach, and all beaches.... all Federal and State parks/areas, should be for everyone.... not just one group. This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.

The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
Protection of the natural resources and wildlife of the Seashore should be the primary consideration, and any recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use throughout the year for wildlife activities, including breeding, migration, and species that winter over. Wildlife protection must be based on the best available scientific information. Wildlife disturbance buffers specified in the preferred plan are barely sufficient, and should be increased to provide adequate protection for breeding birds and sea turtles.

Furthermore, a specific plan must be developed to include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met.

Unregulated beach-driving has taken its toll As a unit of the National Park system, Cape Hatteras has been required for decades under federal law to establish ORV guidelines that minimize harm to wildlife and natural values of the Seashore in accordance with the best available science. The lack of an effective vehicle management plan at the Seashore contributed to an 84% decline in the number of colonial waterbirds (birds that nest in a group) breeding at the Seashore between 1997 and 2007. A recent change in management at the Seashore demonstrates that, given a chance, wildlife can rebound. Under a new science-based management plan, the number of nests laid by colonial waterbirds more than doubled in 2009 compared to 2007. And the two years under the new plan have seen a record 112 sea turtle nests in 2008 and 103 nests in 2009, compared to 82 in the 2007 season prior to the implementation of the plan.
In establishing a final plan for Cape Hatteras, the Park Service must follow law and science in guaranteeing adequate space and protections for wildlife. The Park Service can do so while still allowing responsible beach driving in some areas so that all visitors can fully enjoy this national treasure. The final rules should improve public access to the beaches for pedestrians and people with disabilities by adding boardwalks, parking spaces, and public facilities to enhance visitor enjoyment in balance with wildlife conservation efforts.

This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.

* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.

* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.

When I visited Cape Hatteras two years ago, I was shocked and saddened by the destruction of the beaches caused by ORV use on the beaches. Much of our coastline is open to development and uncontrolled habitat destruction. The preservation of habitat and serenity in National Seashore areas that can

be protected is of great importance.

The Alternative D plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.

If Alternative D is not chosen, the following principles should underpin the park's formulation of its final plan:

*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the National Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.

* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.

* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. As there will be such loss of our wildlife as a result of the oil spill in the Gulf, any opportunity to protect wildlife in other areas surely must be taken including support of the "environmentally preferred" Alternate D w ped access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.----- WE NEED TO KEEP OUR NATIONAL PARKS "WILD FOREVER/FOREVER WILD", Its only pristine once.Do you folks think you can scrub the individual rocks clean like after the Exxon-Mobil Valdez incident? How about an once of prevention being worth a pound of cure? I ride too,but I want to be with nature when I HIKE,when I want to BIKE I BIKE.Just keep the damn parks natural for us AMERICANS who want their nature NATURAL,OKAY? Thanks for letting me rant at you, Bob Burke.

This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.

Dear Superintendent Murray,

I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.

This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.

The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

- *Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
- * Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
- * Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
I am including the comment points supplied by the Audobon Society but would like to add that in light of the BP oil spill in the Gulf, it is urgent that we protect what refuges we have before they are destroyed beyond repair.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
Alternative D provides for more non-ORV use of beaches and less disturbance of wildlife. This should be the goal of seashore management.
As a pedestrian user of the national seashore and a citizen who values a healthy environment, I do NOT feel that ORVs are appropriate at all in a national seashore. They are destructive, polluting, and noisy, and they devalue the experience of natural setting. I do not feel they are compatible at all with the preservation of wildlife and the seashore environment. I would welcome their banishment totally from the park land. Having "fun" at the expense of and destruction of the seashore's creatures is simply wrong.
If you don't enact Alternative D, you should at least make half of the beach available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
I will follow this issue at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore. Thank you for doing the right thing for the seashore entrusted to you.

The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are

management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Please protect the wildlife on the Cape Hatteras seashore and elsewhere. and STOP vehicle access. People can go anywhere but the animals who called the seashore home have no alternatives and their lives are being ended by allowing off road vehicles.
That is a way bigger tragedy than the inconvenience of going somewhere to enjoy a drive.

This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.

* Put Natural Resources First. Both sea turtles and all wildlife, including threatened and endangered bird species should be the first priority of any plan adopted. It is imperative to preserve the quality of the shore ecology in order for all people to enjoy its unique properties. The NPS needs to step up now to protect species currently endangered and those not yet perceived as imperiled.

* Establish and Meet Clear Goals for Wildlife Recovery. this should be the top priority, stabilize current wildlife use then develop a plan to allow limited ORV use. The shore is being abused by those that have the largest machines. Please protect it for all living species, and all humans who love to experience a natural, national seashore.

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

I love Hatteras and visit at least twice every year and I believe this alternative plan would provide more opportunity for non-ORV uses of the beaches--faithful tourists like me -- and result in essential protections for wildlife, which I believe is a more important consideration than recreational enjoyments. Under the Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Pedestrians and families could then enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
Beach closures have NOT been detrimental to tourism and other local business, despite claims by the vocal opponents of closure. Very little of the beach has actually been off limits at any giving time; and according to the scientists monitoring the process, it has been very beneficial to the endangered wildlife that has a right to continue to live securely in its native habitat. The closure regulations are very reasonable in balancing recreation/tourism and needs of wildlife; participants from all sides contributed to the agreement. Please do not be swayed by the vocal, but unreasonable, arguments of the opponents of closure. It is not harmful to traditional ways of life for locals, it has not harmed business, and it has been essential to the birds' and turtles' survival.
Thank you for the opportunity to provide these comments. I deeply love Cape Hatteras, and I sincerely believe that Hatteras can remain a safe refuge for an abundance of wildlife, which is a major reason I and many other tourists visit, AND local businesses can still continue to thrive.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
I am interested in an alternative plan which would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife. I see no reason that our water fronts should have vehicles on them. But rather that they should be safe places for both people and wildlife. There are plenty of places to drive. Roads to drive on. Driving on beaches is unsafe and I am totally opposed to it in all places and at all times. The park is a wonderful place that I visit often and ORV use is completely inconsistent with its beauty.
I am proud that my neighboring state of Virginia does not promote such activity and am strongly in support of its area on the North Carolina border to which no one can even drive a car. Hiking, biking, walking and tram access only.
We must protect our seashore and allow pedestrians and families the safely enjoy their time there while also enabling wildlife to have a chance to rebound to its traditional numbers and diversity within the park.
For a change, put Natural Resources FIRST. Protection of the natural resources and wildlife of the Seashore should come first, and all recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species.
Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased to protect breeding birds and sea turtles.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.

This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.

The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

- *Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
- * Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
- * Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

- *Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
- * Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
- * Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.

This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.

The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

- *Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

On a visit to Cape Hatteras with a group of wildlife enthusiasts, we were dismayed at the unregulated use of ORV's on the beach. Not only was it noisy and disruptive, it was very detrimental to any wildlife attempting to nest in this area.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
