Why would a group of surf fisherman want to come to Hatteras Island to surf fish if they are not sure they can access the prime fishing grounds at Cape Point? The answer is they won't come. If they don't come, they don't rent vacation homes and spend their money on Hatteras and Ocracoke Islands.

The definition of the Region of Influence (ROI), faulty data on economic activity generated by specific type recreational activity, incomplete visitation/business survey data, inflated overall Seashore visitor counts pertaining to beach use, and flawed key assumptions concerning the maintenance of access under Alternative F, all lead to inaccurate conclusions in the socioeconomic analyses. Specifically, these inaccuracies can be seen as understating the negative socio-economic impact of the Seashore Villages. Further, this negative impact will be absorbed almost entirely by Small Businesses. Neither of these important aspects of the management alternatives are adequately presented in the DEIS.

Page 136: I strongly disagree with your pet restriction proposals. The "prohibition of pets in the Seashore during bird breeding season including in front of the villages." = No Pets in public areas ?beaches, campgrounds, soundfront, foot trails, park maintained roads -from March 15 ?July 31. I propose allowing pets on 6 foot leashes year-round in all areas open to pedestrians or ORVs.

Pages 125; 392 ? 396: SEA TURTLES. I disagree with the stats and procedures proposed. I think endangered sea turtles would benefit from management practices now in use at other federal seashores that are more proactive in efforts to achieve nesting success. This includes relocating nests to more desirable locations as is done in other state and federally controlled areas.

The Cape Hatteras National Seashore Recreational Area is on the northernmost fringe of turtle nesting locations for the southeast, accounting for about 1% of all turtle nests. Proposed buffer areas are not needed for protection of the turtles and amount to overprotection.

Not allowing ORV access is paramount to denying the public access to these beaches. They are located miles from the nearest parking or paved road area and too far to access on foot. As a matter of course, there has been no breeding of piping plover or other endangered species at the Hatteras Island Inlet (spit) area in the past 6 years.

page 104: I disagree with the proposed night time driving closures. Per your proposals, night driving will be prohibited between May 1 and November 15th, forcing visitors off of the beaches early in the evening and preventing sunrise surf fishermen access in the morning. I propose a more moderate night time ban if one is needed, perhaps from June 1 ? September 15 with times being 1 hour after sunset and 1 hour before sunrise to allow beach goers to gather their stuff and exit the beach area.

Certainly more proactive measures such as relocating nests prone to weather and ocean events would dramatically increase the nesting success rates.

Page 121: I disagree with the proposed beach closings, including pedestrian access from March 15 until July 31 in 8 different beach locations which have traditionally been available. Please leave these areas open to beach walkers, shell collectors and those that want to access the beaches in these areas.

Correspondence Type: Web Form
Correspondence: Mike Murray, Superintendent Cape Hatteras National Seashore Recreational Area 1401 National Park Drive Manteo, NC 27954
Dear Superintendent Murray,

I am writing you today to make formal comments on the Cape Hatteras National Seashore Recreational Area Off-Road Vehicle Management Plan Draft Environmental Impact Statement, specifically Alternative F, created by the National Park Service with input from the negotiated rulemaking advisory committee. I wish to thank the National Park Service for an opportunity to comment on the Cape Hatteras National Seashore ORV Management Plan DEIS. As a concerned Hatteras Island citizen whose family income is dependent solely on tourism, I feel it is my professional and civic duty to make timely comment on a matter that affects millions of citizens who wish to visit and have access to the Cape Hatteras National Seashore Recreational Area.

The Midgett family has lived on the Outer Banks for at least three centuries, and today's Midgetts are descendants of the tough, independent seafaring men and women who managed to thrive and survive on these isolated barrier islands. The Midgett tradition of commitment and serving others has deep roots. In the 1800's, the men of the Midgett family were known as leaders in the US Lifesaving Service. Their selfless actions earned the men a record number of 10 Lifesaving Medals of Honor, a record that stands unsurpassed today in the history of the Lifesaving Service, and the US Coast Guard. My father-in-law and his brother were the operators of the famous Hatteras Island - Manteo Bus Line, which carried islanders and visitors up and down the beach in the days before roads and bridges.

I am in support of Alternative A (the Interim Plan). Under the plan there was negligible economic impact, however, there was an increase in piping plovers that was clearly demonstrated by increased numbers in 2007 and in 2008. In the latter year, the Consent Decree went into effect but not until after the nesting season was underway. In 2009, the first full year under the decree, the numbers actually declined. This alternative was based on science and balanced access by the public with protection of the wildlife.

In my opinion, National Park Service is appearing to shift its dual mandate of providing for the protection of the natural resources and wildlife while simultaneously providing for the public's right to current and future recreational opportunities (access) to a policy of denying human entry into large areas of the park and severely restricting the public's access to all portions of the beach. As currently structured, Alternative F is not primarily an ORV management plan. It is primarily a public access restriction plan. The plan is biased toward bird and turtle protection, seashore isolation and not to a reasonable extent on public use and visitor access?specifically ORV and pedestrian access. There is room for both public use and resource management.

Comment 1:

I am distrustful of the bird counts used as a basis for the protective measures. I have grave concerns that all birds in the ecosystem are not being considered in the management plan. Currently, birds on dredge spoil islands located adjacent to the Park are not being included in the population figures. The North Carolina Wildlife Resources Commission is on record that they are agreement that these islands have no predation and are ideal

locations for nesting. Additionally, Pea Island National Wildlife Refuge is managed by the U.S. Fish and Wildlife Service separately from the Park Service management of the Cape Hatteras National Seashore. But the refuge is located on Hatteras Island within the seashore. The bird activity within the refuge should be tracked and included in the target productivity levels. Fluctuations and trends in Recreational Area bird populations should be viewed relative to regional and state experiences not in isolation. To not include the populations of these islands and the Refuge is disingenuous to the intent of this process and is one of the reasons I am distrustful of the integrity of this process.

Comment 2:

Birds listed as North Carolina species of concern should not be given protected status under the Endangered Species Act. It is my understanding that both the Chairman and Executive Director of the North Carolina Wildlife Resources Commission have informed you that these unnecessary protections were never the intent of the Commission's participation in this process, nor a requested outcome. They also have stated that other species of concern are not given ESA status on other federal lands. Pre-nesting closures should be exclusively for the piping plover; the only federally listed threatened bird species. Also, non-ESA listed birds should not have buffers of 300 meters.

The following is an excerpt from a May 9, 2010 Virginian-Pilot news article by Catherine Kozak: Numerous shorebirds in Cape Hatteras National Seashore are given higher levels of protection in a proposed off-road vehicle management plan than what the law ever intended the birds to have, a state wildlife official said. State-listed "species of concern," - such as the American oystercatcher - do not require the extensive buffers and beach closures mandated for federally listed species such as the piping plover, said Gordon Myers, the executive director of the North Carolina Wildlife Resources Commission. Myers said that's beyond the intent of the state law: the state designation is supposed to be more of a call to action for a species. The Wildlife Resource Commission, he said, will voice its objections to the use of state "species of concern" lists to trigger ORV management strategies under the federal Endangered Species Act. That is of concern to us because it's apples and oranges," he said. "To treat it as synonymous with threatened and endangered is not congruent."

Again, the misuse of data is disingenuous to the intent of this process and is yet another one of the reasons I am distrustful of the integrity of this process.

Comment 3:

Nowhere in the DEIS is it mentioned that protected species populations are growing without the needs of additional restrictions such as those of consent decree and Alternative F.

Published USFWS data suggests that the piping plover is "recovering" well beyond 1986 levels and do not suggest that additional restrictions beyond regional recovery plans are necessary or essential at the Cape Hatteras National Seashore Recreational Area for the continued recovery of the species.

Piping Plover--Atlantic Coast Pairs

Year 1986 1999 2005 2006 2007 Nesting Pairs (est.) 790 1386 1632 1749 1880

<http://www.fws.gov/northeast/pipingplover/index.html>

Comment 4:

A 1,000-meter buffer in all directions of an unfledged piping plover chick represents 771 acres of closed beach. This seems a bit arbitrary and capricious when managing a species. I have yet to read any scientific reasoning behind this management strategy. It is my understanding that in Assateague Island National Seashore the buffer is 300 meters. Why is the 1,000 meter buffer being proposed for CHNSRA? Why is one National Seashore being treated so differently than others when we are at the extreme southernmost extremity of the nesting area? A much smaller buffer would be just as effective for the survival of a piping plover chick without the extreme penalization of the residents and visitors of Hatteras Island.

Comment 5:

In the past during a closure, the NPS and our State government were able to work with you and your staff to create corridors around resource closures. These alternative paths are indispensable to the continued movement of pedestrians and vehicles. Also, the corridors allow visitors to access an open area that may be sandwiched between two closed areas. These corridors have limited negative impacts to the protected species, but they are crucial to providing access during closure periods. I stand with Dare County and our North Carolina state government in requesting that corridors be maintained for pedestrians and vehicles in all areas of the Cape Hatteras National Seashore Recreational Area throughout the entire breeding and nesting season.

Comment 6:

It appears as if the preferred alternative prohibits pets in the Seashore during bird breeding season including in front of the villages. This means no pets in public areas ?beaches, campgrounds, sound front, foot trails, and park maintained roads from March 15 ?July 31. If this is a correct interpretation, I am totally opposed. I support the previous leash law (all pets must be on a leash 6 feet or less in length).

Comment 7:

Alternative F will significantly change the economy and unique culture of the Outer Banks. The DEIS has failed to properly assess those changes. The Economic Impact Analysis found the DEIS by its own admission is incomplete. How can I comment on an incomplete document? The Economic analysis is structured in such a manner that it fails to address full costs?direct costs, indirect costs, lost opportunity costs, costs of future liability, and hidden costs.

The Economic Analysis fails to recognize that the national seashore environment is a unique form of capital that serves the local economy, and in turn the health and well being of citizens and families that depend of that economy. Access to the seashore is essential for family business operations on the Outer Banks. In our family business, vacation rentals, the spring rental season has been decimated by the beach closures brought about by the consent decree. The demographics of the spring guests have been traditionally fishermen and they are unwilling to risk sending money on a vacation when the beach access is so untenable.

The cost to society and the local communities under the restrictive consent decree has now been extended indefinitely into Alternative F. Economic losses in millions of dollars have occurred to island businesses especially motels, campgrounds, restaurants and tackle shops. The full costs of Alternative F are very much understated in the DEIS. Annual economic losses under the consent decree are already in excess of those estimated by Research Triangle Institute.

It is my understanding that the Outer Banks Chamber of Commerce, on behalf of its more than 1,000 members with businesses in Dare, Hyde and Currituck counties, has gone on record as vehemently disagreeing with the validity of the economic impact analysis included in the Draft Environmental Impact Statement for proposed new rules for access to the Cape Hatteras National Seashore.

This group of professional business owners states unequivocally states "Not only does the analysis not adequately convey the economic impact of the proposed Alternative F, it fails to address any of the alternatives listed in the DEIS. The data is incomplete, misleading and the statements of what are supposed to be facts are without sound basis."

Comment 8:

If I understand the document correctly, it would appear as if the DEIS proposes to close the beaches at Hatteras Inlet, both the South Tip of Hatteras Island and the North tip of Ocracoke Island permanently and year-round. Aside from the fact that such a closure would forever alter the traditional uses of these areas, such a closure has already and will impact the public safety of mariners traversing the inlet. On Saturday, May 1st 2010, an inshore charter boat overturned in Hatteras Inlet. There were 6 occupants of the boat, all family members, 3 children and 3 adults. The captain was a professional charter captain. They spent 4 hours in the water awaiting rescue. They could have been seen from the beach, had it been open but instead had to wait until the offshore charter fleet was returning in late day for any hopes of being rescued. One of the group died as a result.

Comment 9:

The final subject I wish to comment on is a bit more personal in nature. I am overwhelmingly appalled and bitterly disillusioned in the National Park Service and our Federal government for allowing this entire issue to get so out of hand. I feel strongly that the enabling legislation for the Cape Hatteras National Seashore Recreational area has been violated. Furthermore, as a member of a family who has called Hatteras Island home for over three centuries and has been a steward of the Island for just as long, the government considers us to be "visitors" to the Seashore, having no more rights than a non United States citizen!

Native Hatteras Islanders and visitors were deeply concerned when the federal government was creating the recreational Seashore in 1937, ? and rightly so ? that government involvement would interfere with the public's enjoyment of and access to the beaches of Hatteras and Ocracoke Islands. It was an incredible relief that the Park Service and the Department of the Interior were willing to work so closely and cooperatively with the local community to address these concerns. In fact, in 1952 during discussions of adjusting the boundaries of the Seashore, Park Service Director Conrad Wirth wrote an open letter to the people of the Outer Banks reassuring them that the beaches would continue to be open for their use, stating, "?when the lands for the

Recreational Area are acquired and become public property there will always be access to the beach for all people, whether they are local residents or visitors from the outside."

The Federal government knowingly fully encompassed the existing villages of Hatteras Island upon creation of the Recreational Seashore. When the Cape Hatteras National Seashore Recreational Area was formed, the National Park Service stressed to the local residents in 1949 that this park would be an economic asset to the villages located within the park's boundaries. In 1952, Park Superintendent Conrad Wirth wrote that the park and its staff would "bring enjoyment to millions of visitors and prosperity to you."

We, the native people of the islands were asked by the government to be the host to the nation and the world at the seashore. Our family responded to that call from our government. We now own the largest natively owned vacation rental company on the island, we own a motel, real estate business, two marinas and a restaurant. Now, because we responded to that call of duty we are in jeopardy of losing all we have worked for?.for ourselves and future generations?.being put in jeopardy by the very same entity that called us to duty.

Thank you again for allowing the submission of comments. I leave you with the words of Secretary of the Interior Harold Ickes from 1938.

"When we look up and down the ocean fronts of America, we find that everywhere they are passing behind the fences of private ownership. The people can no longer get to the ocean. When we have reached the point that a nation of 125 million people cannot set foot upon the thousands of miles of beaches that border the Atlantic and Pacific Oceans, except by permission of those who monopolize the ocean front, then I say it is the prerogative and the duty of the Federal and State Governments to step in and acquire, not a swimming beach here and there, but solid blocks of ocean front hundreds of miles in length. Call this ocean front a national park, or a national seashore, or a state park or anything you please?I say that the people have a right to a fair share of it."

Sincerely, Beth Midgett

Correspondence: To whom it may concern,

I have been fishing on the outer banks all my life and its a tradition I would like to pass on to my offspring's offspring. I truly believe that the fishermen and can cohabitate with the native birds without stressing them. At my home in the cities and towns we all cohabitate with many birds and they seem to thrive just fine. In fact I hear them singing out my door as I write this note. Also, food and water is available at my house year round for any bird. I believe animals are very resilient and can adapt to any situation because they have been doing it for thousands of years and definitely as long as man has fished the outerbanks. I hope whoever makes this decision about the beach access really thinks about the impact it will have to our way of life in North Carolina. Thanks for your cosideration.

Sincerely,

John Lyon

Correspondence: I am a native of Hatteras Island and a business owner. I strongly disagree with the closures of our beaches. Due to the economic crisis we have been through and are still going through,my business is extremely down and if you close our beaches that will certainly add to the problem in a serious matter. Tourist have come into my store and strongly commented that they will never come back here if our beaches are closed to vehicles and pedestricians. We, the people on Hatteras Island cannot survive without tourism. My business depends on the people which own rental houses and if tourist are not here to rent the cottages then I am out of business. Please consider the devastation that will occur if we cannot depend on these people coming to our beautiful Island to vacation.

Correspondence: Subject: DEIS Off-Road Vehicle Management Plan Comments

My comments concern the DEIS of the Off-Road Vehicle Management Plan prepared by the National Park Service (NPS) for the Cape Hatteras National Seashore Recreation Area.

1) Page 201: I disagree with the NPS statement: "Even with resource closures in place, protected species are still at risk [from pedestrians and ORVs]." No Piping Plover deaths have been attributed to ORVs. ORV violations continue to decrease as signage and education improve. Pedestrian violations are much more significant than ORV violations. It seems to me that any transgressions into protected area are the result of lack of NPS manpower and enforcement than the public purposely and willfully violating out of bounds areas.

2) Page xxiv: I question the statement of as per the DEIS: "Carrying capacity would be a 'peak use limit' determined for all areas based on the linear feet of beachfront?" If you close off huge sections of the beach, you force more people into smaller areas, potentially resulting in more resource impairment and diminished visitor experience.

3) Page xix and page 23: I am against having two different closures rules pertaining to the North facing beaches (North side) and the South facing beaches (South side) as per the grid outlined in Alternative "F". I disagree with the NPS proposal to close the beaches in villages of Frisco, Hatteras and Ocracoke Villages to ORV access longer than the traditional May 15 to September 15 period for the Northern beaches, even though seasonal visitor statistics are similar for all villages. Please, make them the same: May 15 -> September 15.

4) Page 1: I agree with your statement "ORVs have long served as a primary form of access for many portions of the beach in the seashore, and continue to be the most practical means of access and parking for many visitors."

However, pedestrian only areas discriminate against individuals with limited mobility due to age or physical impairments, families with small children, and those wishing to engage in activities requiring recreational equipment (boogie boards, beach umbrellas, beach chairs, coolers, fishing rods and tackle, etc)

5) Page 53: I disagree with the special use permit proposed guidelines. It is impractical to allow the transportation of disabled visitors to the village beaches and then require the vehicle to be returned to the street or parking area. This necessitates the disabled person to have a driver to drop him (or her) off, then drive to a parking area, then trudge a long distance to the site of the drop off, then trudge the long distance through the sand back to get the vehicle.

Suppose the handicap person wants to go to the beach, is capable of driving himself, yet cannot find another person to go with him? Does he now not go to the beach? This rule creates unnecessary hardships and risks in the event of an emergency as well.

6) Page 121 ? 127. I strongly disagree with the buffers as presented. We must allow for pass-thru corridors. The beach is linear with the ocean buffering on one side and the dune line on the other. For example - If you pinch off access on one side of a 4 mile linear beach and pinch off access on the other side of the 4 mile section of beach with no corridor, then you effectively have closed off all 4 miles of the beach because you CAN'T get there. The proposed bird buffers are too large, blocking access to the interior sections from the two "buffered" ends.

I propose ORV pass-thru only corridors and to use breeding / nesting buffer distances to establish ORV pass through only corridors to ensure beach access in a way that does not hinder resource protection. I believe pass through corridors should be maintained for pedestrians and ORVs in all areas of the Cape Hatteras National Seashore Recreational Area throughout the entire breeding and nesting season. Corridors are vital to providing access in a

way that does not hinder resource protection.

Piping Plover unfledged chicks buffer should move with the brood as it relocates to reliable food source, not expanded.

The 1,000 meter distance for the piping plover is way too large and not based upon peer reviewed science. A more rational distance would be 200 meters per other sites in the nation for the piping plover. Ample scientific evidence and precedent exists to support a 200 meter buffer.

Buffers for other species, including American Oystercatchers, Least Terns and Colonial

Waterbirds must also be changed. An effective 30 meter buffer should be established for these species rather than the 300 meter closure outlined in the DEIS.

NON-ENDANGERED BIRDS should not have same protection as if endangered. Not allowing ORV access is paramount to denying the public access to these beaches.

7) Page 468: I disagree with the limitations imposed on pedestrian and ORVs. Corridors or bypasses should be provided thru, around or below high tide line in all SMAs during entire breeding season to maintain access.

8) Page 124: I strongly disagree with the NPS slant of providing for over protection of resource management over that of the public's right to access the beaches. Pro-active initiatives include: Vegetation Management, Habitat Management, Enhanced Predator Management, Colonial Water bird social attraction, Piping Plover check fledge rate, Piping plover chick buffer distance, and pass-through buffers during the incubation period. Opportunities to implement less restrictive closures as a result of the above initiatives should be considered more frequently than the 5-year periodic review process identified in the DEIS.

9) I disagree with the NPS Resource Management Pedestrian / ORV Closure Policies. These policies address the least significant factors affecting nest survival with little chance to have more than negligible impact. For example: the AMOY Nest Failures are predominately due to non-human events.

Using your own stats, the mammalian predation is 54%, Storm / Lunar Tides: 29%, Nest Abandonment: 6%, Avian Predation: 5%, and Ghost Crab Predation: 3%,

So what is the percentage due to human interference: just 3%! It's insignificant, yet the NPS wants to ban humans when their actions provide very little influence on the success rate of breeding birds and turtles.

10) I disagree with the stats of breeding plovers and the other birds in the Park when the NPS does not adequately consider locations neighboring the Recreational Area that are part of the same ecosystem, namely dredge and spoil island that are located just yards away and within sight of the seashore. These birds are part of the same ecosystem and should be included.

Those spoil islands, developed by man from dredging the waterways in the Pamlico Sound for channel upkeep are slammed full of birds. The reason why so many birds? NO PREDATORS. SO, birds are not as stupid as one might think. You have to count these birds and incorporate them in the stats when the NPS is talking about any so called decline in breeding pairs in the National Park.

11) Page 1: I do not think the DEIS responsibly addresses the cultural resource issues. The very purpose of the DEIS as set forth in the National Environmental Policy Act (NEPA) is to protect and preserve natural and cultural resources in the federal decision making process. In the DEIS, the statement "protect and preserve natural and cultural resources" appears in the first sentence of the first page of the plan, in the Purpose of the Plan section, and numerous times thereafter. Yet, the 810 page document devotes only two paragraphs to analysis of cultural resource issues.

When on Hatteras Island we have always gotten together on the South Beach to enjoy the beach with our cookouts, gatherings, surf bathing, horse shoes and foot races, fishing, and surfing. Now the DEIS is proposing closing off most of the south beach during the summer which is the traditional period we local people use the beach. The continuation of this traditional pattern of land use is central to maintaining the historic identity of our island communities.

12) Pages 270-281; 561-598: I strongly disagree with your economic analysis of the impact of the DEIS. The region of influence (ROI) incorporates the Northern Beach communities, including Kill Devil Hills, Kitty Hawk, Southern Shores and Duck. These areas are almost completely disconnected from ORV use and access issues relating to the Seashore.

? Inclusion of the Northern Beaches in analysis significantly dilutes estimates of economic impact on the 8 Seashore Villages

? Analysis of economic impact to the Seashore Villages appears to be significantly down played. Emphasis in DEIS is on the ROI-wide or county-wide level impacts.

? Nowhere is it clearly addressed that the overwhelming majority of negative impacts will be felt by small businesses in the Seashore Villages rather than by overall economic interests within the greater ROI.

On page xlvi, Alternative F is characterized as having a "negligible to moderate" adverse impact on small businesses. I strongly disagree with this statement.

I believe the negligible to moderate projection is inaccurate and relies on economic surveys that has not yet been published. Furthermore, this material is not expected to be added to the DEIS until after the public comment period has ended.

Based upon the economic harm we have already experienced under the consent decree, Dare County projects the economic impact of Alternative F to be substantial.

Beach closures have already had a devastating and unfair impact on many Dare County Businesses, causing foreclosures, bankruptcies, lay-offs, cutbacks, expensive refinancing, and depleted college funds and savings accounts.

Even businesses whose revenue has stayed level or showed a modest increase have accomplished this at a costly price. Many have had to cut back employee hours, forego much-needed capital improvements, and sacrifice profits. That is certainly the case with Hatteras Realty.

Pages 270-286, 561-598: The socio-economic data and analyses are incomplete and erroneous and result in an understatement of the effect the restrictions will have upon the Island, the region and the state of NC. The US Park Services answer: Businesses will have to "adapt" to the new rules.

(p.383) The negative economic impacts of the decree ARE KNOWN, so to say that the added restrictions would have negligible to moderate impact is indefensible.

13) Overall Visitor Counts - Overall visitor counts appear to include visitors to Fort Raleigh National Historic Site and the Wright Brothers National Memorial. A large percentage of these visitors vacation in the Northern Beaches communities and recreate on the non-federal beaches outside of the Seashore. Visitors who patronize the Fort Raleigh National Historic Site and the Wright Brothers National Memorial but do not visit the actual seashore areas need to be factored out.

Maintenance of Future Access to Cape Point and South Point Ocracoke: All socioeconomic analyses related to Alternative F are predicated on the assumption that access corridors will remain open for at least an appreciable portion of the visitor high season. Under Alternative F, the access corridors will be subject to Resource Closures based on buffers similar or identical to the Consent Decree. Unless some predictability of access to Cape Point and South Point Ocracoke can be assured, economic analyses predicated on assumption of access are fundamentally flawed.

Why would a group of surf fisherman want to come to Hatteras Island to surf fish if they are not sure they can access the prime fishing grounds at Cape Point? The answer is they won't come. If they don't come, they don't rent vacation homes and spend their money on Hatteras and Ocracoke Islands.

The definition of the Region of Influence (ROI), faulty data on economic activity generated by specific type recreational activity, incomplete visitation/business survey data, inflated overall Seashore visitor counts pertaining to beach use, and flawed key assumptions concerning the maintenance of access under Alternative F, all lead to inaccurate conclusions in the socioeconomic analyses. Specifically, these inaccuracies can be seen as understating the negative socio-economic impact of the Seashore Villages. Further, this negative impact will be absorbed almost entirely by Small Businesses. Neither of these important aspects of the management alternatives are adequately presented in the DEIS.

14) Page 136: I strongly disagree with your pet restriction proposals. The "prohibition of pets in the Seashore during bird breeding season including in front of the villages." = No Pets in public areas ?beaches, campgrounds, soundfront, foot trails, park maintained roads -from March 15 ?July 31.

Hatteras Realty books approximately 13,000 rental weeks for a total of 91,000 rental nights housing approximately 700,000 visitors. The ban on pets to July 31 will seriously hurt the rentals of my vacation homes as our pet homes encompass about 30% of our rentals. I propose allowing pets on 6 foot leashes year-round in all areas open to pedestrians or ORVs.

15) Pages 125; 392 ? 396: SEA TURTLES. I disagree with the stats and procedures proposed. I think endangered sea turtles would benefit from management practices now in use at other federal seashores that are more proactive in efforts to achieve nesting success. This includes relocating nests to more desirable locations as is done in other state and federally controlled areas.

The Cape Hatteras National Seashore Recreational Area is on the northernmost fringe of turtle nesting locations for the southeast, accounting for about 1% of all turtle nests. Proposed buffer areas are not needed for protection of the turtles and amount to overprotection.

16) Pages 97- 101. I strongly disagree with proposals in this section saying that ORVs will be prohibited year round between ramps 27 and 30, at Hatteras Inlet (Hatteras Spit), Ocracoke Inlet (North Ocracoke Spit) and various other locations. Not allowing ORV access is paramount to denying the public access to these beaches. They are located miles from the nearest parking or paved road area and too far to access on foot. As a matter of course, there has been no breeding of piping plover or other endangered species at the Hatteras Island Inlet (spit) area in the past 6 years.

17) Page 104: I disagree with the proposed night time driving closures. Per your proposals, night driving will be prohibited between May 1 and November 15th, forcing visitors off of the beaches early in the evening and preventing sunrise surf fishermen access in the morning. I propose a more moderate night time ban if one is needed, perhaps from June 1 ? September 15 with times being 1 hour after sunset and 1 hour before sunrise to allow beach goers to gather their stuff and exit the beach area.

Certainly more proactive measures such as relocating nests prone to weather and ocean events would dramatically increase the nesting success rates.

18) Page 121: I disagree with the proposed beach closings, including pedestrian access from March 15 until July 31 in 8 different beach locations which have traditionally been available. Please leave these areas open to beach walkers, shell collectors and those that want to access the beaches in these areas.

Conclusion:

Please, incorporate access corridors through any SMA so we can get to the open beach beyond. Incorporate the birds into the count that nest on the spoil islands. Base your buffer zones on peer reviewed science and scale them back to more reasonable distances as discussed.

It is neither logical nor reasonable to spend so much time, money and energy to overprotect a bird (Piping Plover) in the Cape Hatteras National Seashore that is on the southernmost fringe area of its breeding ground. That goes for the loggerhead turtle that is in its northernmost breeding area.

Let's scale back the buffer zones. You can always increase at a later date.

The USPS is leaning way over the line on over protection and not enough on the public's right to enjoy the beaches of the National Seashore. The proper balance is not achieved in the propose DEIS and needs to be modified so that the proper balance of reasonable resource protection and access to the beaches of the National Park is achieved. I could sum it up by saying "Protect, not Prohibit."

Thank you,

Correspondence: Subject: DEIS Off-Road Vehicle Management Plan Comments
My comments concern the DEIS of the Off-Road Vehicle Management Plan prepared by the National Park Service (NPS) for the Cape Hatteras National Seashore Recreation Area.
1) Page 201: I disagree with the NPS statement: "Even with resource closures in place, protected species are still at risk [from pedestrians and ORVs]." No Piping Plover deaths have been attributed to ORVs. ORV violations continue to decrease as signage and education improve. Pedestrian violations are much more significant than ORV violations. It seems to me that any transgressions into protected area are the result of lack of NPS manpower and enforcement than the public purposely and willfully violating out of bounds areas.
2) Page xxiv: I question the statement of as per the DEIS: "Carrying capacity would be a 'peak use limit' determined for all areas based on the linear feet of beachfront?" If you close off huge sections of the beach, you force more people into smaller areas, potentially resulting in more resource impairment and diminished visitor experience.
3) Page xix and page 23: I am against having two different closures rules pertaining to the North facing beaches (North side) and the South facing beaches (South side) as per the grid outlined in Alternative "F". I disagree with the NPS proposal to close the beaches in villages of Frisco, Hatteras and Ocracoke Villages to ORV access longer than the traditional May 15 to September 15 period for the Northern beaches, even though seasonal visitor statistics are similar for all villages. Please, make them the same: May 15 -> September 15.
4) Page 1: I agree with your statement "ORVs have long served as a primary form of access for many portions of the beach in the seashore, and continue to be the most practical means of access and parking for many visitors."
However, pedestrian only areas discriminate against individuals with limited mobility due to age or physical impairments, families with small children, and those wishing to engage in activities requiring recreational equipment (boogie boards, beach umbrellas, beach chairs, coolers, fishing rods and tackle, etc)
5) Page 53: I disagree with the special use permit proposed guidelines. It is impractical to allow the transportation of disabled visitors to the village beaches and then require the vehicle to be returned to the street or parking area. This necessitates the disabled person to have a driver to drop him (or her) off, then drive to a parking area, then trudge a long distance to the site of the drop off, then trudge the long distance through the sand back to get the vehicle.
Suppose the handicap person wants to go to the beach, is capable of driving himself, yet cannot find another person to go with him? Does he now not go to the beach? This rule creates unnecessary hardships and risks in the event of an emergency as well.
6) Page 121 ? 127. I strongly disagree with the buffers as presented. We must allow for pass-thru corridors. The beach is linear with the ocean buffering on one side and the dune line on the other. For example - If you pinch off access on one side of a 4 mile linear beach and pinch off access on the other side of the 4 mile section of beach with no corridor, then you effectively have closed off all 4 miles of the beach because you CAN'T get there. The proposed bird buffers are too large, blocking access to the interior sections from the two "buffered" ends.
I propose ORV pass-thru only corridors and to use breeding / nesting buffer distances to establish ORV pass through only corridors to ensure beach access in a way that does not hinder resource protection. I believe pass through corridors should be maintained for pedestrians and ORVs in all areas of the Cape Hatteras National Seashore Recreation Area throughout the entire breeding and nesting season. Corridors are vital to providing access in a way that does not hinder resource protection.
Piping Plover unfledged chicks buffer should move with the brood as it relocates to reliable food source, not expanded.
The 1,000 meter distance for the piping plover is way too large and not based upon peer reviewed science. A more rational distance would be 200 meters per other sites in the nation for the piping plover. Ample scientific evidence and precedent exists to support a 200 meter buffer.
Buffers for other species, including American Oystercatchers, Least Terns and Colonial Waterbirds must also be changed. An effective 30 meter buffer should be established for these species rather than the 300 meter closure outlined in the DEIS.
NON-ENDANGERED BIRDS should not have same protection as if endangered. Not allowing ORV access is paramount to denying the public access

to these beaches.

7) Page 468: I disagree with the limitations imposed on pedestrian and ORVs. Corridors or bypasses should be provided thru, around or below high tide line in all SMAs during entire breeding season to maintain access.

8) Page 124: I strongly disagree with the NPS slant of providing for over protection of resource management over that of the public's right to access the beaches. Pro-active initiatives include: Vegetation Management, Habitat Management, Enhanced Predator Management, Colonial Water bird social attraction, Piping Plover check fledge rate, Piping plover chick buffer distance, and pass-through buffers during the incubation period. Opportunities to implement less restrictive closures as a result of the above initiatives should be considered more frequently than the 5-year periodic review process identified in the DEIS.

9) I disagree with the NPS Resource Management Pedestrian / ORV Closure Policies. These policies address the least significant factors affecting nest survival with little chance to have more than negligible impact. For example: the AMOY Nest Failures are predominately due to non-human events. Using your own stats, the mammalian predation is 54%, Storm / Lunar Tides: 29%, Nest Abandonment: 6%, Avian Predation: 5%, and Ghost Crab Predation: 3%,

So what is the percentage due to human interference: just 3%! It's insignificant, yet the NPS wants to ban humans when their actions provide very little influence on the success rate of breeding birds and turtles.

10) I disagree with the stats of breeding plovers and the other birds in the Park when the NPS does not adequately consider locations neighboring the Recreational Area that are part of the same ecosystem, namely dredge and spoil island that are located just yards away and within sight of the seashore. These birds are part of the same ecosystem and should be included.

Those spoil islands, developed by man from dredging the waterways in the Pamlico Sound for channel upkeep are slammed full of birds. The reason why so many birds? NO PREDATORS. SO, birds are not as stupid as one might think. You have to count these birds and incorporate them in the stats when the NPS is talking about any so called decline in breeding pairs in the National Park.

11) Page 1: I do not think the DEIS responsibly addresses the cultural resource issues. The very purpose of the DEIS as set forth in the National Environmental Policy Act (NEPA) is to protect and preserve natural and cultural resources in the federal decision making process. In the DEIS, the statement "protect and preserve natural and cultural resources" appears in the first sentence of the first page of the plan, in the Purpose of the Plan section, and numerous times thereafter. Yet, the 810 page document devotes only two paragraphs to analysis of cultural resource issues. When on Hatteras Island we have always gotten together on the South Beach to enjoy the beach with our cookouts, gatherings, surf bathing, horse shoes and foot races, fishing, and surfing. Now the DEIS is proposing closing off most of the south beach during the summer which is the traditional period we local people use the beach. The continuation of this traditional pattern of land use is central to maintaining the historic identity of our island communities.

12) Pages 270-281; 561-598: I strongly disagree with your economic analysis of the impact of the DEIS. The region of influence (ROI) incorporates the Northern Beach communities, including Kill Devil Hills, Kitty Hawk, Southern Shores and Duck. These areas are almost completely disconnected from ORV use and access issues relating to the Seashore.

? Inclusion of the Northern Beaches in analysis significantly dilutes estimates of economic impact on the 8 Seashore Villages

? Analysis of economic impact to the Seashore Villages appears to be significantly down played. Emphasis in DEIS is on the ROI-wide or county-wide level impacts.

? Nowhere is it clearly addressed that the overwhelming majority of negative impacts will be felt by small businesses in the Seashore Villages rather than by overall economic interests within the greater ROI.

On page xlvi, Alternative F is characterized as having a "negligible to moderate" adverse impact on small businesses. I strongly disagree with this statement.

I believe the negligible to moderate projection is inaccurate and relies on economic surveys that has not yet been published. Furthermore, this material is not expected to be added to the DEIS until after the public comment period has ended.

Based upon the economic harm we have already experienced under the consent decree, Dare County projects the economic impact of Alternative F to be substantial.

Beach closures have already had a devastating and unfair impact on many Dare County Businesses, causing foreclosures, bankruptcies, lay-offs, cutbacks, expensive refinancing, and depleted college funds and savings accounts.

Even businesses whose revenue has stayed level or showed a modest increase have accomplished this at a costly price. Many have had to cut back employee hours, forego much-needed capital improvements, and sacrifice profits. That is certainly the case with Hatteras Realty.

Pages 270-286, 561-598: The socio-economic data and analyses are incomplete and erroneous and result in an understatement of the effect the restrictions will have upon the Island, the region and the state of NC. The US Park Services answer: Businesses will have to "adapt" to the new rules. (p.383) The negative economic impacts of the decree ARE KNOWN, so to say that the added restrictions would have negligible to moderate impact is indefensible.

13) Overall Visitor Counts - Overall visitor counts appear to include visitors to Fort Raleigh National Historic Site and the Wright Brothers National Memorial. A large percentage of these visitors vacation in the Northern Beaches communities and recreate on the non-federal beaches outside of the Seashore. Visitors who patronize the Fort Raleigh National Historic Site and the Wright Brothers National Memorial but do not visit the actual seashore areas need to be factored out.

Maintenance of Future Access to Cape Point and South Point Ocracoke: All socioeconomic analyses related to Alternative F are predicated on the assumption that access corridors will remain open for at least an appreciable portion of the visitor high season. Under Alternative F, the access corridors will be subject to Resource Closures based on buffers similar or identical to the Consent Decree. Unless some predictability of access to Cape Point and South Point Ocracoke can be assured, economic analyses predicated on assumption of access are fundamentally flawed.

Why would a group of surf fishermen want to come to Hatteras Island to surf fish if they are not sure they can access the prime fishing grounds at Cape Point? The answer is they won't come. If they don't come, they don't rent vacation homes and spend their money on Hatteras and Ocracoke Islands.

The definition of the Region of Influence (ROI), faulty data on economic activity generated by specific type recreational activity, incomplete visitation/business survey data, inflated overall Seashore visitor counts pertaining to beach use, and flawed key assumptions concerning the maintenance of access under Alternative F, all lead to inaccurate conclusions in the socioeconomic analyses. Specifically, these inaccuracies can be seen as understating the negative socio-economic impact of the Seashore Villages. Further, this negative impact will be absorbed almost entirely by Small Businesses. Neither of these important aspects of the management alternatives are adequately presented in the DEIS.

14) Page 136: I strongly disagree with your pet restriction proposals. The "prohibition of pets in the Seashore during bird breeding season including in front of the villages." = No Pets in public areas ?beaches, campgrounds, soundfront, foot trails, park maintained roads -from March 15 ?July 31.

Hatteras Realty books approximately 13,000 rental weeks for a total of 91,000 rental nights housing approximately 700,000 visitors. The ban on pets to July 31 will seriously hurt the rentals of my vacation homes as our pet homes encompass about 30% of our rentals. I propose allowing pets on 6 foot leashes year-round in all areas open to pedestrians or ORVs.

15) Pages 125; 392 ? 396: SEA TURTLES. I disagree with the stats and procedures proposed. I think endangered sea turtles would benefit from management practices now in use at other federal seashores that are more proactive in efforts to achieve nesting success. This includes relocating nests to more desirable locations as is done in other state and federally controlled areas.

The Cape Hatteras National Seashore Recreational Area is on the northernmost fringe of turtle nesting locations for the southeast, accounting for about 1% of all turtle nests. Proposed buffer areas are not needed for protection of the turtles and amount to overprotection.

16) Pages 97- 101. I strongly disagree with proposals in this section saying that ORVs will be prohibited year round between ramps 27 and 30, at Hatteras Inlet (Hatteras Spit), Ocracoke Inlet (North Ocracoke Spit) and various other locations.

Not allowing ORV access is denying the public access to these beaches. They are located miles from the nearest parking or paved road area and too far to access on foot. As a matter of course, there has been no breeding of piping plover or other endangered species at the Hatteras Island Inlet (spit) area in the past 6 years.

17) Page 104: I disagree with the proposed night time driving closures. Per your proposals, night driving will be prohibited between May 1 and November 15th, forcing visitors off of the beaches early in the evening and preventing sunrise surf fishermen access in the morning. I propose a more moderate night time ban if one is needed, perhaps from June 1 ? September 15 with times being 1 hour after sunset and 1 hour before sunrise to allow

beach goers to gather their stuff and exit the beach area.

Certainly more proactive measures such as relocating nests prone to weather and ocean events would dramatically increase the nesting success rates.
18) Page 121: I disagree with the proposed beach closings, including pedestrian access from March 15 until July 31 in 8 different beach locations which have traditionally been available. Please leave these areas open to beach walkers, shell collectors and those that want to access the beaches in these areas.

Conclusion:

Please, incorporate access corridors through any SMA so we can get to the open beach beyond. Incorporate the birds into the count that nest on the spoil islands. Base your buffer zones on peer reviewed science and scale them back to more reasonable distances as discussed.

It is neither logical nor reasonable to spend so much time, money and energy to overprotect a bird (Piping Plover) in the Cape Hatteras National Seashore that is on the southernmost fringe area of its breeding ground. That goes for the loggerhead turtle that is in its northernmost breeding area. Let's scale back the buffer zones. You can always increase at a later date.

The USPS is leaning way over the line on over protection and not enough on the public's right to enjoy the beaches of the National Seashore. The proper balance is not achieved in the propose DEIS and needs to be modified so that the proper balance of reasonable resource protection and access to the beaches of the National Park is achieved. I could sum it up by saying "Protect, not Prohibit."

Thank you,

Correspondence: I am defending the position that the Cape Hatteras National Seashore should remain as accessible as possible for ORVs. I have lived in the area prior to my move to Illinois and I continue to take vacations to the outer banks area. I am an avid surfer and I can say that ORV access is a consideration in choosing to vacation in the outer banks, especially having the ability to enjoy the seashore and drive along to areas where I can surf alone. I also believe that curtailing ORV will severely limit access to the beaches given the lack of adequate parking facilities along the main highway on Hatteras Island. I appreciate the position of conservationists who are trying to protect wildlife, but it seems to me that the unique nature of the island resulting in lack of adequate means of access without ORVs would pretty much cut off a substantial amount of recreational use on the seashore at the expense of a conservation movement. I am surprised that additional reviews are not being considered to explore measures to accommodate all parties. Like most surfers I appreciate nature and enjoy surfing in a natural environment but the proposed ORV restrictions seem extreme and will act to cut-off the park from public use, not promote it.

Correspondence: ORV traffic is devastating habitat and tranquility in way to many our our precious parks and natural areas. We need to be especially careful with our disappearing wetlands. Beside protect wetlands from the hardcore mudders we need to educate the novice and casual users to the damage they can cause.
As a member of the National Parks Conservation Association, Izaak Walton League of America, Sierra Club, and Save Our Creeks and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.
1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."
2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness...."
Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.
3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.
Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to

provide greater pedestrian access.

This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.

The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.

* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.

* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: Subject: DEIS Off-Road Vehicle Management Plan Comments
My comments concern the DEIS of the Off-Road Vehicle Management Plan prepared by the National Park Service (NPS) for the Cape Hatteras National Seashore Recreation Area.

1) Page 201: I disagree with the NPS statement: "Even with resource closures in place, protected species are still at risk [from pedestrians and ORVs]." No Piping Plover deaths have been attributed to ORVs. ORV violations continue to decrease as signage and education improve. Pedestrian violations are much more significant than ORV violations. It seems to me that any transgressions into protected area are the result of lack of NPS manpower and enforcement than the public purposely and willfully violating out of bounds areas.

2) Page xxiv: I question the statement of as per the DEIS: "Carrying capacity would be a 'peak use limit' determined for all areas based on the linear feet of beachfront?" If you close off huge sections of the beach, you force more people into smaller areas, potentially resulting in more resource impairment and diminished visitor experience.

3) Page xix and page 23: I am against having two different closures rules pertaining to the North facing beaches (North side) and the South facing beaches (South side) as per the grid outlined in Alternative "F". I disagree with the NPS proposal to close the beaches in villages of Frisco, Hatteras and Ocracoke Villages to ORV access longer than the traditional May 15 to September 15 period for the Northern beaches, even though seasonal visitor statistics are similar for all villages. Please, make them the same: May 15 -> September 15.

4) Page 1: I agree with your statement "ORVs have long served as a primary form of access for many portions of the beach in the seashore, and continue to be the most practical means of access and parking for many visitors." However, pedestrian only areas discriminate against individuals with limited mobility due to age or physical impairments, families with small children, and those wishing to engage in activities requiring recreational equipment (boogie boards, beach umbrellas, beach chairs, coolers, fishing rods and tackle, etc)

5) Page 53: I disagree with the special use permit proposed guidelines. It is impractical to allow the transportation of disabled visitors to the village beaches and then require the vehicle to be returned to the street or parking area. This necessitates the disabled person to have a driver to drop him (or her) off, then drive to a parking area, then trudge a long distance to the site of the drop off, then trudge the long distance through the sand back to get the vehicle. Suppose the handicap person wants to go to the beach, is capable of driving himself, yet cannot find another person to go with him? Does he now not go to the beach? This rule creates unnecessary hardships and risks in the event of an emergency as well.

6) Page 121 ? 127. I strongly disagree with the buffers as presented. We must allow for pass-thru corridors. The beach is linear with the ocean buffering on one side and the dune line on the other. For example - If you pinch off access on one side of a 4 mile linear beach and pinch off access on the other side of the 4 mile section of beach with no corridor, then you effectively have closed off all 4 miles of the beach because you CAN'T get there. The proposed bird buffers are too large, blocking access to the interior sections from the two "buffered" ends. I propose ORV pass-thru only corridors and to use breeding / nesting buffer distances to establish ORV pass through only corridors to ensure beach access in a way that does not hinder resource protection. I believe pass through corridors should be maintained for pedestrians and ORVs in all areas of the Cape Hatteras National Seashore Recreational Area throughout the entire breeding and nesting season. Corridors are vital to providing access in a way that does not hinder resource protection. Piping Plover unfledged chicks buffer should move with the brood as it relocates to reliable food source, not expanded. The 1,000 meter distance for the piping plover is way too large and not based upon peer reviewed science. A more rational distance would be 200 meters per other sites in the nation for the piping plover. Ample scientific evidence and precedent exists to support a 200 meter buffer. Buffers for other species, including American Oystercatchers, Least Terns and Colonial Waterbirds must also be changed. An effective 30 meter buffer should be established for these species rather than the 300 meter closure outlined in the DEIS. NON-ENDANGERED BIRDS should not have same protection as if endangered. Not allowing ORV access is paramount to denying the public access to these beaches.

7) Page 468: I disagree with the limitations imposed on pedestrian and ORVs. Corridors or bypasses should be provided thru, around or below high tide line in all SMAs during entire breeding season to maintain access.

8) Page 124: I strongly disagree with the NPS slant of providing for over protection of resource management over that of the public's right to access the beaches. Pro-active initiatives include: Vegetation Management, Habitat Management, Enhanced Predator Management, Colonial Water bird social attraction, Piping Plover check fledge rate, Piping plover chick buffer distance, and pass-through buffers during the incubation period. Opportunities to implement less restrictive closures as a result of the above initiatives should be considered more frequently than the 5-year periodic review process identified in the DEIS.

9) I disagree with the NPS Resource Management Pedestrian / ORV Closure Policies. These policies address the least significant factors affecting nest survival with little chance to have more than negligible impact. For example: the AMOY Nest Failures are predominately due to non-human events. Using your own stats, the mammalian predation is 54%, Storm / Lunar Tides: 29%, Nest Abandonment: 6%, Avian Predation: 5%, and Ghost Crab Predation: 3%, So what is the percentage due to human interference: just 3%! It's insignificant, yet the NPS wants to ban humans when their actions provide very little influence on the success rate of breeding birds and turtles.

10) I disagree with the stats of breeding plovers and the other birds in the Park when the NPS does not adequately consider locations neighboring the Recreational Area that are part of the same ecosystem, namely dredge and spoil island that are located just yards away and within sight of the seashore. These birds are part of the same ecosystem and should be included. Those spoil islands, developed by man from dredging the waterways in the Pamlico Sound for channel upkeep are slammed full of birds. The reason why so many birds? NO PREDATORS. SO, birds are not as stupid as one might think. You have to count these birds and incorporate them in the stats when the NPS is talking about any so called decline in breeding pairs in the National Park.

11) Page 1: I do not think the DEIS responsibly addresses the cultural resource issues. The very purpose of the DEIS as set forth in the National Environmental Policy Act (NEPA) is to protect and preserve natural and cultural resources in the federal decision making process. In the DEIS, the statement "protect and preserve natural and cultural resources" appears in the first sentence of the first page of the plan, in the Purpose of the Plan section, and numerous times thereafter. Yet, the 810 page document devotes only two paragraphs to analysis of cultural resource issues. When on Hatteras Island we have always gotten together on the South Beach to enjoy the beach with our cookouts, gatherings, surf bathing, horse shoes and foot races, fishing, and surfing. Now the DEIS is proposing closing off most of the south beach during the summer which is the traditional period

we local people use the beach. The continuation of this traditional pattern of land use is central to maintaining the historic identity of our island communities.

12) Pages 270-281; 561-598: I strongly disagree with your economic analysis of the impact of the DEIS. The region of influence (ROI) incorporates the Northern Beach communities, including Kill Devil Hills, Kitty Hawk, Southern Shores and Duck. These areas are almost completely disconnected from ORV use and access issues relating to the Seashore.

? Inclusion of the Northern Beaches in analysis significantly dilutes estimates of economic impact on the 8 Seashore Villages

? Analysis of economic impact to the Seashore Villages appears to be significantly down played. Emphasis in DEIS is on the ROI-wide or county-wide level impacts.

? Nowhere is it clearly addressed that the overwhelming majority of negative impacts will be felt by small businesses in the Seashore Villages rather than by overall economic interests within the greater ROI.

On page xlvi, Alternative F is characterized as having a "negligible to moderate" adverse impact on small businesses. I strongly disagree with this statement.

I believe the negligible to moderate projection is inaccurate and relies on economic surveys that has not yet been published. Furthermore, this material is not expected to be added to the DEIS until after the public comment period has ended.

Based upon the economic harm we have already experienced under the consent decree, Dare County projects the economic impact of Alternative F to be substantial.

Beach closures have already had a devastating and unfair impact on many Dare County Businesses, causing foreclosures, bankruptcies, lay-offs, cutbacks, expensive refinancing, and depleted college funds and savings accounts.

Even businesses whose revenue has stayed level or showed a modest increase have accomplished this at a costly price. Many have had to cut back employee hours, forego much-needed capital improvements, and sacrifice profits. That is certainly the case with Hatteras Realty.

Pages 270-286, 561-598: The socio-economic data and analyses are incomplete and erroneous and result in an understatement of the effect the restrictions will have upon the Island, the region and the state of NC. The US Park Services answer: Businesses will have to "adapt" to the new rules.

(p.383) The negative economic impacts of the decree ARE KNOWN, so to say that the added restrictions would have negligible to moderate impact is indefensible.

13) Overall Visitor Counts - Overall visitor counts appear to include visitors to Fort Raleigh National Historic Site and the Wright Brothers National Memorial. A large percentage of these visitors vacation in the Northern Beaches communities and recreate on the non-federal beaches outside of the Seashore. Visitors who patronize the Fort Raleigh National Historic Site and the Wright Brothers National Memorial but do not visit the actual seashore areas need to be factored out.

Maintenance of Future Access to Cape Point and South Point Ocracoke: All socioeconomic analyses related to Alternative F are predicated on the assumption that access corridors will remain open for at least an appreciable portion of the visitor high season. Under Alternative F, the access corridors will be subject to Resource Closures based on buffers similar or identical to the Consent Decree. Unless some predictability of access to Cape Point and South Point Ocracoke can be assured, economic analyses predicated on assumption of access are fundamentally flawed.

Why would a group of surf fishermen want to come to Hatteras Island to surf fish if they are not sure they can access the prime fishing grounds at Cape Point? The answer is they won't come. If they don't come, they don't rent vacation homes and spend their money on Hatteras and Ocracoke Islands.

The definition of the Region of Influence (ROI), faulty data on economic activity generated by specific type recreational activity, incomplete visitation/business survey data, inflated overall Seashore visitor counts pertaining to beach use, and flawed key assumptions concerning the maintenance of access under Alternative F, all lead to inaccurate conclusions in the socioeconomic analyses. Specifically, these inaccuracies can be seen as understating the negative socio-economic impact of the Seashore Villages. Further, this negative impact will be absorbed almost entirely by Small Businesses. Neither of these important aspects of the management alternatives are adequately presented in the DEIS.

14) Page 136: I strongly disagree with your pet restriction proposals. The "prohibition of pets in the Seashore during bird breeding season including in front of the villages." = No Pets in public areas beaches, campgrounds, soundfront, foot trails, park maintained roads -from March 15 to July 31.

Hatteras Realty books approximately 13,000 rental weeks for a total of 91,000 rental nights housing approximately 700,000 visitors. The ban on pets to July 31 will seriously hurt the rentals of my vacation homes as our pet homes encompass about 30% of our rentals. I propose allowing pets on 6 foot leashes year-round in all areas open to pedestrians or ORVs.

15) Pages 125; 392 to 396: SEA TURTLES. I disagree with the stats and procedures proposed. I think endangered sea turtles would benefit from management practices now in use at other federal seashores that are more proactive in efforts to achieve nesting success. This includes relocating nests to more desirable locations as is done in other state and federally controlled areas.

The Cape Hatteras National Seashore Recreational Area is on the northernmost fringe of turtle nesting locations for the southeast, accounting for about 1% of all turtle nests. Proposed buffer areas are not needed for protection of the turtles and amount to overprotection.

16) Pages 97- 101. I strongly disagree with proposals in this section saying that ORVs will be prohibited year round between ramps 27 and 30, at Hatteras Inlet (Hatteras Spit), Ocracoke Inlet (North Ocracoke Spit) and various other locations.

Not allowing ORV access is paramount to denying the public access to these beaches. They are located miles from the nearest parking or paved road area and too far to access on foot. As a matter of course, there has been no breeding of piping plover or other endangered species at the Hatteras Island Inlet (spit) area in the past 6 years.

17) Page 104: I disagree with the proposed night time driving closures. Per your proposals, night driving will be prohibited between May 1 and November 15th, forcing visitors off of the beaches early in the evening and preventing sunrise surf fishermen access in the morning. I propose a more moderate night time ban if one is needed, perhaps from June 1 to September 15 with times being 1 hour after sunset and 1 hour before sunrise to allow beach goers to gather their stuff and exit the beach area.

Certainly more proactive measures such as relocating nests prone to weather and ocean events would dramatically increase the nesting success rates.

18) Page 121: I disagree with the proposed beach closings, including pedestrian access from March 15 until July 31 in 8 different beach locations which have traditionally been available. Please leave these areas open to beach walkers, shell collectors and those that want to access the beaches in these areas.

Conclusion:

Please, incorporate access corridors through any SMA so we can get to the open beach beyond. Incorporate the birds into the count that nest on the spoil islands. Base your buffer zones on peer reviewed science and scale them back to more reasonable distances as discussed.

It is neither logical nor reasonable to spend so much time, money and energy to overprotect a bird (Piping Plover) in the Cape Hatteras National Seashore that is on the southernmost fringe area of its breeding ground. That goes for the loggerhead turtle that is in its northernmost breeding area.

Let's scale back the buffer zones. You can always increase at a later date.

The USPS is leaning way over the line on over protection and not enough on the public's right to enjoy the beaches of the National Seashore. The proper balance is not achieved in the propose DEIS and needs to be modified so that the proper balance of reasonable resource protection and access to the beaches of the National Park is achieved. I could sum it up by saying "Protect, not Prohibit."

Thank you,

Correspondence: Dear Superintendent Murray, I have recently become aware that the National Park Service is on the verge of approving an Off Road Vehicle management plan for Cape Hatteras National Seashore. I cannot begin to express my disappointment in the lack of consideration for the wildlife and pedestrian visitors. This initiative will only disrupt the natural environment and the beauty of Cape Hatteras National Seashore. Off Road Vehicles will only bring noise and disrupt wildlife. People that visit National Parks do so to get away from the noise and pollution of everyday life. How is it possible to allow this type "recreation" into this peaceful environment. I am distraught by the National Parks Service consideration of the use of ORV.

This shows lack of common sense and management skills.

Correspondence:	There is a strong community of watersports enthusiasts living in the outer banks and a large majority of visitors to the island that come solely to enjoy the park and the waters and beaches. Keeping the beaches open to those people who drive hundreds of miles to come visit multiple times every year, and those who after visiting have decided to live is imperative to keep this access available. I strongly suggest that you keep all these people in mind and the impact it will have on their lives and the livelihood of the people living on the island.

Correspondence:	Dear Superintendent Murray, As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points. 1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations." 2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness..." Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources. 3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals. Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

Correspondence:	As an avid angler on the North Carolina seashore, I am strongly opposed to the National Park Service (NPS) preferred alternative, Alternative F, in the DEIS and urge you to make significant changes to the preferred alternative in order to provide both reasonable resource protection and reasonable public access to public land. Recreational fishing is one of the most enjoyable American pastimes, and Cape Hatteras National Seashore has some of the best surf fishing locations on the east coast ? accessible only by ORV. Alternative F is the most restrictive management option to date, far exceeding any sense of balance between resource protection and public access and betraying all promises made to the public regarding recreational uses in the seashore. The majority of the provisions included within the preferred alternative far exceed anything proposed by a majority of the Negotiated Rulemaking Committee, including excessively large resource closures (buffers), unnecessary year-round and floating closures, and the lack of access corridors around or through resource closures. In order to restore balance to the DEIS, I highly recommend that the NPS revisit the proposal put forth to the Negotiated Rulemaking Committee in December of 2009. It provides the necessary protections for wildlife resources while having the support of a majority of the local community. Without reasonable ORV access, responsible anglers like me, and the local economy that is supported by recreational fishing, suffer greatly. I urge you to provide a better balance between resource protection and recreational uses by incorporating the December 2009 recommendations from the Negotiated Rulemaking Committee into the preferred alternative.

Correspondence:	Improve public access to the beaches for pedestrians and people with disabilities by adding boardwalks, parking spaces, and public facilities to enhance visitor enjoyment in balance with wildlife conservation efforts. Piping Plovers, American Oystercatchers, and endangered sea turtles that have been threatened for too long by unregulated off-road vehicles (ORVs) at Cape Hatteras. Cape Hatteras has been required for decades under federal law to establish ORV guidelines that minimize harm to wildlife and natural values of the Seashore in accordance with the best available science. The lack of an effective vehicle management plan at the Seashore contributed to an 84% decline in the number of colonial waterbirds (birds that nest in a group) breeding at the Seashore between 1997 and 2007. Protect the rare birds and sea turtles for which Cape Hatteras is famous and to ensure equal access for people who choose to visit the Seashore on foot.

people whose lives and futures are intertwined to the success of each species.

I own property in Salvo NC, and walk and drive on the beach for surfing, windsurfing and enjoyment of the National Seashore. The only way my elderly parents can get to the National Seashore beachfront is by driving to the beach. (As well as all residents and visitors that may use wheelchairs) The community of homeowners in our neighborhood are stewards of the National Seashore and the beach area in our Village. We often spend our time picking up trash and cleaning the beach area. The users of the beach, surfers, wind & Kite boarders, fisherman and beach lovers are all committed to balancing resource protection and providing reasonable access for recreation.

I AGREE WITH THE 4 ITEMS LISTED BELOW REGARDING THE DEIS Alternative F, the one considered by the National Park Service as their preferred alternative: CORRIDORS are a vital tool in providing access while managing resources MANAGEMENT BUFFERS must be based on peer-reviewed science NON-ENDANGERED BIRDS should not have same protection as if endangered TURTLE MANAGEMENT would benefit from nest relocation and other practices

And I also agree that the following questions must be researched and incorporated in the standards for beach access. Do vibrations in the sand affect incubation or hatchlings? At what distance can emerging hatchlings hear a passing car? At what distance can emerging hatchlings feel a car pass at 15 mph? And, does either of these events alter their activity? How far away does a stationary light source have to be disorienting (We were told a moving light is not as disorienting as stationary light)

Correspondence: i hope that driving on ALL north carolina beaches will be banned - too many times i have seen people in jeopardy because the driver of a vehicle was inconsiderate or reckless -
the beach is a place to bring children to play and not have to worry about them being run over by a careless driver - i understand preventing an accident on the highway but a person should not have to watch to prevent a truck accident on the beach !
if you want to drive: do it on the highway or a race track -
the beach is NOT a roadway !
also, there is erosion to consider when a vehicle is driven on the beach & sometimes the vehicles have oil leaks -
thank you for allowing my comments -

Correspondence: I disagree with DEIS alternative F. I believe it to be excessive and unreasonable. I am in complete agreement with the Dare County Board of Commissioners support of open and accessible beaches for Cape Hatteras National Seashore Recreational Area. I disagree specifically with alternative "F" position that there would be little economic impact. To the contrary, beach closures have already had a definite negative impact on the economy of Hatteras Island and any additional restrictions would be nothing short of severe. I disagree with alternative "F" allowance for 1000 meter buffers for the unfledged piping plover chick, there is no scientific reasoning for this excessive amount of area. I believe that a 200 meter buffer would be arguable sufficient. I strongly believe that corridors are absolutely necessary to allow passage to open areas. I also believe there is no purpose to give endangered species protective status. This just enlarges closed areas for no reason. I support the relocation of sea turtle nests as a ways of their management.

Correspondence: I am writing to comment on the draft ORV plan for the Cape Hatteras seashore. Of the 6 plans presented in the draft plan I am most pleased with plan D. This plan is the most predictable option and restricts driving on the beach to the greatest extent. I wish, however, that a plan was presented that restricted driving on the beach to a greater extent than has been proposed in any of the 6 plans. My preference would be that driving (at all times of the year) was restricted to a small proportion of the beach (perhaps 10 miles in total). At the same time I think the greatest possible beach should be open to pedestrian traffic. The park service should encourage pedestrian visits rather than ORV visits to the beach by providing more walking paths to the beach at the same time closing driving access.

Correspondence Type: Web Form
Correspondence: 1. Page 201: I disagree with the statement: "Even with resource closures in place, protected species are still at risk."
There have been no Piping Plover deaths have actually been linked to ORVs. ORV violations continue to decrease as signage and education improve.
2. Page xix and page 23: I disagree with having the two different closures rules for to the North facing beaches and the South facing beaches as the grid outlines in Alternative "F". I am also against the NPS proposal to close the beaches in villages of Frisco, Hatteras and Ocracoke Villages to ORV access longer than the traditional May 15 to September 15 period for the Northern beaches.
3. Page 1: I do agree with the statement that "ORVs have long served as a primary form of access for many portions of the beach in the seashore, and continue to be the most practical means of access and parking for many visitors."
4. Page 53: I disagree with the special use permit proposed guidelines. It is not practical to have someone transport disabled person to the beach and then turn around the vehicle park at the street or parking area. This requires the disabled person to have a driver. What if the disabled person can drive by themselves and wants to go to the beach when unable to find a driver- they are stuck because they are disabled? It also requires the driver hike distance from the parking area to the place that the disabled person was dropped off and to top it off then the driver has to hike the long distance through the sand back to get the vehicle.
5. Page 121 ? 127. I totally disagree with the buffers that are currently being presented. There have to be pass-thru corridors. The beach is linear with the ocean buffering on one side and the dune line on the other. The problem is if you close off the access on one side of a 3 mile beach stretch and close off access on the other side of the 3 mile beach stretch while you provide no corridor- what you have really done is closed 3 miles of the beach. The 1,000 meter distance for the piping plover is too large and not based upon reviewed science. A more reasonable distance is 200 meters per other sites in the nation for the piping plover. Sufficient scientific evidence and precedent exists to support a 200 meter buffer. NON-ENDANGERED BIRDS should not have same protection as if endangered. Not allowing ORV access is paramount to denying the public access to these beaches.
6. Page 124: I disagree with the NPS attitude of providing for over protection of resource management over that of the public's right to access the beaches.
7. I disagree with the NPS Resource Management Pedestrian / ORV Closure Policies. The policies address the least significant factors affecting nest survival. Example: the AMOY Nest Failures are predominately due to non-human events such as the mammalian predation is 54%, Storm / Lunar Tides: 29%, Nest Abandonment: 6%, Avian Predation: 5%, and Ghost Crab Predation: 3% - these are your own stats! So basically the NPS wants to ban humans when their actions provide very little influence on the success rate of breeding birds and turtles- JUST 3%!
8. I disagree with the stats of breeding plovers and the other birds in the Park. The NPS does not properly consider locations near the Recreational Area that are part of the same ecosystem such as Dredge and Spoil Island. These birds in these areas are part of the same ecosystem and should be included in

the NPS stats.

9. Page 1: The DEIS does not responsibly address the cultural resource issues. The National Environmental Policy Act (NEPA) is to protect and preserve natural and cultural resources in the federal decision making process. In the DEIS, the statement "protect and preserve natural and cultural resources" is in the first sentence of the first page of the plan. However, in the 810 page document devotes only two paragraphs to analysis of cultural resource issues.

10. Pages 270-281 & 561-598: I disagree with the economic analysis of the impact of the DEIS. The region of influence (ROI) includes the Northern Beaches- Kill Devil Hills, Kitty Hawk, Southern Shores and Duck. These areas are totally separate from Hatteras Island ORV use and access issues relating to the Seashore.

11. I strongly disagree with the statement on Page xlvi: Alternative F is listed as having a "negligible to moderate" negative impact on small businesses. Beach closures have already had a devastating impact on many Dare County Businesses.

12. Page 136: I very strongly disagree with your pet restriction proposals. The "prohibition of pets in the Seashore during bird breeding season including in front of the villages". The ban on pets will not only effect the lifestyles of our locals include my family but it will also great hurt the tourism as pet travel is a big market that we currently attract. It is reasonable to allow pets on 6 foot leashes all year in all areas open to pedestrians or ORVs.

13. Pages 125 & 392 ? 396: SEA TURTLES. I disagree with the stats and proposed procedures. It is reasonable to think that endangered sea turtles would benefit from management practices currently being used at other federal seashores. These other federal seashores are more proactive towards achieving nesting success. Example of proactive behavior- relocating nests to more desirable locations which is currently done in other state and federally controlled areas. The Cape Hatteras National Seashore Recreational Area is on the northernmost edge of turtle nesting locations, accounting for about 1% of all turtle nests. The proposed buffer areas are not needed for protection of the turtles and they amount to overprotection.

14. Pages 97- 101. I strongly disagree with proposals in this section which prohibits ORVs year round between ramps 27 and 30, Hatteras Inlet, Ocracoke Inlet and other locations. Not allowing ORV access is denying the public access to these beaches. These areas are too far from parking and paved areas to access them on foot.

15. Page 104: I strongly disagree with the proposed night time driving closures. The proposal forces visitors off of the beaches early and prevents surf fishermen access in the early morning.

16. Page 121: I disagree with the proposed beach closings, including pedestrian access March 15 to July 31 in eight different locations. Please leave these areas open!

Correspondence: The DEIS is a major failure. Years of preparing for this moment and NPS does not even have the integrity to bring forth a plan which both provides resource protection and provides for recreational access. The DEIS greatest flaw comes from its bias and its very weak attempt to rationalize a position of non access through resource management.
 No outreach or education was offered to my community and most were not qualified to respond to 900 or so pages of the DEIS. It should be well noted that after all of these years of hearing about the so-called other side of this issue and how many people are allegedly upset and complaining about off road vehicles; that the public meeting attendance had almost no participation by anti-access voices except for paid environmental lawyers and lobbyist (and only a couple of those). The pro-access community was well represented.
 It should also be noted that not one resource violation under the consent decree has harmed the resource in any manner according to Superintendent Murray.
 Turtle nests should be relocated to increase chances of hatching my moving them from likely overwash areas. Even if turtle hatchlings whose nest are moved appear to be less vigorous than unmoved turtle hatchlings, an original site nest which floods and kills all the hatchlings has NO chance. It is really poor management of the ESA to allow the states to manage turtles while allowing thousands of unhatched eggs to be lost.
 The enabling legislation which was decades after the Organic Act is very clear that recreation is the main function of this recreational area. I find it amazing that NPS takes an old act and uses it to supersede what congress wanted and intended. The concept of preserving for future generations public resources would mean a desire to protect cultural and historical use both recreational and other for this area. The DEIS again brings none of this discussion forward. In the enabling legislation were grave concerns and promises made about commercial fishing since it was the only method the islanders had for making a living and so protections were offered. If interpreted correctly, the concerns were for the local citizens to be afforded protection in order to make a living but of course today NPS only looks at commercial fishing and their misinterpretation and their closures do not even take in commercial fishing access.
 The traditional use of the beach and seashore is being completely ignored. While the DEIS tries to give a very mundane oversight of transportation use through out the 1940's and up to today, it fails. CHNRA was one of the very first surf fishing Mecca's in the world. The traditional use of the beach to fish and recreate was and is history. Hunting shorebirds for profit and recreation was also a part of that history. Long before NPS began trying to manage and close the beach the locals were profiting from taking visitors to hunt and fish and to also furnish the same visitors with food and lodging. Both the NC Wildlife Resources Commission and the NC Marine Fisheries Commission with minor reservation are in support of the access point of view. I find it highly disturbing that NPS places such a high priority on the species of concern list generated by North Carolina while the state does not. The list is only there for increased monitoring of the species if needed and no further restrictions are recommended or suggested. I also find it disturbing that NPS picks and chooses its species for regulation from the list.
 Predation, storms, and interference by outside monitors and guest are the real reasons for the lack of birding success in the area. The DEIS continues to promote the theory that there are more vehicles on the beach today than ever before. This is just supposition. The bluefish runs in the early eighties had much greater numbers of people and vehicles on the beach. Hurricane charts mirror the decline of plovers in the nineties but these tables are simply discounted in the DEIS. Predators are now being killed by the thousands and one can only imagine the resurgence of ghost crabs and the harm future generations of plovers will face by this menace. The protocols make reference to 25 predators killed the first year of management that this should help increase bird numbers. I wonder if they ever imagined thousands being killed (sort of like mowing your grass).
 Objective viewing of the birds and their reaction to intrusion by either pedestrian or vehicle shows without question the suggested buffers under alternative F to be vastly too large. Any unbiased person can walk up to an American oyster catcher and note that it is not disturbed until only a few meters away. The same scenario happens while driving slowly past. The number 1, 2, and 3 nesting sites for least terns in this county are on the roofs of various department and grocery stores. Least tern populations are going up year after year and they seem content to nest amongst us. Why the great penalty?
 Bird Populations should be managed by area. I well remember the hysteria brought forth by the plaintiffs about black skimmers being extinct in CHNRA. Oh my God, guess what? They simply moved 500 yards off and on to a spoil site just off the sound in Hatteras. Last year there were 500 or more nest of black skimmers on the north end of Hatteras Island which were not included in NPS reports. If NPS is going to succumb to the lies and

0012537

hype of the environmental lobby; at least try to manage with some kind of honesty.

Turtle management should be maintained by NPS. The great amount of nest lost to water emersion is unacceptable and leads only to questioning why local managers of NPS would listen to one biologist from the state when such vast numbers of eggs are being destroyed. Many years lost eggs account for 50% of the total laid eggs and last year's 37% is a disgrace. The state of South Carolina with a much greater number of nests too manage lost 7% last year. The only clear reason I see for the present management is the bias of the state biologist against vehicle use. By the way, this same biologist did a study (the grant was worth hundreds of thousands of dollars) which showed that moving the nest caused the hatchlings to be less vigorous in his opinion. Of course a dead egg is even less vigorous than a moved egg. It is just ridiculous.

Night time restrictions are again not founded in science but simply in mixing assumptions and then using the mix for a rule. For example, 70% of all turtle nest are in non vehicle areas already. Therefore 30 nest are in vehicle areas and 15 of these will be moved. All of this nighttime closure for the 15 nest out of the 56,000 plus east coast turtle nest. Alternative F recommends night time closure one month before turtles arrive and 3 months after they quit nesting. This is just not acceptable. Not allowing campfires on the open beach but allowing campfires in front of the first row of village rental cottages smacks of pay offs for those same few owners who lobbied for both vehicle and pedestrian access restrictions. The very most basic study of false turtle crawls in closed, open, and village area show no justification for nighttime closure. After all, there never has been a turtle or nest harmed in the area by vehicle nighttime traffic (NPS has no study on use). All of the assumptions made are just that, assumptions.

Flexibility is not being shown in the DEIS. The flexibility for future managers shown in the interim strategy is not shown here. The future will close vast areas to all even though those areas may change and have little benefit to the birds. Today areas are closed which could be open and much criticism of NPS alleviated yet those areas are closed because of inflexible buffers.

The disabled, old, and infirm will pay a great price for the DEIS. Local NPS has neither studies nor inclination to understand its customers and users. Interpreters and managers do not get involved with the public. Sure the fee gathering spots such as the Cape Hatteras Lighthouse and Wright Memorial or even the campgrounds may be easy places to generate information but the beach user is not studied. This does not surprise me since upper management is never seen on Hatteras or Ocracoke Island. There will be a grave injustice done to the handicapped under the DEIS.

Note that Hatteras Island's recession started with the consent decree and not when the rest of the country's recession started. I also grow weary of hearing about how hard this is on NPS. There is not an employee in NPS who has lost a nickel over the consent decree or a night's sleep. The economic harm will be and is in the hundreds of millions of dollars to Dare and Hyde County.

Please address the Cape Hatteras National Seashore Recreational Area as a RECREATION area.

Correspondence: Dear Superintendent Murray,
As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.
1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."
2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... the said area shall be permanently reserved as a primitive wilderness..." Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.
3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.
Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

Dear Superintendent Murray,
Please accept this letter as my comment on the ORV DEIS before you at this time. After reviewing the National Park Service DEIS I must disagree with any of the six alternatives within the document.
I have; however, reviewed the 77 page Coalition for Beach Access Position Statement signed by several groups that were a part of the negotiated rule making process and it by far succeeds in furnishing the best visitor experience while maintaining the needs of protecting the fragile resources. Please consider all aspects of this alternative and put people back into the management of Cape Hatteras National Seashore.

Correspondence: Please accept this letter as my comments on the ORV DEIS before you at this time. After reviewing the NPS DEIS I must disagree with any of the six

alternatives within the document. The DEIS management alternatives have little to do with developing a responsible off road vehicle management plan. The alternatives map out a plan to exclude humans from the Cape Hatteras National Seashore and Recreation Area. Unless my feet are now classified as off road vehicles, this document is wat off base.

A 1000 meter buffer zone for common shore bird nests ia absolutely absurd. This buffer zone allows a bird nest a circle that cannot be entered by humans that is over a mile across! We do not afford this type of easment to any other animal. We do not provide this much of a buffer zone to the president! It makes no sense what so ever to place the buffer zone around the nests of oyster catchers and terns let alone the misguided plovers that are attempting to nest outside of their natural range.

Another thing that really bothers me is the way the National Park Service is slaughtering mamalian wildlife under the guise of protecting endangered birds. THE BIRDS ARE NOT ENDANGERED! The fact that the park service is deciding which wildlife can live and which species should be irradicated disgusts me.

I have reviewed the 77 page Coalition for Beach Access Statement signed by several groups that were a part of the negotiated rule making process (another travesty) and it by far succeeds in furnishing the best visitor experience while maintaining the needs of protecting the fragile resources. Please consider all aspects of this alternative and put actual people, not lawyers, back into the management of Cape Hatteras National Seashore. Sincerely,
George W. Sobotka/Briner

Correspondence: Mr. Mike Murray, Supt. Cape Hatteras National Seashore 1401 National Park Drive Manteo, NC 27954

Supt. Murray:

Please consider my views on the current ORV DEIS issue.

I agree with rational measures to protect our natural resources. However, the DEIS emphasizes maintenance of natural resources without a voice but glosses over the voices of local human residents and maintenance of their cultural and historic values, not to mention the socioeconomic impact of the closures it recommends. Continuation of current beach closures to pedestrians and ORVs will further devastate the fragile economy of Hatteras Island in an already challenging economic environment, not to mention violate the Americans with Disabilities Act, precluding that group's ready beach access.

I urge rule makers on this issue to consider carefully the 77 page Coalition for Beach Access position Statement, a document signed by several groups involved in the negotiated rule-making process, successfully provides alternatives for quality visitor experiences, simultaneously protecting fragile natural resources. Please consider all aspects of these alternatives. Allow directly-involved stakeholders?not only property and business owners and visitors?both new and long-time?a stronger voice back into the management of Cape Hatteras National Seashore, as opposed to those who've never experienced the numerous pleasures of the Hatteras experience. Thank you for your consideration. By the way, I have no financial interest in any island property, only a 37 year long love of quiet beach walks.

Sincerely,

Diana Dreyer 116 Bradman Estates Slippery Rock, PA 16057 dyd@zoominternet.net

Correspondence: Please work hard to keep the motorized orv's to a minimum on this lovely beach. There are too many places already that are dominated by the noise, fumes, danger, and destructiveness to the environment of motorized vehicles. My family and I just want to have a quiet place to escape the "accoutrements of civilization" once in awhile and it would be a great irritation, even a tragedy to be confronted with these off-road vehicles that do so much damage to the environment and the quality of life for others.

Correspondence:	I have been coming to the Outer Banks and Hatteras Island for over thirty years and have enjoyed the beautiful beaches, scenery and wild life. Now due to a few birds, that barely travel this far south to nest, natural predators are being killed, beach travel is closed to vehicles and fishermen. I think this is a shame. The economy has taken a hit, places are closing and quality of merchandise and service is down. Please keep the beaches open. Travel around turtle nests, just fine--we do not mind that.

Correspondence:	I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access. National parks are about preserving natural landscapes and plant and animal life. Many people come there to be awed by nature and to be refreshed. Allowing off road vehicle use that destroys the bird/turtle life the way ORVs have done at Cape Hatteras is not responsible park management nor acceptable to me. I come to parks for the nature, not the noise of ORVs. I am overdosed by vehicle noise and emissions in urban environments and need the quietude of nature for personal restoration. To replace turtles, birds and bird sound with vehicle tracks and sounds saddens me and does nothing to refresh my spirit. It traumatizes me to think of this unnecessary level of destruction of birds and sea life in the name of "recreation." There is enough of this destruction planet wide and parks are not the place to condone it. _____						

This alternative plan D would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are absolutely important to me.

The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.

* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.

* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.

This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.

The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.

* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.

* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: Dear Superintendent Murray,

As a life long resident of Hatteras Island, please accept this letter as my comment on the ORV DEIS before you at this time.

After reviewing the National Park Service DEIS I must disagree with any of the six alternatives within the document.

I have; however, reviewed the 77 page Coalition for Beach Access Position Statement signed by several groups that were a part of the negotiated rule making process and it by far succeeds in furnishing the best visitor experience while maintaining the needs of protecting the fragile resources.

Please consider all aspects of this alternative and put people back into the management of Cape Hatteras National Seashore.

PLEASE KEEP OUR BEACHES OPEN!

Correspondence: Superintendent Murray,

I am writing in opposition to alternative F, chosen by the NPS as the preferred plan for access at Cape Hatteras National Seashore Recreational Area.

The plan is too restrictive for ALL access, not just off-road vehicles, but for pedestrians and boaters as well. Please review the Coalition for Beach Access position. I believe it is a much more "middle of the road" option for access for all and preservation of the National Seashore.

Thanks for all that you, your staff, and NPS do for our Parks; as a regular visitor and Passport holder, I truly appreciate all that you do.

Sincerely,

Elaine Goodwin

Correspondence: I am opposed to Alternative F. I support the proposal of the Coalition to Preserve Beach Access. I know there are MANY factors to be considered, and while it has been advised to stay away from emotions in these letters, that's what the ocean is - emotional. When I think about very ill and disabled friends, who find peace and emotional (and sometimes physical) health at the beach, emotions come into play. I suppose that from some points of view - enough of the beach is being left open. I moved to KDH over seven years ago, after having stayed in Rodanthe in the late 80's. When I first moved here, and saw all the people at Oregon Inlet - and had my neighbors and co-workers talk to me about spending the day fishing at Oregon Inlet with the family, I thought about how wonderful that was. Family time - fishing time - fun time. Now I drive across the bridge and feel sadness for those who can no longer experience that family, fun, fishing time. And for what purpose? I just don't understand what is being protected. This is my second letter - my first was very short - I've been thinking about things a lot the last few weeks. When the Cape Hatteras National Seashore was created - I believe it was created for the enjoyment of the people. I don't feel that Alternative F allows for much enjoyment. Thank you for your consideration. PLEASE do not restrict beach access. I don't deal with the people that are driving (or walking - I REALLY think you should NOT address beach walking in this plan) on the beach on a daily basis like you do. If I did, I might be more understanding of the reason for the alternatives, because I do recognize that a few bad apples can spoil the whole bunch. I'm sure there are people who visit OUR beaches and do not respect the environment they are in. But having been party to organized, individual and just because beach clean-ups, I think implementing a plan such as alternative F punishes the many who care because of the few who are irresponsible jerks.

Correspondence: The NPS must formulate a plan that is consistent with the legislation establishing Cape Hatteras National Seashore Recreation Area. The enabling legislation for the Recreational Area states, in part, "said area shall be, and is, established, dedicated, and set apart as a national seashore recreational area for the benefit and enjoyment of the people and shall be known as the Cape Hatteras National Seashore Recreational Area". Therefore, it is important to balance resource protection with reasonable access for recreation. Corridors are a vital tool in providing access while managing resources. They provide a small path around temporary resource closures in order to provide access to open areas that would otherwise be blocked. Corridors should be permitted throughout the seashore during the entire breeding and nesting season including ML-I portions of SMAs. These corridors would provide valuable access without impairment or damage to protected resources. Buffers, or closures, are important management practices for species recovery. However, to have long term benefit for the wildlife and the visiting public, buffers must be based on peer-reviewed science. For example, the Piping Plover, a species classified as threatened and not endangered, is given a level of unprecedented protection in Alternative F. A 1,000-meter buffer in all directions represents over 771 acres. The DEIS does not cite any peer-reviewed science in supporting such closure. A more appropriate & effective buffer would be 200 meters. Birds that are not listed as endangered should not be afforded the level of protection given to ESA (Endangered Species Act) protected species. Instead of 300-meter buffers for these birds, a more appropriate buffer would be 30 meters. Also, all birds in the same ecosystem of the seashore should be counted. This includes all the many birds on the dredge and spoil islands located just yards away and within sight of the seashore. The National Park Service should consider turtle management practices successfully used in other federal and state areas to achieve nesting success. More proactive measures include relocating nests to more desirable locations, which is routinely and successfully done in other areas.

Correspondence: I have been visiting the Outer Banks since the early 1960's. We have vacationed either at Ocrakoke Island or Avon for over 25 years. We are working towards buying a home at Avon that we could rent out for part of the year and live in for the remainder of the year. Implementation of plan Alternative F could change those plans. Why invest in something you can't use? I want to see to the Outer Banks and the wildlife protected, but reasonably. The islanders have a done great job of balancing commerce, tourism and preservation. They live there and they love the islands and it shows. Their voices should be heard and their experience taken seriously. They are the true advocates for what is best for the islands. As a native North Carolinian and as a supporter of the Outer Banks I urge you not to implement Alternative F.

Correspondence: Dear Superintendent Murray,
As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.
1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."
2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness..."
Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.
3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.
Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

Correspondence: Of the six alternative plans outlined in the draft for this project, I'm in favor of the "environmentally preferred" Alternative D, but only if it's modified so that the protection of wildlife and their habitat is included.
When Cape Hatteras was first established, Congress wished that the area be preserved as a "primitive wilderness."
Just last year, on a visit to a wildlife reservation in NJ, I was deeply disappointed to have the trip interrupted by ORV's that previously were not allowed in the area.
Please don't allow this to happen to the Cape as well.
Thanks.

Correspondence: Dear Mr Murry,
Thank you for the ability for me to provide public comment on the future ORV management plan. My husband, newborn son and I are 7 year-round resident of Rodanthe. My husband and I are both surfers and often use Ramp 23 to access our favorite waves. One of the changes I found in the plan that didn't seem to make sense was the development of the Ramp 23 parking facilities and walk-over access to the shoreline. The distance from the highway to the water's edge is far too great for most people to walk on hot summer days yet alone tote their family and all their belongings. We feel that a development like this could make more sense and as well be more economical to make a better impact if it were located at a new or existing ramp that was closer to the water. A good example of a distance that works would be the allover day use area to the water's edge. If you are to develop a facility such as the one outlined in the plan, we feel the cost would be justified if you position it further south of Ramp 23, where the parking lot would be more close to the water and more people would use the facility.
Our second comment has to do park users having a positive visitors' experience. After Ramp 23 closed last year, prior to Memorial Day, my husband and I often noticed both visitors and residents become very frustrated as they were unable to access the ocean. Their first try would be North of Rodanthe and the police would write parking tickets. Their second try would be on the streets surrounding Mirlo beach and then the residents would call the police and tow trucks. Their last try would be the public access points in Salvo and there we witnessed many conflicts between property owners and visitors simply trying to access the beach. The tri-village area was not designed nor developed to accommodate public parking/access to the beach, Ramp 23 has always been our go-to spot to access the ocean. I would like to thank you again for the ability to provide public comments. If you have any questions you can follow up with my email address: karmasita@hotmail.com Thank you. Correspondence: I would like to comment on the closing of the beaches on Cape Hatteras seashore. Please take into consideration that the residents of these barrier island depend on the tourist industry to make a living. Closing the beaches to tourist and fisherman will cripple the residents of these areas. I understand that we need to be respect and take care of the birds and wildlife that God has given us, but not at the cost of a man feeding his family. I feel that we have gone to far in the direction of animals being superior over man and that is not how God designed the world to be. God gave man the priviege of naming each and ever creature on earth and put them here for us to enjoy not destroy. The reserch that has been done is not always accurate. The tide and storms have as much to do with destroying nests as man but that is not being addressed. There can be a balance for the people to protect the birds and wildlife that would not include closing all beaches. Please do not close the beaches to humans!

Correspondence: I DISAGREE WITH THE ORV/DEIS ALTERNATIVE F,P.58, BECAUSE IT DISCRIMINATES AGAINST THE HANDICAPPED WHO OVERCOME THEIR DISABILITY THROUGH ORV USE TO REACH THE OCEAN EDGE AND SOCIALIZE NORMALLY WITH THEIR PEERS AND FAMILY. ON P 58 OF THE DEIS, THE NPS ALLOWS FOR SPECIAL USE PERMITS TO ALLOW TRANSPORTATION OF DISABLED VISITORS TO VILLAGE BEACHES BUT REQUIRE THE ORV TO BE RETURNED TO THE STREET.WHAT IF LIFESAVING EQUIPMENT IS IN THE ORV? AND WHAT ABOUT THE FAMILY/PEERS OF THE DISABLED WHO NEED TO CARE FOR AND STREET PARK THE ORV? I AM A LICENSED PHYSICAL THERAPIST AND FOR OVER 30 YEARS I HAVE RECOMMENDED CAPE HATTERAS RECREATIONAL SEASHORE TO DISABLED PATIENTS FOR THE FREEDOM BEACH ORV USE PROVIDES. THEIR FEEDBACK- THE INDEPENDENCE OF "GOING TO THE BEACH" WITH THEIR FAMILIES, NOT SITTING ON A WOODEN PLATFORM HUNDREDS OF

FET FROM THE OCEAN EDGE. ORV USE AFFORDS ACCESS THAT CARDIAC, RESPIRATORY, NEUROLOGICAL, AND MUSCULOSKELETAL PATIENTS ARE DENIED AS PEDESTRIANS. DROPPING THE DISABLED OFF, AS P 58 IMPLIES, CREATES UNNECESSARY HARDSHIPS AND RISKS IN THE EVENT OF EMERGENCIES AND REINFORCES THE STIGMA OF HANDICAPPED/DEPENDENT RATHER THAN INCLUSION/INDEPENDENT. ALTERNATIVE F DOES NOT ADEQUATELY ADDRESS THE IMPACT THE ORV CLOSURES HAVE ON THE HANDICAPPED THOUGH BIRDS AND TURTLES ARE OVERLY CONSIDERED. ALTERNATIVE F SHOULD BE SCRAPPED AND A MORE HUMAN FRIENDLY ORV PLAN BE PRESENTED.

Correspondence: To the National Park Service RE: DEIS Cape Hatteras National Seashore

1) Page 201: I disagree with the NPS statement: "Even with resource closures in place, protected species are still at risk [from pedestrians and ORVs]." No Piping Plover deaths have been attributed to ORVs. ORV violations continue to decrease as signage and education improve. Pedestrian violations are much more significant than ORV violations. It seems to me that any transgressions into protected area are the result of lack of NPS manpower and enforcement than the public purposely and willfully violating out of bounds areas. Also, Park Service vehicles are driving through restricted areas all of the time. Wouldn't it be more protective of the nesting birds for the park employees to walk/hike into protected areas as opposed to driving into the area? 2) Page xxiv: I question the statement of as per the DEIS: "Carrying capacity would be a 'peak use limit' determined for all areas based on the linear feet of beachfront?" If you close off huge sections of the beach, you force more people into smaller areas, potentially resulting in more resource impairment and diminished visitor experience. 3) Page 121 ? 127. I strongly disagree with the buffers as presented. We must allow for pass-thru corridors. The beach is linear with the ocean buffering on one side and the dune line on the other. For example - If you pinch off access on one side of a 4 mile linear beach and pinch off access on the other side of the 4 mile section of beach with no corridor, then you effectively have closed off all 4 miles of the beach because you CAN'T get there. The proposed bird buffers are too large, blocking access to the interior sections from the two "buffered" ends.

I propose ORV pass-thru only corridors and to use breeding / nesting buffer distances to establish ORV pass through only corridors to ensure beach access in a way that does not hinder resource protection. I believe pass through corridors should be maintained for pedestrians and ORVs in all areas of the Cape Hatteras National Seashore Recreational Area throughout the entire breeding and nesting season. Corridors are vital to providing access in a way that does not hinder resource protection.

Piping Plover unfledged chicks buffer should move with the brood as it relocates to reliable food source, not expanded.

The 1,000 meter distance for the piping plover is way too large and not based upon peer reviewed science. A more rational distance would be 200 meters per other sites in the nation for the piping plover. Ample scientific evidence and precedent exists to support a 200 meter buffer. Buffers for other species, including American Oystercatchers, Least Terns and Colonial Water birds must also be changed. An effective 30 meter buffer should be established for these species rather than the 300 meter closure outlined in the DEIS. NON-ENDANGERED BIRDS should not have same protection as if endangered. Not allowing ORV access is paramount to denying the public access to these beaches.

We are Cape Hatteras Recreation Area, designed to promote commerce and recreation for habitants and visitors as well. The recreation and commerce of habitants and visitors is being hampered and prohibited.

4) I disagree with the stats of breeding plovers and the other birds in the Park when the NPS does not adequately consider locations neighboring the Recreational Area that are part of the same ecosystem, namely dredge and spoil island that are located just yards away and within sight of the seashore. These birds are part of the same ecosystem and should be included.

Those spoil islands, developed by man from dredging the waterways in the Pamlico Sound for channel upkeep is slammed full of birds. The reason why so many birds? NO PREDATORS. SO, birds are not as stupid as one might think. You have to count these birds and incorporate them in the stats when the NPS is talking about any so called decline in breeding pairs in the National Park. One of these islands is actually named "BIRD ISLAND" because of all of the birds found there. The sound also is full of fish and other water life so that these birds have quick and easy access to a bounty of food sources and very little human contact except from boaters who only stay for a few hours of recreation and then leave.

5) Pages 270-281; 561-598: I strongly disagree with your economic analysis of the impact of the DEIS. The region of influence (ROI) incorporates the Northern Beach communities, including Kill Devil Hills, Kitty Hawk, Southern Shores and Duck. These areas are almost completely disconnected from ORV use and access issues relating to the Seashore. ? Inclusion of the Northern Beaches in analysis significantly dilutes estimates of economic impact on the 8 Seashore Villages

? Analysis of economic impact to the Seashore Villages appears to be significantly down played. Emphasis in DEIS is on the ROI-wide or county-wide level impacts.

? Nowhere is it clearly addressed that the overwhelming majority of negative impacts will be felt by small businesses in the Seashore Villages rather than by overall economic interests within the greater ROI.

On page xlvi, Alternative F is characterized as having a "negligible to moderate" adverse impact on small businesses. I strongly disagree with this statement. I believe the negligible to moderate projection is inaccurate and relies on economic surveys that have not yet been published. Furthermore, this material is not expected to be added to the DEIS until after the public comment period has ended. Based upon the economic harm we have already experienced under the consent decree, Dare County projects the economic impact of Alternative F to be substantial. Beach closures have already had a devastating and unfair impact on many Dare County Businesses, causing foreclosures, bankruptcies, lay-offs, cutbacks, expensive refinancing, and depleted college funds and savings accounts. This all timed with a time of national economic hardship serves as a "double whammy" to businesses and residents of the Seashore Villages.

6) Page 136: I strongly disagree with your pet restriction proposals. The "?prohibition of pets in the Seashore during bird breeding season including in front of the villages." = No Pets in public areas ?beaches, campgrounds, soundfront, foot trails, park maintained roads -from March 15 ?July 31.

This restriction will cause a hardship to many; vacationing with pets has become more and more popular, many people travel with pets and not allowing them in a campground or parking lots causes hardships to people who want to enjoy something that they and we all pay taxes to maintain. Imagine driving for 4 or 5 or 10 hours with your family pet only to find out that you cannot let your dog out to walk when you arrive in Cape Hatteras or else receive a fine. Will there be sufficient signage to let people know that they cannot let their pet out of the car? How much will this signage cost and what is the cost of maintain and placing the signage?

We in the Seashore Villages are separate from the Northern Beaches; we have a separate lifestyle and economy. We are not shopping or entertainment oriented, we are nature and family oriented as related to fishing, boating, watersports, and beach going. We must be considered separately and we need to keep our beaches open for economic survival. We pay a large amount of taxes into the State and Federal governments and we deserve access to our beloved beach.

Thank you,
Monica Jones P.O. Box 1316 Buxton, NC 27920

Correspondence: I urge the National Park Service to protect the rare birds and sea turtles for which Cape Hatteras is famous and to ensure equal access for people who choose to visit the Seashore on foot.

In establishing a final plan for Cape Hatteras, the Park Service must follow law and science in guaranteeing adequate space and protections for wildlife. The Park Service can do so while still allowing responsible beach driving in some areas so that all visitors can fully enjoy this national treasure. The final rules should improve public access to the beaches for pedestrians and people with disabilities by adding boardwalks, parking spaces, and public

facilities to enhance visitor enjoyment in balance with wildlife conservation efforts.

Correspondence: I do not agree with any of the plans currently suggested and under review. I believe the economic impact to the islands by restricting access to the beaches is being GREATLY UNDERESTIMATED. The plans are too restrictive to the fishermen and tourists that are the economic base of Hatteras Island and Ocracoke. While I support protecting our wildlife, I do not believe that 11 pairs of threatened (not endangered!) piping plovers are more important than the thousands of human lives Hatteras Island supports, and I do not support the killing of racoons and other wildlife to protect the birds. My understanding is that the number of piping plovers has more to do with the number of hurricanes in the Atlantic than the number of vehicles or pedestrians on the beaches. For the past 50 years there have been an average of 11 pairs of plovers, except during times of more than normal hurricanes, so why is the NPS trying to deny beach access now when there are the same number of plovers there have been for the past 50 years? Why do the plans close so many different areas of the beach?? I support free and open beaches. Please just rope off small areas (25 yards?) of beach if birds or turtles are nesting to protect the wildlife, but don't keep out the people all season who support and love this area. We enjoy our time on Hatteras Island, because we can drive on the beach and it is a unique experience. PLEASE do not restrict vehicle and pedestrian access to the beaches!!

Correspondence: To Whom It May Concern:
I am highly disappointed by the lack of balance in the National Park Service's preferred alternative in the draft Cape Hatteras National Seashore Off-Road Vehicle Management Plan / Environmental Impact Statement I (DEIS). The highly restrictive measures outlined in Alternative F go directly against NPS's dual mandate to provide recreational opportunities and protect resources.
I fully support the position statement written by the Coalition for Beach Access (available at <http://www.obpa-nc.org/position/statement.pdf>). The coalition's statement is a balanced, realistic approach to management that takes into account the available relevant science while recommending common sense solutions that fit nicely within the legal, political, and economic contexts of the situation.
Of the many objectionable aspects of the DEIS, I find two management recommendations particularly outrageous: the prohibition on driving the beach at night and the 1000 meter buffer for piping plover chicks.
Night Driving Prohibition The beach is a magical place to be at night, and nighttime fishing is often magically productive. The scenic value can hardly be overstated, whether you're fishing for drum under a harvest moon or watching meteors streak and bioluminescent waves sparkle under a new moon. The DEIS does not account for the incredibly high value of this recreational opportunity. For a well-considered discussion of why night driving should be allowed, please see pages 37-42 of the recently released document "Sea Turtle Management ? A Common Sense Approach for the Cape Hatteras Seashore Recreational Area" by Larry Hardham and Bob Davis (available at <http://www.obpa-nc.org/turtles/TurtleMgmtProgram.pdf>).
Plover Buffer The 1000 meter recommendation is off by an order of magnitude. Closing a 2 kilometer (1 1/4 mile) section of beach for each brood is absurd. The "Patuxent Protocols," the dubious document from which the 1000 meter buffer seems to derive, makes clear that its recommendations allow for discretion: "These protocols DO NOT ATTEMPT TO BALANCE the need for protection of these species with other activities that occur at CAHA, nor was NPS management policy considered in detail" [emphasis added] (p. 3, 2005 document). NPS's job is to balance resource protection with human activities; why, then, is NPS opting for the highest level of protection found anywhere in the scientific literature?
Thanks very much for taking the time to consider my comments.
Sincerely,
Mike Donaldson

Correspondence: Dear Superintendent Murray,
I am very concerned that Off Road Vehicle use is being considered on the Cape Hatteras National Seashore. I believe that this area under the Organic Act and National Seashore legislation is to be protected for all visitors and for the wildlife and habitat. Conserving this beautiful area for now and for the future should take precedence over one form of recreation (that of ORVs) use.
As a specifically designated Park area by the US Congress, Cape Hatteras beaches should be protected by the National Park Service and permanently preserved as a primitive wilderness.
I believe that ORV use would endanger that primitive wilderness and is best suited for less fragile environments.
Thank you for the work you do, and I count on you to have the wisdom to protect one of America's most beautiful and important seashores!
Sincerely,
Judith L. Pilutti

Correspondence: I visit the Cape Hatteras National Seashore (OBX), along with family and friends, several times a year during various seasons of the year for the purpose of surf fishing via the Off Road Vehicle access (ORV) to the beaches.
My visits help to support the local economy through the purchases of goods and services. If ORV beach access were to be denied I, and others like me, would cease to visit the OBX and the OBX families and businesses would economically suffer.
The vast majority of those of us that use the ORV access to the beaches do so with great respect and care. We follow the rules and regulations. The beaches are actually better off as a result of our visits than they would be otherwise (we clean, protect and preserve). Sure, there are those that don't follow the rules and regulations, as you will find any where in our society. But generally you do not punish all (via access denial) for the wrong doing of so few. Increase the enforcement and punishment of those that should be punished. If funds are an issue, I am sure that appropriate permits, fees etc. associated with the access and use of the beaches would be gladly accepted in order to rid the beaches of those that would do harm and allow continued ORV access for those that admire, respect and care for them.

It is my understanding that the OBX was established for the recreational use and enjoyment for the people. Fishing and ORV access is the largest recreational use of the beaches. Does not the National Environmental Policy Act (NEPA) require that the important parts and the diverse use of the OBX be preserved? Historically fishing via ORV access has been a regular and important part of the use of the beaches.

Surely intelligent and wise men and women can come up with a plan that would preserve and protect our precious seashore, while avoiding prohibiting the ORV access and its impact (huge blow to the local economy and the stripping of rights held by the people today and tomorrow to enjoy the recreation of the OBX).

Thank You,

Robert L. Handlon 3303 Wynnewood Dr. Greensboro, N.C. 27408 336/288-0033

Correspondence: Cape Hatteras National Seashore Recreational Area DEIS Comment

The legislation states: "said area shall be, and is, established, dedicated, and set apart as a national seashore recreational area for the benefit and enjoyment of the people and shall be known as the Cape Hatteras National Seashore Recreational Area." The enabling legislation created the park as a Recreation Area not a Wildlife Refuge. Areas such as Pea Island National Wildlife Refuge on Hatteras Island were created to provide habitat and protection for endangered and threatened species. Finding a way to guarantee unrestricted public beach access for pedestrians and ORV that coexists with wildlife needs to be the highest priority. I believe ORV & pedestrian corridors should be maintained with adequate monitoring through temporary resource closures to provide access to the beach. Because of the distances involved, ORV access corridors are required so citizens can travel to their desired destinations within the Recreation Area. ORVs have historically served as the primary form of access for many portions of the beach in the Recreation Area, and continue to be the most practical means of access for most visitors to Hatteras Island. To limit ORV access would discriminate against individuals with limited mobility due to age or physical impairments, families with children, senior citizens and those wishing to engage in activities requiring recreational equipment such as Fishing, surfing, birding, swimming and family gatherings. Equipment needed for recreating in popular areas of the park cannot be easily carried on foot through miles of deep sand on a hot summer day by even the fittest individual without the risk of heat stroke, dehydration, physical exhaustion or even death. For example: Water, Food, Beach toys, umbrellas, beach chairs, coolers, fishing poles, tackle boxes, water-sports boards, first aid kit, cameras, binoculars, etc... ORVs in remote areas of the beach provide shelter from lighting, a place to get out of the heat and emergency transportation for an ill/injured child or elder. ORVs have been used on the Hatteras Island beaches for decades without any resource conflict. It is imperative that ORV use be recognized for exactly what it is: A historical means of access to an area for recreational opportunities. The use of an ORV is not considered a recreational activity in this Recreational Area. ATVs are not permitted. These recreational opportunities sought, allow the public to enjoy the Seashore's resources and values. Denying access to recreational opportunities, many of which are specifically protected in the Enabling Legislation, denies the Seashore's current visitors the opportunity to enjoy the park's resources and values and denies future generations the opportunity to enjoy the park's resources in direct violation of Park Services Management Policies. There is no evidence that ORV beach access causes any unacceptable environmental impacts in the park. Often, traces of ORV access are erased by wind and tide in a matter of hours.

The beaches within the Cape Hatteras National Seashore Recreational Area offer high recreational value to the public. While all of the beaches are suited and commonly used for swimming, sunbathing, wading, shelling and fishing, some beaches are uniquely more favorable for some specific activities. These specific areas should have minimal and flexible buffers for birds and turtles because ORV Closure is the Least Significant Factor Affecting Nest Survival. Humans and ORVs can coexist in harmony with birds and turtles. Scientific studies prove that human and ORV presence have an insignificant impact on nesting. Predators, Tides and Storms account for nearly all the lost nest in CHNSRA. Human presence benefits birds and turtles because Human presence decreases predator presence and increases nest survival rates. Prime historical recreation areas that require guaranteed public ORV access under the plan must include: Buxton to Cape Point ? World Famous Surf Fishing on Cape Point ? Prime water sports ? Favorite gathering area for locals and visiting families ? Prime Birding area ? Prime shelling area Cape Point to the Frisco Village line (South Beach) ? Prime child-safe swimming area south of Cape Point to Frisco village ? Favorite gathering area for "locals" and visiting families ? Prime shelling area ? Prime horseback riding area ? Recreational and commercial cast-netting at Cape Point ? Sunbathing ? Water sports ? Snorkeling ? Birding Ramp 55 to/including Hatteras Spit (Hatteras Inlet) ? Prime fishing area from ramp 55 around Hatteras Inlet spit ? Ramp 55 to/including Hatteras Spit (Hatteras Inlet) ? Recreational and Commercial cast-netting ? Prime family gathering area for visitors in the Hatteras Village area ? Water sports ? Birding Turtle Nests should be relocated from ORV corridors in these prime historical recreation areas. South Beach is an unproductive Plover nesting area so access should be open year round to South Beach. I support resource protection for shorebirds and sea turtles based on peer reviewed science. Who better to advocate preservation of area wildlife than the people whose lives and futures are intertwined to the success of each species?

I agree with these Shorebird / Water bird Buffers: Species Breeding Behavior/ Nest Buffer ORV Pass-through Unfledged Chicks Piping Plover 50 m 30 m 200 m American Oystercatcher Flush + 15m Flush + 15m Flush + 15m Least Terns 30 m 30 m 30 m Other Species CWB 30 m 30 m 30 m MAXIMUM Piping Plover Unfledged Chick Buffers Establish a 200 meter buffer / Closure around the unfledged chick(s) location. Adjust buffer as needed when chicks are mobile. Establish ORV/Pedestrian access corridors. Vehicles may be allowed to pass through portions of the protected area that are considered inaccessible to PIPL chicks because of steep topography, dense vegetation, water or other obstacles. Morning access to the points and spits may be delayed until chicks have been located if the access corridor passes between the waterline and through the buffer area that would otherwise be closed. Reopen access corridor outside of pre-nesting area after chicks fledge. Remove pre-nesting closure 2 weeks after all chicks in the area have fledged.

Ample scientific evidence and precedent exists to support a 200 meter buffer.

*** As part of the NEPA process, I Formally Request the National Park Service to provide peer-reviewed science that justifies a 1,000 meter closure in all directions.

MAXIMUM American Oystercatcher Unfledged Chick Buffers Establish a 30 meter buffer/closure around the unfledged chick(s) location. Adjust buffer as needed when chicks are mobile. Monitor daily. Establish ORV/Pedestrian access corridors. Buffers/closures will be removed after AMOY chicks have fledged (observed flight of 30 meters).

MAXIMUM Colonial Water birds Unfledged Chick Buffers Establish a 30 meter buffer/closure around the chick(s) location. Adjust buffer as needed when chicks are mobile. Monitor daily. Establish ORV/Pedestrian access corridors. Buffer/closure will be removed after all chicks have fledged.

I believe the Four-wheel drive vehicles allowed to drive on the Recreation Area beaches should be registered, licensed, and insured and comply with inspection regulations within the state, country or province where the vehicle is registered. All-Terrain Vehicles (ATVs) should be prohibited. ATVs are defined as a type of off highway vehicle that travels on three or more low-pressure tires; has handle-bar steering; and has a seat designed to be straddled by the operator.

The science offered to support the environmentalist positions does not justify the extreme ORV and pedestrian access restrictions proposed in the DEIS. I believe ORV access to Cape Point, South Beach and Hatteras Inlet should not be restricted.

The proposed 1,000 meter pedestrian/ORV closure in all directions for a piping plover unfledged chick brood is extreme and scientifically unjustified. This equals approximately 771 acres per brood. The plover closure should be reduced to 200 meters.

The Oystercatcher is not a federally threatened species and the proposed 300 meter pedestrian/ORV closure is extremely excessive. The Oystercatcher closure should be reduced to 15 meters.

In my opinion, there is no scientific justification to deny human entry into large areas of the recreation area and severely restricting the public's access to all portions of the beach.

I urge you to preserve our beaches, protect natural resources with common sense policies, but not prohibit ORV use and pedestrian access to any portion of the Cape Hatteras National Seashore Recreational Area at any time. Remember, the National Seashore Recreation Area was established for the benefit and enjoyment of the people of this country. How can future generations enjoy the area if access is severely restricted? CORRIDORS are vital in providing access while managing resources. MANAGEMENT BUFFERS must be based on peer-reviewed science. NON-ENDANGERED BIRDS

0012547

should NOT have the same protection as if endangered. TURTLE MANAGEMENT would benefit from nest relocation and other practices. So, please save the communities of Hatteras Island and preserve the historic & cultural way of life of the people on this island for future generations to experience. There are many miles of unpopulated barrier islands on the east coast that are better suited to enhance shorebirds and turtles than Hatteras Island.

The enabling legislation created "The Cape Hatteras National Seashore Recreational Area" for all to enjoy (beachcombers, sunbathers, surfers, horseback riders, anglers, hikers, joggers, wildlife observers, kayakers, swimmers, families, children, grandparents?). The park was never intended to be "The Cape Hatteras Special Interest Group Area for National Audubon Members Only!"

Thank You

Correspondence: At age 41 I have been a lifetime visitor and huge fan of Cape Hatteras National Seashore. I am a sport fisherman and love to fish in the park. I do not have a boat and love to surf fish.

After skimming parts of the instant document, I can see that option are still limited for those of us wishing to recreate on the beaches of Cape Hatteras. I am in favor of a plan that protects all the animals in the park and allows for normal and customary ORV access. Normal and customary access as I have been privy to includes but is not limited to:

- no night time restrictions - normal enclosures around turtle nests - normal beach closures for narrow dunes / tide line - no expansion of enclosure due to violations which then preclude beach access

What I am unhappy with: - Huge wintering habitat closures - Huge spring/summer habitat closures - nighttime restrictions - enlarging of enclosures due to violations - the taking of predatory animals to increase the successful breeding efforts of the plover. These measures in my opinion, are unbalancing nature. - The use of enclosure that reach thousands of yards long are unnecessary and abusive to the publics access to the beaches. - I am tired of the very birds mentioned as being protected, also being seen nesting the parking lots of the local stores / grocery stores. This is a joke! If protection is not being afforded the birds in the towns it is not fair or practical to be biased toward the public on the beaches for pedestrian or ORV access. - enclosures! resource enclosures should only be erected in the presence of a truly endangered species. Migratory birds are not endangered!!!!

I could go on and on and write a novel for you to review, but in a nutshell, I am for continued open access for ORV and Pedistrian use of the beaches in Cape Hatteras National Seashore.

I am not opposed to a permit requirement to access the beaches. But, permits should be readily available from all park rangers and all ranger stations. I also think the fee for a permit should be under \$50 per year and should not be used as a mechanism to earn income. The permit should be a mechanism for those who truly want to be on the beach and will care for it. This should deter the once a year weekend warrior just wanting to see if his/her 4x4/suv really does work.

Also, it is critical that access to the most popular spots such as the inlets (bodie island/oregon inlet, the point at buxton, hatteras inlet, and the north and south ends of ocracoke) remain available. I for one can tell you that my trips to Hatteras have been limited or cancelled due to the lack of access to the beaches I have always fished with no restrictions on access to in the past. ORV's nor Pedistrians are scaring these birds nor are they hurting or killing the birds or turtles for that matter. The environmentalists are running wild and they Fed. Govt. needs to shut them down and tell them to go away period!!

The concent decree is a joke. Judge Boyle is wrong and this needs to be remanded to a higher court. Additionally, the United States of America needs to enact its Sovereign Right and tell the environmental lawyers and groups that they will not be able to sue the federal gov't any longer.

Keep things in their simplest terms... use a permit, maintain reasonable enclosures on an as needed basis, and be reasonable on all fronts. I for one will protest to gov't if the beaches are severely limited.

Finally on the endangered species ... I would like to mention that I have read on fed gov't websites that the number of sea turtles is unknown and they have no idea where they go once out in the ocean! If their numbers are unknown then how can we positively state that they are endangered????? Science is key, and estimating species population through algorithms and estimating is not a fact based system and not reliable, plus it can be manipulated by whoever is writing the formulas. In addition, the science behind the breeding success of the Piping Plover is flawed. There have been no successes in additional breeding of the plover at cape hatteras with the restrictions of beach access to ORV's, over prior years. Science must concede that fledgling rates will vary from year to year and with respect of weather, tides, and natural predation.

Thank you, Andrew Fonda

Correspondence: Dear Superintendent Murray,
As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.
1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."
2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness...."
Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.
3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.
Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

Correspondence: Regarding Pet Restrictions:
REFERENCE - Page 136: I strongly disagree with your pet restriction proposals. The prohibition of pets in the Seashore during bird breeding season including in front of the villages. No Pets in public areas beaches, campgrounds, soundfront, foot trails, park maintained roads -from March 15 through July 31.
COMMENTS: As a multi-year visitor to the Outer Banks, I can state unequivocally that I will no longer visit if I am not able to take my dogs to the beach. While I LOVE the Outer Banks, my family and I love traveling with our dogs even more and we will find other "pet friendly" vacation places to go. Why vacation with pets if they can't join you on the beach for play and recreation?
I know many, many of my friends who make their vacation decisions based on the ability to be with and recreate with their dog companions at the shore, on a lake, and on hikes. Your restrictions will drive away many dog owners who would otherwise choose your location for a spring/summer vacation.
Leashed dogs cannot do damage...please allow them year-round! (And possibly consider an off-leash designated area without access to nesting areas).

Correspondence: For the last 14 years I have owned a business on Hatteras Island. With the economic downturn most businesses are barely 'holding on' to survive. If the environmentalists are allowed to get their way it is likely many businesses will fail causing more folks in the unemployment lines burdening our already very delicate economy. More importantly it should be noted that Hatteras Island wildlife has been thriving for many years, well before the environmentalists decided to take up a cause on the island. The natives and guests on HI are here because of their respect and love of nature. There are plenty of other beaches on the east coast to vacation but if you talk to HI vacationers especially to those who are first-timers they commonly agree this is a peaceful nature-loving area and they love the solitude of the beaches. Many natives are instrumental in protecting the wildlife here and go to great lengths and give much time to monitor turtle nests, etc. I pray that the environmentalists do not turn our beautiful Hatteras Island into California where they were instrumental in putting 50,000 people out of work/business in one area. The HI locals have weathered many horrible storms, hurricanes, norasters but I'm beginning to believe we highly-intelligent humans will soon be on the extinct list promoted by a small body of environmentalists -- who then will be monitoring our nests? Please ensure sanity and common sense are applied to the Outers Banks of Hatteras Island.

Correspondence: DEIS Comments for the Cape Hatteras National Seashore Recreational Area
The legislation states: "said area shall be, and is, established, dedicated, and set apart as a national seashore recreational area for the benefit and enjoyment of the people and shall be known as the Cape Hatteras National Seashore Recreational Area." The enabling legislation created the park as a Recreation Area not a Wildlife Refuge. Areas such as Pea Island National Wildlife Refuge on Hatteras Island were created to provide habitat and protection for endangered and threatened species. Finding a way to guarantee unrestricted public beach access for pedestrians and ORV that coexists with wildlife needs to be the highest priority. I believe ORV & pedestrian corridors should be maintained with adequate monitoring through temporary resource closures to provide access to the beach. Because of the distances involved, ORV access corridors are required so citizens can travel to their

desired destinations within the Recreation Area. ORVs have historically served as the primary form of access for many portions of the beach in the Recreation Area, and continue to be the most practical means of access for most visitors to Hatteras Island. To limit ORV access would discriminate against individuals with limited mobility due to age or physical impairments, families with children, senior citizens and those wishing to engage in activities requiring recreational equipment such as Fishing, surfing, birding, swimming and family gatherings. Equipment needed for recreating in popular areas of the park cannot be easily carried on foot through miles of deep sand on a hot summer day by even the fittest individual without the risk of heat stroke, dehydration, physical exhaustion or even death. For example: Water, Food, Beach toys, umbrellas, beach chairs, coolers, fishing poles, tackle boxes, water-sports boards, first aid kit, cameras, binoculars, etc... ORVs in remote areas of the beach provide shelter from lighting, a place to get out of the heat and emergency transportation for an ill/injured child or elder. ORVs have been used on the Hatteras Island beaches for decades without any resource conflict. It is imperative that ORV use be recognized for exactly what it is: A historical means of access to an area for recreational opportunities. The use of an ORV is not considered a recreational activity in this Recreational Area. ATVs are not permitted. These recreational opportunities sought, allow the public to enjoy the Seashore's resources and values. Denying access to recreational opportunities, many of which are specifically protected in the Enabling Legislation, denies the Seashore's current visitors the opportunity to enjoy the park's resources and values and denies future generations the opportunity to enjoy the park's resources in direct violation of Park Services Management Policies. There is no evidence that ORV beach access causes any unacceptable environmental impacts in the park. Often, traces of ORV access are erased by wind and tide in a matter of hours.

The beaches within the Cape Hatteras National Seashore Recreational Area offer high recreational value to the public. While all of the beaches are suited and commonly used for swimming, sunbathing, wading, shelling and fishing, some beaches are uniquely more favorable for some specific activities. These specific areas should have minimal and flexible buffers for birds and turtles because ORV Closure is the Least Significant Factor Affecting Nest Survival. Humans and ORVs can coexist in harmony with birds and turtles. Scientific studies prove that human and ORV presence have an insignificant impact on nesting. Predators, Tides and Storms account for nearly all the lost nest in CHNSRA. Human presence benefits birds and turtles because Human presence decreases predator presence and increases nest survival rates. Prime historical recreation areas that require guaranteed public ORV access under the plan must include: Buxton to Cape Point ? World Famous Surf Fishing on Cape Point ? Prime water sports ? Favorite gathering area for locals and visiting families ? Prime Birding area ? Prime shelling area Cape Point to the Frisco Village line (South Beach) ? Prime child-safe swimming area south of Cape Point to Frisco village ? Favorite gathering area for "locals" and visiting families ? Prime shelling area ? Prime horseback riding area ? Recreational and commercial cast-netting at Cape Point ? Sunbathing ? Water sports ? Snorkeling ? Birding Ramp 55 to/including Hatteras Spit (Hatteras Inlet) ? Prime fishing area from ramp 55 around Hatteras Inlet spit ? Ramp 55 to/including Hatteras Spit (Hatteras Inlet) ? Recreational and Commercial cast-netting ? Prime family gathering area for visitors in the Hatteras Village area ? Water sports ? Birding Turtle Nests should be relocated from ORV corridors in these prime historical recreation areas. South Beach is an unproductive Plover nesting area so access should be open year round to South Beach. I support resource protection for shorebirds and sea turtles based on peer reviewed science. Who better to advocate preservation of area wildlife than the people whose lives and futures are intertwined to the success of each species?

I agree with these Shorebird / Water bird Buffers: Species Breeding Behavior/ Nest Buffer ORV Pass-through Unfledged Chicks Piping Plover 50 m 30 m 200 m American Oystercatcher Flush + 15m Flush + 15m Flush + 15m Least Terns 30 m 30 m 30 m Other Species CWB 30 m 30 m 30 m MAXIMUM Piping Plover Unfledged Chick Buffers Establish a 200 meter buffer / Closure around the unfledged chick(s) location. Adjust buffer as needed when chicks are mobile. Establish ORV/Pedestrian access corridors. Vehicles may be allowed to pass through portions of the protected area that are considered inaccessible to PIPL chicks because of steep topography, dense vegetation, water or other obstacles. Morning access to the points and spits may be delayed until chicks have been located if the access corridor passes between the waterline and through the buffer area that would otherwise be closed. Reopen access corridor outside of pre-nesting area after chicks fledge. Remove pre-nesting closure 2 weeks after all chicks in the area have fledged.

Ample scientific evidence and precedent exists to support a 200 meter buffer.

*** As part of the NEPA process, I Formally Request the National Park Service to provide peer-reviewed science that justifies a 1,000 meter closure in all directions.

MAXIMUM American Oystercatcher Unfledged Chick Buffers Establish a 30 meter buffer/closure around the unfledged chick(s) location. Adjust buffer as needed when chicks are mobile. Monitor daily. Establish ORV/Pedestrian access corridors. Buffers/closures will be removed after AMOY chicks have fledged (observed flight of 30 meters).

MAXIMUM Colonial Water birds Unfledged Chick Buffers Establish a 30 meter buffer/closure around the chick(s) location. Adjust buffer as needed when chicks are mobile. Monitor daily. Establish ORV/Pedestrian access corridors. Buffer/closure will be removed after all chicks have fledged.

I believe the Four-wheel drive vehicles allowed to drive on the Recreational Area beaches should be registered, licensed, and insured and comply with inspection regulations within the state, country or province where the vehicle is registered. All-Terrain Vehicles (ATVs) should be prohibited. ATVs are defined as a type of off highway vehicle that travels on three or more low-pressure tires; has handle-bar steering; and has a seat designed to be straddled by the operator.

The science offered to support the environmentalist positions does not justify the extreme ORV and pedestrian access restrictions proposed in the DEIS. I believe ORV access to Cape Point, South Beach and Hatteras Inlet should not be restricted.

The proposed 1,000 meter pedestrian/ORV closure in all directions for a piping plover unfledged chick brood is extreme and scientifically unjustified. This equals approximately 771 acres per brood. The plover closure should be reduced to 200 meters.

The Oystercatcher is not a federally threatened species and the proposed 300 meter pedestrian/ORV closure is extremely excessive. The Oystercatcher closure should be reduced to 15 meters.

In my opinion, there is no scientific justification to deny human entry into large areas of the recreation area and severely restricting the public's access to all portions of the beach.

I urge you to preserve our beaches, protect natural resources with common sense policies, but not prohibit ORV use and pedestrian access to any portion of the Cape Hatteras National Seashore Recreational Area at any time. Remember, the National Seashore Recreation Area was established for the benefit and enjoyment of the people of this country. How can future generations enjoy the area if access is severely restricted? CORRIDORS are vital in providing access while managing resources. MANAGEMENT BUFFERS must be based on peer-reviewed science. NON-ENDANGERED BIRDS should NOT have the same protection as if endangered. TURTLE MANAGEMENT would benefit from nest relocation and other practices.

So, please save the communities of Hatteras Island and preserve the historic & cultural way of life of the people on this island for future generations to experience. There are many miles of unpopulated barrier islands on the east coast that are better suited to enhance shorebirds and turtles than Hatteras Island.

The enabling legislation created "The Cape Hatteras National Seashore Recreational Area" for all to enjoy (beachcombers, sunbathers, surfers, horseback riders, anglers, hikers, joggers, wildlife observers, kayakers, swimmers, families, children, grandparents?). The park was never intended to be "The Cape Hatteras Special Interest Group Area for National Audubon Members Only!"

Thank You

Correspondence: I believe the existing consent decree policies are overly restrictive, are damaging, and will further damage the economy of the outer banks. I am in favor of protecting endangered species but there needs to be a balance. I have seen policies regarding beach driving and beach access particularly involving the plovers, that are rendering large sections of the beach off limits. What is the point of having a National Park if we can't use it? I propose that no entire section of any beach be closed for this protection. There must be specific access ways for both vehicles and pedestrians that allow access to other areas of the beach beyond where the protected areas are located while maintaining reasonable buffer areas for nesting birds or turtles.

Correspondence: I will only say that as a taxpaying American, I am appalled that a few groups of individuals who favor animal rights over human rights have been able to just about shutdown access to the Cape Hatteras National RECREATION Area.
 I expect access to my beach as I support the beach via my tax dollars. The Cape Hatteras national Recreation Area is not, and should not be, a bird or turtle sanctuary. There is Pea Island for that purpose.
 Do I support protecting animals from the few crazy people out there? Of course I do! But don't remove a right of access to ALL for the stupidity and carelessness of a few.
 Species go extinct daily. Do you really think we as humans can prevent the next one from going extinct?
 Think about this, if the dinosaurs did not go extinct, we wouldn't be here to help keep the birds from going extinct.
 Give all of us, 4x4'ers included, more access to our national treasure that is the Cape Hatteras National Recreation Area- Since 1954 I believe.
 thanks for listening.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
 This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
 The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
 *Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
 * Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
 * Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
 Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to

provide greater pedestrian access.

This alternative plan presents a rare opportunity for finding common ground where non-ORV users of the beaches and those committed to the care of creation can meet. Families can continue to enjoy non-ORV uses they have always enjoyed and also protect the beaches, including wildlife, that they want their children and grandchildren to enjoy, too.

If you cannot see fit to enact the Alternative D plan, please ensure fair use by non-ORV users. Please:

*Provide Equal Access for ALL Visitors, which the National Park Service's preferred plan, Alternative F, does not do because ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This is not a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.

* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this priority. That's because protection of natural resources provides near-term and long-term legacy benefits for everyone, while allowing off-road vehicles provides temporary thrills for only a few at the expense of other people and their common natural inheritance--including the economic benefits that come from maintaining an area that will attract all kinds of visitors. Plan F also fails to set aside adequate areas that are free of ORV use year-round for wildlife, including breeding, migrating, and wintering species. Based on science, the wildlife disturbance buffers in the Plan F are bare minimums; at least increase them if science indicates it is necessary to protect breeding birds and sea turtles.

* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities to support wildlife. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Correspondence: I disagree with the proposed restrictions on pedestrian and off road vehicle (ORV) access to the Cape Hatteras National Seashore Recreation Area. Predators have a larger impact on protected wildlife populations than do vehicles or pedestrians. ORV and other recreational uses would NOT have long term major adverse impacts on sea turtles as there have NOT been frequent deaths, nest lost, disorientation or hatchling mortality due to ORV use or night time beach driving. Dredge and spoil island populations must be included in total population counts for accurate numbers and activity.

Correspondence: Please keep in mind the people who use and enjoy the beaches and those whose livelihoods depend on full access yet monitored beaches as you consider your final options. The impacts to us are huge. Please do not cave in to the fear of continued lawsuit by the three environmentalist groups who filed suit in 2008 with the cooperation of environmentalist judge Boyle. You hold the power to stand up for the citizens who need the access, and at the same time stand up to the overprotective environmentalists and say they have gone too far. Your ORV management plan should be able to stand the light of day even if it gives the same degree of openness, although monitored, as it did before the lawsuit and the consent decree. You as the park service have always done a good job, we just hit a bump in the road with the lawsuit. Now it is time to stand up to those environmentalists and say they are overstepping as they always have done and they always will continue to do as long as people let them do it. Thanks for continuing to work with the citizens as you explore an option better than F, at least try to keep corridors in place for moving around closures.

Correspondence: Dear Mike Murray,

I strongly disagree with the predation program.

Page #237 "Foraging Habitat." There is a ghost crab shown on this page. It's part of the gull-billed terns diet. Why are park employees killing ghost crabs in the park? Page #232 "Human Activity." DEIS states a negative impact to nesting shore birds due to ORV and pedestrians. FACT: NPS acknowledges their vehicles ran over 20 piping plovers in the nesting season. UMF research. Page #232 "Risk Factors to American Oystercatchers." DEIS states human disturbance is only 4% and ocean overwash is 29%. Why shut down Cape Point when it's an overwash area? Page #209 "Predation 1st paragraph DEIS lists all predators." The last predator listed is "birds of prey". Why are all the other predators trapped and killed in htis park, except for falcons and hawks? Predation is part of the natural balance in wildlife. Stop trapping and killing all over the island. Page #212 "Research, surveying, and protective management activities are a risk to piping plovers." The DEIS just stated that NPS, biologists, trappers...are negatively impacting the piping plovers. Need I say more!?

Sincerely,

Kim Mosher

Correspondence: Dear Superintendent Murray,

I am very disturbed by the proposed ORVs plan for Cape Hatteras National Seashore that will allow disproportionant use of ORVs on an area that was to be set aside as a "primitave wilderness" except for "some" recreational use. When this park was established I do not think this wording ment that almost all the seashore should have trucks parked on it. Just because this was allowed in the past does not mean that it needs to continue. Upon reading the proposal it appears that this proposal has been unduly affected by the very local demands of the the fishing community. This is not how a NATIONAL treasure should be administered. Please reconsider the proposal and take into account what the seashore was supposed to be.

As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft

plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.

- 1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."
- 2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness...." Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.
- 3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.

Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

Correspondence:	Dear Mike Murray, I strongly disagree with the DEIS on pages 121-127 concerning the large, inflexible and non-scientific buffers of 1,000 meters for piping plovers. Piping plovers are not even endangered. This 1,000 meter buffer is no where else in this country. Why here? This 1,000 meter buffer completely takes away the observance and education to the human race. I live right here in Buxton, NC 2 miles from Cape Point. I can no longer nejoy, observe or educate myself or others on the seashores nesting birds. The biologists that work in the Park even say it's way to big. "OverKill"! Piping plovers forage on sand/mud flats, not the rough north side of Cape Point. Cape Point, historically is a flooded wash over area, that constantly changes with each tide. Storms and ocean swells historically reshape this unique area. Historical and cultural Cape Point should never be denied access, and I don't mean walking in waist water. There can be room for both human access and protected nest sites for shorebirds. I've observed this for 25 years. Clear some vegetation near the salt ponds. It used to be much more favorable for nesting birds, before ORV and pedestrian access was denied. Please show me the science that proves the 1,000 meter really works. After the 2nd year of Audubon's consent decree; it did not prove to help the piping plovers. They actually declined in numbers. Sincerely, Kim Mosher

Correspondence:	Dear Mike Murray, I strongly disagree with the DEIS pages #270-285 concerning the Socioeconomic Impact. Page #28` quote "The economy of the ROI is largely driven by the reigon's tourist draw, mainly during hte summer months." end quote... Hatteras Island's economy is more than just summer months. Spring and Fall fishing has always been a huge part of the economy here for well over 50 years. Beach closures have dramatically impacted this industry negatively, as well as other activities in the Park. THE ROI is a very weak example of how important Dare County's economy is to the state of North Carolina. Dare County used to be one of the top 4 donor counties to North Carolina. Now we are 4.1 million dollars under budget. North Carolin State is 410 million dollars under budget. Shutting beaches down with non-scientific 1,000 meter buffers is clearly destroying this economy. Why would tourists come to a Naitonal Recreatoinal Park, when it is closed. No one that owns a business on Hatteras Island was asked how their business has struggle with closed beaches due to the consent Decree. Including myself. Why? How can you say the ROI was factual in the DEIS?

Correspondence: Dear Superintendent Murray,

As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.

1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."

2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness..."

Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.

3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.

Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

Correspondence: I do not agree with the DEIS. The proposed legislation and restrictions are not congruent with the successful preservation measures that other parks have seen success utilizing. 1,000 meter restrictions for one nest is an extreme measure and other parks have implemented 300 meter rules and seen great success. I'm for protecting the natural environment and it's native species, but this can be accomplished without the huge economic impact that would be seen if this drafted version of restrictions were put in affect. The restrictions listed in the DEIS are overkill and should be optimized to ensure the least amount of environmental and economic impact.

Correspondence: My family visits the Cape Hatteras sea shore about three to four times a year. It is our favorite place to get away on vacations. My husband is a fisherman and has always went there to fish. We drive out on the beach and enjoy the experience. We are all about preserving the area and being responsible to the park and the animals living there. People and animals can co exist. Man should come before animals in the long scheme of things. Plans just need to be made to benefit both. Closing a whole beach from man so that a bird can nest is insane. If we are not smart enough by now to figure out away around a birds nest than we really haven't evolved much have we??? I want to share the sea shore with my children and someday their children but if I can't because a bird may want to nest there, what a shame. If I am not mistaken can't birds FLY? I mean really what are we talking about here? People and animals co exist all across the world. You can't close down the mountains because their may be bears or wolves there. You can't close down the cities because their may be deer in the neighborhoods. In my opinion, I feel closing down the beaches would be a huge mistake for everyone. If the birds do not like having people around than they can fly else where. Families should have the right to enjoy what God has given us and it should not be regulated by one group of conservationist. I am all for protecting animals and their rights but what about the rights of the people. Please do not close the beaches. Sincerely Beach Lover Angela Weston

Correspondence: Please accept this letter as my comments on the ORV DEIS before you at this time. After reviewing the NPS DEIS I must disagree with any of the six alternatives within the document. The DEIS management alternatives have little to do with developing a responsible off road vehicle management plan. The alternatives map out a plan to exclude humans from the Cape Hatteras National Seashore and Recreation Area. Unless my feet are now classified as

off road vehicles, this document is wat off base.

A 1000 meter buffer zone for common shore bird nests ia absolutely absurd. This buffer zone allows a bird nest a circle that cannot be entered by humans that is over a mile across! We do not afford this type of easment to any other animal. We do not provide this much of a buffer zone to the president! It makes no sense what so ever to place the buffer zone around the nests of oyster catchers and terns let alone the misguided plovers that are attempting to nest outside of their natural range.

Another thing that really bothers me is the way the National Park Service is slaughtering mamalian wildlife under the guise of protecting endangered birds. THE BIRDS ARE NOT ENDANGERED! The fact that the park service is deciding which wildlife can live and which species should be irradiated disgusts me.

I have reviewed the 77 page Coalition for Beach Access Statement signed by several groups that were a part of the negotiated rule making process (another travesty) and it by far succeeds in furnishing the best visitor experience while maintaining the needs of protecting the fragile resources. Please consider all aspects of this alternative and put actual people, not lawyers, back into the management of Cape Hatteras National Seashore. Nicholas Belcastro Sr.

Correspondence: The NPS must formulate a plan that is consistent with the legislation establishing Cape Hatteras National Seashore Recreation Area. The enabling legislation for the Recreational Area states, in part, "said area shall be, and is, established, dedicated, and set apart as a national seashore recreational area for the benefit and enjoyment of the people and shall be known as the Cape Hatteras National Seashore Recreational Area". Therefore, it is important to balance resource protection with reasonable access for recreation.
Corridors are a vital tool in providing access while managing resources. They provide a small path around temporary resource closures in order to provide access to open areas that would otherwise be blocked. Corridors should be permitted throughout the seashore during the entire breeding and nesting season including ML-1 portions of SMAs. These corridors would provide valuable access without impairment or damage to protected resources. Buffers, or closures, are important management practices for species recovery. However, to have long term benefit for the wildlife and the visiting public, buffers must be based on peer-reviewed science For example, the Piping Plover, a species classified as threatened and not endangered, is given a level of unprecedented protection in Alternative F. A 1,000-meter buffer in all directions represents over 771 acres. The DEIS does not cite any peer-reviewed science in supporting such closure. A more appropriate & effective buffer would be 200 meters. Birds that are not listed as endangered should not be afforded the level of protection given to ESA (Endangered Species Act) protected species. Instead of 300-meter buffers for these birds, a more appropriate buffer would be 30 meters. Also, all birds in the same ecosystem of the seashore should be counted. This includes all the many birds on the dredge and spoil islands located just yards away and within sight of the seashore. The National Park Service should consider turtle management practices successfully used in other federal and state areas to achieve nesting success. More proactive measures include relocating nests to more desirable locations, which is routinely and successfully done in other areas.
Sincerely, Ladd Johnson

Correspondence: Regarding the prohibition on pets in the Seashore during bird breeding season, page 136:
I think the prohibition of pets in popular places such as campgrounds to be unnecessary and unduly restrictive. I support the ability of visitors to bring pets to the Seashore at anytime, and anywhere that pedestrian and / or ORV access is allowed. Pets, on the typical 6 foot or less leash, do not in any way pose a threat to the environment. By banning pets outright, visitors who travel with their pets and enjoy recreational activities with those pets will be excluded from enjoying the seashore.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to

provide greater pedestrian access.

This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.

The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.

* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.

* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence:	To whom it may concern I find the DEIS to be totally inaccurate and lacking in common sense alternatives to beach access and resource protection. Cape Hatteras National Seashore Recreation Area is uniquely suited to beach driving, surf fishing and recreation since unlike the remainder of the Outer Banks it is not overly developed. What it is not suited for is bird and turtle nesting due to the frequent storms and overwash that flood the nest and the predators that eat the eggs, not to mention it is at the farthest reaches of the breeding areas for the proposed protected species. I ask and implore as a tax payer, land owner and responsible user that you disregard the special environmental terrorist groups and implement a more fair and user friendly alternative such as that proposed by the groups making up the Preserve Access organization. Do the right thing and protect access for the people of America.

Correspondence:	I disagree with the DEIS and the closing of Cape Hatteras National Seashore. I believe that closing access to the beaches will have more of a negative impact on the beaches as well as to the local economy. The closing of night time driving will allow more mammalian predators to run free and attack the plover nests as well as turtle nests. I think that the islands off the coast provide better habitat for the plovers and other seashore birds and should be included in the studies of birds in the area.

Correspondence:	On Behalf of all the hardworking people of Dare county, I submit my comments. Since before the Wright Brothers discovered flight here, the Dare county area has been a haven to U.S. taxpaying citizens looking to enjoy the activities this great area offers. Fishing, hunting, hiking, swimming, beachcombing, and boating are just a few. We have coexisted with nature peacefully for hundreds of years until a few over zealous critics expressed unsubstantiated concern over a few species of birds. Now, politics and special interests have pushed this issue of beach driving and open access to the brink. We will NOT sit by and let this happen. I respectfully ask that our constitutional rights to public land not be infringed upon. There is not one single legitimate reason to ban open access to the historical areas of recreation we have enjoyed for so long. Whether by foot or vehicle, we will						

continue to enjoy OUR beaches just as our forefathers.

Correspondence:	When concerning the matter of ORV access at the Cape Hatteras National Seashore I only ask that the national park Service uses legitimate science and not science of a speculative nature. For example, the piping plover population appears to be more adversely effected by the frequency of severe storms instead of the number of people on the beach. Thanks for your consideration. Correspondence:	Dear Superintendent Murray, As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points. 1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations." 2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness..." Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources. 3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals. Please don't permit the destruction seen is some of our National Parks by off road vehicles to ruin this land for everyone else. Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

Correspondence:	In an already disastrous economy the actions taken by the Court and the Park Service have proved devastating to all businesses and residents on Hatteras Island. For anyone to claim differently would be either a misguided statement of ignorance or just plain falisification of the truth. Today our livelihoods are being threatened, by an apparently severly misguided yet politically connected group of people. When reviewing the mngement of any wildlife species by the state of North Carolina, anyone can see our management plans are based on reliable and reputable science and data. POLITICAL WHIMS AND INFLUENCE FROM BEHIND DOOR NEGOTIATIONS AND ARM TWISTING are not entered into the formula for the management of species by our State. I am concerned that political inclination is the reason for and basis of the management buffers within the DEIS. A 1,000 meter buffer in all directions of an unfledged piping plover chick represents 771 acres of closed beach. This is arbitrary and capricious when managing a species. A buffer of 200 meters would be just as effective for the survival of the chick, without extreme penalization of the residents and visitors of Hatteras Island. I have raised my daughter here with childhood days spent in with the park service, looking for turtle nest, cleaning the lighthouse, keeping beached whales alive on cold January days, enjoying sunrise service on Easter Sunday at the old lighthouse sight where her great grandfathers name in etched in stone for the whole world to know that he kept the light burning. No one cares more about our island or its natural inhabitants than those of us who choose a way of life in this remote location, instead of going with the popular flow of bright lights big city. Make sure you take the time to make a decision based on facts and workable plans to keep our island alive for everyone.

Correspondence:	I have been a resident of both the state of Virginia and the state of North Carolina for over 35 years and have been visiting the Outer Banks and specifically the Cape Hatteras National Seashore since 1975. Part of the special allure of the Cape Hatteras National Seashore has been the ability to access the beach via 4 wheel drive vehicle. That has always been what was unique about a visit to Outer Banks. I personally, and for that matter many of my friends, have always respected and obeyed the regulations regarding beach access. I have always taken care to ensure I did my best not to disturb						

any wildlife encountered on the beach. I have also impressed upon any friends who visited the Cape Hatteras Seashore with me of the importance of being proper stewards of the beach and think of how our actions could affect the environment. On a number of occasions I have relayed information on the presence of turtles to the appropriate park rangers to help in their identification of nesting areas. As I have gotten older, I have introduced my family to the beauty of the Cape Hatteras Seashore, and have always educated my children in the importance of respect for the environment and need to be responsible for one's actions when visiting the Outer Banks, especially in off-road vehicles. I was severely disappointed with the National Park Service's decision to severely limit access to the beach for off-road vehicles. In fact, in 2009, it resulted in reducing my visits to the Cape Hatteras National Seashore from an average of 5 visits a season to one visit. I feel the unique beauty and treasures of the Cape Hatteras National Seashore should be available to all. As I get older, the ability to access the beach via off-road vehicle enables me and my family to enjoy the relative remoteness of the Outer Banks without having to park in designated parking areas and walk long distances carrying heavy loads. I am a believer in enforcement of the regulations that restrict behavior that can cause damage to the dunes and nesting areas of the birds and other wildlife that live and visit the seashore. Education and strong sanctions of individuals who deliberately disobey regulations could ease the impact of humans on the environment without punishing those of us who obey the rules. Please envoke my voice as one of the many who feel restriction of off-road vehicles on the beaches of the Cape Hatteras Seashore has served to detract from the uniqueness of the area as one of the great places of National Park Service. There must be another solutions to the off-road vehicle beach access issue to allow others to enjoy the beauty of the Outer Banks as much as I have enjoyed them.

Correspondence: In developing the ORV plan for Cape Hatteras National Seashore the NPS has linked pedestrian and vehicle use together, and proposes resricions on both. Shouldn't pedestrian access be considered as a seperate issue when drafting an Off Road Vehicle Plan? Would it not be better in most cases, if not all, to allow pedestrian access to the beachfront and the soundfront in the Seashore? By adopting a plan that bans pedestian access even below the high tide line, where no birds nest, and no turtle nests are usually found, isn't the NPS being overly restrictive without reason?

Correspondence: Thank you for taking the time to read my comments. My husband and I started bringing my children here since they were infants. Thirty years of vacationing here evolved into eleven years of living here full-time. I honor the Hatteras Island and the people here who honor every aspect of life, be it birds, fish, wildlife or each other. I strongly disagree with the way the DEIS deals with the heritage of the islanders, of which I now considered myself one. I spent some time reading around this 800 page document and am amazed at its complexities. How do you expect people to read and understand all of these proposed policy changes without any educational workshops put forth by the National Park Service? So, I went to the area of the DEIS that dealt with the Cultural and Historical Values. Why in a document that is so large and detailed was only two paragraphs given to this important subject. For thousands of years, people have been on island's beaches. From foot, to horseback and eventually, the automobile, people have used the beaches for travel. The wet sand next to the ocean is the easiest to drive on. The birds don't nest next to the ocean. Many cultural activities are centered around the beach like the jamborees, weddings and family gatherings ? for hundreds of years. On page 83, the DEIS talks about the ORV access as being historic in nature. Since these activities go back more than 50 years, I believe that qualifies the island for protection, not the destruction of Hatteras Culture. The DEIS fails miserably in this category. Also, for all the decades I have been here, the people on the beach (fisherman, surfers, sunbathers) have enjoyed the environment not destroyed it as suggested through the DEIS. The 15 miles set aside for Pea Island is a huge amount of land. Why do the National Park Service seem so intent on taking the Cape Hatteras National Recreational Seashore, too, when I don't see much of an argument to justify this action in the DEIS. Watching the effects of the Consent Decree which is now in its 3rd season, has been heartbreaking to watch my friends and neighbors now struggle to make a living. I didn't see how the Park Service was going to give the residents a bale out when the effects of the DEIS take hold.

Correspondence: I am opposed to all of the alternatives presented in the DEIS because they are all flawed in the fact they diminish the existing visitor experience and do not recognizing the socioeconomic and cultural resource impacts. None of the alternatives recognize the 12 or so miles of pedestrian only beaches contained within Pea Island National Wildlife Refuge. Yes, it is managed by the USFWS, but it is still contained within CAHA. This is a serious flaw.

Alternative A would require less restrictive wildlife closures, opening of interdunal roads, and free (or minimal cost) education and permits for ORV users in order for it to be acceptable.

Alternative B should be completely removed from consideration in this document. A court ordered consent decree, with arbitrary and capricious rules, that were not vetted properly in the NEPA process do not belong in this document as a viable alternative. Unprecedented wildlife closures, no pass through corridors, closures disturbance penalties, and unsubstantiated night time driving restrictions are all new rules brought on by the consent decree. How do non-NEPA vetted rules now become part of every alternative (except alt A), including the preferred alternative?

In the effort to manage wildlife at CAHA, pedestrian and ORV usage is being unfairly portrayed as a significant factor affecting nesting success of birds, even birds not even listed on the U.S. Endangered Species List. The proposed buffers for nesting birds are not based in peer reviewed science, and are not standards used anywhere else on NPS managed lands. In essence the public is being penalized where predation and storms are the true factors to lack of nesting success.

This penalization diminishes the existing visitor experience. Species on North Carolina's list of concern certainly shouldn't trigger closures like those species listed on the U.S. Endangered Species List. In addition, buffers for those species on the U.S. Endangered Species List are excessive, not based on peer reviewed science, and serve only to penalize the visiting public.

Night time driving restrictions are part of every alternative to protect sea turtles (except alt A), yet the science does not exist that proves night time driving affects the turtles. Pass through corridors for ORVs behind nests, any time of day or night, should be part of a preferred alternative.

Proposed year round closures at any points or spits should not be considered, particularly when suitable habitat is available elsewhere. This is another reason that Pea Island National Wildlife Refuge should be recognized in all alternatives. In addition, dredge spoil islands adjacent to CAHA should be recognized as suitable habitat, and any nesting success there should be attributed to CAHA.

Safety closures in front of the villages should continue from mid May to mid September and re open for the remainder of the time. This rule should also be consistently applied to the villages of Hatteras and Frisco.

Also, the pet restrictions from March through July need to be removed from consideration because leash laws will prevent any incidents with pets.

The sound side access locations in the document seem to be lacking. A better and more complete inventory of sound side access needs to be included in the final document.

This Seashore is unique from all others in that multiple villages and communities exist inside the boundary of the park. Impacts to these town and communities are more acute than to surrounding communities whenever the Parks Service institutes rules. I don't believe the alternatives in this document have properly evaluated the socioeconomic and historical and cultural impacts to these communities contained therein. The large ROI mentioned is too large to adequately assess the economic impacts to the villages. And very little is addressed in terms of historic access to the shoreline. This National Seashore was created so many years ago with the national public's diminishing access to the shoreline in mind, due to privatization of the beach. Its primary mission was people first. It was meant to be long open stretches of beach for those people not fortunate enough to live on the water. This document and these alternatives do nothing to further that initial goal. Instead, it seeks to chop up this National Seashore into little manageable pieces, where the visiting public and the people that live there suffer the most.

Please address these deficiencies in the final document. Or, put the "Coalition for Beach Access" position statement in as the preferred alternative.

Thank you,

Dave Vachet 127 W. Gilpin Ave. Norfolk, VA 23503

Mr. Mike Murray Superintendent, Cape Hatteras National Seashore 1401 National Park Drive Manteo, North Carolina 27954
Dear Mr. Murray: I would like to take this opportunity to comment on the Draft Environmental Impact Statement (DEIS) for the Cape Hatteras National Seashore Off-road Vehicle Management Plan. The Cape Hatteras National Seashore is truly one of the treasures of our State, and I take very seriously the need for a balanced management approach for this important resource.
Based on the analysis provided in the DEIS, I believe you and your staff are working to include the economic, social, cultural, recreational and environmental dimensions of this complex issue in the new Management Plan. However, I also believe there are a number of local concerns related to Alternative F that need to be fully addressed. In particular, the Dare County analysis of Alternative F raises several key points, including how corridors, buffers and other practices can be better used to address species management issues and how local businesses are adversely affected by limiting beach access. The history of managing this beautiful Seashore shows that local support and buy-in is crucial to the success of any management approach. I strongly encourage you to take these local concerns seriously and develop appropriate responses to them as you continue working on the new Management Plan.
Any plan that is adopted by the National Park Service must provide an open and accessible beach for the public while also protecting this fragile environment. An effective and sustainable plan must also address Seashore's vital role in the local economy and in the social and cultural lives of local communities. I appreciate the opportunity to comment on the DEIS and I thank you for your continued attention to these issues as the process moves forward.
Sincerely, Bev Perdue

Correspondence: Management Buffers Concerning the species to be protected: The buffers outlined in DEIS pages 121 to 127 are for all species of concern as well as endangered species. This protection is appropriate as any species that is "of concern" or "threatened" or "endangered" could not possibly thrive under the continually increasing threat of ORV use in Cape Hatteras National Seashore. All else being equal it is predictable that in the coming years there will be even more visitors to the seashore. While most ORV users (I being the owner and driver of an ORV) would not willfully damage a nest or fledgling bird, the nests, eggs and fledglings are camouflaged in such a way as to be practically invisible to even a slowly moving vehicle. Concerning the size of buffers: Adequate buffers for the nests and fledglings are crucial. I trust that the best science available will be used to establish the scope of these buffers be they 200 yards or 1000 yards.

Correspondence: Mike Murray, Superintendent Cape Hatteras National Seashore 1401 National Park Drive Manteo, NC 27954
 May 5, 2010
 Mr. Murray,
 It has been brought to the attention of the kiteboarding community that a variety of plans are being considered in response to proposed environmental and ecological concerns. The Outer Banks of North Carolina is a sanctuary for many beach goers, sports enthusiasts, wildlife observers and most importantly, the natural environment. We, as a community, feel that it is important for the environment to be protected and thus understand certain steps may be needed to achieve this goal. Thank you for evaluating the options to improve the environmental conditions at one of the greatest destinations in the United States of America.
 However, with the aforementioned said, please consider the responses you choose carefully. Minimalist environmental management approaches have worked well throughout the United States' National Parks. Closing extensive sections of beaches, the sound, and water ways will strip away the very nature and reason for why we appreciate the land in its current state. It can be said with great certainty that all frequent and casual users of this place intend to preserve its natural beauty and respect its wildlife.
 We strongly feel that the Historical, Cultural, and Economic ramifications of the proposed plans have not been adequately addressed by the Draft Environmental Impact Statement (DEIS) as is required.
 Should the environmental changes impact our communities' sport (as it would in Plans D, E, & F) we would be forced to reconsider our frequent and environmentally friendly utilization of the Outer Banks. Other user groups such as surfers, fishermen, beachcombers, and virtually all other forms of tourism will also be discouraged from visiting Cape Hatteras if beach closures are greatly expanded. This will have a severely negative impact on the local economy and way of life that the residents of Hatteras Island have enjoyed for many generations. It will also take away something that is important to the lives of thousands of people throughout the United States and around the world.
 If people, and especially children, can not experience the environment how are they going to learn to help you protect the environment?
 Thank you,
 Robert Giroux

Correspondence: I strongly disagree with the approach that the NPS has taken to this situation. While the NPS has a duty to protect the wildlife in the Park and should take measures to do so, the NPS also has a duty to protect the public's right to use and enjoy the Park. Simply closing off hundreds of acres of random land because a certain bird has decided to nest there is not the answer. For a start, where is the data that says that a 1,000 meter perimeter is appropriate? It could very well be that a 50 meter perimeter is adequate. More importantly, there does not appear to be any restriction on where that perimeter can be located. If a bird nests near a road, do you close the road? Of course not. Of direct concern to me and other homeowners is what happens if a bird nests near my home. Do I now have to walk more than a half a mile away just to get to the beach, or possibly even access my own home? That is simply unreasonable. Again, where is the data/research to say that a person walking through the sand even 50 meters away from a bird nest is disruptive in any way. Or how about a vehicle driving near the water's edge 100 meters away from the dunes where nests may be present. And where does NPS possibly come up with justification for the restriction on dogs being on the beach when they are on a leash? If a dog is within 6 feet of a human, how is it a threat to a bird nesting area? Clearly dog owners must be responsible for cleaning up after their dogs, but how does a seasonal restriction on dog walking on the beach possibly enhance bird nesting? It just makes no sense to me and gives me even more concern about the foundation for any of the NPS's proposal. Again, policy decisions should be based on sound scientific data and accepted or proven methods. The current proposal does not appear to be based on either.
 The NPS has to recognize that one of the principle uses of the Park is beach access. Denying people the opportunity to have ready access to the beaches from their homes is simply unacceptable. There are designated pre-existing access ways through the dunes to the beaches which have existed for a long time and these access areas should not be closed except under extreme conditions. The NPS also has to recognize that there is a significant economic impact to the region that will result from it's actions. If people cannot have easy access to the beaches to enjoy them, then they will not come and the local economy will be severely affected. The Cape Hatteras National Seashore has been a growing and thriving recreational area for decades. Many families have been coming to visit for generations and there is a strong history to be respected here. The proposed actions of the NPS could destroy a significant part of these traditions and memories and history.
 This entire situation was created because the NPS mis-handled the development of this area in the past. It is simply not fair to now punish all of the users of this area due to the errors of the NPS in the past. The NPS should be using its own resources and funds to solve this problem in an equitable manner, not simply closing off vast areas of the park and thus making the users of the park pay for the mistakes of the NPS. This appears to be another example of a government agency simply passing the buck, and causing hardship on others to make up for its own mistakes.
 What is most troubling is the failure of the NPS to simply use the time-tested and well-accepted doctrine of "designated use" in solving this problem. If the NPS would simply designate bird nesting areas and then use it's own resources to "promote" these areas - possibly constructing perimeter protection, making the terrain more friendly to the birds, maybe even providing nesting materials and food - then the birds would benefit and the homeowners and visitors in the developed areas of the Park would not have to suffer. Doesn't it make sense that the bird population would be much more likely to recover if they were in managed, protected areas than in random uncontrolled spots near developed areas? Of course it does and yet NPS does not seem to consider this. The current approach appears to ignore the fact that there are other threats to the bird population than people. There are natural predators, high winds, food shortages, and other conditions which can be minimized in a designated use area. I expect these situations are much more of a threat to these birds than someone walking by 50 meters away. I simply cannot understand why the NPS fails to recognize this very basic concept of resource management, and that is very troubling.
 In summary, I implore the NPS to pursue a more reasonable and less restrictive approach to this situation. I respectfully submit that both the birds and the humans will be better off with a more reasonable solution, based on science and not emotion.

Correspondence: I disagree with the proposed restrictions on pedestrian and off road vehicle (ORV) access to the Cape Hatteras National Seashore Recreation Area. Predators have a larger impact on protected wildlife populations than do vehicles or pedestrians. ORV and other recreational uses would NOT have long term major adverse impacts on sea turtles as there have NOT been frequent deaths, nest lost, disorientation or hatchling mortality due to ORV use or night time beach driving. The proposed restrictions rely on information that is very limited in its scope and does not include the nearby dredge and spoil islands. Dredge and spoil island populations must be included in total population counts for accurate numbers and activity. I disagree with the size of the buffer zones proposed. There is no good scientific research to validate such large buffers. I disagree with the pet restrictions proposed. As long as people are allowed on the beaches of our recreation area, then controlled pets should be allowed on a six foot leash. Not allowing pets is in direct conflict with "the continued traditional, historical and cultural uses" of the entire beach. I disagree with the proposed beach closures. They are far too restrictive and will cause a major impact to local economy due to major impairment of the visitor experience and provide negligible benefit to resources. Further restrictions to ORV and pedestrian access to beaches is not necessary due to restrictions already in place at Pea Island Wildlife Refuge. Also, large buffers and closures would force more people into smaller areas, leading to overcrowding and possible greater resource impact to those areas. And finally, I disagree with the proposed restrictions to ORV access because beach driving is the traditional and only practical way of accessing the beach for elderly, impaired and handicapped persons (such as my mother). Why are they being discriminated against?

Correspondence: Please do all that you can to insure that the Cape Hatteras National Seashore Recreational Area remains a RECREATIONAL area for everyone, and NOT a bird sanctuary. The very livelihoods of many of the folks in the surrounding villages is dependent on free and open access to the beaches by visitors and locals alike.
I am now a grandmother. I began coming here as a child in the 50's. I was able to play on and fish from the beaches of Cape Hatteras with my family. It was here where some of my fondest memories with my father were made. In the '60's, I loved to come with my friends and play and fish on the open beaches. Then, in the 70's, I started bringing my own children, and we began making OUR memories in the place I love. They were taught to be good stewards of the land, just as I was taught. Now, my Grandchildren may not have the same access and freedom to make their own memories. My eldest grandson is possibly the only one who will have ANY memory of a free and open area. The place where his great-grandparents, his grandparents, and his parents once were allowed to fish, swim, sun, walk, beachcomb and camp, is no longer open and available to him. EVENTHOUGH it was promised to him, and the rest of us generations ago, it is now being overregulated and even closed off in many areas, by overzealous, close-minded, single points of view people, who don't seem to have a compromising bone in their bodies!
We know how to take care of the land and its creatures. We have been doing so for generations. PLEASE use common sense and reach an agreement that is fair to EVERYONE. PLEASE allow Cape Hatteras National Seashore Recreational Area to be just that,...a "RECREATIONAL" area.

Correspondence: I disagree with parkplanning to set aside 1000 meters for the piping clover. This is too much of the beach to set aside. I agree that 300 meters would be enough beach to set aside for nature. This way we can all share this beautiful beach that God has blessed us with. Elderly folks cannot get to the beach where they can enjoy it without garbage and debris unless they go to the wonderful beaches of National Seashore. The humans that use this beach have kept it clean and useful to all for many years. So, like the people of Cape Cod, let's give nature 300 meters and continue to care for and share the beach. Signed, Robin L. Bartone and family members from Ashtabula, Ohio.

Correspondence: Dear Superintendent Murray,
I urge you to reconsider the use of ORV on the beaches of Cape Hatteras. Beaches should be for foot traffic only, in my opinion. Beach erosion is a problem everywhere. With climate change, stronger storms and hurricanes are predicted and will cause even more drastic erosion. To allow ORVs on the beaches is irresponsible. Their tracks do amazing damage. Before approving any such plan, I think you ought to demand a high vehicle use fee for such items and should engage ORV "clubs" to enter into an agreement to do trail maintenance on a regular basis.
Again, I urge you to deny use of ORVs on the beaches of Cape Hatteras.
Sincerely,
Vivienne Lenk

Correspondence: My name is Chuck Antle. I am a lifelong resident of North Carolina and property owner on Hatteras Island. I disagree with the six alternatives included in the DEIS. I support the plan formulated by the Coalition for Beach Access. I believe it is an improved version of the regulations in place up until 2004, that were based on the 1978 draft plan. All the alternatives in the DEIS favor overly aggressive resource protection at the expense of the public's access to the beaches of Hatteras Island. Science shows the main threat to wildlife on the Cape Hatteras National Seashore is mother nature. Human affect is minimal. Yet the DEIS proposes very restrictive measures to prohibit people from the beaches. I do not see how this is going to make any significant difference. The resource closures for birds are beyond excessive. They appear to be based on what is mandated by the Consent Decree. The CD has not shown improvement in fledged birds over the resource protection of the past, nor is there any science to back up such large closures. I support more reasonable sized closures, such as 200M for piping plovers instead of 1000M. Regarding birds that are only on a list of concern in North Carolina, I support regulations that are similar to the state procedures. I believe night access restrictions for turtles are unwarranted and the practice of not moving nests in areas prone to overwash is wrong. I support the document from OBPA, Larry Hardham and Bob Davis (<http://www.obpa-nc.org/turtles/TurtleMgmtProgram.pdf>). I think resource closures are unfairly targeted towards the most popular parts of the seashore, that being the spits and cape point. This causes spillover/overcrowding in the remaining open areas, which can only lead to limits being placed on the number of people allowed access. The economic impact of the six alternatives in the DEIS is greatly underestimated. The past three years under the Consent Decree have been devastating to the economy of Hatteras and Ocracoke Islands. Including areas north of Oregon Inlet in any economic analysis is very misleading. I do not support the new restrictions on pets. There are sufficient regulations already in place. The new rules banning dogs from the beach most of the year only punish law abiding citizens. I think Pea Island should be taken into account when counting wildlife and when calculating pedestrian only areas. It is part of the park, regardless of whether the NPS manages it.

Correspondence: Dear Superintendent Murray,
 One of my fondest memories of the 1990s is a bicycle ride I made through the Cape Hatteras National Seashore. I camped at several campsites, I spent time birding, swimming, and watching dolphins. I often just sat and watched the waves and enjoyed the sounds the wind carried to me. Yes, some of the sound was the traffic route 12, but the speed limits, and the dunes mitigated that. I am so happy that I was able to enjoy the beeches and campsites with out having to share them with Off Road Vehicles. It is my hope that this area will remain free of ORVs forever. The tranquility and peace of the undeveloped beeches, marshes, woodlands is something I hope to share with my grandchildren in the not to distant future. There are so few wilderness areas left i the lower 48 that we need to protect each and every one. We need to create more, not abuse the ones we have. Please keep the Cape Hatteras National Seashore free of ORV.
 The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.
 1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."
 2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness...."
 Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.
 3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.
 Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

Correspondence: The National Seashore is exactly that -- it was created as a national park to preserve the seashore for the enjoyment of generations of PEOPLE to come. The OUTER BANKS is an extremely sensitive habitat area, but the people who live along this coastal area live in harmony with the wildlife -- in fact more turtle nests are damaged each year since trying to protect them and creating 'human free' zones. It is the humans who are generally keeping the turtles predators at bay!
 The Outer Banks is also an area of economic prosperity, which is largely dependent on the beach, tourism and customer services. At one time, fishing was a mainstay for the local people as well, but that's become more and more difficult to maintain and earn a good living due to legislative efforts. Without tourism, this area with fail to thrive and Dare and the surrounding counties would most likely go bankrupt. The people living on the Outer Banks would most likely lose their jobs (supporting the industry), property values would fall, sales taxes would decline -- which would decimate the local economy and industry.
 My family and I love the environment and this is one remaining location (that we're aware of) on the eastern seaboard where we can enjoy the beach, the ocean, the people and the beauty; in a relatively unspoiled environment. We all do our part to maintain OUR National Seashore. We as citizens have the right to enjoy and spend time on our beaches - next to nature. Do NOT deny us that right to recreate and co-habitate in one of the few remaining wonders along the east coast.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Dear Superintendent Murray,
I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternate D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, both of which are important to me.
As the government entity charged with protecting natural resources within National Parks and Seashores, I believe it is your responsibility to put the protection of natural resources first. If protecting natural resources is the first priority then all recreational activities should conform to that protection even if this means the recreational activity is limited or constrained by this protection. The Outer Banks in general, and Cape Hatteras National Seashore specifically, provide critical nesting habitat for seabirds, shorebirds and sea turtles. Cape Hatteras National Seashore is also a critical stop over area for migrating shorebirds which are already stressed throughout much of their wintering and breeding ranges. The National Park Service's preferred plan, Alternative F, does not do enough to limit year-around ORV activity in areas that are critical to wildlife. More of Cape Hatteras National Seashore needs to be free of ORV use and set aside for wildlife protection. Also, wildlife disturbance buffers in the preferred plan are minimums and should be increased to enhance the protection of breeding birds and sea turtles.
Any management plan should have the ability to be flexible if it is to be effective. If protection of the Seashore's natural resources is first priority then goals and objectives for wildlife recovery should be set. The plan should have the ability to adjust if these goals and objectives are not being realized - including adding more protective measures if they are needed in order to facilitate recovery. I believe these goals and objectives should take into account what the Seashore has historically supported with regard to wildlife and not what it currently is capable of supporting in its degraded condition.

This plan should be able to mitigate damage done over the years and allow Cape Hatteras Seashore to recover its former glory. The current preferred plan does not provide equal access to all visitors as ORVs would be prohibited year around on only 16 of the 68 miles of the Seashore. This does not represent a fair balance for all users. If ORV use will continue to be allowed in the Park then there needs to be a more equitable balance between areas where ORVs are allowed and where they are not allowed. I feel that at least 50% of the Seashore should be set aside for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide more balanced access for all visitors. This more multi-use approach would be better for the many non-ORV visitors and would allow wildlife the ability to recover to its traditional numbers and diversity.

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Sincerely, David Davenport Zoologist and President - EcoQuest Travel, Inc. 459 Go Cart Road Four Oaks, NC 27524

Considering the recent tragic oil spill in the Gulf, it's time for our governmental agencies to do their job! Please protect the rare birds and sea turtles on the Cape Hatteras Seashore to the fullest extent possible. Don't let the lobbyists have their way. They have done far too much damage to our country and the environment already! It's time to stop the rule of profits!

This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.

Correspondence: Dear Sir/Madam:

I grew up on the shores of North Carolina and I am dismayed to learn that allowing vehicles on our Hatteras beaches is even under consideration. What is the purpose? The only response I can think of is to make the ocean easily accessible. To what end? So, the beach-goers do not have to walk to their favorite tanning or fishing spot.

What is the possible harm? Presently, we have an alarming amount of beach erosion and our sandy beaches are eroding at an even more alarming rate. Passing this legislation will increase the rates of erosion. How? I could write for days on the whys of disallowing vehicles on the beach, but I will simply make a small argument. I am certain some off-roaders will choose to cross over the dunes (although it is illegal) in order to access the beach. Our dunes are the beaches stability point and the sea oats are the sentries of the dunes. If a vehicle barrels over the dune, the precious balance is lost. Which would you prefer, a couple of decades of short term off-road fun or a forever of losing our incredibly beautiful Hatteras coastline.

Correspondence: After decades of vacationing here on Hatteras Island, my wife and I retired to Frisco, NC eleven years ago. Frisco is one of the 8 villages located within the Cape Hatteras National Seashore Recreational Area and residents stand to loose so much from what I have read in the DEIS. Nothing that I read satisfied my concerns for the local economy and real estate values and I feel that the DEIS failed to adequately address.

The Region of Influence which was described starting with page 270 deals with Hatteras Island incorrectly. The northern beaches, the southern beaches and Ocracoke Island are grouped together in the DEIS and this is wrong. The northern beaches do not rely on ORV or pedestrian access for their customers. The people who vacation there generally visit the historical sites like Ft Raleigh and Wright Bros. monument. These are not the same type of person who generally recreates on Hatteras. These people are rugged and enjoy the things that nature provides like fishing, surfing, bird watching, windsurfing, kitesurfing, etc. Throwing the towns of Southern Shores and Duck into this grouping is wrong and incorrect, and throws the numbers out-of-whack. Hatteras and Ocracoke are nothing like the northern beaches. Also, Hatteras has about one-third the amount of visitors when compared to the area north of Oregon Inlet. Nowhere did I read where the overwhelming negative impacts on local businesses were acknowledged.

Additionally, I understand that there were no surveys done with the local businesses on Ocracoke and Hatteras Islands. Given the "test run" that was provided because the area has been operating under the Consent Decree for two complete seasons, I think businesses have a perfect idea what the DEIS will do to their income considering how much more restrictive Alternative F is over the Consent Decree.

In my opinion, there are so many flawed key assumptions in the DEIS.

Correspondence: My husband and I have been vacationing in Avon, NC, for the past two years and are scheduled to return for a third year next May. We go there with a

0012568

group of friends who have been going for many more years than we have. The allure of vacationing in Avon is the ability to take our dogs with us and take them on the beach. Our dogs are both American Kennel Club Canine Good Citizens and both are also registered therapy dogs through Therapy Dogs International. They are well behaved and obedient and we are very respectful of our surroundings. We NEVER allow our dogs off leash on the beach. We do not allow our dogs to veer off the path on the dunes leading to the beach. We ALWAYS clean up our dogs' waste. We do not allow our dogs to bark or otherwise disturb others. We keep our dogs under control at all times. We are very appreciative of the opportunity to share this beautiful stretch of beach with our canine companions. With that said, if access to the beach for our dogs was denied, we would NOT return to Avon to vacation each year. The purpose of our trip is spend a week with our friends, both human and canine. We rent a high-end oceanfront beach home for the week, we shop, eat, and entertain in the Hatteras Island area. In short, the money we spent on Hatteras Island will be spent elsewhere if our dogs are not allowed on the beach. While we are supportive of efforts to protect wildlife, please be conscious of the economic impacts of your actions. Thank you.

Correspondence: The plan to restrict access to the beaches seems to be a continuation of the use of the endangered species act to limit use of public land and parks. In recent years several groups and organizations have used the courts to force the closure or restrictions on usage of land, in order to create some sort of wildlife refuge.
When our children were growing up we would come to the Cape Hatteras National Seashore to enjoy the beach and would spend all day doing all the things kids love to do. We were able to travel up and down the beach to locate small tidal pools and good fishing spots and just the right surf conditions to suit their age at the time. We would bring a tarp and a grill and spend the entire day enjoying the beach. Now that the kids are grown, we no longer visit the seashore as much, but we still enjoy coming down even if it is just for the day. The ORV plan makes it look like the trip will no longer be as enjoyable.
The whole idea to restrict access will only make a visit to the seashore less of an experience, and people's use of the seashore will be at the mercy of where a bird or turtle may choose to nest. I understand a few more endangered species may survive, but the reduced use and access will be of limited benefit. Unless the increase in the number of nests is large, and predator species can be controlled the end result will be nothing of any value. I feel sorry for future generations who will not have the full use and access to this very special place. With limited vehicle access the beach will become difficult for a lot of people to reach and visitors probably will feel the primary use of the National Seashore is to be some sort of sanctuary.

Correspondence: Dear Superintendent Murray,
As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.
1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."
2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness..."
Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.
3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.
Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

Correspondence: Supt. Murray
Please accept this letter as my comments on the ORV DEIS before you at this time.
After reviewing the NPS DEIS I must disagree with any of the six alternatives within the document.
I have, however reviewed the 77-page Coalition for Beach Access Position Statement signed by several groups that were a part of the negotiated rule making process and it by far succeeds in furnishing the best visitor experience while maintaining the needs of protecting the fragile resources. Please consider all aspects of this alternative and put people back into the management of Cape Hatteras National Seashore.
Buffers in the Alternatives for piping plovers are extreme and unnecessary. The protections listed in the alternatives for AMOYs and colonial waterbirds are excessively restrictive; these birds are not federally threatened or endangered and do not deserve the levels of protection described.
Sincerely,
Ted Buckwalter

Correspondence: Dear Sir:
I disagree with DEIS restrictive management areas (p. 468) ML1 is overly restrictive. Pedestrian and ORV corridors or bypasses should be provided thru, around, or below high tide line in all SMA's during entire breeding and nesting season (within guidelines) to maintain access. 1000 meter buffers are too large. Buffers should move with the brood as they relocate for food.

Correspondence: I think the proposed ORV program is overly restrictive and does not take into account the traditional use and economic impact that closures to the seashore have on the local economy and to the local population. Science does not clearly show, and empirically prove, that reasonable use of vehicles at the seashore, below the high tide line and through corridors established to guide the vehicle traffic has any significant impact to wildlife whatever. I find the plan to overly restrictive to visitors by denying basic access to the Seashore for the people, while experimenting in an unfounded fashion to encourage a wildlife habitat. Reasonable restrictions call for maximizing the reasonable access to the Seashore at all times and minimizing the necessity to close beaches and prevent people from enjoying their natural resource.

Correspondence: The NPS has a challenging job trying to protect the resources of the beaches and balance that charge with providing access to local, state citizens and other park visitors. The uniqueness of CHNS presents the challenge not of an isolated locale as are many parks but one interspersed with villages where people live and work. This in and of itself requires a different perspective on managing the park and therefore cannot necessarily utilize standardized management that may work well in other parks. IT IS NOT NOR SHOULD IT BE VIEWED OR CONSIDERED A WILDLIFE PRESERVE. The park originated to provide and make this wonderful natural asset available to PEOPLE. Additionally the NPS was not established to be regulatory agency nor should it be.

While some controls may be needed, I disagree with the NPS preference for Plan Alternative F. This plan is too restrictive and regulatory, and places the NPS into the role of enforcement police rather than educators of and for the treasures that the Cape Hatteras Seashore holds. I support the least restrictive plan that allows the human species access to our publicly owned and tax funded beaches while still providing some protections for wildlife and their habitats. NPS should be working with the local communities as Conrad Wirth did, rather than becoming an adversary. Certainly people that live and work in a community have a vested interest in the environment that supports their very livelihood.

The Pea Island Refuge provides a large extensive habitat for birds and other creatures. Restrictive areas in other park areas should be limited to endangered species with limited boundaries. Areas as large as 1000 feet are excessive for protection.(large inflexible buffers-p.121-127)

I disagree on the restriction for dogs and horses. Banker ponies were an essential part of the islands history and the allowance of horses continues this tradition of ocean riders who enjoy this recreational pursuit. Dogs on leashes should also be allowed as for many, their dog is indeed a family member.(p 136) I question how birds and turtles are entitled to protection but dogs and horses do not also have some "protective rights."

The sea, the shore and beaches affect the the lives of locals on a daily basis and often determines if they will work, go to school, the off island doctor etc. As a 6th generation island descendant with many family members residing on the island, I can attest the intertwining of the sea and beaches to the traditions, culture and vitality of island life. In fact a portion of the seashore was once property owned by family members. This tradition of reliance on the sea and surf zone is not given enough coverage or weight in the DEIS. The human species and its way of life should also be given the same protections and access as our smaller creatures.

Access to pursuits on our beaches are critical to life on the islands. They provide sustenance, income, relaxation, fun and community bonding experiences that cannot be provided elsewhere. Many of these traditional experiences have taken place at night or early morning prior to sunset at the Hatteras and Ocracoke Spits. (p.97-101) These are areas where the fishing and or shelling is often exceptionally good. Night time driving/ORV access maintains these traditions and activities.(p.104) Human access educates people of the ever changing shore and "grows" supporters and protectors which the NPS should strongly desire. The park with its interspersed villages and citizens should indeed merit a Traditional Cultural Property Designation, yet it is hardly included or considered in the 800 page document. This is contrary to the NPS guideline statement regarding Traditional Cultural Properties. I disagree with the method used in counting visitors. Only visitors that visit the barrier islands should be counted. A considerable number of visitors to Wright Memorial or Fort Raleigh never travel further out onto the islands. These numbers should not be included in the totals for visitors to the park beaches.

I disagree with the ROI that was used. The actual area of concern should be the island beaches. The entire environment is different from the Northern Beaches of Nags Head, Kitty Hawk, and Duck. Island businesses are mostly locally owned and there are few chains.

The socio-economic analysis of the DEIS document is INADEQUATE. Already the unpredictability of beach access is affecting businesses. Previously July 4th week was one of the busiest of the summer. During the past two years I have observed that 5 of 7 oceanfront cottages along and adjacent to the street of my cottage were empty at this time. Our cottage rentals have dropped at least one third over the past two years. Previously they stayed full at least 12 weeks during peak season. The ripple effect of un-rented cottages greatly affects islanders from those that clean, to restaurants to gift and grocery stores as well as deep sea and sound charters etc.

Access to tax paying citizens should be available at all times, even if some limitations are necessary. A key factor in ORV access is the accessibility it provides to citizens with disabilities. Based on information from the NC Office of Budget Management 21% of non-institutionalized adults consider themselves to have activity limitations and a disability. 20.5% of NC children have a disability or health condition. 39% of NC older adults 65 and older have one or more disabilities. ORV access provides many of this population their ONLY option to fish, or enjoy the ocean close up.

The Cape Hatteras National Seashore IS NOT an isolated beach where you fence it, gate it or lock it up at night. Support by the public for the beaches and also the NPS is dependent upon their access to them. Pedestrian access should rarely be restricted and only limited guidelines are truly needed for ORV access.

The current proposed plan does not fully consider the impact upon the culture and tradition of the local community, the extreme impact upon local businesses and the economy which has already begun to be seen, and the recreational and educational pursuits of the community as well as visitors.

The proposed alternative F is overkill , too restrictive and unnecessary. In my career working in education, public recreation, and with people with disabilities the common denominator was to provide the least restrictive environment for people while still providing for their safety and well being. I strongly urge you to do the same for Cape Hatteras National Seashore.

I support a more reasonable approach to that Alternative F and encourage you to make alterations to your plan that includes the above mentioned items as well as works more closely with, and incorporates items found in the Coalition for Beach Access position statement and assessment. The members of the coalition are more directly involved in the daily activities of island life are not large national groups pushing a national cause with lobbyists.

Extreme regulatory control of our seashore is not needed and stands to increase animosity between the NPS and the local community. Work together to provide a continued protection for and enjoyment of our beaches for all citizens. By using a less restrictive, non regulatory approach both the citizens and NPS can benefit equally.

I support the issues and concerns brought forth by the Coalition for Beach access. While I am not a member of any of its groups I think they have approached the issues in a fair, reasonable and equitable manner. The lure of the sea and its shores have drawn man to its side forever. May it continue to do so. Do not significantly restrict access to our beaches. A more reasonable, less restrictive plan is what is needed at this time.

Thank you for providing the opportunity for comment.

Correspondence:

I was born in NC and have always been a permanent resident of this fine state. I consider myself a nature lover, conservationist and fisherman. I was less than 5 years old when my parents first introduced me to our barrier islands. Over the years Ocracoke and Hatteras have been our primary vacations and weekend destinations. My two children literally grew up visiting the beach numerous times each year. They are grown up now and will shortly be introducing my first grandson to the islands. During my parents later years I return to the beach with them often. Without ORV many of these trips would have been impossible. Taking small children and elderly to the our beaches requires ORV use. Please consider the following points in making decisions about managing this valuable resource for the citizens of this great nation.

- 1) Page 201: I disagree with the NPS statement: "Even with resource closures in place, protected species are still at risk [from pedestrians and ORVs]."
- 2) No Piping Plover deaths have been attributed to ORVs. Pedestrian violations are much more significant than ORV violations.
- 3) Page xxiv: Per the DEIS: "Carrying capacity would be a 'peak use limit' determined for all areas based on the linear feet of beachfront?" Unnecessarily large enclosure will force more people into smaller areas, potentially resulting in more resource impairment and diminished visitor experience.
- 4) Page xix and page 23: Having two different closures rules pertaining to the North facing beaches (North side) and the South facing beaches (South side) as per the grid outlined in Alternative "F" makes no sense and has not scientific peer support. I disagree with the NPS proposal to close the beaches in villages of Frisco, Hatteras and Ocracoke Villages to ORV access longer than the traditional May 15 to September 15 period for the Northern beaches, even though seasonal visitor statistics are similar for all villages. Please, make them the same: May 15 -> September 15.
- 5) Page 53: I disagree with the special use permit proposed guidelines. This is impractical. Allowing the transportation of disabled visitors to the village beaches and then require the vehicle to be returned to the street or parking area in not in alignment with ADA laws.
- 6) Page 121 ? 127. I strongly disagree with the buffers as presented. We must allow for pass-thru corridors. The beach is linear with the ocean buffering on one side and the dune line on the other. For example - If you pinch off access on one side of a 4 mile linear beach and pinch off access on the other side of the 4 mile section of beach with no corridor, then you effectively have closed off all 4 miles of the beach because you CAN'T get there. The proposed bird buffers are too large, blocking access to the interior sections from the two "buffered" ends. I propose ORV pass-thru only corridors and to use breeding / nesting buffer distances to establish ORV pass through only corridors to ensure beach access in a way that does not hinder resource protection. I believe pass through corridors should be maintained for pedestrians and ORVs in all areas of the Cape Hatteras National Seashore Recreational Area throughout the entire breeding and nesting season. Corridors are vital to providing access in a way that does not hinder resource protection. The 1,000 meter distance for the piping plover is way too large. A more rational distance would be 200 meters per other sites in the nation for the piping plover. Ample scientific evidence and precedent exists to support a 200 meter buffer. Buffers for other species, including American Oystercatchers, Least Terns and Colonial Waterbirds must also be changed. An effective 30 meter buffer should be established for these species rather than the 300 meter closure outlined in the DEIS. NON-ENDANGERED BIRDS should not have same protection as if endangered. Not allowing ORV access is paramount to denying the public access to our beaches.
- 7) Page 468: I disagree with the limitations imposed on pedestrian and ORVs. Corridors or bypasses should be provided thru, around or below high tide line in all SMAs during entire breeding season to maintain access.
- 8) Page 124: I strongly disagree with the NPS slant of providing for over protection of resource management. Pro-active initiatives include: Vegetation Management, Habitat Management, Enhanced Predator Management, Colonial Water bird social attraction, Piping Plover check fledge rate, Piping plover chick buffer distance, and pass-through buffers during the incubation period. Opportunities to implement less restrictive closures as a result of the above initiatives should be considered more frequently than the 5-year periodic review process identified in the DEIS.
- 9) I disagree with the NPS Resource Management Pedestrian / ORV Closure Policies. These policies address the least significant factors affecting nest survival with little chance to have more than negligible impact. For example: the AMOY Nest Failures are predominately due to non-human events. Using your own stats, the mammalian predation is 54%, Storm / Lunar Tides: 29%, Nest Abandonment: 6%, Avian Predation: 5%, and Ghost Crab Predation: 3%. The percentage due to human interference: just 3%. It's insignificant. NPS should change their efforts to where it will make the most benefit not ban humans when their actions provide very little influence on the success rate of breeding birds and turtles.
- 10) The use of incorrect statistics of breeding plovers and the other birds in the Park if just plain wrong. The NPS does not adequately consider locations neighboring the Recreational Area that are part of the same ecosystem, namely dredge and spoil island that are located just yards away and within sight of the seashore. These birds are part of the same ecosystem and must be included to have any valid statistical truth.
- 11) Pages 270-281; 561-598: I strongly disagree with your economic analysis of the impact of the DEIS. The region of influence (ROI) incorporates the Northern Beach communities, including Kill Devil Hills, Kitty Hawk, Southern Shores and Duck. These areas are almost completely disconnected from ORV use and access issues relating to the Seashore. The Northern Beaches in this analysis significantly dilutes estimates of economic impact on the 8 Seashore Villages. Analysis of economic impact to the Seashore Villages appears to be significantly down played. Nowhere is it clearly addressed that

the overwhelming majority of negative impacts will be felt by small businesses in the Seashore Villages rather than by overall economic interests within the greater ROI.

Beach closures have already had a devastating and unfair impact on many Dare County Businesses, causing foreclosures, bankruptcies, lay-offs, cutbacks, expensive refinancing, and depleted college funds and savings accounts. Even businesses whose revenue has stayed level or showed a modest increase have accomplished this at a costly price. Many have had to cut back employee hours, forego much-needed capital improvements, and sacrifice profits.

11) Page 136: I disagree with your pet restriction proposals. The 6 foot lease rule in effect today should be carried forward. Pets are part of many families lives. This was proven during hurricane evacuations and recognized by FEMA. Do it right thing! 12) Pages 97- 101. I disagree with proposals in this section saying that ORVs will be prohibited year round between ramps 27 and 30, at Hatteras Inlet (Hatteras Spit), Ocracoke Inlet (North Ocracoke Spit) and various other locations. This denies public access to these beaches as there is not sufficient parking to support beach use.

13) Page 104: I disagree with the proposed night time driving closures. Scientific studies in support of this are not existent. Additional NC is at the northern most extent of turtle nesting and estimates are that only 2% return to NC. ORV lights on the beach are not impacting turtle nesting. More proactive measures such as relocating nests prone to weather and ocean events would dramatically increase the nesting success rates.

Final thoughts which I hope you will consider:

Please, incorporate access corridors within your planning so the public can get to the open beach beyond. Incorporate the birds into the count that nest on the spoil islands. Base your buffer zones on peer reviewed science and scale them back.

It is neither logical nor reasonable to spend so much tax payer money and energy on overprotecting so few Piping Plover nest sites. The DEIS is extremely biased toward over protection and not considering the public's right to enjoy our beaches of the National Seashore.

Please preserve the citizens of this great nations access to share our beaches while performing your assigned duties of protecting shoreline wildlife. Thank you for consideration of my thoughts.

Correspondence Type: Web Form

Correspondence: DEIS Comments: Cape Hatteras National Seashore Recreational Area

The enabling legislation created "The Cape Hatteras National Seashore Recreational Area" for all to enjoy (beachcombers, sunbathers, surfers, horseback riders, anglers, hikers, joggers, wildlife observers, kayakers, swimmers, families, children, grandparents?). The park was never intended to be "The Cape Hatteras Special Interest Group Area for National Audubon Members Only!"

The legislation states: "said area shall be, and is, established, dedicated, and set apart as a national seashore recreational area for the benefit and enjoyment of the people and shall be known as the Cape Hatteras National Seashore Recreational Area." The enabling legislation created the park as a Recreation Area not a Wildlife Refuge. Areas such as Pea Island National Wildlife Refuge on Hatteras Island were created to provide habitat and protection for endangered and threatened species. Finding a way to guarantee unrestricted public beach access for pedestrians and ORV that coexists with wildlife needs to be the highest priority. I believe ORV & pedestrian corridors should be maintained with adequate monitoring through temporary resource closures to provide access to the beach. Because of the distances involved, ORV access corridors are required so citizens can travel to their desired destinations within the Recreation Area. ORVs have historically served as the primary form of access for many portions of the beach in the Recreation Area, and continue to be the most practical means of access for most visitors to Hatteras Island. To limit ORV access would discriminate against individuals with limited mobility due to age or physical impairments, families with children, senior citizens and those wishing to engage in activities requiring recreational equipment such as Fishing, surfing, birding, swimming and family gatherings. Equipment needed for recreating in popular areas of the park cannot be easily carried on foot through miles of deep sand on a hot summer day by even the fittest individual without the risk of heat stroke, dehydration, physical exhaustion or even death. For example: Water, Food, Beach toys, umbrellas, beach chairs, coolers, fishing poles, tackle boxes, water-sports boards, first aid kit, cameras, binoculars, etc... ORVs in remote areas of the beach provide shelter from lightning, a place to get out of the heat and emergency transportation for an ill/injured child or elder. ORVs have been used on the Hatteras Island beaches for decades without any resource conflict. It is imperative that ORV use be recognized for exactly what it is: A historical means of access to an area for recreational opportunities. The use of an ORV is not considered a recreational activity in this Recreational Area. ATVs are not permitted. These recreational opportunities sought, allow the public to enjoy the Seashore's resources and values. Denying access to recreational opportunities, many of which are specifically protected in the Enabling Legislation, denies the Seashore's current visitors the opportunity to enjoy the park's resources and values and denies future generations the opportunity to enjoy the park's resources in direct violation of Park Services Management Policies. There is no evidence that ORV beach access causes any unacceptable environmental impacts in the park. Often, traces of ORV access are erased by wind and tide in a matter of hours.

The beaches within the Cape Hatteras National Seashore Recreational Area offer high recreational value to the public. While all of the beaches are suited and commonly used for swimming, sunbathing, wading, shelling and fishing, some beaches are uniquely more favorable for some specific activities. These specific areas should have minimal and flexible buffers for birds and turtles because ORV Closure is the Least Significant Factor Affecting Nest Survival. Humans and ORVs can coexist in harmony with birds and turtles. Scientific studies prove that human and ORV presence have an insignificant impact on nesting. Predators, Tides and Storms account for nearly all the lost nest in CHNSRA. Human presence benefits birds and turtles because Human presence decreases predator presence and increases nest survival rates. Prime historical recreation areas that require guaranteed public ORV access under the plan must include: Buxton to Cape Point ? World Famous Surf Fishing on Cape Point ? Prime water sports ? Favorite gathering area for locals and visiting families ? Prime Birding area ? Prime shelling area Cape Point to the Frisco Village line (South Beach) ? Prime child-safe swimming area south of Cape Point to Frisco village ? Favorite gathering area for "locals" and visiting families ? Prime shelling area ? Prime horseback riding area ? Recreational and commercial cast-netting at Cape Point ? Sunbathing ? Water sports ? Snorkeling ? Birding Ramp 55 to/including Hatteras Spit (Hatteras Inlet) ? Prime fishing area from ramp 55 around Hatteras Inlet spit ? Ramp 55 to/including Hatteras Spit (Hatteras Inlet) ? Recreational and Commercial cast-netting ? Prime family gathering area for visitors in the Hatteras Village area ? Water sports ? Birding Turtle Nests should be relocated from ORV corridors in these prime historical recreation areas. South Beach is an unproductive Plover nesting area so access should be open year round to South Beach. I support resource protection for shorebirds and sea turtles based on peer reviewed science. Who better to advocate preservation of area wildlife than the people whose lives and futures are intertwined to the success of each species?

I agree with these Shorebird / Water bird Buffers: Species Breeding Behavior/ Nest Buffer ORV Pass-through Unfledged Chicks Piping Plover 50 m 30 m 200 m American Oystercatcher Flush + 15m Flush + 15m Flush + 15m Least Terns 30 m 30 m 30 m Other Species CWB 30 m 30 m 30 m MAXIMUM Piping Plover Unfledged Chick Buffers Establish a 200 meter buffer / Closure around the unfledged chick(s) location. Adjust buffer as needed when chicks are mobile. Establish ORV/Pedestrian access corridors. Vehicles may be allowed to pass through portions of the protected area that are considered inaccessible to PIPL chicks because of steep topography, dense vegetation, water or other obstacles. Morning access to the points and spits may be delayed until chicks have been located if the access corridor passes between the waterline and through the buffer area that would otherwise be closed. Reopen access corridor outside of pre-nesting area after chicks fledge. Remove pre-nesting closure 2 weeks after all chicks in the area have fledged.

Ample scientific evidence and precedent exists to support a 200 meter buffer.

*** As part of the NEPA process, I Formally Request the National Park Service to provide peer-reviewed science that justifies a 1,000 meter closure in all directions.

MAXIMUM American Oystercatcher Unfledged Chick Buffers Establish a 30 meter buffer/closure around the unfledged chick(s) location. Adjust buffer as needed when chicks are mobile. Monitor daily. Establish ORV/Pedestrian access corridors. Buffers/closures will be removed after AMOY chicks have fledged (observed flight of 30 meters).

MAXIMUM Colonial Water birds Unfledged Chick Buffers Establish a 30 meter buffer/closure around the chick(s) location. Adjust buffer as needed when chicks are mobile. Monitor daily. Establish ORV/Pedestrian access corridors. Buffer/closure will be removed after all chicks have fledged.

I believe the Four-wheel drive vehicles allowed to drive on the Recreational Area beaches should be registered, licensed, and insured and comply with

inspection regulations within the state, country or province where the vehicle is registered. All-Terrain Vehicles (ATVs) should be prohibited. ATVs are defined as a type of off highway vehicle that travels on three or more low-pressure tires; has handle-bar steering; and has a seat designed to be straddled by the operator.

The science offered to support the environmentalist positions does not justify the extreme ORV and pedestrian access restrictions proposed in the DEIS. I believe ORV access to Cape Point, South Beach and Hatteras Inlet should not be restricted.

The proposed 1,000 meter pedestrian/ORV closure in all directions for a piping plover unfledged chick brood is extreme and scientifically unjustified. This equals approximately 771 acres per brood. The plover closure should be reduced to 200 meters.

The Oystercatcher is not a federally threatened species and the proposed 300 meter pedestrian/ORV closure is extremely excessive. The Oystercatcher closure should be reduced to 15 meters.

In my opinion, there is no scientific justification to deny human entry into large areas of the recreation area and severely restricting the public's access to all portions of the beach.

I urge you to preserve our beaches, protect natural resources with common sense policies, but not prohibit ORV use and pedestrian access to any portion of the Cape Hatteras National Seashore Recreational Area at any time. Remember, the National Seashore Recreation Area was established for the benefit and enjoyment of the people of this country. How can future generations enjoy the area if access is severely restricted? CORRIDORS are vital in providing access while managing resources. MANAGEMENT BUFFERS must be based on peer-reviewed science. NON-ENDANGERED BIRDS should NOT have the same protection as if endangered. TURTLE MANAGEMENT would benefit from nest relocation and other practices.

So, please save the communities of Hatteras Island and preserve the historic & cultural way of life of the people on this island for future generations to experience. There are many miles of unpopulated barrier islands on the east coast that are better suited to enhance shorebirds and turtles than Hatteras Island.

Thank You

Correspondence Type: Web Form

Correspondence: My children are currently 9th generation Outer Bankers dating back to William Howard who passed away in 1724. My sons first four birthdays were spent at the point in Hatteras celebrating with several generations of our family as the family has for the last 280+ years. The economic impact of the Convent Decree has severely effected most residents on Hatteras Island.

I disagree with the following listed in the DEIS:

1) Page 201: I disagree with the NPS statement: "Even with resource closures in place, protected species are still at risk [from pedestrians and ORVs]." No Piping Plover deaths have been attributed to ORVs. ORV violations continue to decrease as signage and education improve. Pedestrian violations are much more significant than ORV violations. It seems to me that any transgressions into protected area are the result of lack of NPS manpower and enforcement than the public purposely and willfully violating out of bounds areas.

2) Page xxiv: I question the statement of as per the DEIS: "Carrying capacity would be a 'peak use limit' determined for all areas based on the linear feet of beachfront?" If you close off huge sections of the beach, you force more people into smaller areas, potentially resulting in more resource impairment and diminished visitor experience.

3) Page six and page 23: I am against having two different closures rules pertaining to the North facing beaches (North side) and the South facing beaches (South side) as per the grid outlined in Alternative "F". I disagree with the NPS proposal to close the beaches in villages of Frisco, Hatteras and Ocracoke Villages to ORV access longer than the traditional May 15 to September 15 period for the Northern beaches, even though seasonal visitor statistics are similar for all villages. Please, make them the same: May 15 -> September 15.

4) Page 1: I agree with your statement "ORVs have long served as a primary form of access for many portions of the beach in the seashore, and continue to be the most practical means of access and parking for many visitors."

However, pedestrian only areas discriminate against individuals with limited mobility due to age or physical impairments, families with small children, and those wishing to engage in activities requiring recreational equipment (boogie boards, beach umbrellas, beach chairs, coolers, fishing rods and tackle, etc)

5) Page 53: I disagree with the special use permit proposed guidelines. It is impractical to allow the transportation of disabled visitors to the village beaches and then require the vehicle to be returned to the street or parking area. This necessitates the disabled person to have a driver to drop him (or her) off, then drive to a parking area, then trudge a long distance to the site of the drop off, then trudge the long distance through the sand back to get the vehicle.

Suppose the handicap person wants to go to the beach, is capable of driving himself, yet cannot find another person to go with him? Does he now not go to the beach? This rule creates unnecessary hardships and risks in the event of an emergency as well.

6) Page 121 ? 127. I strongly disagree with the buffers as presented. We must allow for pass-thru corridors. The beach is linear with the ocean buffering on one side and the dune line on the other. For example - If you pinch off access on one side of a 4 mile linear beach and pinch off access on the other side of the 4 mile section of beach with no corridor, then you effectively have closed off all 4 miles of the beach because you CAN'T get there. The proposed bird buffers are too large, blocking access to the interior sections from the two "buffered" ends.

I propose ORV pass-thru only corridors and to use breeding / nesting buffer distances to establish ORV pass through only corridors to ensure beach access in a way that does not hinder resource protection. I believe pass through corridors should be maintained for pedestrians and ORVs in all areas of the Cape Hatteras National Seashore Recreational Area throughout the entire breeding and nesting season. Corridors are vital to providing access in a way that does not hinder resource protection.

Piping Plover unfledged chicks buffer should move with the brood as it relocates to reliable food source, not expanded.

The 1,000 meter distance for the piping plover is way too large and not based upon peer reviewed science. A more rational distance would be 200 meters per other sites in the nation for the piping plover. Ample scientific evidence and precedent exists to support a 200 meter buffer.

Buffers for other species, including American Oystercatchers, Least Terns and Colonial

Waterbirds must also be changed. An effective 30 meter buffer should be established for these species rather than the 300 meter closure outlined in the DEIS.

NON-ENDANGERED BIRDS should not have same protection as if endangered. Not allowing ORV access is paramount to denying the public access to these beaches.

7) Page 468: I disagree with the limitations imposed on pedestrian and ORVs. Corridors or bypasses should be provided thru, around or below high tide line in all SMAs during entire breeding season to maintain access.

8) Page 124: I strongly disagree with the NPS slant of providing for over protection of resource management over that of the public's right to access the beaches. Pro-active initiatives include: Vegetation Management, Habitat Management, Enhanced Predator Management, Colonial Water bird social attraction, Piping Plover check fledge rate, Piping plover chick buffer distance, and pass-through buffers during the incubation period. Opportunities to implement less restrictive closures as a result of the above initiatives should be considered more frequently than the 5-year periodic review process identified in the DEIS.

9) I disagree with the NPS Resource Management Pedestrian / ORV Closure Policies. These policies address the least significant factors affecting nest survival with little chance to have more than negligible impact. For example: the AMOY Nest Failures are predominately due to non-human events. Using your own stats, the mammalian predation is 54%, Storm / Lunar Tides: 29%, Nest Abandonment: 6%, Avian Predation: 5%, and Ghost Crab Predation: 3%,

So what is the percentage due to human interference: just 3%! It's insignificant, yet the NPS wants to ban humans when their actions provide very little influence on the success rate of breeding birds and turtles.

10) I disagree with the stats of breeding plovers and the other birds in the Park when the NPS does not adequately consider locations neighboring the Recreational Area that are part of the same ecosystem, namely dredge and spoil island that are located just yards away and within sight of the seashore.

These birds are part of the same ecosystem and should be included.

Those spoil islands, developed by man from dredging the waterways in the Pamlico Sound for channel upkeep are slammed full of birds. The reason why so many birds? NO PREDATORS. SO, birds are not as stupid as one might think. You have to count these birds and incorporate them in the stats when the NPS is talking about any so called decline in breeding pairs in the National Park.

11) Page 1: I do not think the DEIS responsibly addresses the cultural resource issues. The very purpose of the DEIS as set forth in the National Environmental Policy Act (NEPA) is to protect and preserve natural and cultural resources in the federal decision making process. In the DEIS, the statement "protect and preserve natural and cultural resources" appears in the first sentence of the first page of the plan, in the Purpose of the Plan section, and numerous times thereafter. Yet, the 810 page document devotes only two paragraphs to analysis of cultural resource issues.

As a lifelong resident of Hatteras Island, we of the Hatteras Island community have always gotten together on the south beach on Sunday to enjoy the beach with our cookouts, gatherings, surf bathing, horse shoes and foot races, fishing, and surfing. Now the DEIS is proposing closing off most of the south beach during the summer which is the traditional period we local people use the beach. The continuation of this traditional pattern of land use is central to maintaining the historic identity of our island communities.

12) Pages 270-281; 561-598: I strongly disagree with your economic analysis of the impact of the DEIS. The region of influence (ROI) incorporates the Northern Beach communities, including Kill Devil Hills, Kitty Hawk, Southern Shores and Duck. These areas are almost completely disconnected from ORV use and access issues relating to the Seashore.

? Inclusion of the Northern Beaches in analysis significantly dilutes estimates of economic impact on the 8 Seashore Villages

? Analysis of economic impact to the Seashore Villages appears to be significantly down played. Emphasis in DEIS is on the ROI-wide or county-wide level impacts.

? Nowhere is it clearly addressed that the overwhelming majority of negative impacts will be felt by small businesses in the Seashore Villages rather than by overall economic interests within the greater ROI.

On page xlvi, Alternative F is characterized as having a "negligible to moderate" adverse impact on small businesses. I strongly disagree with this statement.

I believe the negligible to moderate projection is inaccurate and relies on economic surveys that has not yet been published. Furthermore, this material is not expected to be added to the DEIS until after the public comment period has ended.

Based upon the economic harm we have already experienced under the consent decree, Dare County projects the economic impact of Alternative F to be substantial.

Beach closures have already had a devastating and unfair impact on many Dare County Businesses, causing foreclosures, bankruptcies, lay-offs, cutbacks, expensive refinancing, and depleted college funds and savings accounts.

Even businesses whose revenue has stayed level or showed a modest increase have accomplished this at a costly price. Many have had to cut back employee hours, forego much-needed capital improvements, and sacrifice profits. That is certainly the case with Hatteras Realty.

Pages 270-286, 561-598: The socio-economic data and analyses are incomplete and erroneous and result in an understatement of the effect the restrictions will have upon the Island, the region and the state of NC. The US Park Services answer: Businesses will have to "adapt" to the new rules. (p.383) The negative economic impacts of the decree ARE KNOWN, so to say that the added restrictions would have negligible to moderate impact is indefensible.

13) Overall Visitor Counts - Overall visitor counts appear to include visitors to Fort Raleigh National Historic Site and the Wright Brothers National Memorial. A large percentage of these visitors vacation in the Northern Beaches communities and recreate on the non-federal beaches outside of the Seashore. Visitors who patronize the Fort Raleigh National Historic Site and the Wright Brothers National Memorial but do not visit the actual seashore areas need to be factored out.

Maintenance of Future Access to Cape Point and South Point Ocracoke: All socioeconomic analyses related to Alternative F are predicated on the assumption that access corridors will remain open for at least an appreciable portion of the visitor high season. Under Alternative F, the access corridors will be subject to Resource Closures based on buffers similar or identical to the Consent Decree. Unless some predictability of access to Cape Point and South Point Ocracoke can be assured, economic analyses predicated on assumption of access are fundamentally flawed.

Why would a group of surf fisherman want to come to Hatteras Island to surf fish if they are not sure they can access the prime fishing grounds at Cape Point? The answer is they won't come. If they don't come, they don't rent vacation homes and spend their money on Hatteras and Ocracoke Islands.

The definition of the Region of Influence (ROI), faulty data on economic activity generated by specific type recreational activity, incomplete visitation/business survey data, inflated overall Seashore visitor counts pertaining to beach use, and flawed key assumptions concerning the maintenance of access under Alternative F, all lead to inaccurate conclusions in the socioeconomic analyses. Specifically, these inaccuracies can be seen as understating the negative socio-economic impact of the Seashore Villages. Further, this negative impact will be absorbed almost entirely by Small Businesses. Neither of these important aspects of the management alternatives are adequately presented in the DEIS.

14) Page 136: I strongly disagree with your pet restriction proposals. The "prohibition of pets in the Seashore during bird breeding season including in front of the villages." = No Pets in public areas ?beaches, campgrounds, soundfront, foot trails, park maintained roads -from March 15 ?July 31.

Hatteras Realty books approximately 13,000 rental weeks for a total of 91,000 rental nights housing approximately 700,000 visitors. The ban on pets to July 31 will seriously hurt the rentals of my vacation homes as our pet homes encompass about 30% of our rentals. I propose allowing pets on 6 foot leashes year-round in all areas open to pedestrians or ORVs.

15) Pages 125; 392 ? 396: SEA TURTLES. I disagree with the stats and procedures proposed. I think endangered sea turtles would benefit from management practices now in use at other federal seashores that are more proactive in efforts to achieve nesting success. This includes relocating nests to more desirable locations as is done in other state and federally controlled areas.

The Cape Hatteras National Seashore Recreational Area is on the northernmost fringe of turtle nesting locations for the southeast, accounting for about 1% of all turtle nests. Proposed buffer areas are not needed for protection of the turtles and amount to overprotection.

16) Pages 97- 101. I strongly disagree with proposals in this section saying that ORVs will be prohibited year round between ramps 27 and 30, at Hatteras Inlet (Hatteras Spit), Ocracoke Inlet (North Ocracoke Spit) and various other locations.

Not allowing ORV access is paramount to denying the public access to these beaches. They are located miles from the nearest parking or paved road area and too far to access on foot. As a matter of course, there has been no breeding of piping plover or other endangered species at the Hatteras Island Inlet (spit) area in the past 6 years.

17) Page 104: I disagree with the proposed night time driving closures. Per your proposals, night driving will be prohibited between May 1 and November 15th, forcing visitors off of the beaches early in the evening and preventing sunrise surf fishermen access in the morning. I propose a more moderate night time ban if one is needed, perhaps from June 1 ? September 15 with times being 1 hour after sunset and 1 hour before sunrise to allow beach goers to gather their stuff and exit the beach area.

Certainly more proactive measures such as relocating nests prone to weather and ocean events would dramatically increase the nesting success rates.

18) Page 121: I disagree with the proposed beach closings, including pedestrian access from March 15 until July 31 in 8 different beach locations which have traditionally been available. Please leave these areas open to beach walkers, shell collectors and those that want to access the beaches in these areas.

Conclusion:

Please, incorporate access corridors through any SMA so we can get to the open beach beyond. Incorporate the birds into the count that nest on the spoil islands. Base your buffer zones on peer reviewed science and scale them back to more reasonable distances as discussed.

It is neither logical nor reasonable to spend so much time, money and energy to overprotect a bird (Piping Plover) in the Cape Hatteras National Seashore that is on the southernmost fringe area of its breeding ground. That goes for the loggerhead turtle that is in its northernmost breeding area.

Let's scale back the buffer zones. You can always increase at a later date.

The USPS is leaning way over the line on over protection and not enough on the public's right to enjoy the beaches of the National Seashore. The proper balance is not achieved in the propose DEIS and needs to be modified so that the proper balance of reasonable resource protection and access to the beaches of the National Park is achieved. I could sum it up by saying "Protect, not Prohibit."

Thank you,

Tim Kelly

Following are my comments about the DEIS Off-Road Vehicle Management Plan prepared by the NPS for Cape Hatteras National Seashore.

1. Page xxiv: I disagree with the NPS statement that "Carrying capacity would be a 'peak use limit' determined for all areas based on the linear feet of beachfront..." If huge sections of the beach are closed off, people will be forced into smaller areas, resulting in potentially more resource impairment and diminished visitor experience.

2. Page xix and page 23: I disagree with having two different closure rules pertaining to the North-facing (north side) beaches and the South-facing (south side) beaches, according to the grid in "Alternative F." I disagree with the NPS proposal to close the beaches in the villages of Frisco, Hatteras, and Ocracoke longer than the traditional May 15 to Sept. 15 period for the Northern beaches, even though seasonal visitor statistics are similar for all villages. The May 15-Sept. 15 closed period should be apply to ALL villages.

3. Page 1: I agree with the statement that "ORVs have long served as a primary form of access for many portions of the beach in the seashore, and continue to be the most practical means of access and parking for many visitors."

However, pedestrian-only areas discriminate against individuals with limited mobility due to age or physical impairments, families with small children, and people who engage in activities requiring recreational equipment such as fishing rods and tackle, beach umbrellas, chairs, bookie boards or coolers.

4. Page 1: I disagree that DEIS responsibly addresses cultural resource issues. The purpose of the DEIS--as set forth in the National Environmental Policy Act (NEPA)--is to protect and preserve natural AND cultural resources in the federal decision-making process. Please see the statement "protect and preserve natural and cultural resources" that appears in the first sentence of the plan's first page, in the Purpose of the Plan section, and numerous times later in the document. Why, then, does the document have only two paragraphs of analysis of these cultural resource issues?

One example of the short shrift given to cultural resources is the DEIS proposal to close off most of the south beach during the summer, which is the time that year-long Hatteras Island residents ("locals") traditionally use the south beach--typically on Sundays--for cookouts, get-togethers, swimming in the surf, fishing, surfing, and games. Maintaining this ages-old land-use pattern is necessary to the continued cultural identity of Hatteras Island communities.

5. Page 53: I disagree with the proposed guidelines for a special use permit.

Some conditions haven't been considered. For example, allowing the transportation of a disabled visitor to the village beaches by another person and then requiring the vehicle to be returned to the parking area, means that the driver must walk a long distance through the sand back to the place the disabled visitor has been dropped off and again hike back to vehicle when it's time to go. Also, in the event that the disabled visitor is capable of driving to the beach, he or she cannot go unless they have another person with them to drive their vehicle back to the parking lot. This ruling creates unnecessary hardships for the disabled and their families and friends, and even creates risks in the event of an emergency.

6. Pages 97-101: I strongly disagree with proposals in this section that ORVs will be prohibited year-round between ramps 27 and 30 at Hatteras Inlet (Hatteras Spit), Ocracoke Inlet (North Ocracoke Spit) and various other locations.

Prohibiting ORV access equates to denying public access to these beaches, which are located miles from the nearest parking or paved road areas and are too far to reach on foot. In fact, there have been no breeding piping plovers or other endangered species in the Hatteras Island Inlet (Spit) area during the past six years.

7. Page 104: I disagree with the proposed night-time driving closures, prohibiting night-time driving from May 2 through November 15. These closures will force visitors off the beaches early in the evening and prevent sunrise surf fishermen access in the morning. If one truly is needed, a shorter night-time ban--i.e., 1 hour after sunset and 1 hour before midnight, June 1-Sept. 15--is much more practical and appropriate for all concerned.

8. Page 121: I disagree with the proposed beach closings--including pedestrian access--from March 15-July 31 in eight different beach locations that have traditionally been open.

Please leave these areas open to beach walkers, shell collectors and others.

9. Page 124: I strongly disagree with the NPS's perspective that over-protects resource-management at the expense of the public's right to access the beaches.

Alternatively, please seriously consider proactive initiatives, including: Vegetation Management, Habitat Management, Enhanced Predator Management, Colonial Water Bird Social Attraction, Piping Plover Chick Fledge Rate, Piping Plover Chick Buffer Distance, and Pass-Through Buffers during the incubation period.

Also, opportunities to implement less restrictive closures as a result of the aforementioned initiatives should be considered more frequently than the 5-year periodic review process identified in the DEIS.

10. Pages 121-127: I strongly disagree with the buffers as presented.

Pass-through corridors must be provided. The beach is linear with the ocean buffering one side and the dune line on the other side. For instance, if you close access on one side of a 4-mile linear beach and prohibit access on the other side of that section of the beach with no pass-through corridor, then you have closed all 4 miles of the beach because people CANT get there. The bird buffers are excessive, blocking access to the interior sections from the two "buffered" ends. I propose pass-through-only corridors to ensure beach access in a way that does not hinder resource protection. I believe pass-through corridors must be maintained for pedestrians and ORVs in all areas of the Cape Hatteras National Seashore Recreational Area throughout the entire breeding and nesting season. Corridors are vital to providing access in a way that does not hinder resource protection.

Also, I believe the Piping Plover Unfledged Chicks Buffer should move with the brood as it relocates to reliable food sources and NOT be expanded. Most important, the 1,000-meter distance--an area almost equal in size to 10 football fields--for the Piping Plover is overkill and not based on peer-reviewed science. A more realistic distance would be the 200-meter distance observed at other Piping Plover sites in the U.S.--ample scientific evidence and precedent exists to support the 200-meter buffer.

Buffers for other species such as American Oystercatchers, Least Terns, and other Colonial waterbirds must also be changed. An effective 30-meter buffer should be established for these species rather than the 300-meter closure noted in the DEIS.

Non-endangered birds should not mandate the same protections as endangered species. Denying ORV access to these beaches with non-endangered birds is tantamount to denying public access to them.

11. Pages 125 and 392-396: SEA TURTLES. I disagree with the statistics and procedures proposed.

Endangered Sea Turtles would benefit from management practices now used in other Federal seashores that are more proactive in their efforts to achieve nesting success. These proactive efforts include relocating nests to more desirable locations and have proved successful in other state- and federally-controlled seashores. The Cape Hatteras National Seashore Recreational Area is on the northernmost fringe of turtle-nesting locations of the Southeast, accounting for about 1% of all turtle nests. The proposed buffer areas on Cape Hatteras Seashore amount to overprotection of the turtles.

12. Page 136: I strongly disagree with your pet restriction proposals. The "prohibition of pets in the Seashore during bird breeding season including in front of the villages," amounts to NO PETS in public areas--beaches, campgrounds, soundfront, foot trails, park maintained roads, etc.--from March 15-July 31.

I own a home in Avon that rents as a "Pet House," where, for an additional cost, people may bring pets with them on vacation. If people cannot bring their pets into the National Seashore, my rental income will be severely impacted, as most of my income comes from guests with pets. Former guests, whom we have relied on season after season, will either leave their pets at home and NOT rent my house or they will leave their pets unsupervised in my house while they visit the seashore, resulting in damage to my property.

As a pet owner myself, I have observed the effectiveness of the present 6-foot leash law, and I strongly recommend allowing pets on 6-foot leashes in all Cape Hatteras National Seashore areas open to pedestrians or ORVs.

13. Page 201: I disagree with the NPS statement, "Even with resource closures in place, protected species are still at risk [from pedestrians and ORVs]." No piping plover deaths have been attributed to ORVs. In fact, ORV violations continue to decrease with the improvement of signage and education of the public. And the violations that do occur seem more the result of NPS lack of manpower and enforcement than the willful and purposeful violation of the out-of-bounds areas by the public.

14. Pages 270-281 and 561-598: I strongly disagree with the NPS economic analysis of the impact of the DEIS. Your region of influence (ROI) incorporates the Northern Beach Communities, including Kill Devil Hills, Kitty Hawk, Southern Shores, and Duck. These areas are almost completely disconnected from ORV use and access issues relating to the Seashore.

Including the Northern Beaches in analysis significantly dilutes estimates of economic impact on the 8 Seashore Villages. Moreover, analysis of economic impact to the Seashore Villages is significantly down-played in The DEIS, with emphasis on the ROI-wide or County-wide impacts. Worse, the DEIS IGNORES that the overwhelming majority of negative impacts will be borne by small businesses in the Seashore Villages rather than overall economic interests within the greater ROI.

On page xviii, Alternative "F" is presented as having "negligible to moderate" adverse impact on small businesses. I strongly disagree with this statement.

The negligible to moderate prediction is inaccurate and relies on economic surveys that have not yet been published and are not expected to be added to the DEIS until after the public comment period is over.

Based on the economic hardships already experienced under the Consent Decree, Dare County projects the economic impact of Alternative "F" to be substantial. Consent Decree beach closures have already had a devastating and unfair impact on many Dare County businesses, causing lay-offs, job losses, loss of profit, postponement of needed property improvements, business closures, foreclosures, bankruptcies, and depletion of savings, college and retirement funds. Meanwhile, food banks and "soup kitchens" on Hatteras Island are hard-pressed to keep up with demand.

Pages 270-268 and 561-598: The socio-economic data and analyses used are incomplete and erroneous, understating the effect the DEIS restrictions will have on Hatteras Island, the region, and the State of North Carolina. The NPS recommendation on page 383 that businesses will have to "adapt" to the new rules is completely arbitrary and cruel. The negative impacts of the decree ARE KNOWN; therefore, to say that the new restrictions would have negligible to moderate impact is indefensible.

15. Page 468: I disagree with the limitations imposed on pedestrian and ORVs. Corridors or bypasses should be provided through, around or below the high-tide line in all SMAs during the entire breeding season to maintain access.

Additional comments:

Overall Visitor Counts

Overall Visitor Counts appear to include visitors to Fort Raleigh National Historic Site and the Wright Brothers National Memorial. A large percentage of these visitors vacation in the Northern Beaches communities and recreate on the non-federal beaches outside the National Seashore. Visitors who patronize the Fort Raleigh national Historic Site and the Wright Brothers National Memorial but do not visit the actual National seashore areas SHOULD NOT BE INCLUDED in the counts that factor into the DEIS.

Maintenance of Future Access to Cape Point and South Point Ocracoke

Alternative "F" socioeconomic analyses are made on the assumption that access corridors will remain open for at least an appreciable portion of the visitor "high season." In reality, under Alternative "F," the access corridors will be subject to Resource Closures based on buffers similar or identical to the Consent Decree. Unless some predictability of access to Cape Point and South Point Ocracoke can be assured, economic analyses predicated on assumption of access are fundamentally flawed.

Why would a group of surf fishermen want to come to Hatteras Island to surf fish if they are not sure they can access the prime fishing grounds at Cape Point? The answer is, they WON'T COME, and if they don't come, they don't rent my or any other vacation home. And they won't spend their money on Hatteras And Ocracoke islands.

Inaccurate Conclusions in the Socioeconomic Analyses

The DEIS socioeconomic analyses are rendered inaccurate because they are based on: 1). a flawed definition of the ROI, 2). faulty data about economic activity generated by specific type of recreational activity, 3). incomplete visitation/business survey data, 4). inflated overall National Seashore visitor counts pertaining to beach use, 5). and flawed key assumptions concerning maintenance of access under Alternative "F." Specifically, these inaccuracies understate the negative socioeconomic impact on the Seashore Villages. Moreover, the negative impact will be felt almost entirely by small businesses. Neither of these concerns has been adequately represented in the DEIS.

In Conclusion:

I disagree with the NPS Resource Management pedestrian/ORV Closure Policies. These policies address the least significant factors affecting nest survival, with little chance for more than a negligible impact. In example, the American Oyster Catcher Nest failures are predominantly due to non-human causes. Using your own figure: Mammalian (non-human) predation causes 54% of failures, storm/lunar tides cause 29%, nest abandonment equates to 6%, avian predation is responsible for 5%, and ghost crab predation equals 3%. Human interference comes in at the end with a mere 3% cause of nest failures. Why, then, does the NPS want to so severely limit human activity when it causes very little negative impact on the success rate of breeding birds and turtles?

It is unreasonable to spend so much time, money and energy protecting a bird--the Piping Plover--that is on the southernmost fringe of its breeding ground, in the Cape Hatteras National Seashore. Likewise, the same can be said for the Loggerhead Turtle that is in its northernmost breeding area here. Please scale back these buffer zones. They can be increased at a later date if needed.

In the proposed DEIS, the National Park Service has taken extreme measures to overprotect these species while nearly disregarding the public's right to enjoy the beaches in what is supposed to be the National Seashore Recreational Area. Please balance these two concerns in a more reasonable and equitable way with a plan that inspires not hurt and anger but respect among both native and local Hatteras islanders and the visiting public.

Additional Recommendations:

Please incorporate access corridors through any SMA so people can get to the open beach beyond.

Also, DO count the birds that nest on the Spoil Islands.

Base your buffer zones on peer-reviewed science and scale them back to more reasonable distance. Respectfully, M. Eileen Graham Hatteras Island property owner

Correspondence: I have a second home in Buxton and have been coming to the Outer Banks for outdoor recreation, specifically the Buxton-Frisco area, for in excess of 45 years. Though there is much I disagree with in the proposals, the following are some points I would like to stress. It makes no sense to me to have different restriction periods for the North and South beaches. The time periods for seasonal closures should be the same. Based on your own study, the least significant impact on bird and turtle nesting success is human impact, yet all recommendations only address this issue. Non-endangered birds should not be provided the same buffers and protection as endangered birds. In evaluating breeding success, the bird populations on the dredge spoil islands should also be considered. Please do not make the beach access restrictions any longer or wider than the current May 15 to September 15 restrictions, and preferably shorter.

Correspondence: In the DEIS a study was made concerning how jobs would be effected by imposing the different alternatives. I will be focusing on Alternative A and F as these appear to be both the most favored by two different groups but also the most extreme. For history purposes I will also be referring to the plan for the Edwin B. Forsythe Wildlife Refuge, in particular the Holgate section that was put into effect in late 2000. Cape Hatteras is one of the unique parks in that there are four towns that act as the gateways to the park. By gateways I refer to the ability of each town to offer housing, guiding, support structure of convinces such as gas, food, and other amenities for the enjoyment of the visitors. Each of these Gateways towns' incomes is based on the tourist trade. In turn the people that fill the needed job market rely on other businesses that provide service to them (i.e. Building and repair to housing,

Repair of their vehicles, food shopping, and clothes).

In referring to your own studies under Plan "A" (p574) at the extreme worse, only 135 jobs would be lost causing long term minimal effect. Under Plan "F", 400 jobs (p.594) will be lost. Neither mentions how this will have the "ripple effect" to the local economy for those that live from paycheck to pay check. All of the studies are put into a model that predicts out comes, but not real life. Just as an example, with the statistics being drawn from the 2000 census (http://mcdc2.missouri.edu/websas/dp_products_overview.shtml) there was a working population of 2241 working and a total of 3371 capable of working; this gives 66% of this population working. Now if we go under Plan "A", 62% would remain working or 94% of the original population, under Plan "F", 55% would remain working or 83% of the original population. The difference in the un-employed is 6% under Plan "A" and 17% under Plan "F". This is a difference of 11% would have a big ripple effect to the both the local and regional economy.

Now speaking from my own experience where I was out of work for close to two years in the mid 90's, I still have not fully recovered after 15 years as I had to 1) dip into my savings to make ends meet which included my retirement fund. 2) My salary income has been greatly suffered because I had to take a lower paying job resulting in a loss of seven years of income that also affected both my savings and spending ability. This again affected local business that I patronize. Though this is only the "ripple effect" of one person, multiply this by 400 jobs and families. If the families decide to stay in the area hoping for the promised turn around, there is a burden put on the local governments that must help to supply support for them, lost tax revenue and an increase of government costs for the other support activities such as trash pick-up, schools, medical facilities, and Municipal costs. One has to remember that most of the work in the gateway towns is small businesses which are the backbone of this area. By your own model studies under Alternative "F" would experience "Negligible to moderate adverse impacts". (p.595). However, this is based upon the improvements and projects for accessibility to the public over a short period of time. The history of the park system has been to slowly respond where improvements are concerned and 11% difference to me would have a major effect in the region. Now let us go to the plan as it was put into effect at the Holgate section of the Edwin B. Forsythe Wild Life Refuge. In this section the island of Long Beach island services as the gateway with the small town of Long Beach Township, which includes Holgate and Beach Haven Heights being closest to the referenced beach. Under that study it was stated that just on the beach permits alone a loss of income may result, but this was never followed up. Also over the five year period where the businesses that relied on tourist income alone, four businesses failed because they relied on the extra income that the fishermen provided in both the off season that had limited access, and during the summer months when the beach was closed to all access. During this five year time period, none of the added anticipated jobs materialized such as the Boat Ferrying system that was expected to contribute to provide other support jobs for this service. This may be considered small, but the businesses that failed were small family owned, which were the main incomes for those families. These families if they stayed in the area would still be struggling because the predicted jobs never materialized. Tax revenue was lost to both state and local governments.

For this reason, Alternative "A" is the preferred plan. This plan would allow for the greatest flexibility as long as the maximum funding is provided and common sense is used.

Correspondence: To whom it may concern:

I am an original native to Hatteras Island with family dating back long before lightkeepers. I have been managing my family restaurant for 13 years, while this business has been going for 35 years. I could give you several reasons to keep beaches open for my own personal pleasure, as well as my 3 young children, my true concern lies on behalf of my business. I am NOT against the safety for animals, nor do I feel there are any animals any more important than the next, but the amount of space being allotted for the nesting is completely over the extreme. The only ones suffering from these actions are the humans living here and visiting our island. You have proven statistics to what has 'harmed' these nesting areas and it is not anything from human form. Our business is more than seasonal, we are open 90 percent of the year. Much of our business comes from local, but a vast majority relies upon visitors. When these closures began, I noticed a significant decline in our revenue. Many people only looked at headlines and simply cancelled their vacations. Could you blame them, try keeping a family possibly with kids cooped up inside. How much fun is that? Please look at this from our eyes: There is not a single business that will not be affected by the closures. Motels, rental agencies, grocery stores, convenient stores, tackle shops, marinas, charter boats, seafood stores, and my main concern: RESTAURANTS! With our country already in desperate concern for money, what do you think this will do? I already stated that I am not against animal safety, I must provide for my children, nothing comes free. I do not have a government job with benefits, retirement or any insurance, nor do I receive any government help. Aside from the need to supply for my family, I also have my employees relying on income for their families and the cycle could go on and on! Dare County provides the highest income for our state, as I know your job does not rely on our income, but the taxes we pay in inadvertently filter down to your pay. Lets be logistic and come together on this. There has to be a "Happy Medium." Aside from my restaurant, my husband has a charter boat, and while his business may not rely on "beach goers" many of his customers are here with their families on vacation and spend majority of their time on the beach, making memories, this will affect generation after generation. This past Saturday, May 1st, a family was out on a boat together, 6 people, coming through the inlet, the boat capsized, throwing all members out. This occurred at 12 noon. The boat sank, children in life jackets drifted for 4 hours. One man died, a honest life was lost, a man and his childre watched their father/grandfather die. Now, had there been people allowed on the beach to witness this occurrence, someone could have called for help. But these parts of the beachers were closed FOR A BRID? Was that worth a man's life? For his son and grandchildren to witness? Luckily a passing boat spotted the tip of the sunken vessel and immediately boats began searching for the other 5 survivors. It is documented, another 30 minutes and they would have died as well. In closing, I was born and raised here and have solid, great memories of growing up on Hatteras Island. I have been raised in my families business and I desire to raise my children the same way. I want my kids to know their heritage, but to do so, I have got to be able to make a living I have to provide for myself and my children. We are not living in the days where one income can supply all of a families needs, regardless of the career, neither mine nor my husbands work will be able to go on if the beach closure continues. We have an amazing heritage here on Hatteras Island, God blessed us with abilities to earn a living, raise our families, and to keep an island "afloat." I've thanked GOD daily for all he has provided for me, please don't end our heritage or our childrens, we are not trying to "get rich" but simply "earn a living" Thank you for your time, may God Bless You and your coworkers. Sincerely,
 Le Ann Quidley-Canning

Correspondence: We have been frequent visitors to the Outer Banks for over 40 years. We would like to see better management of beach driving. I would like to see very limited driving on the beaches. I read that the limits put in place for the last several years has helped the bird and turtle population and feel that at the very least, we should stick with a plan such as that. I feel that Americans are becoming very lazy and feel that they cannot walk a few hundred feet.

When I see all the vehicles lined up on the beaches in parking rows, it sickens me. When I see truck tire treads all over the beaches, it sickens me. We fear leaving anything on the beach for fear of it being run over. I even fear lying on the beach for fear of being run over. Fisherman can walk if they want to fish. We do not need to bring our whole "house" with us to the beach. And I really fear approaching the beach access as the trucks are flying to get up the hill and one day a child will be run over at those accesses. The birds are entitled to a beach free of trucks, as are the turtles. As a woman, one has to take some precautions walking alone on the beach. If you see no one and start a long walk, it is very easy for a truck to come flying down the beach, which is bit unnerving. Please limit the driving.

Correspondence:	I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access. This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me. The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D: *Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park. * Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles. * Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones. Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: My DEIS Comments for the Cape Hatteras National Seashore Recreational Area

The enabling legislation created "The Cape Hatteras National Seashore Recreational Area" for all to enjoy (beachcombers, sunbathers, surfers, horseback riders, anglers, hikers, joggers, wildlife observers, kayakers, swimmers, families, children, grandparents?). The park was never intended to be "The Cape Hatteras Special Interest Group Area for National Audubon Members Only!"

The legislation states: "said area shall be, and is, established, dedicated, and set apart as a national seashore recreational area for the benefit and enjoyment of the people and shall be known as the Cape Hatteras National Seashore Recreational Area." The enabling legislation created the park as a Recreation Area not a Wildlife Refuge. Areas such as Pea Island National Wildlife Refuge on Hatteras Island were created to provide habitat and protection for endangered and threatened species. Finding a way to guarantee unrestricted public beach access for pedestrians and ORV that coexists with wildlife needs to be the highest priority. I believe ORV & pedestrian corridors should be maintained with adequate monitoring through temporary resource closures to provide access to the beach. Because of the distances involved, ORV access corridors are required so citizens can travel to their desired destinations within the Recreation Area. ORVs have historically served as the primary form of access for many portions of the beach in the Recreation Area, and continue to be the most practical means of access for most visitors to Hatteras Island. To limit ORV access would discriminate against individuals with limited mobility due to age or physical impairments, families with children, senior citizens and those wishing to engage in activities requiring recreational equipment such as Fishing, surfing, birding, swimming and family gatherings. Equipment needed for recreating in popular areas of the park cannot be easily carried on foot through miles of deep sand on a hot summer day by even the fittest individual without the risk of heat stroke, dehydration, physical exhaustion or even death. For example: Water, Food, Beach toys, umbrellas, beach chairs, coolers, fishing poles, tackle boxes, water-sports boards, first aid kit, cameras, binoculars, etc... ORVs in remote areas of the beach provide shelter from lighting, a place to get out of the heat and emergency transportation for an ill/injured child or elder. ORVs have been used on the Hatteras Island beaches for decades without any resource conflict. It is imperative that ORV use be recognized for exactly what it is: A historical means of access to an area for recreational opportunities. The use of an ORV is not considered a recreational activity in this Recreational Area. ATVs are not permitted. These recreational opportunities sought, allow the public to enjoy the Seashore's resources and values. Denying access to recreational opportunities, many of which are specifically protected in the Enabling Legislation, denies the Seashore's current visitors the opportunity to enjoy the park's resources and values and denies future generations the opportunity to enjoy the park's resources in direct violation of Park Services Management Policies. There is no evidence that ORV beach access causes any unacceptable environmental impacts in the park. Often, traces of ORV access are erased by wind and tide in a matter of hours.

The beaches within the Cape Hatteras National Seashore Recreational Area offer high recreational value to the public. While all of the beaches are suited and commonly used for swimming, sunbathing, wading, shelling and fishing, some beaches are uniquely more favorable for some specific activities. These specific areas should have minimal and flexible buffers for birds and turtles because ORV Closure is the Least Significant Factor Affecting Nest Survival. Humans and ORVs can coexist in harmony with birds and turtles. Scientific studies prove that human and ORV presence have an insignificant impact on nesting. Predators, Tides and Storms account for nearly all the lost nest in CHNSRA. Human presence benefits birds and turtles because Human presence decreases predator presence and increases nest survival rates. Prime historical recreation areas that require guaranteed public ORV access under the plan must include: Buxton to Cape Point ? World Famous Surf Fishing on Cape Point ? Prime water sports ? Favorite gathering area for locals and visiting families ? Prime Birding area ? Prime shelling area Cape Point to the Frisco Village line (South Beach) ? Prime child-safe swimming area south of Cape Point to Frisco village ? Favorite gathering area for "locals" and visiting families ? Prime shelling area ? Prime horseback riding area ? Recreational and commercial cast-netting at Cape Point ? Sunbathing ? Water sports ? Snorkeling ? Birding Ramp 55 to/including Hatteras Spit (Hatteras Inlet) ? Prime fishing area from ramp 55 around Hatteras Inlet spit ? Ramp 55 to/including Hatteras Spit (Hatteras Inlet) ? Recreational and Commercial cast-netting ? Prime family gathering area for visitors in the Hatteras Village area ? Water sports ? Birding Turtle Nests should be relocated from ORV corridors in these prime historical recreation areas. South Beach is an unproductive Plover nesting area so access should be open year round to South Beach. I support resource protection for shorebirds and sea turtles based on peer reviewed science. Who better to advocate preservation of area wildlife than the people whose lives and futures are intertwined to the success of each species?

I agree with these Shorebird / Water bird Buffers: Species Breeding Behavior/ Nest Buffer ORV Pass-through Unfledged Chicks Piping Plover 50 m 30 m 200 m American Oystercatcher Flush + 15m Flush + 15m Flush + 15m Least Terns 30 m 30 m 30 m Other Species CWB 30 m 30 m 30 m MAXIMUM Piping Plover Unfledged Chick Buffers Establish a 200 meter buffer / Closure around the unfledged chick(s) location. Adjust buffer as needed when chicks are mobile. Establish ORV/Pedestrian access corridors. Vehicles may be allowed to pass through portions of the protected area that are considered inaccessible to PIPL chicks because of steep topography, dense vegetation, water or other obstacles. Morning access to the points and spits may be delayed until chicks have been located if the access corridor passes between the waterline and through the buffer area that would otherwise be closed. Reopen access corridor outside of pre-nesting area after chicks fledge. Remove pre-nesting closure 2 weeks after all chicks in the area have fledged.

Ample scientific evidence and precedent exists to support a 200 meter buffer.

*** As part of the NEPA process, I Formally Request the National Park Service to provide peer-reviewed science that justifies a 1,000 meter closure in all directions.

MAXIMUM American Oystercatcher Unfledged Chick Buffers Establish a 30 meter buffer/closure around the unfledged chick(s) location. Adjust buffer as needed when chicks are mobile. Monitor daily. Establish ORV/Pedestrian access corridors. Buffers/closures will be removed after AMOY chicks have fledged (observed flight of 30 meters).

MAXIMUM Colonial Water birds Unfledged Chick Buffers Establish a 30 meter buffer/closure around the chick(s) location. Adjust buffer as needed when chicks are mobile. Monitor daily. Establish ORV/Pedestrian access corridors. Buffer/closure will be removed after all chicks have fledged.

I believe the Four-wheel drive vehicles allowed to drive on the Recreational Area beaches should be registered, licensed, and insured and comply with inspection regulations within the state, country or province where the vehicle is registered. All-Terrain Vehicles (ATVs) should be prohibited. ATVs are defined as a type of off highway vehicle that travels on three or more low-pressure tires; has handle-bar steering; and has a seat designed to be straddled by the operator.

The science offered to support the environmentalist positions does not justify the extreme ORV and pedestrian access restrictions proposed in the DEIS. I believe ORV access to Cape Point, South Beach and Hatteras Inlet should not be restricted.

The proposed 1,000 meter pedestrian/ORV closure in all directions for a piping plover unfledged chick brood is extreme and scientifically unjustified. This equals approximately 771 acres per brood. The plover closure should be reduced to 200 meters.

The Oystercatcher is not a federally threatened species and the proposed 300 meter pedestrian/ORV closure is extremely excessive. The Oystercatcher closure should be reduced to 15 meters.

In my opinion, there is no scientific justification to deny human entry into large areas of the recreation area and severely restricting the public's access to all portions of the beach.

I urge you to preserve our beaches, protect natural resources with common sense policies, but not prohibit ORV use and pedestrian access to any portion of the Cape Hatteras National Seashore Recreational Area at any time. Remember, the National Seashore Recreation Area was established for the benefit and enjoyment of the people of this country. How can future generations enjoy the area if access is severely restricted? CORRIDORS are vital in

providing access while managing resources. MANAGEMENT BUFFERS must be based on peer-reviewed science. NON-ENDANGERED BIRDS should NOT have the same protection as if endangered. TURTLE MANAGEMENT would benefit from nest relocation and other practices. So, please save the communities of Hatteras Island and preserve the historic & cultural way of life of the people on this island for future generations to experience. There are many miles of unpopulated barrier islands on the east coast that are better suited to enhance shorebirds and turtles than Hatteras Island.
Thank You

Correspondence:	I am a frequent visitor to the CHNS and visit for the sole purpose of being able to enjoy the seashore through ORV use. I believe that public parks are meant to be used for the enjoyment of the public. I support both pedestrian access and ORV access to all of the beaches. I support the residents of the towns and villages adjacent to the seashore. I am considered a "visitor" and in no way should my input outweigh the opinions and beliefs of the residents. I respect the parks wildlife and believe that before 2007 and now the NPS has done a great job in protecting it. If I have to choose one of the alternatives to support I would choose Alternative A out of the A - F Alternatives. Although I believe that many of the previously used buffers were far to large. Thanks for your time! Respectfully, Jacob Presley

Correspondence:	Dear Superintendent Murray, As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points. 1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations." 2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness...." Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources. 3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals. Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

Correspondence:	I am writing you today to make formal comments on the Cape Hatteras National Seashore Recreational Area Off-Road Vehicle Management Plan Draft Environmental Impact Statement, specifically Alternative F, created by the National Park Service. Myself and my family have been vacationing in Avon on Hatteras Island for years now. We fell in love with the Outer Banks mainly because of the ability to enjoy the ORV access to the beautiful beaches for fishing, wildlife observation and having our two dogs with us. These are all things we cannot enjoy in New Jersey where we live and can be at the beach in less than a one hour drive. In New Jersey, we can operate an ORV in very limited areas and can only have pets on the beach during certain months. We must also buy a permit to access the beach and a beach tag to sit on an overcrowded beach where you aren't allowed to do much of anything. What you have in the Outer Banks National Seashore is truly a special privilege that was meant to be enjoyed by all. For this to be taken away or severely limited would be a tragedy for all of us. I would also like to call attention to the potential economic impact of Alternative F. The DEIS suggests "F" will have low impact on small businesses. From my experiences with small business owners on Hatteras Island, any restriction in beach access will have severe economic impacts to their income as the closures in the past years have. In an already poor economy, the limiting of beach access has proved devastating to all businesses and residents on Hatteras Island. I personally have cut my vacationing at the Outer banks down from two trips a year (one in May and one in October) down to one trip in October because of the extremely limited beach access during the summer months. I am urging you to formulate a management plan with flexibility. Without the ability to change user patterns while keeping access open, the Cape Hatteras National Seashore Recreational Area will become but a memory to generations of users. Sincerely, Barry Patrizzi Cherry Hill, NJ

Correspondence:	Please keep the Cape Hatteras beaches open for the public. Parks are for people to enjoy as well as for preservation. A national park needs to be "managed", not "closed". I visit the outer banks area several times a year and have family members who own property there. The feeling of open spaces and wild beaches is the biggest draw to the area. Please allow this popular fishing and recreation area to remain open for all to enjoy.

Correspondence:	These beaches need to have open access so that all can enjoy them. Not every beach has to be overcommercialized or access restricted. The public has right to be able to use this resource in what ever way they decide, if that means going for a walk or for drive to access their favorite spot on the beach away from every one else. I took my family out to the Outer Banks,NC last summer and enjoyed the unspoiled and unrestricted freedom we had while we were there. We have already made reservations to go back this year. One of the major reasons is because we are able to drive down the beach and						

find our own spot. Thanks for keeping our beaches open and accessible for ALL to use.

Correspondence: Dear Superintendent Murray,
 As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.
 1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."
 2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness...." Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.
 3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.
 Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

Correspondence: Mr. Murray,
 I sit here reading the DEIS document and wondering where it will all end. The total closure of the Seashore Park to all humans? The restrictions and closures as they stand with this document will put an end to the economy of the Outer Banks. If no economy-no visitors-thus no need for the Park Service to be here-just make it a desert island. I have been coming out here for over 50 years to visit and fish. I have seen people of all races, colors, creeds, and sizes enjoying nature at its finest. The fishermen I have seen over the years hav eALWAYS taken the extra time and effort to look after birds in distress or calling in problems or turtle situations. When I have personally called in teenagers on the beach "feeling their aots" I was told there is nothing the Park Service can do, but all the sudden, there is a push to close all the beaches to ORV use to great spots to recreate. It seems strange that the raccoons, foxes, etc. don't stand a chance as they are being trapped just because they live here. Is the government out to trap humans for just being out here enjoyin glife? A few people (bad apples) seemed to have screwed things up for everyone. If someone speeds on the beach is everyone else being penalized for just being there? I feel sure there can be an answer to the situation of ORV use on the beach. Please heed our request before big government does something that comes back to "bite us all in the butt."
 Sincerely,
 Gary M Michael

Correspondence: I have been driving on the Outer Banks Sand for 30+ years. I am respectful of all animals, dunes, trash pickup and I know all of my friends have been this way for the same period of time. Blocking off areas for the migratory birds is fine, but once they have birthed their young and the park service opens the beaches back up, everything is fine. Permanently closing over 60% of the beaches is just not fair to those of us who plan their vacations around the 4WD experience, who have bought property down in the Outer Banks for that purpose. You can't cram in all of the 4WDers into such a small area without unintentional destruction of the shores. The way it is now is protective enough to the wildlife and the sand.

 re: "historical use" and access to OUR beaches
 Dear Mr. Murray,
 As a local citizen, property owner, business owner and tax payer, I am very concerned about the impact to our area, as a result of the proposed and ongoing restrictions to access OUR beaches.
 Businesses, particularly on Ocracoke and Hatteras Island, have already suffered considerably from the closures. Coupled with the current economic situation, further closures could easily put more small businesses out of business. Our area has been built on the small, private business operators. People who have invested and leveraged everthing to survive, and now are now seeing their businesses struggle and fail due to closures, when their families where gaurenteed access to those beaches.
 Is there any provision to compensate the business and property owners for loss of revenue? My rental cottage in Ocracoke has not rented as well for the last two years, due to the beach closures.
 I have even stopped going down to Ocracoke as much myself, in the off season, due to the inability to fish on the south point, at sunrise and at night, where I have fished for 30 years. I am only one person, but when I am in Ocracoke, I will average spending \$100./day on food, tackle, gas, etc., not even counting lodging, since we have a home there. Multiple that by the many visitors who decide not to visit Ocracoke or Hatteras Island, and the economic impact is considerable for the small businesses.
 I just don't understand why access corridors can not be used to access the points of Oregon Inlet, Hatteras, and Ocracoke Inlets. Enough width for vehicles to drive and park one deep, would be adequate.
 How about the handicap visitors? Beach closures limit how these people can enjoy OUR beaches. My mother-in-law, a Hatteras native, suffered from alzheimers, but she loved to ride down on the beach and sit with the wind and surf in her face. If she were still here, she would be furious that the "historical access" that was gaurenteed to her father had been denied the "natives" of Hatteras Island. And by limiting access for the visitors, the local people are being denied the opportunity to support their families.
 80+% of Dare County is preserved or protected. There is only 6.5% the land that is suitable for building and private usage. Further restriction seems

totally unfair the people, both visitors and local.

Ocracoke is responsible for over 50% of Hyde County's revenue. Hyde County is one of the poorest counties in North Carolina. Further restrictions can have a severe economic impact on the whole county; schools, health services, etc.

Please, let common sense and practical application enter in to all decisions to close OUR beaches. That's right, the beaches are OUR beaches, bought and paid for by the tax payers/users of the resource.

Thank you for your time and consideration.

Bobby Harrell

Correspondence: I just read the letter from John and Sharon Newbold that was published in today's Coastland Times. I wholeheartedly agree with every point they made, and I think the Off-Road Management plan that has been proposed is flawed. I love birds, and I think they need to be protected, to a point. I think this plan completely disregards the economic impact that beach closures have on residents and visitors.

Correspondence: Another example of government/environmental groups gone wild. Fabricate a crisis, create new rules as a solution, go thru fake public input phase, adopt new rules. End result: more control over us common folk by the government. Understand, without rules the government has no power. . . . Law abiding, tax paying citizens be damned. We are, in essence, subsidizing this coup by the federal government via payment of taxes to further restrict public access to public property.
 Access to America's beaches is being threatened by misguided environmental groups who want to prohibit, or severely restrict, the right of people to continue the responsible use of this environment.
 I strongly oppose the latest plan to severely limit and restrict beach access at the Cape Hatteras National Seashore Recreational Area.

Correspondence: AS A PROPERTY OWNER ON HATTERAS ISLAND THE NEW PLAN BEING CONSIDERED WILL HAVE A NEGATIVE IMPACT ON US. STUDIES HAVE SHOWN IF THESE RULES ARE IMPLEMENTED, TOURISM WILL BE GREATLY IMPACTED. MOST PEOPLE COME TO THE BEACH TO GO TO THE BEACH. IF YOU KEEP THEM FROM THE BEACH THEY WON'T COME AND OUR RENTAL HOUSES WILL LOOSE MONEY. WE RELY ON THE INCOME FROM OUR RENTALS TO PAY 75% OF THE COST AND WITH THE ECONOMIC SITUATION AS IT IS, WE ARE JUST KEEPING UP WITH PAYMENTS. IF WE LOSE RENTAL INCOME WE WILL HAVE TO SELL OUR HOUSES, IT'S AS SIMPLE AS THAT. BELOW ARE MY COMMENTS.
 1) PAGE 201: WE DISAGREE WITH THE NPS STATEMENT: ? EVEN WITH RESOURCE CLOSURES IN PLACE, PROTECTED SPECIES ARE STILL AT RISK(FROM PEDESTRIANS AND ORVs)?
 2) WE AGREE WITH YOUR STATEMENT? ORVs HAVE LONG SERVED AS A PRIMARY FORM OF ACCESS FOR MANY PORTIONS OF THE BEACH IN THE SEASHORE, AND CONTINUE TO BE MOST PRACTIAL MEANS OF ACCESS AND PARKING FOR MANY VISITORS?
 3) PAGE 121 ? 127. I STRONGLY DISAGREE WITH THE BUFFERS AS PRESENTED. WE MUST ALLOW FOR PASSTHRU CORRIDORS. THE BEACH IS LINEAR WITH THE OCEAN BUFFERING ON ONE SIDE AND THE DUNE LINE ON THE THE OTHER. FOR EXAMPLE IF YOU PINCH OFF ACCESS ON ONE SIDE OF A 4 MILE LINEAR BEACH AND PINCH OFF ACCESS ON THE OTHER SIDE OF THE 4 MILE SECTION OF BECAH WITH NO CORRIDOR, THEN YOU EFFECTIVELY HAVE CLOSED OFF ALL 4 MILES OF THE BEACH BECAUSE YOU CAN'T GET THERE. THE PROPOSED BIRD BUFFERS ARE TOO LARGE, BLOCKING ACCESS TO THE INTERIOR SECTIONS FROM THE TWO BUFFERED ENDS.
 NON ENDANGERED BIRDS SHOULD NOT HAVE THE SAME PROTECTION AS IF ENDANGERED. NOT ALLOWING ORV ACCESS IS PARAMOUNT TO DENYING THE PUBLIC ACCESS TO THESE BEACHES.
 4) PAGES 97-101 I STRONGLY DISAGREE WITH PROPOSALS IN THIS SECTION SAYING ORVs WILL BE PROHIBITED YEAR ROUND BETWEEN RAMPS 27 AND 30, AT HATTERAS INLET (HATTERAS SPIT) OCRACOKE INLET (NORTH OCRACOKE SPIT) AND VARIOUS LOCATIONS.
 NOT ALLOWING ORV ACCESS IS PARAMOUNT TO DENYING THE PUBLIC ACCESSTO THESE BEACHES. THEY ARE LOCATED MILES FROM THE NEAREST PARKING OR PAVED ROAD AREA AND TOO FAR TO ACCESS ON FOOT. AS A MATTER OF COURSE, THERE HAS BEEN NO BREEDING OF PIPING PLOVER OR OTHER ENDANGERED SPECIES AT THE HATTERAS ISLAND INLET (SPIT) AREA IN THE PAST 6 YEARS.

Supt. Murray:
As a new Ocracoke home owner, I would like to comment on the ORV DEIS which is under consideration. I am not pleased with any of the six alternatives presented, each for a different reason.
However, I believe that the Coalition for Beach Access Position Statement represents many community constituents and provides an excellent recommendation on ways to protect the seashore environments while not diminishing any opportunities for tourists to enjoy our beaches.
I am counting on your considering all the comments you have received, and the sincere commitments of all the residents that care so deeply about these issues.
Sincerely,
Trisha L. Davis 79 Lighthouse Rd Ocracoke, NC 27960

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should be the basis for the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

I feel as an avid park supporter and outdoors person that Cape Hatteras falls short in promoting the visitor experience. While CAHA offers camping for it visitors is it not family friendly, unless you own an ORV. I would love nothing more than to bring my daughter camping and enjoy the beach. While there are board walks and foot trails leading from the campgrounds to the beaches, they all lead to ORV beaches. These beaches are full of tire ruts and vehicles and offer no aesthetic value or safety for pedestrians and most certainly not for those with small children. How can you have a seashore with

campgrounds with no access to vehicle free beaches for families to enjoy? After all isn't that what people are looking for when planning a family vacation? I understand that CAHA provides some vehicle free beaches which are mainly centered around the village areas. While these beaches may provide access to those people who are staying in the village, they do not offer the park visitor anything. Even with the addition of parking lots and foot paths - the true park visitor patronizing the Park run campgrounds - would have to pack up their vehicle and family to search for parking space and battle the droves of people renting vacation cottages. People flock to the our National Parks to enjoy the scenery and solitude they provide. It's an opportunity to sink into another realm, to learn, to relax and enjoy. This valuable opportunity is lost at CAHA. I've spent many hours and many years enjoying what CAHA has to offer and I am sad to say that I don't see myself bringing my family there anytime soon. The wonderment that I so fondly remember has been destroyed by one user group - the ORV's. I ask that you rethink the visitor experience and provide access to vehicle free beaches for those paying for campsites in order to enjoy your park. Their happiness and safety should be part of your top priorities along with habitat and species protection.

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources and integrity of the Seashore as part of the National Park system.

Correspondence: Dear Mr. Murray:
May 3, 2010
Regarding the six alternatives described in the DEIS for the CHNS draft Off Road Vehicle Management Plan, please record my wife and me as favoring Alternative D. Unfortunately, none of the alternatives described adequately protect wilderness areas. There needs to be firm, clear, unambiguous prohibitions about driving on beaches in national parks and seashores. More and wider beaches must be set aside for pedestrian access only, with appropriate restrictions to protect wildlife needs during breeding seasons. Continued vehicle access to some of the most environmentally sensitive areas, such as Cape Point, South Beach, the Hatteras Spit, and South Point, is particularly disturbing. Our best hope is that the Park Service will reconsider its position and adopt something very close to Alternative D. If that should fail, we must hope that our federal legislative and legal systems will provide better direction within the next few years. Thank you for your consideration. Yours truly, Burnham S. Gould, Jr

Correspondence: Dear Superintendent Murray, Don't let Off Road Vehicles dominate Cape Hatteras National Seashore. The plan on the verge of approval will disproportionately dedicate beach use to year-round ORV traffic at the expense of wildlife and pedestrian visitors. Conserving Cape Hatteras for future generations and protecting wildlife must take precedence over ORV use.

Correspondence: To whom it may concern, I am in complete agreement that the endangered species of Cape Hatteras National Seashore Recreational Area should be protected but I believe that they should be protected in such a way that is not detrimental to the economy and businesses of Hatteras Island. As both a visitor and relocater to the Island I understand how reliant the business owners of the island are to visitors and tourists. If access is completely shut down in areas such as Cape Point and South Point as suggested on p468 of the DEIS Assessment, fewer and fewer visitors will visit and businesses will suffer. I believe these closures to be overly restrictive and access could be maintained for ORV's and pedestrians within reasonable guidelines while the nesting and breeding birds continue to remain protected. Yours sincerely

Correspondence: Please accept this letter as my comments on the DEIS at Cape Hatteras National Seashore. After reviewing the DEIS, I would like to strongly urge NPS to adopt a "reasonable and logical" approach to ORV use inside the park. Based on several of the Alternatives in the DEIS, reason and logic are not being employed. I am not submitting my comments frivolously. I take conservation of our natural resources very seriously. There has to be a way to allow reason and logic to enter the process of allowing ORV's in the park. To wit, I submit the following:

- The use of a 1,000 meter buffer for each nest is illogical. I offer that a person can be significantly closer to the President of the United States while he is sitting in the Oval Office than a person can be to a nest of birds at CHNS. A reasonable alternative would be to have significantly smaller buffers such as 200 meters that allow for ample room for the chicks to fledge and would still allow for public access to the beaches. - Why is it not reasonable to count the birds that nest on Cora June Island? The birds that nest there are in most cases the same birds the Consent Decree was designed to protect yet the environmentalists and the NPS refuse to publicly acknowledge their existence. I understand that technically the island lies outside the NPS jurisdiction however, a reasonable and prudent person can see the fact that this island is teeming with birds. A reasonable and prudent person, once they include the birds on Cora June Island, would see that the bird population in Hatteras is actually healthy. - There has not been a true economic impact study of the effect of the Consent Decree and beach closures that uses known, proven and logical methods. The Outer Banks economy is based on tourism, particularly on the ability to access and use the beaches. Not having the ability to access the beaches will deter and detract from tourism. How could it not? At the same time, the DEIS does not properly acknowledge the historical and cultural significance the use of the beaches and its resources has to the communities in CHNS. The residents and their families have used the beaches responsibly for generations and have developed a way of life unique to the Outer Banks. That culture and history must be preserved. - I object to the eradication of predators within CHNS in the name of saving a small number of birds. Having the power to alter with Mother Nature and natural selection is a slippery slope that the NPS has no business getting involved with. - With the possibility of access to the beaches limited to walking, handicapped and elderly people would be completely shut off from access to the beaches. How is it reasonable and logical to deny anyone the right to enjoy public lands? - Why can't the vegetation within the park be managed more responsibly to allow for potential nesting further away from the beach but still within the park grounds? This can be accomplished by NPS not allowing sections of the park to be overgrown.

I appreciate the opportunity to offer my comments to NPS. I would appreciate the same courtesy of reviewing my comments along with all of the other comments that I know are being submitted. My objective with this is to again, ensure that NPS takes reason and logic into account when determining the final plan for ORV usage. As a responsible driver of the beaches in CHNS, I exercise caution every time I have the opportunity to drive on the beaches. Numerous other drivers do as well. I offer that there has never been a documented case of a beach user deliberately destroying a nest. That said, no one can ensure that it will never happen in the future. We can hope that through a combination of education regarding responsible use of driving on the beaches and proper conservation techniques, future generations can enjoy one of the great natural wonders that is CHNS.

Respectfully submitted, Jim McGettigan Lansdale, PA

Correspondence: To whom it may concern, Whilst I completely agree that the natural beauty and endangered species of Cape Hatteras National Seashore Recreational Area should be protected I disagree with the extremity of the 1000m Buffer system for the piping plovers currently suggested on pages 121-127 of the DEIS Assessment. As an artist and visitor for many years to Hatteras Island I have been drawn by both its natural beauty and the wonderful, accessible recreational opportunities there.

Surely lesser severer distances for the buffers (a endorsed by the coalition) would provide more than adequate protection for the birds and thus also allowing the passage of ORV's and pedestrians in these areas. I believe it is as equally important for those visitors and locals who truly appreciate the island be able to pass through such areas and enjoy the Island to its full potential whilst the birds and other species remain protected. Yours sincerely

Correspondence: Dear Mr. Murray, I am totally against the proposed DEIS alternative F because of the following: Regarding ORV usage, it is the most restrictive of the alternatives. From the NPS own reports, restrictive ORV routes not only don't work, they have the opposite effect. In 2009, the number of Piping Plover and Oystercatcher chicks fledged was down from the previous year by 1 and 3 chicks respectively. Although ORV routes in the late spring and summer of 2008 were restricted under the "consent Decree", the spring nesting had already begun. 2009 is the first full year by which comparisons can be made.

0012587

2007 nesting season (without ORV restrictions) was the most successful Plover breeding season in over 20 years. The Coalitions Position statement is a more thorough and scientifically based guideline for managing the Park. Please start over using that document. Regards,
R. Mark Hudson 1117 Lake Valley Drive Wake Forest, NC 27587

Correspondence: I strongly disagree with the the draft Cape Hatteras National Seashore Off-Road Vehicle Management plan and Environmental Impact Statement published in March 2010. My family's non-rental soundfront vacation home in Buxton makes it possible for us to enjoy access to the local beaches. The draft management plan, if put into effect, will make access nearly impossible for us and for many locals and visitors. My husband and I are 67, with arthritis in knees and hips, so we cannot walk a considerable distance to the beach. We could not bring our dog under the proposed plan. We could not bring our grandchildren, both of whom are not quite two years old, because we cannot carry them very far. We could not enjoy playing in the surf, sunning, watching birds, searching for shells, watching young people enjoy water sports, or watching surf fishermen. Furthermore, I disagree with the current indiscriminate trapping of wildlife

Correspondence: Surf fishing out of the back of my truck along the OBX is a valued tradition I hold dear as a multi generation NC native. Unfortunately, many of the places with the best fishing are not accessible by pedestrians. At the same time I understand the need to protect wildlife. BUT, what some of these environmentalists are asking for is simply over the top. By their standards ALL human use of the areas in question will be terminated (not just ORV use)... except by some of them of course... to monitor their birds and turtles. Why does miles of beach need to be closed down because one nest is found back in the dunes? What ever happened to using a little common sense? A lot of good peoples' lives will be adversely affected all because of a hand full of birds. KEEP THE BEACHES OPEN TO ORV'S!

Correspondence: To the National Park Service,
I am an Outer Banks resident who uses the Cape Hatteras National Seashore for recreation throughout the year. I especially enjoy kite boarding in the waters off the seashore. I am glad that your officers are there to protect the wildlife and the human visitors.
It seems that all of the options in the DEIS are going to require an incredible amount of park resources to enforce. I think these complicated plans are a terrible waste of taxpayer money. But this is what we have to work with. My comments follow.
I am strongly in favor of driving and walking corridors being preserved through ALL areas of the National Seashore. I think all users of the seashore respect REASONABLE accommodation of wildlife. A plan which includes driving and walking corridors at all times and in all places will help the average person like me figure out how to access areas of the seashore without becoming hopelessly confused.
Please reconsider buffer measurements. I'd like more peer review of the distance necessary for these buffers. They seem to err on the side of being too large.
Birds not considered endangered should not be afforded protection under your plan. I would also like you to consider other turtle management practices that allow for more beach access.
My family had a terrible experience last winter driving on the beach. As it was low tide, we did not see the signs indicating no driving on a part of the beach near Oregon Inlet (I don't think nesting closures were involved in this case). We drove into a restricted area where we were stopped by a NPS officer. We were completely apologetic and admitted fault. We were treated like common criminals by the NPS officer. He made my husband get out of the automobile in front of his children where he was ordered to take his hands out of his pockets, as if he were suspected of having a weapon. The children still talk about how scary the whole experience was.
I am frankly afraid to drive on the beach in the Seashore in case I make a mistake again. Please don't turn this national treasure into a mess of bureaucratic formulae and mean-hearted law enforcement. Please simplify the beach driving plan as much as possible.
Thank you, Patty McKenna 252-255-0530

Correspondence: Regarding DEIS for CHNSRA Dear Mr. Murray,
I cannot support the proposed DE IS because of the enormous buffer zones afforded to nesting birds and especially chicks. 1000 meter buffer zones equate to 528 acres of land, which means that in most states a convicted child molester can get closer to an Elementary school full of children than a fisherman can get to plover chick. This bird is not even on the endangered list! 100 meter buffers would be more than adequate.

Correspondence: Hello, I am writing to you to express my feelings on Beach Access on Hatteras Island. I am originally from Delaware and have spent all of my memorable life at the Delaware beaches. Over the past 40 years I have watched the steady methodical closing of access to Beaches due to development

and privatization all along the Delaware coast. Once a year we would travel to the Outer Banks to admire the huge dunes and the 60+ miles of "open" beach. The trip to the Outer Banks represented a destination where we could see the beaches as they were intended. Open for all to enjoy. As you are undoubtedly aware the purpose of our National Parks centers on the credo of access and preservation of those areas so designated for all present and future generations to enjoy. Cape Hatteras National Seashore accomplishes that end in a way that is truly unique in the National Park system. The inclusion of the word "Recreational" in the naming of the park is significant and plainly states, not by inference, that one of the primary purposes of the Park is recreation. Recreation requires access that allows for all to access the beach for the many definitions of the word. My wife and I have purchased property on Hatteras because of the ease of access to the beaches. We also acknowledge and respect the need for preservation of nature and the many forms of wildlife that have made these beaches their homes for ions. We also feel that any restriction beyond that needed to preserve these many forms of wildlife is an infringement on the original purpose which brought about the formation of the park. We feel that the "banging of the drum" by special interest groups will unfairly influence decisions made by the Park Service. This situation requires a careful balance between the need for preservation and the need for access. We do not believe one has priority of importance over the other but the two need to co-exist in a harmony that meets the needs of all.

Thank You

Correspondence: Regarding DEIS for CHNSRA Dear Mr. Murray,
The National Park Service has trapped and killed over 300 mammals in 2008 (feral cats, raccoons, mink, opossum, muskrat, otter, gray fox, red fox, nutria) and 464 of the same plus coyotes in 2009. With the exception of nutria, all are native species. All this resulted in 7 fledged piping plovers in 2008 and 6 fledged piping plovers in 2009. That's 58 dead animals for every chick (that are not even classified as endangered). I cannot support and Federal Regulation that continues with these practices. Please discontinue and start the DEIS over. The Coalition's position statement would be a good place to start.
Regards,
Mark Hudson

Correspondence: Superintendent, Cape Hatteras National Seashore Recreational Area:
It is a real travesty when another SIG (Special Interest Group) can deprive so many hardworking people their rights established by congress. In this case Congress established Cape Hatteras National Seashore Recreational Area for the people to enjoy. If the SIGs prevail the beach access will be restricted causing more business and homes to go into foreclosure resulting in less tax revenue for Federal, State and Local government.
Vacationers who visit our little place of peace and relaxation on earth have already had fireworks banned and are now forced to buy a fishing license to cast their line into the ocean in hopes of catching a memory. Now Beach Access restriction and not allowing mans best friend to tag along.
Here is another recent example of a SIG bullying our local leaders. Watching the local government meetings on television. It was an outrage when I saw the leaders in one of our communities forced to stop having a prayer before their meetings. It was decided the community would not be able to spend the taxpayer's money to fight a lawsuit when there are so many other expenses needing attention. I am not a very religious person, but I do believe in the power of prayer. It can help when making the difficult decisions our leaders face.
I do have faith there are still people with good judgment and common sense in this world. It is very difficult to watch as the SIGs suppress them. The SIGs have companies, organizations and people sending them money when the donators do not have all the facts. Please do not let this happen in this case. Allow the vacationers and the fine people who call this area home to continue to enjoy the beaches without restrictions.
Reading different articles on the Piping Plovers it seems the use of "enclosures" is an effective way of notifying people where the birds are nesting and keeping the predators away. If one of the nests are found in a heavy traffic area and it is in emanate danger; move it as in the case of a Hurricane. No need to close the beach and grant the bird so much real estate. Post signs within a reasonable limit of the nests so everyone with binoculars can observe natures beauty if they like. If someone is caught doing intentional harm to any of the wildlife on our beaches they should be prosecuted. The majority of the visitors and residents would never do anything to harm the wild life. Please keep this in perspective when expanding the area after someone runs over a sign. It was probably a vacationer who felt that was his or her way to protest, not knowing the repercussions.
It sure would be interesting to see what our founding fathers, past leaders and Veterans who fought for the people's rights would be thinking about this. The world and our human rights have been going to the birds since 9-11, please do the right thing and don't allow the masses to be bullied by the SIGs. God Bless America! And may you enjoy peaceful walks on her beaches with your best friend or be awestruck by the awesome beauty of the sun rising next to your fishing pole. Stay real and don't allow the SIGs to bully you.

Correspondence: Mike Murray, Superintendent
Cape Hatteras National Seashore Recreational Area
1401 National Park Drive
Manteo, NC 27954
Dear Superintendent Murray,
Please accept this letter as my comment on the ORV DEIS before you at this time.

0012589

After reviewing the National Park Service DEIS I must disagree with any of the six alternatives within the document. I have; however, reviewed the 77 page Coalition for Beach Access Position Statement signed by several groups that were a part of the negotiated rule making process and it by far succeeds in furnishing the best visitor experience while maintaining the needs of protecting the fragile resources. Please consider all aspects of this alternative and put people back into the management of Cape Hatteras National Seashore. Jeffery Shipman 625 Valley Forge Drive Newport News VA 23602

Correspondence: Please allow us to live on our beautiful island and enjoy our beaches. The wildlife is very important to all of us, but so are the wonderful beaches that God gave to us to use. It's difficult to watch others come from far away to pass judgment and instill changes that really don't affect them. Thank you for remembering that "we the people" do love our island and want to protect it.

Correspondence: I strongly disagree with the the draft Cape Hatteras National Seashore Off-Road Vehicle Management plan and Environmental Impact Statement published in March 2010. My family's non-rental soundfront vacation home in Buxton makes it possible for us to enjoy access to the local beaches. The draft management plan, if put into effect, will make access nearly impossible for us and for many locals and visitors. My husband and I are 67, with arthritis in knees and hips, so we cannot walk a considerable distance to the beach. We could not bring our dog under the proposed plan. We could not bring our grandchildren, both of whom are not quite two years old, because we cannot carry them very far. We could not enjoy playing in the surf, sunning, watching birds, searching for shells, watching young people enjoy water sports, or watching surf fishermen. Furthermore, I disagree with the current indiscriminate trapping of wildlife. Some dedicated local people are licensed by the government to rescue and rehabilitate injured birds and mammals, while at the same time the government is using taxpayer dollars to trap and kill other wildlife. Why are the lives of some wildlife worth so little? And why are the are the values of many locals and visitors so unimportant?

Correspondence: RE: Cape Hatteras National Seashore Offroad Vehicle Management Plan I Draft Environmental Impact Statement Comment I: On Page iii, one of the objectives listed is 'Provide protection for threatened, endangered, and other protected species (e.g., state listed species) and their habitats...'. I do not agree that the DEIS adequately takes into account the non-human factors that account for the majority of species and habitat destruction. For example, with regard to turtles, on page 220, it states, "The majority of turtle nest losses at the Seashore from 1999 to 2007 were weather related, particularly due to hurricanes and other storms. During this time, six hurricanes caused impacts to nests. In 2003, Hurricane Isabel destroyed 52 of the 87 nests (34 had hatched before the storm); there was so much water and sand movement along the beaches that no evidence of any nests could be found afterward. The Seashore also felt the effects of numerous tropical storms and hurricanes as they passed by offshore. The report, on the same page, states that foxes destroyed up to nine nests per year between 1999 and 2008 and that ghost crab predation was reported in up to 26 nests per year. Given the harsh weather and predation conditions on the CHNS, would it not be better to relocate the turtle nests to a more hospitable location as is done when major storms are bearing down? Why is relocation not an alternative? Why do we humans encourage the wildlife to engage in behavior that is destructive to them? Why not encourage them to locate their nests in safer places?
Comment II: Page 266 states that the Pea Island National Wildlife Refuge is managed separately and under a different regulatory framework by the Fish and Wildlife Service. Why is land adjacent to the CNHS not considered as part of the same ecosystem as CHNS? The wildlife do not recognize the boundaries. All activity for the wildlife documented in this Study should include the activity in neighboring areas such as PINWR in order to obtain an accurate picture of the activity. It may be that the birds prefer PINWR for certain reasons and it is important that we understand why some birds choose that area over CHNS. It may be a superior nesting ground due to fewer predators, more protection from storms or other factors. Those factors should be studied and taken into account. I believe that these animals have instincts that have been honed over many millennia. If the birds find CHNS inhospitable, they will eventually relocate to more hospitable breeding grounds in order to ensure the survival of their species. And they may be doing just that. It is important that we not look at the CHNS in a vacuum. Those neighboring areas may offer clues as to how these birds have and are adapting to the weather and predators.
Sincerely, Lisa Marley

Correspondence: Dear Mike:
I agree that the birds and turtles should be protected, but reasonably so. I feel that our (residents and tourists) corridors of beach access to the ocean side areas of Cape Point and ramp 49, and sound side access from Rodanthe to village of Hatteras also should be protected. I disagree with pages 121-127 of the NPS DEIS because the buffers are too large, and do not allow for corridors of beach access for the humans. Hoping that the people are protected as well as the birds, I remain. Sincerely,
Diane Horan PO Box 933 Buxton, NC 27920

Correspondence: This DEIS boils down to a battle between wanting to protect certain species of birds and sea turtles with the ability to safely drive ORV's on the beach. Alternative F is the most restrictive ORV alternative, which is totally unnecessary. The Piping Plovers that nest at CHNSRA are considered "threatened", not endangered. CHNSRA is on the extreme Southern edge of the Plovers breeding range which accounts for the historically low numbers within the Park. Most Plovers nest well north of the Park, from Virginias' Eastern Shore to Newfoundland, Canada; with the majority of nesting occurring mid-range. They nest in areas that are subject to frequent overwash and frequently lose nests as a result. There are 21 documented ORV related plover deaths in the entire United States. Twenty of these were committed by federal vehicles. In the past 50 years, not one single plover death can be attributed to an ORV user in this Park. Nearly one hundred percent of plover mortality at CHNSRA has been a result of either storms or predation. Mammalian Predation: 54% Storm / Lunar Tides: 29% Nest Abandonment: 6% Avian Predation: 5% Ghost Crab Predation: 3% Human Interference: 3% Statistics from NPS records
Protecting the environment and inhabitants of the Park is important for fishermen also. But the ORV restrictions in Alternative F are so farfetched, they cannot be seen as anything but irrational. In alternative F, a single Plover chick is given 1000 meter buffer zone which equates to 524 acres. As such, in

most American communities, a convicted child molester can live closer to a public school than a fisherman and his family can get to a plover. Alternative F also includes a ban on night driving believing it dis-orients sea turtles. This ignores the facts of Pea Island National Wildlife Refuge, the northern 22 miles of beach on Hatteras Island. At Pea Island NWR, there is no beach driving and less than a dozen lights visible from the sea. Very few pedestrians frequent these beaches due to the difficulty in accessing them. And yet Pea Island has no greater turtle nesting success than ORV accessible beaches but does have more false crawls and aborted nesting attempts, than the open beaches. The National Park Service should consider turtle management practices successfully used in other federal and state areas to achieve nesting success. More proactive measures include relocating nests to more desirable locations, which is routinely and successfully done in other areas. Please go back to drawing board with this DEIS, and start with the Coalition's position statement.

Regards,
R. Mark Hudson

Correspondence:	Mike Murray, Superintendent Cape Hatteras National Seashore Recreational Area 1401 National Park Drive Manteo, NC 27954 Dear Superintendent Murray, Please accept this letter as my comment on the ORV DEIS before you at this time. I consider myself a responsible steward of our environment. But, after review and consideration of the National Park Service DEIS I disagree with all of the six alternatives within the document. I have; however, reviewed the 77 page Coalition for Beach Access Position Statement signed by several groups that were a part of the negotiated rule making process and it succeeds in protecting the area's fragile resources while enabling responsible use by human residents and visitors. I believe that is important to protect the environment and threatened species. However, the public's right to this beautiful resource must also be preserved. In fact, preserving the public's right to pursue recreational activities on Cape Hatteras National Seashore is of paramount importance if we are to foster people's love and respect for the natural world. I have lived in a number of coastal communities and traveled extensively to others and I can say without hesitation that Cape Hatteras' beaches are among the most pristine. People appreciate and respect the area's natural beauty and wildlife. Please consider all aspects of this alternative and put people back into the management of Cape Hatteras National Seashore. Correspondence:	We own a rental property on Hatteras island, and have been visiting the island for the last 15 years. We treasure the lifestyle on the island and do not want to see further restrictions put in place. As it stands currently, we have already noticed considerable restrictions over the last few years. We have also noticed a drop in weekly rentals during this same period. We are dependent on the rental income and the property values, and we think there is a balance between conservation and allowing people to enjoy the natural resources the island has to offer. We oppose alternative F and any further restrictions on beach access for humans, pets, or vehicles.

Correspondence: Dear Superintendent Murray:
I am writing as a homeowner in Buxton, a university professor and a long-time small business-person. I strongly object to the DEIS/ORV management plan released in March for public comment on grounds that the analysis of the economic impact of severely restricting Cape Hatteras National Seashore beach access on the lives and livelihoods of Outer Banks residents is incomplete, inadequate and misleading. The analysis cited in detail on pages 561-598 of the DEIS is still being conducted by RTI International and so cannot be considered complete and definitive. But the NPS has incorporated it into the DEIS at length and offers its pronouncements to justify a finding of an acceptable impact of beach closures on the small to mid-sized businesses of Hatteras and Ocracoke Islands. The survey on which the RTI analysis is based is regional, not locally specific to the eight communities within the Seashore, and does not accurately reflect the inevitable economic impact on those communities. It appears that local testimony regarding effects already felt since the consent decree was imposed in April, 2008, has not been taken seriously. On pages 281 and 284, the DEIS acknowledges that "... beach-related tourism drives the economy of the area." But none of the proposed Action Alternatives specifically provides for protecting that vital element of resident life from the impact on jobs, incomes, and ability to pay bills when recreational visitors are driven away by beach closures to vacation, fish, surf, bird watch and spend their dollars elsewhere. Nor does the analysis address the economic damage to the rest of North Carolina from the loss of revenues generated by the state's third-ranked producer of tourism-related taxes. As island tourism is dramatically diminished - as it will be if the DEIS goes forward as written -- the state's budgets for education, roads, social services and other mandates will go back to the chopping block or everyone's taxes will go up - or both. The DEIS should be withdrawn until a more complete and focused economic impact analysis can be completed. Thank you for the opportunity to offer these comments.

Correspondence: Dear Superintendent Murray,
Our National Parks are precious treasures and we must do everything possible to protect them and the flora and fauna which inhabit them. Not only do I love visiting national parks, but I love knowing they are there safely protected for generations to come. We must do everything possible curb ORV use and protect Cape Hatteras National Seashore.
As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.
1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."
2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness...."
Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.
3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.
Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

Correspondence: I believe the protections given to piping plovers in the DEIS go beyond what is needed to adequately protect Piping Plovers. I suggest the standards and protections to be used in CAHA should be the exact same as is used in the Cape Cod National Seashore where the most successful breeding area continues with ORV use. The use of 1000 meter buffers is excessive and not needed. CAHA should stick to and use standards as defined in Appendix G of the ESA.
I believe the use of Piping Plover protection standards for birds not listed under the ESA is not appropriate. Of course, when chicks are on the ground there must be some closed area however to treat all shorebirds the same as ESA listed shorebirds is excessive.

Correspondence: I am writing as a homeowner in Buxton, a long-time admirer of the unique beauty and visitorfriendly accessibility of the beaches of the Cape Hatteras National Seashore, a friend of the wildlife which flourishes there, and a strong supporter of rational, fair and balanced management of the public's vehicle and pedestrian access to the Seashore's public lands. In my view, the DEIS/ORV Management Plan released for public comment by the National Park Service in March, 2010, is deeply flawed and unacceptable as the basis for a permanent management plan. In this letter, I would like to comment specifically on the lack of credibility in what is offered in the DEIS as "the best available science" to support the plan's severe restrictions of beach access. What is presented as scientific substance is little more than scattered observations of bird, turtle and human behavior seasoned with the observers' preferences and promulgated without standard scientific review, instead of the peer-replicated independent experimental studies that would produce real scientific evidence. While the DEIS proposes to establish a setting for serious research in the Seashore sometime in the future, the Park Service must admit that virtually no such research has been conducted to this time. Nevertheless, planning for access restriction is proceeding as though there were a firm foundation of legitimate science to substantiate proposals like the 1000-meter buffer around unfledged plover chicks and the contention that ORVs are the major threat to plover reproductive success when available data clearly show predation and weather to be for more serious threats. Your positions on these and related issues are scientifically baseless. I ask you, Mr. Superintendent, to direct the Park Service's efforts toward the kind of access management that's represented in the pre-consent decree Interim Plan so that real science and cool objective thinking can be brought to bear on this critically important issue. Thank you for the opportunity to offer these comments. Sincerely,
James W. Lea

Mr. Michael Murray, Superintendent Cape Hatteras National Seashore 1401 National Park Dr. Manteo, NC 27954
Dear Mr. Murray,
I am writing regarding the upcoming decision on beach access to Cape Hatteras National Seashore. I have been coming to Cape Hatteras for my entire life and my family now owns a home in Frisco. In my personal experience over the past thirty-one years, I have only seen people treating the beach environment with the utmost respect. It is a place where we can go with our children, parents, grandparents, enjoy nature at its best, and where I learned so much about caring for the environment.
I have seen many inconsistencies in the way the data has been presented and interpreted and feel that the facts put forth are not accurate or honest. My concerns:
1. The economic impact on the citizens of Cape Hatteras National Seashore has been enormous. According to what I have read, when considering the financial/economic impact, the areas of Duck, Corolla, Kitty Hawk, etc., have been included in the statistics. Nevertheless, anyone who has visited the CHNS knows that the inclusion of those towns will skew the results. The villages on CHNS are entirely different from the northern beaches and it is disingenuous to say otherwise. Tourism is what keeps CHNS economically viable and the only product that the people of these villages have to "sell" is the beach and the activities associated with it. They are very isolated with Rt. 12 and the ferries being the only way to get to those towns. If we are honest, we all know that they are hours from the northern beaches. Without beach access, they have nothing to offer the tourist. Honesty requires looking at the impact on the specific towns affected by the beach access issues.
2. Access for the elderly and the disabled. Driving on the beach has been the traditional way of access and has provided the elderly and disabled a way to enjoy the beautiful national park that we call Hatteras. In my particular case, my grandmothers would not be able to enjoy the area without the ability to drive to the point where we would set up for the duration of that day's visit. Walking across the sand is not an option for my grandmothers, and one day may also preclude my parents from enjoying the area as well. I know this to be true for many other visitors.
3. Buffer zones for the nesting birds and turtles. Where is the scientific evidence that 1000 meters in all directions is necessary for the protection of the nesting birds? This is widely known to be untrue. The "research" presented is very questionable. My parents, who were recently in the Galapagos Islands, found it very interesting to listen to the National Geographic naturalist who said very clearly that the American Oyster Catcher is not bothered by close foot traffic. That was evidenced by how closely they were allowed to walk to the AOC. They actually asked her to repeat her statement because it was in such opposition to what we have been hearing from the Audubon Society, Defenders of Wildlife and the NPS. 4. Why are birds that are not on the Endangered Species list being afforded the same protection as if they were? Some of these birds are being given equal or even more protective

status. Also, the NC Wildlife Resources Commission has specifically said that it was never their intent for these "species of concern" to be protected in this way.

5. When determining the bird population and also the success of the breeding season, why are you not including all the birds in the ecosystem? The dredge islands are very successful breeding areas as is Pea Island. It is dishonest to not count these birds and their successful breeding.

6. I ask that you, at the very least, provide corridors around the resource closures for pedestrians and vehicles through the entire breeding and nesting season.

7. Lastly, I ask that you remember the promises made by previous directors and superintendents to protect access for residents and visitors. And, please, look honestly at the evidence. Decisions should be based on actual fact and true, verifiable, scientific evidence as well as an honest evaluation of how the final decision will impact the humans beings who call Hatteras their home.

Sincerely,
Kathryn Yingling

Correspondence:	<p>Dear Superintendent Murray:</p> <p>I am a Buxton, North Carolina, homeowner and a professor of family medicine at the University of North Carolina at Chapel Hill. My family and I have for many years enjoyed the beaches of the Cape Hatteras National Seashore. Today I am writing to express my strong disapproval of the DEIS/ORV management plan as written and to question the National Park Service's true goal in preparing the plan. It's clear that the NPS is rejecting all alternatives for enhancing and protecting the nesting habitat of the shore birds and the turtles except the ones that involve severely restricting access to the beaches by pedestrians and vehicles. The suggestion of expanding suitable bird habitat by removing vegetation around the salt ponds is tossed aside as unworkable in the DEIS. Yet clearing vegetation is a scientifically accepted means of enhancing piping plover nesting and feeding habitat that's practiced by other state and national parks on the East Coast. Reaching a target number of breeding pairs of plovers is the stated goal of the beach access management plan. But the NPS insists that only plover pairs on the Seashore beaches be counted toward the target number. The nesters on spoil and dredge islands within the Seashore ecosystem are purposefully disregarded. The NPS carries out an aggressive predator control program on behalf of the birds and turtles, but refuses to manage habitat conditions and to move turtle nests from exposed locations, claiming that such interference would not be environmentally sound. These contradictions are patently hypocritical, and they strongly suggest that the NPS's true goal is not to increase bird and turtle breeding productivity but to turn the Seashore recreational areas into an Audubon-approved wildlife refuge. The DEIS cherry picks arguments that support keeping recreational users off the beaches while choosing to ignore approaches that would help to create a fair and balanced access and use policy. I urge the Park Service to set aside all Action Alternatives described in the DEIS and give all of us a chance to work together to develop a rational beach access management plan whose goal is clear and unequivocal. Thank you for the opportunity to offer these comments. Sincerely, James W. Lea</p>

Correspondence:	<p>I am a year round permanent resident of Frisco, and a recreational surf fisherman who accesses Hatteras Island beaches year round with my ORV. I support free and open access to our beaches. I disagree with the beach closing at Cape Point, Hatteras Inlet, and Ocracoke Inlet due to wildlife nesting sites. An open year round corridor for ORVs around nesting sites is a more fair solution. I disagree with the minimum ten year time frame for closure of designated beaches on Hatteras Island due to wildlife nesting sites. A floating closure is a more practical solution given that nesting areas can change from season to season. To close an area for that time span based on what might be a one season event seems heavily weighed in favor of wildlife over human activity. I disagree with permitting ORVs. No permits are necessary. Sincerely,</p> <p>Robert Carson</p>

Correspondence:	<p>I disagree with the buffers as presented. We must allow for pass-thru corridors. Pass-thru corridors should be maintained for pedestrians and ORVs in all areas of the Cape Hatteras National Seashore Recreational Area throughout the entire breeding and nesting season. Use breeding / nesting buffer distances to establish the corridors and ensure beach access in a way that does not hinder resource protection. Corridors or bypasses should be provided thru, around or below high tide line in all SMAs during entire breeding season to maintain access.</p> <p>Piping Plover unfledged chicks buffer should move with the brood as it relocates to reliable food source, not expanded.</p>				

Endangered sea turtles would benefit from management practices now in use at other federal seashores that are more proactive in efforts to achieve nesting success. This includes relocating nests to more desirable locations as is done in other state and federally controlled areas. Certainly more proactive measures such as relocating nests prone to weather and ocean events would dramatically increase the nesting success rates. The US Park Services statement that businesses will have to "adapt" to the new rules is irresponsible. The negative economic impacts of the decree ARE KNOWN, so to say that the added restrictions would have negligible to moderate impact is indefensible. Common sense says that less beach access equals less tourists, which equals less business revenue.

Correspondence: The following are my comments on the NPS' Draft Off-Road Vehicle Management Plan/Environmental Impact Statement.
 1. I agree and wholeheartedly support the Coalition for Beach Access Position Statement 2. I disagree with the title of the Plan as an "Off-Road Vehicle Management Plan". The Plan is really a beach access plan for ORV's, yes, but also for pedestrians. 3. I disagree that NPS has not included the Pea Island National Wildlife Refuge with its 6000 acres and 13 miles of ocean beach that is pedestrian only year round. 4. I disagree that NPS has not included the thousands of birds that inhabit Pea Island National Wildlife Refuge and the nearby dredge and spoil islands which are part of the same eco-system as CHNS. The population of the entire eco-system must be included. 5. I disagree with NPS' decision to put into place closures of a much larger size than necessary for a list of bird species, none of which is endangered, and only one is considered to be threatened. It would appear that NPS has bowed to pressure from the environmental groups without regard to the effect of the closures on the residents of and visitors to CHNS. 6. I disagree with NPS and the Department of the Interior deciding to ignore the historical fact that CHNS was established as Cape Hatteras National Seashore Recreational Area and not as a wildlife refuge.

 Re: Comments on March 2010 Draft Environmental Impact Statement and Off-Road Vehicle Management Plan
 Dear Sir:
 I wish to comment on the Draft Environmental Impact Statement and Off-Road Vehicle Management Plan (hereafter referred to as the DEIS) for which public comments are to be accepted until May 11, 2010.
 Specifically, I've thoroughly reviewed the DEIS, both for its impact on wildlife resources and its effect on the visiting public and the towns and villages along the national seashore. My concerns are enumerated below:
 1) The data and justifications, and therefore the validity of the proposed rules governing beach access by pedestrians and off-road vehicles of alternatives B, C, D, E, and F, appears to be crafted from exceptionally weak, or in some cases, no data. As an agency chartered with managing (and balancing) the needs of the public that fund the National Park Service and the wildlife within the national parks, national wildlife refuges, national seashores, and national monuments, it is your duty and responsibility to demand sufficient and credible data on the morbidity and mortality of wildlife within the park and their causes BEFORE drafting proposed rules that will significantly restrict access to any sector of the taxpaying public. Specifically, the sources cited within the DEIS as to the impact of the public on the wildlife within the Cape Hatteras National Seashore generally do not meet reasonable standards of proper scientific peer review and unbiased data collection and analysis. Many of the sources are more than 20 years old, and do not reflect modern analytical methods and technology that have become the standard for evaluating wildlife morbidity and mortality. It is your responsibility, therefore, to suspend the rulemaking process and revert the rules for access by the public to pre 2005 standards (i.e., before the lawsuit brought by the Audubon Society, et. al. , and subsequent consent decree) until valid, unbiased and sufficient studies that pass scientific scrutiny have been conducted to properly assess the impact that visitors to the CHNS have, and will continue to have, on the indigenous wildlife. 2) Even though the data used to support rule-making in the DEIS is weak and scientifically suspect, it rather clearly does not demonstrate that off road vehicles nor pedestrians on the beach interfere with wildlife breeding, feeding, nesting, or roosting behavior to any substantial degree. Yet the rules as proposed in options B, C, D, E, and F seem to be constructed as if impact by human visitors on the seashore, regardless of conveyance method, has a direct and substantial negative impact on this wildlife. Such blatant disregard from the NPS's own data, however, suspect is not acceptable, and will form the basis for immediate legal action against the proposed rules if adopted that wastes taxpayer money that could be expended on substantive and scientifically defensible wildlife morbidity and mortality studies. 3) Finally, the supporting documentation for the DEIS proposed rules as they exist in options B,C,D,E, and F do not consider the potential catastrophic impact they may have on the economic health of the citizens that live and make their livelihood based on visitors to the CHNS. No credible studies assessing this impact are referenced in the DEIS. Again, it is not acceptable for the NPS to propose rules that substantially restrict access by the taxpaying public from their natural resources based on such a paucity of objective data. I therefore conclude that none of the proposed options detailed in the DEIS for CHNS of March 2010 is acceptable save option A that returns access to the conditions in place before the legal action brought by the Audubon Society et. al., and subsequent consent decree until such time as credible and defensible wildlife and economic impact studies can be completed. To do otherwise is irresponsible, and possibly illegal under current Code of Federal Regulations rules and guidelines, and invites a protracted legal battle that wastes tremendous amounts of taxpayer money and NPS employee's time.
 Sincerely,
 David E. Keller, PhD.

 Dear Superintendent Murray,
 Please accept this letter as my comment on the ORV DEIS before you at this time.

0012595

After reviewing the National Park Service DEIS I must disagree with any of the six alternatives within the document. As a lifelong visitor and new homowner (I purchased my home in Waves on April 15, 2010), proper management of the natural resources is critical for the continued mutual benefit and enjoyment of the seashore. All six alternatives will drastically reduce human access and enjoyment island without significantly improving the plight of endangered or at-risk species.

I have; however, reviewed the 77 page Coalition for Beach Access Position Statement signed by several groups that were a part of the negotiated rule making process and it by far succeeds in furnishing the best visitor experience while maintaining the needs of protecting the fragile resources. Please consider all aspects of this alternative and put people back into the management of Cape Hatteras National Seashore.

Correspondence: I hate to see taxpayer money and the time and effort of officials being wasted on such a proposal as this!!! Are you NOT learning from what is going on?? Isn't there going to be enough oil slick along Louisiana's coast and beyond? Haven't we decimated enough land, air and water as it is over the last several decades?? Why on GOD's earth does anyone need to use ORV's on a beach other than for lifeguard emergencies??? What is wrong with people that they cannot enjoy GOD's creation as HE created it??? The beach, the mountains, and other wild places are to be revered, respected and used as a means of rejuvenating, inspiring and relaxation from the noise, crowds, material needs that man bombards himself with everyday! These places are sacred and should NOT be ruined by loud, obnoxious, speeding vehicles! Going to the beach is a place to escape, "rewind", breathe in the salty fresh air, listen to the wind and the waves and listen to the gulls. It is to be therapy from our hectic lives! NOT be subject to motors roaring, fumes and ignorant people who have no respect or consideration for Nature in it's purity. PLEASE DO NOT let ORV's on the beach!!!!!!!

Correspondence: I am writing to comment on Document 2010 03Mar 05 - Draft ORV Management Plan/EIS.
I want you to know that my family and I visited Hatteras Island every year from 1992 to 2008 to spend time surf fishing and to enjoy the beach. We did not visit the Outer Banks in 2009 because of the beach closures and the negative impact they had on our ability to fish and enjoy the beach. We are not visiting the Outer Banks this year, either, for the same reason.
We typically spent about \$4,000 for a week of vacationing on Hatteras Island. The impact of your ORV management plans has been to keep our tourist dollars away from Hatteras Island. Unless your final plan re-opens the beaches to fishermen in ORVs our tourist dollars will not be returning.

Correspondence: I am responding to the NPS DEIS that affects not only my way of life but to those of thousands that visit Cape Hatteras National Seashore, now and for years to come. My family and I are avid surf fishing enthusiasts but we also enjoy all of nature's offerings when we come to the Outer Banks including bird watching, shell picking, swimming, sunrises and just breathing the great salt air. We use our off road vehicle to pursue these activities. It is therefore that I support the response from the Coalition For Beach Access as to the options listed by NPS.
MY MOST CONCERNS ARE: 1) CLOSING OFF TOO MUCH AREAS FOR BIRD PRE-NESTING, NESTING AND FLEDING PERIODS 2) CLOSING OFF TOO MUCH AREAS FOR TURTLE NESTING PERIODS Why can't these closures be more reasonable like what is standard in other parks and most notably like what is used just north on Pea Island. The species that you are currently going overboard to protect are not endangered or threatened and represent an extremely small fraction of what their populations are and where they breed. 3) WHEN YOU CLOSE THE BEACHES AND THE BEST FISHING AREAS YOU CHOKO THE ECONOMICS OUT OF THE VILLAGES ON HATTERAS ISLAND 4) CLOSING THE BEACHES MAKE IT DIFFICULT OR IMPOSSIBLE FOR ELDERLY, DISABLED AND SMALL CHILDREN TO ACCESS AND ENJOY AREAS THAT ARE NOT CROWDED Thank You for entering and recording my comments. Best Regards, Daniel J Russo

Correspondence: I disagree with the DEIS about a pet policy as stated on Page 136. The policy prohibits pets in the seashore from March 15 to July 31. The Park Service already has regulations concerning unleashed pets and these regulations should be enforced. Additional extremely restrictive pet regulations are not justified by the available data. I disagree with the DEIS proposed restrictive measures and inflexible buffers as found on pages 121-127 and page 468.

These will prevent ORV use on large portions of the National Seashore. I agree with efforts to establish reasonable access corridors so that ORVs can reasonably access the surf zone in the National Seashore. I advocate the Coalition for Access 77 page proposal.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
 This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
 The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
 *Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
 * Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
 * Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
 Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: Dear Mike Murray, I have been coming down to the Outer Banks of North Carolina for approximately 20 years. Not just once a year, but several times a year. I load up my family of 4 children and drive 6 hours to get there to enjoy the beaches of Cape Hatteras National Park. My children as well as myself look forward to these trips every single year. I can not even begin to imagine how many dollars I have spent over the last 20 years in the local economy whether it be on fishing tackle, food, gas, lodging or whatever. One of the reason that I am drawn to the area is because of the ability to access the beach at many different points or ramps. For 20 years or so, my children have been raised to respect the park and its wildlife, always careful / mindful to stay away from the turtle nesting areas or roped off bird nesting areas. As a whole I believe that the public in general has done the same. For years people and the wildlife have been able to co-exist without any problems, that was what the National Park was all about. Along comes the Consent decree, fishermen and beach goers are made out to look like Red Necks or lunatics driving around in big trucks running over little birds ever chance they get.. the fact of the matter is that this is completely incorrect. These same so called lunatics over the past 20 years are the same ones that respect and take care of the park. I can't tell you how many times I have stopped to pick up litter as it washes up on the shore. " leave with more than than you brought additude " that was taught to me by and old fisherman. These are the same people that" police " the beaches and teach some of the younger more rambunctious crowd about respect of public lands and wildlife. I guess I must be one of them too, I own a successful business in Va, I am 41 year old married father of 4 who likes to go to the beach with his family to enjoy what the park is all about. I would consider myself an avid fisherman as well as my children and my wife, we all fish (or try to fish)but we are always respectful of the environment and the wildlife around us. On our trip down last summer, I was asked by my youngest daughter why the beach was roped off " I told her that the beach was closed to traffic either by car or by foot due to a bird nesting area " she immediately pointed to an area that has been roped off on Ocracoke island for as long as I or she can remember as a bird nesting area. That's where the birds are suppose to nest. Why did they close the beach ? I spend several hours trying to explain the why to this little inquisitive mind, I'm still to this day not convinced that she understands. She has played in the waters of South point Ocracoke every Summer since birth 11 years ago and I'm telling her that its no longer open to the public due to a bird nest. Something must be done about this Consent Decree, People and wildlife have co-existed on this planet for as long as we all know. Whose to say that this bird no longer wants to fly this far south to nest. Whose to say that the temperature or wind currents haven't changed making it a less desirable place to nest. I do not understand the ability of a Federal judge to be able to take away the enjoyment of a little girl or a families freedom to enjoy a public land such as a National Park due to a birds nest. This makes absolutly no sense. This is the meer foundation of the National Park Service, Its whole purpose was to set aside land and protect it from development for the enjoyment of people . Generations of people, fathers, mothers, grandparents, children and grand children not birds. As I have traveled back and forth from North Carolina in the past few years I have noticed an increased number of businesses forsale or closed down due to what I believe to be closed beaches. I have actually found myself checking the NPS website to see what beaches are open before I head down with my family, because I do not want to be faced with the same question from an even smarter little girl. I have cancelled a few of those spur of the moment trips on more than one occasion due to beach access issues. I can not imagine what effect closed beaches are having on the families who own businesses down the Outer Banks of North Carolina trying to survive in an already tough economy. It has to be devastating and my heart goes out to them, but why should I head south to North Carolina if cant participate in the things that my family enjoys the most ? There is no way that this hasn't had an economic impact on these people

or even the entire state of North Carolina department of tourism. Whatever study had or has been done to state that this would have no impact must have been done by someone that was completely incompetent or had blinders on. They say that statistics can be manipulated in anyway which suits the user but I dare you to go and ask the people. Ask the business owners and realstate owners, ask the ferry docks personnel, ask the people whose jobs and families depend on their income if closed beaches have had and effect and they will tell you that they have without a doubt. It all boils down to economics ... less people ... less vacationers ... less revenue .. not only for local business but for the entire state of North Carolina. So what does a state have to do that is experiencing a huge economic loss ? Cut jobs, cut services, and raise taxes to make up the difference. Lets go ahead and raise state taxes on people who are already suffering. Its really kind of sad but undeniably true. There has to be a happy medium somewhere, before this whole Consent Decree I know that certain areas were closed off as bird nesting areas and I completely understood and respected that, any decent human being would. I understood that the first 20 + miles or so of Pea Island is a wildlife refuge and can not be driven on, I accept that! I understood that certain areas were " bird nesting areas" and were "off limits" everyone seemed to abide by that. What is unacceptable to me is the constant changing of the boundries and barriers and rules imposed by the Consent decree, closing down what little beach is actually axcessible in a National "for the people" Park ! What is unacceptable to me is to watch an economy, and way of life that has been passed down from grandfather to father to sons be ruined by a faceless group so called the Defenders of Wildlife. I closing I would just like to say that if 1/1000th of the money that was spent on attorneys, legal battles and so called studies would have been spent on educating the people that travel to North Carolina about the unique dynamic beauty of the barrier islands, and how important it is to respect nature (and its balance) and to preserve it for future generations to come, would have been money better spent. Cape Hatteras National Seashore is an important part of the North Carolina department of tourism and a National Park that should be enjoyed by all. Thank you for your time .
William O'Hop and Family

Correspondence:	My husband and I have owned a water sport related business in Buxton on Hatteras Island for the past 33 years. The nature of our business requires us to visit the beach here daily so we are very aware of the ocean and weather conditions. Beach access is an important part of visiting our seashore recreation area. I feel it is important to keep access open to the most popular of the areas visited, especially Cape Point and Hatteras South Point. A corridor at the high tide line should be kept open to allow access to these areas. Cutting off these areas that have been so popular over the years is a sin. The one thing i noted when we drove out to Cape Point last Sunday night was all of the birds were outside of their roped off area and hanging out around the humans. Humans mean food and protection. Reasonable roped off corridors should exist as they have in the past.

Correspondence:	By committing this travesty, you will further entrench my belief that the park service does not have the well being of the general public at heart, but would rather run a park free of humans. Congratulations, this bloated government bureaucracy filled with do-gooders is shockingly disconnected with the public. And it is all thanks to your head in the ground approach to public relations. This ORV Management bill does not take into account the real world. What wildlife is worth keeping? Why is it acceptable to kill predators, but not other species? Welcome to nature, you're supposed to work in it. And more importantly, you are killing off the livelihood of an entire society. YOU are furthering the economic situation that we are in. The mentality I get from the park service is the sooner that humans are gone from this planet, the better. Save the animals, screw the humans. Despicable.

Correspondence: Dear Superintendent Murray,
One of the great pleasures in America is visiting the remarkable beaches from shore to shore, including the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.
1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."
2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness...."
Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.
3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.
Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.
Sincerely,
William Messenger

Correspondence: Alternative A (2007 FOSNI Interim Strategy) for the purposes of Species/Resource Management and the current ORV Management Policies are the only option in the DEIS that accomplishes what was envisioned in the 1930s when the park was created. Around 1952, fifteen years after he submitted the act to create Cape Hatteras National Seashore, then former Congressman Lindsay C. Warren made the following statement:
"When I introduced the bill for the Cape Hatteras National Seashore in 1937, I would have nothing to do with it unless the people were fully protected forever in their hunting and fishing rights, and unless there was a guarantee of a hard-surface road if the Government came into the picture, and unless all of the villages were exempt. At that time there was very little prospect for a paved road, but I extracted a promise from the NPS that they would favor such a road to be built, whenever possible, either through State or Federal Aid funds. Frankly, I think that this Park will mean more to the people of Dare County than anything that could ever happen to them. I do not say that because I was the author of the bill, but I say it because I had studied the history of all Parks, before I came into the picture back in 1937."
As stated above, the creation of the park took many years of negotiation with the residents of Hatteras and Ocracoke Islands. At the time residents were presented with two other options for development--namely, oil exploration and accepting outside developers. The residents' acceptance of the national seashore as their preferred option for development was based upon Conrad Wirth's promise that the parks' beaches would always be open to all people, that the park would not compete with the villages for tourists' dollars, and that the NPS would "stand ready to cooperate with you at all times in the development of your communities, if you want us to." That is, the residents saw the park as a way to retain their primary way of life while still taking advantage of the higher living standard offered by a modern national economy.
It's the NPS and the DOI's duty to make certain that they do everything possible to retain the traditional way of life for the residents and visitors of Hatteras and Ocracoke Islands and to live up the commitments that were made to the residents which allowed for the creation of the park.

Correspondence: Dear Sir: The purpose of this correspondence is to express my concern and offer comments as to the "preferred plan" of access as is now presented by the NPS. I note the following; curtailing the use of the Park relative to "historical use" will and is having a substantial, negative impact on our small, family owned and operated Lodging Business on Ocracoke Island (21 Rental Units). Current Year To Date Reservations and Income are off substantially; Reservations being down 27% with Revenues being off 30%. In my view, the Park Service's increasingly stringent policy as to "limiting access" is and has been a major contributor to these substantial decreases. As to the Plan as recommended by the NPS, I have concern/comments relative to the following:

1. Limitations on Access to ocean front beach: a. South Point on Ocracoke (too restrictive) b. North End on Ocracoke (too restrictive) c. Restrictions as to availability beyond what has been historical prior to the "Consent Decree". 2. It is my understanding that the economic study for the Outer Banks is still underway; so the DEIS plan used the visitor demographics for Fort Raleigh and Wright Brothers in their assessment of economic impact. There was no mention that even within Cape Hatteras National Park, there are different demographics for Ocracoke versus Oregon Inlet. This is a significant flaw in the document! An economic study particular to areas south of the Oregon Inlet Bridge needs to be done separate and apart from other areas of the park. Hatteras and Ocracoke have particular dynamics (importance of specific types of beach access) that are significantly different from the "commercialize type use" by Tourists of the Northern Beaches. This issue is too important (dealing with people's livelihood) to not be completely researched and documented. 3. The curtailment of night driving on the beach will and is negatively impacting tourism in the following ways: a. Surf Fisherman will no longer be able to fish at "peak fishing times". b. Visitors will no longer be able to have "family gatherings" at night on the beach relative to "star gazing" and "camp fires/cook outs". Historical use as to night driving on the beach should be the rule. Other means of protecting the environment need to be identified and used that do not curtail night driving on the beach. b. Regulations that allow no provision for pets on the beach will negatively impact use of the Park and thus our local economy. The "continuance" of the "pets on a leash rule" should remain as is with no provision for change. 4. Buffer Areas should return to "minimum historical sizes" prior to the Consent Decree. At no time should Buffer Areas totally prohibit access to areas that are adjacent to "closed areas" when there is space for a corridor or Interdunal path. 5. A Vehicle permitting system is something that can be accommodated but with a provision that allows for a Permanent Resident to have a year round permit at no cost. This would be similar to the Hatteras Ferry Pass permanent residents now have. 6. Issues that Determine the quality of life of the residents of Ocracoke and Hatteras Islands I note that many Residents and Tourists/Nisitors use the Park by way of their ORV on the Ocean Front. Of these Users many have physical handicaps caused by age and or disabilities or have "specialty needs" for small children or "recreational equipment use". Historical RV Access is extremely important to these Users given their physical limitations. Historical Access should be maintained to accommodate these important Users of the Park. 7. Why does NPS refuse to acknowledge that Pea Island is a prime, pedestrian-only area for visitors to the seashore and overstate the need for more ORV free areas? 8. Possible Mitigating Factors to Economic Impact of "restrictions of use": a. Access CorridorS/Interdunal Paths need to be put in place to provide maximum access to the entire beach when certain parts of it are closed for environmental/habitat reasons. At no time should a part of the beach be totally restricted when there is no reason specific to that particular part of the beach. b. An "access trail" needs to be put in place that runs parallel to the Sound Side Beach with appropriate parking provided at different spots along the trail. This will provide an off set when areas of the ocean front have to be closed. This would provide access as per the back side of Hatteras Island south of the Ferry Dock. In addition, a Sound Side Public Beach needs to be put in place that is comparable to the Ocean Side Public Beach on Ocracoke. This will provide an alternative for Park Users when the Ocean Front Beach is less than desirable as to weather conditions (wind) and parts of the Ocean Beach is closed for environmental/habitat reason. 9. Both of the "referred to designated areas" (South Point and the North End of Ocracoke) and historical uses that have been and are important to Park Users; especially Surf Fisherman. Curtailing or eliminating "historical use" is resulting in a decrease in Visitors (both beach combers and surf fisherman) coming to our Island. In my view we are already experiencing that relative to Surf Fisherman especially. Given the local Economy has been built around these important historical uses of the Park. it is "terribly wrong" to "change the uses allowed" given the negative economic impact it is having and will have. Other means of mitigating concerns as to Environmental and Habatat should be explored and implemented. At a minimum, the proposed "changes to use" will decrease occupancy and revenue for our small lodging business. Worst case is that it will decrease occupancy to the extent that it will no longer be feasible to "stay in business". This will eliminate jobs for at least 3 families on the Island and two part time employees. This will result in the families no longer being able to make a living on the Island thus having to move away. If the NPS puts in place permanent restrictions that impact historical use. it should have to pay all businesses and individuals appropriately as to the negative impact it will have on their business. personal income and real property values. If this does not occur. the NPS by way of its proposed changes will directly cause for economic hardship without compensation. A "buyout" similar to what the Government did for Tobacco Farmers would be justified. It is my view that "legal remedies" as to compensation for "loss of use" will deserve consideration should the Park be substantially change historical uses of the Park. Your consideration of my comments/statements and questions in the development of the Plan is appreciated.
- H. Wayne Clark Edwards of Ocracoke Rooms and Cottages

Correspondence: Mr. Mike Murray

As a home owner and part time resident of Hatteras Island I object to the plan to close the beaches. We should all be able to access the beach, swim in the ocean, and enjoy freedom. With the turtles the park service should mark and move the nests to pea island or the areas currently marked for the park service (strip between avon & Buxton) With the plover mark the nest sites and almost all people will respect the nesting privacy I am concerned the the reports of the mass destruction of wild like on the island to protect the plover and I hope that these reports are unfounded We can all work together providing areas for the wild life and people I just takes thinking & effort

Correspondence:	We advocate keeping the beaches of the Cape Hatteras recreational area free and open for public use. In this recreational area, we also advocate brief and finite closures of discrete (i.e. non-continuous) sections of the beaches due to endangered wildlife. The Cape Hatteras National Seashore is a recreational area - not a wildlife sanctuary - and it should be preserved as it was originally designated - for the non-destructive pleasure and use of the citizens and legal guests of the USA.

Correspondence:	I feel I must comment on the "beach plan" that the NPS is trying to implement for the closure of many of Hatteras Island's beaches. The NCWRC has already stated that the recommended actions and mixing of rules for endangered vs non-endangered species does not make sense. The recommended 300 meter closure in all directions of the American Oystercatcher nest or brood really does not make sense. This species is not listed as federally threatened. I totally disagree with the 1000 meter pedestrian/ORV closure in all directions of the piping plover chick. There have been numerous articles stating that there is "no scientific reasoning that has been presented for this management strategy". To close beaches to pedestrian, visitors and permanent residents, and their dogs and any ORVs will surely devastate an already critical economy. I do know that the beach in front of one of my houses was closed last summer do to a Least Tern nest. Luckily there was a small area that the renters were able to access to the beach. If visitors and people that live on Hatteras Island cannot walk on the beach, play in the ocean, and appreciate nature, like they have been able to do for centuries, the island will be ruined. The economic impact from such rules will surely have a trickle down effect on thousands of people who own, work, visit, and live on the Hatteras Island. I agree that NPS need a viable management plan for all parks, but please do not go from one extreme to another, when many people have put there life into their homes, businesses, and investments. There has to be a balance between what is best for the park and what is reasonable for the people who live and work on the island. Please, please, please consider the lives that your decision will impact.

Correspondence:	I disagree with the DEIS as presented, as it is flawed in its basic evaluation baselines. The baselines as stated are: "evaluates the impacts of two no-action alternatives (A and B)" but these no-action alternatives are taken AFTER severe restrictions had already been placed on beach access by a consent decree. A "no-action" alternative should be based on baselines that have metrics that can be measured and truly evaluated such as the long standing NPS Interim Plan that had been used as a stop-gap measure until this DEIS could be developed. I cannot support the concept that all the years leading up to and PRIOR to the consent decree would not account for any baseline data points in developing any of the no-action alternatives. This is a gross misrepresentation of the data available. Instead, no-action alternatives should, at the minimum, use the very successful Interim Plan as one of the alternatives.

Correspondence:	Dear Superintendent Murray, As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points. 1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations." 2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness..." Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources. 3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals. Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan. ***** Thank you very much for taking the time to protect one of America's most beautiful stretches of Atlantic seashore! Sea turtles, nesting shorebirds, and generations to come will be grateful for your action today. Thanks again! Sincerely, Michelle Sheridan

Correspondence:	Public comment on CAHA ORV Mgt Plan DEIS Thank you for the opportunity to express my views on the various alternatives. My three major areas of concern are: 1. The protection of the Park's natural resources including flora, fauna, coastal habitat and the natural barrier island processes that promote their health and sustainability. 2. Preservation and promotion of NPS values including natural, scenic and esthetic and their benefit and inspiration provided to the public. 3. Implementation of an efficient, sustainable alternative with a permit fee that would cover operational costs. I will refer mainly to Plan D, the preferred environmental plan and Plan F, the NPS preferred alternative. As my comments suggest, I agree with incorporating parts of Plan F into parts of Plan D. I also find a lack of permanent high quality pedestrian-only beaches in all alternatives that need to be rectified in the final plan. I do not support the no action plans A and B or major components of the other action plans C and E.				

Wetlands I agree with Plan F in erecting signage to delineate all ORV routes, parking and limits on soundside roads. I disagree with absence of signage in Plan D, as it is in conflict with the Organic Act, Redwood amendment, CAHA Enabling Legislation, applicable Executive Orders and NPS Policies. Vegetation damage and soil compaction are well visible and documented. Vehicle routes should not be established parallel to the sound shoreline as vegetation that buffer the island during storms would be killed. Also, most salt marsh shorelines in the park are retreating in the absence of ocean overwash due to artificial dune lines as well as sea level rise. ORV activity exacerbates the erosion by killing vegetation and driving on undercut shorelines. Comparing aerial photographs will show that unregulated soundside driving has resulted in the establishment of wider and/or additional ORV trails. Marsh habitats recover slowly. The best protection for wetland resources would be to replace routes with parking lots and maintaining foot trails to the water's edge. Additional interdunal roads would be built through fresh water wetlands under Plan F. Based on past experience, it would be difficult to keep users from going off trail to avoid passing through standing water or to allow oncoming traffic to pass (even if periodic turnouts are provided). Building the road high to keep dry and wide enough to accommodate traffic would mean the building of a large culvert trail through the wetlands.

Floodplains I agree with the need for more parking areas to promote pedestrian access. To reduce environmental impacts, parking lots should not be constructed with asphalt (that will eventually end up in the water) but with porous material such as crushed rock or patio pavement. Twelve additional lots proposed in Plan F will likely be extravagant since so many beaches are open to ORV use. Plan D needs to include additional parking areas since more beaches will be closed to vehicles.

T and E Species Piping Plover ? I agree with Plan D over Plan F. Suitable breeding and nonbreeding habitat has dwindled to a fraction of what it was when the park was established due to maintaining artificial dune/berm lines and suppression of ocean overwash events. Increase visitor activities and the resulting increase in presence of avian and mammalian predators have further impacted the species survival. Minimal or nonexistent protective efforts by the NPS for many decades after the park's inception have had extreme negative consequences. NPS needs to take a more aggressive action now for past failings, even those unintentional. The Organic Act, Threatened and Endangered Species Act, Migratory Bird Treaty Act, Redwood amendment, CAHA Enabling Legislation, applicable Executive Orders and NPS Policies support or mandate such actions. Plan D with ML1 will provide highest degree of protection for the next 5 years when it can be re-evaluated. I also support Plan D because pets are unacceptable near breeding and non-breeding SMAs.

On pg. 210 of the DEIS, it states that no known piping plover were lost to vehicles within CAHA. This is misleading. It should be noted that their nesting activity on ORV beaches was not protected until the late 1980s. The protective buffers were smaller than FWS recommendations and monitoring staff was low until recently. It is reasonable to believe that vehicles may have run over chicks in the past and it went undetected. Close calls were documented by NPS in three separate years in the 1990s when plover chicks were observed outside or at the edge of the bird closure prompting the park to extend the closure at the South beach drain to the surf edge.

Sea Turtles ? Similar to Piping Plover, suitable nesting habitat has dwindled since the park was established due to maintaining artificial dune/berm lines and suppression of ocean overwash events. Increase visitor activities and the resulting increase in mammalian predators have further impacted the species survival. Minimal or nonexistent protective efforts by the NPS for many decades after the park's inception have had negative consequences. NPS needs to take a more aggressive action now for past failings, even those unintentional. The Organic Act, Threatened and Endangered Species Act, Redwood amendment, CAHA Enabling Legislation, applicable Executive Orders and NPS Policies support or require stronger actions.

I applaud the park for having night driving restrictions in all alternatives. I do not agree with Plan D that vehicles have to be off the beach every evening at 7 PM. Using sunset hours as in F is reasonable though a daily moving target for visitors could prove frustrating. A compromise of 8 PM could be made without impacting nesting activity. My concern on both D and F is with the morning hour. I don't see how all beaches could be surveyed by such an early hour ? unless many more biotechs are now involved in surveying smaller sections of beach. It is true that after the peak hatching period, some stretches of beaches may no turtle activity. If there are no nests on a stretch of beach and vehicle lights could not be seen at any other distant nests that was in its hatching window, then the beach could be opened to vehicles by permit. Filter fence should not be relied upon to block light since it cannot successfully be secured to the low water mark. At least twice CAHA staff has documented hatchling entanglement after fabric was frayed by wind.

If beach fires are to be allowed, I agree with the spatial restrictions on campfires found in Plan F. However fires should be extinguished by 10 PM at latest to protect nesting sea turtles. (Also, consider safety and aesthetics as these village beaches are presently littered with beach fire debris left behind) Sea-beach amaranth ? If this endangered species has not been seen since 2005 in CAHA, the park must be extremely proactive in its recovery. CAHA has never protected habitat all year as proposed under Plan D. This plan could have major positive impacts by providing permanent protection of habitat, seeds and plants. Natural plant succession is likely eliminating suitable habitat on the upper beach. Plan D protects more lower beach habitat over a longer period than other alternatives. East Carolina University found that amaranth growing on the lower beach were larger and produced more seeds than those growing on the upper beach. I also support D since it is not known what impact vehicles have on seeds. Newly germinated plants are especially vulnerable under ML2 procedures proposed under F. I support reintroduction efforts proposed in Plan F. The Organic Act, Threatened and Endangered Species Act, Redwood amendment, CAHA Enabling Legislation, applicable Executive Orders and NPS Policies support or require stronger actions.

State Listed / Species of special status I agree with Plan D over Plan F. Suitable breeding and nonbreeding habitat has dwindled to a fraction of what it was when the park was established due to maintaining artificial dune/berm lines and suppression of ocean overwash events. Increase visitor activities and the resulting increase in presence of avian and mammalian predators have further impacted the species survival. Minimal or nonexistent protective efforts by the NPS for many decades after the park's inception have had dangerously negative consequences. NPS needs to take a more aggressive action now for past failings, even those unintentional. The Organic Act, Threatened and Endangered Species Act, Migratory Bird Treaty Act, Redwood amendment, CAHA Enabling Legislation, applicable Executive Orders and NPS Policies support or mandate such actions. Plan F with ML1 will provide highest degree of protection for the next 5 years when it can be re-evaluated. I also support Plan D because pets are unacceptable near breeding and non-breeding SMAs.

I fully support "floating" closures for non-breeding birds under Plan F. This gives additional protection to migratory and wintering birds that feed along the surf zone and rest on the upper beach such as red knot, sanderling, willit, whimbrel and black-bellied plover. Several of these species have dwindling populations. "Floating" closures should not replace closures at spits and point that incorporate sand/mud flats and inshore waters that many species prefer.

Permit/Education I strongly agree with Plan F proposal to tie resource protection education into the permit process. It has more positive returns than a permit with no education.

Safety Closures Park should definitely identify safety closures based on specific criteria. Plan F includes pedestrian safety ? only responsible thing to do if pedestrians and ORVs will be in the same area.

Park Values/Visitor Experience. NPS Management Policies make a clear tie between preserving and protecting park resources with safeguarding park values. In an overview of these management policies on pages 527 - 528, the DEIS states that (1) the enjoyment of park resources and values are part of the fundamental purpose of each park; (2) the NPS will ensure that the users would not cause impairment or unacceptable impacts to resources or values; (3) when uses and protection of resources and values conflict, protection of resources and values must predominate; (4) preferred forms of enjoyment that foster understanding and appreciation of the resources and values, contribute to personal growth, wellbeing, health and fitness will be actively promoted in accordance with the Organic Act. The DEIS follows in stating that the related Executive Orders require ORV routes and areas be allowed only in locations where there will be no adverse impact on natural, scenic or esthetic values and where they will minimize conflicts with other user groups I do not agree that any of the various alternatives presented do enough to protect or promote park values on a year round basis. The experience of some visitors is compromised and degraded as a result.

The park plans give preferential consideration to vehicles over protecting and promoting park values and pedestrians seeking to experience park values. In Plan F, pg 554 of DEIS, the 29 miles dedicated as year round ORV areas vastly out weighs 16 miles set aside as year round pedestrian sites. An additional 23 miles of SMA beach will be open to beach driving 7.5 months/year as opposed to 4.5 months as vehicle-free. It is unlikely that pedestrians will have access to the SMAs during the vehicle-free period due to resource needs. So under Plan F, vehicles will have access to 52 miles of beach for many months of the year leaving only 16 miles vehicle-free. I object to NPS dedicating more area to visitors with vehicles than for those without. Who decided vehicles get preference? Pedestrians who want to safely experience park values will avoid ORV beaches at CAHA. . Page 268 of the DEIS states that 18% of visitors surveyed found vehicles distracted from their experience. This does not take into account past visitors who no longer come here due to such conflicts. This needs to be re-evaluated with consideration of park values based on the above mentioned park policies, executive orders

as well as the Organic Act and enabling legislation.

Even along beaches shared by ORVs and pedestrians, the park gives greater consideration to the vehicles. In Plan F, a year round pedestrian-only corridor on the upper beach will be granted only if there is at least a 90-foot wide swath for vehicles. If a beach does not meet the criteria, (the case along most beaches) then pedestrians must walk in traffic and ruts. Public comments concerning close proximity of vehicles to other activities were cited on page 268 of the DEIS. I do not agree with the park's analysis that the vehicles need such a wide swath. It visually degrades the landscape and negatively impacts other users. No standard is even made for ORV corridor except in the No Action Plan A. After Hurricane Isabel in 2003, members of an NPS management team recommended 45' maximum width. Furthermore, pedestrians seeking to safely experience park values will not visit beaches dominated by vehicles. This needs to be re-evaluated with consideration of park values based on the above mentioned park policies, executive orders as well as the Organic Act and enabling legislation.

This disproportional consideration at the expense of preserving park values is seen further. Wherever vehicles are allowed, their activities dominate over other non-vehicle activities. The beach serves as a rutted multilane road and parking lot. Even visitors who access the beach with vehicles do not set blankets, chairs etc on the open beach (a rutted roadway) but instead between parked vehicles or between the ocean and parked vehicles. The parked ORVs act as a safety fence against moving vehicles. This needs to be re-evaluated with consideration of park values based on the above mentioned park policies, executive orders as well as the Organic Act and enabling legislation.

No plan adequately deals with carrying capacity. I do not believe the NPS considered natural aesthetics of the beachscape when reaching a recommendation. Under Plan F, one vehicle every 20' is high density and also unclear if this refers to a single or multiple row of vehicles along the shoreline. This needs to be re-evaluated with consideration of park values based on the above mentioned park policies, executive orders as well as the Organic Act and enabling legislation.

Each action alternative states that NPS will establish ORV routes and areas at sites having low visitor use. I disagree with this analysis. These sites may have low visitor use because they are less accessible due to remoteness. These are often the most wild, dynamic and deserted beaches and should be the very ones designated as year round pedestrian-only sites in order to protect park values and visitor experience. These areas would equate to permanent backcountry trails seen in other NPS units. Park visitors expect such options and not just on a seasonal basis. This needs to be re-evaluated with consideration of park values based on the above mentioned park policies, executive orders as well as the Organic Act and enabling legislation.

Many of the beaches chosen as year round pedestrian-only sites have little park value. For example on Hatteras Island, artificial dunes/berm and the highway border the Frisco site for its entire length. The beach running from Buxton village to the old lighthouse site is steep and narrow, bordered by commercial structures, artificial dunes/berm, sand fence, sand bags, metal groins and for much of its length, the highway. The southern section of this vehicle-free beach is highly valuable. Here a visitor can find a broad beach with natural dunes and a landscape dominated by barrier island process. However even the viewscape on this short stretch is compromised by the high number of vehicles using the bordering beach to the south. This needs to be re-evaluated with consideration of park values based on the above mentioned park policies, executive orders as well as the Organic Act and enabling legislation.

I greatly support the Plan F foot trail at Bodie Island spit and vehicle-free beaches on both sides of Hatteras Inlet. The inlet landscapes are wild, overwashed and ever changing where one can experience a barrier island in its true form. At Hatteras Inlet, the experience may not be remote depending on the size and location of new interdunal parking lots. The situation on the northern side of the inlet will not satisfy the needs of pedestrians seeking to enjoy a remote and wild beach since they still must traverse approximately 1.5 miles of rutted ORV beach or interdunal trail to access the pedestrian-only site. Only on the southern side would pedestrians have a quality experience and follow the vehicle-free shoreline to the inlet.

These and other high value beaches bordering inlets and the cape are extremely likely to be closed to pedestrians for a minimum of 4.5 months under F or longer under D ? which I will not argue with. However this emphasizes the need for the park to dedicate valuable year round vehicle-free beaches in other areas of the park. This needs to be re-evaluated with consideration of park values based on the above mentioned park policies, executive orders as well as the Organic Act and enabling legislation.

Analysis of the soundscape was incomplete. It did not consider that the likelihood of noise pollution in the form of dueling radios, tailgate parties etc. increase with the presence of ORVs. This needs to be re-evaluated with consideration of park values based on the above mentioned park policies, executive orders as well as the Organic Act and enabling legislation.

I very much agree with protection of the night sky in Plan D and F.

Beaches in front of ALL park campgrounds and day use areas should be closed to vehicles when facilities are opened to protect safety, park values and visitor experience. Vehicles could be routed on a marked single lane corridor on the upper beach to pass behind these sites. Frisco campground staff told me campers there were very upset when the park reopened beaches west of Ramp 49 to traffic since this was the only nearby pedestrian beach they could use. I agree with Plan D in that all village beaches will be closed year round to ORVs for the same reason. Parking lots located at ORV ramps do not attract pedestrians. Beaches immediately adjacent to these parking lots should be vehicle-free detouring vehicles in a marked single land corridor on the upper beach to pass behind these sites.

Economics I do not agree that the general economy of the local communities will become weak with year round resource closures regulating access and additional permanent pedestrian-only areas. Other seaside communities in the nation not permitting beach driving still have robust economies. The local economy of Ocracoke grew during the two decades that the northern half of the island was closed to vehicles year round. Frisco and Hatteras grew during the same period when beaches were vehicle-free between Ramp 49 and 55. Sea level rise, storm trends, transportation links and the public's disposable income will have more long lived impacts on the Outer Banks economy. The NPS did not analyze the economic impact of losing visitors who found ORV activity in conflict with their enjoyment of CAHA. As a past CAHA employee, I listened to many such visitor complaints over the years.

I agree with Plan D in that it assigns the highest Preservation Values.

Plan D is the most cost efficient action plan, which would require less NPS resources to implement when compared to other action plans. The aspects I support of Plan F would not add to this cost if incorporated with Plan D as a final plan. Designating additional permanent high quality pedestrian-only beaches would not add to the cost of the final plan.

Mike Murray, Superintendent Cape Hatteras National Seashore 1401 National Park Drive Manteo, NC 27954

Dear Superintendent Murray:
I am writing in opposition to the ORV DEIS. Alternative F is both oppressive and unfair. Please help residents and visitors by considering the requests of the Coalition for Beach Access.

I disagree with the Pro Active Adaptive Management as set out on page 124 of the DEIS. The Park Service should consider the Pea Island Wildlife Refuge as an appropriate part of the Cape Hatteras Seashore Ecosystem for the propagation of affected species.

The cultural and historical value of our shoreline is undisputable. I am concerned about the failure of the Park Service to recognize this as mandated under Section 106 of the NEPA.

Sincerely,
Angela Conner Tawes

Correspondence: I agree with the need to protect the piping plover and other wildlife, however the restrictions must not extend to the rental home areas and Off road

vehicles must be given designated areas to use the island. They must be allowed to use the beach in those areas a few hours before and after sunset at a minimum. Many people vacation with their dogs and they should be allowed on the beach, also. Should a restriction be placed on the beach in a rental area, the renters most likely would not return. Their rental choice and price is based on location which may not require driving. A restriction would cause a snowball effect that would affect land values, taxes and monies available to the NPS for all projects in the future. Please keep all restrictions in the current wildlife areas (such as Pea Island). Thank you

Correspondence: Mike Murray, Superintendent Cape Hatteras National Seashore Recreational Area 1401 National Park Drive Manteo, NC 27954
Dear Superintendent Murray,
Please accept this letter as my comment on the ORV DEIS before you at this time.
My husband and I have been coming to the Cape Hatteras National Seashore for 15 years. We fell in love with its beauty and the feel of freedom it gave us. We loved it so much that we became a homeowner of a cottage in Frisco. Our dream came true. There are few too many places in driving distance that gives an individual or family such a feeling. However, it looks as if the dream and the feeling is in jeopardy of dying.
After reviewing the National Park Service DEIS I must strongly disagree with any of the six alternatives within the document.
I have, however, reviewed the 77 page Coalition for Beach Access Position Statement signed by several groups that were a part of the negotiated rule making process and it by far succeeds in furnishing the best visitor experience while maintaining the needs of protecting the fragile resources.
Please consider all aspects of this alternative and put people back into the management of Cape Hatteras National Seashore.
Sincerely,
Mr. & Mrs Wayne Madonna

Re: Draft Cape Hatteras National Seashore Off-Road Vehicle Management Plan/ Environmental Impact Statement
Dear Superintendent Murray,
The American Sportfishing Association (ASA) offers the following comments on the National Park Service's (NPS) Draft Cape Hatteras National Seashore Off-Road Vehicle Management Plan/Environmental Impact Statement (DEIS). ASA has serious concerns with the preferred alternative included in the DEIS. The Alternative F, the NPS preferred alternative, is the most restrictive management option to date, far exceeding any sense of balance between resource conservation and public access and betraying all promises made to the public regarding recreational uses in the seashore. Because of the highly unbalanced nature of the preferred alternative, and that important socio-economic information is missing or incomplete, we urge the NPS to make significant changes to the preferred alternative in order to provide both reasonable resource protection and reasonable public access to public lands.
ASA is the sportfishing industry's trade association, committed to representing the interests of the entire sportfishing community. We invest in long-term ventures to ensure the industry will remain strong and prosperous as well as safeguard and promote the enduring economic and conservation values of sportfishing in America. ASA also represents the interests of America's 60 million anglers who generate over \$45 billion in retail sales with a \$125 billion impact on the nation's economy creating employment for over one million people.
Dating back to when Cape Hatteras National Seashore (CHNS) was created, the Department of the Interior promised the communities the seashore surrounds that public access for recreation would be maintained and promoted. The unique characteristics of the seashore and its recreational opportunities require the use of off-road vehicles (ORVs) to access remote spits and inlets. While the citizens and businesses of Dare and Ocracoke counties very much understand and support the need for resource protection within the seashore, the NPS's DEIS severely disadvantages reasonable public access while providing overly excessive protections to bird and turtle species. The NPS treats the local communities as if they are located on the outside edges of the seashore, when the reality is the communities are literally surrounded by a national seashore and depend on reasonable access to the seashore for their economic survival. While the NPS states that they are protecting the seashore for future generations, it is sacrificing the livelihoods, enjoyment and culture of the present generation to do so. This is directly contrary to promises made by the NPS upon creation of the unit; in contradiction to Executive Order 13474 that states "that recreational fishing shall be managed as a sustainable activity in national wildlife refuges, national parks? or any other relevant conservation or management areas or activities under any Federal authority?"; and the recent White House initiative to promote recreation in the outdoors.
How to Improve the Preferred Alternative To state that the preferred alternative is the result of the Negotiated Rulemaking Advisory Committee's input is an affront to every member of that committee who promoted ORV and pedestrian access for a variety of activities including surf fishing, kite boarding, kayaking, and bird watching. The majority of the provisions included within the preferred alternative far exceed anything proposed by a majority of the Negotiated Rulemaking Committee. Alternative F is even more restrictive than the compromise position developed by a subcommittee of the Negotiated Rulemaking Committee, which received a 19-5 affirmative vote in December 2009. This includes excessively large resource closures (buffers), unnecessary year-round and floating closures, and the lack of access corridors around or through resource closures. In addition, the DEIS fails to recognize that the limiting factor in nesting rates is often due to weather and predation. Creating an ORV management plan that assumes ORV interactions are the primary cause of bird disturbances is unfair and inaccurate.
In addition, while science should be the foundation of all resource management decisions, it should only serve as a guiding principle and tool? not be the final result. Scientific information must inform management in such a way that recognizes that humans and their activities, including recreation, are also part of the ecosystem. The seashore must not be managed in order to achieve resource goals that can only be achieved if humans are not present. Unfortunately, that is what the preferred alternatives strives to achieve. This is reflected in large, inflexible buffers that far exceed protections afforded to the federally threatened piping plover under its recovery plan, which are then applied to state managed species that are not considered threatened species.
While the state may list the American oystercatcher and a variety of colonial waterbirds as having special status, in the state of North Carolina that special status is to indicate the state's desire to acquire more robust data on the species, not that these species are on the verge of extinction. They therefore do not warrant protections that exceed those afforded to species federally listed as threatened or endangered. It is very transparent that the Preferred Alternative comes from the direct input of the three organizations suing the NPS for more restrictions to beach access and is far from a consensus position, much less representative of a balanced approach to public policy. To placate current and potential litigants is not sound public policy and only serves to result in injustices borne by the local communities.
In order to restore balance to the DEIS, and therefore regain the trust of the local communities, we highly recommend that the NPS revisit the proposal put forth by several members of the Cape Hatteras community, who depend on reasonable access to the seashore. This proposal, submitted to the NPS after the conclusion of the Negotiated Rulemaking process, truly builds on the committee discussions. It provides the necessary protections for wildlife resources while having the support of a majority of the local community, which is vital when the interactions between the local communities and park resources are as intertwined as they are in CHNS. Highlights of this proposal include:
? Resources Closures as outlined below:
Species Breeding Buffer/Nesting Buffer Unfledged Chicks Piping Plover 50 meters 200 meters Wilsons Plover 30 meters 30 meters American Oystercatcher Flush + 15 meters Flush + 15 meters Least Tern 30 meters 30 meters Other Colonial Waterbirds 30 meters 30 meters

? Pedestrian and ORV corridors or bypasses provided through, around or below the high tide line in all SMAs during the entire breeding and nesting seasons (within guidelines) to maintain access. ? NPS should aggressively pursue the adaptive management initiatives identified in the DEIS with the object to improve its success with both resources protection and visitor access. The initiatives identified include vegetation management, habitat management, enhanced predator management, colonial waterbird social attraction, piping plover check fledge rate, piping plover chick buffer distance and pass-through buffers during the incubation period. ? Opportunities to implement less restrictive closures as a result of the above initiatives should be considered more frequently than the 5-year periodic review process identified in the DEIS. ? A proactive Turtle Night Nest Watch Program to allow for maximum nest protection and reasonable ORV and pedestrian access at night. ? Keep the beach open at night in key areas (e.g., Cape Point and Oregon Inlet) where access for popular activities such as fishing and night sky watching can be accommodated ? Ten-meter square turtle protection areas. ? Permit camp fires and leashed pets throughout the park, as to not advantage beach front home owners.

Socio-Economic Analysis ASA is especially concerned that the NPS has not fulfilled its duty in conducting an adequate socio-economic analysis. Unfortunately, the entire Socioeconomic Impacts section of the DEIS was rushed and prematurely released, resulting in estimated impacts for the preferred alternative that are based on subjective reasoning, more than the other alternatives. For example, a survey was conducted into potential business impacts, but it is not yet completed and was not included in the DEIS's results (as stated on p. 566). Only parts of the business survey were applied in the DEIS, and it states the business survey results will be included in the final plan/EIS. This is unacceptable because reviewers are not provided full and objective information upon which to make their comments.

In addition, page 570-571 talks about a survey of vehicle use on the beach. The data were not ready for use in the draft EIS. Given that the socioeconomic impact analysis is incomplete, ASA is very concerned that not only is NPS making decisions that affect the economic future of these small businesses, but the public will not have a chance to comment or review the final results of the analysis. This is once again an affront to the local businesses and communities that were promised a fair hearing in the development of this plan and who have invested untold hours in a process they believed would be objective and based on complete data.

The DEIS states that small businesses, which make up 95-98% of business in CHNS, would be impacted more than others by the closures. According to the severity definitions given on pages 571 & 572, all of the alternatives presented in Table 61 (page 562) would place "major" impacts on the seashore villages. Footnotes throughout the tables in the pages describing each alternative tell us that about half or more of the impacts from closures will accrue to the seashore villages.

In addition, most socioeconomic analyses conducted by federal resource management agencies require "use values" (angling, beach driving, etc) and "non-use values" (existence of birds, etc.) be considered when setting public policy or damage awards. Federal natural resource damage policy (NRDA) and others require consideration of use and non-use values. The DEIS does not include use values, yet non-use values are included starting in the first paragraph and appear to be based completely on assumptions and personal opinions. There are no descriptions of how these statements were developed. Recognizing the failure to include use values, which measure net impacts to anglers and other beach users, the non-use preservation values should be rejected.

The third paragraph on page 568 is a concern. It states that NPS visitation statistics cannot support any claims that the consent decree impacted visitation. It says: "? the information does not support projections of decreases in visitation?" This is misleading. The NPS asserts that state visitation was down in 2008 statewide. However, fishing license data show sportfishing license sales in North Carolina statewide were up 13-15% (according to the U.S. Fish and Wildlife Service.) We know that many factors combine to drive visitation levels, but without the 2007 consent decree, 2008 visitation levels could have been even higher. No one knows for sure. In addition, the analysis does not use data from the first full year of the consent decree (2009.) Many 2008 visitors were either unaware of the scope and breadth of the consent decree's beach closures or had already made reservations for that travel year. Therefore, ASA disagrees with the impression given by the Draft EIS's comment quoted here.

The impacts of the various proposed alternatives beginning on page 573 cannot be accepted or even considered at this time, as the DEIS earlier stated that more data will be released soon. And when that happens, NPS will either confirm or update the DEIS's estimates. To release estimates now may falsely bias readers, which can lead to harmful decisions. It is poor public policy to release draft data in a public process such as this. The DEIS also reported that local businesses expressed concern about the data being applied to estimate future impacts, but that still occurs starting on page 573. Conclusion The level of trust the local communities in CHNS have for the NPS has severely declined since the start of the Negotiated Rulemaking Process. There has been no public outreach by the NPS to the communities since the consent decree was instituted, and the seashore is being managed sixty miles away in Manteo, NC. The deep mistrust is not founded in the resources, but in the notion that the NPS seems determined to cripple a struggling local economy and a way of life. ASA strongly urges the NPS to complete essential data needs and then re-issue the document with the appropriate and necessary changes to the preferred alternative in order to provide both reasonable resource protection and reasonable public access to public lands.

Thank you for your consideration.

Sincerely, Patty Doerr Ocean Resource Policy Director

Correspondence: In July of 1957, my parents and I packed up our camper and headed to the first campground at Oregon Inlet in the Cape Hatteras National Seashore. It was quite primitive back then, but we spent a week learning to catch blue crabs, fish for blues, and enjoy the utter beauty of the beach. For the next 52 years, I have spent my summer vacations enjoying the National Seashore. The memories I have are of nothing but joy. Once the campground at the lighthouse was completed we camped there. I remember attending every program sponsored by the Park Service: walks with the Rangers, campfires on the beach, slide shows in the amphitheater. We learned what to touch and what not to touch. "Take only inspiration, leave only footprints" was the motto. In 2003, my husband and I purchased a small piece of property (paradise)in Hatteras Village. We do not rent our property so we are frequent visitors. Most mornings I walk the beach along MP70. I pick up trash, report injured wildlife, and have been "first on the scene" of a fresh turtle nest. I watch other families on their first visit and answer questions from excited children who have never seen a a skate egg case or a Portuguese Man of War. I teach them the names of all the birds: willets, sanderlings, gulls, egrets, etc. Plan F would prohibit me from all these activities that I love. I can't imagine being restricted from the beautiful shore. No kite boarding, surfing, fishing, or beach combing. Economically, this plan would turn Hatteras and Ocracoke villages into another Portsmouth Island. Property value would tumble, as would assessments, leading to reduced tax collections. Businesses would fail. Tourism is the lifeblood of the Island. There surly has to be a better way to manage wildlife. As I mentioned, our property is not rental so my position is not driven from a selfish economic view point. I respectfully request that you not go with plan F and I thank you for the opportunity you have given me to comment.

Correspondence: The Deis strongly implies that, prior to the consent decree, nesting birds and turtles were simply unprotected. The implication allows the DEIS to use the consent decree as a starting point for nest protection and ORV management, when, in fact, beaches had been closed and ORV access limited by local NPS management well before the lawyers and judges starting making closure decisions. When future closure policy analyses start at the beginning, a far different picture emerges rendering the banning of pets, 1000 m of closure per bird, the ignoring of historical/cultural issues, the denial of the existence of a 12 mile wildlife preserve or of birds nesting on predator free out islands, the unwillingness to open corridors and apply pro-active management techniques (move nests, make areas not valued by recreation more attractive to nesting birds)all the more obviously irresponsible.

Correspondence: Ladies and Gentlemen,
I've been fortunate enough to enjoy my vacation each year on the Outer Banks, specifically, South Nags Head since 1988. And while I'm in total favor of protecting and preserving the seashore and it's inhabitants, I believe your proposal for pet restrictions, in order to preserve the nesting and breeding of birds, is both unnecessary and potentially harmful to the economic stability of the region.
I have yet, in all my years, seen pets running loose or being unattended where they would impdede on either the continuation of wildlife or destroy their natural surroundings. We personally do not bring our pet(s) to the beach, but have considered it many times. However, having mostly long haired dogs, we felt that the didn't want to have the beach at home with us the rest of the year, so we didn't bring them. But, at least that choice was open to us to make. If you impose the pet restrictions that are being discussed, you will autmoatically eliminate a segment of your tourist population, maybe as much as 30% of them. And not that it's the only reason, but I've noticed more and more vacancies over the past few years, so the area may not be on the upside of tourism growth at this point anyway.
I don't believe regulations are necessary regarding pets and highly doubt a significant problem exists at all, but I certainly do not agree with banning them all for the period you are considering. Please do not get caught up in runaway governement or over regulation for what may not be an issue or problem at all, but could have devastating effects on the community.

Correspondence: I disagree with the NPS plan to close our beaches. As a long time resident I strongly believe that a vast majority of our tourism is due to the availability of our beaches. When planning a vacation people do not come to see the largest mall in the United States, they do not come to see the largest aquarium, they come to spend time on the most beautiful beaches in the United States. I believe closing our beaches or restricting them to the point of disinterest to tourism will send our economy into a tumultuous tail spin that we will not recover from. The draw of our beaches bring people back year after year, its a consistent form of income, although tourism may have been up the past two years it will not be the same visitors year after year if they find that they cannot use the natural resources that makes this island what it is. A bird is being protected to kill a species of greater importance. KEEP OUR BEACHES OPEN TO ALL AT ALL TIMES

Correspondence: I am a kiteboarder from California who is planning on visiting The Outer Banks, North Carolina
It has been brought to the attention that a variety of plans are being considered in response to proposed environmental and ecological concerns. The Outer Banks, North Carolina is a sanctuary for many beach goers, sports enthusiasts, wild life observers and most importantly, the natural environment. We, as a community, feel that it is important for the environment to be protected thus understand certain steps maybe needed to achieve this goal. Thank you for evaluating the options to improve the environmental conditions at one of the greatest destinations in the United States of America.
However, with the aforementioned said, please consider the responses you choose carefully. Minimalist environmental management approaches have worked well throughout the United States' National Parks. Closing extensive sections of beaches, the sound, and water ways will strip the very nature and reason for why we appreciate the land in its current state. It can be said, with great certainty, that all frequent and casual users of this place intend to preserve its natural beauty and respect its great wilderness.
The proposed plans affect many groups of people ? we urge that you keep in mind the desires of all parties involved, as a significant change in the way

the Outer Banks environmental situation is handled may result in a significant decrease in utilization of the land. Should the environmental changes impact our communities' sport we would be forced to reconsider our frequent and environmentally friendly utilization of the Outer Banks. Please read our "Field Report" section of our Forums page to gauge how many people travel to the Outer Banks annually; these people help support the environment, local business and the local economy. Kiteboarding is an environmentally friendly (quiet, no pollution and very little, if any, waste) activity which we are proud to partake in. We respect the environment and look forward to participating with those individuals charged with changing the way the current environmental issues are handled. We look forward to your consideration and hope to continue our frequent and ecologically friendly use of this wonderful destination. thank you Steve Hoffman 312 Nashville av #5 Huntington beach, ca 92648

Correspondence: Mike Murray, Superintendent
Cape Hatteras National Seashore Recreational Area
1401 National Park Drive
Manteo, NC 27954

Dear Superintendent Murray,

Please accept this letter as my comment on the ORV DEIS before you at this time.

After reviewing the National Park Service DEIS I must disagree with any of the six alternatives within the document.

I have; however, reviewed the 77 page Coalition for Beach Access Position Statement signed by several groups that were a part of the negotiated rule making process and it by far succeeds in furnishing the best visitor experience while maintaining the needs of protecting the fragile resources.

Please consider all aspects of this alternative and put people back into the management of Cape Hatteras National Seashore.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.

This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.

The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.

* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.

* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.

This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me. I would prefer to see no ORV use allowed at all in the Park, but I recognize that there needs to be a balance of uses within the Park. However, the Park has identified Alternative F as the preferred option, which does NOT balance the uses. It is skewed towards one vocal group, which is not a reasonable alternative at all.

The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. And, I would like to see more walkways and better access facilities, which would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife populations would have a chance to recover to traditional numbers and diversity within the park.

* Put Natural Resources First. The Park was created to protect our State's natural resources, the protection of those natural resources should come first: any recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife in order to allow for successful breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information.

Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.

* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Correspondence: I am an Outer Banks native, body boarder, surf artist and member of Surfrider Foundation, who was brought up to love and respect my environment. I have roamed the beaches and dunes from Hatteras to Corolla since I was a kid. I've spent many a day body boarding up and down the Outer Banks, some places only accessible by four wheel drive. Some of those times have been the best in my life. And now I can share that with my kids by taking them. Being an OBX native I have worked many places here...none of us could make a living here if it weren't for our visitors to the Outer Banks. You close the beaches and it is a death sentence to those in the areas effected by the beach closures. They come here for beautiful wide open beaches, the best surf on the East Coast, and great fishing among other things. OUR BEACHES...for whatever recreational past time our visitors enjoy, it revolves around the ocean and our beaches. I understand the concern for our wildlife, but closing the beaches to everyone, be it by foot or in a vehicle isn't the answer. I think requiring beach drivers to get some sort of permit would be very helpful. In all my years I have NEVER seen anyone hurt our wildlife intentionally. I've seen beach drivers who endanger other drivers. Quite simply the birds WILL nest elsewhere. They can, they will and they do. The smart ones want nothing to do with us, so they nest in more secluded areas, the islands in the sounds are filled with nesting birds. I believe more research is needed and by someone NOT affiliated with either side. Seems like everyone is going by what the Audobon Society specialists dicat. And this is done without thought to those of us trying to earn a living in already hurting economy. Seriously, would you close all of Yellowstone to the public? Let's close access to the Great Smokey Mtns. OUR WHOLE LIVELIHOOD REVOLVES AROUND OUR OCEAN AND OUR BEACHES. Every last shop owner, restaurant, rental agency, builder, ETC, caterS to our visitors in one form or another and they are here to GO TO THE BEACH. Yes, even places like Cape Hatteras Light, Ocracoke Light, Bodie Island Lighthouse, The Lost Colony, RIFP and even the Wright Brothers Memorial could be effected. Why? The tourist, fishermen and surfers will simply go somewhere else. Why visit those landmarks if they can't go to the main one... Outer Banks Beaches. I could go on but hopefully you will see where I am coming from. I admit my family doesn't go to anywhere south of Nags Head to go surfing or fishing like we used to because of the beach closures. What's the point when you want to go to the beach but it's been closed. Why take the drive. We used to make a weekend of it all the time,surf, shop, dine in local restaurants, and visit the Cape Hatteras lighthouse, etc. Not any more. The sad thing is Hatteras Island is a HUGE east coast draw when it comes to surfing, windsurfing, kiteboarding, and fishing. And the local people have suffered because people are vacationing somewhere else where the beaches are not closed and they can enjoy their favorite recreational pastimes. I think more research needs to be done by an OUTSIDE 3RD PARTY and only close a few areas for nesting birds while conducting the extra research. They need to research the local economy and the possible side effects of beach closures. And they need to do a more detailed research of the wildlife and all of the surrounding areas they live in,etc. Closing the beach to all is nothing more than a death sentence to those of us living in Dare and Hyde County. And what a waste to close them, when we have such a wonderful coastline to share with the rest of the world.

Correspondence: I strongly disagree with the stated proposal in regards to the new planning for ORV use on the Cape Hatteras National Seashore. when the park service bought the land from my family generations ago it was stated that as long as the families and island were there that the land would always be free to use as a hunting and recreation area with little to no regulations to hinder the use of our natural resources. what is the point of banning humans from using land that they once owned and were promised continual use of? i feel as though our economy will suffer greatly in the event that the beaches are closed, and in all honesty what else is there to do around here other than enjoy the beach? it will kill this island and ruin the lives of those who have been here since the beginning, and those who have chosen to call this beautiful place home for years and years to come. KEEP OUR BEACHES OPEN TO ALL AT ALL TIMES

Correspondence:	Driving motor vehicles, with the exception of emergency vehicles, on beaches should be banned. There is no good reason to drive on the beach except for the fun of driving on the beach. There are other methods of travel suitable for the beach, including walking, running, biking. Driving on the beach pollutes the area. Emissions, oil leaks, anti-freeze, airconditioning run off all sink in the sand and eventually enter the ocean. The noise of the vehicles scares wildlife from its natural habitat (turtles, crabs, birds . . .) Rotten drivers run over the creatures. Some of these creatures are endangered.

Correspondence:	To whom it may concern. I am writing this with deep concern that the beaches of Cape Hatteras National Sea Shore may become closed to vehicles and or pedestrians. My family has been vacationing in the Cape Hatteras area for over 20 years. We enjoy the beautiful ocean and beaches and the way of life. I have traveled to many of our National treasures and while I feel that we need to preserve and protect them I would hope that you keep in mind that they are for all of us to enjoy. My daughter has learned so much on the shores of Hatteras in regard to the oceans, wildlife and the need to respect and protect nature. But to what extreme? To the point that we can not even enjoy what nature has to offer. I hope not. I also find it ironic that most of this land was actually donated from local people as to insure future generations enjoyment. While I can not comment directly I am sure that the impact that this will have on the local economy would be devastating. We have a ski area up here in New England and the former owner once said, "you should not profit from the mountains, lakes and rivers etc. They are here for us to enjoy." Well it may not be a profit issue but it seems to me that all of us should be able to enjoy our beautiful shoreline in Cape Hatteras. PLEASE KEEP THE BEACHES OPEN. It is so important to so many people. Thank you, Paul Seavey

Correspondence:	I think access to beach driving on Hatteras Island should still be open to the public. I have been going to Hatteras Island for over 15yrs and I have never seen a problem with people messing with the wild life parts of the beach, or damaageing the beach in anyway. The limited access that is out there now I belive is doing more harm because now instead of there being more area to spread out over the beach you now have all the trucks parked in one spot which in turn causes more damage to the beach because you now have a more concentrated area of driving. I belive protection of the wild life is important but it has gotten to the point where we can not enjoy the OBX has we have been able to in the past and in return could hurt the local business. OBX is like no place on the east coast the beaches are wild open and not a mass of people like you find at other beaches on the east coast the fishing is better than other places and it brings you back to a more simple time. Cutting beach access would limit those who use it to drive to the "Point" park the truck and "wet a hook" and just relax and get a way from the life of cell phones, email, meetings, and all the norm's of our fast paced life. So please find a way to keep our beach access and protect the local wildlife cause the old system was working just fine.

Correspondence:	Dear Superintendent Murray, As a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points. 1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations." 2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason. "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness...." Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources. 3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals. Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

Correspondence:	Dear Sirs: The Park Service proposals are an injustice to the original formation of The Cape Hatteras National Seashore, intended for human RECREATIONAL use. The lack of a local business polled economic review is unbelievable. The park must remain open for recreational use by people on foot and in vehicles at all times. The buffers are ridiculous and not scientifically supported. Peer review scientific data is required for any decisions of this magnitude. The parks adjacent spoil islands need to be included for analysis. Furthermore CHNS is not the last bastion of sustainability for the piping plover. CPHNS is only the southern range and the species is located in Canada and the US Northeast and in the US Midwest. The endangered species in CHNS is the hunman being! Harry T. Branch

Correspondence: I support reasonable accommodations for endangered species, however, all of the current proposed alternatives by the NPS (which I have reviewed) and the coalition of well-funded of environmental groups have gone above and beyond the requirements of the law to the detriment of the human population. The decision about which species qualify for protection under the Endangered Species Act (ESA) has already been made by Congress and The ban against beach driving should not be expanded to species that are not within the purview of that law. In general I support the 77-page Coalition for Beach Access Position Statement signed by several groups that were a part of the negotiated rulemaking process, and it by far succeeds in furnishing the best visitor experience while maintaining the needs of protecting the fragile resources.

Impacts to Fall Disproportionately on Poor and Vulnerable Portions of the Population The proposed restrictions on beach driving, pedestrian and pet access will have a number of deleterious effects, including by not limited to, turning Hatteras National Seashore into a group of "haves" and "have-nots" and the effects will fall most heavily on the most vulnerable populations ? the handicapped, elderly, less healthy persons, families with small children and the less affluent. This trend is being resisted all over the world as in the international arena, the attempts to balance the traditional uses of the beach (or other protected areas) with the true needs of wildlife. Many of the people who live on Hatteras Island full time are hanging on by their fingernails, dependent on a tourist economy that has been devastated by national recession as well as the impacts of lack of beach access. Those who can afford to rent the oceanfront castles-by-the-sea, who will have easy access to the beach and the rest of the population who will have limited access as there are vastly insufficient parking lots for the beach users if they cannot drive on the beach. As an aside, there is a lack of knowledge/compliance by those beach users concerning the impacts of leaving chairs, volleyball nets and other beach toys on the beach overnight on turtle nesting. There are a number of less drastic measures that can be taken to reach the goal of reaching a proper balance between beach access and endangered species. Lack of Scientific Consensus/Study Supporting the Proposed Restrictions on Beach Access It is very disappointing that the NPS did not undertake a true study of the effects of beach driving on the species covered by the ESA. The old study has not been updated, nor was its purpose the use to which it is being put, so it is woefully inadequate. For example, it does not consider all the habitat available to the endangered species, such as dredge islands. Moreover, I have been reading the or preNPS weekly resource management reports (I subscribe to the NPS email list) for the past year and a half. I have yet to see a report that an ORV has damaged a nest or chick. The proposed buffer areas are not supported by sound science. And the reports indicate that many (if not most) of the chicks fail to mature due to storms or predation. I believe that better results for the endangered birds could be achieved by more aggressive predator control, especially non-native predators such as feral cats. Selecting to preserve one species over another is a much closer call when the other predators are also native. For turtles, why are more aggressive steps not taken to preserve their nests from storms, etc. There seems to be a very good argument for moving the nests up closer to the dunes (and out of the reach of weather driven problems as well out of the ORV corridors. I am a non-resident property owner whose house is in a rental program -- we have seen a decrease in rentals since the ORV restrictions have gone into effect.

Correspondence: Mike Murray, Superintendent Cape Hatteras National Seashore Recreational Area 1401 National Park Drive Manteo, NC 27954

Dear Superintendent Murray, I am writing you today to make formal comments on the Cape Hatteras National Seashore Recreational Area Off-Road Vehicle Management Plan Draft Environmental Impact Statement, specifically Alternative F, created by the National Park Service with input from the negotiated rulemaking advisory Committee. I wish to thank the National Park Service for an opportunity to comment on the Cape Hatteras National Seashore ORV Management Plan DEIS. As a concerned Hatteras Island citizen and president of the Hatteras Village Civic Association, I feel it is my professional and civic duty to make timely comment on a matter that affects millions of citizens who wish to visit and have access to the Cape Hatteras National Seashore Recreational Area.

Comment 1:

Tourists are the lifeblood of the local economy. They stay at motels and rental houses. They eat at the restaurants and buy food from the grocery stores. They put gas in their vehicles. They support the local shops by getting bait and tackle, bathing suits, surf boards and books. They buy souvenirs, local art and T-Shirts to remember their time here on the islands. During the summer, it was difficult to find a place to stay if you didn't have a reservation and there were always long waits to get into restaurants. For decades, Cape Hatteras National Seashore Recreational Area was immune from recession including the fallout from Sept. 11, 2001. Economic downturns that would cripple the national economy tended to give a boost to the Hatteras economy because people were inclined to go to Hatteras for inexpensive, short-distance vacations.

The Consent Decree has taken a heavy toll on the local economy. Without sensible beach access, there is no reason for tourists to come here. Since 2008, successful businesses that are older than the park itself have started to fail.

The Consent Decree and the resulting soft economy happened months before the nation began suffering from the recession. When the stock market plunged in September 2008, the Hatteras and Ocracoke economies were rebounding because the beaches reopened the month before. Businesses located near closed ramps to the beach struggled while businesses near an open ramp blossomed, even if they were just a few miles apart. Previous bird protection plans, specifically the Interim Protected Species Management Plan, had no effect on the local business.

Alternative F will significantly change the economy and unique culture of the Outer Banks. The DEIS has failed to properly assess those changes. The Economic Impact Analysis found the DEIS by its own admission is incomplete. How can I comment on an incomplete document? The Economic analysis is structured in such a manner that it fails to address full costs?direct costs, indirect costs, lost opportunity costs, costs of future liability, and hidden costs.

The Economic Analysis fails to recognize that the national seashore environment is a unique form of capital that serves the local economy, and in turn the health and well being of citizens and families that depend of that economy. Access to the seashore is essential for family business operations on the Outer Banks. In our family business, vacation rentals, the spring rental season has been decimated by the beach closures brought about by the consent decree. The demographics of the spring guests have been traditionally fishermen and they are unwilling to risk sending money on a vacation when the beach access is so untenable.

The cost to society and the local communities under the restrictive consent decree has now been extended indefinitely into Alternative F. Economic losses in millions of dollars have occurred to island businesses especially motels, campgrounds, restaurants and tackle shops. The full costs of Alternative F are very much understated in the DEIS. Annual economic losses under the consent decree are already in excess of those estimated by Research Triangle Institute.

It is my understanding that the Outer Banks Chamber of Commerce, on behalf of its more than 1,000 members with businesses in Dare, Hyde and Currituck counties, has gone on record as vehemently disagreeing with the validity of the economic impact analysis included in the Draft Environmental Impact Statement for proposed new rules for access to the Cape Hatteras National Seashore.

This group of professional business owners states unequivocally states "Not only does the analysis not adequately convey the economic impact of the proposed Alternative F, it fails to address any of the alternatives listed in the DEIS. The data is incomplete, misleading and the statements of what are supposed to be facts are without sound basis."

Comment 2:

If I understand the document correctly, it would appear as if the DEIS proposes to close the beaches at Hatteras Inlet, both the South Tip of Hatteras Island and the North tip of Ocracoke Island permanently and year-round. Aside from the fact that such a closure would forever alter the traditional uses of these areas, such a closure has already and will impact the public safety of mariners traversing the inlet.

On Saturday, May 1st 2010, a local inshore charter boat from Hatteras Village overturned in Hatteras Inlet. There were 6 occupants of the boat, all family members, 3 children and 3 adults. The captain was a professional charter captain. They spent 4 hours in the water awaiting rescue. They could have been seen from the beach, had it been open but instead had to wait until the offshore charter fleet was returning in late day for any hopes of being rescued. One of the group died as a result.

Comment 3:

It appears as if the preferred alternative prohibits pets in the Seashore during bird breeding season including in front of the villages. This means no pets

in public areas ?beaches, campgrounds, sound front, foot trails, and park maintained roads from March 15 ?July 31. If this is a correct interpretation, we are opposed. We support the previous leash law (all pets must be on a leash 6 feet or less in length).

Regards,
Dennis Robinson President Hatteras Village Civic Association

Correspondence: I have lived year round in Frisco, NC since 2002 and been a frequent visitor to the seashore for several years prior to moving my full time residence here. I have reviewed the DEIS, but I think that The Coalition for Beach Access has a more common sense approach and proposal. Specifically, I disagree with the following points. Economic Impacts: Page 270(Part2of2) and Page 144)Table detailing impacts in Chapter 2) Considering any data for Dare County that includes the northern beaches (Nags Head north to Duck) skews the data. While visitors to those areas, may make day or short overnight trips to Hatteras Island and Ocracoke, the greatest source of our income comes from visitors direct to the island. I think the economic impact will be very adverse if Alternative F is implemented as it is now written. I am a small business owner and I work part time in a retail gallery/gift store. I can speak from personal experience in saying that the restrictions of the the Consent Decree over the past years has tremendously and adversely impacted both my business and what I have observed as an employee. My sales last year were the worst ever and resulted in an overall loss of income. Given that Alternative F provides even more restrictions than the Consent Decree, I have to conclude that the economic effects will be significantly adverse. Pets: Page 187 (Table 8 in Part 1 of 2) I disagree with your recommendation of prohibiting pets in any SMA from Mar 15-July 31(or 2 weeks after all shorebird breeding activity has ceased & all chicks have fledged). This seems excessive. I enjoy going to the beach with pets and most of our friends have dogs that enjoy the beach as well. Pets should be allowed in any area of the seashore that is open to ORVs/Pedestrians as long as they are on a 6 foot leash.

Correspondence: Dear Superintendent Murray,
Please accept this note as my comment on the ORV DEIS before you at this time.
After reviewing the national Park DEIS I must disagree with all the six alternatives.
I believe the Coalition for Beach Access Position Statement by far succeeds in proving the best visitor experience while maintaining the needs of protecting the fragile resources.
Please put people back into the managemnt of Cape Hatteras National Seashore.
Thank you for your consideration.

Correspondence: I disagree with the NPS statement made on page 210 stating the adverse affects of pedestrians and ORVs on the piping plovers. The statement proclaiming that "Even with resource closures in place, protected species are still at risk" in unfounded as there have not been any plover deaths attributed to human or ORV intervention. Not only is this a flawed statement, the DEIS does not include the known period before the consent decree (under the Interim Plan) where no plovers have been killed by pedestrians or ORVs. What has been neglected and erroneously miscalculated are the overall risks to plovers, which are known to be predators and weather events (storms). In order to achieve the greatest return on the effort expended with the least affect on the society and economics of the Island community, the greatest risks should be considered and addressed first with species relocation and predator deterrents.

Correspondence: ? Desirable areas require vehicular access due to their distance from the highway and parking areas.
? Equipment needed for recreating in area of beach accessed cannot be easily carried on foot. (Beach toys, umbrellas, beach chairs, coolers, fishing equipment, water-sports boards, cameras and binoculars
? The principle activity aided by ORV access on these beaches is best described as multiple-use. This concept has developed over many years of public experience without resource conflict. ORV operation provides the flexibility to respond to the rapid weather and ecological changes that occur along these shifting strands of sand. Weather, wind, and waves often dictate where and when a particular recreation will be practiced. The proposal also gives consideration to year-round and seasonal pedestrian use. Seasonal ORV use is contemplated only in non-peak visitation times of the year in front of villages. Year-round pedestrian closures are contemplated where pedestrian visitors can easily access and use beaches free of ORV traffic.
? Visitors with disabilities and families with infants and young children must travel unwalkable distances to enjoy beach activities including swimming in safe areas at tidal pools, on the sound side of inlets and the west side of Cape Point.
? Elderly and health disadvantaged are able to enjoy beach activities they otherwise could not access.

Correspondence: We disagree with all of the proposed alternatives [A through F] put forth in the draft Cape Hatteras National Seashore Off-Road Vehicle Management Plan/Environmental Impact Statement for the primary reasons below. We do agree that the park does need a Off-Road Vehicle Management Plan as set forth by the Presidential Executive Order. We feel very strongly that the Cape Hatteras National Seashore under direction of Superintendent Murray has written a plan that targets the off-road vehicle users of the park by basing the proposed plan on a document [Consent Decree] written by special interest groups. CAHA is a 'national seashore" not a wildlife refuge.
Our comments are not referenced to specific sections/paragraphs or pages of the document because they apply to issues used throughout the draft plan. The size of buffers [bird enclosures] have no known scientific basis. Other National Parks have enclosures for the piping plover of 200 meters but Cape Hatteras National Seashore [CHNS] has established enclosures of 1000 meters.
Do not support establishing enclosures for bird that are not threatened or endangered.
No flexibility within CAHA...nesting areas on the inland side of dunes result in closures on the ocean side of the dunes. Are chicks really going to walk over the dunes?
Allowing formerly open areas of the park to become overgrown with vegetation. This enables predators to approach nesting birds undetected. Areas that

once provided nesting areas are currently not available or attractive to nesting birds thus forcing them to nest in areas closer to the shoreline making them more likely to be damaged/lost to storm/tidal flooding. CAHA statistics show that the vast majority of losses [83%] are caused by mother nature not to humans. Not providing for draining of flooded areas in the park resulting in loss of acreage for wildlife.

Closures from the dune line to the ocean without access corridors yet birds have nested next to Highway 12 with no apparent impact on nesting.

Counting miles of beach open but accessible only by water...this is misleading to the general public.

This is a national "recreational" seashore not a wildlife refuge but actions of the CAHA would lead one to believe otherwise.

It is apparent to us that every year more and more acres of the parks are being closed year round to use by visitors...not all visitors to the park just want to use the ocean beach areas.

In regard to the park area west of the ferry dock...numerous sound access points were lost during past storms but the CAHA has taken no action to reopen or establish access points to the sound.

It is clear to us and many other users of the park that numerous acres of the park are lost each year to administrative actions or inactions...these losses are exclusive of action taken by mother nature!

No mention of provisions afforded individual with disabilities. CAHA has done very little if anything to provide for the disabled over the years. We believe that the American with Disabilities Act should be taken into consideration in all actions taken by the CHNS. You are quick to protect birds not threatened or endangered but what about providing for the disabled?

On the CAHA NPS website in the "Nature and Science" section there is a reference to the piping plover as "endangered" when in fact the bird is "threatened". Statements like this on the official NPS website are misleading to the general public. Just how much more false and misleading information is in documents published by the NPS relating to the situation at hand? We assumed that the credit to "Sidney Maddox" was for the picture of the piping plover and hopefully not the statement that the bird is endangered.

As stated we feel protection of threatened or endangered birds is needed but do no support actions taken to protect birds that are of interest - of interest to whom?

We believe that both humans and birds/animals can use the park jointly but feel that the humans are not getting a fair shake...the park was established as a "National Recreational Seashore" and not a wildlife refuge.

Respectfully, Joel and Elizabeth B. Jorlett

May 11, 2010

Mr. Mike Murray Superintendent Cape Hatteras National Seashore 1401 National Park Drive Manteo, NC 27954

Dear Superintendent Murray:

These comments on the Draft Environmental Impact Statement on the Cape Hatteras National Seashore Off-road Vehicle Management Plan ("DEIS") are submitted by American Bird Conservancy, Ascutney Mountain Audubon Society, Center for Biological Diversity, Conservation International, Delaware Valley Ornithological Club, Delmarva Ornithological Society, Sacharuna Foundation, Salem Audubon Society, Saving Birds Thru Habitat, and Wildlands CPR.

Collectively, these organizations represent approximately 300,000 members and supporters with an interest in protecting America's wildlife heritage and the public lands and natural resources on which they depend.

Cape Hatteras National Seashore ("Seashore") attracts 2.2 million visitors annually to enjoy its beaches, lighthouses, and adjacent coastal waters. The Seashore also provides habitat to many species of wildlife, including some that are federally or state-listed. For example, the Seashore is a nesting ground for threatened piping plovers, threatened green sea turtles and, occasionally, endangered leatherback sea turtles. Loggerhead turtles, which also nest at Cape Hatteras, have been proposed by the U.S. Fish & Wildlife Service to be listed as endangered. In addition, the Seashore provides important nesting or migratory habitats for various species of shorebirds and colonial waterbirds, including the American oystercatcher, least tern, gull-billed tern, and red knot, which itself is a candidate for federal listing under the Endangered Species Act.

Although President Nixon directed all national parks and seashores to develop off-road vehicle ("ORV") management plans in 1972, Cape Hatteras National Seashore remains out of compliance. Over time, the Park Service's lax regulation of vehicles on the beach and inadequate protection of natural resources has contributed to significant documented declines in the nesting wildlife at the Seashore. In 2008, a temporary plan to manage the impact of ORV use was put in place by a consent decree settlement of a lawsuit. Breeding birds and sea turtles have begun to rebound under this temporary management, which has continued to allow ORV use of the beaches consistent with wildlife protection, and overall visitation to the Seashore has increased.

We recommend the National Park Service adopt and implement a final ORV management plan for the Seashore that responds to the following guiding principles and comments on the environmental analysis in the DEIS. We believe these recommended measures are necessary for NPS to meet its legal mandates to conserve and protect the natural resources of the Seashore, leave them unimpaired for future generations, and provide an appropriate balance between continued ORV use and other public uses of the Seashore.

? The final ORV management plan should be based on environmentally-preferred Alternative D in the DEIS, modified to allow increased pedestrian access subject to standard resource closures and a 100-foot wide ORV access corridor to Cape Point and South Point subject to standard resource closures to protect shorebirds and waterbirds once breeding behavior is observed.

? The final EIS should include a true "no action" alternative of no ORV use on Seashore which will provide an appropriate baseline for assessing and evaluating environmental impacts of the action alternatives.

? Management measures to protect wildlife must be based on the best scientific information available which is presented to NPS in the peer-reviewed recommendations and report from the U.S. Geological Survey scientists.

? As recommended by the USGS scientists and the 2008 Loggerhead Sea Turtle Recovery Plan, night driving must be prohibited during the sea turtle nesting season to protect and recover these threatened and endangered species.

? The final plan must provide additional protections to migratory and wintering shorebirds which can be achieved through year round ORV closures of critical areas.

? The final management plan should set species recovery goals for the Seashore based on an analysis of carrying capacity and consistent with recovery plans for threatened and endangered species. These goals should replace artificially low desired future conditions for threatened, state listed, and special status species for the Seashore with higher targets that are consistent with how these species can recover at the Seashore over the short and long term if they were properly managed.

? The preferred ORV management plan provides inadequate areas where ORV use is prohibited year round for use and enjoyment by pedestrians and other visitors. The Park Service's preferred plan would allow continued driving on 52 of 68 miles of the Seashore.

? ORV management should include a permit system with a mandatory education component. In administering permits, the Park Service should also sharply reduce its recommended ORV carrying capacity of 260 vehicles/mile allowed in alternative F, which would result in over 13,500 ORVs being able to use the Seashore beaches at certain times of the year, to a level that will better protect resources and reduce pedestrian/ORV conflicts.

Unregulated beach driving within critical natural resource areas has interfered with nesting success, undermined species recovery, and undermined the visitor experience at the Seashore, in violation of the Endangered Species Act, the Migratory Bird Treaty Act, two Presidential Executive Orders, the Seashore's own Organic Act, and National Park Service regulations. Moreover, Cape Hatteras's policies have long stood in marked contrast to those of other national seashores, including Cape Cod, Fire Island, and Assateague Island, which have final rules or other management plans in place to address ORV use.

We appreciate that the National Park Service at last appears ready to manage ORV use at Cape Hatteras National Seashore. Its preferred alternative, however, falls short of what's legally and biologically required to conserve the Seashore's wildlife and natural resources unimpaired for future generations. We strongly urge the Park Service to adopt as its final ORV management plan the modified Alternative D as described above.

Thank you for your consideration of these comments.

Sincerely,

Correspondence: The Coastal Conservation Association North Carolina wishes to comment on the recently released Draft Environmental Impact Statement on the ORV Management plan for Cape Hatteras National Seashore Recreation Area issued by the National Park Service. The objective of CCA is to conserve, promote and enhance the present and future availability of these coastal resources for the benefit and enjoyment of the general public. As such the thousands of members and volunteers of CCA NC and their nearly three quarters of a million associated recreational anglers are very disappointed in the six options for ORV management on CHNSRA. First of all the document itself is very difficult to follow in its 800+ pages. The tragedy is that none of the six options reflect the wishes of the vast majority of the CHNSRA visiting public and CCA NC. While there are preferred environmental and NPS options, there is no pro-access preferred option. The CHNSRA was established specifically for the American public to enjoy the seashore. To propose no option which provides a maximum access option certainly violates the spirit and perhaps the letter of the laws establishing this national park. Without serving the visiting public, The NPS has failed in its responsibility to our citizens. All the options presented in the DEIS seek to restrict public access well beyond any reasonable or legal requirement. It is clear that significant facts have been ignored in the preparation of this DEIS. The success of turtle nesting and piping plover nesting and fledging is virtually unchanged since the de facto ORV plan was implemented in 1978. The primary causes of failed nesting and fledging are overwhelmingly predation and weather events which have occurred for hundreds of years. ORV caused mortality is a fraction of 1%. The USFWS and NPS personnel have caused more plover mortality. Yet, the NPS chooses to attack those users who are very sensitive to the wildlife in the CHNSRA. The DEIS options all include restrictions which, when implemented as they have been under the consent decree, will unnecessarily close miles and miles of beach access both from the ocean and sound side. The many options describe no action which can circumvent a nesting closure in order to access an open area of the beach. Thus, while a stretch of waterfront may be "open" it is inaccessible. This represents nothing more than verbal trickery and masks the true available waterfront. The specifics of option F, the NPS preferred option, require at least some comment as commenting on all options would extend beyond the available space and time constraints. Overall, the DEIS suggests there would be 52 of 68 miles of the waterfront "open" to ORV access but it is not clear that this includes any calculation of sound side access for ORVs or pedestrians. CCA NC strongly believes the "buffer" or closure areas suggested for piping plovers in various stages of nesting and fledging are beyond excessive. For nesting piping plovers 50 meters is more than adequate and as is 200 meters for unfledged chicks. To suggest that unfledged chicks of a bird that is less than 1 foot tall requires over a mile of seashore is ludicrous! All this with no pass through or corridor around these areas closes vast areas of the CHNSRA to the American public. All other shore birds should be allocated no more than 30m for nesting and 30m for unfledged chicks with pass through corridors as there is no legal requirement to provide excessive buffers. In addition, the NPS fails to recognize the role played by the spoil islands behind Bodie Island, Hatteras Island, Pea Island National Wildlife Refuge and Ocracoke Island in the breeding of shore birds. These areas are typically with a few hundred yards of the CHNSRA and harbor large populations of shore birds. If the NPS truly wants to help the population of piping plovers they should investigate the usage of large cages placed around the nests to keep predators out of the nests. These are used in the Northeast where the major piping plover nesting takes place. The NPS and the USFWS seem content to kill hundreds of other wildlife to try to protect piping plovers but refuse to implement simpler techniques improve shore bird breeding success while improving access as well. Option F describes measures required to "improve turtle breeding success". Many of the restrictions described in option F have little basis in peer reviewed science. For example, there is no evidence that night driving of ORVs has any impact on turtle nesting or hatchling survival. There have been no female turtles killed by ORVs. To protect turtle nests and improve hatchling success, CCA NC recommends relocation of turtle nests when they are laid in areas exposed to weather events. Using the fences used on the Pea Island National Wildlife Refuge that are keyhole shaped are more effective for turtle hatchlings and would allow continued use of ORVs at night. The surf zone of CHNSRA has been used for a hundred years for the purposes of swimming, sunbathing, fishing, birding and shelling. ORV usage is critical to the pursuit of these activities as much of the surf zone would be inaccessible without ORVs. The NPS, throughout the DEIS, seeks only to restrict ORV usage without proposing ways to improve access for ORVs and providing expanded habitat for those species which are threatened or endangered. It seems the NPS has forgotten the CHNSRA was established as a recreation area. Pea Island National Wildlife Sanctuary is for wildlife, yet under the de facto rules in place from 1978, there has been little difference in the successful breeding of piping plovers or endangered sea turtles. CCA NC urges you to revert to those rules put in place in 1978 to provide maximum access for ORVs and the American citizens.

Dear Superintendent Murray,
Please accept this letter as my comment on the ORV DEIS before you at this time.
After reviewing the National Park Service DEIS, I must disagree with any of the six alternatives.
I have, however, reviewed the 77 page Coalition for Beach Access Position Statement signed by several groups that were a part of the negotiated rule making process and it is far superior in furnishing the best visitor experience while maintaining the needs of protecting the fragile resources.
Please consider all aspects of this alternative and put people back into the management of the Cape Hatteras National Seashore.
Sincerely,
Michael and Kim Huff Rodanthe, NC

Manteo, NC 27954
Dear Superintendent Murray,
Please accept this letter as my comment on the ORV DEIS before you at this time.
After reviewing the National Park Service DEIS I must disagree with any of the six alternatives within the document. It is unbelievable that our park be turned into a place where a handful of select people can close our beaches to the thousands of fisherman and vacationers who visit our beaches yearly. I have; however, reviewed the 77 page Coalition for Beach Access Position Statement signed by several groups that were a part of the negotiated rule making process and it by far succeeds in furnishing the best visitor experience while maintaining the needs of protecting the fragile resources. Take the right stand here, tradition means alot to your profession....it means alot to our townspeople and visitors as well.
Please consider all aspects of this alternative and put people back into the management of Cape Hatteras National Seashore.
Respectfully submitted,
Richard and Joy Livingston 46285 Old Lighthouse road, PO Box 542 Buxton, NC 27920

Correspondence: My comments are as follows: 1) Time to respond should be extended. 2) One of the most beautiful places I've shared with my family has been on the points of Ocracoke and Hatteras Island. To close access is denying families the opportunity to observe and learn about nature and all it has to offer. There is more than enough area for the wildlife & families to co-exist. Closing these areas would be detrimental to the economy of Ocracoke & Hatteras as well. 3) I feel the birds, turtles, etc need to be protected, but lets look at real science and smart methods that will provide for all. 4)Consideration to recreational areas needs to be improved. 5) Look elsewhere for proactive techniques to encourage turtle nesting (evidence in other east coast areas is available). 6) Smarter decisions should be made when determining which vegetation is cleared. 7) Relocate turtle nests when storms threaten the nest. 8) Allow pets under control, leashed etc - to prohibit the family friend is not solving any problems. 9) I don't agree with killing predators that put eggs at risk. This measure is beyond what God/Mother Nature and the circle of life present - Man should not interfere. 10) Clearly, the economic impact will be great on these areas with such stringent closures. I alone, had spent between \$5K - \$10K in rentals, spending, fishing permits, etc.....the year - I've spent \$0. I'm just one family of many who aren't coming down again this year. (From 1996 - 2008 - we did not miss a year!)

Correspondence: Dear Sir or Madam,

I disagree strongly with the increased limitations to beach access proposed in the DEIS. The main reason (among many others) is commerce. The economy of the Cape Hatteras National Seashore Recreation Area is based on tourism. If large parts of the beaches are not accessible to our visitors, then the local economy would suffer tremendously. The many miles of open and undeveloped beaches within the Seashore are what give Cape Hatteras its' own unique niche in this "highly competitive for tourist dollars" market. Without beach access by pedestrians and ORVs in the more remote beaches, the economy within the Seashore would suffer. The beaches of Cape Hatteras make up a large part of Dare County's beaches and therefore bring tourist dollars that Dare County could not live without and in turn North Carolina's fiscal status would suffer. Other beaches along the coast have hotels and cottages that line the beach. That scenario is great for tourists that simply want to enjoy the beach with what they can carry by hand. But, the long stretched beaches of Cape Hatteras give an opportunity like no other for fishing, surfing, kayaking, boogie boarding, wind surfing, kite boarding, picnicking, commercial fishing and horseback riding. A majority of visitors to the island come just for these activities. They come back year after year or several times a year, simply because these activities are allowed here and conditions are ideal. The tourists that come here for these activities will always come here (as long as the beaches are open).

Also, why is the keep away distance from nests 1,000 meters? Is that truly necessary, and if so where is the research/data backing that? In addition, your own studies state that human interference has an insignificant impact on nesting survival. Plus, there are already wonderful wild life refuges all over eastern North Carolina. With Pea Island Wild Life Refuge already making up a very large part of the island, how can 1000 meters in the middle of the Cape Hatteras National Seashore Recreation area be justified?

It is important for those against ORV access to know that the ORV use is simply the mode of transportation to get to the site of their favorite recreations. The ORV use is not the recreation. The vast majority of users highly respect the beach and wildlife as well as the 15 mph speed limit. Those who do not, should be penalized accordingly, but not such that it penalizes everyone else.

I lived on wonderful Cape Hatteras Island for 18 years. My ancestors made a good life for themselves here as far back as I can count. I come back often and hope to come back to live eventually ? if the local economy is still intact. I live in Virginia now and have had countless conversation with Virginians who are delighted to tell me all about their favorite recreations at Cape Hatteras. One man at the meat counter at my grocery store said with excitement, "You're from the Cape. I love to go down there whenever I can. It's such a neat place, like no other." He was referring to his joy and amazement of what it was like to fishing of Cape Point. A colleague of mine told me he saves his vacation time all year to spend two weeks in the summer to "fish of Cape Point". He stays at the Tower Circle Motel and he named of all the restaurants where he and his family like to eat. They don't bother stopping at Nags Head to let the kids play put put or shop. All they want to do is get down to the open spaced beaches of Cape Hatteras and spend their days fishing and doing and what we all deserve once in a while ? our favorite recreations. I believe a workable compromise can be made between recreation and wildlife. I am sure you will too!

Dear Superintendent Murray,

Please accept this letter as my comment on the ORV DEIS before you at this time.

After reviewing the National Park Service DEIS I must disagree with any of the six alternatives within the document.

I have; however, reviewed the 77 page Coalition for Beach Access Position Statement signed by several groups that were a part of the negotiated rule making process and it by far succeeds in furnishing the best visitor experience while maintaining the needs of protecting the fragile resources.

Please consider all aspects of this alternative and put people back into the management of Cape Hatteras National Seashore.

Jennie Farrow

Correspondence:

Dear Superintendent Murray, I write this letter to voice my opposition to Option F of the Draft EIS for ORV management at the Cape Hatteras National Seashore. As a scientist, educator, and life-long visitor to Hatteras Island, I am deeply disturbed by the impact the proposed management plan will have on Cape Hatteras for a variety of reasons. My grandparents first traveled to visit the beaches of Cape Hatteras in the 1950's because of the amazing natural beauty, great fishing, and exceptional ORV access to the beaches. Since that time, most of my extended family, along with our friends and their relatives, has traveled hundreds of miles at a shot and spent countless thousands of hours visiting the Recreation Area. The proposed regulations of Option F of the Draft EIS will certainly end almost sixty years of regular trips to Hatteras by an extended group that now includes well over one hundred people. The proposed plan will not only end the experience in Hatteras as we have all known it, but prevent my children and future generations from enjoying the beaches of Hatteras as we have for so many years as responsible stewards of the seashore. The proposed plan will also devastate the economy of Cape Hatteras and provide tremendous hardship for the residents who have always been wonderful hosts and friends to those of us who have traveled from all over the world to enjoy the unique Hatteras experience. If the proposed plan is enacted as law, there is almost no incentive for us to incur the cost and effort to travel from Pennsylvania, Connecticut, Massachusetts, New Jersey, Delaware, Georgia, and so on. In order to keep this letter relatively brief, I will focus my statement of opposition to a handful of points. Excessive buffer size I have completed a relatively extensive literature search in order to find data that substantiates the need for 1000m buffers. I have not found any literature that substantiates the need of 1000m buffers for successful breeding. Even the 200m buffer is probably excessive. The 100m buffers would certainly be the best compromise of wildlife protection and protecting recreational access. The goal of the EIS process is to identify reasonable environmental protection. The 1000m buffers are completely outside the realm of practical and reasonable protection. As an aside, the literature also does not support the implication (by Defenders of Wildlife, SELC, Audubon Society, etc.) that direct human interactions (such as ORV use) are affecting shorebird populations on even remotely the same scale as storms or predation. The buffers will negatively and dramatically affect the human visitor experience with almost no benefit to shorebird populations. Economic impact underestimated. The economic impact identified in the draft EIS greatly underestimates the economic impact the proposed options would have on the villages of Cape Hatteras. The great majority of those of us who travel to Hatteras to fish, surf, shell etc. stay in Avon, Buxton, Frisco and Hatteras Village. Other visitors who are less interested in the outdoor sports aspect of the vacation are content visiting the northern towns on the Outer Banks, which do not require the same amount of ORV access. The proposed options, particularly Option F, will have a dramatically disproportionate affect on the economy of the lower Cape Hatteras Villages that have typically relied on commercial fishing and recreational fishing related tourism. People who visit Duck, Corolla, Kill Devil Hills, and Kitty Hawk could have very similar experiences to what they have now if Option F is enacted. However, those of us who visit the southern towns have had and will have a dramatically different experience than in the past. We cannot justify driving the extra miles and incurring the extra expenses associated with traveling Buxton and Avon if we can't even access the beaches as we have for the fifty years prior to recent changes. The result will be tremendous economic hardship for the residents of lower Dare County. Such extreme impact could be mitigated by not enacting Option F. Corridors The proposed Option F dramatically limits user access to the seashore. A better plan would ensure access for all people through the use of many more ORV corridors than the option would provide. The beaches of

Cape Point, False Point, and Ocracoke South and North Points in particular and the beaches of the Outer Banks in general provide incredibly unique and productive fishing opportunities for shore bound fishermen. The proposed plan would create a situation where anyone who is not of excellent health and fitness has very limited access to the beach. My own two grandfathers, ages 83 and 93, still enjoy some access to the beaches they have loved for so many years. If the proposed plan is enacted, neither of them will be able to traipse over dunes and through deep sand to access the beach, let alone walk the mile to The Point in waders lugging fishing equipment. ORV access in Hatteras is special and should be preserved. Along with that, the last thing any of us would like to see is large areas of impermeable surfaces placed on the beautiful dunes to provide parking. I do not see how anyone, scientist or not, can believe that created parking lots is a better option than low impact beach driving. If areas must be closed to ORV traffic, then a plan must dictate that every effort should be made to create corridors around those areas to provide access to open areas. In closing, I love the Cape Hatteras National Seashore and Recreation Area with all of my heart. The ORV management plan, once enacted, is certainly going to permanently change the way we enjoy the park. I urge you to choose an option that provides the strictest possible protection for human access, while at the same time protecting the shore as a viable area for wildlife use. Option F dramatically shifts the park from an area for humans and wildlife toward a wild life preserve. You have the power to strike a reasonable balance and I speak as a scientist, a fisherman, and an environmentalist when I urge you to please opt for an option that allows us much less restrictive access than that proposed in Option F. The people, who use the park and love the park are the ones who will fight to protect every aspect of it for future generations. Each generation in my family has done so for the last sixty years, and will continue to do so if you take this opportunity to make the correct decision and not implement Option F. Sincerely, Owen Zimmerman MA Ed. Earth Science (Candidate) Penn State University M.S. Environmental Science, University of Newhaven B.S. Biology, Moravian College

Correspondence: Access to the beach is essential to the economy here on the Outer Banks. We are supported by the tourist industry and they will not continue to visit the outer banks and spend their money if they are not allowed access to the beaches. I understand there are environmental concerns but really, who is going to be able to survive here on the outer banks without any tourism. The outer banks has grown to what it is because of the tourist attraction to the beach and yes the preserving nature is part of that, but that has to be some sort of balance. Not eliminating the public and the income to preserve nature that is going to destroy itself due to the lack of human interaction. Tourism finances this area, we have been hit hard by this economy to take away the access to the beautiful beaches is going to be the final straw. I dare say there is not nearly as much income brought to the outer banks by nature as there is by tourism. Find a better alternative!

Correspondence: It's commendable that a plan is in the works. I've enjoyed beach driving in both the Cape Hatteras National Seashore and the Cape Lookout National Seashore for many years, and I hope that can continue. It's important to protect the environment while at the same time allowing for recreational activities, such as beach driving.
Beach recreation is an important part of the economy around Ocracoke and Cape Hatteras. Part of the allure of going to the Outer Banks is being able to drive on the beach. This is especially true in places like Ocracoke where you can't even get to the beach without the aide of an ORV. If that access were taken away or severely limited, people may not go to those places like they do now, which would hurt the local economy.
I'm all for the environment and protecting wildlife. The current crisis with the oil spill along the gulf coast is a reminder of how fragile ecosystems are and how much humans can have an effect. It's important to keep vehicles off the dunes to prevent erosion and out of nesting areas to protect species. At the same time, there's no need to go overboard.
A few weeks ago, I was on Portsmouth Island, part of the Cape Lookout National Seashore. Beach driving is allowed on Portsmouth Island. There were plenty of signs posted to remind drivers to stay on the paths and keep off the dunes, which is important in preventing erosion and protecting the integrity of the barrier islands. There were also large areas that were restricted because of nesting birds or sea turtles. Some of these nesting areas were very wide open and crossing them by vehicle would have made traversing the island much easier. However, I didn't see any birds nesting in that area. While that doesn't mean necessarily mean that birds don't use that area for nesting, it did seem like they had too much area blocked off.
Since protected species are closely monitored by ecologists and wildlife authorities, the nesting patterns are probably well understood and predictable. Instead of closing off large areas of the beach all the time, why not only do it during the times the birds or turtles are nesting? Or maybe have staff

0012617

monitoring nesting activity and directing traffic during those times (this could also create jobs). There's plenty of room for both humans and animals, so I hate to see restrictions made so strict as to prevent humans from enjoying the beach.

I will be interested to see what the final plan will be. Please keep in mind that beach driving is an important part of healthy, recreational activities and crucial to the local economy. It should be kept in place while at the same time instituting level-headed precautions and restrictions to protect the local ecosystem. Through careful compromise, I believe both goals can be achieved. This draft is a good step in that direction.

Mike Murray, Superintendent Cape Hatteras National Seashore Recreational Area 1401 National Park Drive Manteo, NC 27954 Dear Superintendent Murray,
Please accept this letter as our comments on the ORV DEIS before you at this time. My husband and I are both full time residents of Hatteras Island. Like many others who reside here, we first were introduced to the area in 1986 while vacationing here. At that time and annually for the next 12 years our only vacation destination was Hatteras Island where we enjoyed camping (at Frisco Woods Campground), windsurfing, fishing, surfing and beach going, etc. We fell in love with the quiet island way of life (which in many ways was similar to our New Hampshire lifestyle), and in 1998 moved here permanently, purchased a plot of land, built a new house, and now call Frisco, NC home. We are both employed by Midgett Realty (for over 8 years and counting) and solely rely on the tourist-based economy of Hatteras Island for our livelihood. We have a vested interest in protecting the future of Hatteras Island as a whole; our property, our friends, the people who live here, access to the seashore and the beaches, the natural surroundings, wildlife, sea life, and all that makes this island special.
After reviewing the National Park Service DEIS we must disagree with any of the six alternatives within the document. We have, however, reviewed the 77 page Coalition for Beach Access Position Statement signed by several groups that were a part of the negotiated rule making process and it by far succeeds in furnishing the best visitor experience while maintaining the needs of protecting the fragile resources. We believe that a reasonable and realistic approach into the management of CHNSRA will allow adequate protection of wildlife while maintaining a balance and necessary access to our beaches and seashore. As residents we are hosts of this beautiful island and welcome visitors. It has been our belief and experience that together we all share an interest and an obligation in preserving and protecting access to this land and the seashore for our families now. In turn, generations to come will be able to enjoy all that the Cape Hatteras National Seashore Recreational Area has to offer, both now and in the future.
Please consider all aspects of this alternative and put people back into the management of Cape Hatteras National Seashore Recreational Area (CHNSRA).
Thank you for your consideration of this very important issue.
Respectfully, Gordon Thompson and Katherine White

Correspondence: As a life-long citizen of North Carolina, I implore the National Park Service to take every step possible to protect our delicate coastal ecology. If certain people put more thought into the consequences of their personal actions and were more considerate of others, extra protections of the coastal areas might not be necessary. Unfortunately, this is not the case. As it is, every time I go to the beach, I see examples of irresponsible beach goers harming animals and the environment with activities, such as driving into delicate areas and carelessly leaving behind fishing line and other debris. Consequences of these actions are beach erosion, destruction of nesting grounds and other wildlife habitats, injury and death to wildlife as well as degradation of the scenic quality and loss of commercial viability of the coastal regions.
As we become more educated and conscious of the extreme environmental degradation that we are causing, we should be doing more to protect our ecosystems not less. We should think carefully as a society before we make any decision that could lead to irreparable damage. It is better to err on the side of caution than risk destroying one of the quintessential areas that make North Carolina so special. Many say that economic concern outweigh ecological concerns. My response is, without a healthy ecology, there can be no economic stability.

Correspondence: I disagree with the limitations to beach access proposed in the DEIS. The island depends on tourism greatly. If you take away large parts of the beaches, you take away the vitality of the island. The many miles of open and undeveloped beaches within the Seashore are what give Cape Hatteras its own unique niche in the tourism industry over other beaches like Nags Head and Virginia Beach. Without beach access by pedestrians and ORVs in the more remote beaches, the economy within the Seashore would suffer. Surf Fishing, Kite Boarding, Shelling, horseback riding and Commercial Fishing are ideal along these beaches, that's why the tourist are willing to drive so far. Plus, your own studies state that human interference has an insignificant impact on nesting survival. There are already wonderful wild life refuges all over eastern North Carolina. With Pea Island Wild Life Refuge already making up a very large part of the island, how can 1000 meters in the middle of the Cape Hatteras National Seashore Recreation area be justified? Those against ORV access should know that the ORV use is simply the mode of transportation to get to the site of their favorite recreations. The ORV use is not the recreation. Correspondence: My husband and I have visited the Cape Hatteras National Seashore and surrounding area a couple of times on vacation. We find the area very welcoming and beautiful. We particularly enjoy the historical and environmental features. One of our favorite pastimes on vacation (or any time, for that matter) is birdwatching and taking nature hikes. Being from the Midwest, vacations to shore communities present a unique and special experience for us. Unfortunately, the last time we visited the area in question we had to leave and find a different section of beach because of the many off-road vehicles racing up and down the beach, creating noise and an unsafe condition for walking. I love sports and outdoor activities, but I find that the idea of such vehicles on a National Seashore don't seem to mix. In fact, my concept of the purpose of National Parks, Monuments, etc. that are included within the system are areas of significance to be preserved and enjoyed by the current and future generations of Americans. While off-road vehicle owners would be able to enjoy the National Seashore, they would in no way contribute to preserving it. Please keep the Cape Hatteras National Seashore free of the noise, pollution, and destructive ways of off-road vehicles so that the area may be preserved as an ecosystem for future generations to visit and enjoy.
Thank you.

Correspondence: I feel Alternative F restrictions far exceed those under the current Consent Decree and the Interim Management Strategy and are therefore unacceptable as a visitor to the Cape Hatteras National Seashore.
A few points:
This document states on p. 210 'Even with resource closures in place, protected species are still at risk (from pedestrians and ORVs)'. No Piping Plover deaths have been attributed to ORVs. ORV violations continue to decrease as education improves. ORV users take the restrictions seriously, and I for one feel expanding the buffers for violations of the areas is to harsh a penalty unless real intent can be shown. I also urge the NPS to make an effort to investigate any violations to the point where the real culprits can be found and punish that person individually.
NPS ORV usage figures are flawed. ORV counts for Memorial Day 2009 and July 4, 2009 fail to recognize that Bodie Island Spit and Cape Point were closed to ORV access on these dates due to resource protection closures, which naturally led to increased ORV numbers at ramps 4, 43, 44, and 49.
Reference p. 265
NPS Resource Management pedestrian and ORV closure policies address the least significant factor affecting nest survival. Nest failures are predominantly due to non-human events (naturally occurring events), including predation, storm & lunar tides, and nest abandonment.
The DEIS ignores the traditional cultural importance of surf zone access to Outer Banks communities. This failure stands in direct violation of the NPS legal responsibility under Section 106 of the NEPA and NEPA framework as a whole.
The DEIS economic surveys are flawed. Economic analyses do not use data from the first full year of the Consent Decree (2008).
Alternative F, the NPS preferred alternative is attributed to the Advisory Committee. However, the rules, policies and procedures in Alternative F were not reviewed nor approved by the participants within the Reg-Neg process.
I would respectfully recommend that the 'Coalition for Beach Access' position statement be implemented to manage Cape Hatteras National Seashore as it is the only practical system to manage a recreation area, including Cape Hatteras National Seashore, the nation's first.
Sincerely
William Mills

My name is Michael J Kohan. My address is 6524 Rocky Top Dr., Rougemont, NC 27572. My telephone # is 919-732-9272, cell phone is 919-632-2673. E-mail address is m_kohan@hotmail.com. I am 62 years old and have fished in the Cape Hatteras National Recreational Seashore for 37 years. I work, as a Biologist, at the U.S. Environmental Protection Agency, 109 TW Alexander Dr., RTP, NC 27711. My comments are my own and do not reflect the position of the U.S. Environmental Protection Agency on the Off-Road Vehicle Management Plan Environmental Impact Statement (DEIS). I do not agree with any of the six alternative plans described in the DEIS and I do support the Coalition for Beach Access ORV Access Environmental Impact Position Statement. I would like to comment on certain elements in the Alternative F plan that the NPS prefers. Pages 121 -127 describe the buffer closures for piping plovers, American oyster catcher, and colonial waterfowl. I believe the closures proposed are excessive and not based on peer reviewed science. Where is the data that shows that 1000 meters is any more protective than 200 meters? No other Seashore has a 1000 meter buffer. For unfledged piping plover chicks, 200 meters is the standard in other seashores. In all cases ORV access to the surf line should be permitted at all times by establishing a 50 meter corridor starting at the high tide line, if nests are not present within 200 meters. American Oyster Catcher (AMOy) and colonial waterfowl unfledged chicks buffer zones are also very restrictive. A study by Conner et al., Wilson Journal of Ornithology, 2006: 11 8(4) p485-493 states that there is little or no association between ORV traffic and time spent on the nest. Case in point, there has been an AMOY nest on the sound side of Highway 12 between Avon and Buxton. They are not disturbed by all the traffic on Hw12. Again, 200 meters is too restrictive. Thirty meters is a more reasonable buffer. There seems to be an attempt to eliminate ORV access to prime fishing and recreational areas during the prime tourist season. There have been no cases of piping plovers being killed by an ORV in Cape Hatteras National Recreational Seashore. Also, during the consent decree, no increase in fledged chicks has occurred. In fact, there was a decrease in fledged chicks in 2009 compared to 2008. Predators and weather events have a greater effect on successful nesting than ORV's do. In fact, only 3% of nesting failures is "estimated" to be caused by human interference. A more protective stance by the NPS in predator and vegetative management will result in higher nesting successes. If the NPS would till all the vegetation around Cape Point, the piping plovers will have prime forage area and they will nest away from ORV traffic. The argument that the NPS wants nature to take its course does not hold for not managing the vegetation. Predators are destroyed by the hundreds and new parking lots are being proposed in wetlands. The NPS needs to strike a reasonable balance between beach access and preserving the amazing ecology of the Seashore. As an employee of the U.S. EPA, I do want to see all of the birds of the Seashore to thrive. As mentioned above, other measures can accomplish this goal without the draconian measures stated in Alternative F. Pets are also being banned from the CHNRS during nesting season, even on a leash. What evidence exists that leashed dogs in the CHNRS affect the nesting success of any bird? People bring their pets on summer vacations. I am starting to believe that the only threatened species at CHNRS is Homo Sapiens! The DEIS is also concerned that ORV's pose a threat to loggerhead sea turtles. The NPS' own figures over the last 10 years shows only 14 eggs/hatchlings have been destroyed/killed by ORV's out of a potential 94,000 eggs. This does not sound like a huge problem to me. Again, as with the birds, weather events and predators are more destructive to turtle recovery than human interference. Better predator management and relocation of nests will be more beneficial to the turtles than restricting ORV access. Another concern is that the lights of an ORV may cause false crawls. What is the ratio of false crawls to nests on Pea Island. I would imagine the ratio would be about 1: 1, the same as it is on Hatteras Island. Pea Island does not have ORV's. That would debunk that theory. I am opposed to restricting night driving on the Island between May 1 and November 15, because again, there is no peer reviewed evidence that ORV lights disorient Sea turtles and cause false crawls in the CHNRS. I do believe that permits should be issued so that the NPS knows the number of potential ORV users at night during the turtle nesting season. I do believe there needs to be a full beach closure close to hatching times with volunteers watching the nest. The NPS plans to institute a permit system for ORV with some kind of cost associated with it. I am in favor of a permit system including paying for it, if the money remains in CHNRS. The seasonal ORV closures are longer for Frisco, Hatteras Village and Ocracoke as opposed to Avon and the trivillages. Why is this? The visitation rates are very similar. Another problem with the DEIS (pg270-281;561-698) pertains to the socioeconomic analysis of the CHNRS. The region of influence (ROI!) includes essentially all of Dare County, including Duck and Southern Shores. These villages are not impacted economically like the Hatteras villages. ORV access is almost a non issue in the northern cities compared to the Hatteras villages. The ROI should only include the Hatteras villages and a survey of the businesses should have happened during the 2009 season, the first full year of closure. Many visitors were unaware or did not fully understand the amount of closures caused by the consent decree in 2008. Only model surveys and not actual business surveys were done. Also, I understand that Research Triangle Institute is doing an economic impact study, but their results will not be ready by May 11. The small businesses are hurting on Hatteras Island and if the DEIS becomes law, many will close their doors. The cultural and historical values of surf zone access to the Outer Banks has been almost completely ignored by the DEIS. Only 2 paragraphs are dedicated to the analysis of cultural resource issues. The DEIS, as defined by the National Environmental Policy Act (NEP A), is required to protect and preserve natural and cultural resources in the federal decision making process. The DEIS (pg15, 18, 83, 259, and 260) describes various ORV activities that are historical and cultural in nature. Look at the cover page of the DEIS document! Why does the NPS essentially ignore it's responsibility as spelled out in NEPA and refuses to acknowledge the long historical and cultural values of surf zone access on the Outer Banks. Finally, I would like to end my comments with a few questions. Why was Alternative F attributed to the advisory committee? The majority of people on the committee did not review or approve Alternative F. Why is there not a round-the-clock NPS presence to deter vandalism? The CHNRS visitors should not be punished by expanding buffers because NPS does not patrol the buffers day and night. Signed by: Michael J. Kohan

Correspondence: I agree with the NPS Guidelines which state, "A traditional Cultural Property designation can and should be based on patterns of land use that reflect cultural traditions valued by the long term residents of the local community."
Being a long time visitor to Hatteras Island, this weekend I was saddened to see the the possible break in a long ago formed community - those whose relatives gave their land to the NPS with the hope that their families would continue to enjoy living in the Cape Hatteras National Seashore Recreational Area.
I disagree with the restrictive closure of the beach areas. My family is very supportive of protecting wildlife, but wildlife adjusts to living patterns when there are thousands of acres available to them. I hope that you will consider that human interference has an insignificant impact on survival of the birds in such an expanse of land.

Correspondence: Dear Superintendent Murray,
As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.
1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."
2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason. "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness..."

Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.

3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals. Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.
Sincerely, Alexandra Gawreliuk

Correspondence: To Whom It May Concern: As a Veteran with 24 years of service with the United States Navy, I have demonstrated my desire to help keep the United States a free nation, indivisible, with liberty for all. As a child of an immigrant, I realize the vast opportunities afforded me by and in this nation. My husband and I have been residents of Avon for 5 years, moving her to enjoy all of the treasures of Cape Hatteras National Seashore. Unfortunately, our access to many of our favorite points of the seashore has been limited by the Consent Decree now in force. For the future, I fear that the enactment of Alternative F of the DEIS will further destroy our ability to even look at many areas of the seashore. I am capable of walking from proposed entry sties to the actual seashore, but everyone is not. I have a 90 year old mother who visits yearly and a sister who is disabled by Multiple Sclerosis who also is a frequent visitor. Neither of them can walk on the uneven sand surfaces of the beach without difficulty. Many local residents, as well as visitors, are elderly and or disabled Many young disabled war veterans now come to the National Seashore to quiet their minds; should they not be allowed to eEnjoy the seashore as they desire? Alternative F of the DEIS attempts to allow the disabled access to the beach: "Accessibility for the Disabled The Seashore would provide access to disabled visitors as follows: ? Beach access points and boardwalks compliant with the Americans with Disabilities Act Requirements would be provided at Coquina Beach, the Frisco Boathouse, the Ocracoke PonyPen, and the Ocracoke day use area ? Beach access would be provided through the issuance of special use permits for areas in front ofthe villages to allow ORVs to transport disabled visitors to the beach and then return the vehicl eback to the street. ? Beach wheelchairs could be checked out at each District on a first-come, first-served basis." The Americans with Disabilities Act actually states that "Physical and mental disabilities in no way diminish a person's right to fully participate in all aspects of society, but that people with physical or mental disabilities are frequently precluded from doing so because of prejudice, antiquated attitudes, or the failure to remove societal and institutional barriers I believe alternative F of the DEIS would preclude the disabled and the elderly from fully participating in enjoyment of the national seashore. Institutional barriers, as stated in the above paragraph "Accessibility for the Disabled", will be created by only having certain beach access points and boardwalks actually available for the disabled. Many disabled visitors would be unable to use the beach access in front of the villages, as they may be the driver of the vehicle and unable to return the vehicle to the street. Beach wheelchairs are very difficult to push and are very expensive to purchase. I doubt each District will have many wheelchairs; there is only one now at the CHNS. In addition, an elderly person would be unable to push their disabled partners over the sand. As a healthy adult, I have difficulty pushing the beach wheelchair in the sand. All American citizens and foreign visitors should be allowed to take part of liberties offered by the freedom of open beaches. The DEIS severely lessens the chance that a non-disabled person can enjoy the beach. The disabled will become shut-ins as they are shunned from the beach. Respectfully, Jane Vercruyse CDR, UNN, Ret

Correspondence: Dear Superintendent Murray,
As a member of the National Parks Conservation Association and as a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.
1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."
2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... the said area shall be permanently reserved as a primitive wilderness..."
Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.
3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.
Protecting wildlife and visitors from OVR use is especially important to me, not only because I value the lives of the wildlife inhabitants that so badly need the opportunity for unobstructed living in their natural habitat, as well as the fragile ecosystem which can be altered irrevocably by misuse, but because I also believe that the safety of people visiting the parks should be considered.
My great-grandmother was run over some years ago by a vehicle while she was strolling on a beach at sunset. She was enjoying the beauty of nature, and supposedly so were the people in the vehicle - but at what cost? A life was lost and a family changed because rules were not in place at that time to protect the innocent pedestrians enjoying the beach/park in quiet. Although the vehicle in this situation was not an OVR, but a car which was then allowed to drive on the actual beach with the rest of the public, I think that the damage OVR's make - on the landscape, to the land itself, and in the noise they create, and in the physical danger to wildlife and people they pose, should NOT be overlooked. The "rights" of OVR users should not come before the rights of others.
Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.
Sincerely,
Rosemary DeSena

 Dear Superintendent Murray,
 Please accept this letter as my comment on the ORV DEIS before you at this time.
 After reviewing the National Park Service DEIS I must disagree with any of the six alternatives within the document.
 I have; however, reviewed the 77 page Coalition for Beach Access Position Statement signed by several groups that were a part of the negotiated rule making process and it by far succeeds in furnishing the best visitor experience while maintaining the needs of protecting the fragile resources.
 Please consider all aspects of this alternative and put people back into the management of Cape Hatteras National Seashore.

Correspondence: On April 27, 2010, my husband and I attended the DEIS meeting held at the Wright Brothers Memorial. Superintendent Murray, I know you haven't been here that long, but I was impressed that you seemed genuinely interested in what the local residents had to say by taking notes.
 The OBX is a unique and wonderful barrier island. That is why I support the Coalition for Beach Access Position Statement and that is the one that should be used because it was written by people that work and live here that really care about the access to the beaches for all people and the future of the residents.
 I disagree with using resources from FL, GA, TX, MI, MA, and other states and countries on how to manage our beaches. Their beaches are probably different from our beaches and environment. I also disagree (page 533, ex of the University of Idaho) with people that don't live here or work here to have an input on how to manage our beaches.
 I agree with the Visitor Centers having information on the closures. A couple of weeks ago, we stopped at the center in Whalebone Junction and the volunteer there didn't know anything about the closures or even what the DEIS was. The DEIS statement on line you couldn't read the charts. When I showed my co-workers the DEIS hard copy they all said "You got to be kidding." That is why I disagree with the 60 day comment period. I am still reading it and will not be finished with it by the May 11 deadline. I have to take exception with the socioeconomic resources, page 270-289, where you include Duck, Southern Shores, Kitty Hawk, Manteo, because they are not part of the Cape Hatteras National Seashore Recreational Area. However, if you are going to include them, then you should take into consideration, that beach driving is prohibited year round at Duck, Southern Shores and Kitty Hawk. Those people that want to experience the beach without vehicles should go there , plus they can go to Coquina up to Ramp 2; South Side of the Oregon Inlet bridge and walk the jetties; plus Pea Island.
 I disagree with the buffers as they seem excessive. The 1000m buffer for the migratory Piping Plover, which is not endangered, is absurd. I also read where the ghost crabs are capable of destroying the piping plover eggs, but at the same time it is mention that ORV's are destroying the ghost crabs. Aren't you destroying the coyote and foxes to protect the plover? I really feel that you should check out the dredge and spoil islands to see how many birds are there and since you are using resources from other states, might want to check out Portsmouth Island, even though it isn't in the CHNS jurisdiction.
 I do take exception to the Alternatives, especially Alternative F. I take exception that would limit the number of vehicles on the beaches. What happens when a group of friends want to fish together or there is a family reunion, like we witnessed a couple of weeks ago, and you have the rules of one vehicle per twenty feet. I do take exception to the millions of dollars that it will cost to implement any of the alternatives in these hard economic times, especially on Hatteras Island.
 ORV drivers have only certain areas where they can drive, unlike the pedestrians where they have more options. On page 263, in 1978 there were 28 ramps, now we are down to 17. With the beach closures due to the consent decree and beach closings for the birds and turtles, high tides, we are very limited where we can actually drive. As stated in the brochure "Driving at CHNS- The use of off-road vehicles (ORV's) is a traditional way for visitors to enjoy the Seashore's ocean beaches and sound side waters. But if any of your alternatives are implemented, then there will be no more tradition and the ORV's will be the threatened species.
 P. S. I am wondering if anyone has tried to raise the threatened birds in captivity and try growing the amaranth in a green house.

Correspondence: I am 33 years old and have been visiting Hatteras multiple times a year for my entire life. I just cannot imagine not being able to go on the beaches. My father and my brother both live in Hatteras Village and run charter boat companies. My husband and I have a home that we rent in Waves. The beach closures will devastate the local economy on Hatteras Island. People come to this place because it is so natural and so accessible. They come to explore and be close to nature. Everyone who comes to the Outerbanks appreciates the wildlife and respects it, but the Piping Plover will survive and will thrive despite people on the beaches and driving on the beaches. I implore you to stop the closure of the beaches and not to restrict access.
Sincerely, Elizabeth Smith

Correspondence: Dear Mr. Murray,

I disagree with a number of the rules restricting access, for whatever reason, to the various beaches running in front of residential houses. Specific discussion of the issues are indicated below. But first let me say that I'm coming at this for strictly economic reasons. I own a house in Rodanthe. I upgraded it several years ago by adding a pool and hot tub deck area. Four years ago it was valued at \$650,000. The last estimated value, several weeks ago, was \$365,000. And that was stretching it. I'm hanging on by my finger nails trying to pay down a mortgage of \$327,000 and not just abandon the property. To say the least anything that restricts the use of the beach in front of my property or any vacation rental property will directly effect the rental income. In effect if you can't use the beach in front of the houses people will not vacation in the Outer Banks of NC. I request that the plan be amended to add the following: 1. P121-127 ... piping plover unfledged chick brood require closure of beach unless it extends in front of area around beach houses. 2. P121-127 ... American Oystercatcher nest ... amended to read unless it extends in front of area around beach houses .. 3. P136 ... Allow dogs on leashes in areas around beach houses. 4. P97-101... Allow more areas for ORV to access beaches to fish. I'm not saying allow total ORV access beaches. But I think the amount of area now considered is too large. 5. P97-101... Again on the areas where ORV are allowed don't restrict times of day/night for beach access/fishing. Some of the best times to fish are in the early morning and late at night. 6. P121 Allow for pedestrian access at all times to beaches in front of beach houses. I appreciate your taking into consideration my request for changes. I think some of the proposed changes are OK and needed. However don't hinder the visitors/renters from use of a great vacation spot.
Albert A. Cutino, 23101 Meadow Mist Rd, Clarksburg, MD 20872 Cell phone 301-706-3661.

Correspondence: I am a long-time semi-resident of Hatteras Island. I am a nature lover and an avid volunteer at my local state park. I agree that off-road vehicles should be managed on Hatteras Island. As a "sensible driver," I am willing to make sacrifices for other, not-so-sensible drivers. I disagree with the severity of the proposed policy toward ORV and pedestrians. Birds, signs, ropes, etc. are much more visible to pedestrians and can be avoided more easily than in 4x4. 1000 meter restrictions for pedestrians are a tough restriction. Likewise, I disagree with barring pets from the beaches. I understand the nature of dogs to chase birds, but restricting them from all beaches, even leashed, is a very strict policy and sets a very harsh, unfriendly tone to say the least. I disagree with these points and ask why, after so many years of neglecting the situation, does the National Park Service not look within its total areas of management (it's overgrown marshlands) and rather go for extreme conditions on its beaches, effecting every single walk of life on Hatteras Island? I own a home that I do NOT rent to tourists. I do rent my home, but to year-round residents. They rely on tourism to make a living. If the policy is enforced as-is, there will be a severe negative economic effect on Hatteras Island and beyond.
I implore you to be more flexible when it comes time to set this policy. Barring visitors to a park was not the original intention of the founding of such a system. The parks exist for the people. I also ask the National Park Service to better use its total resources. The woods are overgrown, the marshlands neglected. Remember, the Cape Hatteras National Seashore is more than its sandy beaches.

Correspondence: I disagree with the DEIS as it does not achieve the primary goal as stated in the very first paragraph. The goal as stated: "to protect and preserve natural and cultural resources and natural processes, to provide a variety of visitor use experiences" has grossly been under emphasized and as compared to the 800 pages of background information related to wildlife, only a scant number of paragraphs are dedicated to the socioeconomic impacts of the extreme access restrictions and closures proposed. Not only have the level of closures (visitor, pedestrian and ORV) never been felt by this historic community, baselines and metrics with substantial proven data points are not available to fully quantify the devastating effects on the towns as well as the revenues to the county should the proposed closures be imposed. It is obvious even without the proper numbers and evaluations done, that the unique nature of the recreational, tourists, sporting, and fishing nature of this island would be significantly changed for the worse. As the NPS states that "A landscape can also constitute Traditional Cultural Property if it is a location where a community has traditionally carried out economic or other cultural practices important in maintaining its historic identity" should warrant a full and complete economic assessment. The historic and cultural impacts to the Island must also be a high priority if the NPS guideline above is to be complied with.

Correspondence: I disagree with limited access to any beach on the Outer Banks. The argument is that we need to preserve these beaches for our children. But without access to the beach we are not preserving the beach we are archiving it. "Look children we made sure this lovely beach will always be here for you. Great Mommy, let's go there. Oh, honey we can't go there! At one time you could, you could drive on the beaches, ride horses on it, fish, walk the beach, watch the sunrise and at night because there were no big buildings with bright lights you could see billions of the amazing stars just hanging over the ocean. It was just beautiful. So beautiful we wanted to preserve it for you, but you can't go there. You are not allowed on the beach anymore". Think about this, if limiting beach access continues unchecked, at some point, our children could only be able to see the Outer Banks in e-books and on the Discovery channel. And at that point, 50 years from now, never having experienced the very thing we are trying to preserve for them, why will people continue to care about these beaches. Will they clean up an oil spill, will they work hard to save an animal or plant they have never seen? Children are much more likely to want to save a bird after taking a walk on the beach with the sand pipers leading the way or watching a pelican dive for his dinner. We must trust that we have raised our children to respect and cherish the beaches we love. We can only do this by sharing the beach with them, by showing them why we love it, some children will never hear the sound of the ocean, just the sound of their iPods. We need to work to protect the beach from the one percent who would not respect her beauty and still leave it available for the ninety-nine percent who will cherish her. Another issue is the breeding grounds of the wild birds. I have read statements that say if the proposed restrictions are to take place, and certain shorebirds were to nest near your home that your access to the beach will be limited even if the ocean is essentially your back yard. I suspect that the restrictions even limit the distance a person can be from the breeding site. I understand the intent behind this proposal, but my fear is that is that these proposed regulations will have unintended consequences. How many home owners, with beach access or otherwise, will allow a nest to remain undisturbed if it means that the bird can keep them from their home? You may have just put a bulls-eye on the very wildlife you are seeking to protect. Again, I agree, we must protect our wildlife, but rushing out and pushing through wide sweeping changes that are so long and complicated that the summary is 77 pages long, only create fear and resentment among the very residents and visitors who you need as supporters. Again I urge you to consider all of the ramifications of your proposals and give us time to find away to protect our beaches without archiving them. Do not limit beach access. Respectfully, Gina L. Stevenson Pennsville, NJ Rodanthe, NC

Correspondence: These are my comments relating to the Cape Hatteras National Recreational Seashore DEIS. "The Interim Management Plan had adequate protective measures while allowing ORV and pedestrian access. It also had public input. The judicially imposed Consent Decree had none." First let me be totally up front in my views, I am totally against what Audubon and DOW are trying to force on us. Having said that I will try my best based on the "assessment". As for the Pedestrian/ORV Routes: I disagree with the Alternative F restrictions. They far exceed what would and could be more acceptable alternatives. Specifically those set forth by the Coalition FOR Beach Access. Closures Due to Birds: I disagree with the restrictive measures presented by the NPS. Pedestrians and ORV's should have thru access available to them at all times. I agree that PP unfledged chick buffers should move with the brood as it relocates, not expanded. Large, Inflexible Buffers are not acceptable! Why does NPS not consider neighboring areas that are more conducive to the breeding and survival of these birds? Mr. Walker Golder of Audubon has stated that we (CHNRS) "don't have what the birds need." "USF&WL describe the primary constituent elements for the birds as crusted tidal mud flats where they can forage and feed. Most of CHNRS beaches are dry baron sand with vegetated dune lines that they don't prefer to nest in because of predation." Closures Due to Turtles: I do not agree with NPS's excessive restrictions. A more acceptable closure is presented by the coalition. (Closure to surf line from I hour before sunset until dawn.) Instead of around the clock closures. The frequency of human involvement resulting in nesting female deaths and/or hatching disruption or mortality has not occurred. Cultural/Historical Values: The very purpose of the DEIS as set forth by NEP A "is to protect and preserve natural and cultural resource in the federal decision making process." Why are the cultural aspects being downgraded to only two paragraphs of analysis? Shameful if not downright deceitful Socioeconomic Analysis: (pg270-281; 561 -698) I disagree with the ROI analysis used in this DEIS. The analysis used is totally irrelevant to our specific area. Certain areas such as the Northern Beach communities and Fort Raleigh National Historic Sight as well as the Wright Brothers National Memorial need to be factored out. "Economic analysis predicated on assumption of access is fundamentally flawed." Pet/Horse Restrictions: I agree with the Coalitions position of allowing pets on at least a 6-foot leash year-round in all areas open to access. Predator Management: I do not agree with NPS' s current policy of selective species eradication. - The 100+ nutria that were killed are mainly vegetarians. Why select this species? - A favorite food of the 250+ raccoons killed is ghost crabs. (Which is a bigger threat to PP chicks than any human or ORV.) Why select this species? C" A park in Florida had raccoons eliminated to protect turtle eggs. The ghost crab population exploded and they ate the eggs." Night Driving: I do not agree with banning night driving. It is more of a deterrent to predators than eliminating certain species. Thank you for your time. And hope that I have made some feasible comments. Sincerely,
Sheri Folb 47937 Buxton Back Rd Buxton NC 27920

Correspondence: Dear Superintendent Murray,
I am an attorney with the Southern Environmental Law Center but I submit these comments as a North Carolina resident and a nature enthusiast. The outer banks are beautiful. They are not a highway.
When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness..."
There are plenty of places to drive machines that have not been reserved as primitive wilderness areas. The DEIS is disappointing. Please do a better job of protecting the public's resources when you issue the FEIS.
Sincerely, Thomas Gremillion

Submitted via PEPC Web site and U.S. Mail
Mike Murray, Superintendent Cape Hatteras National Seashore 1401 National Park Drive Manteo NC 27954
Dear Superintendent Murray:
On behalf of Disability Rights North Carolina, we write to provide comments regarding the National Park Service (NPS) Notice of Availability of a Draft Environmental Impact Statement for the Cape Hatteras National Seashore (Seashore) Off-Road Vehicle (ORV) Management Plan (Plan) published in the Federal Register Vol. 75, No. 43, March 5, 2010.
Disability Rights North Carolina (DRNC) is North Carolina's federally mandated Protection and Advocacy (P&A) System for individuals with disabilities. Among other activities, DRNC advocates for the accessibility of government programs and services to ensure individuals with disabilities

enjoy equal opportunities in the community.

DRNC was pleased to see accessibility described on page viii of the Plan as an element common to all alternatives analyzed in the document. We offer the following comments in the hope of improving upon NPS's commitment to accessibility.

1. Page viii: Beach access points and boardwalks compliant with the Americans with Disabilities Act requirements would be provided at Coquina Beach, the Frisco Boathouse, the Ocracoke Pony Pen, and the Ocracoke day use area.

DRNC encourages the National Park Service to ensure that providing ADA-compliant access points and boardwalks at only four (4) sites does not diminish overall accessibility of the Seashore. 2. Page viii: Beach access would be provided through the issuance of special use permits for areas in front of the villages to allow ORVs to transport visitors with disabilities to the beach and then return the vehicle back to the street.

While DRNC appreciates NPS's effort to accommodate visitors with disabilities via these special use permits, the scheme as proposed does not accommodate visitors with disabilities who are visiting the Seashore alone. The Plan proposes that the special use permit be used "to transport [individuals with mobility impairments] to join their family or friends on an open beach that is otherwise closed to ORV." (Page 540) This necessarily excludes individuals with mobility impairments who are able to operate their own vehicle and choose to visit the Seashore without friends or family. 3. Page viii: Beach wheelchairs could be checked out at each District on a first-come, first-served basis.

DRNC applauds the inclusion of beach wheelchairs in each of the Plan's alternatives. We hope the availability of the wheelchairs will be highly publicized and that the use of the wheelchairs will be monitored to ensure they are available for all who require them. 4. In various places, the Plan mentions restricting "pets" at certain times of the year, and in fact Alternatives D, E and F prohibit "pets" in species management areas year-round. (See, e.g., page 546) DRNC would like to highlight for NPS that Seashore visitors with disabilities may be accompanied by a trained service animal necessary for the visitor's use and enjoyment of the Seashore. A working service animal should not be considered a pet and therefore should be exempt from any such restrictions. NPS should train Seashore personnel on the use of and inquiry into the use of service animals, including training about the various uses of service animals. Service animals include not just guide dogs for people with visual impairments, but also include animals trained to assist individuals with mobility and balance impairments, seizure disorders, and hearing impairments, among others. NPS may also wish to devise a policy for granting requested reasonable accommodations to this "no pets" prohibition for individuals with disabilities who use service animals. A trained service animal of course poses little risk to the wildlife the Plan seeks to protect. 5. Several of the Plan's alternatives note the potential for a beach shuttle service. (See, e.g., page 540)

NPS should ensure any such shuttle service can accommodate riders with disabilities.

If you have any questions or comments, please feel free to contact Annaliese Dolph, Director of Public Policy, at 919-856-2195. Thank you for the opportunity to comment on the Plan.

Sincerely,

Annaliese Dolph Adrienne Allison Director of Public Policy Staff Attorney

Correspondence:	My wife and I are residents of Elizabeth City and owners of a vacation rental house in Waes, NC on Hatteras Island. Completion of the ORV Management Plan/EIS and final implementation is important. We are commenting today to express our concern that the options contained in the latest proposals for the management plan seem to again take too much away from vacationers and thus, by default, too much away from businesses and rental property owners whose income relies on vacationers. NPS needs to define options that are more reasonable in terms of the periods of ORV closures and restrictions. NPS also needs to take a more reasonable approach to restrictions on presence of pets in park, beach and other areas used by vacationers. Protection of the at risk animals (turtles and shore birds) and beach and dunes is important, but the severe restrictions being recommended are unreasonable. Vidal and Georgene Falcon

Correspondence:	The closures seem to have lumped all beach access under a single term called "ORV Access". While I may not agree with closing the beaches to ORV access, I understand that there may be a need that should be driven by science. Since I am not an expert I have to hope that the politics of closing the beaches to ORV traffic is done fairly and for the right reasons. My comment today is how the closures to ORV access also impacts pedestrian traffic on the beaches. The 2 groups of people are different categories and should be treated differently. I understand the need for protecting the environment, I just think we need to treat pedestrians access differently than ORV access.

Correspondence:	I completely disagree with NPS's DEIS. This document is more restrictive than the consent decree, which is also totally unacceptable!! On page 210 of the DEIS, NPS claims that "protected species are still at risk" from pedestrians and ORV's. When in fact NPS has no proof of deaths of piping plovers by pedestrian or ORV's And the only death attributed to humans, on a shorebird, was the death of an oyster catcher chick by NPS resource management and biologists while attempting to tag a chick!! The unsuccessful fledge rate of shorebirds on Hatteras Island is due to predation and weather and has nothing to do with pedestrians or ORV's Closures due to Birds: NPS's closures are excessive!! 1000 meter closures for unfledged chicks is approx. 771 sq. miles for 1 or 2 piping plover chicks. Large overly excessive closures for nesting and unfledged shorebirds that are not on the endangered species list are also unacceptable. The science used to come up with these closure sizes is not peer reviewed. Socioeconomic Impact on the 8 villages located in Cape Hatteras National Recreational Seashore: The Economic Impact of the DEIS on our villages has not been looked at by the NPS. NPS has used Dare County as their model and this does not nor will it ever give a clear account of the effects that the DEIS will have on Hatteras Island villages. The DEIS is 800+ pages of misinformation, biased and non-peer reviewed science with only 2 paragraphs on the socioeconomic Impact on the Villages in CHNRS. This document is NOT acceptable!! Sincerely, Frank Folb Jr PO Box 940 Buxton, NC 27920 252-995-4153

Correspondence:	Greetings to all. I attended the DEIS session in Kitty Hawk at the Wright Brothers Pavilion on April 27th 2010. I was so moved by the true American Democratic Process in the works. For two hours we listened to speaker after speaker talk from the heart about their love and commitment to the people, the nature and the beaches, of the Outer Banks most notably Hatteras National Seashore. The speakers were both eloquent with their delivery and knowledgeable with their content. They justified-with data ~ science -and pure-emotion the essence of their concerns. I was moved to tears during some of the deliveries. We listened to fishermen, surfers, residents, business owners and politicians express their feelings. The one message that came thru the						

loudest over and over again was the need to consider the environmental and economical impact on We the people, on the lives of American Citizens and their way of life. Little by little Government is witting away at what makes this country great as we eliminate one industry after another and sacrifice our Independence. Hatteras Seashore has revenue generating industries that should not be sacrificed at this time or ever. They have tourism and a fishing industry that is hard to rival. Yet the National Park Service run by the Federal Government is up for yet another power grab. Statistics show that relocation of nests for endangered birds and turtles are by far the best alternative especially in the Outer Banks Environment where severe storms are the biggest threat to both wildlife and humans. Why is it that I feel raped by our government once again in a deal that is unequivocally dirty to the core? We are literally destroying our economy piece by piece thru unprecedented spending and taxation with no regard to maintaining the means that generate income, not only for the individual but for the country. If the National Park Service continues to pursue the path of blocking beach access and use by the local people and tourists, that love and support the area, I can only conclude that their motives are insensitive and foolish. One would be hard pressed to understand how they are able to sleep at night knowing that they have been responsible for destroying the deeply rooted, historic, beautiful and amazing culture of the Outer Banks of North Carolina. Sincerely, S. Dineen

Correspondence: My family has visited the following major national parks: Everglades, Great Smoky Mountains, Grand Canyon, Zion, Monument Valley, Yellowstone, Grand Tetons and Glacier along with many minor parks, preserves, etc. We did not just drive by these parks; we spent days exploring them. Never have we witnessed the draconian measures that have been forced on the visitors to the Cape Hatteras National Seashore and that are being proposed now. The measures proposed are a threat to the original intent when this area was designated and a threat to the mission of the national park system. Cape Hatteras National Seashore was designated as a recreational area, not as a wildlife refuge. Pea Island National Wildlife Refuge (with 5,834 acres land and 25,700 acres water) was established at approximately the same time for that purpose. Alligator River National Wildlife Refuge 154,000 acres. When combined with our other area wildlife refuges such as Mattamuskeet, our area has more acreage dedicated to preservation of wildlife than to people. "When we look up and down the ocean fronts of America, we find that everywhere they are passing behind the fences of private ownership. The people can no longer get to the ocean. When we have reached the point that a nation of 125 million people cannot set foot upon the thousands of miles of beaches that border the Atlantic and Pacific Oceans, except by permission of those who monopolize the ocean front, then I say it is the prerogative and the duty of the Federal and State Governments to step in and acquire, not a swimming beach here and there, but solid blocks of ocean front hundreds of miles in length. Call this ocean front a national park, or a national seashore, or a state park or anything you please? I say that the people have a right to a fair share of it." Secretary of the Interior Harold Ickes, 1938
 Would he have ever believed that our own federal government and special interest groups would be the ones stopping citizens from stepping foot on our beaches? Educate yes. Issue permits for beach driving yes. Reduce access NO.

Correspondence: My comments concern the DEIS of Off-Road Vehicle Management Plan prepared by the National Park Service (NPS) for the Cape Hatteras National Seashore Recreation Area.
 1) Page xxiv: I question the DEIS statement that "Carrying capacity would be a peak use limit" determined for all areas based on the linear feet of beachfront..." If large sections of beach are closed, visitors will migrate to smaller remaining areas. Thus the resource could potentially be more greatly impaired and the visitor experience diminished.
 2)Page xix and page 23: I disagree with having different closures for north-facing beaches and south-facing beaches as described on the grid outlined in Alternative "F". I also disagree with the NS proposal to close the beaches in Frisco, Hatteras, and Ocracoke Villages to ORV access longer than the traditional May15 to September 15 period for the Northern beaches, even though seasonal visitor statistics are similar for all Villages. Please maintain the May 15 to September 15 dates.
 3)Page 1: I agree with the statement that "ORVs have long served as a primary form of access for many portions of the beach in the seashore, and continue to be the most practical means of access and parking for many visitors." However, if areas are designated as pedestrian only areas, people with handicaps such as aging or physical impairments, will not be able to engage in activities requiring equipment like boggy boards, beach umbrellas, beach chairs, coolers, fishing rods and tackle, etc.
 4)Page 1: I disagree with the way the DEIS addresses cultural resource issues. I do not feel the DEIS properly addresses the cultural resource issues. The purpose as set forth in the DEIS is to protect and preserve the natural and cultural resources, yet only Two Paragraphs in the 810 Page Document are devoted to analysis of the cultural issues.
 5)Page 53: I disagree with the concept of the special use guidelines. It would be impractical and would require twice the beach driving to transport a handicapped person to the beach, return to a parking area, walk back onto the beach, then when ready to leave , walk back out to the parking lot, drive in, pick up the handicapped person, and drive back out. This is not to mention, if an emergency occurs while the transport vehicle is in the parking area with no immediate access to it, the handicapped person may be in jeopardy.
 6)Pages 97-101: I strongly disagree with the proposal to prohibit ORV year round between ramps 27 and 30 at Hatteras inlet(Hatteras Spit) , Ocracoke Inlet(North Ocracoke Spit) and various other locations. Not permitting ORV access to the areas virtually denies public access to these areas since it is miles to the nearest parking area or road and too far to access by foot.
 7)Page 104: I disagree with the proposed prohibition of nighttime driving from May 1 to November 15 forcing visitors off the beaches early preventing early morning fishing. A more moderate schedule of an hour before sunset and an hour before sunrise would be more appropriate.
 8)Page 121: I disagree with the proposal to close beaches, including pedestrians, from March 15 to July 31 at eight locations which have traditionally been available. Please, at least, leave these open for beach walkers, shell pickers, and those who want access to these beaches.
 9)Page 124: I disagree with the NPS proposals that over protect the resource at the expense of the public right to access the beaches. A proactive role to include vegetation management, habitat management, predator management, etc. should be activated. Opportunities to implement less restrictive closures should be considered more frequently than every 5 years.
 10)Pages 121-127: I strongly disagree with the proposed buffer zones as proposed. Pass through corridors should be provided to allow access from one area to another. There are areas between buffer zones that are effectively closed because there is no way to get to them if the beach is totally closed above and below them. The 1000 meter buffer for the piping plover is way too extensive. Scientific evidence shows 200 meters is adequate. The proposed 300 meter buffer for other species such as the American Oystercatcher, Least Tern, and Colonial Waterbirds should also be reduced from 300 meters to 30 meters. Non-endanger species should not have the same protection as those that are endangered.
 11)Pages 125, 392-396: I disagree with the stats and procedures proposed. Sea turtles would benefit from better management practices to achieve better nesting success including relocating nests to more desirable locations as done at other state and federally controlled areas.
 12)Page 136: I very strongly disagree with the proposed pet restrictions. the prohibition of pets in the Seashore during bird breeding season including in front of the villages essentially prohibits pets in public areas-beaches, campgrounds, soundfront, foot trails, park maintained roads-from March 15 until July 31. I own a home that I rent as a pet permitted house. The proposed regulations would effectively cost me at least One half of my potential rentals since the regulations would encompass the rental season. If people do come with pets and be forced by the regulations to leave their pets in the house for extended periods, I would have damage to the house while they are out, which would result in financial loss to me.
 13)Page 201: I disagree that plover deaths are a result of ORV violations. Pedestrian violations are much more significant than ORV violations. The transgressions into protected areas are a result of lack of NPS manpower and enforcement rather than public purposely and willfully violating the

protected areas.

14)Page 486: I disagree with the limitations imposed on pedestrian and ORVs. Pass through corridors should be provided through, around or below high tide line in all SMAs during the entire breeding season.

15) I disagree with the overall visitor counts presented. Overall visitor counts in the DEIS appear to include visitors to Fort Raleigh National Historic Site and the Wright Brothers National Memorial. A large percentage of these visitors vacation in the northern beaches communities and do not recreate on the National Seashore. They should not be included in Seashore stats. The atmosphere in the Kitty Hawk-Nags head area is one of large box stores and fast food, not the Nature Loving Visitors of the Seashore area.

16) I disagree with the socioeconomic analysis presented. All socioeconomic analysis related to Alternative F for the of the Cape Point and South Point Ocracoke areas is based on the assumption that access corridors will be maintained for at least an appreciable portion of the visitor high season. Under Alternative F, the access corridors will be subject to resource closures based on buffers similar or identical to the Consent Decree. Unless some predictability of access to Cape point and South Point Ocracoke can be assured, the economic analysis based on the assumption of access is fundamentally flawed.

17) I disagree with the NPS Resource Management Pedestrian/ORV Closure Policies. These policies address the least significant factors affecting nest survival. Using NPS numbers, human interference is just 3% of the problem where natural influences such as mammalian predation, storm/lunar tides, nest abandonment, avian predation, and ghost crab predation make up the other 97%. Human interference is insignificant.

18) I disagree with the NPS stats that do not consider adjacent areas to the Seashore such as spoil islands that were created as waterways are dredged. These areas are covered with birds of all sorts and should be considered in the same ecosystem.

Conclusion: Please incorporate access corridors through all SMAs so we can get to open beaches. Base you buffer zones on peer reviewed science and scale them back to more reasonable distances.

The proposals do not adequately protect the human element that is involved at this location. Over restriction of human activities does not help protect the other ecosystems involved. A proper balance of regulations will stimulate humans to respect this area that is the visited by nature loving individuals.

Correspondence: May 11, 2010

Mr. Jon Jarvis Director National Park Service Washington, DC

Please accept this comment letter from The Wilderness Society and thousands of our members and supporters. The Wilderness Society alerted our members and supporters to your request for comments on the Cape Hatteras off-road vehicle plan. 16,000 of our members and supporters responded to our alert and submitted a letter to Mr. Murray supporting the identified "environmentally preferred" Alternative D (modified to provide greater pedestrian access). Many of those who commented made an extra effort to expand on their experiences and their desired outcomes in the rule-making. After our members and supporters sent letters supporting our position, I was surprised to find those comments would be rejected because they didn't meet technical requirements set out by the Park Service for the comment process.

We have numerous times provided comments on CDs to other Interior agencies, because presently we have no way of submitting these comments via a web-form. While use of web-forms may make sense from the agency's point of view, they can make it more difficult for your constituency? Americans who cherish and want to care for their national parks? to engage with the Service on policy issues.

Other federal agencies have been quite receptive to comments via CD, as they prove to be in a format that makes it easy to sort and file the data. I urge you to open your comment processes to include public input submitted via CD? or via email? so that more people may participate in public comment.

I am appreciative of Mr. Murray notifying us promptly that our CD could not be accepted, but because our members and supporters who commented about Cape Hatteras did so believing their comments would reach the Park Service, I am sending to Mr. Jarvis a CD of their comments for your consideration. We regret this situation and respectfully request that the Park Service take note of the 16,000 comments from our member and supporters --your constituents.

Below is the letter that our members and supporters used as the basis of their comments to the NPS regarding this matter.

Sincerely,

Kathy Kilmer Director Electronic Communications The Wilderness Society 1615 M St, NW Washington, DC 20036

Cc: Mike Murray, Supervisor, Cape Hatteras National Park

Mike Murray Superintendent, Cape Hatteras National Seashore 1401 National Park Drive Manteo, NC 27954

I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.

This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.

Provide Equal Access for All Visitors - Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.

Put Natural Resources First - Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.

Establish and Meet Clear Goals for Wildlife Recovery - A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: RE: Public Comments on the Draft Environmental Impact Statement (DEIS) As a Dare County Commissioner, I strongly support access to the beaches of the Cape Hatteras National Seashore Recreational Area consistent with the promises made in the enabling legislation. The residents and visitors to Dare County have always been faithful stewards of wildlife. For generations our people have lived in harmony with nature. Our people have a genuine interest in making sure that nature thrives in our area in order to preserve it for future generations. In fact, the greatest threat to nature in our area is weather related events and predators. People are not the enemy of wildlife. I support resource protection that is based on transparent, peer-reviewed science. But, I also believe that resource protection must be balanced with providing people reasonable access for family recreation. In addressing the DE IS, I believe there are several areas that need modification before release of a final environmental impact statement later this year. These areas include: ? Need for corridors ? Reasonable buffers ? Modified protection for non-endangered birds ? More proactive management practices for sea

turtles

Issue DEIS Alternative F Page # Park Service Preferred Dare County Position which I Support Corridors xli Corridors are only Corridors are a vital tool in providing access while xviii allowed in ML-2 managing resources. They provide a small path 468 portions of SMA's around temporary resource closures in order to provide and are subject to access to open area that would otherwise be blocked. resource closures at any time Corridors should be permitted throughout the seashore during the entire breeding and nesting season including ML-1 portions of SMA's. These corridors would provide valuable access without impairment or damage to protected resources Management 121-127 Buffers (closures) are Buffers, or closures, are important management Buffers larger than required practices for species recovery. However, to have long by species recovery term benefit for the wildlife and the visiting public, plans. buffers must be based on peer-reviewed science For example, Piping For example, the Piping Plover, a species classified as Plover unfledged threatened and not endangered, is given a level of chicks, are given a unprecedented protection in Alternative F. protective buffer of a minimum of 1,000 A 1,000 meter buffer in all directions represents over meters in all 771 acres. The DE IS does not cite any peer-reviewed directions. science in supporting such closure. A more appropriate & effective buffer would be 200 meters Non- 121-127 Non-endangered Birds that are not listed as endangered should not be Endangered species, such as afforded the level of protection given to ESA Birds American (Endangered Species Act) protected species. Instead Oystercatchers, of 300 meter buffers for these birds, a more appropriate Least Terns and buffer would be 30 meters Colonial Waterbirds are given Pre-Nesting Also, all birds in the same ecosystem of the seashore closures and buffers should be counted . This includes all the many birds on up to 300 meters the dredge and spoil islands located just yards away and within sight of the seashore. Turtle 125 The National Park Service should consider turtle Management 392-396 DEIS claims North management practices successfully used in other Carolina Wildlife federal and state areas to achieve nesting success. Resources Commission turtle More proactive measures include relocating nests to guidelines will be more desirable locations, which is routinely and successfully done in other areas. Sincerely, Richard Johnson, D re Nests County Commissioner

Mike Murray, Superintendent Cape Hatteras National Seashore 1401 National Park Drive Manteo, NC 27954
Re: Comments on the draft Cape Hatteras National Seashore Off-Road Vehicle (ORV) Management Plan / Environmental Impact Statement (plan/EIS)
Dear Superintendant Murray:
On behalf of the more than 400,000 Americans living with multiple sclerosis (MS), the National MS Society would like to comment on the draft Cape Hatteras National Seashore Off-Road Vehicle (ORV) Management Plan / Environmental Impact Statement (plan/EIS) published by the U.S. Environmental Protection Agency on March 12, 2010. The National MS Society certainly understands and respects the desire to develop regulations and procedures that carefully manage ORV use/access in the Seashore to protect and preserve natural and cultural resources and processes. The options presented, however, appear to not fully take into account the special and unique circumstances of people living with multiple sclerosis and other disabilities. The National MS Society therefore strongly urges that regardless of which alternative is selected, the National Park Service thoroughly review the strategy from a disability perspective and remove rather than create barriers to physical accessibility; prevent discrimination; and promote independence.
Multiple sclerosis (MS) is an often disabling, autoimmune disease affecting the central nervous system. The progress, severity, and specific symptoms of MS are unpredictable and vary from one person to another. MS can cause blurred vision, loss of balance, poor coordination, slurred speech, tremors, numbness, extreme fatigue, problems with memory and concentration, paralysis, blindness and more. These problems may be permanent or may come and go. The National MS Society is a collective of passionate individuals who want to do something about MS now?to move together toward a world free of multiple sclerosis. The Society is the largest nonprofit organization in the United States supporting research for the treatment, prevention and cure of multiple sclerosis.
More than 5,000 people living with MS reside in eastern North Carolina and many others around the country living with MS visit the Cape Hatteras region year round for vacation and personal enjoyment. Several aspects of the plan/EIS are troubling and would present significant obstacles for people living with MS. For instance, special use permits would be required to transport people with disabilities to the beach and then the vehicle must be returned to the street. If a person living with MS is fortunate to be traveling with a companion or caretaker, this requirement could still prove problematic if the individual must remain alone for any period of time and the individual's symptoms are severe and for instance, include loss of balance, paralysis, blurred vision, or blindness. People living with MS traveling to Cape Hatteras alone may also encounter extreme difficulty if they are forced to park far away from ADA accessible access points and his or her symptoms are severe in nature. Having to travel even a short distance when experiencing intense fatigue, tremors, loss of balance, vision problems, or memory issues can be an enormous burden which runs counter to Cape Hatteras's purpose of a place of enjoyment for all.
The plan/EIS indicates that four ADA compliant beach access points will be provided for persons living with disabilities. Cape Hatteras consists of more than 30,000 acres distributed along approximately 68 miles of shoreline, making a mere four ADA-compliant access points a fairly significant barrier for people living with MS attempting to fully participate in recreation and/or enjoyment of Cape Hatteras's offerings.
The National MS Society also finds distinctly troubling the considerable restrictions placed on "pets" by each of the alternatives, whether prohibited in certain areas or during certain seasons. The current policy for Cape Hatteras is that "[g]uide dogs for the visually impaired are permitted to remain with their owners at all times." People living with MS or other disabilities may very well rely on assistance animals not only for specific guide purposes, but also for providing balance support, pulling wheelchairs, alerting to sounds, or responding to changes in the physiological, mental, or emotional state of their human partners. People living with MS and other disabilities needing help from assistance animals simply must not be denied their presence, guidance, and comfort at any location in Cape Hatteras or during any time of year.
The National MS Society thanks you for the opportunity to comment on the plan/EIS and truly hopes that moving forward, the needs of people living with MS and other disabilities are met. Should you have any questions, please contact Shawn O'Neil, Vice President of Federal Government Relations at 202-408-1500. Every individual should be able to lead a full, productive life and participate in community activities such as the full enjoyment of Cape Hatteras. The National Multiple Sclerosis Society is dedicated to the removal of barriers and hope that you will work with us so that all people with MS can live with as much independence and self-sufficiency as possible.
Sincerely,
Shawn O'Neil Vice President Federal Government Relations

Correspondence: Superintendent Murray,
We recommend that any ORV permits required be made easily available to the vacationing, visiting public. Requiring permits to be purchased days in advance or at limited NPS locations will cause severe adverse economic impacts to businesses in the region. Permits must be made available both in person and on-line. Today's technology allows customers to expect immediate results. We are extremely concerned that ifORV permits are only available at NPS visitor centers then there is no incentive to satisfy the public. As the owners of a tackle shop in one of the seashore villages, we understand the implications and logistical issues surrounding the NC Saltwater fishing licensing requirement. Although customers may accept that permits and licenses are required, there is no tolerance for bureaucracy by the vacationing public. In order to sell fishing tackle and earn a paycheck, we MUST ensure that we always have the state-issued paper available, an active internet connection, and extended store hours. Otherwise, the customer does not receive a license, and (unlike a visitor center federal employee) we do not earn a paycheck. We suggest that ifORV permits are required in the seashore, that the administration of the permits be tied into the secure NC DMF saltwater license website www.ncalvin.org and administered by NC Fish & Wildlife. This will significantly reduce NPS costs and allow ORV permit buyers a reasonably accessible alternative to NPS sites. Duplicating

effort with a second website will only foster visitor frustration over governmental bureaucracy. Finally, it should be stated that any fees collected through a permit system must be used to maintain or increase OR V access. Sincerely, Alan and Melinda Sutton Tradewinds Tackle PO Box 388 Ocracoke, NC 27960

Correspondence: As an avid angler on the North Carolina seashore, I am strongly opposed to the National Park Service (NPS) preferred alternative, Alternative F, in the DEIS and urge you to make significant changes to the preferred alternative in order to provide both reasonable resource protection and reasonable public access to public land. Recreational fishing is one of the most enjoyable American pastimes, and Cape Hatteras National Seashore has some of the best surf fishing locations on the east coast ? accessible only by ORV.
Alternative F is the most restrictive management option to date, far exceeding any sense of balance between resource protection and public access and betraying all promises made to the public regarding recreational uses in the seashore. The majority of the provisions included within the preferred alternative far exceed anything proposed by a majority of the Negotiated Rulemaking Committee, including excessively large resource closures (buffers), unnecessary year-round and floating closures, and the lack of access corridors around or through resource closures.
In order to restore balance to the DEIS, I highly recommend that the NPS revisit the proposal put forth to the Negotiated Rulemaking Committee in December of 2009. It provides the necessary protections for wildlife resources while having the support of a majority of the local community. Without reasonable ORV access, responsible anglers like me, and the local economy that is supported by recreational fishing, suffer greatly. I urge you to provide a better balance between resource protection and recreational uses by incorporating the December 2009 recommendations from the Negotiated Rulemaking Committee into the preferred alternative.

Correspondence: Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.
1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."
2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness...."
Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.
3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.
Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

Correspondence: Dear Superintendent Murray,
As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.
1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."
2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness...."
Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.
3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.
Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

Correspondence: Superintendent Murray,
I strongly disagree with DEIS economic data being derived from the Fort Raleigh/Wright Brothers Memorial visitors. There is immense diversity within the seashore. The region depends on different visitors in different parts of the seashore and at different times of year. As a native NC resident, 25 year visitor to Cape Hatteras Seashore, 12 year Ocracoke property resident, and 6 year permanent Ocracoke resident, I can testify that I have NEVER been to Fort Raleigh or Wright Brothers parks. These locations have nothing in common with the critical seashore points, spits, and inlets that are only accessible by ORV. Suggesting that the visiting public at Ocracoke Island is similar, or could produce reasonable economic data to the visitors of these northern non-ORV locations, is severely flawed. The spring and fall visitors to Ocracoke Island come here for the ability to access the points and spits at Hatteras and Ocracoke Inlets. OR V access to these areas is critical, as it allows visitors to bring their fishing rods, surfboards, beach chairs, and beach toys. These areas are enjoyed by families looking for experiences different from those offered elsewhere in the seashore. Without OR V access to these areas, the spring and fall visitors do not come. Without ORV access to the points and spits, potential visitors vacation at beaches that are easier to access

0012629

and offer greater diversity of activities, such as Emerald Isle or Kitty Hawk. I suggest that any final OR V plan be postponed until complete and accurate economic data is available. I also suggest that the DEIS reflect that the visiting public at Ocracoke Island during spring and fall months show the actual dependence on ORV seashore access. Sincerely, Melinda Fodrie POBox 1025 Ocracoke, NC 27960

Correspondence: We disagree with the ORV closure at the north end of Ocracoke. This area has not had any significant breeding pairs of shorebirds, and it is a critical area for recreational fishermen. Closing this area to OR V's and setting it aside as pedestrian-only will not enhance the pedestrian visitor's experience. We have no doubt that complaints occur from pedestrian users that there are not adequate pedestrian-only surf locations. However, these complaints are NOT due to inadequate pedestrian-only seashore. These complaints are generated by the non-existent education and communication offered by NPS on what locations are available for what type of use. We have stopped hundreds of 2wd motorists entering the seashore at 4wd ramps. We have discussed access with thousands of pedestrians at our store. NONE of them have ever complained to us about the lack of pedestrian-only access, because we have explained where this access is and how to get there. NPS does not post adequate maps or explanations on where the pedestrian-only access areas are, which naturally results in complaints. To enhance the visitor experience of pedestrians at the seashore, NPS must improve its signage and communications. Closing more beach miles to ORV's only improves the odds that a pedestrian accidentally happens upon pedestrian-only access areas while penalizing OR V users. Beach ramps must ensure OR V access throughout the critical spring and fall fishing seasons to prevent severe adverse economic impacts. The only beachfront areas that should be pedestrian-only are the pony pens year-round, the campground area seasonally while open, and the lifeguard beach seasonally. The ENTIRE sound-side area of Ocracoke is already a pedestrian-only access location, as NPS has continually failed to provide any ORV access. In addition, maintaining corridors through any closed area is critical. Any management plan that potentially allows closed areas of beach without OR V corridors is creating severe adverse socioeconomic impacts. Sincerely, Alan and Melinda Sutton Tradewinds Tackle POBox 388 Ocracoke, NC 27960

Correspondence Type: Web Form
Correspondence: My comments concern the DEIS of the Off-Road Vehicle Management Plan prepared by the National Park Service (NPS) for the Cape Hatteras National Seashore Recreation Area.
1) Page 201: I disagree with the NPS statement: "Even with resource closures in place, protected species are still at risk [from pedestrians and ORVs]." No Piping Plover deaths have been attributed to ORVs. ORV violations continue to decrease as signage and education improve. Pedestrian violations are much more significant than ORV violations. It seems to me that any transgressions into protected area are the result of lack of NPS manpower and enforcement than the public purposely and willfully violating out of bounds areas.
2) Page xxiv: I question the statement of as per the DEIS: "Carrying capacity would be a 'peak use limit' determined for all areas based on the linear feet of beachfront?" If you close off huge sections of the beach, you force more people into smaller areas, potentially resulting in more resource impairment and diminished visitor experience.
3) Page xix and page 23: I am against having two different closures rules pertaining to the North facing beaches (North side) and the South facing beaches (South side) as per the grid outlined in Alternative "F". I disagree with the NPS proposal to close the beaches in villages of Frisco, Hatteras and Ocracoke Villages to ORV access longer than the traditional May 15 to September 15 period for the Northern beaches, even though seasonal visitor statistics are similar for all villages. Please, make them the same: May 15 -> September 15.
4) Page 1: I agree with your statement "ORVs have long served as a primary form of access for many portions of the beach in the seashore, and continue to be the most practical means of access and parking for many visitors."
However, pedestrian only areas discriminate against individuals with limited mobility due to age or physical impairments, families with small children, and those wishing to engage in activities requiring recreational equipment (boogie boards, beach umbrellas, beach chairs, coolers, fishing rods and

tackle, etc)

5) Page 53: I disagree with the special use permit proposed guidelines. It is impractical to allow the transportation of disabled visitors to the village beaches and then require the vehicle to be returned to the street or parking area. This necessitates the disabled person to have a driver to drop him (or her) off, then drive to a parking area, then trudge a long distance to the site of the drop off, then trudge the long distance through the sand back to get the vehicle.

Suppose the handicapped person wants to go to the beach, is capable of driving himself, yet cannot find another person to go with him? Does he now not go to the beach? This rule creates unnecessary hardships and risks in the event of an emergency as well.

6) Page 121 ? 127. I strongly disagree with the buffers as presented. We must allow for pass-thru corridors. The beach is linear with the ocean buffering on one side and the dune line on the other. For example - If you pinch off access on one side of a 4 mile linear beach and pinch off access on the other side of the 4 mile section of beach with no corridor, then you effectively have closed off all 4 miles of the beach because you CAN'T get there. The proposed bird buffers are too large, blocking access to the interior sections from the two "buffered" ends.

I propose ORV pass-thru only corridors and to use breeding / nesting buffer distances to establish ORV pass through only corridors to ensure beach access in a way that does not hinder resource protection. I believe pass through corridors should be maintained for pedestrians and ORVs in all areas of the Cape Hatteras National Seashore Recreational Area throughout the entire breeding and nesting season. Corridors are vital to providing access in a way that does not hinder resource protection.

Piping Plover unfledged chicks buffer should move with the brood as it relocates to reliable food source, not expanded.

The 1,000 meter distance for the piping plover is way too large and not based upon peer reviewed science. A more rational distance would be 200 meters per other sites in the nation for the piping plover. Ample scientific evidence and precedent exists to support a 200 meter buffer.

Buffers for other species, including American Oystercatchers, Least Terns and Colonial

Waterbirds must also be changed. An effective 30 meter buffer should be established for these species rather than the 300 meter closure outlined in the DEIS.

NON-ENDANGERED BIRDS should not have same protection as if endangered. Not allowing ORV access is paramount to denying the public access to these beaches.

7) Page 468: I disagree with the limitations imposed on pedestrian and ORVs. Corridors or bypasses should be provided thru, around or below high tide line in all SMAs during entire breeding season to maintain access.

8) Page 124: I strongly disagree with the NPS slant of providing for over protection of resource management over that of the public's right to access the beaches. Pro-active initiatives include: Vegetation Management, Habitat Management, Enhanced Predator Management, Colonial Water bird social attraction, Piping Plover check fledge rate, Piping plover chick buffer distance, and pass-through buffers during the incubation period. Opportunities to implement less restrictive closures as a result of the above initiatives should be considered more frequently than the 5-year periodic review process identified in the DEIS.

9) I disagree with the NPS Resource Management Pedestrian / ORV Closure Policies. These policies address the least significant factors affecting nest survival with little chance to have more than negligible impact. For example: the AMOY Nest Failures are predominately due to non-human events.

Using your own stats, the mammalian predation is 54%, Storm / Lunar Tides: 29%, Nest Abandonment: 6%, Avian Predation: 5%, and Ghost Crab Predation: 3%,

So what is the percentage due to human interference: just 3%! It's insignificant, yet the NPS wants to ban humans when their actions provide very little influence on the success rate of breeding birds and turtles.

10) I disagree with the stats of breeding plovers and the other birds in the Park when the NPS does not adequately consider locations neighboring the Recreational Area that are part of the same ecosystem, namely dredge and spoil island that are located just yards away and within sight of the seashore. These birds are part of the same ecosystem and should be included.

Those spoil islands, developed by man from dredging the waterways in the Pamlico Sound for channel upkeep are slammed full of birds. The reason why so many birds? NO PREDATORS. SO, birds are not as stupid as one might think. You have to count these birds and incorporate them in the stats when the NPS is talking about any so called decline in breeding pairs in the National Park.

11) Page 1: I do not think the DEIS responsibly addresses the cultural resource issues. The very purpose of the DEIS as set forth in the National Environmental Policy Act (NEPA) is to protect and preserve natural and cultural resources in the federal decision making process. In the DEIS, the statement "protect and preserve natural and cultural resources" appears in the first sentence of the first page of the plan, in the Purpose of the Plan section, and numerous times thereafter. Yet, the 810 page document devotes only two paragraphs to analysis of cultural resource issues.

12) Pages 270-281; 561-598: I strongly disagree with your economic analysis of the impact of the DEIS. The region of influence (ROI) incorporates the Northern Beach communities, including Kill Devil Hills, Kitty Hawk, Southern Shores and Duck. These areas are almost completely disconnected from ORV use and access issues relating to the Seashore.

? Inclusion of the Northern Beaches in analysis significantly dilutes estimates of economic impact on the 8 Seashore Villages

? Analysis of economic impact to the Seashore Villages appears to be significantly down played. Emphasis in DEIS is on the ROI-wide or county-wide level impacts.

? Nowhere is it clearly addressed that the overwhelming majority of negative impacts will be felt by small businesses in the Seashore Villages rather than by overall economic interests within the greater ROI.

On page xlvi, Alternative F is characterized as having a "negligible to moderate" adverse impact on small businesses. I strongly disagree with this statement.

I have owned a rental beach house on Hatteras Island for nearly thirty years and am fortunate that I no longer have a mortgage but there are several thousand rental houses on the island and I estimate that at least have of these "small businesses" have sizeable mortgages and the economic viability of these businesses depends upon booking renters for at least 20 - 30 weeks per year to remain viable. Why do people rent houses on the island? For fishing and other beach activities in the National Park. I believe the restrictive rules of the DEIS will significantly limit rentals and will bring about the foreclosure of many mortgages and the collapse of the rental business. This is not adequately considered in your economic analysis.

Pages 270-286, 561-598: The socio-economic data and analyses are incomplete and erroneous and result in an understatement of the effect the restrictions will have upon the Island, the region and the state of NC. The US Park Services answer: Businesses will have to "adapt" to the new rules.

(p.383) The negative economic impacts of the decree ARE KNOWN, so to say that the added restrictions would have negligible to moderate impact is indefensible.

13) Overall Visitor Counts - Overall visitor counts appear to include visitors to Fort Raleigh National Historic Site and the Wright Brothers National Memorial. A large percentage of these visitors vacation in the Northern Beaches communities and recreate on the non-federal beaches outside of the Seashore. Visitors who patronize the Fort Raleigh National Historic Site and the Wright Brothers National Memorial but do not visit the actual seashore areas need to be factored out.

Maintenance of Future Access to Cape Point and South Point Ocracoke: All socioeconomic analyses related to Alternative F are predicated on the assumption that access corridors will remain open for at least an appreciable portion of the visitor high season. Under Alternative F, the access corridors will be subject to Resource Closures based on buffers similar or identical to the Consent Decree. Unless some predictability of access to Cape Point and South Point Ocracoke can be assured, economic analyses predicated on assumption of access are fundamentally flawed.

Why would a group of surf fishermen want to come to Hatteras Island to surf fish if they are not sure they can access the prime fishing grounds at Cape Point? The answer is they won't come. If they don't come, they don't rent vacation homes and spend their money on Hatteras and Ocracoke Islands.

The definition of the Region of Influence (ROI), faulty data on economic activity generated by specific type recreational activity, incomplete visitation/business survey data, inflated overall Seashore visitor counts pertaining to beach use, and flawed key assumptions concerning the maintenance of access under Alternative F, all lead to inaccurate conclusions in the socioeconomic analyses. Specifically, these inaccuracies can be seen as understating the negative socio-economic impact of the Seashore Villages. Further, this negative impact will be absorbed almost entirely by Small Businesses. Neither of these important aspects of the management alternatives are adequately presented in the DEIS.

14) Page 136: I strongly disagree with your pet restriction proposals. The "prohibition of pets in the Seashore during bird breeding season including in front of the villages." = No Pets in public areas ?beaches, campgrounds, soundfront, foot trails, park maintained roads -from March 15 ?July 31.

15) Pages 125; 392 ? 396: SEA TURTLES. I disagree with the stats and procedures proposed. I think endangered sea turtles would benefit from

management practices now in use at other federal seashores that are more proactive in efforts to achieve nesting success. This includes relocating nests to more desirable locations as is done in other state and federally controlled areas. The Cape Hatteras National Seashore Recreational Area is on the northernmost fringe of turtle nesting locations for the southeast, accounting for about 1% of all turtle nests. Proposed buffer areas are not needed for protection of the turtles and amount to overprotection.

16) Pages 97- 101. I strongly disagree with proposals in this section saying that ORVs will be prohibited year round between ramps 27 and 30, at Hatteras Inlet (Hatteras Spit), Ocracoke Inlet (North Ocracoke Spit) and various other locations.

Not allowing ORV access is paramount to denying the public access to these beaches. They are located miles from the nearest parking or paved road area and too far to access on foot. As a matter of course, there has been no breeding of piping plover or other endangered species at the Hatteras Island Inlet (spit) area in the past 6 years. 17) Page 104: I disagree with the proposed night time driving closures. Per your proposals, night driving will be prohibited between May 1 and November 15th, forcing visitors off of the beaches early in the evening and preventing sunrise surf fishermen access in the morning. I propose a more moderate night time ban if one is needed, perhaps from June 1 ? September 15 with times being 1 hour after sunset and 1 hour before sunrise to allow beach goers to gather their stuff and exit the beach area.

Certainly more proactive measures such as relocating nests prone to weather and ocean events would dramatically increase the nesting success rates.

18) Page 121: I disagree with the proposed beach closings, including pedestrian access from March 15 until July 31 in 8 different beach locations which have traditionally been available. Please leave these areas open to beach walkers, shell collectors and those that want to access the beaches in these areas.

Conclusion:

Please, incorporate access corridors through any SMA so we can get to the open beach beyond. Incorporate the birds into the count that nest on the spoil islands. Base your buffer zones on peer reviewed science and scale them back to more reasonable distances as discussed.

It is neither logical nor reasonable to spend so much time, money and energy to overprotect a bird (Piping Plover) in the Cape Hatteras National Seashore that is on the southernmost fringe area of its breeding ground. That goes for the loggerhead turtle that is in its northernmost breeding area.

Let's scale back the buffer zones. The USPS is leaning way over the line on over protection and not enough on the public's right to enjoy the beaches of the National Seashore. The proper balance is not achieved in the propose DEIS and needs to be modified so that the proper balance of reasonable resource protection and access to the beaches of the National Park is achieved.

I do not understand why you have chosen Alternative F, the most restrictive and user unfriendly of all of the Alternatives that have been studied.

Thank you,

Donald A. Delwiche

Correspondence: I do not agree with alternative F of the DEIS. I do agree with the position that the Dare County Board of Directors have taken. It is my opinion after visiting Hatteras numerous times that the Hatteras Island residents economy has already suffered greatly because of beach closings. Additional restrictions to beach access would harm their lively hood even more. This is so unnecessary when there are other alternatives. The corridors to access open areas should not be compromised. Species not listed on the endangered list should not have protective status. The buffer for the unfledged piping plover chick should not be excessive and the relocation of the sea turtle nests should be used as a means of their management. Please do not pass alternative F of the DEIS. Please keep our beaches in OUR National Seashore open and accessible!

Correspondence: My husband and I moved to NC 5 years ago. One draw for my husband was the proximity to the pristine beaches of the Outer Banks/ Cape Hatteras National Seashore. We visited and were stunned at the driving on the beach. It seemed counterintuitive; it was dangerous - people were driving these gigantic ORVs, enormous larger-than-life sized tires, tearing up the beach and racing each other, trying to overtake each other as if on the highway. On the occasion there was someone coming in the opposite direction of two hyped up fools racing on the beach, the near misses for the walking public were too close for comfort. We were horrified. This pretty much killed our desire to be around that area again.

Not to mention what it could have possibly done to the wildlife...the damage must have been immense.

No one on this planet has an inherent right to anything. All the blather about "rights" of access to public beaches regardless of the outcome is only realistic and viable to a point. When the 'rights' of the minority (insane drivers) overtake and crush the 'rights' of the majority (walkers, naturalists, wildlife)...something is seriously flawed.

Please restrict or continue to restrict full access to these beaches.

Correspondence: I disagree with the statement:

"May 1 to Nov 15: Designated ORV routes in potential sea turtle nesting habitat (ocean intertidal zone, ocean backshore, and dunes) would be closed to non-essential ORV use from 1 hour after sunset until turtle patrol has checked the beach in the morning (by approx. one-half hour after sunrise)." ORV night-time access has not disrupted sea turtle nesting or sea turtle nesting productivity. Nesting females have not been killed, nests have not been lost due to human activity, and hatchlings have not suffered. Light disorientation makes no scientific sense when you look at the number of turtle nests in high density developed areas such as Myrtle Beach or southern Florida that have much higher light pollution. Turtle nests fail due to weather, as shown by NPS records. In fact, the USGS Protocols state on page 77 that turtle nests do well when the weather is good, and they do poorly when the weather is bad. These events are independent of ORV or pedestrian activity. Turtle nests in low areas should be relocated immediately to ensure turtle hatchling success and visitor access. At the very least, a special night-time use permit for the May 1 to Nov 15 dates should be made available to drum fishermen and star gazers. These two user groups are actually more light sensitive than the sea turtles. Star gazers require the low light pollution made available by the seashore area. . . Red drum, North Carolina's state fish, is extremely sensitive to any light (or shadows) 'cast onto the night-time ocean water. This

light sensitivity is a large reason why the Cape Hatteras Seashore area is so critical to drum fishermen. There are very few if any locations along the east coast, even those locations that have better sea turtle nesting results that offer the low light pollution required by drum fishermen. Drum fishermen are extremely careful to never shine their truck lights along the water edge for fear of disturbing the drum or causing light blindness in a fellow fisherman. These fishermen do not cause any light disturbance to potential nesting sea turtles. In fact, star gazers and drum fishermen are the responsible user groups that can help mitigate the administrative costs of monitoring the seashore for nesting turtles and nighttime activity. Their nighttime access to the seashore is not only reasonable but should be desired by an actively managed seashore. If a special use permit is deemed required, a requirement could be the reporting of any turtle crawl activity. I suggest that drum fishermen and star gazers be allowed year-round 24 access to the Cape Hatteras National Seashore. Sincerely, Alan Sutton POBox 1025 Ocracoke, NC 27960

Correspondence: i have not been to cape hatteras in a long time, but i still remember the beautifull beaches and sand dunes. I hate to think about what kind of damage wheeled vehicles could do to the beaches!!! I think that cape hatteras should remain a protected wildlife area. the U.S.A.is loosing too many wild areas and especially beaches to development already!!!

Dear Superintendent Murray,
Please accept this letter as my comment on the ORV DEIS before you at this time.
After reviewing the National Park Service DEIS I must disagree with any of the six alternatives within the document.
I have; however, reviewed the 77 page Coalition for Beach Access Position Statement signed by several groups that were a part of the negotiated rule making process and it by far succeeds in furnishing the best visitor experience while maintaining the needs of protecting the fragile resources.
Please consider all aspects of this alternative and put people back into the management of Cape Hatteras National Seashore.

Correspondence: I disagree with the buffer distances proposed in the DEIS.
A 1000m unfledged piping plover chick closure distance closes as many acres to visitor use as the entire village of Ocracoke, a community that pays over half of Hyde County taxes. The 300m and 200m closure distances for other shorebirds are unneeded and unjustified. The 300m and 200m closures close 70 and 31 acres respectively. More importantly, Ocracoke Island only has about 100m to 150m of beachfront access available from the water's edge to the dunes, so these buffer distances reflect a COMPLETE closure of the entire seashore for non-endangered species. I recommend the plover buffer distances used by Assateague Island and approved by the April 15, 1994 US Fish & Wildlife Study for actively managed piping plover unfledged chicks. This distance is a minimum of 100m and suggested 200m for the plover nest of unfledged chicks. Per the US Fish & Wildlife study, this distance requires an active management plan, which is consistent with the active management requirements found in plan F. And a 100m to 200m buffer for unfledged piping plover chicks is consistent with common sense. The greatest distance that a plover nest had been found to move in the 1994 US Fish & Wildlife study was 900m, which has caused some proponents of the 1000m buffer. But the US Fish & Wildlife study only recommends this distance for a nest that is not managed. The plover broods do not migrate these large distances except as the brood completes hatching and searches for proper foraging habitat. Once the brood finds suitable foraging habitat it travels little. Prior to hatching the nest is not moving at all. I recommend that DEIS proposal F have an active management plan for piping plover unfledged chicks and change the buffer distance from 1 000m to 200m accordingly. Since the piping plover nests will be actively managed, I recommend that the buffer distance be no more than 50m for the piping plover breeding activity and nest prior to hatching. The closure distance can be increased to the 100m minimum as the nest approaches its hatch window. Other shorebirds require much less buffer distances than the endangered piping plover. Assateague Island management has found that terns and AMOY's require no special buffers, as most of their nesting typically occurs within the piping plovers 200m buffer. In fact, one AMOY pair nests yearly next to HWY 12 outside of Hatteras village as motorists pass by at 50mph. These birds are obviously not disturbed by OR V's or pedestrians. In addition, terns are known to nest on shopping center rooftops in the adjacent Kitty Hawk/Nags Head area. Any seashore closures that impede visitor use are unjustified and unnecessary for these species. I agree with a sound-side pre-nesting closure at Southpoint Ocracoke, provided it maintains beachfront access and a corridor during any potential nesting closures. The mudflats found in this area are critical habitat for shorebirds, and closing these areas (as long as the beachfront remains open) will not cause extreme economic impact. Other sound-side shorefront should be made available north of the pony pens to mitigate the sound-side closures in the Southpoint area. But the Southpoint area sound-side mudflats are ideal habitat for the shorebirds, and a closure in this area should satisfy any requirements for species protected areas. In no case could anything larger than a reasonable buffer of not more than 30m around nests and unfledged chicks be justified for AMOY's, Wilson's Plovers, Least Terns, or other Colonial Waterbirds. And, I disagree with any area on Ocracoke being designated (MLI). Currently, DEIS Alternative F lists north Ocracoke and ramp 68 to ramp 70 areas as SMA's with MLI. All seashore areas are critical to visitor experience and must be actively managed (ML2) to prevent severe economic hardship to Ocracoke village. If funding is required to ensure ML2 status the ORV permit fees should be used. Sincerely, Alan Sutton POBox 1025 Ocracoke, NC 27960

Correspondence: As an avid angler on the North Carolina seashore, I am strongly opposed to the National Park Service (NPS) preferred alternative, Alternative F, in the DEIS and urge you to make significant changes to the preferred alternative in order to provide both reasonable resource protection and reasonable public access to public land. Recreational fishing is one of the most enjoyable American pastimes, and Cape Hatteras National Seashore has some of the best surf fishing locations on the east coast ? accessible only by ORV.
Alternative F is the most restrictive management option to date, far exceeding any sense of balance between resource protection and public access and betraying all promises made to the public regarding recreational uses in the seashore. The majority of the provisions included within the preferred alternative far exceed anything proposed by a majority of the Negotiated Rulemaking Committee, including excessively large resource closures (buffers), unnecessary year-round and floating closures, and the lack of access corridors around or through resource closures.
In order to restore balance to the DEIS, I highly recommend that the NPS revisit the proposal put forth to the Negotiated Rulemaking Committee in December of 2009. It provides the necessary protections for wildlife resources while having the support of a majority of the local community. Without reasonable ORV access, responsible anglers like me, and the local economy that is supported by recreational fishing, suffer greatly. I urge you to provide a better balance between resource protection and recreational uses by incorporating the December 2009 recommendations from the Negotiated Rulemaking Committee into the preferred alternative.

Correspondence: I've been coming to the Outer Banks since I was a small kid, and I've always realised the need to respect and coexist with the wildlife and as long as I've been able to drive have always followed the rules and regs of the park. As a matter of fact, I've called NPS on more than a few times to report violators for speeding, donuts, in general stupid behavior on the beach. I've also reported illegal fish poaching, oversize, undersize, exceeding legal limits etc., to NCDMF as well.
That being said, my opinion on a few of the issues are as follows:
1. While I understand some changes have to be made in the park, I would like to see a little more concern as to how this is going to affect Humans rather than how it going to protect some species of birds that aren't even listed as "endangered".
2. I STRONGLY disagree with the NPS decision to NOT clear the vegetation around the pond at Cape Point, thus giving the Piping Plovers a chance to elude predation, nest far from Human presence, protect nests from overwash due to storms, high tides, etc. In other words give them the best chance at survival they have. I don't subscribe to the belief that Humans pose the most risks these animals face, I believe the biggest risk they face is Mother Nature herself. Cape Hatteras is a constantly changing spit of sand at the mercy of the sea.
3. I STRONGLY disagree with the NPS policy on killing some animals to save others. This is Man playing God at it's worst in my opinion. Also, I believe a Human presence on the beach helps to deter predation simply by being there.
4. I have made many friends in in the Outer Banks in the 40+ years I've been coming and I worry about them surviving down there with the severe restrictions I believe are coming. It's disconcerting that I always used to worry about Hurricanes, noreasters and so forth and now I'm worried about their own Government making it so hard to make a living they'll have to leave the land they love.
5. Pea Island Wildlife Refuge is just that, a Wildlife Refuge. Cape Hatteras National Seashore is a National Park. I believe Parks are for people to enjoy. Not to allow people to destroy wildlife, but to enjoy themselves. I have not seen people run over turtles, piping plovers, or any other form of wildlife down there in 40+ years, so I don't understand the need for such draconian measures now.
As I said, I understand changes are coming soon and I will abide by the rules and regs, but if things change drastically my family and I will just find somewhere else to go to fish, windsurf, and kayak. If my dog is not welcome in the park, then I'll have no choice anyway as he is a part of the family and goes where we go.
Good luck and I hope you make the right decision,
Fred Lewis freddrum@verizon.net

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: Dear Superintendent Murray, Please accept this letter as my comment on the ORV DEIS before you at this time. After reviewing the National Park Service DEIS I must disagree with all of the six alternatives within the document. I have, however, reviewed the 77 page Coalition for Beach Access Position Statement signed by several groups that were a part of the negotiated rule making process and it by far succeeds in furnishing the best visitor experience while maintaining the needs of protecting the fragile resources. As a long time visitor to the Outer Banks and as a person who favors conservation of natural resources and respect for wildlife, I feel that all six of these proposals are over reaching by various degrees and ultimately do not provide a reasonable solution or compromise of a common sense nature. The Coalition for Beach Access Position Statement is the closest alternative to a true, sensible alternative. Please consider all aspects of this alternative and put people back into the management of Cape Hatteras National Seashore.

Correspondence: I disagree with the statement: "There would be 1.0 mile of 'floating' ocean shoreline area for nonbreeding shorebirds. Area would be bypassed via the OR V corridor on the upper beach during nonbreeding season." found on page 101 under Alternative F, Oceanside Location 0.5 mile southwest of ramp 72 to inlet (Species Management Area). On page 124 Nonbreeding Shorebird SMAs Ocean Shoreline Areas state: "If resource protection staff determines that any single activity or collection of activities is negatively impacting shorebird use of a specific location, the NPS may implement additional restrictions on compatible activities." These statements allow for OR V access, and visitor use experiences, to be restricted and potentially eliminated year-round, if they are found to be "negatively impacting shorebird use". This is inconsistent with the assumption that alternative F socioeconomic impacts "would be long-term negligible to minor adverse or beneficial ..." found on page 145. As someone that was asked for economic consequences of closures, I can assure you that Ocracoke "Southpoint" is NOT defined as the specific location where the ocean and inlet shorelines meet. Southpoint is the term that visitors and business owners use to define the 2.5 mile area from ramp 72 to the inlet and along the inlet. Restricting access throughout any of this shoreline area will SEVERELY affect the socioeconomics of the region. Fishing the shoreline from ramp 72 to the inlet is unique as compared to the entire continental US east coast. Nowhere else from central Florida through New England do Gulf Stream waters push this close to the beach. Wintertime water temperatures are typically 5 to 10 degrees warmer in this area than anywhere else on Ocracoke or Hatteras Islands. I have watched these beachfront warm water phenomena, and the fish that it attracts, for 20 years. These warm winter waters allow locals and a small number of visitors to catch puppy drum from December through March. Although the economic impact of restricting access through this area during winter months may be small, the cultural impact of restricting access through this area would be severe during winter months. Ocracoke residents have historically cooked "drum stew", and local recipes and history highlight how unique this is to the area. Potentially limiting fishing access to this unique area would be

devastating to the culture of Ocracoke village. Most of the entire sound-side mudflats are already closed year-round for nesting and non breeding shorebirds. These flats and sound-side shoreline are closed to OR V's, pedestrians, and any visitor experience. This closed area accounts for well over half of the Southpoint area. An additional closure for nonbreeding shorebirds, aside from the sound-side mudflats, is NOT NEEDED. I recommend that the 1.0 mile of floating nonbreeding shorebird area be removed from Southpoint to prevent severe socioeconomic impact. Sincerely,
Alan Sutton PO Box 1025 Ocracoke, NC 27960

Correspondence:	Mike Murray, Superintendent Cape Hatteras National Seashore Recreational Area 1401 National Park Drive Manteo, NC 27954 Dear Superintendent Murray, Please accept this letter as my comment on the ORV DEIS before you at this time. My husband and I are both full time, lifelong residents of Hatteras Island. We were married in October of 2009, purchased a plot of land in Buxton, and are building a new house. We are expecting our first child in August, a boy. I am employed full-time by Cape Hatteras Electric Comany and my husband is employed full-time by Midgett Realty. He is a third generation member of their family business. We have a vested interest in protecting the future of Hatteras Island as a whole; our property, our friends?.the people who live here, access to the seashore and the beaches, the natural surroundings, wildlife, sea life, and all that makes this island special. After reviewing the National Park Service DEIS we must disagree with any of the six alternatives within the document. We have, however, reviewed the 77 page Coalition for Beach Access Position Statement signed by several groups that were a part of the negotiated rule making process and it by far succeeds in furnishing the best visitor experience while maintaining the needs of protecting the fragile resources. We believe that a reasonable and realistic approach into the management of CHNSRA will allow adequate protection of wildlife while maintaining a balance and necessary access to our beaches and seashore. As residents we are hosts of this beautiful island and welcome visitors. It has been our belief and experience that together we all share an interest and an obligation in preserving and protecting access to this land and the seashore for our families now. In turn, generations to come will be able to enjoy all that the Cape Hatteras National Seashore Recreational Area has to offer, both now and in the future. Please consider all aspects of this alternative and put people back into the management of Cape Hatteras National Seashore Recreational Area (CHNSRA). Thank you for your consideration of this very important issue. Respectfully, Kristen Midgett

Correspondence:	Dear Superintendent Murray: Ocracoke village, located on a small island in the Cape Hatteras National Seashore, is completely dependent on tourism for its survival. The National Park Service DEIS plan recently released for public comment has used visitor demographics for Fort Raleigh and Wright Brothers Memorial in the interest of time since the economic study for Cape Hatteras Seashore is still under way. This does not take into account the true visitor demographics within the Cape Hatteras area. For example, those that vacation at Oregon Inlet are very different from those that vacation at Ocracoke. The economic study of Cape Hatteras National Seashore must be reviewed and used before the final ORV plan is released. Otherwise, this plan has the ability to cause severe adverse impacts to our local commercial and/or recreational tourist fishing industry. The Ocracoke community is concerned that the local lodging, restaurants, services, and cultural industries will be adversely affected by this plan's strict access to the seashore. Much of our local population's heritage includes commercial, as well as recreational fishing, in the Atlantic Ocean and Pamlico Sound. Most of our tourists, who support the local businesses, come to the island for the ability to access these areas. With the large buffers still listed in alternative F, access to the seashore will be severely restricted. The Board of Ocracoke Civic and Business Association supports the buffer distances and access alternatives listed in the Coalition for Beach Access DEIS statement recommendations for the current DEIS plan on the Cape Hatteras National Seashore. Until there is a willingness to work with our local community, whose livelihood depends on the environment, we will oppose the restrictions imposed by alternative F of the current DEIS plan. Sincerely, Melinda Sutton Secretary Ocracoke Civic and Business Association

Correspondence:	I have spent many a wonderful day hiking through the outer banks of North Carolina. I especially enjoy Cape Hatteras and the preserved natural seashore. It is so wonderful to experience nature without honking cars, garishly colored beach houses blocking the view and noisy 4 wheelers. I would ask that they be severely imited on the cape and in fact, only used for those actually handicapped with no other means of accessing the area. Those who are able bodied do not need 4 wheelers to run up and down on! I have land myself, and it is a ongoing battle with 4 wheelers who do not stay on the dirt road (our fields of hay are much more fun to destroy), litter and leave gates open for our horse to wander through (I have invested in padlocks to solve that one). The majority of the 4 wheeling community I have had contact with believe they have a priviledge to ride where they please with no regard for others; basically large spoiled brats! I ask that we keep them off the beaches for safety and the pleasure of the rest of us who spend our vacation dollars in NC. Thank you, Anne Crews

Correspondence: Mr. Murray, There is no reason why the National Park Service has to close down our beaches to protect birds and turtles. I disagree with your thinking. Hatteras Village does not need another set back. Hurricane Isabel did plenty of damage to our island in 2003. Now the Park Service, under the direction of special interest groups, is trying to destroy what is left of our island. We are good hard working Americans. We love our land, our neighbors and all of God's creatures. We do not need the NPS to shut down miles of beaches to protect a bird or turtle. We have been caring for these creatures for a long time. Birds migrate and pass through and visit our beaches on the way north or south. They have been doing this forever, and will continue to do this. I honestly feel you are doing more harm than good. There has been no significant increase in the population of these creatures, but the population of our island is diminishing because many are forced to leave because their means of living as been taken from them when you close the beaches. If left to their own devices, Hatteras would survive and be a better place than trying to survive under the terms and conditions you have set forth. Please reconsider your actions. Whose life is more important, a humans or a birds? Thank you for your time.

Correspondence: Mike Murray, Superintendent Cape Hatteras National Seashore Recreational Area 1401 National Park Drive Manteo, NC 27954 Dear Superintendent Murray,
 Please accept this letter as my comment on the ORV DEIS before you at this time. My wife and I are both full time, lifelong residents of Hatteras Island. We were married in October of 2009, purchased a plot of land in Buxton, and are building a new house. We are expecting our first child in August, a boy. My wife is employed full-time by Cape Hatteras Electric Comany and I am employed full-time by Midgett Realty. I am a college graduate who returned to the Island to join the third generation working in our family business. We have a vested interest in protecting the future of Hatteras Island as a whole; our property, our friends?.the people who live here, access to the seashore and the beaches, the natural surroundings, wildlife, sea life, and all that makes this island special.
 After reviewing the National Park Service DEIS we must disagree with any of the six alternatives within the document. We have, however, reviewed the 77 page Coalition for Beach Access Position Statement signed by several groups that were a part of the negotiated rule making process and it by far succeeds in furnishing the best visitor experience while maintaining the needs of protecting the fragile resources. We believe that a reasonable and realistic approach into the management of CHNSRA will allow adequate protection of wildlife while maintaining a balance and necessary access to our beaches and seashore. As residents we are hosts of this beautiful island and welcome visitors. It has been our belief and experience that together we all share an interest and an obligation in preserving and protecting access to this land and the seashore for our families now. In turn, generations to come will be able to enjoy all that the Cape Hatteras National Seashore Recreational Area has to offer, both now and in the future.
 Please consider all aspects of this alternative and put people back into the management of Cape Hatteras National Seashore Recreational Area (CHNSRA).
 Thank you for your consideration of this very important issue.
 Respectfully,
 Thomas A. Midgett

Correspondence: I disagree with the scope used in the NPS ROI when evaluating the overall socioeconomic impacts proposed under the alternatives. (P270?) The ROI includes areas that would not be impacted by the proposed alternatives. The access closures proposed do not even appear in the ROI evaluated which would grossly skew the numbers towards ones that would have little effect. The ROI should be directly related to the area that the limits proposed would be imposed upon. Including the large population of non-affected areas attenuates the impact to the villages that would be directly and most impacted by the proposals. It is in these smaller villages (vs. the larger community of the Northern beaches) that the brunt of the economic impact will be felt by

those small businesses that are the majority of the providers in these smaller areas. It is these small businesses that local residents, visitors and tourists come to look forward to for their cultural "Island" experience. It is also these smaller businesses that make up the bulk of the landscape of these smaller villages. It is these cultural landmarks that would be affected the most and directly. The inclusion of such a board area that is not in scope is a flaw in the analysis done.

Correspondence: I grew up in Cape Hatteras and lived there for 15 years. Hatteras is special in that vehicles are allowed to drive on the beaches and enjoy the beaches. The entire economy depends on tourists and will suffer severely if vehicles are not allowed on the beaches. If they are not able to drive on the beach, then a significant number of tourists will go somewhere else. I know that I will not drive another 1.5 hours when I can get the same thing somewhere else. Hatteras will be just another over-regulated beach like everywhere else. In this economy it makes absolutely no sense to close entire beaches and kill an economy. There has always been certain areas restricted during nesting season, but not the entire beach. There has to be some compromise.

Correspondence: Date: May 10, 2010 To: National Park Service From: Subject: DEIS Off-Road Vehicle Management Plan Comments My comments concern the DEIS of the Off-Road Vehicle Management Plan prepared by the National Park Service (NPS) for the Cape Hatteras National Seashore Recreation Area. 1) Page 201: I disagree with the NPS statement: "Even with resource closures in place, protected species are still at risk [from pedestrians and ORVs]." No Piping Plover deaths have been attributed to ORVs. ORV violations continue to decrease as signage and education improve. Pedestrian violations are much more significant than ORV violations. It seems to me that any transgressions into protected area are the result of lack of NPS manpower and enforcement than the public purposely and willfully violating out of bounds areas. 2) Page xxiv: I question the statement of as per the DEIS: "Carrying capacity would be a 'peak use limit' determined for all areas based on the linear feet of beachfront?" If you close off huge sections of the beach, you force more people into smaller areas, potentially resulting in more resource impairment and diminished visitor experience. 3) Page xix and page 23: I am against having two different closures rules pertaining to the North facing beaches (North side) and the South facing beaches (South side) as per the grid outlined in Alternative "F". I disagree with the NPS proposal to close the beaches in villages of Frisco, Hatteras and Ocracoke Villages to ORV access longer than the traditional May 15 to September 15 period for the Northern beaches, even though seasonal visitor statistics are similar for all villages. Please, make them the same: May 15 -> September 15. 4) Page 1: I agree with your statement "ORVs have long served as a primary form of access for many portions of the beach in the seashore, and continue to be the most practical means of access and parking for many visitors." However, pedestrian only areas discriminate against individuals with limited mobility due to age or physical impairments, families with small children, and those wishing to engage in activities requiring recreational equipment (boogie boards, beach umbrellas, beach chairs, coolers, fishing rods and tackle, etc) 5) Page 53: I disagree with the special use permit proposed guidelines. It is impractical to allow the transportation of disabled visitors to the village beaches and then require the vehicle to be returned to the street or parking area. This necessitates the disabled person to have a driver to drop him (or her) off, then drive to a parking area, then trudge a long distance to the site of the drop off, then trudge the long distance through the sand back to get the vehicle. Suppose the handicap person wants to go to the beach, is capable of driving himself, yet cannot find another person to go with him? Does he now not go to the beach? This rule creates unnecessary hardships and risks in the event of an emergency as well. 6) Page 121 ? 127. I strongly disagree with the buffers as presented. We must allow for pass-thru corridors. The beach is linear with the ocean buffering on one side and the dune line on the other. For example - If you pinch off access on one side of a 4 mile linear beach and pinch off access on the other side of the 4 mile section of beach with no corridor, then you effectively have closed off all 4 miles of the beach because you CAN'T get there. The proposed bird buffers are too large, blocking access to the interior sections from the two "buffered" ends. I propose ORV pass-thru only corridors and to use breeding / nesting buffer distances to establish ORV pass through only corridors to ensure beach access in a way that does not hinder resource protection. I believe pass through corridors should be maintained for pedestrians and ORVs in all areas of the Cape Hatteras National Seashore Recreational Area throughout the entire breeding and nesting season. Corridors are vital to providing access in a way that does not hinder resource protection. Piping Plover unfledged chicks buffer should move with the brood as it relocates to reliable food source, not expanded. The 1,000 meter distance for the piping plover is way too large and not based upon peer reviewed science. A more rational distance would be 200 meters per other sites in the nation for the piping plover. Ample scientific evidence and precedent exists to support a 200 meter buffer. Buffers for other species, including American Oystercatchers, Least Terns and Colonial Waterbirds must also be changed. An effective 30 meter buffer should be established for these species rather than the 300 meter closure outlined in the DEIS. NON-ENDANGERED BIRDS should not have same protection as if endangered. Not allowing ORV access is paramount to denying the public access to these beaches. 7) Page 468: I disagree with the limitations imposed on pedestrian and ORVs. Corridors or bypasses should be provided thru, around or below high tide line in all SMAs during entire breeding season to maintain access. 8) Page 124: I strongly disagree with the NPS slant of providing for over protection of resource management over that of the public's right to access the beaches. Pro-active initiatives include: Vegetation Management, Habitat Management, Enhanced Predator Management, Colonial Water bird social attraction, Piping Plover check fledge rate, Piping plover chick buffer distance, and pass-through buffers during the incubation period. Opportunities to implement less restrictive closures as a result of the above initiatives should be considered more frequently than the 5-year periodic review process identified in the DEIS. 9) I disagree with the NPS Resource Management Pedestrian / ORV Closure Policies. These policies address the least significant factors affecting nest survival with little chance to have more than negligible impact. For example: the AMOY Nest Failures are predominately due to non-human events. Using your own stats, the mammalian predation is 54%, Storm / Lunar Tides: 29%, Nest Abandonment: 6%, Avian Predation: 5%, and Ghost Crab Predation: 3%. So what is the percentage due to human interference: just 3%! It's insignificant, yet the NPS wants to ban humans when their actions provide very little influence on the success rate of breeding birds and turtles. 10) I disagree with the stats of breeding plovers and the other birds in the Park when the NPS does not adequately consider locations neighboring the Recreational Area that are part of the same ecosystem, namely dredge and spoil island that are located just yards away and within sight of the seashore. These birds are part of the same ecosystem and should be included. Those spoil islands, developed by man from dredging the waterways in the Pamlico Sound for channel upkeep are slammed full of birds. The reason why so many birds? NO PREDATORS. SO, birds are not as stupid as one might think. You have to count these birds and incorporate them in the stats when the NPS is talking about any so called decline in breeding pairs in the National Park. 11) Page 1: I do not think the DEIS responsibly addresses the cultural resource issues. The very purpose of the DEIS as set forth in the National Environmental Policy Act (NEPA) is to protect and preserve natural and cultural resources in the federal decision making process. In the DEIS, the statement "protect and preserve natural and cultural resources" appears in the first sentence of the first page of the plan, in the Purpose of the Plan section, and numerous times thereafter. Yet, the 810 page document devotes only two paragraphs to analysis of cultural resource issues. 12) Pages 270-281; 561-598: I strongly disagree with your economic analysis of the impact of the DEIS. The region of influence (ROI) incorporates the Northern Beach communities, including Kill Devil Hills, Kitty Hawk, Southern Shores and Duck. These areas are almost completely disconnected from ORV use and access issues relating to the Seashore. ? Inclusion of the Northern Beaches in analysis significantly dilutes estimates of economic impact on the 8 Seashore Villages ? Analysis of economic impact to the Seashore Villages appears to be significantly down played. Emphasis in DEIS is on the ROI-wide or county-wide level impacts. ? Nowhere is it clearly addressed that the overwhelming majority of negative impacts will be felt by small businesses in the Seashore Villages rather than by overall economic interests within the greater ROI. On page xlvi. Alternative F is characterized as having a "negligible to moderate" adverse impact on small businesses. I strongly disagree with this statement. I believe the negligible to moderate projection is inaccurate and relies on economic surveys that has not yet been published. Furthermore, this material is not expected to be added to the

DEIS until after the public comment period has ended. Based upon the economic harm we have already experienced under the consent decree, Dare County projects the economic impact of Alternative F to be substantial. Beach closures have already had a devastating and unfair impact on many Dare County Businesses, causing foreclosures, bankruptcies, lay-offs, cutbacks, expensive refinancing, and depleted college funds and savings accounts. Pages 270-286, 561-598: The socio-economic data and analyses are incomplete and erroneous and result in an understatement of the effect the restrictions will have upon the Island, the region and the state of NC. The US Park Services answer: Businesses will have to "adapt" to the new rules. (p.383) The negative economic impacts of the decree ARE KNOWN, so to say that the added restrictions would have negligible to moderate impact is indefensible. 13) Overall Visitor Counts - Overall visitor counts appear to include visitors to Fort Raleigh National Historic Site and the Wright Brothers National Memorial. A large percentage of these visitors vacation in the Northern Beaches communities and recreate on the non-federal beaches outside of the Seashore. Visitors who patronize the Fort Raleigh National Historic Site and the Wright Brothers National Memorial but do not visit the actual seashore areas need to be factored out. Maintenance of Future Access to Cape Point and South Point Ocracoke: All socioeconomic analyses related to Alternative F are predicated on the assumption that access corridors will remain open for at least an appreciable portion of the visitor high season. Under Alternative F, the access corridors will be subject to Resource Closures based on buffers similar or identical to the Consent Decree. Unless some predictability of access to Cape Point and South Point Ocracoke can be assured, economic analyses predicated on assumption of access are fundamentally flawed. Why would a group of surf fishermen want to come to Hatteras Island to surf fish if they are not sure they can access the prime fishing grounds at Cape Point? The answer is they won't come. If they don't come, they don't rent vacation homes and spend their money on Hatteras and Ocracoke Islands.

The definition of the Region of Influence (ROI), faulty data on economic activity generated by specific type recreational activity, incomplete visitation/business survey data, inflated overall Seashore visitor counts pertaining to beach use, and flawed key assumptions concerning the maintenance of access under Alternative F, all lead to inaccurate conclusions in the socioeconomic analyses. Specifically, these inaccuracies can be seen as understating the negative socio-economic impact of the Seashore Villages. Further, this negative impact will be absorbed almost entirely by Small Businesses. Neither of these important aspects of the management alternatives are adequately presented in the DEIS. 14) Page 136: I strongly disagree with your pet restriction proposals. The "prohibition of pets in the Seashore during bird breeding season including in front of the villages." = No Pets in public areas beaches, campgrounds, soundfront, foot trails, park maintained roads -from March 15 ?July 31. 15) Pages 125; 392 ? 396: SEA TURTLES. I disagree with the stats and procedures proposed. I think endangered sea turtles would benefit from management practices now in use at other federal seashores that are more proactive in efforts to achieve nesting success. This includes relocating nests to more desirable locations as is done in other state and federally controlled areas. The Cape Hatteras National Seashore Recreational Area is on the northernmost fringe of turtle nesting locations for the southeast, accounting for about 1% of all turtle nests. Proposed buffer areas are not needed for protection of the turtles and amount to overprotection. 16) Pages 97- 101. I strongly disagree with proposals in this section saying that ORVs will be prohibited year round between ramps 27 and 30, at Hatteras Inlet (Hatteras Spit), Ocracoke Inlet (North Ocracoke Spit) and various other locations. Not allowing ORV access is paramount to denying the public access to these beaches. They are located miles from the nearest parking or paved road area and too far to access on foot. As a matter of course, there has been no breeding of piping plover or other endangered species at the Hatteras Island Inlet (spit) area in the past 6 years 17) Page 104: I disagree with the proposed night time driving closures. Per your proposals, night driving will be prohibited between May 1 and November 15th, forcing visitors off of the beaches early in the evening and preventing sunrise surf fishermen access in the morning. I propose a more moderate night time ban if one is needed, perhaps from June 1 ?September 15 with times being 1 hour after sunset and 1 hour before sunrise to allow beach goers to gather their stuff and exit the beach area. Certainly more proactive measures such as relocating nests prone to weather and ocean events would dramatically increase the nesting success rates. 18) Page 121: I disagree with the proposed beach closings, including pedestrian access from March 15 until July 31 in 8 different beach locations which have traditionally been available. Please leave these areas open to beach walkers, shell collectors and those that want to access the beaches in these areas. Conclusion: Please, incorporate access corridors through any SMA so we can get to the open beach beyond. Incorporate the birds into the count that nest on the spoil islands. Base your buffer zones on peer reviewed science and scale them back to more reasonable distances as discussed. It is neither logical nor reasonable to spend so much time, money and energy to overprotect a bird (Piping Plover) in the Cape Hatteras National Seashore that is on the southernmost fringe area of its breeding ground. That goes for the loggerhead turtle that is in its northernmost breeding area. Let's scale back the buffer zones. You can always increase at a later date. The USPS is leaning way over the line on over protection and not enough on the public's right to enjoy the beaches of the National Seashore. The proper balance is not achieved in the propose DEIS and needs to be modified so that the proper balance of reasonable resource protection and access to the beaches of the National Park is achieved. I could sum it up by saying "Protect, not Prohibit." Thank you,
Connie Lalonde Vacation Home Owner

Correspondence:	Please accept the following as my comments on the ORV DEIS before you at this time. After reviewing the NPS DEIS I must disagree with any of the six alternatives within the document. The DEIS management alternatives has little to do with developing a responsible off road vehicle management plan and more with further intrusion on visitor freedoms within the Cape Hatteras National Seashore and Recreation Area as requested by animal rights and environmental groups.						

As a visitor of the recreational area for over 10 years and an ORV operator on its beaches, I am saddened that there are those that feel citizens are not responsible enough to balance both recreational enjoyment with environmental stewardship. Most who enjoy the area do so with intentions of return visits on a yearly basis which have become family traditions. During these visits individuals not only enjoy being on the beach and fishing but also the beauty of the island and its wildlife that others feel ORV operators have no interest in. Many visitors belong to fishing groups which donate untold amounts of money towards keeping fish stocks at acceptable levels. Many belong to surfing groups that donate untold amounts of money towards keeping beaches clean and ocean waters clean. Many visitors belong to groups such as Ducks Unlimited who donate untold amounts of money to keep wetlands clean and available for waterfowl and other inhabitants. The list can go on. This issue comes down to either a political issue to which involved parties in the decision process feel they cannot act against the pressure of the lobbying party or the highlighting of data which makes up a very small percentage of visitors to the park that don't adhere to the rules by which all others conduct themselves. Please don't let the actions of a few dictate the direction for the majority. Do those actions sometimes cause harm to animals and environment? Unfortunately they do, but hurricanes and high tides can have the same detrimental effect on bird and turtle nesting areas within the beaches of Cape Hatteras. Give the local community and the traditional visitors the power to assist the Park Service with enforcement and the education of the frailty of the park's ecosystem along with the role and responsibility of everyone visiting Cape Hatteras to keep the Cape clean and safe for everyone and everything. We just don't need exaggerated rules to make this happen. Please don't make Hatteras Island an extension of the existing Pea Island National Wildlife Refuge. The refuge's own objectives already provide what seem to be the end game in the DEIS management plan.

I have reviewed the 77 page Coalition for Beach Access Statement signed by several groups that were a part of the negotiated rule making process and it by far succeeds in furnishing the best visitor experience while maintaining the needs of protecting the fragile resources. Please consider all aspects of this alternative and put actual people, not lawyers, back into the management of Cape Hatteras National Seashore.

With great respect and great concern,
Chester E. Kovalesky Jr. Durham, NC

Correspondence: As an avid angler on the North Carolina seashore, I am strongly opposed to the National Park Service (NPS) preferred alternative, Alternative F, in the DEIS and urge you to make significant changes to the preferred alternative in order to provide both reasonable resource protection and reasonable public access to public land. Recreational fishing is one of the most enjoyable American pastimes, and Cape Hatteras National Seashore has some of the best surf fishing locations on the east coast ? accessible only by ORV.
Alternative F is the most restrictive management option to date, far exceeding any sense of balance between resource protection and public access and betraying all promises made to the public regarding recreational uses in the seashore. The majority of the provisions included within the preferred alternative far exceed anything proposed by a majority of the Negotiated Rulemaking Committee, including excessively large resource closures (buffers), unnecessary year-round and floating closures, and the lack of access corridors around or through resource closures.
In order to restore balance to the DEIS, I highly recommend that the NPS revisit the proposal put forth to the Negotiated Rulemaking Committee in December of 2009. It provides the necessary protections for wildlife resources while having the support of a majority of the local community. Without reasonable ORV access, responsible anglers like me, and the local economy that is supported by recreational fishing, suffer greatly. I urge you to provide a better balance between resource protection and recreational uses by incorporating the December 2009 recommendations from the Negotiated Rulemaking Committee into the preferred alternative.
Sincerely,
Curtis Hetherington

Correspondence: This concerns the management of Cape Hatteras National Park with the draft plan of the ORV management. I believe that the plan is too restrictive to the people of the area, the people who own homes, and the visitors from all across the USA and foreign countries. When we were visiting the Park last summer, we were not allowed to walk to "the point" near the water's edge which is more that 1,000 meters from the nesting birds. Your restrictions seem to go way beyond the interest of preservation of the wildlife of birds and turtles. I believe that the plan that has been selected should be revised to allow more human contact on the beaches.
Buffers are very important to the nesting birds, but what are the limits to these buffered areas? In our locality we have nesting bald eagles that tolerate human closeness - we can observe and appreciate the entire cycle of raising young chick within 100 yards. No one wants to disturb them and they do not. I do not see any scientific literature that supports your buffered area/restricted areas of the local nesting birds. In fact, if the local people and visitors were invested in helping with the long-term restoration of the animals, there would be a great outpouring of support.
At the present, due to the removal of people from the beach during the summertime, many predators such as raccoons and rats are hungry (the fish entrails are removed); therefore, they feed on the small birds and chicks. The new regulations have completely upset the wildlife cycle as it has stood for many years. There is an overabundance of these predators due to the new guidelines. It is a fact that most nesting birds would be quite successful on islands in the sound without human or predator interference. Can this be accomplished?
The National Parks were made for recreation for the citizens of America. Somehow the citizens have been left out of the formula with the new plan. Human life on the outer banks has had a history for over 300 years which should be taken into account when preparing a future for years to come. These people can not be cut out with any regard, but instead, they should be listened to and respect their opinions which are valuable.
As you read this comment you can understand that I do not like the present plan and hope that agreement can be reached that balances all the parties involved. At the present the citizens of the area have been regulated to a position that severely impacts their life to a very negative degree.
Thank you for the freedom to write my opinion. I hope that the future will be bright and successful of all concern: people, birds, turtles, wildlife and the sand and ocean.

Correspondence:	As a tax payer, I am most disturbed at being denied beach access in my vehicle. My invalid mother loves the beach and is not mobile enough to walk over the dunes. We visit the Cape Hatteras area twice a year and spend money on fishing licenses, restaurants, cottage rental, shopping. If we are denied vehicle beach access, we will not return to this beautiful area. Pea Island wildlife preserve offers protected areas for plovers, etc. I can't believe that a compromise can not be worked out. The residents of this island should not lose their way of life nor they means for making a living. When you close the beaches, you will lose tourists.

Correspondence:	To our Government; I disagree with some of what you are doing .I love nature and wildlife But I love this place to be able to walk anywhere on the beach and see things that come up on shore is a blessing.I believe God would rather see his people using the beach .Than to save it for the birds and animals alone. There are places on the beach where people do not walk or fish.This community is a second home for us .We know the people who come to Fairhaven Church that live down here and they need the beaches open for thier lively hood . We are here for 4 months out of the year .Camp at Ocean Waves campground .2 months in the spring and 2 in the fall. All the food we buy at stores and eating out 3 to4 times a week. The resturants will go out of buisness if this happens and home owner will loose the rental homes and ALL the bait shops will go out buisness also. There are so many of us here who drive on the beach to fish because of health reasons.We are older people who come down in the spring and have to have help ,here is this campground we have people who have walkers and canes.There is no way I can fish on the beach if I can't get there. If we can not go on the beaches how are the bird watchers going to see these birds?I know they need to be saved BUT there has to be another way . PLEASE HELP AND SAVE OUR BEACHES FOR THE PEOPLE AND NOW JUST ANIMALS AND BIRDS. Thank you so very much for trying to find a way to help us all. Jo & Garry Moorefield.

Correspondence:	Mike Murray, Superintendent Cape Hatteras National Seashore Recreational Area 1401 National Park Drive Manteo, NC 27954 Dear Superintendent Murray, Please accept this letter as my comment on the ORV DEIS before you at this time. After reviewing the National Park Service DEIS I must disagree with any of the six alternatives within the document. I have; however, reviewed the 77 page Coalition for Beach Access Position Statement signed by several groups that were a part of the negotiated rule making process and it by far succeeds in furnishing the best visitor experience while maintaining the needs of protecting the fragile resources. Please consider all aspects of this alternative and put people back into the management of Cape Hatteras National Seashore. Allison Rucker Kill Devil Hills, NC

Correspondence:	Our family has been going to Ocracoke Island for 30 years. We swim, walk, collect shells, fly kites, fish, and generally enjoy the "wildness of mother nature". It is where we go to recharge and relax and forget about the stresses of our daily lives. We are there 1 or 2 weeks per year and pump \$2,000-\$3000 per year into the local economy from house rental, dining out nightly and making local purchases. We are in support of returning to the Interim Plan which managed the Seashore just fine for decades. However, since that is unlikely to happen, I would like to present our rebuttal to the DEIS plan, specifically Alternative F. Anyone with an understanding of Cape Hatteras knows that the best fishing, swimming, and shelling spots can be miles from the nearest asphalt. People use street-legal, licensed vehicles to access those areas. No four-wheelers are allowed. The speed limit on the beach is 25 MPH and most people drive slower. All state laws are in effect as are additional federal laws. Compared to other areas the beaches of Hatteras Island are virtually free of litter. As outlined on pages xii, xvii, and 468 of the DEIS, corridors would only be permitted in Management Level 2 portions (ML2) of Species Management Areas (SMA). In more restrictive Management Level 1 portions (ML1) corridors would not be permitted at all. We disagree with this position. Corridors are vital to providing access in a way that does not hinder resource protection. Corridors provide a small path around temporary resource closures in order to provide access to OPEN areas that would otherwise be blocked. Also, the closures prevent pedestrians from walking on the beach, not just people driving trucks. In some instances, corridors can be made through or around closure areas. In other places corridors can be established below the high tide line. Since unfledged chicks are not found in nests between the ocean and the high tide line, this type of pass through corridor would have no negative effect on wildlife and should be established throughout the seashore. Therefore, we believe pass through corridors should be maintained for pedestrians and ORVs in all areas of the Cape Hatteras National Seashore Recreational Area throughout the entire breeding and nesting season. Numerous shorebirds in Cape Hatteras National Seashore are given higher levels of protection in a proposed off-road vehicle management plan than what the law ever intended the birds to have. The piping plover is the only seashore bird species protected under the Endangered Species Act. It is threatened but, not endangered. Other birds covered by the NPS are not even threatened, for instance the American Oystercatcher. The NPS also needs to count birds on the dredge islands. Why are these birds not included already in counts? Buffers: DEIS pages 121-127 discuss protective buffers. We believe these are inappropriately large. For example, Piping Plover unfledged chicks, are given a protective buffer of minimum of 1,000 meters in all directions. the Piping Plover, a species classified as threatened and not endangered, is given a level of unprecedented protection in Alternative F. A 1,000 meter buffer in all directions represents over 771 acres. The DEIS does not cite any peer-reviewed science in supporting such closure. We believe a more appropriate & effective buffer would be 200 meters which is the buffer used at other National Seashores. Since these birds are not found between the high tide line and the water, this is another reason to always permit corridors. Buffers for non-threatened species could be reduced from the 300 meter DEIS recommendation to 30 meters. As for Turtle closures, we have always believed the roping off that is done to protect the nests are adequate. The National Park Service should consider						

0012641

turtle management practices successfully used in other federal and state areas to achieve nesting success. More proactive measures include relocating nests to more desirable locations, which is routinely and successfully done in other areas. This would be the best method to protect the nests when hurricanes are approaching.

The DEIS plan would prohibit dogs from the seashore. Our family feels the current leash requirements for dogs are more than adequate. I can understand forbidding a dog in a life guarded section of beach which is extremely crowded but it makes no sense if a family has arrived at an area by ORV.

President Roosevelt had a vision for the seashore when Congress first designated the Cape Hatteras National Seashore Recreation Area as America's first national seashore. Generations have enjoyed its uniqueness and beauty. We are all stewards of the wildlife there and the majority of us go under the guise of "leave nothing but footprints". Hatteras and Ocracoke Island have flourished through the years as tourism is the main economy there. The Consent Degree has devastated many businesses with revenue and jobs lost. We urge you to revise alternative F and save our seashore. North Carolina's Senators as well as Dare County have and various preservation groups have made valid comments and suggestions and our family would like the NPS and the Department of the Interior to listen to them.

Sincerely,

Terri and Dennis Osborne 2000 Carbon Hill Dr. Midlothian, VA 23113

Correspondence: We do not think that allowing off-road vehicles on the Cape Hatteras Nat'l Seashore is a good idea environmentally. The off-roaders will inevitably damage the fragile ecosystem on Cape Hatteras. We need to preserve this area for the wildlife that live there and for future generations to enjoy. The noise and pollution will be disruptive and destructive.

Correspondence: dear mr park service, i am a 55 year old man, fourth generation hatterasman. my wife and i retired here after hurricane isabel. i wasn't fortunate enough to live all my life here. i spent 29 years of my life running 2 businesses, but i came to hatteras just about every weekend and holiday for those 29 years. my grandfather was a successful poundnetter. he was interviewed twice by the national geographic and twice by duke university for being a man that had never left the island and had more knowledge and common sense than most men today. as a kid i sat on his front porch and listened to him tell me stories where the breach was in 2003 from hurricane isabel that there used to be a bridge there, and he told me that we would probably see that bridge again. well, we didn't see the bridge but we did see the old pilings from where the bridge used to be in my lifetime. as far as the beach and as far back as i can remember, weather permitting, after he ate dinner every evening, he left the house and walked the beach. he met many people and he saw and experienced all the wildlife, and he talked about birds and animals that came and went on hatteras island, and how alot of animals and birds were brought here by the rich northerners during the waterfowl haydays before limits. as we all know who study the wildlife of hatteras island, the majority of the birds, not just waterfowl, migrate in one form or another, and i have yet to meet a person who intentionally wants to kill or mane a turle or a piping plover, and therefore, just like in the past and just like i was taught, things will come and go on hatteras island. so be careful of what you are protecting. the park service can continue to push the people off hatteras island, like my grandfather predicted many years ago, and then you may have protected the piping plover and you may have protected a turtle, but while doing so you have ruined a way of life that goes back to the beginning of our country's history. at that point, you start destroying the united states government because from the beginning of our nation, we were put here to progress. So i would bank on the things my grandfather taught me about hatteras island the sounds and the ocean and you will never be able to put it back like it was. therefore, you should leave the people of hatteras island and their visitors alone and drop this ridiculous issue of chasing birds and turtles that sometime never exist up and down the seashores of our islands and outer banks. sit back and take a deep breath and take each village one by one and the impact of what you are doing to all those villages combined and equate that against some piping plovers that can fly away and go anywhere they want to go and a few turtles have the whole ocean and beaches to theirselves. so, this is my position on the over eight hundred pages that were written about hatteras island and how off road vehicle use should be controlled when in fact you may be putting your own selves out of a job. look what the government has allowed to happen to economies all over the country and each of every one of you reading this letter is not exempt. so be careful what you wish for. thank you. david ballance

Correspondence: My wife and I have been coming to Avon, NC for yearly vacations for the past eight years. Most recently over the past four years, we have been able to share the wonderful beach experience with our young sons. Closing off beach access will take away life long memories and experiences from not only our family, but friend's families and countless others that flock to the Outer Banks for recreation and vacation. In addition, it is readily apparent that a closed national sea shore would severely impact commerce, real estate investments, state revenue and those who's livelihoods depend on the tourist trade. I am an advocate of managing the environment and our natural resources, but this approach to totally cutting off access to a national treasure is not in the best interest of all involved. We need to find common ground and consensus between constituencies on both sides of the issue so that everyone can continue to enjoy this cherished destination while also being mindful of the preservation of the environment. Entirely closing off access is a totalitarian approach that ignores the voices and desires of countless people that support the Outer Banks, and is frankly un-american.
Eric Wong

May 11, 2010
Mike Murray, Superintendent Cape Hatteras National Seashore 1401 National Park Drive Manteo NC 27954 Sent via internet to
Dear Mr. Murray:
I am hereby commenting on the DEIS Off-Road Vehicle Management Plan draft dated March 2010.
1. Executive Summary, page i, paragraph 1: I disagree with the naming of the area. Please change it to the Cape Hatteras National Seashore Recreational Area as defined in Title 16, Chapter 1, subchapter LXIII, dated June 29, 1940.
2. Elsewhere in the document, where the area is referred to as "Cape Hatteras Seashore", please change it to "Cape Hatteras National Seashore Recreational Area". (I will refer to it as Cape Hatteras National Seashore Recreational Area or CHNSRA from here on.)
3. Page 1. Purpose of the Plan. I disagree that the plan sufficiently addresses the charge to protect and preserve cultural resources. The glossary includes "cultural practices" as part of the definition of cultural resources.

Driving on the beach plays a large part in the culture practices of the local residents and visitors who have traditionally accessed the beaches via ORV for gatherings of families and friends and for surfing, picnicking, bathing, fishing and other beach activities. ORV access to a majority of the shoreline is an integral part of the island culture and should be considered more fully in the plan.

4. Page 1. Purpose of the Plan. I agree with the statement: "ORVs have long served as a primary form of access for many portions of the beach in the Seashore, and continue to be the most practical available means of access and parking for many visitors." However, designating pedestrian only or having different buffers for ORV and pedestrian access discriminate against individuals with limited mobility, families with small children, and those who use heavy or bulky recreational equipment (fishing equipment, surf boards, picnic equipment, kite boarding equipment, etc.). The enabling legislation established the area for the enjoyment and benefit of the people. Banning any class of people from access to the shoreline goes against the enabling legislation.

5. Page 1. Purpose of the Plan. I agree with the statements: "These habitats are also home to numerous other protected species, as well as other wildlife. The NPS is required to conserve and protect all of these species, as well as the other resources and values of the Seashore."

However, the plan does not allow for conservation and protection of all species. According to the 2009 Annual Piping Plover report, the NPS trapped and removed 464 animals including 25 red fox, 1 gray fox, 152 raccoons, 102 opossum and 105 opossum kits, 10 nutria, 3 coyote and 1 mink. The report did not detail what was done with these animals. Since other animals were taken to shelters or released, I assume these were killed. The plan does not address how these animals will be conserved and protected.

6. Page 2. I agree that the plan should provide protection for threatened, endangered, and other protected species. I disagree that North Carolina species of concern and non-endangered species should be given the same protection as endangered species.

7. Page 7. I disagree that the plan should be reviewed at five year intervals. It should be reviewed annually and as social, economic and environmental changes may occur. What would happen changes were made to the threatened and endangered species lists? What if the economic assumptions are incorrect and there is a large increase in unemployment, foreclosures, and bankruptcies? That has to be considered in the plan.

8. Page 8. I disagree with targets for piping plover. Statistics show that the number of mating pairs of piping plovers is closely associated with severe weather en route to and from their wintering grounds in the southern U. S., particularly Florida. Having a target that has not been met during the last 17 years is unrealistic, given the association with factors that are beyond the control of the NPS. Page 186 of the DEIS lists that there were 331 breeding pairs of piping plover in DE, MD, VA and NC in 2008. The 11 counted in the CHNSRA account for a tiny 3.32%.

9. Page 16. I disagree that ORV driving is a recreational activity. It is, as it has been historically, a means of getting from one place to another on the beach. It is a means of getting from the road to the shoreline. No one that I know drives on the beach just to drive on the beach.

10. Page 31. I agree that local businesses are concerned with limiting ORV access to the shorelines. It has been well-documented by local businesses that their income decreases significantly when closures are in effect. Please include rental home owners in the "small business category".

My husband and I own one oceanfront rental home in Buxton and one sound front rental home in Frisco. The 2010 oceanfront income is down by 7% and our sound front income is down by 18% from 2009. Oceanfront renters are less affected by ORV closures (especially ocean fronts in Buxton which have pedestrian access to prime fishing spots) than sound front renters who rely on ORVs to access the beach. People have written in our guest book and emailed me that they were very unhappy with the beach closures.

11. Pages 97 to 101. I strongly disagree with proposals that would prohibit ORVs year round at various places including but not limited to the area between ramps 27 and 30, Hatteras Inlet on Hatteras Island and Ocracoke Island, and Ocracoke Inlet.

These areas contain some of the best fishing and family fun beaches in the National Seashore Recreational Area and are primarily inaccessible by foot. They are key areas of "cultural practices" of family outings and fishing. Closing them year round is unnecessary for the protection of any threatened or endangered species. For example, the NPS 2009 Piping Plover Report, page 17, showed no piping plover observations at Hatteras Island Spit between August 2008 and March 2009, less than ten sightings in August 2008 at Cape Point and none over the next seven months, and zero to ten sightings per month at northeast Ocracoke Island. There have been no breeding piping plover or other endangered species at Hatteras Island Inlet spit in six years. There has been no evidence of killed piping plover chicks due to ORV usage. Keeping these areas accessible by ORV is necessary for the survival of the residents and home owners of Hatteras and Ocracoke Islands.

12. Page 104. I disagree with the proposed night time driving restrictions. I agree there should be a ban on ORV night driving during turtle mating season and at times they are likely to be mating. Please limit the restrictions to mating season (more like June 1 to September 15) and when it is dark outside (more like after sunset to one hour before sunrise). Furthermore, I support the moving of turtle nests to areas that are not subject to wash over. This would serve two purposes: increased survival of the species and increased public access to the beaches.

13. Page 108, alternative D. I disagree that ORV parking should be limited to one deep. Driver discretion should be used as to not obstruct the flow of vehicles.

14. Page 108, Carrying Capacity. I disagree. There should be no carrying capacity restrictions. The cost of enforcing these would outweigh any environmental benefit. Do you propose that if the capacity is reached that there would be a waiting line to access the beach? Think about it? People would keep their ORV engines running sitting inside their ORVs with the air conditioning on, children would be climbing on the dunes, etc.

15. Page 110. I disagree with the proposed speed limit. I feel it should be 10 mph.

16. Page 113. I disagree with the proposed ban of pets in the CHNSRA during bird breeding season. I propose dogs be allowed on six-foot leashes at all times in all areas. Dogs on six-foot leashes pose no threat to any species of any kind.

17. Page 127: Closures and buffers. I disagree with the proposed buffers. I support ORV pass-through corridors in all areas of the National Seashore Recreational area, except in front of the village ocean front homes. When one section of beach is closed (for example, north of Billie Mitchell Field) and another is closed (for example, south of Cape Point), although a relatively small area is officially closed, the effect is closure of miles of beach. Pass-through corridors near the high tide line will have no impact on endangered or threatened species. The buffers for unfledged piping plover chicks should be moved as the chicks move. A buffer of 1,000 meters is uncalled for and could be as small as 200 meters, according to research. Buffers for other birds listed in the proposal should be reduced to 30 meters, which is an adequate distance, supported by research.

18. Page 130. Protect cultural resources? I disagree that plans C through F protect the cultural practices of the island people. As stated on page 1 of this letter, cultural practices are defined as being part of the "cultural resources". The plans put a much higher emphasis on birds and wildlife than human access to the beaches of the Cape Hatteras National Seashore Recreational Area. This is not a wilderness area. The 1938 charter that established the area did so for the enjoyment of the people for recreational purposes.

19. In general: ORV and pedestrian access to the shoreline is an insignificant factor in the survival of the piping plover on Hatteras and Ocracoke Islands, as detailed in the NPS 2009 Piping Plover report. When the death rate due to tropical storms and late season hurricanes during PPL southern migration is factored in, ORV and pedestrian traffic in the Cape Hatteras National Seashore Recreational Area is not even an issue.

20. In general: The NPS captures bird, turtle and amaranth statistics only in the park. They do not include bird counts in other locations such as the dredge and spoil islands that are breeding grounds for thousands and thousands of birds. In 2009 NPS counted six fledged chicks and between 1992 and 2009 counted an average of 4.9 per year. It is likely there are many more fledging on the remote dredge and spoil islands and on Pea Island because there are no predators (i.e., foxes, raccoons, etc.). When calculating survival of a species, one must consider the entire mating area. And, related to that statement, the eleven piping plover chicks that fledged in 2008 represented just 3.32% of those counted in Delaware, Maryland, Virginia and North Carolina.

21. Page 143: Visitor use experience impact. ORV users in the areas under management comprise the vast majority people visiting the ORV access area, since most of the areas are inaccessible except by ORV. Creating a plan that has the cumulative impact that is "long term moderate to major and adverse to ORV users" is unacceptable. The assumption that it would be long term beneficial for non-ORV users is irrelevant since they comprise a minute percent of the population in areas accessible by ORV only.

22. Page 270 to 281 and more. The towns north of the CHNSRA should not be included in the ROI for economic analysis. As stated, the villages of Ocracoke, Hatteras, Frisco, Buxton, Avon, Salvo, Waves, and Rodanthe would be most affected by the proposed actions because they are located within the Seashore. The economic impact of beach closures has not been adequately addressed. Please carefully read comments from local business owners about the impact to their businesses and those from Dare County and North Carolina officials. I urge the NPS to do complete, unbiased research on the real economic impact of their alternatives on the CHNSRA residents and home owners.

In addition to the impact on local businesses, please consider the adverse economic impact to rental house owners. This year's decrease of 18% on our sound front rental income is causing us severe harm. Our expenses remain about the same, regardless of our rental income. Just look at the number of

houses for sale and the number of foreclosures. ORV driving restrictions are hurting everyone.

Stating statistics for North Carolina or Dare County and making assumptions about the economy or demography of villages in the CHNSRA is erroneous.

23. Page 562. Economic impact. To estimate that the economic impact of plan F on income to sporting goods businesses and to other businesses in the "Seashore villages" would be 0% to -10% must be based on flawed research. Please conduct a complete survey of businesses in the villages and include their revenues for July of each year. That would allow you to calculate the impact of the recent closures. The 0% to -10% figure doesn't meet the first test of valid research which is, "Does it make sense?" The research done by RTI was not completely reported in the DEIS. Reference was made to "Even businesses that reported no decrease or an increase in revenue in 2008 under the consent decree were concerned about the long-term impacts of the alternatives, even alternatives similar to the consent decree." But no where did the DEIS quote statistics from those businesses that said income was down.

24. Page 570. No where is there mention of the economic impact on non-resident rental home owners. These people, including my husband and myself, should be considered as "small business owners", too.

25. Page 570. I am happy to see that additional data are being collected. I have not heard about the publication of the 12-month study which was expected to be completed in early 2010. I urge you to re-open the comment time after the new research has been published.

Sincerely,
Carol Hall Suhr

 Re: Cape Hatteras National Seashore Recreational Area Draft Off-Road Vehicle Management Plan/EIS
 Dear Mr. Murray:
 This letter is a comment made under your draft EIS as referred to above.
 Your failure to make reasonable allowance for human use of specialized areas in the Park is a bad way to allocate the use of the Park and, I believe, is illegal under your organic act.
 Your EIS seems to take the position that in any action you must give primacy to what might be good for birds (NB, only the plover is endangered and has any special protection at a high level). You would find that your actions would be less objectionable to many, would be closer to reasonable and would bring less disrepute upon the Park Service, if you were to make some compromises and balance the rights of birds and the rights of people. For example, kite boarders, in the ocean, really only need a limited amount of beach space (and parking) to launch down wind sessions, and kites, surfers and windsurfers, as well as fisherman, all see Cape Point as a special spot (and one it is hard to believe is optimal for birds given it frequent flooding and high winds). If you were to preserve these kinds spaces (including, in addition, Ego Beach, the Lighthouse Beach, Lifeguard Beach, the existing ramp areas, etc.) for human usage, you could still maintain large areas for birds and other animals you wish to protect.
 The enabling legislation (which governs you) for the Park makes sit clear that this is the law. In fact the language goes even further and says you must give precedence to these areas for personal use. As your EIS states:
 As stated in the Seashore's enabling legislation (the Act), Congress established the Seashore in 1937 as a national seashore for the enjoyment and benefit of the people, and to preserve the area. The Act states:
 Except for certain portions of the area, deemed to be especially adaptable for recreational uses, particularly swimming, boating, sailing, fishing, and other recreational activities of similar nature, which shall be developed for such uses as needed [emphasis added], the said areas shall be permanently reserved as a primitive wilderness and no development of the project or plan for the convenience of visitors shall be undertaken which would be incompatible with the preservation of the unique flora and fauna or the physiographic conditions now prevailing in this area. (NB, none of the plovers is other animals you seek to protect are unique to the area!)
 This right of people to certain uses of the Park is not permissive; it is mandatory under your governing Statute. I do not believe you have any right to contravene the law, as I believe your EIS does in failing to take into account these specialized areas.
 Sincerely yours,
 rick eustis Avon, NC

Correspondence: I am taking this opportunity to comment on the ORV DEIS plans. I have read, and discussed at length, the NPS DEIS. I see all of the options listed as nothing more than a thin attempt to rob me and future generations of access to this beautiful unspoiled place. It sickens me that visiting, fishing, and relaxing with friends and loved ones will soon be a thing of the past. I do not for an instant believe that this abomination to Ted Roosevelt's legacy has anything to do with saving birds or turtles
 North Carolina is on the fringe of the piping plovers nesting range, and in all of my years of visiting the Outer Banks, have never seen anyone run one over, or harm one for that matter. A six thousand foot circle around a 4 ounce bird is ridiculous on its face. To do such an extreme thing for a bird that is only locally "threatened", at the expense of the livelihood of so many of my friends is an immoral crime.
 I have already visited Buxton three times this year. I love the place and will be deeply hurt when I can no longer visit, or take children there to see it for the first time. My niece's idea of a beautiful beach was Myrtle Beach until she saw Avon. I am literally being robbed so some stinking lawyer can line his pockets with my tax money. I witnessed first hand, the animosity of the island locals to Park Service employees.
 I know I am wasting my breath, and that this deal is done (and was done behind closed doors long before now), but for the record, I would prefer the adoption of the Coalition for Beach Access Statement in lieu of any of the Draft EIS plans.
 It is, and should remain, the Cape Hatteras National RECREATIONAL Seashore. That is what was promised to its previous owners. The choice is yours, will future children look upon Park Service employees the way I did as a child, or as police state guards that patrol no trespassing zones?

I have; however, reviewed the 77 page Coalition for Beach Access Position Statement signed by several groups that were a part of the negotiated rule making process and it by far succeeds in furnishing the best visitor experience while maintaining the needs of protecting the fragile resources. Please consider all aspects of this alternative and put people back into the management of Cape Hatteras National Seashore.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me. The recent oil spill in the Gulf of Mexico highlights what a fragile ecosystem our coastlines are. We must give seabirds and other wildlife a chance to live and raise their young in their natural habitat--the seashore.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. Correspondence: I disagree with the NPS policy of closing access corridors for bird or turtle nesting activity. There are other effective ways of protecting the birds and turtles which allow access for people. NPS could relocate turtle nests if they should be found in a corridor. Nests are routinely relocated when threatened by the weather, why not when found in an area reserved for people access? Pedestrian and ORV bypasses should be provided around bird buffers so that access can be maintained.

Correspondence: What is the matter with you people? Do you think more of birds, etc than you do people? Those that come to the Outer Banks of NC from cities cannot believe their eyes as to the beauty of the ocean as far as their eyss can see.
I only live about 200 miles inland and I can tell you it takes my breath away to be able to sit on the beach and just stare at the ocean. I ask myself how can all that water stay where it is. I know that it is the hand of God.
Please do not make all of the Outer Banks of NC a refuge for wildlife. After all, God takes care of the birds, etc. Let the public bring in the revenue to the businesses. If you close all the land then Dare county will dry up.

Correspondence: Mr. Mike Murray, Superintendent Cape Hatteras National Seashore 1401 National Park Drive Manteo, NC 27954
May 11, 2010
Dear Supt. Murray,
Thank you very much for seeking comments on the ORV Draft Environmental Impact Statement.
My extended family has been enjoying the Cape Hatteras National Seashore Recreational Area (CHNSRA) since the late 1960's, primarily camping at Salvo and Oregon Inlet (the early days) and then Cape Point (before the maintenance and drainage issues became such a problem there) until 2003, and now the Ocracoke NPS campgrounds. We return almost every year, and will again this June. It remains a very special place for our family.
I have communicated with you and Cindy Holda several times previously, providing comments on the situation at the Cape Point Campground, the management of wildlife within the CHNSRA, and the access for ORVs at the CHNSRA. You may perhaps remember me - the guy from Indiana with a Masters Degree in Environmental Engineering working for Engineering Consulting firms since the mid 1980's ? doing my best to protect and clean-up the small portion of this precious Mother Earth that I come in contact with on a daily basis.
I commend you and your staff on your continued efforts to balance the needs of preservation with those of responsible use. Unfortunately, the current Consent Decree requirements, and the majority of the Alternatives cited in the DEIS, do not achieve a healthy balance between responsible use and preservation ? the scale is weighted far too heavily on protecting avian species that are not endangered, requires an exceedingly excessive exclusion zone for piping plovers, and does not allow for the relocation of turtle nests in appropriate circumstances - I heartily object to all of those provisions of the DEIS and the Consent Decree. The Consent Decree measures also unnecessarily restrict ORV access by not allowing alternative access routes where appropriate. It is indeed unfortunate that the Negotiated Rule-Making Process was unable to successfully reach an acceptable compromise during their deliberations - I initially had high hopes for that process.
I have reviewed the lengthy DEIS, and based on this review provide the following comments:
1. I strongly support the Pro-Active Adaptive Management (PAAM) alternative, as this alternative provides the best balance between appropriate protection of resources, while providing for responsible use of CHNSRA by pedestrians and ORV's. Although perhaps requiring more attention by Park Service personnel to the dynamics of park use by both wildlife and human visitors, the PAAM should be used to improve both the resource protection and the visitor access to the Seashore, by aggressively pursuing the adaptive management initiatives identified in the DEIS: vegetation management, habitat management, enhanced predator management, colonial waterbird social attraction, piping plover chick fledge rate, piping plover chick buffer distance and pass-through buffers for ORVs during the incubation period. In addition, opportunities to implement less restrictive closures as a result of these initiatives should be considered more frequently than the 5-year periodic review process identified in the DEIS.
2. The data presented in your "Cape Hatteras National Seashore Resource Management Field Studies" reports for the past several years (which I review religiously), as well as other historical data presented in the peer-reviewed technical literature, clearly demonstrate that Human Interference (and use of ORV's) has a very minor impact on avian species nest survival and fledging rates (accounting for approx 3% of nest failures) , when compared to natural predators (approx 62%), storms and tides (approx 29%), and nest abandonment (approx 6%). Therefore, any ORV closures required for protection of avian species should be guided by the science of PAAM and the more universally practiced procedures at other National Seashores, and not an arbitrarily imposed buffer of 1000meters.
3. I have personally observed the successful nesting/fledging of avian species on the dredge and spoil islands located soundside of the CHNSRA. In addition, the Pea Island National Wildlife Refuge provides additional appropriate habitat for the successful nesting/fledging. Avian activity in these areas should be included in the data evaluated when looking for trends in avian species nesting/fledging.
Thank you very much for your continued efforts on behalf of the citizens who enjoy and use the amazing resources of the Cape Hatteras National Seashore Recreation Area. Kindly consider my comments as the rule-making process proceeds. Best wishes for a resolution that balances the preservation and appropriate use of this precious spot.
Sincerely,
Kenneth Hill 5504 Leisure Dr Valparaiso, IN 46383

Correspondence: The beaches should be available for the public, but I agree with managing where vehicles should be allowed. I do not agree with further restricting certain areas or cutting off some areas permanently. I've grown up going to Hatteras and Ocracoke, and I have always known to stay away from the Dunes and the Open Areas for the nesting of turtles and birds. What I worry about here is a slippery slope that would further restrict access and eventually take away our RIGHT to drive on the beaches and fish from these beaches. Without the ability to drive on the beaches, the access to surf fish would be greatly hindered. Across the country I am seeing areas taken away and denying the public to activities they have enjoyed for years. There should be some middle ground that all parties can agree with this issue.

Correspondence: I have enjoyed traveling to North Carolina's seashore many times. The picturesque barrier islands are something to be protected. Please do not allow the off road vehicles to have access to Cape Hatteras. It will hurt wildlife and be a deterrent to pedestrians. Instead of this alternative, I wish you would support Alternative D if it is modified to include and recognize the following points.
1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."
2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness...."
Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.
3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.
Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations.

Correspondence: Sirs: I have lived on Hatteras Island for over 15 years and have visited here for over 30. I know that the best keepers of this fragile place are the people who choose to live here. It is a very difficult place to live, and the people who have chosen this place as home, cherish every life that is here. We know better than anyone what a tough place this is to make it in. We all love this island but we need to be able to make a living here too. I can't believe that a group of people that not only don't live here but most of whom have never visited here can dictate how we will be living. Not being able to walk on the beach, with or without our dogs, is ridiculous. Most of the people who live here or visit are willing to have some restrictions, all I am asking is that we meet in the middle. Please.

Correspondence: The NPS must formulate a plan that is consistent with the legislation establishing Cape Hatteras National Seashore Recreation Area. The enabling legislation for the Recreational Area states, in part, "said area shall be, and is, established, dedicated, and set apart as a national seashore recreational area for the benefit and enjoyment of the people and shall be known as the Cape Hatteras National Seashore Recreational Area". Therefore, it is important to balance resource protection with reasonable access for recreation.
 Corridors are a vital tool in providing access while managing resources. They provide a small path around temporary resource closures in order to provide access to open areas that would otherwise be blocked. Corridors should be permitted throughout the seashore during the entire breeding and nesting season including ML-1 portions of SMAs. These corridors would provide valuable access without impairment or damage to protected resources. Buffers, or closures, are important management practices for species recovery. However, to have long term benefit for the wildlife and the visiting public, buffers must be based on peer-reviewed science For example, the Piping Plover, a species classified as threatened and not endangered, is given a level of unprecedented protection in Alternative F. A 1,000-meter buffer in all directions represents over 771 acres. The DEIS does not cite any peer-reviewed science in supporting such closure. A more appropriate & effective buffer would be 200 meters.
 Birds that are not listed as endangered should not be afforded the level of protection given to ESA (Endangered Species Act) protected species. Instead of 300-meter buffers for these birds, a more appropriate buffer would be 30 meters. Also, all birds in the same ecosystem of the seashore should be counted. This includes all the many birds on the dredge and spoil islands located just yards away and within sight of the seashore.
 The National Park Service should consider turtle management practices successfully used in other federal and state areas to achieve nesting success. More proactive measures include relocating nests to more desirable locations, which is routinely and successfully done in other areas.

Correspondence: Introduction
 The Recreational Fishing Alliance (RFA) is a national, 501(c)(4) non-profit grassroots political action organization that has been representing individual sport fishermen and the sport fishing industry since 1996. The RFA Mission is to safeguard the rights of saltwater anglers, protect marine, boat and tackle industry jobs and ensure the long-term sustainability of U.S. saltwater fisheries. RFA members include individual anglers, boat builders, fishing tackle manufacturers, party and charter boat businesses, bait and tackle retailers, marinas, and many other businesses in fishing communities. The South Carolina Chapter of RFA was created like all chapters of RFA- to build more local support and awareness of the RFA Mission.
 It is our understanding that a 2008 court order severely restricted off-road vehicle (ORV) and pedestrian access to the Cape Hatteras National Seashore Recreation Area (CHNSRA) even though these beaches are very popular destinations for recreational fishing and other activities.
 Now, the National Park Service is considering much more restrictive regulations for this area despite the area being one of the most important surf fishing locations on the entire east coast of the United States.
 Not only anglers are affected by the proposed regulations that will restrict ORV access greatly. Consumers, business owners, taxpayers and citizens are impacted.
 Comments Regarding Socio-cultural, Economic and Legal Concerns
 The coastal economy of North Carolina is much like that of South Carolina's. The states depend heavily on outdoor recreation and tourism. While protection of the piping plover is important to users of this area as well as all citizens of this country, over regulation and over protection could never have been the intention of governmental policy and/or regulations. There's too much at stake for this to be the case.
 What's at stake is more than \$80 billion in sales of recreational fishing gear, over 500,000 jobs and over \$24 billion in income in this country directly resulting from recreational fishing each year. (Genter & Steinback)
 Even more compelling than national economic statistics is a relative comparison. While sportspersons, hunters and anglers are a minority of all recreationists in the United States, we spend almost twice as much money as wildlife watchers to partake in our recreational activities. (United States Fish and Wildlife Service, 2009)
 According to a 2007 study, just the amount of federal tax revenues generated by recreational angler spending in 2006 generated enough to nearly fund the US Environmental Protection Agency's entire 2006 budget- \$9 billion. (Southwick Associates, 2007)
 We arguably put our money where our mouths are when it comes to expenditures for activities as well as conservation efforts.
 In South Carolina, we made sure that all our saltwater fishing license revenues would go directly to our marine resources management, enhancement and protection. Hundreds of thousands of recreational fishing trips are made each year to our state Department of Natural Resources implemented and

managed artificial reefs, which were funded directly by our fishing license revenues. These reefs, as well as privately funded reefs also, would not have existed at all if not for us.

Recreational anglers and related business owners in South Carolina overwhelmingly support our natural resources management agency, and I submit to you that the sole reason for this entrustment of responsibility for over \$29 billion per year in economic impacts to South Carolina's economy from natural resources is this state agency's commitment to cooperating with and involving the public at all stages of regulation and policy making. We urge the National Park Service to adopt a similar attitude towards all stakeholders in its policy generation and regulation promulgation.

There must be legitimate science with full accounting of the socio-cultural and economic impacts, and if these exist, the recreational anglers and recreational fishing industry will fully support the initiatives sought.

The answers to the questions of conservation and sustainability should never lead straight to draconian type restrictions of our recreational access. They should instead consider creative ideas that include as many stakeholders as possible, and these stakeholders must first be informed and educated on government initiatives or plans in order for this to happen. Then, our environment as well as our recreation will benefit greatly together. We all share the same goals, and we've proven this repeatedly when our perspectives and contributions are embraced by policy makers.

South Carolina is ranked fifth among states for non-resident fishing destinations with non-resident expenditures exceeding \$370 million, and our state is also eighth in the country in recreational angler expenditures with nearly \$1.5 billion. Similarly, North Carolina ranks ninth in the United States in recreational angler expenditures with over \$1.2 billion per year. (Southwick Associates, 2007)

With this kind of social, cultural and economic value at stake, it is hard to understand why the National Park Service has not extended the public comment period for even 30 more days to allow more input from stakeholders who have only recently learned of the proposal. North Carolina's two U.S. Senators have both requested this extension, but the National Park Service has denied them apparently. Does the National Park Service really intend to go forward with this ORV Draft Management Plan / Environmental Impact Statement when it is 810 pages long and only came out for public review on March 5, 2010?

This would be regrettable because it is our understanding that the preferred alternative, Alternative F, as outlined in the DEIS is the most restrictive management option to date, and it far exceeds any sense of balance between resource protection and public access. It is also our understanding that this approach contradicts all indications and promises made to the public regarding recreational uses in the seashore throughout the development process of this Management Plan. CHNSRA is one of the best recreational surf fishing locations on the east coast, and most of it is accessible only by ORV's. To unduly restrict ORV's would be unduly restrict recreational fishing. The President has directed the National Park Service to do everything in its power not to do just that.

On September 26, 2008, President G.W. Bush issued Executive Order No. 13474, which amended President Clinton's Executive Order No. 12962. The amended Executive Order explicitly directs in Section 1(d) that Federal agencies are to ensure, "... that recreational fishing shall be managed as a sustainable activity in national wildlife refuges, national parks, national monuments, national marine sanctuaries, marine protected areas, or any other relevant conservation or management areas or activities under any Federal authority, consistent with applicable law."

The majority of the provisions included within the preferred alternative far exceed anything proposed by a majority of the Negotiated Rulemaking Committee, including excessively large resource closures (buffers), unnecessary year-round and floating closures, and the lack of access corridors around or through resource closures. These provisions will have the effect of greatly restricting recreational fishing in a national park while two Presidential Orders have directed that recreational fishing be managed as a sustainable activity in national parks. The Orders directed that recreational fishing activities be enhanced- not curtailed. The proposals currently drafted by the National Park Service also raise issues regarding the public trust doctrine. The public trust doctrine is as old as Roman law, and it continues to remain as a dominant influence in our law today.

For example, South Carolina and North Carolina follow the riparian view of rights to water. Property rights, that is. Owners of property adjacent to our rivers and streams have rights to that water, but these do not include the right to impair downstream users' rights to this water. The public policy reasoning for this is the public trust doctrine holding that public or common use of water is more important than any individual use. It is important to remember that any allocation of rights to any individual interests necessarily takes away rights from the public. We are needless to say concerned about allocation of rights to those prioritizing protection of the piped plover, for lack of a better phrasing of certain parties' interests.

If the proposals by the National Park Service greatly restrict ORV access whereby recreational fishing is also greatly restricted as a matter of fact, it necessarily takes away rights the public once enjoyed. The public trust doctrine holds that the highest and most important use of certain resources is the public's use, and in this case that use has been for recreational activity- recreational shore fishing in particular.

Such direct impacts to the highest valued uses of public resources in our society not only harms individual liberties and rights previously enjoyed- the number of public users of our resources would also be greatly restricted. When society's highest valued users are restricted, we are therefore harmed socially, culturally and economically all at once. This greatly concerns us not just as recreational anglers and industry but as citizens of this state and country.

As recreational anglers and small business owners in the Carolinas, we are strongly opposed to Alternative F in the draft Environmental Impact Statement. Please make material changes in order to provide for resource protection as well as reasonable public access to public lands and resources.

Conclusion

Restriction of sustainable recreational fishing in our National Parks is at odds with several important things. These are socio-cultural and economic values, the public trust doctrine and United States Presidential Orders.

Recreational fishing has not been adequately represented for its economic, social and cultural value in the National Park Service's Draft ORV Management Plan/EIS for CHNSRA. The National Park Service should develop a consensus from as many interests as possible as it develops and recommends policy and regulations, and our strong concerns here should at least indicate that there is a great opportunity to be more inclusive of interests that are quite popular among the public not only in the Carolinas but in the entire country.

The Recreational Fishing Alliance and its South Carolina Chapter stand ready to assist you in this regard, and we appreciate the National Park Service's attention and consideration regarding our comments. Please extend the public comment period on this draft management plan and environmental impact statement, and please consider the opinions of those who put their money where their mouths are on these types of issues over and over again.

We are strongly opposed to Alternative F in the draft Environmental Impact Study. Please make material changes in order to provide for resource protection as well as reasonable public access to public lands, resources and sustainable recreational fishing activities.

Dear Superintendent Murray,
Please accept this letter as my comment on the ORV DEIS before you at this time.
After reviewing the National Park Service DEIS I must disagree with any of the six alternatives within the document.
I have; however, reviewed the 77 page Coalition for Beach Access Position Statement signed by several groups that were a part of the negotiated rule making process and it by far succeeds in furnishing the best visitor experience while maintaining the needs of protecting the fragile resources.
Please consider all aspects of this alternative and put people back into the management of Cape Hatteras National Seashore.

Correspondence: We are voicing our opinion on the Deis/off road vehicle management plan that the national park service intends to manage for the next 15 years. STOP IT NOW. We own a beach home in Avon, NC. We have been going to the Outer Banks for well over 30 years. These changes you are making ie: closing Hatteras Inlet and the North End Ocracoke Island, Ramp 27-Ramp 30 Salvo are not for the good of the human population. The pipers could have more favorable space at the Cape Point ponds if you would clear the vegetation there. If the turtles are the problem then close the beach in that specific area only when the turtles are on the move. Why is it not ok to drive on the beach at night when this would be a deterrent to predators of turtles and birds. You killed other animals ie:raccoons and foxes but it's not ok to have a few turtle or pipers killed by accident. Why is the Audubon Society and their lawyers poking their noses on our island now. Things have been fine for the last 30+ years that we have been there. The way the island is run should be up to the homeowners/businesses not outsiders. If you pass all the closings/buffers it will mean the end of the Outer Banks. We bring numerous friends/fishermen to the area and they all spend money to fish and drive on the beach. They won't come. We will have to sell our home there and you won't have the tax revenue which greatly effects the rest of North Carolina as well. Business's will have to close. More people will be out of work. North Carolina will be another poorer state. But it will have a ton of turtles and Piping plovers. Let's see how much taxes they pay. Man has the ability to move these creatures out of the way and let us go on with our right to use the beaches. Let's not let new comers ie: The Audubon Society and their lawyers change something that has been working well all ready. Everyone we know has used beach respect at all times. The Society has created a problem when there wasn't one. It all comes down to money and who has more. Surely in today's world there are bigger problems for them to poke their noses in. We need the county and state of NC to stand behind it's homeowner's and businesses.
Sincerely,
Frank Carmen

Correspondence: Any "final" managment plan must fully respect community rights to access and use of the "national" seashore as well as the economic impacts on those communties and homeowners resident and non-resident.(I am a non-resident homowner who comes to the OBX throughout the year to windsurf, fish, and hunt and bring significant numbers of people with me.) This is what the US and US ngos preach to the rest of the world and too often it is not applied at home in the US. yes there is a need to balance ORV traffic and conservation - conservation based on good science and constructive interpretation of the ESA. Are ORVs the real problem regarding birds as compared to endemic natural predators and feral and non-feral cats? What is the balance and if cats should there not be a feral cat extermination program. Sea turtles are another issue requiring different ORV strategies than birds. How many birds have been killed by ORVs?
In sum there is a need to balance the needs of people and communities and conservation -they are the ones looking out for the real interests of the seashore. Conservation that does not serve the interests as well does not result in effective conservation nor human wellbeing. Noe of the proposed plans provides that balance.

Correspondence:	<p>Mr. Mike Murray Superintendent, Cape Hatteras National Seashore 1401 National Park Drive Manteo, NC 27954 Dear Supt. Murray: I am in favor of a permit system to regulate ORV beach use and I am in favor of sensible beach closures to protect nesting birds. But, there has to be another way to protect nesting birds and turtles and other resources within the Cape Hatteras National Recreational Seashore other than the draconian measures outlined in the Seashore's Draft Off-Road Vehicle Management Plan/EIS (DEIS). These measures will kill the local economy on Hatteras Island, and ultimately kill the Seashore as a National Park when visitors stop coming. I would hope the National Park Service can compromise on its plans for extensive beach closures as its preferred solution to protecting the bird and turtle nests. The solutions presented in the Coalition for Beach Access Position Statement, which has been submitted to you, would give the Park Service a much more equitable basis for wildlife and species protection, and yet continue to protect the resources within the Seashore. Please incorporate the Coalition's options into the Seashore's final ORV management plan.</p> <p>Thank you, J. Torres Buxton NC</p>

Correspondence:	<p>I disagree with the NPS buffers used for breeding, nesting and unfledged chicks. The numbers derived do not come from proven distances, rather just from an arbitrary and overly excessive distance that would severely restrict access through the narrow corridors that often exist on high tides and during times of excessive erosion from storms. Bypasses or corridors could continue to be provided through, around, or below high tide line for all SMAs during entire breeding and nesting season to maintain access to critical historical and cultural areas. This can and has been done historically within</p>				

guidelines and without adverse impact to birds. There are significant reductions in the proposed buffers that could be used and should be flexible to accommodate different species. These buffers should also move as the brood moves to accommodate access. One example of an excessive buffer is for the breeding piping plover at 75m which would be sufficient at 50m. The unfledged piping plover buffer of 1000m is extremely excessive and should be reduced to a reasonable 200m. Having a more reasonable as well as a flexible buffer will help provide DEIS with an object to improve visitor experiences and access as well as its success with resource protection. Some other initiative that could be focused on to aid in access while providing resource protection would be to manage habitat and vegetation as to promote (not deter) bird breeding environments. Improve predator deterrents and management. And to be flexible in the buffers as to provide economically essential access to historically critical areas.

Correspondence: I have been fishing on the beaches of the Outer Banks for over 30 years and have never harmed a single bird as far as I know. There are plenty of places for the birds to nest without barring humans from enjoying the very park land that was dedicated for public use so many years ago.
The people who have pushed for the closure of our public beaches on the Outer Banks of NC have not used sound environmental science as a basis for their actions. Please please inject some sanity into this situation and stop the trend that is ruining the economy of the area for no valid reason at all.

Correspondence: The ORV access to the beaches on the Cape Hatteras National Seashore should be maintained. I am opposed to the hyper-sensitivity I have experienced since the NPS began restricting access to the beaches just a few years ago. With the exaggerated separation of human use of the beach and wildlife use of the beach we are inappropriately balancing the impact on humans and the impact on wildlife. The economic impact to Hatteras Island residents should be weighed heavily in this matter as well as the human value of the recreational use of the national beaches. I fear that the importance of the separation between the human and wildlife usage is being given too much importance on the Cape Hatteras National Seashore.

Correspondence: Dear Superintendent Murray:
Mike, we are living at a time when it has become "politically incorrect" to dispute or even question anything presented to us concerning the environment.
The people of the Outer Banks are struggling with this...they want to protect a way of life, a place they love, and the land where they have been good stewards for generations.
Unfortunately, this fight to keep access open has put them in an awkward position - it has labeled them as being on the wrong side of the environmental fence.
I simply ask - please keep access open. Allow those that love this place to be involved in protecting it. Let us continue to make memories and pass to the next generation a deep love and respect for all that makes up the Cape Hatteras Recreational Seashore. That cannot be accomplished from afar...
Thank you. Pat Mullinax (frequent visitor)

Correspondence:	I am a lifelong resident of Chesapeake, VA and i have been driving down to the outer banks for surfing and fishing year round for over 20years. The beaches of the Outer Banks are a state and national treasure. I support the idea of protecting the beaches and the native wildlife for generations to come. Closing down the beaches for off road traffic should not be the only option. Education of the importance in maintaining the beaches is bound to be more effective. Over the years I have seen the commitment of all of the visitors to the outer banks by treading softly on mother earth, picking up their trash, and avoiding wildlife preserve areas. The majority of erosion is due to mother nature herself and her constant change. When I was a boy Oregon Inlet was a huge beach. Now it is practically gone. Vehicles were not the major cause in this erosion. Please reconsider the option of closing the beaches.

Correspondence:	I am for reasonable protection of "endangered" wildlife based on the latest true scientific information. I am not for the same stringent regulations and beach closures for non-endangered wildlife. I would recommend that the beaches associated with Hatteras Inlet, Oregon Inlet and Ocracoke Inlets should not be totally closed. These Inlet areas are constantly vulnerable to washovers, whether from strong northerly or southerly winds. Extreme protective measures can't stop the wind and surf and are a complete waste of our tax dollars. Since the "decree" has been in place, Cape Hatteras has been transformed from a place that I could really get away and relax into a place that I would personally describe as a police state where someone is always looking over my shoulder. Last year I was "checked" three times on the same day by Park Rangers or Marine Fisheries (twice by the same Ranger on the same day). In conclusion, I am for the Parke Service to use some common sense to manage Cape Hatteras and it recources not a 800 page surround and confuse DEIS recommndation compiled by extremist using faulty scientific information. Any time I see such a monstrosity, I smell something fishy

Correspondence Type:	Web Form						
Correspondence:	On behalf of Midgett Realty and Midgett Brothers Inc., I respectfully submit our position on the draft ORV management plan/EIS. Midgett Realty is a family owned company whose roots began in 1938 when two brothers began the only source of public transportation on the island. Now, some sixty plus years later, we own the largest real estate company on the island together with a number of other related businesses including marinas, restaurants, shopping centers, a construction company and some others. We employ some 75-100 folks on a year-round basis and about double that during the peak seasons. It is now a 3rd generation family business in the throes of extinction due to governmental intervention. Our businesses are totally reliable on the tourism industry. Given the recent closures of the island beaches due to the ongoing "plans" put forth by the Park Service, or lack thereof, our business has suffered considerable losses of revenue in every area; especially during the much needed "off-seasons" when beach closures are at the peak.						

The fact that the traditional and historic uses of the Park are being threatened by well-funded environmental organizations and the proven lackadaisical effort by the NPS is tantamount to a criminal act. Access to and use of the beaches was part and parcel of the original creation of the park as the Nation's first National Seashore park; The Cape Hatteras National Seashore Recreational Area. Please explain how/when/where/who determined, unilaterally, that the park's name and use shall be changed forever?? All under the pretense of democracy??

The efforts to manage bird activities on the beaches and to severely restrict beach access for the human population is very much without merit. The restrictions as delineated by the "Consent Decree" have already practically decimated the tourism industry on Hatteras and Ocracoke islands. These efforts were undertaken without adequate science to support the decision-making and have absolutely ignored the impacts upon commerce. Any purported true study of the economic impact analysis would most certainly indicate tremendous impacts upon the tourism population.

A close look at most any area business financial statement for the past couple of years will clearly indicate that the financial impacts are literally "off-the-charts". By that, I mean that those businesses have suffered considerable loss of income and their balance sheets clearly reflect the declines of previous years. No, this is NOT the result of the economic downturn, it is a 'cause and effect' situation derived directly from government intervention. Let's face the facts - most, if not all, commerce on Hatteras Island is a direct result of tourism. As visitation diminishes due to restricted access, the fishermen either stay at home or travel to another area where they can do their thing. This equates to losses of revenue to the area businesses. When revenues decline, business owners are forced to take drastic measures to survive - this leads to serious decreases in employment as owners eliminate positions. We at Midgett Realty have had to make some very difficult decisions and have been forced to lay off several key employees. There will be more to come if government is successful in destroying the goose that lays the golden egg.....TOURISM.

If 'big brother' chooses to do a study on the economics of Hatteras Island, please see that there is just a bit of integrity and science involved. Don't continue with the banter about "minimal impacts" thinking you are fooling the population - those antics do little to assuage the fears of an island under siege and looking at the demise of the only industry that exists out here.

We strongly encourage NPS and it's cohorts in this mess to consider the bird populations on the many adjacent dredge spoil islands lying nearby. That is where the predominant populations of shorebirds choose to nest. Go take a look at these islands, count the birds. Hey, let's face it, they can't read all the little signs posted every few feet along practically every shoreline there is on Hatteras and Ocracoke -instead the birds seek and find adequate habitat in which to do their thing, oftentimes away from the influence of mankind.

We support more and larger corridors than identified within the DEIS. Access is critical to the future of the islands. Similarly, we support much smaller closure areas after determining 'a bird may be exhibiting signs of mating or nesting'. Along those same lines, we noticed that government has exceeded it's call for action and is kindly providing protection for bird species that had been identified by the great state of North Carolina as being of concern due to smaller populations. These species are NOT protected nor endangered in the true sense. It seems that this is yet another over-reach by the long arms of government when the Park endeavors to add these species to their protections and closures. Does it appear there is a pattern here?

We have witnessed a massive undertaking by the federal government here on Hatteras Island the past couple of years. They have amassed an army of federal enforcement agents from across America, placed them in enough vehicles to keep Detroit working, paid untold dollars to house the employees while on assignment, fed them, killed a literal forest of trees to secure the necessary 2 X 2's to delineate hundreds of miles of shoreline.....all in the best interests of very few birds and a couple of turtles. Taxpayer's are seeing millions of dollars wasted during a time when the national debt is spiraling out of control.

In summary, Midgett Realty supports the positions of the alliance. We need adequate beach access. We applaud the tireless efforts of the fine folks who have given of their valuable time and energies to work for a cause that defies common sense. Similarly, we are aligned with our elected officials who have tread the halls of Congress seeking the democratic process. We extend a big thank-you to our Dare County commissioners, Senator Basnight and all the others who have stepped up for the cause of free and open access to America's first National Seashore for her citizens.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.

This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.

The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.

* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.

* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: As year round residents of Hatteras Island for the past 19 years and as regular visitors to the island starting in 1983, we would like to offer the following comments on the DEIS Off-Road Vehicle Management Plan:
- We have enjoyed visiting National Parks around the country for the past 27 years, the openness of these American treasures is one of their most attractive features. It is unconscionable to close large areas of a National Park that has been created and preserved for the enjoyment of the citizens of this country.
- We find it especially egregious that ORVs will be prohibited year round between Ramps 27-30, Hatteras Inlet(Hatteras Spit), North Ocreacoke Spit and various other locations. These are prime fishing and recreational areas, and provision for access by ORVs should be incorporated on the ORV Plan.(pages 97-101)
- We would also ask you to reduce the size of the buffer areas (pages 121 - 127). 1,000 meters is excessive. Something more like 200 meters would be reasonable. Sea turtle nests could simply be identified and fenced off with a much smaller buffer area. In fact, in Akumal, Mexico, where there is a major sea turtle research center, the center employees actually dig up the turtle eggs and relocate them to a safe location while they are incubating.
- There should, in our opinion, be no restriction on leashed pets at anytime during the year(page 136). The ability to bring pets to the beach is one of the greatest freedoms and strongest attractions of the Cape Hatteras National Seashore for many visitors and residents.
- We would advocate that any restricted areas have ORV corridors through them.
- Pedestrian access should be allowed in all locations on Hatteras and Ocracoke islands (page 121). Restricting pedestrian access is unreasonable and unduly restrictive.
The theme of our comments as you can see is to preserve as much of the access to all areas of Hatteras and Ocracoke islands as possible. This was the original policy and intent when the national seashore was formed, and this legacy should be preserved.
We look forward to your reasonable and favorable decisions on these matters.

Correspondence: I have carefully read the document and all of the recommended alternatives, including the one preferred by the Park Service. I am currently a property owner in the village of Avon, and have owned property off and on on the Outer Banks since 1969. I also spend a large amount of time fishing and hunting all over the North America and Canada. Thus it is difficult for me to understand how the NPS can recommend permanent closure of ANY area to ANY activity for 20 years when they nor anyone else can predict how the barrier island will look in 20 years! I also find the document above rather confusing and full of nature science based on outdated studies and studies done in beach environments that have no relationship to the North Carolina barrier islands. I find that the Coalition for Beach Access, in approx. 77 pages has come up with a more flexible and realistic plan that can be implemented with less work and can also, in my opinion, adapt as the wildlife and the geography of the barrier islands changes over the next twenty years. I therefore urge the NPS to carefully consider and include the recommendations of the Coalition in any final plan. Also, it seems strange to me that an area originally designated as a recreation area as opposed to a wildlife area, does not take into consideration the people and the villages that will be impacted by any changes to the park areas. Closing approx. 26 miles permanently and other areas on a "as need" basis will have a detrimental effect on property rentals, property values, business growth and tax based revenues for the area over the next 20 years that, to my mind, is more important than whether piping plover(not native to the area)increases in nesting activity. Speaking of wildlife and economic impact, can you explain why the entire region from Duck to Ocracoke was used for economic impact study, but only the area of Cape Hatteras National Park was used for wildlife impact? What is good for one, should be good for all. I don't care which area the NPS uses, but you have to be consistent in my mind. Thank you.

Correspondence: As a long-time visitor to the Cape Hatteras/Ocracoke recreational area, I have an intense interest in the proposed Draft Environmental Impact Study (DEIS) and the possibility of it becoming law.
It is alarming that the Piping Plover (that seeks out human habitation areas to nest and is not indigenous to the Outer Banks) is given 700 acres of restricted area for each nest. The American Oystercatcher, also covered in this study, is in no way threatened. These two bird species have received protection way beyond what is reasonable and borders on disbelief. Examples of this are:
Over 1000 mammals including domestic cats have been killed in the name of protecting less than one dozen piping plovers. These mammals include foxes, raccoons and opossums that are indigenous to the area. This has resulted in an imbalance in nature and rabbits are now breeding out of control and doing extensive damage to the vegetation in this fragile environment. This will result in the loss of vegetation that prevents beach erosion.
Due to the closure of the beach areas for many weeks and the fact that visitors can not have a dog on the beach (not on a leash or any other way -- no dogs on the beaches) tourism has dropped dramatically. In an area where unemployment is 17+% this is devastating.
I urge you to reconsider these draconian laws.

Correspondence: First, I would like to give you some background info on the history of the relationship between the Outer Banks of North Carolina and my family. From this, my hope is that you will ascertain how special this place is to us. Our first trip was to Kitty Hawk in 1964. That began a span of approximately 8-10 years of Outer Banks vacations with extended family. We stayed in oceanfront cottages in Kitty Hawk, KDH, and Nags Head. We made occasional trips to Hatteras Island for the day. The island back then was quaint and had character that I have never seen anywhere else. The fall of 1977 was the first year for a week of surf fishing and camaraderie with family. It has continued every year since, losing some family members along the way to old age, but gaining new fisherman from the family and sometimes friends as well. In 1986, my wife and I purchased a lot in Kinnakeet Shores in Avon. We had looked at property from the Georgia to the Virginia shoreline. In the end we came back to our beach roots, because of its uniqueness. We built a home on our property in 2000. It is currently a rental vacation home that perhaps we will occupy on a semi-permanent basis some day. In looking back since that first trip in 1964, Hatteras Island has changed immensely. Uncontrolled growth has taken its toll. Much of the uniqueness is gone forever. Sadly, the island's character has been diluted to a fraction of what it once was. Now island life is under assault once again due to issues of beach access being pushed by certain environmental groups. We believe the actions of these groups are sole reason NPS has created DEIS and thus we would not be having this conversation otherwise. We certainly are not environmental zealots and by the same token are not anti-environment. We have environmental concerns about the preservation of life's essentials, including all God's creatures. Those concerns should be addressed with rational, well thought out solutions, backed by scientific merit. However we feel options A thru F of DEIS do not fall under any of the above criteria. Options A thru F are draconian in dealing with these preservation issues and will result in long term harm to the economy and way of life of Hatteras Island while at the same time doing little to address preservation issues. They also do not take into consideration any prior regulations from 1937-2008, which stated the expressed purpose of the Cape Hatteras National Seashore was to provide recreational activities for all. I have driven with an ORV on the beaches for 23 years. Not once during that time have I seen damage to wildlife caused by ORV use. We are not sure the preservation issues even exist, because we have not been presented with any evidence of such, and without a valid scientific timeframe of many years versus the documented snapshot of the last several years. If in fact the issues are real, the people and their ORV use are some of the less likely causes, but yet because we are the easiest to affect, the penalties you are asking people to pay are draconian in nature and more damaging to Hatteras Island in general, but at the same time will have minimal impact on hypothetical preservation issues. We are in firm support of increased regulation that is rational in dealing with potential preservation issues similar to statement published by Coalition for Beach Access or some other less damaging alternative other than any of the 6 DEIS alternatives. In the meantime, rational scientific examination of the preservation issues needs to be undertaken. The environmental groups have demonstrated by past island actions, that they will settle for nothing less than a total ban on beach access regardless of hardships and the negative impact their policies will create. And once the bar is set, despite periodic review, access will never return to rational levels. We implore the NPS to go slow and be prudent in regulating this issue and continue to monitor and gather pertinent information. There are many intertwined issues that need to be addressed, including the feral cat problem, beach and dune preservation and unrestricted growth and development on the island. It is better to limit the number of people on the island than to restrict what the people on the island are able to do. These are but a few of many. We realize that many contributors to this issue lie outside the realm of the NPS. Thank you for your time in reading this.
Respectfully,
Tim and Jean Markey

Correspondence: I am a frequent visitor to the Cape Hatteras National Seashore, and I would prefer that the beaches at CHNS be as restrictive as possible with respect to off road vehicle use.
I fish the surf, and walk my (leashed) dog on the beaches, and I do not appreciate the presence of ORVs on the beaches. I am very much concerned about the long-term welfare of the seabirds that nest near the beaches, as well as the sea turtles that nest on the beach. Our shores along the Atlantic coast have been excessively developed, and there are few places left for these creatures to nest successfully. The CHNS should remain one of them. The long term financial welfare of the outer banks communities will be better served by keeping the area from being overused and overdeveloped, and keeping ORVs as much off the beaches as possible will serve this long term good. I, for one, will visit more often, and spend more freely, if the beaches are kept environmentally intact.
I urge you to opt for the alternative that most limits ORVs on the beaches.

Correspondence: Please do not allow motor vehicles on NC beaches. I regularly visit New Smyrna Beach in Florida, where beach driving is allowed. Both ORVs and cars are allowed, but I believe even ORVs on their own would have numerous negative impacts.
1. In my opinion, the fact that allowing vehicles on the beach compromises the safety and habitat of its resident non-human animals is more than enough

reason to keep cars off the beach. 2. But if more reason is really needed, vehicles on the beach pose a safety hazard for humans as well. Kids running around on the beach are essentially playing in a parking lot, which responsible parents would normally not allow. I realize a speed limit would be enforced, but drivers are easily distracted. 3. Allowing vehicles on the beach also brings their pollution that much closer to the sensitive marine environment. 4. Vehicles hasten erosion of the beach. 5. Residents of the coastal towns will also be negatively affected from increased traffic and noise pollution.

I think it would be unwise to compromise the safety and health of our beaches and marine animals just so tourists can tool around on gas powered vehicles.

Regards, Moriah Crews Raleigh, NC

Correspondence: Dear Superintendent Murray,
As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.
1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."
2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness..."
Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.
3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.
Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.
We have been enjoying Cape Hatteras for over 30 years and do NOT want to see its beauty and tranquility spoiled by ORV drivers who think the convenience of driving on to the beach preempts preserving this beautiful area.

Correspondence: Short and simple. I enjoy the outer banks. Many families depend on the tourism industry of the North Carolina Outer Banks to survive. So far they've been financially hurt, but by restricting beach access further you are destroying their way life. For what? A couple of species of birds that thrive in other states. I'm totally against any additional closures to the National Seashore as a result of some animal rights group.

Correspondence: I strongly endorse a management plan that allows unimpeded pedestrian access to Cape Hatteras National Seashore beaches. Unimpeded access should be interpreted as a person having the freedom to chose whenever and whatever beaches they would like to walk, run, move about, lounge, sit, etc. It is understood that the beaches should be available to all species, not restricted to a certain sub-set. The vast majority of U.S. citizens who pay taxes that finance NPS activities do so with the implied understanding that national seashore beaches are open and available to the general public regardless of the time of year.
Given the increase of individual obesity rates in the United States over the previous 25 years the NPS needs to encourage physical activity at Cape Hatteras National Seashore beaches. Ensuring that all of the beaches are continually open and available for recreational exercise needs to be included as part of any final approved management plan.

Correspondence: Mike Murray, Superintendent Cape Hatteras National Seashore 1401 National Park Drive Manteo, NC 27954
May 5, 2010
Mr. Murray,
It has been brought to the attention of the kiteboarding community that a variety of plans are being considered in response to proposed environmental and ecological concerns. The Outer Banks of North Carolina is a sanctuary for many beach goers, sports enthusiasts, wildlife observers and most importantly, the natural environment. We, as a community, feel that it is important for the environment to be protected and thus understand certain steps may be needed to achieve this goal. Thank you for evaluating the options to improve the environmental conditions at one of the greatest destinations in the United States of America.
However, with the aforementioned said, please consider the responses you choose carefully. Minimalist environmental management approaches have worked well throughout the United States' National Parks. Closing extensive sections of beaches, the sound, and water ways will strip away the very nature and reason for why we appreciate the land in its current state. It can be said with great certainty that all frequent and casual users of this place intend to preserve its natural beauty and respect its wildlife.
We strongly feel that the Historical, Cultural, and Economic ramifications of the proposed plans have not been adequately addressed by the Draft

Environmental Impact Statement (DEIS) as is required.

Should the environmental changes impact our communities' sport (as it would in Plans D, E, & F) we would be forced to reconsider our frequent and environmentally friendly utilization of the Outer Banks. Other user groups such as surfers, fishermen, beachcombers, and virtually all other forms of tourism will also be discouraged from visiting Cape Hatteras if beach closures are greatly expanded. This will have a severely negative impact on the local economy and way of life that the residents of Hatteras Island have enjoyed for many generations. It will also take away something that is important to the lives of thousands of people throughout the United States and around the world.

If people, and especially children, can not experience the environment how are they going to learn to help you protect the environment? Ernest & Margaret Plasse Seaview Drive Hatteras, NC

Correspondence: I very strongly support open and accessible beaches for the Cape Hatteras National Seashore Recreational Area. I do support the resource protection for the shorebirds and sea turtles when it is based on unbiased comprehensive science while still providing complete open access for human activity in the seashore.

The following is a list of things that I think need to be addressed in the Management plan and are not. I am sure there is more that needs to be addressed but I do not have the ability to review an 800 page document during my limited spare time.

1. Access corridors for vehicles and pedestrians should be provided through closure area in order to gain access to areas that may be open on the other side. The corridors can be at or near the high tide line with enough space for access and use of this area.
2. The management buffers are accessive and there is not adequate science to keep them at 1000 meters. The buffers need to be based on peer reviewed science and still provide public access through these closure areas.
3. The turtle management plan could easily implement a relocation program that would provide a higher survival rate and remove the turtles from dangerous storm events. My wife worked for the NPS in Sebastian and Wabasso Florida were this was done routinely and it works.
4. This document does not adequately address the economic harm that has been caused and will continue to cause if these issues are not considered. The document states there will be "negligible to moderate" adverse impacts to the local economy. I believe this is completely inaccurate and is an insult to all the people who suffered economical throughout the outer banks community.

I know a great deal of hard work has been put into this DEIS but for the average person who has a job and family it is impossible for anyone to review and understand this information in the time that was given. If this is supposed to be for the public benefit it should be and easier process to review. In Summary there should complete open access whith managed corridors for vehicles and pedestrians during resource closures.

Correspondence: Sources included this time- left out in first comment submission a few minutes ago.

Introduction

The Recreational Fishing Alliance (RFA) is a national, 501(c)(4) non-profit grassroots political action organization that has been representing individual sport fishermen and the sport fishing industry since 1996. The RFA Mission is to safeguard the rights of saltwater anglers, protect marine, boat and tackle industry jobs and ensure the long-term sustainability of U.S. saltwater fisheries. RFA members include individual anglers, boat builders, fishing tackle manufacturers, party and charter boat businesses, bait and tackle retailers, marinas, and many other businesses in fishing communities. The South Carolina Chapter of RFA was created like all chapters of RFA- to build more local support and awareness of the RFA Mission.

It is our understanding that a 2008 court order severely restricted off-road vehicle (ORV) and pedestrian access to the Cape Hatteras National Seashore Recreation Area (CHNSRA) even though these beaches are very popular destinations for recreational fishing and other activities.

Now, the National Park Service is considering much more restrictive regulations for this area despite the area being one of the most important surf fishing locations on the entire east coast of the United States.

Not only anglers are affected by the proposed regulations that will restrict ORV access greatly. Consumers, business owners, taxpayers and citizens are impacted.

Comments Regarding Socio-cultural, Economic and Legal Concerns

The coastal economy of North Carolina is much like that of South Carolina's. The states depend heavily on outdoor recreation and tourism. While protection of the piping plover is important to users of this area as well as all citizens of this country, over regulation and over protection could never have been the intention of governmental policy and/or regulations. There's too much at stake for this to be the case.

What's at stake is more than \$80 billion in sales of recreational fishing gear, over 500,000 jobs and over \$24 billion in income in this country directly resulting from recreational fishing each year. (Genter & Steinback)

Even more compelling than national economic statistics is a relative comparison. While sportspersons, hunters and anglers are a minority of all recreationists in the United States, we spend almost twice as much money as wildlife watchers to partake in our recreational activities. (United States Fish and Wildlife Service, 2009)

According to a 2007 study, just the amount of federal tax revenues generated by recreational angler spending in 2006 generated enough to nearly fund the US Environmental Protection Agency's entire 2006 budget- \$9 billion. (Southwick Associates, 2007)

We arguably put our money where our mouths are when it comes to expenditures for activities as well as conservation efforts.

In South Carolina, we made sure that all our saltwater fishing license revenues would go directly to our marine resources management, enhancement and protection. Hundreds of thousands of recreational fishing trips are made each year to our state Department of Natural Resources implemented and managed artificial reefs, which were funded directly by our fishing license revenues. These reefs, as well as privately funded reefs also, would not have existed at all if not for us.

Recreational anglers and related business owners in South Carolina overwhelmingly support our natural resources management agency, and I submit to you that the sole reason for this entrustment of responsibility for over \$29 billion per year in economic impacts to South Carolina's economy from natural resources is this state agency's commitment to cooperating with and involving the public at all stages of regulation and policy making. We urge the National Park Service to adopt a similar attitude towards all stakeholders in its policy generation and regulation promulgation.

There must be legitimate science with full accounting of the socio-cultural and economic impacts, and if these exist, the recreational anglers and recreational fishing industry will fully support the initiatives sought.

The answers to the questions of conservation and sustainability should never lead straight to draconian type restrictions of our recreational access. They should instead consider creative ideas that include as many stakeholders as possible, and these stakeholders must first be informed and educated on government initiatives or plans in order for this to happen. Then, our environment as well as our recreation will benefit greatly together. We all share the same goals, and we've proven this repeatedly when our perspectives and contributions are embraced by policy makers.

South Carolina is ranked fifth among states for non-resident fishing destinations with non-resident expenditures exceeding \$370 million, and our state is also eighth in the country in recreational angler expenditures with nearly \$1.5 billion. Similarly, North Carolina ranks ninth in the United States in recreational angler expenditures with over \$1.2 billion per year. (Southwick Associates, 2007)

With this kind of social, cultural and economic value at stake, it is hard to understand why the National Park Service has not extended the public comment period for even 30 more days to allow more input from stakeholders who have only recently learned of the proposal. North Carolina's two U.S. Senators have both requested this extension, but the National Park Service has denied them apparently. Does the National Park Service really intend to go forward with this ORV Draft Management Plan / Environmental Impact Statement when it is 810 pages long and only came out for public review on March 5, 2010?

This would be regrettable because it is our understanding that the preferred alternative, Alternative F, as outlined in the DEIS is the most restrictive management option to date, and it far exceeds any sense of balance between resource protection and public access. It is also our understanding that this approach contradicts all indications and promises made to the public regarding recreational uses in the seashore throughout the development process of this Management Plan. CHNSRA is one of the best recreational surf fishing locations on the east coast, and most of it is accessible only by ORV's. To unduly restrict ORV's would be unduly restrict recreational fishing. The President has directed the National Park Service to do everything in its power not to do just that.

On September 26, 2008, President G.W. Bush issued Executive Order No. 13474, which amended President Clinton's Executive Order No. 12962. The amended Executive Order explicitly directs in Section 1(d) that Federal agencies are to ensure, ". . . that recreational fishing shall be managed as a sustainable activity in national wildlife refuges, national parks, national monuments, national marine sanctuaries, marine protected areas, or any other relevant conservation or management areas or activities under any Federal authority, consistent with applicable law."

The majority of the provisions included within the preferred alternative far exceed anything proposed by a majority of the Negotiated Rulemaking Committee, including excessively large resource closures (buffers), unnecessary year-round and floating closures, and the lack of access corridors around or through resource closures. These provisions will have the effect of greatly restricting recreational fishing in a national park while two Presidential Orders have directed that recreational fishing be managed as a sustainable activity in national parks. The Orders directed that recreational fishing activities be enhanced- not curtailed. The proposals currently drafted by the National Park Service also raise issues regarding the public trust doctrine. The public trust doctrine is as old as Roman law, and it continues to remain as a dominant influence in our law today.

For example, South Carolina and North Carolina follow the riparian view of rights to water. Property rights, that is. Owners of property adjacent to our rivers and streams have rights to that water, but these do not include the right to impair downstream users' rights to this water. The public policy reasoning for this is the public trust doctrine holding that public or common use of water is more important than any individual use. It is important to remember that any allocation of rights to any individual interests necessarily takes away rights from the public. We are needless to say concerned about allocation of rights to those prioritizing protection of the piped plover, for lack of a better phrasing of certain parties' interests.

If the proposals by the National Park Service greatly restrict ORV access whereby recreational fishing is also greatly restricted as a matter of fact, it necessarily takes away rights the public once enjoyed. The public trust doctrine holds that the highest and most important use of certain resources is the public's use, and in this case that use has been for recreational activity- recreational shore fishing in particular.

Such direct impacts to the highest valued uses of public resources in our society not only harms individual liberties and rights previously enjoyed- the number of public users of our resources would also be greatly restricted. When society's highest valued users are restricted, we are therefore harmed socially, culturally and economically all at once. This greatly concerns us not just as recreational anglers and industry but as citizens of this state and country.

As recreational anglers and small business owners in the Carolinas, we are strongly opposed to Alternative F in the draft Environmental Impact Statement. Please make material changes in order to provide for resource protection as well as reasonable public access to public lands and resources.

Conclusion

Restriction of sustainable recreational fishing in our National Parks is at odds with several important things. These are socio-cultural and economic values, the public trust doctrine and United States Presidential Orders.

Recreational fishing has not been adequately represented for its economic, social and cultural value in the National Park Service's Draft ORV Management Plan/EIS for CHNSRA. The National Park Service should develop a consensus from as many interests as possible as it develops and recommends policy and regulations, and our strong concerns here should at least indicate that there is a great opportunity to be more inclusive of interests that are quite popular among the public not only in the Carolinas but in the entire country.

The Recreational Fishing Alliance and its South Carolina Chapter stand ready to assist you in this regard, and we appreciate the National Park Service's attention and consideration regarding our comments. Please extend the public comment period on this draft management plan and environmental impact statement, and please consider the opinions of those who put their money where their mouths are on these types of issues over and over again.

We are strongly opposed to Alternative F in the draft Environmental Impact Study. Please make material changes in order to provide for resource protection as well as reasonable public access to public lands, resources and sustainable recreational fishing activities.

Correspondence: I believe there can be a better balance between land use and resource conservation than what is being proposed in the DEIS. I understand the need to preserve the delicate balance of resources that make the Cape Hatteras National Seashore Recreational Area so special. I also understand the importance of allowing reasonable access to these resources. I believe the underlying "facts" used as a basis for the construction of the DEIS is flawed.

I. The inclusion of the northern beaches, (Duck, Kitty Hawk, etc.) dilutes the true financial impact of the access limitations on local businesses. The actual impact on local business has been tremendous, and is seriously under-reported for purposes of the DEIS. Furthermore using 2008 data as "post consent decree" is misleading. Many people were unaware of the beach closures, and those that were already had reservations in place. 2009 should be the first year for purposes of comparing the effects of the beach closures.

II. The need for 1,000 meter buffers around nests and chicks is also excessive. Why not use suggested buffer sizes as given by the Fish & Wildlife services?

III. The restriction of leashed pets is also excessive. If dogs are such a threat (which they are not, but for arguments sake we will entertain the idea.) then simply enforcing the already present leash law would be sufficient to protect the birds and turtles. If there was a case of a domesticated pet destroying a nest or killing a bird, then the pet's owner should be held responsible. Law should not be made exponentially more restrictive to stop the irresponsible behavior of a few. Do not punish the responsible pet owners for the small minority of pet owners irresponsible actions.

IV. I disagree with the exclusion of Pea Island National Wildlife Refuge as pedestrian only land use, not including this significant piece of the seashore also skews the land use data.

The significant financial cost to the parks system as a result of the consent decree and the development of a long term plan could easily be avoided or reduced if they simply increased the amount of rangers available and on staff to actually enforce the rules. The vast majority of visitors to the Cape Hatteras National Seashore Recreational Area are excellent stewards of the beaches. In the twenty years I have visited Cape Hatteras, I can count on one hand the times I have seen someone act in an inappropriate or out of line way. In each of those three circumstances, the surf fishermen, who have been portrayed as "wild cowboys" were the ones to intervene. Please do not allow this beautiful and amazing resource to no longer be accessible because of the irresponsible actions of a few. If that requires charging for permits or requiring class time to be able to drive, fine. Complete closure of the Cape Hatteras National Seashore Recreation Area is a serious mistake, and one that I pray will never happen.

Thank you for your time and allowing me to voice my opinion, and I hope that prudent minds will be able to come to an agreement for the responsible management of one of our national treasures.

Correspondence: My wife and I own a non-rented, part-time house at Buxton, NC. We enjoy walking on the beaches in the seashore area, as do many of the guests we

have in our home. Our children and grandchildren enjoy looking for shells and other things on the beach. Presently we do not have a dog, but have had one in the past and probably will have another one; walking a dog on the beach is a great American past-time. We are not fishermen but support them in their fight to continue driving on the beach. We are keenly aware of the need for tourism to keep Hatteras Island viable. We also are aware of the animals and birds that use the beaches for breeding and food. All these things use the national seashore and its beaches and need access to the beaches. The proposed off road vehicle regulations represent an unnecessary and arbitrary attempt to close off the beaches to activities that most Americans associate with a beach. In the name of conservation, and under the sway of misguided zealots, the national seashore is going to be put out of reach of the public whom you are supposed to serve.

What is the purpose of the national seashore, if it is not to provide Americans with recreational opportunities and protection of the native birds and animals. Once the people quit coming to Hatteras because their beach experience is nothing more than looking at the water from the highway, the people move out because there is no economy to support them, the fishermen give up their fight against an unreasoning and stupidly arrogant bureaucracy and the animal zealots move on to some other place to ruin everything they touch, what then will the Park Service have accomplished?

Hatteras will be a large sand pile with nothing for anybody. The management of the Park Service can give itself plaques and praise for a great job of following on its mandate. Hopefully, there will be one or two honest employees who will wistfully remember what a great place it was before the Park Service ruined it! Of course, they can put up a nice sign that says that it used to be first national seashore of America!!

Correspondence: I very strongly support open and accessible beaches for the Cape Hatteras National Seashore Recreational Area. I do support the resource protection for the shorebirds and sea turtles when it is based on unbiased comprehensive science while still providing complete open access for human activity in the seashore. The following is a list of things that I think need to be addressed in the Management plan and are not. I am sure there is more that needs to be addressed but I do not have the ability to review an 800 page document during my limited spare time.

1. Access corridors for vehicles and pedestrians should be provided through closure area in order to gain access to areas that may be open on the other side. The corridors can be at or near the high tide line with enough space for access and use of this area.
2. The management buffers are accessive and there is not adequate science to keep them at 1000 meters. The buffers need to be based on peer reviewed science and still provide public access through these closure areas.
3. The turtle management plan could easily implement a relocation program that would provide a higher survival rate and remove the turtles from dangerous storm events. My wife worked for the NPS in Sebastian and Wabasso Florida were this was done routinely and it works.
4. This document does not adequately address the economic harm that has been caused and will continue to cause if these issues are not considered. The document states there will be "negligible to moderate" adverse impacts to the local economy. I believe this is completely inaccurate and is an insult to all the people who suffered economical throughout the outer banks community.

I know a great deal of hard work has been put into this DEIS but for the average person who has a job and family it is impossible for anyone to review and understand this information in the time that was given. If this is supposed to be for the public benefit it should be and easier process to review. In Summary there should complete open access whith managed corridors for vehicles and pedestrians during resource closures.

Correspondence: So your telling me our government is willing to kill an economy over a BIRD. That is the most ridiculous thing I have ever heard. So are you going to give me a job when the economy get so bad people will start loosing there jobs??? So are you going to tell my kids who have lived here their whole life they are not allowed to enjoy living at the beach because a bird is more important than the humans who live here. I am the first to tell you I love animals and treat them with the respect they deserve but I do not put them before human beings. You are crossing the line!!!!

Correspondence: I disagree with the assessment made by NPS that: "Visitor experience could be affected by conflicts between motorized and non-motorized recreation users." (p. vi).
I agree with the need to ask the question: Why has NPS never made public a list of reported incidents? Because ? In 10 years, only 1 minor incident involving a stuck vehicle and a pedestrian was disclosed. The driver was not blamed by those involved, nor was he charged. (p. 268)
I disagree with the statement made by NPS: Shorter Off-Season ORV access on South-facing Villages (p. xix)
I agree that the question needs to be asked: Why are Frisco, Hatteras and Ocracoke Villages closures to ORV access longer than the traditional May 15 to September 15 period, even though seasonal visitor statistics are similar for all villages? (p. 23)
I agree with the statement by NPS: "Carrying capacity would be a 'peak use limit' determined for all areas based on the linear feet of beachfront?" (p. xxiv)
But I also agree then the question needs to be asked: Why is capacity more restrictive on Bodie Island and Ocracoke than at Cape Point? (p. xxiv). (Bodie Island & Ocracoke -260 vehicles per mile and Cape Point ?400 vehicles per mile). This seems to be in conflict with the earlier assessment made by NPS regarding "Carrying Capacity". I also agree that the question needs to be asked of the NPS: Why do ORV counts provided for Memorial Day and July 4, 2009 which state: "ramp 4: includes Bodie Island Spit" and "ramp 43 to ramp 49: includes Cape Point" fail to recognize Bodie Island Spit and Cape Point were closed to ORV access on these dates due to resource protection closures, which thereby increased ORV congestion at ramps 4, 43, 44, and 49? (p. 265)
I disagree with the assessment by NPS: "Because it is not administered by the NPS, the seashore cannot direct the visitor use at Pea Island NWR." (p. 1)
I agree with asking the question: Why does NPS refuse to acknowledge that Pea Island is a prime, pedestrian-only area for visitors to the seashore and overstate the need for more ORV free areas? By eliminating this vast stretch of beach which is already off limits to ORV access it makes the beach parcels they intend on closing look like a smaller percentage of the overall resource area under closure to ORV.
I agree with the DEIS descriptions of ORV access as historical in nature (pg. 83) and also both predating the Seashore and as being integral to the public use by both residents and visitors. The document also illustrates and captions historical commercial fishing (pg.18), historical recreational fishing (pgs. 15, 260) and historical general recreational activities (pg. 259). These same traditional cultural activities are featured on the front cover.
I disagree with the NPS failure to appropriately address the traditional cultural value of surf zone access. I disagree because the NPS failure stands in direct violation of its legal responsibility under Section 106 of the NEPA and the NEPA framework as a whole. Isn't it ironic that the DEIS has a collage of pictures on the very first depicting surf fishing and ORV usage, but all this 810 page document does is limit the access based on false science.
I disagree with the NPS definition that Large, Inflexible Buffers be used, (p. 121-127) because they are too large, too restrictive and do not allow for ORV pass-thru only corridors
I agree with the opinion that:
? buffers use breeding / nesting buffer distances to establish ORV pass through only corridors to ensure beach access is always maintained
? Piping Plover unfledged chicks buffer should move with the brood as it relocates to reliable food source, not expanded
I disagree with the overall assessment made by NPS Resource Management Pedestrian / ORV Closure Policies Address because the Least Significant Factor Affecting Nest Survival with Little Chance to have more than Negligible Impact, AMOY Nest Failures are predominately due to Non-human Events. ?for example:
? Mammalian Predation: 54% Highest Impact ? Storm / Lunar Tides: 29% ? Nest Abandonment: 6% ? Avian Predation: 5% ? Ghost Crab Predation: 3%
? Human Interference: 3% Insignificant Impact
I disagree with how NPS does not adequately consider locations neighboring the Recreational Area that are part of the same ecosystem. They did not consider:
? Villages, dredge and spoil islands, Pea Island National Wildlife Refuge
? Dredge and spoil islands typically have fewer predators to threaten nesting birds
? Bird activity within neighboring areas should be tracked and included in target productivity levels. Fluctuations and trends in Recreational Area bird populations should be viewed relative to regional and state experiences ?not in isolation.
I agree that all locations neighboring the Recreational Area that are part of the same ecosystem and should have been considered.
I disagree with the NPS: Around the clock closure from nest to surf line (p.125) from May 1 ?November 15th. If the area is closed around the clock from the nest to the surf line, it cuts off all access. Closing all the way to surf line blocks access to the entire beach. It would be better managed if the access were allowed to pass below the nest near the surf.
I agree with a Closure to surf line from 1 hour before sunset until dawn, monitored by Turtle Night Nest Watch Team because the proposed Night Driving Restrictions Penalize Pedestrian and ORV users. Education and awareness are the most beneficial to all parties involved. Simply eliminating access is not "managing" the resource. And the resource is supposed to be available to all parties.
I disagree with the NPS barriers 105 meters wide (p.125) this cuts off all access and one nest at the beginning of two consecutive ramps would block the entire section of beach between the two ramps. This does not take into account all of the beach between two different nests that are cut off completely because the blockage is all the way to the surf line leaving zero passage. I agree with the statement that "Closure should be 10 meters square during the day" This is a more effective way to allow for access. The plan should cover off-road vehicle access, not total off-road vehicle elimination. Eliminating access is not "managing" it.
I disagree with the Prohibition of PETS in the seashore during bird breeding season, including in front of the villages."(p136)= No pets in public areas-beaches, campgrounds, sound-front, foot trails, park maintained roads from March 15 -July 31.
It is perfectly acceptable to have dogs tethered utilizing the six foot leash rule.
I disagree with the NPS position: "Even with resource closures in place, protected species are still at risk [from pedestrians and ORVs]." (p. 210)
I agree with facts related to current ORV access that:
? No Piping Plover deaths have been attributed to ORVs.
? ORV violations continue to decrease as signage and education improve.
? Pedestrian violations are much more significant than ORV violations.
I also agree that the question needs to be asked of the NPS: Why are buffers and closures administered such that more people are forced into smaller areas, potentially resulting in more resource impairment and diminished visitor experience?
I disagree with the socioeconomic data and analyses in the DEIS (pg 270-281;561-598) because it results in misleading and sometimes erroneous conclusions and is directly manifested in both the Effectuated Environment and Socioeconomic Impact sections. Critical weaknesses in the analyses pertain to:
1) Statistical definition of the Region of Influence (ROI); 2) Incomplete visitation/business survey data (p.566); 3) Erroneous recreational user data; 4) inflated overall Seashore visitor counts pertaining to beach use; 5) Flawed key assumption concerning the maintenance of access under Alternative The definition that ROI incorporation of the Northern Beach communities, including Southern Shores and Duck is misleading. These areas are almost completely disconnected from ORV use and access issues relating to the Seashore
The inclusion of the Northern Beaches in analysis significantly dilutes estimates of economic impact on the Seashore Villages.
The analysis of economic impact to the Seashore Villages appears to be significantly down played. Emphasis in DEIS is on the ROI-wide or county-wide level impacts.
Nowhere is it clearly addressed that the overwhelming majority of negative impacts will be felt by small businesses in the Seashore Villages rather than by overall economic impacts within the greater ROI.
Why is it OK to include all of these extraneous areas when it comes to Region of Influence (ROI); but NOT ok to include the populations of birds that exist on the dredge islands?
.
I disagree with the NPS: Use U shaped light filter fence to orient hatchlings
I agree with a proposed "Use Pea Island style keyhole pattern fence to the surf line at night".

I disagree with NPS that : "ORV and other recreational use would have long-term major adverse impacts on sea turtles due to the amount of Seashore available for ORV use and by allowing nighttime driving on the beach." (p. 377)

I agree with the assessment that "Major Adverse" (NPS definition, p.369) events have not occurred at the Recreational Area ?Night Driving Restrictions are not Necessary because: ? Nesting females have not "been killed"
 ? Complete or partial nest lost due to human activity has not "occurred frequently"
 ? This is all conjecture on the part of NPS. There is no documented evidence to support their accusations. They are merely speculating on a worst case scenario. Education and awareness are the best tools for the job here. An educated informed public addresses the true spirit of "managed" resource as opposed to total elimination of beach access, which requires no "management". ? Hatchling disorientation/disruption due to humans have not "occurred frequently" ? Direct hatchling mortality from human activity has not "frequently occurred" ? Pro-active Turtle Night Nest Watch program will insure no ORV impact.

I disagree with the position that NPS will not Adopt More Proactive Techniques Used at Other East Coast Locations to Encourage Turtle Nesting Success.

I agree with the assessment that NPS Inadequately Addresses Environmental Issues More Detrimental to Turtle Recovery Success than ORVs or Pedestrians (p. 392-396) because:
 ? 38.5% of nests had 0% hatchlings due to weather events. (p. 87, p. 219) ? 2009 Loggerhead Recovery Plan calls this catastrophic
 ? False crawl statistics do not support theory that light pollution is a significant problem at the Recreational Area. (p.125, p. 219)
 ? Predator management and nest enclosure practices encourage ghost crabs which are a primary predator of turtle eggs and hatchlings

I disagree with NPS usage of The North Carolina Wildlife Resource Commission Relocation Guidelines.
 I agree with an assessment that the North Carolina Wildlife Resource Commission Relocation Guidelines are Inadequate because:
 ? Recreational Area and the State have lost 55% and 60% of Leatherback nests respectively over the past 10 years following these guidelines.
 ? Use of "average high tide line" (as used in other states) rather than "seaward of debris line marking spring high tide" to identify which nests to relocate leave many nests at risk.

I disagree with the management decisions reflected in the DEIS that show a clear bias to implement actions that will adversely affect the visitor experience but to avoid actions that would benefit both natural resources and visitors. For instance:
 ? The NPS says it is OK to replace South Point wetlands with parking area because beach will be closed to ORVs.
 ? The NPS says it is OK to relocate Turtle Nests when storms are imminent, but not before (coincidentally the high risk nests are in prime ORV corridors).
 ? The NPS says it is OK to set aside areas of beach to replant the "extirpated" seabeach amaranth, but not OK to clear vegetation at Cape Point ponds to create more favorable piping plover habitat (outside of the prime ORV corridor).
 ? The NPS says it is OK to kill predators (greatest risk to birds and turtles), not OK to drive on the beach at night (deterrent to predators, low risk to turtles and birds).

I disagree with the NPS assessment of Restrictive Species Management Areas (p. 468) Where they state:
 NPS: Established based on annual habitat assessment. NPS: Manage each SMA using ML1 or ML2 procedures. NPS: ML1 ?No pedestrian or ORV access during entire breeding season NPS: ML2 ?pedestrian only corridor thru SMA at Bodie Island Spit NPS: ML2 -pedestrian & ORV corridor thru SMA at Cape Point, South Point

I agree with the opinion that: ML1 is overly restrictive. Pedestrian and ORV corridors or bypasses should be provided thru, around or below high tide line in all SMAs during entire breeding & nesting season (within guidelines) to maintain access.

I disagree with the NPS assessment of Limited Pedestrian and ORV Corridors (p. 468) because:
 NPS: Only recognized in ML2 managed SMAs NPS: SMA management reverts to standard buffers when bird breeding activity first observed

I agree with the opinion that:: Pedestrian and ORV corridors or bypasses should be provided thru, around or below high tide line in all SMAs during entire breeding season to maintain access.

In conclusion:
 I disagree with the NPA proposed Alternative F restrictions because they far exceed those under the Consent Decree, the Interim Management Strategy, and the de facto ORV plan previously in place under Superintendent's Order #7.
 I disagree with the speakers at the public hearings being limited to three minutes to address an 810 page document!!!
 Supposedly the Park Service has budget issues. Have they published the cost of doing this do called impact? I disagree with this 810 page document even being called the DEIS. Since when did it become DEIS? It's supposed to be an off-road vehicle management plan. The title includes Cape Hatteras National Seashore and it includes the word off-road vehicle management plan. So why is it referred to as D(draft) EIS. Why isn't it referred to as CHNSORVMPEIS?

Correspondence: Dear Sir or madam:
 I oppose the restriction of OVR on the Cape Hatteras National Sea shore. I have been fishing in Buxton NC since 1990 and I have not witnessed any destruction of Habitat for the Piping Plover or Sea turtles by OVR use.
 What I do see is that there are not enough Park rangers available to ticket or fine violators of the current rules.
 Also, the Piping Plover and Sea turtles nest up and down the Atlantic Seaboard so why target one area that is critical to the livelihood of the residents and visitors. Can you tell me the number of nest damage by OVR versus predators? I have heard that there is more destruction of nest due to predators which would normally be deterred by Human presence.
 Debbie Lamperti

Correspondence: To whom this may concern,
I grew up in Hatteras Village from the time I was 10 years old. Before I ever lived in Hatteras full-time, I was a visitor for years. I have memories and recollections on the beaches of Hatteras that I will cherish for the rest of my life. Without access to the beaches in off-road vehicles, I may have never made these happy memories.
My mother married a native of Hatteras Village in 1991. So when we relocated to Hatteras from Northern Virginia, I knew what a special place it really is. My dad showed me how to cast a line into the surf, launch boats, and how to drive a stick shift... all on the beach over Ramp #55 in Hatteras. Without a doubt, the access enjoyed by everyone shaped me as a child and as a developing young man.
Who knows what would have taken the place of beach rides and sunsets in those highschool years. Maybe I would have used my time in less favorable activities. Activities that would be harmful to the community and possibly to myself.
So what is more important? Closing beaches or keeping the societal community true to the standards we all know and love?
Not to mention the tourism driven by our access to the beaches. I don't need to elaborate on that point. My family ran a motel when I was growing up, so we depended on tourism as many many families do today.
Keep the beaches open!
Sincerely, Brian Ellison, Pharm.D. UNC School of Pharmacy Class of 2004

Correspondence: Leave the beaches open. As someone who has been visiting Hatteras two to three times a year since 1969, I have come to love the island the people the fishing even the birds. All can coexist, to remove the people from the beaches is to destroy the economy, the local businesses, the fishing, the way of life and the very essence of the island. People have been a part of the life of the island...do not make us humans an endangered animal!

Correspondence: Mike Murray, Superintendent Cape Hatteras National Seashore Recreational Area 1401 National Park Drive Manteo, NC 27954
Dear Superintendent Murray,
I am writing you today to make formal comments on the Cape Hatteras National Seashore Recreational Area Off-Road Vehicle Management Plan Draft Environmental Impact Statement, specifically Alternative F, created by the National Park Service with input from the negotiated rulemaking advisory Committee. I wish to thank the National Park Service for an opportunity to comment on the Cape Hatteras National Seashore ORV Management Plan DEIS. As a concerned Hatteras Island citizen and president of Midgett Brothers Inc. I feel it is my professional and civic duty to make timely comment on a matter that affects millions of citizens who wish to visit and have access to the Cape Hatteras National Seashore Recreational Area.
When the Cape Hatteras National Seashore Recreational Area was formed, the National Park Service stressed to the local residents in 1949 that this park would be an economic asset to the villages located within the park's boundaries. In 1952, Park Superintendent Conrad Wirth wrote that the park and its staff would "bring enjoyment to millions of visitors and prosperity to you."
We, the native people of the islands were asked by the government to be the host to the nation and the world at the seashore. Our family, the Midgett's, responded to that call from our government. My father and Uncles began the famous Hatteras Island - Manteo Bus Line, which carried islanders and visitors up and down the beach in the days before roads and bridges. The family business has grown throughout the years such that we now own the largest natively owned vacation rental company on the island, a motel, a real estate and constructions business, two marinas and a restaurant. Now, because we responded to that call of duty, we are in jeopardy of losing all we have worked for?.for ourselves and future generations?.being put in jeopardy by the very same entity that called us to duty.
Economic Impact:
The Economic Impact Analysis found the DEIS by its own admission is incomplete. How can we comment on an incomplete document? The Economic analysis is structured in such a manner that it fails to address full costs?direct costs, indirect costs, lost opportunity costs, costs of future liability, and hidden costs.
Not only does the analysis not adequately convey the economic impact of the proposed Alternative F, it fails to address any of the alternatives listed in the DEIS. The data is incomplete, misleading and the statements of what are supposed to be facts are without sound basis. The area is unique because it is removed from any large populations and has limited transportation infrastructure. These two points translate into a very high cost of living which gained no mention in the DEIS.
The Economic Analysis fails to recognize that the national seashore environment is a unique form of capital that serves the local economy, and in turn the health and well being of citizens and families that depend of that economy. Access to the seashore is essential for family business operations on the Outer Banks. In our family business, vacation rentals, the spring rental season has been decimated by the beach closures brought about by the consent decree. The demographics of the spring guests have been traditionally fishermen and they are unwilling to risk sending money on a vacation when the beach access is so untenable.
The DEIS suggests "F" will have revenue impacts on small businesses "at the low end of the estimated range rather than the high end." Make no mistake! Tourists are THE lifeblood of the local economy. They stay at motels and rental houses. They eat at the restaurants and buy food from the grocery stores. They put gas in their vehicles. They support the local shops by getting bait and tackle, bathing suits, surf boards and books. They buy souvenirs, local art and T-Shirts to remember their time here on the islands. During the summer, it was difficult to find a place to stay if you didn't have a reservation and there were always long waits to get into restaurants. For decades, Cape Hatteras National Seashore Recreational Area was immune from recession including the fallout from Sept. 11, 2001. Economic downturns that would cripple the national economy tended to give a boost to the Hatteras economy because people were inclined to go to Hatteras for inexpensive, short-distance vacations.
The Consent Decree has taken a heavy toll on the local economy. Without sensible beach access, there is no reason for tourists to come here. Since 2008, successful businesses that are older than the park itself have started to fail.
The Consent Decree and the resulting soft economy happened months before the nation began suffering from the recession. When the stock market plunged in September 2008, the Hatteras and Ocracoke economies were rebounding because the beaches reopened the month before. Businesses located near closed ramps to the beach struggled while businesses near an open ramp blossomed, even if they were just a few miles apart. Previous bird protection plans, specifically the Interim Protected Species Management Plan, had no effect on the local business.
It is my understanding that the Outer Banks Chamber of Commerce, on behalf of its more than 1,000 members with businesses in Dare, Hyde and

Currituck counties, has gone on record as vehemently disagreeing with the validity of the economic impact analysis included in the Draft Environmental Impact Statement for proposed new rules for access to the Cape Hatteras National Seashore.

This group of professional business owners states unequivocally states "Not only does the analysis not adequately convey the economic impact of the proposed Alternative F, it fails to address any of the alternatives listed in the DEIS. The data is incomplete, misleading and the statements of what are supposed to be facts are without sound basis."

Hatteras Inlet Permanent Closure:

If I understand the document correctly, it would appear as if the DEIS proposes to close the beaches at Hatteras Inlet, both the South Tip of Hatteras Island and the North tip of Ocracoke Island permanently and year-round.

To allow this closure of the inlet to occur could very well be devastating to the economy of Hatteras Village. Businesses in the Village have still not recovered from the many effects of Hurricane "Isabel" in 2003. Many of us are still carrying substantial SBA loans from that event.

Aside from the fact that such a closure would forever alter the traditional uses of these areas, such a closure has already and will impact the public safety of mariners traversing the inlet.

On Saturday, May 1st 2010, a local inshore charter boat from Hatteras Village overturned in Hatteras Inlet. There were 6 occupants of the boat, all family members, 3 children and 3 adults. The captain was a professional charter captain. They spent 4 hours in the water awaiting rescue. They could have been seen from the beach, had it been open but instead had to wait until the offshore charter fleet was returning in late day for any hopes of being rescued. One of the group died as a result. The family in question is my neighbor and a valued employee.

Unreasonable amount of areas reserved for nesting closures:

A 1,000-meter buffer in all directions of an unfledged piping plover chick represents 771 acres of closed beach! I have yet to read any scientific reasoning behind this management strategy. It is my understanding that in Assateague Island National Seashore the buffer is 300 meters. Why is the 1,000 meter buffer being proposed for CHNSRA? Why is one National Seashore being treated so differently than others when we are at the extreme southernmost extremity of the nesting area? A much smaller buffer would be just as effective for the survival of a piping plover chick without the extreme penalization of the residents and visitors of Hatteras Island.

Pet Restrictions:

It appears as if the preferred alternative prohibits pets in the Seashore during bird breeding season including in front of the villages. This means no pets in public areas ?beaches, campgrounds, sound front, foot trails, and park maintained roads from March 15 ?July 31. If this is a correct interpretation, I am opposed. I support the previous leash law (all pets must be on a leash 6 feet or less in length).

In closing, I am not only a business owner, but a father. I have 5 sons who all live on Hatteras Island and who are working as productive Island citizens. Our businesses are totally reliable on the tourism industry. Given the recent closures of the island beaches due to the ongoing "plans" put forth by the Park Service, or lack thereof, our business has suffered considerable losses of revenue in every area; especially during the much needed "off-seasons" when beach closures are at the peak. What type of legacy will they inherit?

I have a vested interest in protecting the future of Hatteras Island as a whole; our property, our family, our friends?.the people who live here, access to the seashore and the beaches, the natural surroundings, wildlife, sea life, and all that makes this island special.

After reviewing the National Park Service DEIS I must disagree with any of the six alternatives within the document. I have, however, reviewed the 77 page Coalition for Beach Access Position Statement signed by several groups that were a part of the negotiated rule making process and it by far succeeds in furnishing the best visitor experience while maintaining the needs of protecting the fragile resources. I believe that a reasonable and realistic approach into the management of CHNSRA will allow adequate protection of wildlife while maintaining a balance and necessary access to our beaches and seashore. As residents we are hosts of this beautiful island and welcome visitors. It has been my belief and experience that together we all share an interest and an obligation in preserving and protecting access to this land and the seashore for our families now. In turn, generations to come will be able to enjoy all that the Cape Hatteras National Seashore Recreational Area has to offer, both now and in the future.

Sincerely, Ted Midgett, Hatteras, NC

Correspondence: Mr. Mike Murray, Superintendent
Cape Hatteras National Seashore Recreational Area
1401 National Park Drive
Manteo, NC 27954

Dear Superintendent Murray,

Please accept this letter as my comment on the ORV DEIS before you at this time.

After reviewing the National Park Service DEIS I must disagree with the alternatives within the document. I have; however, reviewed the 77 page Coalition for Beach Access Position Statement signed by several groups that were a part of the negotiated rule making process and it by far succeeds in furnishing the best visitor experience while maintaining the needs of protecting the fragile resources.

Please consider all aspects of this alternative and put people back into the management of Cape Hatteras National Seashore. We have always been respectful of the wildlife and it is one of the reasons we live here. However, we fell law abiding citizens should have access to the beaches also.

Thank you,

James Muller & Kris Wilson

Correspondence: To whom it may concern:

With the exception of one year, my family and I have been making annual visits to Buxton, NC since 1961. We have been camping at Cape Point campground all these years and have enjoyed surf fishing from The Point to Hatteras Inlet and on Ocracoke as well. We are now planning this year's trip with our fourth generation in tow. It has always been our experience that fishermen and other recreational beach-goers have the utmost respect for the beaches we love, and the wildlife therein. We sincerely wish to continue having access to our beautiful salty piece of land known as Cape Hatteras National Seashore.

I know you have seen all the arguments by now. It is my hope that after weighing all the studies and opinions you will do the right thing for the people who actually visit and live on the OBX, and keep our beaches open. Please do this for the next four generations and beyond.

Kind regards, Mitch

Correspondence:	Hello, Please accept this letter as my comments on the ORV DEIS. After reviewing the NPS DEIS I must disagree with the six alternatives within the document. The DEIS management alternatives have little to do with developing a responsible off road vehicle management plan. The alternatives map out a plan to exclude humans from the Cape Hatteras National Seashore and Recreation Area. This document is way off base. A 1000 meter buffer zone for common shore bird nests ia absolutely absurd. This buffer zone allows a bird nest a circle that cannot be entered by humans that is over a mile across! We do not afford this type of easment to any other animal. It makes no sense whatsoever to place such a buffer zone around the nests of oyster catchers and terns let alone the misguided plovers that are attempting to nest outside of their natural range. Another thing that really bothers me is the way the National Park Service is slaughtering mamalian wildlife under the guise of protecting endangered birds. THE BIRDS ARE NOT ENDANGERED! The fact that the park service is deciding which wildlife can live and which species should be irradiated ...not right! I have reviewed the Coalition for Beach Access Statement signed by several groups that were a part of the negotiated rule making process (another travesty), and it by far succeeds in furnishing the best visitor experience while maintaining the needs of protecting the fragile resources. Please consider all aspects of this alternative and put actual people, not lawyers, back into the management of Cape Hatteras National Seashore.
