The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
Wildlife is extremely important to me, and I support a plan that would limit ORV use, add walkways and access that would encourage family/foot use and also give the Seashore wildlife a chance to rebound.
Our shores are precious, limited national resources, and as such they should be protected and preserved. ORV use is damaging in several ways; I would prefer to have it eliminated completely from this peaceful and unique area, but in any case its use should definitely be limited to less than half of the 68 miles of beach.
The recovery of birds, turtles, and plants should be a priority. ORV activities can take place in many other areas, but the flora and fauna of this area cannot be relocated.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.

Dear Superintendent Murray,

I am writing to comment on the National Park Service's proposed plan to manage off-road vehicle (ORV) use on Cape Hatteras National Seashore (CHNS). Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access. This plan would provide more opportunity for non-ORV use of the beaches and, most importantly, would result in fewer disturbances to the rare birds and sea turtles that use the beaches for nesting.

I am appalled and disappointed to see that under the National Park Service's preferred plan, Alternative F, ORVs would be given preferential treatment and an unfair advantage and virtually free reign of the beaches. Alternative F would prohibit ORV use on only 16 of the 68 total miles of seashore beach! This is unfair and, to wildlife, unethical.

If ORV use is to be permitted at all in the park (and I prefer it be entirely prohibited), then at least half of the beach should be off limits to ORVs throughout the year. At least half of the beach should be available year-round for wildlife and non-ORV users. A much safer seashore environment would result, and endangered and rare birds and sea turtles would enjoy successful nesting seasons and a chance to rebound to traditional numbers and diversity.

We have a responsibility to protect and maintain the natural resources and wildlife diversity of CHNS and protecting it must be our priority.

Recreational use of the seashore needs to be secondary. Recreational use must be consistent with this protection. The preferred plan for CHNS fails to set aside adequate areas that are free of ORV use year round for breeding, migrating, and wintering species of wildlife. Wildlife disturbance buffers in the preferred plan are minimums and must be increased in order to protect breeding birds and sea turtles.

A good plan must also include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not rebounding as planned, based on annual reviews, additional protective measures must be implemented until recovery goals are met. These goals, and adequate management to realize them, must include migrating and wintering as well as breeding species.

Thank you for the opportunity to comment. This is hugely important to me. The human race, with our ability to manipulate our environment, has managed to do more harm than any other species on the earth. We have extirpated countless numbers of species of plants and animals from this planet with our growth, development, and greed. I hope you will give this matter the serious attention it deserves, and I will be following the progress of your efforts and looking forward to seeing a final plan for Cape Hatteras that is fair and balanced and that will protect our wildlife and natural resources.

 There's no need for off-road vehicles to use the seashore, but there is a need to preserve the seashore. Don't allow ORVs there.

Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
I believe that ORV use should be regulated (but not outlawed) in the park. ALL of us use the parks, not just people who want to ride their vehicles. Keep an area open for ORV use, and limit ORVs to this area only so that the rest of the people can enjoy the park and the wildlife can continue to thrive. If ORV use is not limited and regulated, the rest of us will not have the right to view the park in its natural light. We have rights, too. This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

Correspondence: As a home owner in Avon, NC I have always felt it was a privilege to have access to these beach areas you want to restrict our use of. I have always respected nature and wouldn't harm or disturb any wild life habitat, the area is large enough that both man and nature can co exist, and have been doing so up to this point.
In the long run the birds will go where they will and nature will survive but our fragile economy may not and we are so depended on our summer visitors to rent our homes and to support our economy.
The main reason I started to visit this wonderful place 19 years ago and eventually buying a home here is it was always restrictive in the local sea shore points in NJ and Delaware, I hope this isn't a prelude to what will be happening next. the birds may stay or keep migrate to other already areas of the island that are protected (Pea Island), for as long as I've been going to the Outer Banks ,it has been all good until now (why), but the Vacationers may not come back.
Regards,
Stan

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
If the National Park Service doesn't protect species that can not help themselves, then who will? Please keep ORV off of the National Seashore. No one NEEDs to drive on the beach. Wildlife NEEDs our help to survive. If someone really wants to drive on the beach, let them go to Daytona-it is already ruined. I love Cape Hatteras. Please enact the laws that will save this critical habitat and wonder of God.
Thank You,
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. Correspondence: I am a serious saltwater angler of the East Coast, and someone that is representative of thousands of northeast anglers that want to keep Fishing & Beach Access Open.
I am against the National Park Service (NPS) preferred alternative, Alternative F, in the DEIS and urge you to make significant changes to the preferred alternative in order to provide both reasonable resource protection and reasonable public access to public land. Recreational fishing is one of the most storied American pastimes, and Cape Hatteras National Seashore has some of the best surf fishing locations on the east coast ?which is visited by countless thousands of fellow visiting anglers. This fishing ? our reason for coming to NC ? is accessible only by over sand vehicle.
Alternative F is the most restrictive management option to date, far exceeding any sense of balance between resource protection and public access and betraying all promises made to the public regarding recreational uses in the seashore. The majority of the provisions included within the preferred alternative far exceed anything proposed by a majority of the Negotiated Rulemaking Committee, including excessively large resource closures (buffers), unnecessary year-round and floating closures, and the lack of access corridors around or through resource closures.
In order to restore balance to the DEIS, I highly recommend that the NPS revisit the proposal put forth to the Negotiated Rulemaking Committee in December of 2009. It provides the necessary protections for wildlife resources while having the support of a majority of the local community.
Without reasonable ORV access, responsible anglers like me and the countless other anglers from all parts of the US that VISIT North Carolina, as well as the local economy that is supported by recreational fishing (and us TOURISTS), suffer greatly. I urge you to provide a better balance between resource protection and recreational uses by incorporating the December 2009 recommendations from the Negotiated Rulemaking Committee into the preferred alternative.
Best regards and Please Keep Access Open,
John Redmond Owner, Chief Cook & Bottlwasher www.Striped-Bass.com

* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

ORV's are dangerous to humans as well as wildlife. They also damage habitat and cause pollution. The selfish ORV owners should not be allowed to wreak havoc on Cape Hatteras National Seashore or other federally owned lands.

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. Thank you for what you have done to protect the waterbird and turtle habitats so far. Lets make this a place for all of us.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
I use the beaches of the Seashore several times a year for bird-watching, photography, and simply for walking. While I generally do not mind sharing the beaches with ORVs, I feel that it is important to maintain the Seashore habitat in a way that produces as little disturbance to wildlife, plants and animals, as possible. Therefore, I would prefer to see the closure of some beach areas to ORV disturbance during critical times of the year.
The current preferred plan does not provide adequate protection for wildlife. Nor does it provide the lack of disturbance many species need to build up their population numbers to sustainable levels. These organisms are not just pretty to look at. The health of their populations is an indicator of the health of the whole ecosystem along the Outer Banks.
I would prefer to see the development of a plan that allows for the sharing of the Seashore by wildlife, pedestrians, and ORV drivers. If this results in restricting human access, either pedestrian or vehicular, at certain times of the year, I strongly support that decision.
Sincerely yours, Norman Budnitz 4115 Garrett Dr Durham, NC, 27705

The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.

* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.

* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.

This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.

This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me. We are smart enough to figure these things out if we were not so greedy. We need to think of the overall good for the environment in accomodating change or disruption to the ecology.

The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This is not an unreasonable request considering that the natural beauty of these beaches is the ultimate source of value for this area, including tourism.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
I am very concerned that in the preferred plan the ORV users are getting too much access, at the cost of wildlife. Natural Resources must be protected first. Access to the beach must be worked around the needs of species that need the beach for breeding. Buffers must be based on scientific research.
The alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which is vitally important to me.
Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to

provide greater pedestrian access.

This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.

The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.

* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.

* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
As a 76 year old woman, I have had a life long love of our natural wild areas and our wildlife. It is critical that our wildlife be protected from human activities that destroy the wild creatures, birds and animals. There is no reason that anyone should have the right to drive off road vehicles onto beach areas where wild birds are nesting. This is simply wrong. These people need to be a lot more respectful of our natural wonders and not allowed to destroy them for the rest of our society.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
Preserving the natural beauty and health of the wildlife at Cape Hatteras contributes to the enjoyment to ORV and non-ORV visitors. I am concerned that some of the proposals under consideration would compromise the serenity and ongoing health of the Cape Hatteras National Seashore.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me and many others.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.

I believe we should maintain Cape Hatteras National Seashore as near as possible to its original state, which is most likely possible following plans of the "environmentally preferred" Alternative D.

This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.

The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

- *Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
- * Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
- * Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.

ORV users are basically very disruptive users and do incredibly more damage and disturbance than any other type of user, therefore much more weight should be given to less disruptive users than ORV's.

The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

- *Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.

Ideally, I prefer a complete ban on off road vehicle use in our protected areas. I visit these areas to enjoy the natural beauty and wildlife of this unique area. I care deeply that it should be preserved so my children have the opportunity to experience a small part of our country that remains unspoiled.

When it is allowed to become a parking lot, it destroys the value most visitors travel to experience. My experience is ruined by this traffic on the beach and the opportunity to view wildlife greatly diminished. However, in spirit of compromise, this alternative plan (D) is a more fair solution.

This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me. If we cannot protect a national seashore, what can be protected?

The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.

The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
Here in Ventura County, for instance, the Snowy Plover breeding grounds on the beach are protected with taped off areas, volunteer guards, and signs to educate the public. Education is key to combat the pervasive marketing mantra "It's all about me." Such actions are necessary--and supported by the public when understood--to protect the fragile existence of our plant's wildlife.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a final plan that protects the natural resources of the Seashore.
Sincerely,
Ms. Carol Summers 78 N. Joanne Avenue Ventura, CA 93003

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.

The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.

* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.

* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. We are guardians of the precious wildlife and habitats. They cannot defend themselves against human encroachment. I love seeing birds and animals in their natural habitat so much more than in captivity. Knowing that species can continue means much to me, insofar as they can sustain themselves free from predatory behavior by humans. All we need to do to sustain them is to protect their homes adequately. In so doing, we maintain beauty and order in the world for future generations. This cannot be done by doing only the minimum sustainability level, it must be done as generously and as selflessly as our own survival can manage. You are in the position to make these decisions. It is a great and necessary responsibility.

Correspondence: The NPS must formulate a plan that is consistent with the legislation establishing Cape Hatteras National Seashore Recreation Area. The enabling legislation for the Recreational Area states, in part, "said area shall be, and is, established, dedicated, and set apart as a national seashore recreational area for the benefit and enjoyment of the people and shall be known as the Cape Hatteras National Seashore Recreational Area". Therefore, it is important to balance resource protection with reasonable access for recreation.

Corridors are a vital tool in providing access while managing resources. They provide a small path around temporary resource closures in order to provide access to open areas that would otherwise be blocked. Corridors should be permitted throughout the seashore during the entire breeding and nesting season including ML-1 portions of SMAs. These corridors would provide valuable access without impairment or damage to protected resources. Buffers, or closures, are important management practices for species recovery. However, to have long term benefit for the wildlife and the visiting public, buffers must be based on peer-reviewed science. For example, the Piping Plover, a species classified as threatened and not endangered, is given a level of unprecedented protection in Alternative F. A 1,000-meter buffer in all directions represents over 771 acres. The DEIS does not cite any peer-reviewed science in supporting such closure. A more appropriate & effective buffer would be 200 meters.

Birds that are not listed as endangered should not be afforded the level of protection given to ESA (Endangered Species Act) protected species. Instead of 300-meter buffers for these birds, a more appropriate buffer would be 30 meters. Also, all birds in the same ecosystem of the seashore should be counted. This includes all the many birds on the dredge and spoil islands located just yards away and within sight of the seashore.

The National Park Service should consider turtle management practices successfully used in other federal and state areas to achieve nesting success. More proactive measures include relocating nests to more desirable locations, which is routinely and successfully done in other areas.

Correspondence: Mike Murray, Superintendent Cape Hatteras National Seashore Park 1401 National Park Drive Manteo, NC 27954 May 10, 2010
Re: Cape Hatteras National Seashore Recreational Area Draft Off-Road Vehicle Management Plan/EIS
Dear Mr. Murray:
This letter is sent to you as a public comment under your draft EIS referred to above. Though most of it is copied from a friend's letter to you, that I feel was very well written, it indeed reflects my feelings on this matter quite accurately.
I, along with my 2 children, are frequent visitors to the Cape Hatteras National Seashore. I "discovered" Cape Hatteras in 1982. I now spend nearly half

of my year in the area and the other half in an equally special place- South Hero Vermont (which is also an island). We have participated in all but three of the activities cited in the Figure 23 Visitor Activity Survey Results (Page 260). We would like to continue enjoying the recreation at the seashore for the remainder of our years, however I am gravely concerned that the preferred proposed Alternative F will severely impede this. As stated in the Act, Congress established the Seashore in 1937 as a national seashore for the enjoyment and benefit of the people, and to preserve the area. (page iv). Although I agree with the premise of protecting the natural resource, Alternative F would do so at the expense of humans, as well as the local economy and culture. .

Specifically my comments on the proposed plan:

- 1) I disagree: Page 121. To completely prohibit pedestrian access in sections of the national seashore, runs completely contrary to the basis upon which the Park was founded, for recreation. Pre-Nesting Closures All species: All designated Breeding Shorebird SMAs will be posted as pre-nesting closures using symbolic fencing by Mar 15 at sites involving piping plover, Wilson's plover, and/or American oystercatcher; and by Apr 15 at sites involving only colonial waterbirds. The NPS will determine the configuration of specific pre-nesting closures based on an annual habitat assessment. Pre-nesting closures would be adjusted to the configuration of the Nonbreeding Shorebird SMAs for the respective sites (as described later in this table) if no breeding activity is seen in the area by Jul 31, or 2 weeks after all chicks have fledged, whichever comes later. Pre-nesting closures will not be modified in cases where the beach erodes into the buffered habitat. ORVs, pedestrians, and pets are prohibited within all resource closures, including pre-nesting closures. ML1: SMAs managed using ML1 measures would not allow ORV or pedestrian access when pre-nesting closures are in effect. ML2: The Bodie Island Spit, Cape Point, and South Point Ocracoke SMAs would be managed using ML2 measures in action alternatives C, E, and F. Once pre-nesting closures are implemented at these sites, a narrow ORV access corridor (where ORV use is permitted) or a pedestrian access corridor (where ORV use is not permitted) would be established. Upon the first observation of breeding activity, the standard buffers (please refer to table 11, Shorebird/Waterbird Buffer Summary) will apply, which depending upon the circumstances may close the access corridor. The Bodie Island Spit access corridor would follow the ocean shoreline to the inlet. The Cape Point access corridor would follow the ocean shoreline from ramp 44 south to the point, then west approximately 0.2 mile along the ocean shoreline. The South Point Ocracoke access corridor would follow the ocean shoreline south from ramp 72 to the inlet. Exact configuration of the corridor would be determined by NPS staff based on the annual habitat assessment. The ORV access corridor at ML2 sites will generally be no more than 50 meters wide above the high tide line (alternative E may include a designated pass-through zone where no stopping or recreation would be permitted in order to minimize disturbance). An ML2 pedestrian access corridor would generally be below the high tide line and would in no case be more than 10 meters above the high tide line. Pets, as well as kite flying, ball and Frisbee tossing, and similar activities, will be prohibited in the access corridors or pass-through zones (in alternative E only) while the pre-nesting closure is in effect.
- 2) I disagree. I find the proposed 1000 meter buffers cited on pages 121 ? 127 unnecessarily restrictive and arbitrary. The use of such large buffers will cause people to be forced into smaller areas, with a subsequent greater impact on resource in the area. In addition, the expansion of the buffers as a punitive measure for infractions is also arbitrary. Please do not punish all for the offenses of one.
- 3) I disagree. The complete prohibition of ORVs, year round, pp 97-101, is entirely unnecessary, and will also impede human ability to partake of many recreational activities in the stated areas between ramps 27-30, Hatteras Spit, Ocracoke Inlet and others.
- 4) I disagree. Pets have been part of my, and continue to be part of many visitors' recreation and vacation experience. I disagree with the proposal to completely prohibit pets at the seashore beaches during "breeding season" from March 15th to July 31st. Page 136. Pets on a leash will not interfere with wildlife protection measures.
- 5) I disagree. It has not been proven scientifically that human interference is extensively responsible for damage to turtles and nesting birds, (less than 3%) so the prohibition against night driving for over half of the year is unnecessarily restrictive. P 104, P 377. No piping plover deaths have been attributable to ORVs.
- 6) Page 468, I disagree. Access should be provided through all species management areas. Buffers should move with the species, instead of being expanded.

Thank you for the opportunity to provide comments on the proposed plan. I look forward to a reasonable resolution of the issues, one that the Park, the Visitors, the natural Resources and the Local Culture and Economy will find reasonable and sustainable.

Sincerely,
Don Smallwood

Correspondence:	<p>The Coastal Conservation Association North Carolina wishes to comment on the recently released Draft Environmental Impact Statement on the ORV Management plan for Cape Hatteras National Seashore Recreation Area issued by the National Park Service. The objective of CCA is to conserve, promote and enhance the present and future availability of these coastal resources for the benefit and enjoyment of the general public. As such the thousands of members and volunteers of CCA NC and their nearly three quarters of a million associated recreational anglers are very disappointed in the six options for ORV management on CHNSRA. First of all the document itself is very difficult to follow in its 800+ pages. The tragedy is that none of the six options reflect the wishes of the vast majority of the CHNSRA visiting public and CCA NC. While there are preferred environmental and NPS options, there is no pro-access preferred option. The CHNSRA was established specifically for the American public to enjoy the seashore. To propose no option which provides a maximum access option certainly violates the spirit and perhaps the letter of the laws establishing this national park. Without serving the visiting public, The NPS has failed in its responsibility to our citizens. All the options presented in the DEIS seek to restrict public access well beyond any reasonable or legal requirement.</p> <p><!--[if !supportEmptyParas]--> <!--[endif]--></p> <p>It is clear that significant facts have been ignored in the preparation of this DEIS. The success of turtle nesting and piping plover nesting and fledging is virtually unchanged since the de facto ORV plan was implemented in 1978. The primary causes of failed nesting and fledging are overwhelmingly predation and weather events which have occurred for hundreds of years. ORV caused mortality is a fraction of 1%. The USFWS and NPS personnel have caused more plover mortality. Yet, the NPS chooses to attack those users who are very sensitive to the wildlife in the CHNSRA.</p> <p>The DEIS options all include restrictions which, when implemented as they have been under the consent decree, will unnecessarily close miles and miles of beach access both from the ocean and sound side. The many options describe no action which can circumvent a nesting closure in order to access an open area of the beach. Thus, while a stretch of waterfront may be "open" it is inaccessible. This represents nothing more than verbal trickery and masks the true available waterfront.</p> <p>The specifics of option F, the NPS preferred option, require at least some comment as commenting on all options would extend beyond the available space and time constraints. Overall, the DEIS suggests there would be 52 of 68 miles of the waterfront "open" to ORV access but it is not clear that this includes any calculation of sound side access for ORVs or pedestrians. CCA NC strongly believes the "buffer" or closure areas suggested for piping plovers in various stages of nesting and fledging are beyond excessive. For nesting piping plovers 50 meters is more than adequate and as is 200 meters for unfledged chicks. To suggest that unfledged chicks of a bird that is less than 1 foot tall requires over a mile of seashore is ludicrous! All this with no pass through or corridor around these areas closes vast areas of the CHNSRA to the American public. All other shore birds should be allocated no more than 30m for nesting and 30m for unfledged chicks with pass through corridors as there is no legal requirement to provide excessive buffers. In addition, the NPS fails to recognize the role played by the spoil islands behind Bodie Island, Hatteras Island, Pea Island National Wildlife Refuge and Ocracoke Island in the breeding of shore birds. These areas are typically with a few hundred yards of the CHNSRA and harbor large populations of shore birds. If the NPS truly wants to help the population of piping plovers they should investigate the usage of large cages placed around the nests to keep predators out of the nests. These are used in the Northeast where the major piping plover nesting takes place. The NPS and the USFWS seem content to kill hundreds of other wildlife to try to protect piping plovers but refuse to implement simpler techniques improve shore bird breeding success while improving access as well.</p> <p>Option F describes measures required to "improve turtle breeding success". Many of the restrictions described in option F have little basis in peer reviewed science. For example, there is no evidence that night driving of ORVs has any impact on turtle nesting or hatchling survival. There have been</p>						

no female turtles killed by ORVs. To protect turtle nests and improve hatchling success, CCA NC recommends relocation of turtle nests when they are laid in areas exposed to weather events. Using the fences used on the Pea Island National Wildlife Refuge that are keyhole shaped are more effective for turtle hatchlings and would allow continued use of ORVs at night.

The surf zone of CHNSRA has been used for a hundred years for the purposes of swimming, sunbathing, fishing, birding and shelling. ORV usage is critical to the pursuit of these activities as much of the surf zone would be inaccessible without ORVs. The NPS, throughout the DEIS, seeks only to restrict ORV usage without proposing ways to improve access for ORVs and providing expanded habitat for those species which are threatened or endangered. It seems the NPS has forgotten the CHNSRA was established as a recreation area. Pea Island National Wildlife Sanctuary is for wildlife, yet under the de facto rules in place from 1978, there has been little difference in the successful breeding of piping plovers or endangered sea turtles. CCA NC urges you to revert to those rules put in place in 1978 to provide maximum access for ORVs and the American citizens.

Correspondence: Dear Superintendent Murray,
As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.
1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."
2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness...."
Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.
3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.
Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.
Thank you very much for taking the time to protect one of America's most beautiful stretches of Atlantic seashore! Sea turtles, nesting shorebirds, and generations to come will be grateful for your action today. Thanks again!
Sincerely,
Annette S. Overstreet

Correspondence: We visit the Cape Hatteras National Seashore Recreation Area and would like to continue to recreate there. The legislation for the Recreational Area states, "said area shall be, and is, established, dedicated, and set apart as a national seashore recreational area for the benefit and enjoyment of the people and shall be known as the Cape Hatteras National Seashore Recreational Area". Please balance resource protection with reasonable access for recreation.
To that end, corridors should be permitted throughout the seashore during the entire breeding and nesting season including ML-1 portions of SMAs. Buffers must be based on peer-reviewed science. For example, the Piping Plover, a species classified as threatened and not endangered, is given an unprecedented level of protection in Alternative F. The DEIS does not cite any peer-reviewed science in supporting such closure. A more appropriate & effective buffer would be 200 meters.
Birds that are not listed as endangered should not be afforded the level of protection given to Endangered Species Act protected species. Instead of 300-meter buffers for these birds, a more appropriate buffer would be 30 meters. Also, all birds in the same ecosystem of the seashore should be counted. This includes all the many birds on the dredge and spoil islands located just yards away and within sight of the seashore.
The National Park Service should consider turtle management practices successfully used in other federal and state areas to achieve nesting success.

More proactive measures include relocating nests to more desirable locations, which is routinely and successfully done in other areas.
Sincerely, Michael Sturdevant

Correspondence: Dear Superintendent Murray,
As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.
1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."
2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness...."
Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.
3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.
Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

Correspondence: Date: May 10, 2010 To: National Park Service From: Subject: DEIS Off-Road Vehicle Management Plan Comments
My comments are below and are clearly a collective set of ideas common to property owners in Avon. Before the technical I must preface with the following. A National Seashore is a PARK.
Please take a moment to look back to the reason the park was created. The then Secretary of the Interior said
"When we look up and down the ocean fronts of America, we find that everywhere they are passing behind the fences of private ownership. The people can no longer get to the ocean. When we have reached the point that a nation of 125 million people cannot set foot upon the thousands of miles of beaches that border the Atlantic and Pacific Oceans, except by permission of those who monopolize the ocean front, then I say it is the prerogative and the duty of the Federal and State Governments to step in and acquire, not a swimming beach here and there, but solid blocks of ocean front hundreds of miles in length. Call this ocean front a national park, or a national seashore, or a state park or anything you please?I say that the people have a right to a fair share of it."
Secretary of the Interior Harold Ickes, 1938
There is no mention that birds have more rights than Americans. To be sure the lobbying efforts of some conservation groups are well funded and influential. To be sure the property owners have dwindling rights that have little organized advocacy. Should beach goers and property owners who have risked financial resources to provide comfortable places to stay for those folks for whom the park was intended have their interests set aside because there is no BEACH USER LOBBY? I truly believe that the Park Service has been put in the position of forging a solution that is to remedy a problem that has already been given a priority. The priority is not to accede to the wishes of a few but to find away to allow all to use the resources Americans have paid for. The proposed solutions do not accomplish that. The following is the detail behind how I feel it falls short.
"Call this ocean front a national park, or a national seashore, or a state park or anything you please?I say that the people have a right to a fair share of it."
Secretary of the Interior Harold Ickes, 1938
My comments concern the DEIS of the Off-Road Vehicle Management Plan prepared by the National Park Service (NPS) for the Cape Hatteras National Seashore Recreation Area.
1) Page 201: I disagree with the NPS statement: "Even with resource closures in place, protected species are still at risk [from pedestrians and ORVs]." No Piping Plover deaths have been attributed to ORVs. ORV violations continue to decrease as signage and education improve. Pedestrian violations are much more significant than ORV violations. It seems to me that any transgressions into protected area are the result of lack of NPS manpower and enforcement than the public purposely and willfully violating out of bounds areas. 2) Page xxiv: I question the statement of as per the DEIS: "Carrying capacity would be a 'peak use limit' determined for all areas based on the linear feet of beachfront?" If you close off huge sections of the beach, you force more people into smaller areas, potentially resulting in more resource impairment and diminished visitor experience.
3) Page xix and page 23: I am against having two different closures rules pertaining to the North facing beaches (North side) and the South facing beaches (South side) as per the grid outlined in Alternative "F". I disagree with the NPS proposal to close the beaches in villages of Frisco, Hatteras and Ocracoke Villages to ORV access longer than the traditional May 15 to September 15 period for the Northern beaches, even though seasonal visitor statistics are similar for all villages. Please, make them the same: May 15 -> September 15.
4) Page 1: I agree with your statement "ORVs have long served as a primary form of access for many portions of the beach in the seashore, and continue to be the most practical means of access and parking for many visitors."
However, pedestrian only areas discriminate against individuals with limited mobility due to age or physical impairments, families with small children, and those wishing to engage in activities requiring recreational equipment (boogie boards, beach umbrellas, beach chairs, coolers, fishing rods and tackle, etc)
5) Page 53: I disagree with the special use permit proposed guidelines. It is impractical to allow the transportation of disabled visitors to the village beaches and then require the vehicle to be returned to the street or parking area. This necessitates the disabled person to have a driver to drop him (or her) off, then drive to a parking area, then trudge a long distance to the site of the drop off, then trudge the long distance through the sand back to get the vehicle.
Suppose the handicap person wants to go to the beach, is capable of driving himself, yet cannot find another person to go with him? Does he now not go to the beach? This rule creates unnecessary hardships and risks in the event of an emergency as well.
6) Page 121 ? 127. I strongly disagree with the buffers as presented. We must allow for pass-thru corridors. The beach is linear with the ocean buffering on one side and the dune line on the other. For example - If you pinch off access on one side of a 4 mile linear beach and pinch off access on the other side of the 4 mile section of beach with no corridor, then you effectively have closed off all 4 miles of the beach because you CAN'T get there. The

proposed bird buffers are too large, blocking access to the interior sections from the two "buffered" ends.

I propose ORV pass-thru only corridors and to use breeding / nesting buffer distances to establish ORV pass through only corridors to ensure beach access in a way that does not hinder resource protection. I believe pass through corridors should be maintained for pedestrians and ORVs in all areas of the Cape Hatteras National Seashore Recreational Area throughout the entire breeding and nesting season. Corridors are vital to providing access in a way that does not hinder resource protection.

Piping Plover unfledged chicks buffer should move with the brood as it relocates to reliable food source, not expanded.

The 1,000 meter distance for the piping plover is way too large and not based upon peer reviewed science. A more rational distance would be 200 meters per other sites in the nation for the piping plover. Ample scientific evidence and precedent exists to support a 200 meter buffer. Buffers for other species, including American Oystercatchers, Least Terns and Colonial Waterbirds must also be changed. An effective 30 meter buffer should be established for these species rather than the 300 meter closure outlined in the DEIS.

NON-ENDANGERED BIRDS should not have same protection as if endangered. Not allowing ORV access is paramount to denying the public access to these beaches.

7) Page 468: I disagree with the limitations imposed on pedestrian and ORVs. Corridors or bypasses should be provided thru, around or below high tide line in all SMAs during entire breeding season to maintain access.

8) Page 124: I strongly disagree with the NPS slant of providing for over protection of resource management over that of the public's right to access the beaches. Pro-active initiatives include: Vegetation Management, Habitat Management, Enhanced Predator Management, Colonial Water bird social attraction, Piping Plover check fledge rate, Piping plover chick buffer distance, and pass-through buffers during the incubation period. Opportunities to implement less restrictive closures as a result of the above initiatives should be considered more frequently than the 5-year periodic review process identified in the DEIS.

9) I disagree with the NPS Resource Management Pedestrian / ORV Closure Policies. These policies address the least significant factors affecting nest survival with little chance to have more than negligible impact. For example: the AMOY Nest Failures are predominately due to non-human events. Using your own stats, the mammalian predation is 54%, Storm / Lunar Tides: 29%, Nest Abandonment: 6%, Avian Predation: 5%, and Ghost Crab Predation: 3%.

So what is the percentage due to human interference: just 3%! It's insignificant, yet the NPS wants to ban humans when their actions provide very little influence on the success rate of breeding birds and turtles.

10) I disagree with the stats of breeding plovers and the other birds in the Park when the NPS does not adequately consider locations neighboring the Recreational Area that are part of the same ecosystem, namely dredge and spoil island that are located just yards away and within sight of the seashore. These birds are part of the same ecosystem and should be included.

Those spoil islands, developed by man from dredging the waterways in the Pamlico Sound for channel upkeep are slammed full of birds. The reason why so many birds? NO PREDATORS. SO, birds are not as stupid as one might think. You have to count these birds and incorporate them in the stats when the NPS is talking about any so called decline in breeding pairs in the National Park.

11) Page 1: I do not think the DEIS responsibly addresses the cultural resource issues. The very purpose of the DEIS as set forth in the National Environmental Policy Act (NEPA) is to protect and preserve natural and cultural resources in the federal decision making process. In the DEIS, the statement "protect and preserve natural and cultural resources" appears in the first sentence of the first page of the plan, in the Purpose of the Plan section, and numerous times thereafter. Yet, the 810 page document devotes only two paragraphs to analysis of cultural resource issues.

As a lifelong resident of Hatteras Island, we of the Hatteras Island community have always gotten together on the south beach on Sunday to enjoy the beach with our cookouts, gatherings, surf bathing, horse shoes and foot races, fishing, and surfing. Now the DEIS is proposing closing off most of the south beach during the summer which is the traditional period we local people use the beach. The continuation of this traditional pattern of land use is central to maintaining the historic identity of our island communities.

12) Pages 270-281; 561-598: I strongly disagree with your economic analysis of the impact of the DEIS. The region of influence (ROI) incorporates the Northern Beach communities, including Kill Devil Hills, Kitty Hawk, Southern Shores and Duck. These areas are almost completely disconnected from ORV use and access issues relating to the Seashore.

? Inclusion of the Northern Beaches in analysis significantly dilutes estimates of economic impact on the 8 Seashore Villages

? Analysis of economic impact to the Seashore Villages appears to be significantly down played. Emphasis in DEIS is on the ROI-wide or county-wide level impacts.

? Nowhere is it clearly addressed that the overwhelming majority of negative impacts will be felt by small businesses in the Seashore Villages rather than by overall economic interests within the greater ROI.

On page xlvi, Alternative F is characterized as having a "negligible to moderate" adverse impact on small businesses. I strongly disagree with this statement. I believe the negligible to moderate projection is inaccurate and relies on economic surveys that has not yet been published. Furthermore, this material is not expected to be added to the DEIS until after the public comment period has ended. Based upon the economic harm we have already experienced under the consent decree, Dare County projects the economic impact of Alternative F to be substantial. Beach closures have already had a devastating and unfair impact on many Dare County Businesses, causing foreclosures, bankruptcies, lay-offs, cutbacks, expensive refinancing, and depleted college funds and savings accounts. Even businesses whose revenue has stayed level or showed a modest increase have accomplished this at a costly price. Many have had to cut back employee hours, forego much-needed capital improvements, and sacrifice profits. That is certainly the case with Hatteras Realty. Pages 270-286, 561-598: The socio-economic data and analyses are incomplete and erroneous and result in an understatement of the effect the restrictions will have upon the Island, the region and the state of NC. The US Park Services answer: Businesses will have to "adapt" to the new rules. (p.383) The negative economic impacts of the decree ARE KNOWN, so to say that the added restrictions would have negligible to moderate impact is indefensible.

13) Overall Visitor Counts - Overall visitor counts appear to include visitors to Fort Raleigh National Historic Site and the Wright Brothers National Memorial. A large percentage of these visitors vacation in the Northern Beaches communities and recreate on the non-federal beaches outside of the Seashore. Visitors who patronize the Fort Raleigh National Historic Site and the Wright Brothers National Memorial but do not visit the actual seashore areas need to be factored out.

Maintenance of Future Access to Cape Point and South Point Ocracoke: All socioeconomic analyses related to Alternative F are predicated on the assumption that access corridors will remain open for at least an appreciable portion of the visitor high season. Under Alternative F, the access corridors will be subject to Resource Closures based on buffers similar or identical to the Consent Decree. Unless some predictability of access to Cape Point and South Point Ocracoke can be assured, economic analyses predicated on assumption of access are fundamentally flawed.

Why would a group of surf fisherman want to come to Hatteras Island to surf fish if they are not sure they can access the prime fishing grounds at Cape Point? The answer is they won't come. If they don't come, they don't rent vacation homes and spend their money on Hatteras and Ocracoke Islands.

The definition of the Region of Influence (ROI), faulty data on economic activity generated by specific type recreational activity, incomplete visitation/business survey data, inflated overall Seashore visitor counts pertaining to beach use, and flawed key assumptions concerning the maintenance of access under Alternative F, all lead to inaccurate conclusions in the socioeconomic analyses. Specifically, these inaccuracies can be seen as understating the negative socio-economic impact of the Seashore Villages. Further, this negative impact will be absorbed almost entirely by Small Businesses. Neither of these important aspects of the management alternatives are adequately presented in the DEIS.

14) Page 136: I strongly disagree with your pet restriction proposals. The "prohibition of pets in the Seashore during bird breeding season including in front of the villages." = No Pets in public areas ?beaches, campgrounds, soundfront, foot trails, park maintained roads -from March 15 ?July 31.

Hatteras Realty books approximately 13,000 rental weeks for a total of 91,000 rental nights housing approximately 700,000 visitors. The ban on pets to July 31 will seriously hurt the rentals of my vacation homes as our pet homes encompass about 30% of our rentals. I propose allowing pets on 6 foot leashes year-round in all areas open to pedestrians or ORVs.

15) Pages 125; 392 ? 396: SEA TURTLES. I disagree with the stats and procedures proposed. I think endangered sea turtles would benefit from management practices now in use at other federal seashores that are more proactive in efforts to achieve nesting success. This includes relocating nests to more desirable locations as is done in other state and federally controlled areas. The Cape Hatteras National Seashore Recreational Area is on the northernmost fringe of turtle nesting locations for the southeast, accounting for about 1% of all turtle nests. Proposed buffer areas are not needed for protection of the turtles and amount to overprotection. 16) Pages 97- 101. I strongly disagree with proposals in this section saying that ORVs will be

prohibited year round between ramps 27 and 30, at Hatteras Inlet (Hatteras Spit), Ocracoke Inlet (North Ocracoke Spit) and various other locations. Not allowing ORV access is paramount to denying the public access to these beaches. They are located miles from the nearest parking or paved road area and too far to access on foot. As a matter of course, there has been no breeding of piping plover or other endangered species at the Hatteras Island Inlet (spit) area in the past 6 years.

17) Page 104: I disagree with the proposed night time driving closures. Per your proposals, night driving will be prohibited between May 1 and November 15th, forcing visitors off of the beaches early in the evening and preventing sunrise surf fishermen access in the morning. I propose a more moderate night time ban if one is needed, perhaps from June 1 ? September 15 with times being 1 hour after sunset and 1 hour before sunrise to allow beach goers to gather their stuff and exit the beach area. Certainly more proactive measures such as relocating nests prone to weather and ocean events would dramatically increase the nesting success rates. 18) Page 121: I disagree with the proposed beach closings, including pedestrian access from March 15 until July 31 in 8 different beach locations which have traditionally been available. Please leave these areas open to beach walkers, shell collectors and those that want to access the beaches in these areas. Conclusion: Please, incorporate access corridors through any SMA so we can get to the open beach beyond. Incorporate the birds into the count that nest on the spoil islands. Base your buffer zones on peer reviewed science and scale them back to more reasonable distances as discussed. It is neither logical nor reasonable to spend so much time, money and energy to overprotect a bird (Piping Plover) in the Cape Hatteras National Seashore that is on the southernmost fringe area of its breeding ground. That goes for the loggerhead turtle that is in its northernmost breeding area. Let's scale back the buffer zones. You can always increase at a later date. The USFS is leaning way over the line on over protection and not enough on the public's right to enjoy the beaches of the National Seashore. The proper balance is not achieved in the propose DEIS and needs to be modified so that the proper balance of reasonable resource protection and access to the beaches of the National Park is achieved. I could sum it up by saying "Protect, not Prohibit." Thank you,

Correspondence: The drastic reduction in beach access on Cape Hatteras National Seashore is a travesty of justice when one looks at the scientific research, or lack thereof, as well as the economic impact it has had. It is very possible to protect all species and at the same time revert to the level of beach access prior to the "consent decree". For example there is no evidence that night driving in the recreational areas has done any damage to turtle nestings. Weather conditions have had a far more negative impact on resource protection than any man made activity. When determining the economic impact, one should look just at Hatteras Island and not lump all of the outer banks from Corolla south. Many people will not vacation again on Hatteras Island if their favorite beach access points are closed. This will have a tremendous negative impact on the local economy in a time when the whole nation is suffering in a recession. I urge the NPS to open up the beaches to the level once enjoyed by all visitors and residents. Employ smaller buffers for threatened species and only monitor other non-threatened species.

Correspondence: Dear Superintendent Murray,
As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.
1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."
2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness...."
Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.
3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.
Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.
***** Thank you very much for taking the time to protect one of America's most beautiful stretches of Atlantic seashore! Sea turtles, nesting shorebirds, and generations to come will be grateful for your action today. Thanks again!
Sincerely,
Patricia Osdoby

Subject: DEIS Off-Road Vehicle Management Plan Comments
My comments concern the DEIS of the Off-Road Vehicle Management Plan prepared by the National Park Service (NPS) for the Cape Hatteras National Seashore Recreation Area.
1) Page 201: I disagree with the NPS statement: Even with resource closures in place, protected species are still at risk [from pedestrians and ORVs]. No Piping Plover deaths have been attributed to ORVs. ORV violations continue to decrease as signage and education improve. Pedestrian violations are much more significant than ORV violations. It seems to me that any transgressions into protected area are the result of lack of NPS manpower and enforcement than the public purposely and willfully violating out of bounds areas.
2) Page xxiv: I question the statement of as per the DEIS: Carrying capacity would be a peak use limitdetermined for all areas based on the linear feet of beachfrontIf you close off huge sections of the beach, you force more people into smaller areas, potentially resulting in more resource impairment and diminished visitor experience.
3) Page xix and page 23: I am against having two different closures rules pertaining to the North facing beaches (North side) and the South facing beaches (South side) as per the grid outlined in Alternative F. I disagree with the NPS proposal to close the beaches in villages of Frisco, Hatteras and Ocracoke Villages to ORV access longer than the traditional May 15 to September 15 period for the Northern beaches, even though seasonal visitor

statistics are similar for all villages. Please, make them the same: May 15 -> September 15 4) Page 1: I agree with your statement ORVs have long served as a primary form of access for many portions of the beach in the seashore, and continue to be the most practical means of access and parking for many visitors.

However, pedestrian only areas discriminate against individuals with limited mobility due to age or physical impairments, families with small children, and those wishing to engage in activities requiring recreational equipment (boogie boards, beach umbrellas, beach chairs, coolers, fishing rods and tackle, etc)

5) Page 53: I disagree with the special use permit proposed guidelines. It is impractical to allow the transportation of disabled visitors to the village beaches and then require the vehicle to be returned to the street or parking area. This necessitates the disabled person to have a driver to drop him (or her) off, then drive to a parking area, then trudge a long distance to the site of the drop off, then trudge the long distance through the sand back to get the vehicle.

Suppose the handicap person wants to go to the beach, is capable of driving himself, yet cannot find another person to go with him? Does he now not go to the beach? This rule creates unnecessary hardships and risks in the event of an emergency as well.

6) Page 121 127. I strongly disagree with the buffers as presented. We must allow for pass-thru corridors. The beach is linear with the ocean buffering on one side and the dune line on the other. For example - If you pinch off access on one side of a 4 mile linear beach and pinch off access on the other side of the 4 mile section of beach with no corridor, then you effectively have closed off all 4 miles of the beach because you CANT get there. The proposed bird buffers are too large, blocking access to the interior sections from the two buffered ends.

I propose ORV pass-thru only corridors and to use breeding / nesting buffer distances to establish ORV pass through only corridors to ensure beach access in a way that does not hinder resource protection. I believe pass through corridors should be maintained for pedestrians and ORVs in all areas of the Cape Hatteras National Seashore Recreational Area throughout the entire breeding and nesting season. Corridors are vital to providing access in a way that does not hinder resource protection.

Piping Plover unfledged chicks buffer should move with the brood as it relocates to reliable food source, not expanded.

The 1,000 meter distance for the piping plover is way too large and not based upon peer reviewed science. A more rational distance would be 200 meters per other sites in the nation for the piping plover. Ample scientific evidence and precedent exists to support a 200 meter buffer.

Buffers for other species, including American Oystercatchers, Least Terns and Colonial

Waterbirds must also be changed. An effective 30 meter buffer should be established for these species rather than the 300 meter closure outlined in the DEIS.

NON-ENDANGERED BIRDS should not have same protection as if endangered. Not allowing ORV access is paramount to denying the public access to these beaches.

7) Page 468: I disagree with the limitations imposed on pedestrian and ORVs. Corridors or bypasses should be provided thru, around or below high tide line in all SMAs during entire breeding season to maintain access.

8) Page 124: I strongly disagree with the NPS slant of providing for over protection of resource management over that of the public's right to access the beaches. Pro-active initiatives include: Vegetation Management, Habitat Management, Enhanced Predator Management, Colonial Water bird social attraction, Piping Plover check fledge rate, Piping plover chick buffer distance, and pass-through buffers during the incubation period. Opportunities to implement less restrictive closures as a result of the above initiatives should be considered more frequently than the 5-year periodic review process identified in the DEIS.

9) I disagree with the NPS Resource Management Pedestrian / ORV Closure Policies. These policies address the least significant factors affecting nest survival with little chance to have more than negligible impact. For example: the AMOY Nest Failures are predominately due to non-human events. Using your own stats, the mammalian predation is 54%, Storm / Lunar Tides: 29%, Nest Abandonment: 6%, Avian Predation: 5%, and Ghost Crab Predation: 3%.

So what is the percentage due to human interference: just 3%! Its insignificant, yet the NPS wants to ban humans when their actions provide very little influence on the success rate of breeding birds and turtles.

10) I disagree with the stats of breeding plovers and the other birds in the Park when the NPS does not adequately consider locations neighboring the Recreational Area that are part of the same ecosystem, namely dredge and spoil island that are located just yards away and within sight of the seashore. These birds are part of the same ecosystem and should be included.

Those spoil islands, developed by man from dredging the waterways in the Pamlico Sound for channel upkeep are slammed full of birds. The reason why so many birds? NO PREDATORS. SO, birds are not as stupid as one might think. You have to count these birds and incorporate them in the stats when the NPS is talking about any so called decline in breeding pairs in the National Park.

11) Page 1: I do not think the DEIS responsibly addresses the cultural resource issues. The very purpose of the DEIS as set forth in the National Environmental Policy Act (NEPA) is to protect and preserve natural and cultural resources in the federal decision making process. In the DEIS, the statement protect and preserve natural and cultural resources appears in the first sentence of the first page of the plan, in the Purpose of the Plan section, and numerous times thereafter. Yet, the 810 page document devotes only two paragraphs to analysis of cultural resource issues.

12) Pages 270-281; 561-598: I strongly disagree with your economic analysis of the impact of the DEIS. The region of influence (ROI) incorporates the Northern Beach communities, including Kill Devil Hills, Kitty Hawk, Southern Shores and Duck. These areas are almost completely disconnected from ORV use and access issues relating to the Seashore.

Inclusion of the Northern Beaches in analysis significantly dilutes estimates of economic impact on the 8 Seashore Villages

Analysis of economic impact to the Seashore Villages appears to be significantly down played. Emphasis in DEIS is on the ROI-wide or county-wide level impacts.

Nowhere is it clearly addressed that the overwhelming majority of negative impacts will be felt by small businesses in the Seashore Villages rather than by overall economic interests within the greater ROI.

On page xlvi, Alternative F is characterized as having a negligible to moderate adverse impact on small businesses. I strongly disagree with this statement.

I believe the negligible to moderate projection is inaccurate and relies on economic surveys that has not yet been published. Furthermore, this material is not expected to be added to the DEIS until after the public comment period has ended.

Based upon the economic harm we have already experienced under the consent decree, Dare County projects the economic impact of Alternative F to be substantial.

Beach closures have already had a devastating and unfair impact on many Dare County Businesses, causing foreclosures, bankruptcies, lay-offs, cutbacks, expensive refinancing, and depleted college funds and savings accounts.

Pages 270-286, 561-598: The socio-economic data and analyses are incomplete and erroneous and result in an understatement of the effect the restrictions will have upon the Island, the region and the state of NC. The US Park Services answer: Businesses will have to adapt to the new rules.

(p.383) The negative economic impacts of the decree ARE KNOWN, so to say that the added restrictions would have negligible to moderate impact is indefensible.

13) Overall Visitor Counts - Overall visitor counts appear to include visitors to Fort Raleigh National Historic Site and the Wright Brothers National Memorial. A large percentage of these visitors vacation in the Northern Beaches communities and recreate on the non-federal beaches outside of the Seashore. Visitors who patronize the Fort Raleigh National Historic Site and the Wright Brothers National Memorial but do not visit the actual seashore areas need to be factored out.

Maintenance of Future Access to Cape Point and South Point Ocracoke: All socioeconomic analyses related to Alternative F are predicated on the assumption that access corridors will remain open for at least an appreciable portion of the visitor high season. Under Alternative F, the access corridors will be subject to Resource Closures based on buffers similar or identical to the Consent Decree. Unless some predictability of access to Cape Point and South Point Ocracoke can be assured, economic analyses predicated on assumption of access are fundamentally flawed.

Why would a group of surf fisherman want to come to Hatteras Island to surf fish if they are not sure they can access the prime fishing grounds at Cape Point? The answer is they won't come. If they don't come, they don't rent vacation homes and spend their money on Hatteras and Ocracoke Islands.

The definition of the Region of Influence (ROI), faulty data on economic activity generated by specific type recreational activity, incomplete visitation/business survey data, inflated overall Seashore visitor counts pertaining to beach use, and flawed key assumptions concerning the maintenance

of access under Alternative F, all lead to inaccurate conclusions in the socioeconomic analyses. Specifically, these inaccuracies can be seen as understating the negative socio-economic impact of the Seashore Villages. Further, this negative impact will be absorbed almost entirely by Small Businesses. Neither of these important aspects of the management alternatives are adequately presented in the DEIS.

14) Page 136: I strongly disagree with your pet restriction proposals. The prohibition of pets in the Seashore during bird breeding season including in front of the villages. = No Pets in public areas beaches, campgrounds, soundfront, foot trails, park maintained roads -from March 15 July 31. I have a rental house that books approximately 26 rental weeks per year between April 1- December 1. All my rentals bring their pets. The ban on pets to July 31 will seriously hurt the rentals of my vacation home. I propose allowing pets on 6 foot leashes year-round in all areas open to pedestrians or ORVs.

15) Pages 125; 392 396: SEA TURTLES. I disagree with the stats and procedures proposed. I think endangered sea turtles would benefit from management practices now in use at other federal seashores that are more proactive in efforts to achieve nesting success. This includes relocating nests to more desirable locations as is done in other state and federally controlled areas.

The Cape Hatteras National Seashore Recreational Area is on the northernmost fringe of turtle nesting locations for the southeast, accounting for about 1% of all turtle nests. Proposed buffer areas are not needed for protection of the turtles and amount to overprotection.

16) Pages 97- 101. I strongly disagree with proposals in this section saying that ORVs will be prohibited year round between ramps 27 and 30, at Hatteras Inlet (Hatteras Spit), Ocracoke Inlet (North Ocracoke Spit) and various other locations.

Not allowing ORV access is paramount to denying the public access to these beaches. They are located miles from the nearest parking or paved road area and too far to access on foot. As a matter of course, there has been no breeding of piping plover or other endangered species at the Hatteras Island Inlet (spit) area in the past 6 years.

17) Page 104: I disagree with the proposed night time driving closures. Per your proposals, night driving will be prohibited between May 1 and November 15th, forcing visitors off of the beaches early in the evening and preventing sunrise surf fishermen access in the morning. I propose a more moderate night time ban if one is needed, perhaps from June 1 September 15 with times being 1 hour after sunset and 1 hour before sunrise to allow beach goers to gather their stuff and exit the beach area.

Certainly more proactive measures such as relocating nests prone to weather and ocean events would dramatically increase the nesting success rates.

18) Page 121: I disagree with the proposed beach closings, including pedestrian access from March 15 until July 31 in 8 different beach locations which have traditionally been available. Please leave these areas open to beach walkers, shell collectors and those that want to access the beaches in these areas.

Conclusion:

Please, incorporate access corridors through any SMA so we can get to the open beach beyond. Incorporate the birds into the count that nest on the spoil islands. Base your buffer zones on peer reviewed science and scale them back to more reasonable distances as discussed.

It is neither logical nor reasonable to spend so much time, money and energy to overprotect a bird (Piping Plover) in the Cape Hatteras National Seashore that is on the southernmost fringe area of its breeding ground. That goes for the loggerhead turtle that is in its northernmost breeding area. Lets scale back the buffer zones. You can always increase at a later date.

The USPS is leaning way over the line on over protection and not enough on the publics right to enjoy the beaches of the National Seashore. The proper balance is not achieved in the propose DEIS and needs to be modified so that the proper balance of reasonable resource protection and access to the beaches of the National Park is achieved. I could sum it up by saying Protect, not Prohibit.

Thank you,
Barbara Ledda

In regards to the DEIS management plan, as an individual who enjoys Cape Hatteras, I have the following comments:

1) Buffer proposed for the Piping Plover: I strongly disagree with the proposed buffer of 1000 meters, or 2/3 of a mile. In many locations, the road itself is less than 200 meters from the beach - providing a huge linear buffer along the beach, but ignoring the road nearby appears to provide a false sense of protection. A corridor of 200 meters or less has been used at other sites. For example, in the Natural Resource Conservation Service, buffers for piping plover at Apple Creek Watersheds is a minimum of 200 feet or 60 meters. In the Mass. Audobon Society pamphlet, they indicate a 50 meter buffer, with a 200 meter buffer for kite flying only.

2) I question the purpose of having a longer closure for the South facing beaches. This will have an effect on the economy in this region.

3) I question providing buffers for non-endangered birds. In addition, if a bird is removed from the endangered species list, the buffers should also be removed.

4) In generally, I believe there should be some sort of exception which allows at least 50% of the beaches in each area of the island to remain open to either ORV or pedestrian traffic at all times. To achieve this, some nests may need to be moved. The Cape Hatteras National Recreation Center was set up for recreation, not simply a bird sanctuary.

I believe there has to be a median to which adequate protection can be provided for the wildlife and adequate access is provided to the guests and visitors. Hopefully, by incorporating some of the many comments, the result will be something we all can live with.

Thank you.

The NPS must formulate a plan that is consistent with the legislation establishing Cape Hatteras National Seashore Recreation Area. The enabling legislation for the Recreational Area states, in part, "said area shall be, and is, established, dedicated, and set apart as a national seashore recreational area for the benefit and enjoyment of the people and shall be known as the Cape Hatteras National Seashore Recreational Area". Therefore, it is important to balance resource protection with reasonable access for recreation.

Corridors are a vital tool in providing access while managing resources. They provide a small path around temporary resource closures in order to provide access to open areas that would otherwise be blocked. Corridors should be permitted throughout the seashore during the entire breeding and nesting season including ML-1 portions of SMAs. These corridors would provide valuable access without impairment or damage to protected resources.

Buffers, or closures, are important management practices for species recovery. However, to have long term benefit for the wildlife and the visiting public, buffers must be based on peer-reviewed science For example, the Piping Plover, a species classified as threatened and not endangered, is given a level of unprecedented protection in Alternative F. A 1,000-meter buffer in all directions represents over 771 acres. The DEIS does not cite any peer-reviewed science in supporting such closure. A more appropriate & effective buffer would be 200 meters.

Birds that are not listed as endangered should not be afforded the level of protection given to ESA (Endangered Species Act) protected species. Instead of 300-meter buffers for these birds, a more appropriate buffer would be 30 meters. Also, all birds in the same ecosystem of the seashore should be counted. This includes all the many birds on the dredge and spoil islands located just yards away and within sight of the seashore.

The National Park Service should consider turtle management practices successfully used in other federal and state areas to achieve nesting success. More proactive measures include relocating nests to more desirable locations, which is routinely and successfully done in other areas.

Correspondence: The DEIS for the Cape Hatteras National Seashore is completely biased and invalid as a resource for making decisions regarding resource protection and recreational access. Those who participated in it's formulation should be fired. It ignores the truth about the resource. The truth is that ORV's are a very small part of the problem when it comes to turtle and nesting bird recovery and proliferation. It ignores predation and weather/ocean overwash as the primary reasons why the birds and turtles do not survive.
I followed the farce that was the Negotiated Rule Making. It was a complete failure and the fact that the DEIS supposedly came from that process is a lie.
I find it highly disturbing (and proof that integrity is not important to the NPS) that the NPS places such a high priority on the species of concern list generated by North Carolina while the state does not. The American Oystercatcher is not endangered nor is it designated as threatened by the federal government. Why does NPS need to close the beach to protect it? It does not fall under the jurisdiction of the ESA. Why does the NPS get to IGNORE science and close the beach for this bird when it is not even listed as endangered or even recognized by the federal government as threatened? They do this because they have a political agenda and they can ignore science and the facts because there is no one to hold them accountable for the damage they do to the local economy and the local population's devotion to protecting this resource.
Both the NC Wildlife Resources Commission and the NC Marine Fisheries Commission support the access point of view. If the NPS had any desire to represent the local human population, the local bird and turtle population, and to protect the Seashore, they would listen to the science and not to the special interests which the NPS currently serves.
My recommendations are:
To throw the DEIS in the trash and admit that it is a political document which was written to serve the interests of special interest groups whose agenda is to deny access even if it means circumventing the law as it was written. The NPS should admit that predation, storms and interference by outside monitors are the real reasons for the lack of birding success in the CHNRA.
To admit that the closures offered by Alt. F are ridiculous and have no basis in scientific study. Alternative F is a horrible alternative. I work with children and adults who have special needs and every bit of what is offered by NPS in terms of beach closures is disrespeptful to those who have special cognitive or mobility needs. The DEIS and the NPS have no respect for humans with special needs who have a right to the same access as other humans and birds.
To change the thinking of the NPS that ORV's are not the problem. A government agency should not be allowed to customize science to fit their agenda. Their agenda should be driven by science, economic impacts and the input of the local community. And not controlled by a few special interest groups who have no desire to protect the CHNRA but rather just ban access to the beach.
Sincerely,
Jefferson Ray Coinjock, NC

Mike Murray, Superintendent Cape Hatteras National Seashore 1401 National Park Drive Manteo, NC 27952
Dear Mr. Murray:
I believe in preserving and protecting life on the Cape Hatteras Recreational Seashore Park, but I do not agree with the NPS DEIS's (pg 270-281; 561-698) representation of the economical impact on this Island.
I am in the construction industry, and there has been a decline the amount of work available because of the decline in the building. To subsidize my income,I learned additional trade. This job (pools and hot tubs) has now had a decrease in work secondary to a decline in the number of tourists renting homes, because of decreased access to the beaches.
At the same time I stugle to make my mortgage paymens, the value of my home has decreased. (yet, my taxes and my insurance have gone up???)
Therefore, I disagree with the with the NPS DEIS representation of the economical impact on this Island. I also disagree with the studies grouping haeras Island with the northern island.
I hope that these comments will be considered, as I hope to continue to be able to provide for my livlehood on Hatteras Island.
Sincerely, Don Windsor

Correspondence: Dear Superintendent Murray,
As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.
1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."

2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness...."

Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.

3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.

Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

***** Thank you very much for taking the time to protect one of America's most beautiful stretches of Atlantic seashore! Sea turtles, nesting shorebirds, and generations to come will be grateful for your action today. Thanks again!

Sincerely, Ramsay Kieffer

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
As an avid ORV rider, I want to see protections put in place for all concerned-plants, animals and people. I do enjoy riding whenever possible, but I also stay the trails, so as not to disturb the ecosystems in the areas. If everyone who rides would think this way, life would be much easier!
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
I believe that the off road beach driving despoils the very things that attract people to the beach in the first place.. The beachfront sand and dunes should be for foot traffic only. They should not be used for "cruising". People who want to move down the coast for fishing or alternative scenery should use the back of dune roads, or the paved highway. ATV's are particularly damaging, especially when operated by unsupervised teenagers.
Save the beach for the natural beauty and wildlife, not for four wheeling and partying. If people come for recreation, then they should get out and walk.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: The NPS must formulate a plan that is consistent with the legislation establishing Cape Hatteras National Seashore Recreation Area. The enabling legislation for the Recreational Area states, in part, "said area shall be, and is, established, dedicated, and set apart as a national seashore recreational area for the benefit and enjoyment of the people and shall be known as the Cape Hatteras National Seashore Recreational Area". Therefore, it is important to balance resource protection with reasonable access for recreation.
Corridors are a vital tool in providing access while managing resources. They provide a small path around temporary resource closures in order to provide access to open areas that would otherwise be blocked. Corridors should be permitted throughout the seashore during the entire breeding and nesting season including ML-1 portions of SMAs. These corridors would provide valuable access without impairment or damage to protected resources. Buffers, or closures, are important management practices for species recovery. However, to have long term benefit for the wildlife and the visiting public, buffers must be based on peer-reviewed science For example, the Piping Plover, a species classified as threatened and not endangered, is given a level of unprecedented protection in Alternative F. A 1,000-meter buffer in all directions represents over 771 acres. The DEIS does not cite any peer-reviewed science in supporting such closure. A more appropriate & effective buffer would be 200 meters.
Birds that are not listed as endangered should not be afforded the level of protection given to ESA (Endangered Species Act) protected species. Instead of 300-meter buffers for these birds, a more appropriate buffer would be 30 meters. Also, all birds in the same ecosystem of the seashore should be counted. This includes all the many birds on the dredge and spoil islands located just yards away and within sight of the seashore.
The National Park Service should consider turtle management practices successfully used in other federal and state areas to achieve nesting success. More proactive measures include relocating nests to more desirable locations, which is routinely and successfully done in other areas.

Correspondence: I do not understand the necessity for such restrictive measures as proposed in Alternative F. I support the Coalition for Beach access proposal. After years of watching the NPS I realize that this matter is just the concern "du jour". The NPS makes its determination based upon the prevailing tide and then bends like a willow in the following onslaught. How else could we look at past NPS practice:
Extermination of Canadian Geese because of the success of it's previous protective programs. Hunting season for deer on Nat'l Park Svc, property previously treated as natural preserves. Trapping of native species, such as racoon, possum and feral cats, because the park service would prefer to protect species it considers endangered. Listening to so called experts who do nothing on a daily basis other than complain about things. Where are these experts when I pick up cruise line balloons off the beach? Where are these experts when container ships break apart and our beaches are covered with packing foam? Where are these experts when assistance is required to sit by turtle nests to insure the hatchlings safe passage to the surf? Where are these experts after storms when we, the islanders, rescue injured birds and animals on the beaches?
Money talks and the NPS has sold out to high priced attorneys and environmental defense funds. Attorneys and judges whom very likely have not walked on our beaches now hold our future in their hands. I believe I am wasting my time in writing but for the sake of doing something before this travesty takes place, I'll waste my time. Do the right thing instead of rushing our heritage and future to it's early grave.

From: Timothy J Cantwell
Subject: DEIS Off-Road Vehicle Management Plan Comments
My comments concern the DEIS of the Off-Road Vehicle Management Plan prepared by the National Park Service (NPS) for the Cape Hatteras National Seashore Recreation Area.
1) Page 201: I disagree with the NPS statement: "Even with resource closures in place, protected species are still at risk [from pedestrians and ORVs]." No Piping Plover deaths have been attributed to ORVs. ORV violations continue to decrease as signage and education improve. Pedestrian violations are much more significant than ORV violations. It seems to me that any transgressions into protected area are the result of lack of NPS manpower and enforcement than the public purposely and willfully violating out of bounds areas.
2) Page xxiv: I question the statement of as per the DEIS: "Carrying capacity would be a 'peak use limit' determined for all areas based on the linear feet of beachfront?" If you close off huge sections of the beach, you force more people into smaller areas, potentially resulting in more resource impairment and diminished visitor experience.
3) Page xix and page 23: I am against having two different closures rules pertaining to the North facing beaches (North side) and the South facing beaches (South side) as per the grid outlined in Alternative "F". I disagree with the NPS proposal to close the beaches in villages of Frisco, Hatteras and Ocracoke Villages to ORV access longer than the traditional May 15 to September 15 period for the Northern beaches, even though seasonal visitor statistics are similar for all villages. Please, make them the same: May 15 -> September 15.
4) Page 1: I agree with your statement "ORVs have long served as a primary form of access for many portions of the beach in the seashore, and continue to be the most practical means of access and parking for many visitors."
However, pedestrian only areas discriminate against individuals with limited mobility due to age or physical impairments, families with small children, and those wishing to engage in activities requiring recreational equipment (boogie boards, beach umbrellas, beach chairs, coolers, fishing rods and tackle, etc)
5) Page 53: I disagree with the special use permit proposed guidelines. It is impractical to allow the transportation of disabled visitors to the village beaches and then require the vehicle to be returned to the street or parking area. This necessitates the disabled person to have a driver to drop him (or her) off, then drive to a parking area, then trudge a long distance to the site of the drop off, then trudge the long distance through the sand back to get the

vehicle.

Suppose the handicap person wants to go to the beach, is capable of driving himself, yet cannot find another person to go with him? Does he now not go to the beach? This rule creates unnecessary hardships and risks in the event of an emergency as well.

6) Page 121 ? 127. I strongly disagree with the buffers as presented. We must allow for pass-thru corridors. The beach is linear with the ocean buffering on one side and the dune line on the other. For example - If you pinch off access on one side of a 4 mile linear beach and pinch off access on the other side of the 4 mile section of beach with no corridor, then you effectively have closed off all 4 miles of the beach because you CAN'T get there. The proposed bird buffers are too large, blocking access to the interior sections from the two "buffered" ends.

I propose ORV pass-thru only corridors and to use breeding / nesting buffer distances to establish ORV pass through only corridors to ensure beach access in a way that does not hinder resource protection. I believe pass through corridors should be maintained for pedestrians and ORVs in all areas of the Cape Hatteras National Seashore Recreational Area throughout the entire breeding and nesting season. Corridors are vital to providing access in a way that does not hinder resource protection.

Piping Plover unfledged chicks buffer should move with the brood as it relocates to reliable food source, not expanded.

The 1,000 meter distance for the piping plover is way too large and not based upon peer reviewed science. A more rational distance would be 200 meters per other sites in the nation for the piping plover. Ample scientific evidence and precedent exists to support a 200 meter buffer.

Buffers for other species, including American Oystercatchers, Least Terns and Colonial

Waterbirds must also be changed. An effective 30 meter buffer should be established for these species rather than the 300 meter closure outlined in the DEIS.

NON-ENDANGERED BIRDS should not have same protection as if endangered. Not allowing ORV access is paramount to denying the public access to these beaches.

7) Page 468: I disagree with the limitations imposed on pedestrian and ORVs. Corridors or bypasses should be provided thru, around or below high tide line in all SMAs during entire breeding season to maintain access.

8) Page 124: I strongly disagree with the NPS slant of providing for over protection of resource management over that of the public's right to access the beaches. Pro-active initiatives include: Vegetation Management, Habitat Management, Enhanced Predator Management, Colonial Water bird social attraction, Piping Plover check fledge rate, Piping plover chick buffer distance, and pass-through buffers during the incubation period. Opportunities to implement less restrictive closures as a result of the above initiatives should be considered more frequently than the 5-year periodic review process identified in the DEIS.

9) I disagree with the NPS Resource Management Pedestrian / ORV Closure Policies. These policies address the least significant factors affecting nest survival with little chance to have more than negligible impact. For example: the AMOY Nest Failures are predominately due to non-human events. Using your own stats, the mammalian predation is 54%, Storm / Lunar Tides: 29%, Nest Abandonment: 6%, Avian Predation: 5%, and Ghost Crab Predation: 3%,

So what is the percentage due to human interference: just 3%! It's insignificant, yet the NPS wants to ban humans when their actions provide very little influence on the success rate of breeding birds and turtles.

10) I disagree with the stats of breeding plovers and the other birds in the Park when the NPS does not adequately consider locations neighboring the Recreational Area that are part of the same ecosystem, namely dredge and spoil island that are located just yards away and within sight of the seashore. These birds are part of the same ecosystem and should be included.

Those spoil islands, developed by man from dredging the waterways in the Pamlico Sound for channel upkeep are slammed full of birds. The reason why so many birds? NO PREDATORS. SO, birds are not as stupid as one might think. You have to count these birds and incorporate them in the stats when the NPS is talking about any so called decline in breeding pairs in the National Park.

11) Page 1: I do not think the DEIS responsibly addresses the cultural resource issues. The very purpose of the DEIS as set forth in the National Environmental Policy Act (NEPA) is to protect and preserve natural and cultural resources in the federal decision making process. In the DEIS, the statement "protect and preserve natural and cultural resources" appears in the first sentence of the first page of the plan, in the Purpose of the Plan section, and numerous times thereafter. Yet, the 810 page document devotes only two paragraphs to analysis of cultural resource issues.

12) Pages 270-281; 561-598: I strongly disagree with your economic analysis of the impact of the DEIS. The region of influence (ROI) incorporates the Northern Beach communities, including Kill Devil Hills, Kitty Hawk, Southern Shores and Duck. These areas are almost completely disconnected from ORV use and access issues relating to the Seashore.

? Inclusion of the Northern Beaches in analysis significantly dilutes estimates of economic impact on the 8 Seashore Villages

? Analysis of economic impact to the Seashore Villages appears to be significantly down played. Emphasis in DEIS is on the ROI-wide or county-wide level impacts.

? Nowhere is it clearly addressed that the overwhelming majority of negative impacts will be felt by small businesses in the Seashore Villages rather than by overall economic interests within the greater ROI.

On page xlvi, Alternative F is characterized as having a "negligible to moderate" adverse impact on small businesses. I strongly disagree with this statement.

I believe the negligible to moderate projection is inaccurate and relies on economic surveys that has not yet been published. Furthermore, this material is not expected to be added to the DEIS until after the public comment period has ended.

Based upon the economic harm we have already experienced under the consent decree, Dare County projects the economic impact of Alternative F to be substantial.

Beach closures have already had a devastating and unfair impact on many Dare County Businesses, causing foreclosures, bankruptcies, lay-offs, cutbacks, expensive refinancing, and depleted college funds and savings accounts.

Even businesses whose revenue has stayed level or showed a modest increase have accomplished this at a costly price. Many have had to cut back employee hours, forego much-needed capital improvements, and sacrifice profits.

Pages 270-286, 561-598: The socio-economic data and analyses are incomplete and erroneous and result in an understatement of the effect the restrictions will have upon the Island, the region and the state of NC. The US Park Services answer: Businesses will have to "adapt" to the new rules. (p.383) The negative economic impacts of the decree ARE KNOWN, so to say that the added restrictions would have negligible to moderate impact is indefensible.

13) Overall Visitor Counts - Overall visitor counts appear to include visitors to Fort Raleigh National Historic Site and the Wright Brothers National Memorial. A large percentage of these visitors vacation in the Northern Beaches communities and recreate on the non-federal beaches outside of the Seashore. Visitors who patronize the Fort Raleigh National Historic Site and the Wright Brothers National Memorial but do not visit the actual seashore areas need to be factored out.

Maintenance of Future Access to Cape Point and South Point Ocracoke: All socioeconomic analyses related to Alternative F are predicated on the assumption that access corridors will remain open for at least an appreciable portion of the visitor high season. Under Alternative F, the access corridors will be subject to Resource Closures based on buffers similar or identical to the Consent Decree. Unless some predictability of access to Cape Point and South Point Ocracoke can be assured, economic analyses predicated on assumption of access are fundamentally flawed.

Why would a group of surf fisherman want to come to Hatteras Island to surf fish if they are not sure they can access the prime fishing grounds at Cape Point? The answer is they won't come. If they don't come, they don't rent vacation homes and spend their money on Hatteras and Ocracoke Islands.

The definition of the Region of Influence (ROI), faulty data on economic activity generated by specific type recreational activity, incomplete visitation/business survey data, inflated overall Seashore visitor counts pertaining to beach use, and flawed key assumptions concerning the maintenance of access under Alternative F, all lead to inaccurate conclusions in the socioeconomic analyses. Specifically, these inaccuracies can be seen as understating the negative socio-economic impact of the Seashore Villages. Further, this negative impact will be absorbed almost entirely by Small Businesses. Neither of these important aspects of the management alternatives are adequately presented in the DEIS.

14) Page 136: I strongly disagree with your pet restriction proposals. The "?prohibition of pets in the Seashore during bird breeding season including in front of the villages." = No Pets in public areas ?beaches, campgrounds, soundfront, foot trails, park maintained roads -from March 15 ?July 31.

15) Pages 125; 392 ? 396: SEA TURTLES. I disagree with the stats and procedures proposed. I think endangered sea turtles would benefit from management practices now in use at other federal seashores that are more proactive in efforts to achieve nesting success. This includes relocating nests

to more desirable locations as is done in other state and federally controlled areas.

The Cape Hatteras National Seashore Recreational Area is on the northernmost fringe of turtle nesting locations for the southeast, accounting for about 1% of all turtle nests. Proposed buffer areas are not needed for protection of the turtles and amount to overprotection.

16) Pages 97- 101. I strongly disagree with proposals in this section saying that ORVs will be prohibited year round between ramps 27 and 30, at Hatteras Inlet (Hatteras Spit), Ocracoke Inlet (North Ocracoke Spit) and various other locations.

Not allowing ORV access is paramount to denying the public access to these beaches. They are located miles from the nearest parking or paved road area and too far to access on foot. As a matter of course, there has been no breeding of piping plover or other endangered species at the Hatteras Island Inlet (spit) area in the past 6 years.

17) Page 104: I disagree with the proposed night time driving closures. Per your proposals, night driving will be prohibited between May 1 and November 15th, forcing visitors off of the beaches early in the evening and preventing sunrise surf fishermen access in the morning. I propose a more moderate night time ban if one is needed, perhaps from June 1 ? September 15 with times being 1 hour after sunset and 1 hour before sunrise to allow beach goers to gather their stuff and exit the beach area.

Certainly more proactive measures such as relocating nests prone to weather and ocean events would dramatically increase the nesting success rates.

18) Page 121: I disagree with the proposed beach closings, including pedestrian access from March 15 until July 31 in 8 different beach locations which have traditionally been available. Please leave these areas open to beach walkers, shell collectors and those that want to access the beaches in these areas.

Conclusion:

Please, incorporate access corridors through any SMA so we can get to the open beach beyond. Incorporate the birds into the count that nest on the spoil islands. Base your buffer zones on peer reviewed science and scale them back to more reasonable distances as discussed.

It is neither logical nor reasonable to spend so much time, money and energy to overprotect a bird (Piping Plover) in the Cape Hatteras National Seashore that is on the southernmost fringe area of its breeding ground. That goes for the loggerhead turtle that is in its northernmost breeding area.

Let's scale back the buffer zones. You can always increase at a later date.

The USPS is leaning way over the line on over protection and not enough on the public's right to enjoy the beaches of the National Seashore. The proper balance is not achieved in the propose DEIS and needs to be modified so that the proper balance of reasonable resource protection and access to the beaches of the National Park is achieved. I could sum it up by saying "Protect, not Prohibit."

Sincerely, Mary E. Cantwell,MD

Correspondence: I've been selling furniture and patio furniture stores in the Southeast US since 1980. I own a furniture rep business. On the coast, I have covered stores in the states of NC, SC, GA, and FL during that time. My speciality is outdoor furniture. I grew up in Jacksonville NC and have been a avid waterman most of my life. If you really understood the different coastal areas you would know development has been key to growth during the past 35 years. Everywhere on the coast where I travel development either condo, second home or commercial has all but completely changes the landscape. It's a shame. Not what I grew up with. Stopping more development of homes is a positive for beach access. That is done. Don't stop the people. It has been people who made the area. Respect what few freedoms are left. Find a compromise for people and birds. Make it so everyone and thing enjoys beach access.

Correspondence: I am a resident and business owner on Hatteras Island. I am writing in reference to the proposed beach closings on Hatteras Island and Ocracoke Islands. I disagree with the socio-economic data and analyses of alternative "F". The findings are incomplete and flawed. The result is an understatement of the effect the restrictions will have upon the island. I own a clothing store and my family and I depend on tourism to survive. The economical impact of the beach closings would have a devastating effect on my family, and the families of all the residents of the island. The primary reason that tourist come to our island is for the beautiful beaches. If the beaches become something they can no longer enjoy, they will choose other vacation destinations. That would take money out of the coffers of my store, Dare County and, maybe even the state of North Carolina. I disagree that any piping plover unfledged chick brood requires 1,000 meter closure in all directions. This has not been based on any scientific findings. Seven hundred and seventy-one acres per brood seems excessive, and is completely unsupported by research. Furthermore, the plan calls for 300 meters in all directions for American Oystercatchers, which are not a federally threatened species. Before we devastate our economy and ruin the lives of the residents of the island, I think it would be prudent to call for research into what the birds actually need to prosper. Also, the alternative "F", aims to protect sea turtles. Hatteras Island has the largest closures with the lowest production of sea turtles of any beach in the US. In Florida, turtle production is higher, yet they do not have huge fines and closures protecting the nests. In places other than Cape Hatteras National Seashore, nests are routinely relocated to more secure areas of higher ground to maximize the production. This should become the practice of the park on the island as well. Once again, let's gather some research on what works other places before penalizing the human community. I do care about the wildlife of our island and recognize it is one of the aspects that makes our community unique but destroying the way of life for the people that love the island the most without scientific research and findings would be unjust.

Correspondence: Dear Superintendent Murray,
As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.
1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."
2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness...."
Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.
3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals. Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.
***** Thank you very much for taking the time to protect one of America's most beautiful stretches of Atlantic seashore! Sea turtles, nesting shorebirds, and generations to come will be grateful for your action today. Thanks again!
Sincerely, Richard Savage

Correspondence: I oppose the DEIS Alternate F proposal and support the Coalition for Beach Access in it's entirety. As a property owner on Hatteras Island I am very concerned about several aspects of this situation. I believe that the socioeconomic analysis is flawed. The "region of influence" which includes the northern beaches, including Duck and Southern Shores is not showing an accurate portrait of the impact these beach closures have had already, and will surely have in the future.
Hatteras and Ocracoke Islands are isolated from these areas. Typically visitors who recreate in the northern areas are not going to visit the southern areas. Beach closures in the National Seashore have no effect on them, thus the economy in these areas will stay relatively constant. I believe a fair analysis would consider ONLY the business entities on the islands.
The analysis also does not consider that for 2008 (when the consent decree was initiated), many of the reservations for that season had been booked in advance, many the previous year. It also does not include the full year for 2009. How can this possibly be accurate?
The analysis also utilized "model" projections for economic impact. Perhaps actual business survey data should be considered? Additionally the models project using stable, unchanging access corridors. It seems reasonable to expect increasing closures with increased bird and turtle numbers, thus decreased access.
I hope that you will consider the data that you are utilizing for your decisions. The potential to destroy business and impact lives in these areas is huge! The business community deserves a fair evaluation.
Thank you.
Nancy Johnson

Correspondence: My family has been privileged to vacation on the Outer Banks of North Carolina since the summer of 1962. Our greatest joy has been to be able to walk along the beaches, especially at "The Point" where we have witnessed the meeting of the two currents in sometimes dramatic and beautiful ways. We also enjoy gathering and sharing the various seashells that are washed in by the tide. I say this in order to let you know that we believe that all the National Seashore should be made available to persons, some with vehicles, to some of the greatest shore fishing, swimming and other recreational opportunities along the Eastern coastline. I disagree with some who would close the beaches to everyone in order for some of the wildlife to nest and procreate. The people who live on the Outer Banks and depend on visitors for their entire livelihood should not have to suffer extreme hardships when

no visitors come to this beautiful area of our country. It is extremely important that the residents be given first priority in all the decisions. No one should have to suffer in order that the wishes of a few be the final decision. I agree that there may be some areas (and only some) be set aside for nesting creatures for a limited time each season. As soon as the nesting season is complete, then the entire area should be open to people for their enjoyment. I hope that wiser heads may prevail in the final decision that is made and that all may be able to enjoy the natural beauty of the Outer Banks of North Carolina and all the National Seashore and Park Services that we have always enjoyed. Thank you for considering my comments.

Correspondence: Dear Superintendent Murray,

As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.

- 1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."
- 2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness...." Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.
- 3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.

Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

Correspondence: My comments concern the DEIS of the Off-Road Vehicle Management Plan prepared by the National Park Service (NPS) for the Cape Hatteras National Seashore Recreation Area.

- 1) Page 201: I disagree with the NPS statement: "Even with resource closures in place, protected species are still at risk [from pedestrians and ORVs]." No Piping Plover deaths have been attributed to ORVs. ORV violations continue to decrease as signage and education improve. Pedestrian violations are much more significant than ORV violations. It seems to me that any transgressions into protected area are the result of lack of NPS manpower and enforcement than the public purposely and willfully violating out of bounds areas.
- 2) Page xxiv: I question the statement of as per the DEIS: "Carrying capacity would be a 'peak use limit' determined for all areas based on the linear feet of beachfront?" If you close off huge sections of the beach, you force more people into smaller areas, potentially resulting in more resource impairment and diminished visitor experience.
- 3) Page six and page 23: I am against having two different closures rules pertaining to the North facing beaches (North side) and the South facing beaches (South side) as per the grid outlined in Alternative "F". I disagree with the NPS proposal to close the beaches in villages of Frisco, Hatteras and Ocracoke Villages to ORV access longer than the traditional May 15 to September 15 period for the Northern beaches, even though seasonal visitor statistics are similar for all villages. Please, make them the same: May 15 -> September 15.
- 4) Page 1: I agree with your statement "ORVs have long served as a primary form of access for many portions of the beach in the seashore, and continue to be the most practical means of access and parking for many visitors." However, pedestrian only areas discriminate against individuals with limited mobility due to age or physical impairments, families with small children, and those wishing to engage in activities requiring recreational equipment (boogie boards, beach umbrellas, beach chairs, coolers, fishing rods and tackle, etc)
- 5) Page 53: I disagree with the special use permit proposed guidelines. It is impractical to allow the transportation of disabled visitors to the village beaches and then require the vehicle to be returned to the street or parking area. This necessitates the disabled person to have a driver to drop him (or her) off, then drive to a parking area, then trudge a long distance to the site of the drop off, then trudge the long distance through the sand back to get the vehicle. Suppose the handicap person wants to go to the beach, is capable of driving himself, yet cannot find another person to go with him? Does he now not go to the beach? This rule creates unnecessary hardships and risks in the event of an emergency as well.
- 6) Page 121 ? 127. I strongly disagree with the buffers as presented. We must allow for pass-thru corridors. The beach is linear with the ocean buffering on one side and the dune line on the other. For example - If you pinch off access on one side of a 4 mile linear beach and pinch off access on the other side of the 4 mile section of beach with no corridor, then you effectively have closed off all 4 miles of the beach because you CAN'T get there. The proposed bird buffers are too large, blocking access to the interior sections from the two "buffered" ends. I propose ORV pass-thru only corridors and to use breeding / nesting buffer distances to establish ORV pass through only corridors to ensure beach access in a way that does not hinder resource protection. I believe pass through corridors should be maintained for pedestrians and ORVs in all areas of the Cape Hatteras National Seashore Recreation Area throughout the entire breeding and nesting season. Corridors are vital to providing access in a way that does not hinder resource protection. Piping Plover unfledged chicks buffer should move with the brood as it relocates to reliable food source, not expanded. The 1,000 meter distance for the piping plover is way too large and not based upon peer reviewed science. A more rational distance would be 200 meters per other sites in the nation for the piping plover. Ample scientific evidence and precedent exists to support a 200 meter buffer. Buffers for other species, including American Oystercatchers, Least Terns and Colonial Waterbirds must also be changed. An effective 30 meter buffer should be established for these species rather than the 300 meter closure outlined in the DEIS. NON-ENDANGERED BIRDS should not have same protection as if endangered. Not allowing ORV access is paramount to denying the public access to these beaches.
- 7) Page 468: I disagree with the limitations imposed on pedestrian and ORVs. Corridors or bypasses should be provided thru, around or below high tide line in all SMAs during entire breeding season to maintain access.
- 8) Page 124: I strongly disagree with the NPS slant of providing for over protection of resource management over that of the public's right to access the beaches. Pro-active initiatives include: Vegetation Management, Habitat Management, Enhanced Predator Management, Colonial Water bird social attraction, Piping Plover check fledge rate, Piping plover chick buffer distance, and pass-through buffers during the incubation period. Opportunities to implement less restrictive closures as a result of the above initiatives should be considered more frequently than the 5-year periodic review process identified in the DEIS.
- 9) I disagree with the NPS Resource Management Pedestrian / ORV Closure Policies. These policies address the least significant factors affecting nest

survival with little chance to have more than negligible impact. For example: the AMOY Nest Failures are predominately due to non-human events. Using your own stats, the mammalian predation is 54%, Storm / Lunar Tides: 29%, Nest Abandonment: 6%, Avian Predation: 5%, and Ghost Crab Predation: 3%.

So what is the percentage due to human interference: just 3%! It's insignificant, yet the NPS wants to ban humans when their actions provide very little influence on the success rate of breeding birds and turtles.

10) I disagree with the stats of breeding plovers and the other birds in the Park when the NPS does not adequately consider locations neighboring the Recreational Area that are part of the same ecosystem, namely dredge and spoil island that are located just yards away and within sight of the seashore. These birds are part of the same ecosystem and should be included.

Those spoil islands, developed by man from dredging the waterways in the Pamlico Sound for channel upkeep are slammed full of birds. The reason why so many birds? NO PREDATORS. SO, birds are not as stupid as one might think. You have to count these birds and incorporate them in the stats when the NPS is talking about any so called decline in breeding pairs in the National Park.

11) Page 1: I do not think the DEIS responsibly addresses the cultural resource issues. The very purpose of the DEIS as set forth in the National Environmental Policy Act (NEPA) is to protect and preserve natural and cultural resources in the federal decision making process. In the DEIS, the statement "protect and preserve natural and cultural resources" appears in the first sentence of the first page of the plan, in the Purpose of the Plan section, and numerous times thereafter. Yet, the 810 page document devotes only two paragraphs to analysis of cultural resource issues.

12) Pages 270-281; 561-598: I strongly disagree with your economic analysis of the impact of the DEIS. The region of influence (ROI) incorporates the Northern Beach communities, including Kill Devil Hills, Kitty Hawk, Southern Shores and Duck. These areas are almost completely disconnected from ORV use and access issues relating to the Seashore. ? Inclusion of the Northern Beaches in analysis significantly dilutes estimates of economic impact on the 8 Seashore Villages

? Analysis of economic impact to the Seashore Villages appears to be significantly down played. Emphasis in DEIS is on the ROI-wide or county-wide level impacts.

? Nowhere is it clearly addressed that the overwhelming majority of negative impacts will be felt by small businesses in the Seashore Villages rather than by overall economic interests within the greater ROI.

On page xlvi, Alternative F is characterized as having a "negligible to moderate" adverse impact on small businesses. I strongly disagree with this statement.

I believe the negligible to moderate projection is inaccurate and relies on economic surveys that has not yet been published. Furthermore, this material is not expected to be added to the DEIS until after the public comment period has ended.

Based upon the economic harm we have already experienced under the consent decree, Dare County projects the economic impact of Alternative F to be substantial.

Beach closures have already had a devastating and unfair impact on many Dare County Businesses, causing foreclosures, bankruptcies, lay-offs, cutbacks, expensive refinancing, and depleted college funds and savings accounts.

Pages 270-286, 561-598: The socio-economic data and analyses are incomplete and erroneous and result in an understatement of the effect the restrictions will have upon the Island, the region and the state of NC. The US Park Services answer: Businesses will have to "adapt" to the new rules.

(p.383) The negative economic impacts of the decree ARE KNOWN, so to say that the added restrictions would have negligible to moderate impact is indefensible.

13) Overall Visitor Counts - Overall visitor counts appear to include visitors to Fort Raleigh National Historic Site and the Wright Brothers National Memorial. A large percentage of these visitors vacation in the Northern Beaches communities and recreate on the non-federal beaches outside of the Seashore. Visitors who patronize the Fort Raleigh National Historic Site and the Wright Brothers National Memorial but do not visit the actual seashore areas need to be factored out.

Maintenance of Future Access to Cape Point and South Point Ocracoke: All socioeconomic analyses related to Alternative F are predicated on the assumption that access corridors will remain open for at least an appreciable portion of the visitor high season. Under Alternative F, the access corridors will be subject to Resource Closures based on buffers similar or identical to the Consent Decree. Unless some predictability of access to Cape Point and South Point Ocracoke can be assured, economic analyses predicated on assumption of access are fundamentally flawed.

Why would a group of surf fisherman want to come to Hatteras Island to surf fish if they are not sure they can access the prime fishing grounds at Cape Point? The answer is they won't come. If they don't come, they don't rent vacation homes and spend their money on Hatteras and Ocracoke Islands.

The definition of the Region of Influence (ROI), faulty data on economic activity generated by specific type recreational activity, incomplete visitation/business survey data, inflated overall Seashore visitor counts pertaining to beach use, and flawed key assumptions concerning the maintenance of access under Alternative F, all lead to inaccurate conclusions in the socioeconomic analyses. Specifically, these inaccuracies can be seen as understating the negative socio-economic impact of the Seashore Villages. Further, this negative impact will be absorbed almost entirely by Small Businesses. Neither of these important aspects of the management alternatives are adequately presented in the DEIS.

14) Page 136: I strongly disagree with your pet restriction proposals. The "?prohibition of pets in the Seashore during bird breeding season including in front of the villages." = No Pets in public areas ?beaches, campgrounds, soundfront, foot trails, park maintained roads -from March 15 ?July 31.

I recently purchased a Home in Avon with the intention of using it as an investment along with a 2nd vacation home. We intend on have pets allowed in our home in order to make our home more attractive from a rental standpoint. This restriction would provide a potential burden which would limit the amount of renters to our home. The real estate market is already in disrepair as it relates to Hatteras, this ban will only add to the financial strain of the homeowners. 15) Pages 125; 392 ? 396: SEA TURTLES. I disagree with the stats and procedures proposed. I think endangered sea turtles would benefit from management practices now in use at other federal seashores that are more proactive in efforts to achieve nesting success. This includes relocating nests to more desirable locations as is done in other state and federally controlled areas.

The Cape Hatteras National Seashore Recreational Area is on the northernmost fringe of turtle nesting locations for the southeast, accounting for about 1% of all turtle nests. Proposed buffer areas are not needed for protection of the turtles and amount to overprotection.

16) Pages 97- 101. I strongly disagree with proposals in this section saying that ORVs will be prohibited year round between ramps 27 and 30, at Hatteras Inlet (Hatteras Spit), Ocracoke Inlet (North Ocracoke Spit) and various other locations.

Not allowing ORV access is paramount to denying the public access to these beaches. They are located miles from the nearest parking or paved road area and too far to access on foot. As a matter of course, there has been no breeding of piping plover or other endangered species at the Hatteras Island Inlet (spit) area in the past 6 years.

17) Page 104: I disagree with the proposed night time driving closures. Per your proposals, night driving will be prohibited between May 1 and November 15th, forcing visitors off of the beaches early in the evening and preventing sunrise surf fishermen access in the morning. I propose a more moderate night time ban if one is needed, perhaps from June 1 ? September 15 with times being 1 hour after sunset and 1 hour before sunrise to allow beach goers to gather their stuff and exit the beach area.

Certainly more proactive measures such as relocating nests prone to weather and ocean events would dramatically increase the nesting success rates.

18) Page 121: I disagree with the proposed beach closings, including pedestrian access from March 15 until July 31 in 8 different beach locations which have traditionally been available. Please leave these areas open to beach walkers, shell collectors and those that want to access the beaches in these areas.

Conclusion:

Please, incorporate access corridors through any SMA so we can get to the open beach beyond. Incorporate the birds into the count that nest on the spoil islands. Base your buffer zones on peer reviewed science and scale them back to more reasonable distances as discussed.

It is neither logical nor reasonable to spend so much time, money and energy to overprotect a bird (Piping Plover) in the Cape Hatteras National Seashore that is on the southernmost fringe area of its breeding ground. That goes for the loggerhead turtle that is in its northernmost breeding area.

Let's scale back the buffer zones. You can always increase at a later date.

The USPS is leaning way over the line on over protection and not enough on the public's right to enjoy the beaches of the National Seashore. The proper balance is not achieved in the propose DEIS and needs to be modified so that the proper balance of reasonable resource protection and access to the beaches of the National Park is achieved. I could sum it up by saying "Protect, not Prohibit."

Thank you for considering these comments.

Correspondence:	<p>I am making this comment in strict opposition to the National Park Service's support of the Alternative F of the DEIS.</p> <p>I took my first baby steps on the sand of an Avon, NC beach, trying to walk towards my mother. Had this plan been in effect then, I may have not been able to ever do that. The DEIS?and in particular, Alternative F?has been taken way too far over the edge. To start, I've prepared some factual statements: In the beginning of the DEIS there is a list of federal rules and policies that the DEIS must comply with. MISSING from that list is compliance with the Regulatory Flexibility Act which requires "federal agencies to consider the effects of their regulatory actions on small businesses and other small entities and to minimize any undue disproportionate burden." When reading all the ways in which business WILL be affected, it is clear that this was not taken into consideration, and thus should stop the document from being passed.</p> <p>The authors of the document use numbers, estimations, and assumptions and mold them into propaganda. For example, on page 568 the "visitation" statistics are grossly inaccurate. There is no way to know how many people are riding in a vehicle (at least not the way the study was done) or whether the driver and/or passengers are indeed visitors at all. The study also doesn't take into account the high numbers of construction vehicles in the area as well as shipping or mail service vehicles. Attempts throughout the document are often made assuming that gross occupancy tax collected can be used as a method to determine the number of visitors. That being said, this has been proven as an inaccurate way to determine the number of visitors.</p> <p>On page 595 the document states, "This uncertainty may impact small businesses disproportionately." The Small Business Administration would include over 98% of Outer Banks Businesses as "Small Businesses". That being said, the authors of the DEIS should recognize that passing this plan would result in "disproportionately" effecting (i.e. in layman's terms, cripple, crush, or destroy) Outer Banks businesses.</p> <p>The ORV Management Plan is a minimal part of the document. For as long as I can remember, there has always been restricted ORV access on Outer Banks beaches. If the main goal of the plan in to limit ORV use and access, then why does so much of the document focus on pedestrian and recreational land use? Where is the evidence that pedestrians and recreational land users have negatively impacted the land any more than natural causes? There isn't any. It has been proven that the foot traffic on Jockey's Ridge State Park is negligible when considering that the wind alone moves enough sand to account for over 7,000 people walking on the sand 24 hours a day.</p> <p>There are also many mentions in the DEIS of forward-looking statements of what the NPS "will" do. Some of these are: pp 56. "This alternative would involve the construction of a pedestrian access trail and improvements and additions to the interdunal road system." pp 80. "?by improving interdunal road and ORV ramp access. Pedestrian access would be enhanced by providing increased parking capacity at various points of access to vehicle-free areas?" pp 81. "would include the construction of a short ORV route to access a new pedestrian trail to the south of Ocracoke Island?" pp. 593. "?additional pedestrian and ORV access would be facilitated by construction and relocation of access ramps, and the designation of ORV access corridors at Cape Point and South Point." Pp 598. "The extra efforts to increase ORV access and pedestrian access should increase the probability that the impacts are on the low rather than high end of the range." There is no appropriation in the NPS budget through 2011 for these plans so they should not be used to imply that they will minimize economic impact. These points should be disregarded and not used as part of a plan, unless they are part of the budget.</p> <p>Finally, it appears as if accurate scientific research has not been done about the true ecological impact of humans and their impact on select species in the Cape Hatteras National Seashore and surrounding areas. How is it that, in 2009, after the Consent Decree had it's first full year in effect, that the numbers of piping plover's actually declined?and yet the National Park Service has selected Alternative F (which is even more extreme than the original Consent Decree) from the DEIS as their preferred option? Until there are concrete facts that actually prove that humans are destroying the habitat of the piping plover, sea turtles, and other creatures, why is this extreme plan being put into effect which will so negatively affect local business owners, tourists, and everybody else that visits the Outer Banks?</p>

Correspondence:	<p>I have been visiting Cape Hatteras with my family and friends since the early 1970s. Much of the purpose of these trips has been surf fishing. In a nutshell, if access to the beach is restricted or eliminated to vehicles, I will have no reason to visit and spend money in this region any longer. The NPS must formulate a plan that is consistent with the legislation establishing Cape Hatteras National Seashore Recreation Area. The enabling legislation for the Recreational Area states, in part, "said area shall be, and is, established, dedicated, and set apart as a national seashore recreational area for the benefit and enjoyment of the people and shall be known as the Cape Hatteras National Seashore Recreational Area". Therefore, it is important to balance resource protection with reasonable access for recreation.</p> <p>Corridors are a vital tool in providing access while managing resources. They provide a small path around temporary resource closures in order to provide access to open areas that would otherwise be blocked. Corridors should be permitted throughout the seashore during the entire breeding and nesting season including ML-I portions of SMAs. These corridors should provide valuable access without impairment or damage to protected resources. Buffers, or closures, are important management practices for species recovery. However, to have long term benefit for the wildlife and the visiting public, buffers must be based on peer-reviewed science For example, the Piping Plover, a species classified as threatened and not endangered, is given a level of unprecedented protection in Alternative F. A 1,000-meter buffer in all directions represents over 771 acres. The DEIS does not cite any peer-reviewed science in supporting such closure. A more appropriate & effective buffer would be 200 meters.</p> <p>Birds that are not listed as endangered should not be afforded the level of protection given to ESA (Endangered Species Act) protected species. Instead of 300-meter buffers for these birds, a more appropriate buffer would be 30 meters. Also, all birds in the same ecosystem of the seashore should be counted. This includes all the many birds on the dredge and spoil islands located just yards away and within sight of the seashore.</p> <p>The National Park Service should consider turtle management practices successfully used in other federal and state areas to achieve nesting success. More proactive measures include relocating nests to more desirable locations, which is routinely and successfully done in other areas.</p>

Correspondence: I'm just simply amazed at how far this thing has gone. Never has there been a problem with birds or turtles being killed to the point of extinction in this area. Yes, there have been a few instances of birds and turtles dying at the hands of humans, but for the norm, the coexistence of animals, vegetation and humans has never created a major problem. I'm not a local of the outer banks, but I've been vacationing there for over 40 years and I've found most of us visitors to be protective of wildlife in and around the area.
Then there are the people who do live there. They've been able to carve out a bit of a living from those of us who visit their towns and now the government is going to put a stop to that...for exactly what reason? If the government is so worried about the wildlife, why then are they paying a trapper to trap and kill so many other animals in the area? And, why is this never written about in the newspapers or opposed by such organization as PETA?
I just can't believe that anyone has the right to kill off another's abilities to make a living, especially when they are doing so in a way that is not affecting other animals, as they say is happening with the birds.
These birds are not even near extinction, and they nest in many areas of the eastern seaboard. So why single out the outer banks? People and animals and vegetation have been coexisting peacefully for hundreds of years.
Unbelievable what our government is doing. Think about it. Why?
I have briefly read some of the report and have to say there's nothing I agree with. It all seems to be based on individuals ideas, it doesn't make sense and it is not based on scientific research.
Keep the beaches open. Protect the birds, which by the way, nest in the dunes....not on the flat sandy expanses of beach. When a turtles' nest is found, fence it off. We have all coexisted in the past.....we can continue to do so now and in the future.

Correspondence: Mike Murray, Superintendent Cape Hatteras National Seashore 1401 National Park Drive Manteo, NC 27954 Thank you for allowing me this opportunity to comment on this draft plan for ORV management on Cape Hatteras National Seashore. I've been a regular user of the Park since I was a child brought to Avon by my parents in 1975. My mother, has been coming to the outer banks since she was a child, well before 1975. To say we are "lifers" would be an understatement. Our family owns a house in Avon, and while we are not there 100 percent of the time, we feel that it has become our second home. More importantly than our tenure, are the relationships we've been fortunate to foster with local residents, "islanders" if you will. It is these people that I am most concerned with as a result of the proposals being suggested in this plan. Local island life depends on tourist dollars. Tourist dollars that come to town as a result of access to the beach. Access to the shoreline. Access to the beauty the island offers and access to the waters around the island. Limiting this access will have a negative effect on this community's ability to provide for their families. My concern after reviewing this plan is one of genuine fear for the local economy and for future generations of those wishing to enjoy this pristine setting. As I dig deeper, my concern grows as I don't see many statements in this plan, outlining the protection and security of the local inhabitant's rights. In most cases, it appears that more effort is being placed on the security and rights of the wildlife in the area, rather than the local, taxpaying, constituents. I for one am in favor of rules and regulations that will allow for the balance of nature and people in the fair use of this wonderful setting. However, it seems after reading this draft that this is not about fair use, it's about limiting use for the people that would like to enjoy this park. The document appears to show bias toward the special interest groups that would like to see limited human enjoyment of an area that was, is and should stay a "recreation" area. Also, there are many references to this "plan" that utilize the wording "pedestrian access" yet this is being offered as an ORV plan. Why are limitations to pedestrian access being discussed in a plan that is meant to designate the ability of people to utilize off road vehicles? It seems that these 800+ pages of documentation are further reaching than the title suggests or implies. Specific items such as banning activity within 1,000 meters of a possible nest area do not appear to be realistic or practical. For an island that is in places, less than a 1,000 meters wide, this buffer seems to be arbitrary, as no amount of research that I've done on the NPS, FWS, Audobon society or any other scientific websites dictates that a buffer this large has increased breeding numbers. Historically, minimalist environmental management approaches have worked well throughout the US national parks. Closing extensive areas of beach, sound and water has not been proven as a means to help any species of animal. In an effort to prove the theory of "no access, abundant wildlife", I do hope that you will take into account the possible experiment may be severely damaging to a culture, community and possibly, other species of animals. At this time, it seems that there is a real opportunity for raising awareness, education, and enforcement of sensible rules and regulations that will ensure balance between humans and animals for many years to come. A process that could be regulated with intelligence and fairness funded by tax revenue and perhaps vehicle permits. Unfortunately, a majority of the action plans are so strict; they appear to only compound a bad situation. Less people, lower tax base, lower tax revenue, seems to ensure a lack of funding for programs that should be in place to enable the safe use of the seashore as well as education for programs designed to preserve endangered animals. This is without a doubt a critical time in the history of the Cape Hatteras National Seashore. I'm confident that when the original architects decided to build huge sand dunes to "protect the island", they didn't have the benefit of knowing how their act may endanger species of animals that required the natural flow of water over the sand to ensure their livelihood. Just as then, whatever decision that is reached will have many un-intended consequences for the wildlife, the local inhabitants, and the tourists hoping to enjoy this wonderful area. Please be thoughtful and consider both human life, as well as animal life when making your decision. I have already extended the Hanburger tradition of coming down to Hatteras Island numerous times during the calendar year. Since their birth, my children have enjoyed winters for the solitude, spring and fall for the changing temperatures and shifting sands and summer for the flow of people also looking to enjoy a glorious day at the beach complete with beautiful sunset. I noticed a quote on a forum dedicated to the enlightenment of those not aware of this current situation on Hatteras that struck me deeply. "If people, and especially children, cannot experience the environment how are they going to learn to help you protect the environment?" Please keep this question in mind as you pursue a decision on access in our National Seashore and Recreation area. For something as beautiful as the North Carolina Outer Banks to be truly enjoyed and appreciated, it has to be interactive. This interaction will stimulate a love for the area that will inspire preservation of its inhabitants, all of them, both human and animal. Again, I thank you for your time, and appreciate the ability to be able to comment on these proposed actions. Regards, Chris Hanburger Apex, NC ? Avon, NC Wake County ? Dare County

Correspondence: I oppose the DEIS alternative F on all counts and support the Coalition for Beach Access position statement.
I am a property owner on Hatteras Island. I rent a weekly vacation property that is "pet friendly". I am told by real estate company employees that the number of houses for rent that are pet friendly is up dramatically. The restriction that would be put on visitors with pets goes too far. As stated on P. 136, "prohibition of pets in the Seashore during bird breeding season including in front of the villages" is tantamount to saying no pets in public areas, beaches, campgrounds, soundfront, foot trails, park maintained roads from March 15-July 31.
In my opinion this is ludicrous! I support the beach coalition proposal that pets be allowed in these areas at all times as long as they are on a 6 foot leash. It is unfair to ask visitors to give up the right to have their pets with them. It is one of the advantages of staying in rental homes that entices pet owners to vacation on our island. There is no evidence that properly supervised and tethered animals are in any way responsible for disturbing nesting sights. You will effectively drive away a fair amount of visitors if this is passed. Please give this careful consideration.
Thank you.
Nancy Johnson

Correspondence: Dear Superintendent Murray,
As a member of the National Parks Conservation Association and creator of the Query Quest National Parks Educational Board Game, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include the NPCA's recommendations. The intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and limit or eliminate ORV use, which harms wilderness and wildlife resources. Please do not allow the impairment of enjoyment of those who visit national parks to experience the wonder of nature in peace. ORVs impair enjoyment for everyone not riding one.
Sincerely, David Platt
Query Quest Educational Board Games

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Wildlife should be considered when devising your use plan for Hatteras beaches. We can't allow sea turtles, birds, and other wildlife numbers to deteriorate under any use plan for Hatteras. I recognize that those who would drive on beaches should be allowed to in certain circumstances, but wildlife (and their nesting) should not be harmed.
Please contact me if you would like to discuss this matter further.

Correspondence: I understand that we have to protect our resources. But to go to the extremes of some of the proposed plans is plan childish. The "I want it all my way" of beach closures just shows how some people think that what they believe is right is better than every body elses. Some beach closures are understandable. But all the miles of beach that NC has and the few miles we are allowed to enjoy, some people selfishness wants to take that away because they believe they have to have it all. Myself and my family, call among our friends at least a few times a month to enjoy going to the beach. Just taking our jeeps or dune buggies, parking and hanging out in some of the most beautiful country this nation has. But if we cannot do that, or have to leave before sunset, and not be able to enjoy a fire under the stars with the waves cashing on shore, I'm afraid we will not be returning anymore. We do not go to atlantic beach for the sole reason that we cannot sit beside our vehicle. To see it all day knowing it is safe. And for the people that want all this control. To stop the economic business that ORVs bring to eastern NC, It will affect you with the rest of us. That money, as well as mine, will go to other places. That includes outside NC. That means that the money the people that get my money will not have that money to spend on other things. Which in turn will trickle down to you in one form or another. For the closures of species that are not endangered, is going overboard. If that is the case, nobody should even be allowed to walk into grass or in the woods. For the simple statement that you MIGHT step on some insect or animal that MAY be endangered one day. But hey. I have read that we should kill some animals to save another. How is it they decide which life is more important?

Correspondence: Our beaches have always been open to vehicles and pedestrians to enjoy. Before highway 12 was even made people used the beach as a roadway. It is a shame that you are putting birds before people and their livelihoods. This island depends on the money from tourism and fisherman to survive. There was a piping plover in Carova but they didn't block that off or shut it down. There is the Darwin Theory where it is survival of the fittest, the birds will go where they are safe, just like all animals, they have instinct and nature just needs to be and humans just need to be, don't mess with it!!

Correspondence: : May 10, 2010 To: National Park Service From: Subject: DEIS Off-Road Vehicle Management Plan Comments
My comments concern the DEIS of the Off-Road Vehicle Management Plan prepared by the National Park Service (NPS) for the Cape Hatteras National Seashore Recreation Area.
1) Page 201: I disagree with the NPS statement: "Even with resource closures in place, protected species are still at risk [from pedestrians and ORVs]." No Piping Plover deaths have been attributed to ORVs. ORV violations continue to decrease as signage and education improve. Pedestrian violations are much more significant than ORV violations. It seems to me that any transgressions into protected area are the result of lack of NPS manpower and enforcement than the public purposely and willfully violating out of bounds areas.
2) Page xxiv: I question the statement of as per the DEIS: "Carrying capacity would be a 'peak use limit' determined for all areas based on the linear feet of beachfront?" If you close off huge sections of the beach, you force more people into smaller areas, potentially resulting in more resource impairment and diminished visitor experience.
3) Page xix and page 23: I am against having two different closures rules pertaining to the North facing beaches (North side) and the South facing beaches (South side) as per the grid outlined in Alternative "F". I disagree with the NPS proposal to close the beaches in villages of Frisco, Hatteras and

Ocracoke Villages to ORV access longer than the traditional May 15 to September 15 period for the Northern beaches, even though seasonal visitor statistics are similar for all villages. Please, make them the same: May 15 -> September 15.

4) Page 1: I agree with your statement "ORVs have long served as a primary form of access for many portions of the beach in the seashore, and continue to be the most practical means of access and parking for many visitors."

However, pedestrian only areas discriminate against individuals with limited mobility due to age or physical impairments, families with small children, and those wishing to engage in activities requiring recreational equipment (boogie boards, beach umbrellas, beach chairs, coolers, fishing rods and tackle, etc)

5) Page 53: I disagree with the special use permit proposed guidelines. It is impractical to allow the transportation of disabled visitors to the village beaches and then require the vehicle to be returned to the street or parking area. This necessitates the disabled person to have a driver to drop him (or her) off, then drive to a parking area, then trudge a long distance to the site of the drop off, then trudge the long distance through the sand back to get the vehicle.

Suppose the handicap person wants to go to the beach, is capable of driving himself, yet cannot find another person to go with him? Does he now not go to the beach? This rule creates unnecessary hardships and risks in the event of an emergency as well.

6) Page 121 ? 127. I strongly disagree with the buffers as presented. We must allow for pass-thru corridors. The beach is linear with the ocean buffering on one side and the dune line on the other. For example - If you pinch off access on one side of a 4 mile linear beach and pinch off access on the other side of the 4 mile section of beach with no corridor, then you effectively have closed off all 4 miles of the beach because you CAN'T get there. The proposed bird buffers are too large, blocking access to the interior sections from the two "buffered" ends.

I propose ORV pass-thru only corridors and to use breeding / nesting buffer distances to establish ORV pass through only corridors to ensure beach access in a way that does not hinder resource protection. I believe pass through corridors should be maintained for pedestrians and ORVs in all areas of the Cape Hatteras National Seashore Recreational Area throughout the entire breeding and nesting season. Corridors are vital to providing access in a way that does not hinder resource protection.

Piping Plover unfledged chicks buffer should move with the brood as it relocates to reliable food source, not expanded.

The 1,000 meter distance for the piping plover is way too large and not based upon peer reviewed science. A more rational distance would be 200 meters per other sites in the nation for the piping plover. Ample scientific evidence and precedent exists to support a 200 meter buffer.

Buffers for other species, including American Oystercatchers, Least Terns and Colonial Waterbirds must also be changed. An effective 30 meter buffer should be established for these species rather than the 300 meter closure outlined in the DEIS.

NON-ENDANGERED BIRDS should not have same protection as if endangered. Not allowing ORV access is paramount to denying the public access to these beaches.

7) Page 468: I disagree with the limitations imposed on pedestrian and ORVs. Corridors or bypasses should be provided thru, around or below high tide line in all SMAs during entire breeding season to maintain access.

8) Page 124: I strongly disagree with the NPS slant of providing for over protection of resource management over that of the public's right to access the beaches. Pro-active initiatives include: Vegetation Management, Habitat Management, Enhanced Predator Management, Colonial Water bird social attraction, Piping Plover check fledge rate, Piping plover chick buffer distance, and pass-through buffers during the incubation period. Opportunities to implement less restrictive closures as a result of the above initiatives should be considered more frequently than the 5-year periodic review process identified in the DEIS.

9) I disagree with the NPS Resource Management Pedestrian / ORV Closure Policies. These policies address the least significant factors affecting nest survival with little chance to have more than negligible impact. For example: the AMOY Nest Failures are predominately due to non-human events. Using your own stats, the mammalian predation is 54%, Storm / Lunar Tides: 29%, Nest Abandonment: 6%, Avian Predation: 5%, and Ghost Crab Predation: 3%.

So what is the percentage due to human interference: just 3%! It's insignificant, yet the NPS wants to ban humans when their actions provide very little influence on the success rate of breeding birds and turtles.

10) I disagree with the stats of breeding plovers and the other birds in the Park when the NPS does not adequately consider locations neighboring the Recreational Area that are part of the same ecosystem, namely dredge and spoil island that are located just yards away and within sight of the seashore. These birds are part of the same ecosystem and should be included.

Those spoil islands, developed by man from dredging the waterways in the Pamlico Sound for channel upkeep are slammed full of birds. The reason why so many birds? NO PREDATORS. SO, birds are not as stupid as one might think. You have to count these birds and incorporate them in the stats when the NPS is talking about any so called decline in breeding pairs in the National Park.

11) Page 1: I do not think the DEIS responsibly addresses the cultural resource issues. The very purpose of the DEIS as set forth in the National Environmental Policy Act (NEPA) is to protect and preserve natural and cultural resources in the federal decision making process. In the DEIS, the statement "protect and preserve natural and cultural resources" appears in the first sentence of the first page of the plan, in the Purpose of the Plan section, and numerous times thereafter. Yet, the 810 page document devotes only two paragraphs to analysis of cultural resource issues.

12) Pages 270-281; 561-598: I strongly disagree with your economic analysis of the impact of the DEIS. The region of influence (ROI) incorporates the Northern Beach communities, including Kill Devil Hills, Kitty Hawk, Southern Shores and Duck. These areas are almost completely disconnected from ORV use and access issues relating to the Seashore. ? Inclusion of the Northern Beaches in analysis significantly dilutes estimates of economic impact on the 8 Seashore Villages

? Analysis of economic impact to the Seashore Villages appears to be significantly down played. Emphasis in DEIS is on the ROI-wide or county-wide level impacts.

? Nowhere is it clearly addressed that the overwhelming majority of negative impacts will be felt by small businesses in the Seashore Villages rather than by overall economic interests within the greater ROI.

On page xlvi, Alternative F is characterized as having a "negligible to moderate" adverse impact on small businesses. I strongly disagree with this statement.

I believe the negligible to moderate projection is inaccurate and relies on economic surveys that has not yet been published. Furthermore, this material is not expected to be added to the DEIS until after the public comment period has ended.

Based upon the economic harm already experienced under the consent decree, Dare County projects the economic impact of Alternative F to be substantial.

Beach closures have already had a devastating and unfair impact on many Dare County Businesses, causing foreclosures, bankruptcies, lay-offs, cutbacks, expensive refinancing, and depleted college funds and savings accounts.

Even businesses whose revenue has stayed level or showed a modest increase have accomplished this at a costly price. Many have had to cut back employee hours, forego much-needed capital improvements, and sacrifice profits. That is certainly the case with Hatteras Realty.

Pages 270-286, 561-598: The socio-economic data and analyses are incomplete and erroneous and result in an understatement of the effect the restrictions will have upon the Island, the region and the state of NC. The US Park Services answer: Businesses will have to "adapt" to the new rules. (p.383) The negative economic impacts of the decree ARE KNOWN, so to say that the added restrictions would have negligible to moderate impact is indefensible.

13) Overall Visitor Counts - Overall visitor counts appear to include visitors to Fort Raleigh National Historic Site and the Wright Brothers National Memorial. A large percentage of these visitors vacation in the Northern Beaches communities and recreate on the non-federal beaches outside of the Seashore. Visitors who patronize the Fort Raleigh National Historic Site and the Wright Brothers National Memorial but do not visit the actual seashore areas need to be factored out.

Maintenance of Future Access to Cape Point and South Point Ocracoke: All socioeconomic analyses related to Alternative F are predicated on the assumption that access corridors will remain open for at least an appreciable portion of the visitor high season. Under Alternative F, the access corridors will be subject to Resource Closures based on buffers similar or identical to the Consent Decree. Unless some predictability of access to Cape Point and South Point Ocracoke can be assured, economic analyses predicated on assumption of access are fundamentally flawed.

Why would a group of surf fishermen want to come to Hatteras Island to surf fish if they are not sure they can access the prime fishing grounds at Cape Point? The answer is they won't come. If they don't come, they don't rent vacation homes and spend their money on Hatteras and Ocracoke Islands.

The definition of the Region of Influence (ROI), faulty data on economic activity generated by specific type recreational activity, incomplete visitation/business survey data, inflated overall Seashore visitor counts pertaining to beach use, and flawed key assumptions concerning the maintenance of access under Alternative F, all lead to inaccurate conclusions in the socioeconomic analyses. Specifically, these inaccuracies can be seen as understating the negative socio-economic impact of the Seashore Villages. Further, this negative impact will be absorbed almost entirely by Small Businesses. Neither of these important aspects of the management alternatives are adequately presented in the DEIS.

14) Page 136: I strongly disagree with your pet restriction proposals. The "prohibition of pets in the Seashore during bird breeding season including in front of the villages." = No Pets in public areas ?beaches, campgrounds, soundfront, foot trails, park maintained roads -from March 15 ?July 31.

15) Pages 125; 392 ? 396: SEA TURTLES. I disagree with the stats and procedures proposed. I think endangered sea turtles would benefit from management practices now in use at other federal seashores that are more proactive in efforts to achieve nesting success. This includes relocating nests to more desirable locations as is done in other state and federally controlled areas.

The Cape Hatteras National Seashore Recreational Area is on the northernmost fringe of turtle nesting locations for the southeast, accounting for about 1% of all turtle nests. Proposed buffer areas are not needed for protection of the turtles and amount to overprotection.

16) Pages 97- 101. I strongly disagree with proposals in this section saying that ORVs will be prohibited year round between ramps 27 and 30, at Hatteras Inlet (Hatteras Spit), Ocracoke Inlet (North Ocracoke Spit) and various other locations.

Not allowing ORV access is paramount to denying the public access to these beaches. They are located miles from the nearest parking or paved road area and too far to access on foot. As a matter of course, there has been no breeding of piping plover or other endangered species at the Hatteras Island Inlet (spit) area in the past 6 years.

17) Page 104: I disagree with the proposed night time driving closures. Per your proposals, night driving will be prohibited between May 1 and November 15th, forcing visitors off of the beaches early in the evening and preventing sunrise surf fishermen access in the morning. I propose a more moderate night time ban if one is needed, perhaps from June 1 ? September 15 with times being 1 hour after sunset and 1 hour before sunrise to allow beach goers to gather their stuff and exit the beach area.

Certainly more proactive measures such as relocating nests prone to weather and ocean events would dramatically increase the nesting success rates.

18) Page 121: I disagree with the proposed beach closings, including pedestrian access from March 15 until July 31 in 8 different beach locations which have traditionally been available. Please leave these areas open to beach walkers, shell collectors and those that want to access the beaches in these areas.

Conclusion:

Please, incorporate access corridors through any SMA so we can get to the open beach beyond. Incorporate the birds into the count that nest on the spoil islands. Base your buffer zones on peer reviewed science and scale them back to more reasonable distances as discussed.

It is neither logical nor reasonable to spend so much time, money and energy to overprotect a bird (Piping Plover) in the Cape Hatteras National Seashore that is on the southernmost fringe area of its breeding ground. That goes for the loggerhead turtle that is in its northernmost breeding area.

Let's scale back the buffer zones. You can always increase at a later date.

The USFS is leaning way over the line on over protection and not enough on the public's right to enjoy the beaches of the National Seashore. The proper balance is not achieved in the propose DEIS and needs to be modified so that the proper balance of reasonable resource protection and access to the beaches of the National Park is achieved. I could sum it up by saying "Protect, not Prohibit."

Thank you,

Correspondence:

The NPS must formulate a plan that is consistent with the legislation establishing Cape Hatteras National Seashore Recreation Area. The enabling legislation for the Recreational Area states, in part, "said area shall be, and is, established, dedicated, and set apart as a national seashore recreational area for the benefit and enjoyment of the people and shall be known as the Cape Hatteras National Seashore Recreational Area". Therefore, it is important to balance resource protection with reasonable access for recreation.

Corridors are a vital tool in providing access while managing resources. They provide a small path around temporary resource closures in order to provide access to open areas that would otherwise be blocked. Corridors should be permitted throughout the seashore during the entire breeding and nesting season including ML-1 portions of SMAs. These corridors would provide valuable access without impairment or damage to protected resources. Buffers, or closures, are important management practices for species recovery. However, to have long term benefit for the wildlife and the visiting public, buffers must be based on peer-reviewed science For example, the Piping Plover, a species classified as threatened and not endangered, is given a level of unprecedented protection in Alternative F. A 1,000-meter buffer in all directions represents over 771 acres. The DEIS does not cite any peer-reviewed science in supporting such closure. A more appropriate & effective buffer would be 200 meters.

Birds that are not listed as endangered should not be afforded the level of protection given to ESA (Endangered Species Act) protected species. Instead of 300-meter buffers for these birds, a more appropriate buffer would be 30 meters. Also, all birds in the same ecosystem of the seashore should be counted. This includes all the many birds on the dredge and spoil islands located just yards away and within sight of the seashore.

The National Park Service should consider turtle management practices successfully used in other federal and state areas to achieve nesting success. More proactive measures include relocating nests to more desirable locations, which is routinely and successfully done in other areas.

The NPS must formulate a plan that is consistent with the legislation establishing Cape Hatteras National Seashore Recreation Area. The enabling legislation for the Recreational Area states, in part, "said area shall be, and is, established, dedicated, and set apart as a national seashore recreational area for the benefit and enjoyment of the people and shall be known as the Cape Hatteras National Seashore Recreational Area". Therefore, it is important to balance resource protection with reasonable access for recreation.

Corridors are a vital tool in providing access while managing resources. They provide a small path around temporary resource closures in order to provide access to open areas that would otherwise be blocked. Corridors should be permitted throughout the seashore during the entire breeding and nesting season including ML-1 portions of SMAs. Correspondence: I am a property owner on Hatteas Island. I oppose the DEIS Alternative F on all counts and support the position statement of the Coalition for Beach Access. The impact of the unrealistic buffers and beach closures affects Caper Hatteras in a myriad of ways. The one close to my heart is the loss of access to disabled people. The national seashore was created with a series of ramps to allow 4wd access to the beach while preserving the dune line. As a result there are very few parking spaces. Dare County reports there are 749 spaces; 25 of these are handicapped. Of those, 10 are at Coquina Beach which is not even on Hatteras Island. Of the 15 on Hatteras Island I challenge you to show me one that allows wheelchair access. My elderly parents fall into this category. They are also property owners in Avon. My father is an amputee and has trouble negotiating hard packed sand, let alone soft dune sand. The only way for them to fish and enjoy the beach they love is by 4wd. Without this the beach is 100% off limits to them. My family and I have visited and owned property on Hatteras Island for over 35 years. We have always been good stewards of the seashore. On more than one occasion WE have been the ones to call the park service to report unmarked nesting sites. We have NEVER knowingly disturbed any living creature on the beach. By adopting Alternative F you will effectively disenfranchise a large segment of the populaiaon. I am asking you to consider the human lives here, not just the animal lives. We have coexisted for many years so far and can continue to do so. Thank you.
Nancy Johnson

Correspondence: I am an ORV owner/driver.I have been operating my ORV on the Cape Cod National Seashore since 1978.The Alternative F restrictions are more restrictive than any I have seen on any beach I have used. We have been subject to closures due the Piping Plover since 1988. We respect Tern nesting areas,but,Plovers get the whole beach until they can fly fifty feet.The presence of ORVs help to discourage predators. We drive day and night on C.C.N.S.We have speed limits,equipment requirements,and day limits during holiday weekends. C.C.N.S. allows pets. The owners are responsible to keep dogs on a leash and to pick up after them. ORV impact on resourcisis negligible.I believe that ORV tracks help hold the sand from blowing away in high winds.I believe the rules are needed to keep control of ORVs and pedestrians safe,but,should not ruin anyone's enjoyment on the seashore. Visitors to our seashores have an economic impact to the area.Hotels,service stations,restaurents,gift shops,tackle,and bait shops all benefit. In conclusion be fair,be mindful of all affected,and remember it's a recreational area not a jail.

Correspondence: I strongly object to closing beaches to dogs. Dogs on leashes should be permitted wherever pedestrians are permitted (with the exception of swimming areas as is the current policy). There is no evidence that prohibiting dogs on leashes would provide any additional protection where pedestrians are permitted.
 If the concern is that people would not abide by this law, then I believe you have the same concern if dogs are not permitted.

Correspondence: Dear Superintendent Murray,
 As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.
 1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."
 2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness..."
 Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.
 3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.
 Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

Correspondence: Off Road Vehicles do not belong on grounds of National Parks; they belong on private property where the owner absorbs cost to the environment, not the tax payer. Allocated Taxes are for the protection of our National Parks; these areas were set aside for the preservation of the park environment and

the spiritual beauty enjoyment citizens derive from visiting them. Not only irreversible, but expensive damage can occur with the use of noisy, messy to the environment, machines. Let the citizen who wants to enjoy nature aboard these vehicles purchase their own land to put their machine on...they are not interested in the value of a quiet respite to see, hear, smell and feel the wonders nature. Accessibility means that some of our citizens are limited to areas near parking lots and hopefully those in charge of designing park layout keep the needs of these 'access limited folks' in mind. Walkways into certain areas without loud concession stands, tour buses, etc., should not infringe on the quiet spiritual places that many citizens seek. Please, do not allow ORV into any of our National Parks, Forests, or Monuments. Our park's founding fathers intended these special spiritual places of beauty and uniqueness for generations to come and for all of our citizens to enjoy. Thank you for your consideration, Angela M. Garcia-Johnson

Subject: DEIS Off-Road Vehicle Management Plan Comments

My comments concern the DEIS of the Off-Road Vehicle Management Plan prepared by the National Park Service (NPS) for the Cape Hatteras National Seashore Recreation Area.

1) Page 201: I disagree with the NPS statement: "Even with resource closures in place, protected species are still at risk [from pedestrians and ORVs]." No Piping Plover deaths have been attributed to ORVs. ORV violations continue to decrease as signage and education improve. Pedestrian violations are much more significant than ORV violations. It seems to me that any transgressions into protected area are the result of lack of NPS manpower and enforcement than the public purposely and willfully violating out of bounds areas.

2) Page xxiv: I question the statement of as per the DEIS: "Carrying capacity would be a 'peak use limit' determined for all areas based on the linear feet of beachfront?" If you close off huge sections of the beach, you force more people into smaller areas, potentially resulting in more resource impairment and diminished visitor experience.

3) Page xix and page 23: I am against having two different closures rules pertaining to the North facing beaches (North side) and the South facing beaches (South side) as per the grid outlined in Alternative "F". I disagree with the NPS proposal to close the beaches in villages of Frisco, Hatteras and Ocracoke Villages to ORV access longer than the traditional May 15 to September 15 period for the Northern beaches, even though seasonal visitor statistics are similar for all villages. Please, make them the same: May 15 -> September 15.

4) Page 1: I agree with your statement "ORVs have long served as a primary form of access for many portions of the beach in the seashore, and continue to be the most practical means of access and parking for many visitors."

However, pedestrian only areas discriminate against individuals with limited mobility due to age or physical impairments, families with small children, and those wishing to engage in activities requiring recreational equipment (boogie boards, beach umbrellas, beach chairs, coolers, fishing rods and tackle, etc)

5) Page 53: I disagree with the special use permit proposed guidelines. It is impractical to allow the transportation of disabled visitors to the village beaches and then require the vehicle to be returned to the street or parking area. This necessitates the disabled person to have a driver to drop him (or her) off, then drive to a parking area, then trudge a long distance to the site of the drop off, then trudge the long distance through the sand back to get the vehicle.

Suppose the handicap person wants to go to the beach, is capable of driving himself, yet cannot find another person to go with him? Does he now not go to the beach? This rule creates unnecessary hardships and risks in the event of an emergency as well.

6) Page 121 ? 127. I strongly disagree with the buffers as presented. We must allow for pass-thru corridors. The beach is linear with the ocean buffering on one side and the dune line on the other. For example - If you pinch off access on one side of a 4 mile linear beach and pinch off access on the other side of the 4 mile section of beach with no corridor, then you effectively have closed off all 4 miles of the beach because you CAN'T get there. The proposed bird buffers are too large, blocking access to the interior sections from the two "buffered" ends.

I propose ORV pass-thru only corridors and to use breeding / nesting buffer distances to establish ORV pass through only corridors to ensure beach access in a way that does not hinder resource protection. I believe pass through corridors should be maintained for pedestrians and ORVs in all areas of the Cape Hatteras National Seashore Recreational Area throughout the entire breeding and nesting season. Corridors are vital to providing access in a way that does not hinder resource protection.

Piping Plover unfledged chicks buffer should move with the brood as it relocates to reliable food source, not expanded.

The 1,000 meter distance for the piping plover is way too large and not based upon peer reviewed science. A more rational distance would be 200 meters per other sites in the nation for the piping plover. Ample scientific evidence and precedent exists to support a 200 meter buffer.

Buffers for other species, including American Oystercatchers, Least Terns and Colonial

Waterbirds must also be changed. An effective 30 meter buffer should be established for these species rather than the 300 meter closure outlined in the DEIS.

NON-ENDANGERED BIRDS should not have same protection as if endangered. Not allowing ORV access is paramount to denying the public access to these beaches.

7) Page 468: I disagree with the limitations imposed on pedestrian and ORVs. Corridors or bypasses should be provided thru, around or below high tide line in all SMAs during entire breeding season to maintain access.

8) Page 124: I strongly disagree with the NPS slant of providing for over protection of resource management over that of the public's right to access the beaches. Pro-active initiatives include: Vegetation Management, Habitat Management, Enhanced Predator Management, Colonial Water bird social attraction, Piping Plover check fledge rate, Piping plover chick buffer distance, and pass-through buffers during the incubation period. Opportunities to implement less restrictive closures as a result of the above initiatives should be considered more frequently than the 5-year periodic review process identified in the DEIS.

9) I disagree with the NPS Resource Management Pedestrian / ORV Closure Policies. These policies address the least significant factors affecting nest survival with little chance to have more than negligible impact. For example: the AMOY Nest Failures are predominately due to non-human events. Using your own stats, the mammalian predation is 54%, Storm / Lunar Tides: 29%, Nest Abandonment: 6%, Avian Predation: 5%, and Ghost Crab Predation: 3%,

So what is the percentage due to human interference: just 3%! It's insignificant, yet the NPS wants to ban humans when their actions provide very little influence on the success rate of breeding birds and turtles.

10) I disagree with the stats of breeding plovers and the other birds in the Park when the NPS does not adequately consider locations neighboring the Recreational Area that are part of the same ecosystem, namely dredge and spoil island that are located just yards away and within sight of the seashore. These birds are part of the same ecosystem and should be included.

Those spoil islands, developed by man from dredging the waterways in the Pamlico Sound for channel upkeep are slammed full of birds. The reason why so many birds? NO PREDATORS. SO, birds are not as stupid as one might think. You have to count these birds and incorporate them in the stats when the NPS is talking about any so called decline in breeding pairs in the National Park.

11) Page 1: I do not think the DEIS responsibly addresses the cultural resource issues. The very purpose of the DEIS as set forth in the National Environmental Policy Act (NEPA) is to protect and preserve natural and cultural resources in the federal decision making process. In the DEIS, the statement "protect and preserve natural and cultural resources" appears in the first sentence of the first page of the plan, in the Purpose of the Plan section, and numerous times thereafter. Yet, the 810 page document devotes only two paragraphs to analysis of cultural resource issues.

12) Pages 270-281; 561-598: I strongly disagree with your economic analysis of the impact of the DEIS. The region of influence (ROI) incorporates the Northern Beach communities, including Kill Devil Hills, Kitty Hawk, Southern Shores and Duck. These areas are almost completely disconnected from ORV use and access issues relating to the Seashore.

? Inclusion of the Northern Beaches in analysis significantly dilutes estimates of economic impact on the 8 Seashore Villages
 ? Analysis of economic impact to the Seashore Villages appears to be significantly down played. Emphasis in DEIS is on the ROI-wide or county-wide level impacts.

? Nowhere is it clearly addressed that the overwhelming majority of negative impacts will be felt by small businesses in the Seashore Villages rather than by overall economic interests within the greater ROI.

On page xlvi, Alternative F is characterized as having a "negligible to moderate" adverse impact on small businesses. I strongly disagree with this statement.

I believe the negligible to moderate projection is inaccurate and relies on economic surveys that has not yet been published. Furthermore, this material is not expected to be added to the DEIS until after the public comment period has ended.

Based upon the economic harm we have already experienced under the consent decree, Dare County projects the economic impact of Alternative F to be substantial.

Beach closures have already had a devastating and unfair impact on many Dare County Businesses, causing foreclosures, bankruptcies, lay-offs, cutbacks, expensive refinancing, and depleted college funds and savings accounts.

Even businesses whose revenue has stayed level or showed a modest increase have accomplished this at a costly price. Many have had to cut back employee hours, forego much-needed capital improvements, and sacrifice profits. That is certainly the case with Hatteras Realty, which manages my property for me.

Pages 270-286, 561-598: The socio-economic data and analyses are incomplete and erroneous and result in an understatement of the effect the restrictions will have upon the Island, the region and the state of NC. The US Park Services answer: Businesses will have to "adapt" to the new rules. (p.383) The negative economic impacts of the decree ARE KNOWN, so to say that the added restrictions would have negligible to moderate impact is indefensible.

13) Overall Visitor Counts - Overall visitor counts appear to include visitors to Fort Raleigh National Historic Site and the Wright Brothers National Memorial. A large percentage of these visitors vacation in the Northern Beaches communities and recreate on the non-federal beaches outside of the Seashore. Visitors who patronize the Fort Raleigh National Historic Site and the Wright Brothers National Memorial but do not visit the actual seashore areas need to be factored out.

Maintenance of Future Access to Cape Point and South Point Ocracoke: All socioeconomic analyses related to Alternative F are predicated on the assumption that access corridors will remain open for at least an appreciable portion of the visitor high season. Under Alternative F, the access corridors will be subject to Resource Closures based on buffers similar or identical to the Consent Decree. Unless some predictability of access to Cape Point and South Point Ocracoke can be assured, economic analyses predicated on assumption of access are fundamentally flawed.

Why would a group of surf fisherman want to come to Hatteras Island to surf fish if they are not sure they can access the prime fishing grounds at Cape Point? The answer is they won't come. If they don't come, they don't rent vacation homes and spend their money on Hatteras and Ocracoke Islands.

The definition of the Region of Influence (ROI), faulty data on economic activity generated by specific type recreational activity, incomplete visitation/business survey data, inflated overall Seashore visitor counts pertaining to beach use, and flawed key assumptions concerning the maintenance of access under Alternative F, all lead to inaccurate conclusions in the socioeconomic analyses. Specifically, these inaccuracies can be seen as understating the negative socio-economic impact of the Seashore Villages. Further, this negative impact will be absorbed almost entirely by Small Businesses. Neither of these important aspects of the management alternatives are adequately presented in the DEIS.

14) Page 136: I strongly disagree with your pet restriction proposals. The "prohibition of pets in the Seashore during bird breeding season including in front of the villages." = No Pets in public areas beaches, campgrounds, soundfront, foot trails, park maintained roads -from March 15 ?July 31.

Hatteras Realty books approximately 13,000 rental weeks for a total of 91,000 rental nights housing approximately 700,000 visitors. The ban on pets to July 31 will seriously hurt the rentals of my vacation homes as our pet homes encompass about 30% of our rentals. I propose allowing pets on 6 foot leashes year-round in all areas open to pedestrians or ORVs. 15) Pages 125; 392 ? 396: SEA TURTLES. I disagree with the stats and procedures proposed. I think endangered sea turtles would benefit from management practices now in use at other federal seashores that are more proactive in efforts to achieve nesting success. This includes relocating nests to more desirable locations as is done in other state and federally controlled areas.

The Cape Hatteras National Seashore Recreational Area is on the northernmost fringe of turtle nesting locations for the southeast, accounting for about 1% of all turtle nests. Proposed buffer areas are not needed for protection of the turtles and amount to overprotection.

16) Pages 97- 101. I strongly disagree with proposals in this section saying that ORVs will be prohibited year round between ramps 27 and 30, at Hatteras Inlet (Hatteras Spit), Ocracoke Inlet (North Ocracoke Spit) and various other locations.

Not allowing ORV access is paramount to denying the public access to these beaches. They are located miles from the nearest parking or paved road area and too far to access on foot. As a matter of course, there has been no breeding of piping plover or other endangered species at the Hatteras Island Inlet (spit) area in the past 6 years.

17) Page 104: I disagree with the proposed night time driving closures. Per your proposals, night driving will be prohibited between May 1 and November 15th, forcing visitors off of the beaches early in the evening and preventing sunrise surf fishermen access in the morning. I propose a more moderate night time ban if one is needed, perhaps from June 1 ? September 15 with times being 1 hour after sunset and 1 hour before sunrise to allow beach goers to gather their stuff and exit the beach area.

Certainly more proactive measures such as relocating nests prone to weather and ocean events would dramatically increase the nesting success rates.

18) Page 121: I disagree with the proposed beach closings, including pedestrian access from March 15 until July 31 in 8 different beach locations which have traditionally been available. Please leave these areas open to beach walkers, shell collectors and those that want to access the beaches in these areas.

Conclusion:

Please, incorporate access corridors through any SMA so we can get to the open beach beyond. Incorporate the birds into the count that nest on the spoil islands. Base your buffer zones on peer reviewed science and scale them back to more reasonable distances as discussed.

It is neither logical nor reasonable to spend so much time, money and energy to overprotect a bird (Piping Plover) in the Cape Hatteras National Seashore that is on the southernmost fringe area of its breeding ground. That goes for the loggerhead turtle that is in its northernmost breeding area.

Let's scale back the buffer zones. You can always increase at a later date.

The USPS is leaning way over the line on over protection and not enough on the public's right to enjoy the beaches of the National Seashore. The proper balance is not achieved in the propose DEIS and needs to be modified so that the proper balance of reasonable resource protection and access to the beaches of the National Park is achieved. I could sum it up by saying "Protect, not Prohibit."

Thank you,

William C. Duncan, owner

Correspondence: I want to encourage you to ban Off-Road Vehicles from Cape Hatteras National Sea Shore except when they are providing transportation for physically handicapped individuals who have no other way to visit the park. In an area where the land is so delicate that it cannot survive use by off-road vehicles, it is foolish to allow national treasures to be destroyed. Thank you for considering my comments.

Superintendent Murry,

I am writing today to make a formal comment on the Cape Hatteras National Seashore Recreational Area Off-Road Vehicle Management Plan Draft Environmental Impact Statement. The beach is a wonderful place a place to spend time with family, relax & enjoy the outdoors. If the access is closed how are people going to enjoy this. Isn't that what a National Park is for? Isn't that what a National park was suppose to be, a place for families to enjoy nature at its finest. Not be blocked by ropes and signs saying its there but you cant go through. It is sad to say but if the beach accesses are closed you might as well tell the families that have lived there their entire lives to pack up and leave. There will be no revenue for the people to make to survive. The whole hatteras island/Ocracoke area will be a ghost town. Is that what we want as a state on our shoulders? A state that closes two islands down because of birds. Makes families loose their homes, jobs everything due to birds that arent even endangered? I have read where other areas have moved nest to higher elevations on the beach to protect them & had a higher success rate. Why cant we do this? We move them in threats of storms so why cant we move them any other time. Or why even bother at all THEY ARENT ON THE EXSTINTION LIST!. The ponds off the point could be cleared and used for them. The outer banks generates alot of money for our state, how are we going to recoup that income. The taxes that are collected down there help with things all over this state. If people stop coming to the island there goes the money there goes the state. I am asking please reconsider the alternatives before closing off access to the beach. It is many families past-times for generations. It is a way some make a living. A National Park is for people to see & enjoy not be blocked off from enjoying. Thank you!

Correspondence: Subject: DEIS - See/use Dr. Michael A. Berry's speech shown at end / Posted by: karen w. / 05/10/10

I stand in support of bill H.R. 718 To Reinstate the Interim Management Strategy governing off-road vehicle use in the Cape Hatteras National Seashore, North Carolina, pending the issuance of a final rule for off-road vehicle use by the National Park Service. H.R. 718 and the Preserving Public Access to Cape Hatteras Beaches Act of 2009 (S.1557) are important to Cape Hatteras National Seashore Recreation Area public beach access and America's enjoyment of their park.

Beach enjoyment and surf fishing at Cape Hatteras National Seashore Recreation Area is like a religion for folks like my husband who loves fishing there more than life itself. But it's not just the fishing, it is the being there (for all Americans and their families) that is a sort of religion. At the public meeting in Raleigh NC a few weeks ago I made public comments about this, and I talked about about my father and his fishing buddies frequently landing a single engine plane right at the beach in the 50's and 60's and camping on the beach. This tradition is no longer, and I know and accept that things change through the years, they must, and the times of beach plane landing/tent camping is over now, some 50 years later.

However, the basic real truth of this issue is, that with common sense and continued greater attention and management by the National Parks Service, the protection of resources, the birds and turtles, the ORV access should remain as it has in the past before Judge Boyle's broad ranging biased consent decree went into effect. It MUST revert back to the way it was for cultural reasons, and for survival the "human species", the local people who "inhabit" that beautiful and remote area, many whose families have persevered there for generations. through the years these good people have saved lives (that is what the area is most known for). They have saved human lives, saved turtle's lives, and protected and looked after birds and other species, and kept this whole remote area alive. Those people are becoming an "endangered species" now because of the consent decree and beach closings. Let's use some common sense here because they are suffering and the local economy is devastated.

From all that I have read, there have been only a hand full of nesting pairs of piping plovers yearly at Cape Hatteras National Seashore any way, regardless of the NPS action or the volatile weather conditions or natural predators or not. It would be different altogether if this was like the Great Lakes area where the plover habitat is ideal. A little common sense should prevail here. That is the bottom line. We are talking about a very, very few birds in the big scheme of things.

Personally, I want to say to the National Parks Service and other decision makers, community and political figures fighting for right; do not allow these special interest groups and court actions intimidate you - and do not allow the manipulation of the facts and the "shell game", that the Defenders of Wildlife and Audubon Society are playing, deter you from making commonsense decisions. I must believe that fairness will out in the end. Don't be afraid to say what is right and God will help this fair and right thing to happen and speak through you and others. So, NPS do your job and the right thing, without intimidation. Do the right thing.

As a long time North Carolina resident, and current property owner in Avon, NC, I have enjoyed, and hope to continue to enjoy, this treasured National Seashore Recreation Area at Cape Hatteras NC, along with other Americans and the general public, for years to come. That is why I am making this public comment.

In addition, I would like to say that I also fully support the thoughts and facts contained in the following letter submitted to and read to the National Parks Service by Dr. Michael A. Berry:

-----START QUOTE----- Dr Michael A. Berry -----
 April 27, 2010
 Mike Murray, Superintendent Cape Hatteras National Seashore 1401 National Park Drive Manteo, NC 27954
 Comments on the Cape Hatteras National Seashore ORV Management Plan DEIS I wish to thank the National Park Service for an opportunity to comment on the Cape Hatteras National Seashore ORV Management Plan DEIS. As a concerned citizen, scientist, retired public administrator and university educator, I feel it is my professional and civic duty to make timely comment on a matter that affects thousands of citizens who wish to visit and have access to the Cape Hatteras National Seashore.

For the record, I have a broad public service, technical, and scientific background. I have in-depth knowledge of environmental sciences, research methods, and review procedures, especially those related to human health. I have basic knowledge of the federal environmental statutes and programs, and many years of firsthand experience with federal environmental policy-making processes. I hold the following degrees: Doctor of Philosophy in Public Health with a specialty in environmental management and protection from the University of North Carolina at Chapel Hill; Master of Science in Management from Duke University's Fuqua School of Business; both Bachelor and Master of Science degrees in Mathematics from Gonzaga University. I am a retired Lieutenant Colonel, Army Engineers and a combat veteran of the Viet Nam War. I have from time to time advised the Chief of Army Engineers and Under Secretary of Defense for Environment on a range of environmental issues, projects, and policies. In my civilian life, I retired from the US Environmental Protection Agency in 1998 after a 27-year career with that agency. For over 22 years, I served as the Deputy Director of the National Center for Environmental Assessment at Research Triangle Park, NC. During my EPA career I had extensive interactions with foreign, state, and local governments; federal environmental agencies and offices; the federal courts; US Congress; universities world-wide; institutions to include the National Academy of Sciences, the World Health Organization, and the North Atlantic Treaty Organization; the major environmental organizations; private industry and trade associations. For more than 20 years, I was either an adjunct or full-time faculty member at the University of North Carolina where I taught environmental science and management courses in the Department of Environmental Sciences and Engineering, the Kenan-Flagler Business School, and Environmental Studies Program.

I wish to state clearly for the public record that I have been for the past four decades and remain today and forever in the future, professionally committed to protection of the environment. I am primarily concerned with environmental conditions that affect the health and well-being of humans and with the conservation of natural resources that are essential components of a healthy environment. Given the ever changing environmental conditions brought about by growing human populations and expanding regional and global economies, effective environmental management is more essential now than ever before, but never at the expense of violating human and Constitutional rights of citizens.

I reside at - - - - - , North Carolina. I can be contacted with regard to these comments at drmikeberry@gmail.com.

Comment 1 There is a clear need for an equitable, balanced, and effective seashore access policy and management plan. Growing national population, seashore visitation, transportation avenues into the Outer Banks region mandates an access management policy?but one which has widespread public support and one that balances the rights and traditions of public use and access to the national seashore with responsible but reasonable resource protection.

As currently structured, Alternative F is not primarily an ORV management plan. It is primarily a public access restriction plan. The plan is biased toward bird and turtle protection, seashore isolation and not to a reasonable extent on public use and visitor access? specifically ORV and pedestrian access.

Responsible environmental management uses sound science and unbiased professional judgment that balances the human needs and rights of people with the needs to manage and sustain natural processes. The preferred proposal, Alternative F, fails to meet these criteria. Alternative F fails to recognize objective science, enabling legislation, citizen rights, historical uses, and past promises of access to their environment.

Promulgation of Alternative F as it is currently structured will be the basis for widespread public dissatisfaction, continued distrust of government, especially the National Park Service, and costly litigation.

Comment 2 As indicated by Alternative F, it is the intention of National Park Service (NPS) to transform a major part of the Cape Hatteras National Seashore Recreational Area? set aside over 70 years ago for use and enjoyment of American citizens?? into a wildlife sanctuary, predominantly a national bird and turtle use area. NPS is using as its justification for this radical transformation and departure from traditional and intended public use, a thirty-five year old executive order directing NPS to formally promulgate an ORV management plan.

Alternative F management plan, with its excessive restrictions and denial of public access, both pedestrian and ORV, is in large part incompatible with the legislative purpose and intent of why the national seashore was established (16USC459 CHNSRA Enabling Legislation):

"said area shall be, and is, established, dedicated, and set apart as a national seashore recreational area for the benefit and enjoyment of the people and shall be known as the Cape Hatteras National Seashore Recreational Area."

Nowhere is it indicated in the DEIS where enabling legislation intends or permits both pedestrian and vehicular access denial for a major part of the year, particularly visitor or vacation season.

Comment 3 NPS Request for public comment appears to be more of a bureaucratic process than a search for substantive decision-making information. By virtue of its massive size, complexity, biased and incomplete explanation of science, and the inability for members of the public to access cited scientific literature and references, and ask questions of government officials responsible for the science and DEIS content, no single citizen can effectively review, understand, and constructively comment or suggest improvement to the DEIS in the 60 day comment period.

It appears by way of emphasis in the discussion in the DEIS that NPS has every intention to promulgate Alternative F in the next year, regardless of past or present public comment. There is virtually no significant reference to the workbooks the public provided in the early stages of the plan development process or to countless constructive comments made by the public during the 15 month Regulation Negotiation Process.

The National Park Service (NPS) should make it known to the public the specific information it seeks so as to make a final, objective decision with regard to an ORV management plan for Cape Hatteras National Sea Shore Recreational Area. Thus far NPS has failed to do so. By not asking for specific information, NPS is simply "going through the motions" superficially, and wasting the public's time.

Comment 4 NPS presents Alternative F as if it were recommended by the recent Regulatory Negotiation process. However, upon close examination Alternative F is found to be a biased and highly restrictive management plan that is in complete opposition to majority recommendations of the recent Regulation Negotiation process. Alternative F strengthens and codifies the denial of public access provisions of the current consent decree. The public access denying provisions of the consent decree, put into effect April 30, 2008, have been extended and transferred to Alternative F. The majority of Regulatory Negotiation Committee stakeholders (19 vs. 5) and numerous public commentators did not recommend an extension of the restrictive provisions of the consent decree as part of a final ORV plan.

Comment 5 If promulgated, Alternative F will significantly change the economy and unique culture of the Outer Banks. The DEIS has failed to properly assess those changes. The Economic Impact Analysis found the DEIS by its own admission is incomplete. This alone is the basis for future litigation challenging the legality of the proposed plan. In addition the Economic analysis is structured in such a manner that it fails to address full costs? direct costs, indirect costs, lost opportunity costs, costs of future liability, and hidden costs.

The Economic Analysis fails to recognize that the national seashore environment is a unique form of capital that serves the local economy, and in turn the health and wellbeing of citizens and families that depend of that economy. Access to the seashore is essential for family business operations on the Outer Banks.

The cost to society and the local communities under the restrictive consent decree has now been extended indefinitely into Alternative F. Economic losses in millions of dollars have occurred to island businesses especially motels, campgrounds, restaurants and tackle shops. The full costs of Alternative F are very much understated in the DEIS. Annual economic losses under the consent decree are already in excess of those estimated by Research Triangle Institute.

Comment 6 The DEIS has failed to inform the public of the extent of expected closures to the most popular recreational sites of the national seashore. Experience with the consent decree closures for the past two years (2008, 2009) provide a clear indication of the extent to which the national seashore will be closed to public access? ORV and pedestrian. In recent court testimony the National Seashore Superintendent indicated the extent of the closures, but nowhere does that data appear in the DEIS. The public should know what to expect when Alternative F is promulgated.

The Bodie Island Spit was closed a total of 136 days in 2009. Cape Point was closed 101 days in 2009. The Hatteras Island Spit was closed 125 days and south Ocracoke was closed 80 days. These are some of the most popular recreational use areas at the national seashore which will not be accessible to the public during late spring and summer months.

Comment 7 Nowhere in the DEIS is it indicated that should listed species populations grow in size through natural population cycles or management programs, the public loses even more access given the way the boundary distance are applied.

Comment 8 Nowhere in the DEIS is it mentioned that protected species populations are growing without the needs of additional restrictions such as those of consent decree and Alternative F.

Published USFWS data suggests that the piping plover is "recovering" well beyond 1986 levels and do not suggest that additional restrictions beyond regional recovery plans are necessary or essential at the Cape Hatteras National Seashore Recreational Area for the continued recovery of the species. Piping Plover--Atlantic Coast Pairs

Year 1986 1999 2005 2006 2007 Nesting Pairs (est.) 790 1386 1632 1749 1880

<http://www.fws.gov/northeast/pipingplover/index.html>

Comment 9 Data collected and published by NPS in recent suggest that Cape Hatteras National Seashore Interim Management Plan prepared with public input and publically reviewed in 2005, published in the Federal Register was showing every sign of being effective at protecting birds and natural resources. The Interim Management Plan was set aside by the court and replaced by the consent decree and settlement that mandated extensive closures without public comment or review.

The consent decree closures of recent years have been of exorbitantly high cost to the public but have not contributed to an improvement in species production or safety. The consent decree has produced no natural resource benefit over and above the interim plan. The fledge counts were higher under the interim plan than under the consent decree. 7 Piping Plovers fledged in 2008 under the interim plan, 6 in 2009 under the highly restrictive consent decree. 17 American Oyster Catchers (AMOY) fledged in 2008 under the interim plan and 13 in 2009 under the highly access restrictive consent decree, the same management structure now found in Alternative F. Species productivity is decreasing under consent decree and now Alternative F restrictions.

Comment 10 The majority of nests and hatched birds the past two closure seasons under the consent decree were lost to predation, a few to storms, one at the hands of a university researcher trying to band a bird. None has been lost to ORVs or pedestrians accessing the national seashore. The huge closure distances in the consent decree and Alternative F restrictions keep pedestrians and ORVs off the seashore while birds are nesting. At the same time, the extensive closures also provide for the proliferation and increased free movement of predators. In effect, the extensive closures create an ecological trap for birds in large closures that encourage and enhance predation.

Comment 11 When the boundary distances shown on Table 11 are applied to the Alternative F framework, it is evident that the public, ORV and pedestrian, lose access to a vast amount of the seashore for most of the visitor season. Closure boundaries are overly restrictive at CHNSRA and are not used at other NPS properties. There has been no administrative or science based explanation given to the public for these especially restrictive closures that limit public access to the seashore.

NPS has failed to explain specifically why, by way of science justification, 1000 meter boundaries must be established every time a Plover chick is observed, where the literature indicates on average movement under 200 meters. There is no study or science based explanation that justifies an automatic 1000 meter boundary closure every time a plover chick is observed. In fact the public access denial consequences of such management policy for a national seashore set aside for public use is excessive and does not indicate a balance of responsible usage.

If, as the Alternative F regulation dictates, one extends a boundary out 1000m in every direction from a nest, one creates a circle with a boundary circumference of approximately 3.9 miles, and an area of approximately 1.2 square miles or approximately 775 acres. Given that the boundary regulation dictates 775 acres of national seashore be set aside for the exclusive use of a plover chick?during the height of vacation and visitor season, it obviously does not take too many widely distributed plover chicks to shut down a significant portion of Cape Hatters National Seashore Recreational Area especially if the Plover population increases.

Comment 12 Alternative F, as with the consent decree, establishes a policy of denial of access punishment for the general public when intrusions into closure areas occur. Every time there is a closure intrusion the National Park Service, now at its own discretion, extends restrictive boundaries and widens non-access areas. There is no basis in science or environmental management practices that justifies such punitive measures.

Comment 13 Many of the references used to justify Alternative F are those of individuals and activists organizations who have supported litigation that denies public access. The major science references are published by environmental activist organizations and authored by individuals trying to shut down ORV access to the national seashore: Audubon, Blue Water, Hatteras Island Bird Club, etc. Most of these references have not been reviewed for their accuracy or objectivity and are unsuitable for government decision-making. Many of the references are out dated, biased, contain incomplete and misleading information, and few have ever been reviewed in open forum.

Comment 14 NPS has failed to provide the public with essential items of information, specifically properly reviewed science. The main science references are unsuitable and inappropriate as the basis for a government regulation that restricts public access to the national seashore and has significant negative impacts on the Outer Banks economy.

The 2005 USGS Protocols are indicated by NPS as the primary basis for the highly restrictive boundary distances that restrict public access to the national seashore. The USGS Protocols are cited as being "in press" 5 years after they first appeared on the Park Service website. The 2005 USGS Protocols were challenged two years ago as being in non compliance with USGS Peer Review Policy. At that time the documents were not dated, had no government publication number, and were not published in the open literature or Federal Register and were clearly unsuitable to be a credible scientific basis for government decision-making, especially costly regulation. The documents were sent back to USGS for "review" in 2009, five years after they were first made known to the public.

NPS has indicated a new citation for the USGS Protocols. They are currently referenced on page 660 as: Cohen, J.B., R.M. Erwin, J.B. French Jr., J.L. Marion, and J.M. Meyers In press, Recommendations for Management of Endangered Species at Cape Hatteras National Seashore. U.S. Geological Survey Open-File Report 2009-1262.

NPS uses the USGS protocol recommendations as if they are "best available science." They are not science and have not been shown to be connected with specific scientific studies. The management options presented in the protocols are the policy and management recommendations and opinions of biased and non-reviewed contributors, deemed by USGS to the "experts." Nowhere is a specific science basis (study, data) for a given management option?established solely for the Cape Hatteras National Seashore Recreational Area??demonstrated.

In a slightly modified introduction to the most recent release of the Protocols, the government official responsible for the document states: "Although no new original research or experimental work was conducted, this synthesis of the existing information was peer reviewed by over 15 experts with familiarity with these species. This report does not establish NPS management protocols but does highlight scientific information on the biology of these species to be considered by NPS managers who make resource management decisions at CAHA."

The new publication was not accessible, peer reviewed, or fully explained by government authority at the time the DEIS was submitted to the public for comment in early March 2010.

The literature reviews found in the USGS Protocols as currently published are significantly out of date. In fact many studies were decades out of date at the time the document was prepared in 2005. They are mainly non-replicated, selective papers and studies. Many citations are over 20 years old and most are not related to the Cape Hatteras National Seashore Recreational Area. The public does not have access to the literature reviewed in this essential report and most of the citations are so insignificant they cannot even be found in a major university library (UNC-CH).

Comment 15 There is an "appearance of impropriety" and "conflict of interest" associated with the primary science basis justification for the Alternative F recommendation.

As noted two years ago, the cited protocols are not reviewed consistent with published USGS peer review policy guidelines (<http://www.usgs.gov/usgs-manual/500/502-3.html>) especially with regard to full disclosures and conflicts of interests. In fact the Protocols were developed and prepared in large part by well known environmental activists who subsequently used them as the basis for law suit against NPS, thus creating a very clear conflict of interest in full view of the federal government.

A review of the public record indicates that USGS commissioned well known environmental activist scientists to selectively review and discuss the science as they choose to represent it, and then formulate and recommend management options and policies. There was no outside questioning and review of their work--paid for by federal tax dollars.

It is clear to those of us who understand the scientific methods and process, objective scientific review, and the internal workings of federal government, that the 2004-2005 cooperative agreement review of the science (undertaken in part by members of the Audubon Society and other activist organizations) is biased and selective, misrepresented, fraught with speculation and opinion, and in many cases based on information that has nothing whatsoever to do with Cape Hatteras National Seashore.

In 2005 the architects of the access denying protocols were acknowledged for their contributions. For nearly three years now we have asked NPS and USGS to identify the "independent outside reviewers" of the USGS Protocols consistent with USGS Peer Review Policy. We are now being informed by USGS through their press office that the "science peer reviewers" are the original contributors and architects of the Protocols (which are not science at all, but policy and management opinions/recommendations that regulate the public and deny public access to the national seashore). We are also being informed by press officials that it is the policy of USGS to not identify outside independent peer reviewers or their comments. This is a violation of the Freedom of Information Act and the Federal Advisory Committee Act.

Some of the original contributors (Cohen and Golder) have used the Protocols to be the basis for litigation and insist on denial of public access to the seashore. A lead author "J.B. Cohen" has previously shown his conflict of interest and activist affiliation when he "J.B. Cohen" signed a sworn affidavit in support of the Consent Decree for SELC (2008) and also signed the recent Audubon letter directed at NPS Officials recommending the highest level of access restriction (2009). Scientists working on behalf of the public cannot turn around and use that same work to sue to public without having the objectivity of their work called into question.

For over 15 months of Regulation Negotiation Process, Golder, other environmental activist members, and the federal government never disclosed participants' roles in the design of the Protocols, but constantly referred to them as being the definitive "best available science" justification for closures. Golder and others now appear as "peer reviewers" of their own work. This is discrediting in and of itself, but what is most disturbing and unethical about this is the fact that this highly biased, pseudo science process, sponsored by the federal government, has denied thousands of citizens access to their national seashore and will continue to do so unless it corrected by NPS, the federal courts, or the congress.

The above is clearly a "apparent conflict of interest" known to NPS and USGS officials and calls into question the credibility of science which in the public policy making process??specifically that of denying public access to the national seashore??must be "objective" beyond any doubt. Local media have noted this "apparent conflict of interest" and brought it to the attention of NPS and USGS officials who refuse to offer an explanation or response. The best course of action to resolve this matter is to turn the science review and update over the National Academy of Sciences or some other neutral party, to objectively, critically, and comprehensively review all relevant science, disclose the facts and restore some public trust in the scientific process used as the basis for environmental management decisions at Cape Hatteras National Seashore.

Respectfully Submitted

Michael A. Berry

-----END QUOTE-----

In closing, again, I stand in support of bill H.R. 718 To Reinstate the Interim Management Strategy governing off-road vehicle use in the Cape Hatteras National Seashore, North Carolina, pending the issuance of a final rule for off-road vehicle use by the National Park Service. H.R. 718 and the Preserving Public Access to Cape Hatteras Beaches Act of 2009 (S.1557) are important to Cape Hatteras National Seashore and Recreation Area public beach access.

Respectfully submitted,

Karen Wheless ksw4obx@gmail.com

Correspondence: First and foremost, it is disingenuous of the NPS to call the DEIS an "Off-Road Vehicle Management Plan." In fact, the document itself encompasses nearly every activity, recreational or otherwise, that concerns access to the beaches of Cape Hatteras National Seashore Recreation Area (CHNSRA). It seems as though the official name of the Park has been unilaterally stripped of "Recreation Area" by the NPS and Department of the Interior. In fact, the citizens of Hatteras Island at the time of the Seashore's founding voiced concerns over future access to the beach. At the time, then NPS director Conrad Wirth assured the public, "There will always be access to the beach for all people, whether they are local residents or visitors." I am not in favor of the NPS preferred Alternative F as it violates the purpose of the founding of the Seashore as a recreation area. I understand there is a need for resource protection and to balance environmental sensitivity with the needs of different user groups. That said, the preferred alternative grossly favors the resource protection side of the argument and unfairly restricts access. Please see below for specific concerns I have with the scope of the DEIS.

Additional Ramps Which ever plan the NPS chooses to implement, I would recommend that the addition of new ramps be made a priority. I would recommend several new ramps between Ramps 23-34 and Ramps 45-49. Adding ramps would help keep more of the beach open especially as many ramps have been closed due to nesting activity in close proximity to the ramp. There may be miles of open beach beyond the ramp that would be accessible if more ramps were installed. Another point involving the ramps- the existing ramps should also be upgraded and/or improved for the sake of visitor safety. Each ramp should be two lanes and have should also have a separate corridor for pedestrian access. At some of the ramp pedestrians walking on the ORV are difficult to spot. Ramp 38 comes to mind, it is steep and you must carry forward momentum in order to avoid getting stuck. It is difficult to spot pedestrians or other trucks until you crest the top of the ramp. Improving safety at the access points should be an essential mandate for the NPS going forward.

Resources Closures The buffers provided for nesting shore-birds are excessive under the NPS preferred alternative. The 1000 meter buffer for Piping Plover (PIPL) unfledged chicks is especially draconian. Appendix G of the USFWS Atlantic Coast PIPL Recovery Plan mentions the need for a 1000 meter buffer in cases where broods are not monitored. However, in CHNSRA, PIPL activity is monitored daily thus would qualify according to Appendix G, for a 200 meter vehicle free zone around the brood. The 200 meter buffer would allow flexibility to the NPS to move or expand the buffer as needed while still allowing for the maximum amount of beach to remain open for public use. The minimum buffers for American Oystercatchers and colonial waterbirds are also too restrictive under the NPS preferred alternative. The scientific basis for the AMOY and CWB closures should be revisited. For example, the recommended buffer for an AMOY brood under the NPS preferred alternative is 300 m for nesting and rearing. That said, Table 28 on page 233 in the DEIS, "BUFFER DISTANCES RECOMMENDED FOR AMERICAN OYSTERCATCHERS," none of six studies referenced mentioned 300 m. The flush distances in the studies cited range from 30-200 meters. This leaves the reader wondering whether the scientific basis for said buffer is actually documented. Overall, AMOY and CWB should not be afforded the same protection as PIPLs since they are not listed as endangered or threatened. The goals of balancing access and resource protection would be better served under Alternative A of the DEIS.

Resource Accounting Regardless of the plan that is implemented, the NPS should include other surrounding areas in its bird count statistics. They should specifically include Pea Island National Wildlife Refuge and the dredge islands near the seashore. The dredge islands afford an excellent predator free environment for shorebird nesting activity. These habitats naturally siphon off some of the birds that would otherwise nest in the confines of CHNSRA. The fact that birds at such locations, which are in view from the Seashore are not including in the counts is absurd. If the overall goal is to increase nesting activity in the Seashore, should not these birds be included in statistics to provide a more accurate picture of their activity? Why wouldn't the NPS consider creating additional suitable habits such as the dredge islands? These questions are not adequately answered in the DEIS.

Impacts to Vacationers to CHNSRA Traditionally, the most desirable areas for recreation in CHNSRA can only be accessed by ORV. Throughout the Seashore, there are inadequate parking facilities close enough to for beachgoers to actually access the beach. For example, Cape Point and Hatteras and Ocracoke Inlets are vast distances away from any parking facilities. Without ORVs, these prime recreation areas would be virtually inaccessible for all but the strongest visitors to the Seashore. Similarly, one of the great attractions about vacationing on Hatteras Island is that you do not need to rent an oceanfront home to access the beach. The fact is that ORVs allow vacationers of diverse economic backgrounds to visit and enjoy CHNSRA. Most families cannot afford to pay a minimum of several thousand dollars a week to rent an oceanfront or ocean-side cottage in prime season. Instead, ORV access to the beaches allow for visitors to find a suitable rental or campground on the island regardless of the proximity to beach access. This is especially true for so-called "soundside" rentals. To access the beach on foot from these houses requires a trip across NC Route 12 and is often a significant walk distance-wise. There are very few defined crosswalks throughout the island, making crossing the highway a difficult/dangerous proposition at times, especially during the peak season. Walking long distances such as from a sound-side cottage is made even more difficult when you are laden with all the necessities for enjoying your day the beach. This proposition becomes even more difficult when young children, the elderly, handicapped or pets are involved. In most walk-over locations in the villages and there are no boardwalks or stairs to cross the dunes. Without ORVs, the aforementioned have difficulty accessing the beach even from oceanfront cottages. As there are absolutely zero public parking facilities located in the Villages on Hatteras Island, the closures that would occur under Alternative F would unfairly limit the beach access of middle income families and other groups during the nesting season.

Economic Impact The economic impact study conducted for the proposed alternatives underestimates the impact to the local businesses on Hatteras Island. The entire region, including the northern Beaches (Nags Head, Kitty Hawk, Duck, etc.), should not have been included in this study. These beaches are not part of the Seashore, nor are they dependent on ORV access of the beaches for tourism. The foundation of the Hatteras Island economy is built on access to the surf zone. Widespread closures of the beach under the NPS preferred alternative would have predictable, extremely severe impacts to the majority of Island businesses. I would propose that study of all the individual businesses on the Island be conducted in order to collect data pre-Consent Decree and post-Consent Decree. This would likely paint a much dire picture of the future of the Island economy if Alternative F (similar closures to Consent Decree) indeed becomes the final plan.

Conclusion The NPS and Department of the Interior should not capitulate to the collective will of the special interests groups. Instead, the NPS should create a plan that balances resource protection and beach access. Of the six Alternatives, I stand in support of Alternative A. The NPS is preferred alternative is flawed on many levels and would be devastating to the Island economy and equally devastating to the public enjoyment of CHNSRA.

Thank you

Correspondence: As a nature lover and U.S. citizen who spent family vacations on Cape Hatteras in the 1960's and early '70's, I am saddened and dismayed at the prospect of more and more ORVs being allowed to fill that beautiful place with noise, commotion, and gasoline stink, annoying humans and terrorizing wildlife. If at all, ORV's should be sharply restricted in national parks and other such areas. Those who like that kind of thing, should go watch NASCAR, or get involved in hot rodding or go cart racing on an appropriate track, not in the middle of a park where people come to get away from the

internal combustion engine and all the stress and problems it causes. Thank you.

Correspondence:	I disagree with the buffer zones. As a visitor to the Cape Hatteras National Seashore and Recreation Area for more than 25 Years and a home owner there for 14 years, I have made an effort to study the history and ecology of the area. My experience with members of the plover family (specifically killdeer) is that they are very tolerant of human activity. There is no scientific justification for this draconian 1000 meter buffer. A buffer of 100 meters would be more than sufficient to protect the nesting piping plovers.

Correspondence:	I believe that the seashore should not be opened to any form of vehicle recreation. Vehicles are enormously destructive to fragile habitat like that which occurs on beaches and in sand dunes. The piping plover in particular would be extremely vulnerable to ORV recreation. According to the IUCN: "This species has a small population which has declined significantly since the 1950s. However, there have been overall population increases since 1991 as a result of intensive conservation management, so the species is listed as Near Threatened. It is still dependent on intensive conservation efforts, so if these cease, or if trends reverse, then it would warrant immediate uplisting again." Opening the beaches to this kind of destruction is exactly the kind of thing that will warrant the uplisting of this bird. Additionally, female loggerhead, green, and leatherback sea turtles nest on your beaches. Green turtles have been undergoing serious population decline in the last few years, and it is critical to the preservation of the species to preserve as much nesting habitat as possible. Leatherback turtles are listed as critically endangered by the IUCN. It would show enormous disregard for the mission of the NPS to protect our natural environment, to allow the use of offroad vehicles at Cape Hatteras. Vehicles will also decrease the air quality at the the National Seashore, and make the park less enjoyable for the other visitors who enjoy the natural sounds of the wilderness.

Correspondence:	I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access. This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me. I am completely opposed to the preferred alternative because ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. I am concerned about the impacts on wildlife; moreover this alternative is improperly skewed to ORV users and does not represent a fair balance for others. Most important is that the plan would not protect the natural resources and wildlife. The preferred plan is unacceptable because it fails to set aside sufficient areas where ORVs are prohibited year round in order to protect wildlife during breeding, migrations, and overwintering. I am also concerned that the plan fails to include clear goals and milestones for wildlife recovery. In cases in which the annual reviews show that recovery is not proceeding as desired, additional protective measures should be implemented until recovery goals are met. . Thank you for the opportunity to provide these comments.

Correspondence:	I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access. This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me. The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D: *Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park. * Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles. * Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones. Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: Dear Superintendent Murray,
As a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches

of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.

- 1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."
- 2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness...." Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.
- 3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.

Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.
 ***** Thank you very much for taking the time to protect one of America's most beautiful stretches of Atlantic seashore! Sea turtles, nesting shorebirds, and generations to come will be grateful for your action today. Thanks again!

Correspondence: I have been coming to the Outer Banks for family recreation for over 40 years. In 2007 my wife and I bought a home there in Kill Devil Hills with the hope of continuing to enjoy in our retirement, the recreational opportunities available in the Hatteras National Seashore Recreational area. For us this means visiting the beaches and for me it means surf fishing primarily on the beaches south of Oregon Inlet. Reasonable and safe pedestrian and vehicular access to the beach is essential to participate and enjoy these resources and opportunities. I also support reasonable restrictions to protect the birds, turtles, and other wildlife. However, I believe the favored alternative (#7) advanced by the NPS is more restrictive than necessary to achieve the goal of protecting the Seashore. I have agree with the proposal to manage ORV's on the Seashore prepared and submitted for consideration by the Coalition for Beach Access. My position is that the NPS accept this alternative or at least postpone any decision on the ORV Plan pending further review and negotiation on the counter points by the Coalition for Beach Access. I have dreamed for most of my adult life of spend much of my retirement years enjoying the recreational opportunities available on the Outer Banks. Please do not destroy my dream. Stephen S. Carpenter

Correspondence: The NPS must formulate a plan that is consistent with the legislation establishing Cape Hatteras National Seashore Recreation Area. The enabling legislation for the Recreational Area states, in part, "said area shall be, and is, established, dedicated, and set apart as a national seashore recreational area for the benefit and enjoyment of the people and shall be known as the Cape Hatteras National Seashore Recreational Area". Therefore, it is important to balance resource protection with reasonable access for recreation. Corridors are a vital tool in providing access while managing resources. They provide a small path around temporary resource closures in order to provide access to open areas that would otherwise be blocked. Corridors should be permitted throughout the seashore during the entire breeding and nesting season including ML-1 portions of SMAs. These corridors would provide valuable access without impairment or damage to protected resources. Buffers, or closures, are important management practices for species recovery. However, to have long term benefit for the wildlife and the visiting public, buffers must be based on peer-reviewed science For example, the Piping Plover, a species classified as threatened and not endangered, is given a level of unprecedented protection in Alternative F. A 1,000-meter buffer in all directions represents over 771 acres. The DEIS does not cite any peer-reviewed science in supporting such closure. A more appropriate & effective buffer would be 200 meters. Birds that are not listed as endangered should not be afforded the level of protection given to ESA (Endangered Species Act) protected species. Instead of 300-meter buffers for these birds, a more appropriate buffer would be 30 meters. Also, all birds in the same ecosystem of the seashore should be counted. This includes all the many birds on the dredge and spoil islands located just yards away and within sight of the seashore. The National Park Service should consider turtle management practices successfully used in other federal and state areas to achieve nesting success. More proactive measures include relocating nests to more desirable locations, which is routinely and successfully done in other areas.

Correspondence: Cape Hatteras National Seashore Recreation Area DEIS Comments with Additional Observations
 Submitted by Robert E. Lick on May 10, 2010
 Comments:
 The National Park Service (NPS) Preferred Alternative F offered in the DEIS if implemented would have very serious negative impacts on all recreational opportunities, residents and business owners on the Outer Banks with very little overall benefit to the wildlife of the Seashore. I fine the DEIS Position Statement offered by the Coalition to Preserve Beach Access to be far more acceptable because it contains common sense alternatives. The Coalition folks put forth their alternative in far less than the 8.3 pounds and 800 plus pages that the NPS did. I suppose the NPS could use a course in the KISS System. Of particular interest is the Coalitions common sense position on Corridors and Management Buffers. The NPS Alternative F position is extreme in each area and needs to be modified in line with the Coalitions suggestions. All, not some, closed areas require corridors to allow public access to the entire shoreline. Buffers (closed areas) should not be arbitrary, but based on peer-reviewed science. The National Park Service Plan is not only severely impacting recreation opportunities at Cape Hatteras National Seashore Recreation Area it is ultimately changing the way people have lived on the Outer Banks for generations. This alone is a very sad commentary on our government in my view. As I read the many affidavits put forth by business people of the Outer Banks explaining how beach closures have greatly impacted their businesses it is heart breaking to me that our government can cause such turmoil in people lives. Rather than the NPS Preferred Alternative F, I urge the NPS to accept the Coalition to Preserve Beach Access proposals in the Final Plan.
 Additional Observations:

0012370

My observations come from over 60 years as an avid striped bass surf caster on the east coast from Maine to North Carolina. Over this long period I have commented on NPS management plans for all National Seashore Recreation Areas on the east coast. During this time I have also subsequently watched surf casting opportunities and access lost at all of our Seashores in varying degrees. When originally established all National Seashores were to be managed with recreation as the primary mission. What has happened to the will of Congress?

The sixty day comment period mandated by NPS for the Cape Hatteras DEIS is unreasonable and I will not type the words I feel for the thirty day extension request denial. In my case the sixty day comment period was filled with a trip to Florida for a grandsons wedding, a trip to Pittsburgh for another grandsons college graduation, work and maintaining a household. I took today off to offer my comments with subsequent loss of pay. My point in saying this is to offer the thought that folks have a life besides being glued to an 800 page NPS document and NPS arrogance would not even allow a thirty day extension.

Government promises made, promises broken is certainly alive and well at CHNSRA. When contrasting the CHNSRA Enabling Legislation and what is happening today and when I read The Coastland Times article written by NPS Director Conrad Wirth in 1952 and compare his promises with today's NPS actions the question needs to be asked, "Where is the credibility in our government?" Our Native American friends experienced many similar government actions early in our history. A single case in point is the Treaty of Fort Laramie (1868). Current events at CHNSRA are recreationalists and Outer Banks residents Fort Laramie Treaty. Is it any wonder that the latest polls indicate only 17% of our population trusts government? Current NPS actions at CHNSRA contribute to this sad statistic.

I have come to realize these comments to the NPS are most often an exercise in futility. The final result will in all likelihood be decided by a judge. The Audubon Society and Defenders of Wildlife, et al will see to that. They don't contribute to the Seashore with beach cleanups, Ranger donations, etc, etc. They spend all their time in courts denying others enjoyment of the Seashore we love and have worked to preserve.

I close with a very sad heart. I know I have had the best of times early on at our National Seashores, but now my grandchildren will never be allowed to have the recreational opportunities I have enjoyed over many years. The saddest commentary is we are the people that have used, enjoyed and attempted to preserve these special places and now we are the ones who are denied access.

Because of NPS actions, I close with tears knowing I will never surf fish at Cape Hatteras again.

Correspondence: Mr. Murray...
I believe the NPS preferred alternative will result in little (and perhaps no) value in making the Cape Hatteras National Recreational Seashore a park for the enjoyment of the citizens of this country. There is little (to no) attention given to providing a good "national park" experience. It is my understanding that United States citizens' tax dollars are paying for the park, yet these very "people" are being ignored.
The bird closures are unreasonable and there is no constructive provision for "working together" with the people - only dictating how the park is to be used. It is not a nature sanctuary.
Please pay attention to the rest of the Nature here on the planet..pay mind to the PEOPLE as well as you're attending to the "birds". It is the PEOPLE, the stewards of this planet, that you serve.
I am in favor of the "Coalition's" approach in the ongoing management of the Cape Hatteras National Recreational Seashore.

Supt. Murray,
Please accept this letter as my comment on the ORV DEIS before you at this time.
After thoroughly reviewing the NPS DEIS, I must disagree with any and all of the six alternatives within the document.

0012371

I have, however, reviewed the 77 page Coalition for Beach Access Position Statement signed by several groups. These groups were a part of the negotiated rule making process and it by far succeeds in furnishing the best visitor experience while maintaining the needs of protecting the fragile resources.

Please consider all aspects of this alternative and put people back into the management of Cape Hatteras National Seashore.

Sincerely,

Joseph A Ferraro, MS, ATC, LAT

Correspondence: Dear Superintendent Murray,
As a member of the National Parks Conservation Association and a supporter of national parks, and an employee in the service industry on the Mendocino Coast in California, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.
1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."
2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness...."
Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.
3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.
I look forward to seeing an improved final ORV management plan.
Sincerely,
Jeffery Garcia

Subject: DEIS Off-Road Vehicle Management Plan Comments
We own 2 homes in Hatteras Village, NC. We are concerned about the potential impact on our property values and rentals due to the DEIS Off-Road Vehicle Management Plan prepared by the National Park Service (NPS) for the Cape Hatteras National Seashore Recreation Area.
Most of our comments are in agreement with those of Hatteras Realty, our management company. See below:
1) Page 201: I disagree with the NPS statement: Even with resource closures in place, protected species are still at risk [from pedestrians and ORVs]. No Piping Plover deaths have been attributed to ORVs. ORV violations continue to decrease as signage and education improve. Pedestrian violations are much more significant than ORV violations. It seems to me that any transgressions into protected area are the result of lack of NPS manpower and enforcement than the public purposely and willfully violating out of bounds areas.
2) Page xxiv: I question the statement of as per the DEIS: Carrying capacity would be a peak use limitdetermined for all areas based on the linear feet of beachfront If you close off huge sections of the beach, you force more people into smaller areas, potentially resulting in more resource impairment and diminished visitor experience.
3) Page xix and page 23: I am against having two different closures rules pertaining to the North facing beaches (North side) and the South facing beaches (South side) as per the grid outlined in Alternative F. I disagree with the NPS proposal to close the beaches in villages of Frisco, Hatteras and Ocracoke Villages to ORV access longer than the traditional May 15 to September 15 period for the Northern beaches, even though seasonal visitor statistics are similar for all villages. Please, make them the same: May 15 -> September 15.
4) Page 1: I agree with your statement ORVs have long served as a primary form of access for many portions of the beach in the seashore, and continue to be the most practical means of access and parking for many visitors.
However, pedestrian only areas discriminate against individuals with limited mobility due to age or physical impairments, families with small children, and those wishing to engage in activities requiring recreational equipment (boogie boards, beach umbrellas, beach chairs, coolers, fishing rods and tackle, etc)
5) Page 53: I disagree with the special use permit proposed guidelines. It is impractical to allow the transportation of disabled visitors to the village beaches and then require the vehicle to be returned to the street or parking area. This necessitates the disabled person to have a driver to drop him (or her) off, then drive to a parking area, then trudge a long distance to the site of the drop off, then trudge the long distance through the sand back to get the vehicle.
6) Page 121 127. I strongly disagree with the buffers as presented. We must allow for pass-thru corridors. The beach is linear with the ocean buffering on one side and the dune line on the other. For example - If you pinch off access on one side of a 4 mile linear beach and pinch off access on the other side of the 4 mile section of beach with no corridor, then you effectively have closed off all 4 miles of the beach because you CANT get there. The proposed bird buffers are too large, blocking access to the interior sections from the two buffered ends.
I propose ORV pass-thru only corridors and to use breeding / nesting buffer distances to establish ORV pass through only corridors to ensure beach access in a way that does not hinder resource protection. I believe pass through corridors should be maintained for pedestrians and ORVs in all areas of the Cape Hatteras National Seashore Recreational Area throughout the entire breeding and nesting season. Corridors are vital to providing access in a way that does not hinder resource protection.
Piping Plover unfledged chicks buffer should move with the brood as it relocates to reliable food source, not expanded.
The 1,000 meter distance for the piping plover is way too large and not based upon peer reviewed science. A more rational distance would be 200 meters per other sites in the nation for the piping plover. Ample scientific evidence and precedent exists to support a 200 meter buffer.

Buffers for other species, including American Oystercatchers, Least Terns and Colonial Waterbirds must also be changed. An effective 30 meter buffer should be established for these species rather than the 300 meter closure outlined in the DEIS.

NON-ENDANGERED BIRDS should not have same protection as if endangered. Not allowing ORV access is paramount to denying the public access to these beaches.

7) Page 468: I disagree with the limitations imposed on pedestrian and ORVs. Corridors or bypasses should be provided thru, around or below high tide line in all SMAs during entire breeding season to maintain access.

8) Page 124: I strongly disagree with the NPS slant of providing for over protection of resource management over that of the public's right to access the beaches. Pro-active initiatives include: Vegetation Management, Habitat Management, Enhanced Predator Management, Colonial Water bird social attraction, Piping Plover check fledged rate, Piping plover chick buffer distance, and pass-through buffers during the incubation period. Opportunities to implement less restrictive closures as a result of the above initiatives should be considered more frequently than the 5-year periodic review process identified in the DEIS.

9) I disagree with the NPS Resource Management Pedestrian / ORV Closure Policies. These policies address the least significant factors affecting nest survival with little chance to have more than negligible impact. For example: the AMOY Nest Failures are predominately due to non-human events. Using your own stats, the mammalian predation is 54%, Storm / Lunar Tides: 29%, Nest Abandonment: 6%, Avian Predation: 5%, and Ghost Crab Predation: 3%,

So what is the percentage due to human interference: just 3%! Its insignificant, yet the NPS wants to ban humans when their actions provide very little influence on the success rate of breeding birds and turtles.

10) I disagree with the stats of breeding plovers and the other birds in the Park when the NPS does not adequately consider locations neighboring the Recreational Area that are part of the same ecosystem, namely dredge and spoil island that are located just yards away and within sight of the seashore. These birds are part of the same ecosystem and should be included.

Those spoil islands, developed by man from dredging the waterways in the Pamlico Sound for channel upkeep are slammed full of birds. The reason why so many birds? NO PREDATORS. SO, birds are not as stupid as one might think. You have to count these birds and incorporate them in the stats when the NPS is talking about any so called decline in breeding pairs in the National Park.

11) Page 1: I do not think the DEIS responsibly addresses the cultural resource issues. The very purpose of the DEIS as set forth in the National Environmental Policy Act (NEPA) is to protect and preserve natural and cultural resources in the federal decision making process. In the DEIS, the statement protect and preserve natural and cultural resources appears in the first sentence of the first page of the plan, in the Purpose of the Plan section, and numerous times thereafter. Yet, the 810 page document devotes only two paragraphs to analysis of cultural resource issues.

12) Pages 270-281; 561-598: I strongly disagree with your economic analysis of the impact of the DEIS. The region of influence (ROI) incorporates the Northern Beach communities, including Kill Devil Hills, Kitty Hawk, Southern Shores and Duck. These areas are almost completely disconnected from ORV use and access issues relating to the Seashore.

Inclusion of the Northern Beaches in analysis significantly dilutes estimates of economic impact on the 8 Seashore Villages

Analysis of economic impact to the Seashore Villages appears to be significantly down played. Emphasis in DEIS is on the ROI-wide or county-wide level impacts.

Beach closures have already had a devastating and unfair impact on many Dare County Businesses, causing foreclosures, bankruptcies, lay-offs, cutbacks, expensive refinancing, and depleted college funds and savings accounts.

Even businesses whose revenue has stayed level or showed a modest increase have accomplished this at a costly price. Many have had to cut back employee hours, forego much-needed capital improvements, and sacrifice profits. That is certainly the case with Hatteras Realty.

Maintenance of Future Access to Cape Point and South Point Ocracoke: All socioeconomic analyses related to Alternative F are predicated on the assumption that access corridors will remain open for at least an appreciable portion of the visitor high season. Under Alternative F, the access corridors will be subject to Resource Closures based on buffers similar or identical to the Consent Decree. Unless some predictability of access to Cape Point and South Point Ocracoke can be assured, economic analyses predicated on assumption of access are fundamentally flawed.

Why would a group of surf fishermen want to come to Hatteras Island to surf fish if they are not sure they can access the prime fishing grounds at Cape Point? The answer is they won't come. If they don't come, they don't rent vacation homes and spend their money on Hatteras and Ocracoke Islands.

The definition of the Region of Influence (ROI), faulty data on economic activity generated by specific type recreational activity, incomplete visitation/business survey data, inflated overall Seashore visitor counts pertaining to beach use, and flawed key assumptions concerning the maintenance of access under Alternative F, all lead to inaccurate conclusions in the socioeconomic analyses. Specifically, these inaccuracies can be seen as understating the negative socio-economic impact of the Seashore Villages. Further, this negative impact will be absorbed almost entirely by Small Businesses. Neither of these important aspects of the management alternatives are adequately presented in the DEIS.

13) Pages 125; 392 396: SEA TURTLES. I disagree with the stats and procedures proposed. I think endangered sea turtles would benefit from management practices now in use at other federal seashores that are more proactive in efforts to achieve nesting success. This includes relocating nests to more desirable locations as is done in other state and federally controlled areas.

The Cape Hatteras National Seashore Recreational Area is on the northernmost fringe of turtle nesting locations for the southeast, accounting for about 1% of all turtle nests. Proposed buffer areas are not needed for protection of the turtles and amount to overprotection.

14) Pages 97- 101. I strongly disagree with proposals in this section saying that ORVs will be prohibited year round between ramps 27 and 30, at Hatteras Inlet (Hatteras Spit), Ocracoke Inlet (North Ocracoke Spit) and various other locations.

Not allowing ORV access is paramount to denying the public access to these beaches. They are located miles from the nearest parking or paved road area and too far to access on foot. As a matter of course, there has been no breeding of piping plover or other endangered species at the Hatteras Island Inlet (spit) area in the past 6 years.

15) Page 104: I disagree with the proposed night time driving closures. Per your proposals, night driving will be prohibited between May 1 and November 15th, forcing visitors off of the beaches early in the evening and preventing sunrise surf fishermen access in the morning. I propose a more moderate night time ban if one is needed, perhaps from June 1 September 15 with times being 1 hour after sunset and 1 hour before sunrise to allow beach goers to gather their stuff and exit the beach area.

Certainly more proactive measures such as relocating nests prone to weather and ocean events would dramatically increase the nesting success rates.

16) Page 121: I disagree with the proposed beach closings, including pedestrian access from March 15 until July 31 in 8 different beach locations which have traditionally been available. Please leave these areas open to beach walkers, shell collectors and those that want to access the beaches in these areas.

Conclusion:

Please, incorporate access corridors through any SMA so we can get to the open beach beyond. Incorporate the birds into the count that nest on the spoil islands. Base your buffer zones on peer reviewed science and scale them back to more reasonable distances as discussed.

It is neither logical nor reasonable to spend so much time, money and energy to overprotect a bird (Piping Plover) in the Cape Hatteras National Seashore that is on the southernmost fringe area of its breeding ground. That goes for the loggerhead turtle that is in its northernmost breeding area. Lets scale back the buffer zones. You can always increase at a later date.

The USPS is leaning way over the line on over protection and not enough on the public's right to enjoy the beaches of the National Seashore. The proper balance is not achieved in the propose DEIS and needs to be modified so that the proper balance of reasonable resource protection and access to the beaches of the National Park is achieved. I could sum it up by saying Protect, not Prohibit.

Thank you, Sallie & Dennis Reese 1640 Lozano Dr. Vienna, VA 22182

Dear Superintendent Murray,

As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.

- 1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."
- 2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness...." Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.
- 3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.

Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

***** Thank you very much for taking the time to protect one of America's most beautiful stretches of Atlantic seashore! Sea turtles, nesting shorebirds, and generations to come will be grateful for your action today. Thanks again!

Correspondence Type: Web Form

Correspondence: Please reconsider proposal F DEIS Off Road Vehicle Management Plan. My 3 significant areas of concern are: 1. There should be access to all areas of the beach to pedestrians and ORV through a buffer zone or corridor through nesting areas on the Cape Hatteras Island south of Oregon Inlet coastline to the tip of Ocracoke. 2. By specifying a 300 meter area vs 1000 meter area and only during the actual nesting timeframes and not open-ended, everyone's interests can be accommodated. 3. There will be significant economic hardship to the residents and visitors to Hatteras Island if the plan as now suggested is implemented. I am fearful of the negative impact to housing values because of the decreased visitor population of fisherman and tourist expecting easy access to our pristine beaches. I also think a leash law for pets rather than restrictions eliminating their access is also sufficient. One of the joys of my relocating here was having permanent access to the beach and to walk at sunset or sunrise with my dog in tow. It is healthy for both of us. She is 12 years old and has NEVER bothered another living creature. Please just enforce the laws that you have on the books rather than make more restrictive ones. There is enough room on the beaches of Hatteras Island for all of us to be able to enjoy them. Please don't add any unnecessary restrictions. I am a firm environmentalist and believe we need to protect endangered species and nesting turtles. I also believe we can set up areas conducive to their interests without severely restricting the human population. Thank you considering all of our interests.

Best regards, Carol M. Seaman

Correspondence: The NPS must formulate a plan that is consistent with the legislation establishing Cape Hatteras National Seashore Recreation Area. The enabling legislation for the Recreational Area states, in part, "said area shall be, and is, established, dedicated, and set apart as a national seashore recreational area for the benefit and enjoyment of the people and shall be known as the Cape Hatteras National Seashore Recreational Area". Therefore, it is important to balance resource protection with reasonable access for recreation.

Corridors are a vital tool in providing access while managing resources. They provide a small path around temporary resource closures in order to provide access to open areas that would otherwise be blocked. Corridors should be permitted throughout the seashore during the entire breeding and nesting season including ML-1 portions of SMAs. These corridors would provide valuable access without impairment or damage to protected resources. Buffers, or closures, are important management practices for species recovery. However, to have long term benefit for the wildlife and the visiting

public, buffers must be based on peer-reviewed science. For example, the Piping Plover, a species classified as threatened and not endangered, is given a level of unprecedented protection in Alternative F. A 1,000-meter buffer in all directions represents over 771 acres. The DEIS does not cite any peer-reviewed science in supporting such closure. A more appropriate & effective buffer would be 200 meters.

Birds that are not listed as endangered should not be afforded the level of protection given to ESA (Endangered Species Act) protected species. Instead of 300-meter buffers for these birds, a more appropriate buffer would be 30 meters. Also, all birds in the same ecosystem of the seashore should be counted. This includes all the many birds on the dredge and spoil islands located just yards away and within sight of the seashore.

The National Park Service should consider turtle management practices successfully used in other federal and state areas to achieve nesting success. More proactive measures include relocating nests to more desirable locations, which is routinely and successfully done in other areas.

Correspondence:	I disagree with the 1000 meter pedestrian/ORV closure around any piping plover unfledged chick brood as stated on p. 121-127 of the ORV/DEIS alternative F. Only on Cape Hatteras National Seashore Recreational area would the 1000 meter closure in all directions(770 acres per brood) be imposed while other eastern areas maintain 200-300 meter distance. This inconsistency is unfair, unrealistic (770 acres) and discriminatory to anyone who uses the beach. To make it even more unbelievable is the fact that the piping plover is threatened-NOT ENDANGERED and it's natural nesting area is in Canada- NOT Cape Hatteras National Seashore. An alternative would be for the NPS to consider neighboring dredge and spoil islands that are part of the same ecosystem with less predator presence.

Correspondence:	I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access. This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me. The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D: *Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a					

chance to rebound to its traditional numbers and diversity within the park.

* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.

* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
We began visiting the Outer Banks as children, and now take our children and grandchildren to enjoy and explore their natural beauty. Therefore, this alternative plan is important to us and would provide more opportunity for a wide variety of uses of the beaches and result in less disturbance of wildlife, which are important to me. My son was involved with a Piping Plover research project. I was able to volunteer some time and know how critical habitat protection is for their survival.
If Alternative D cannot be enacted, some basic guidelines are fundamental to any plan.:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at

least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.

* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should be the primary concern, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased as necessary to protect breeding birds and sea turtles.

* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: This letter is in reference to the Draft Environmental Impact Survey submitted by the National Park Service concerning ORV use and management of the Cape Hatteras National Seashore. I applaud the NPS for approaching the issue of balancing human access to the park and critical resource protection with an open mind and honorable intent. After reading through the Draft EIS, there are a few comments/suggestions that I would like to put forth:
1) On page 73 of the Draft EIS, research from Assateague Island is mentioned (Loegering 1992), which suggested a 225 meter buffer radius for nesting Piping Plover with unfledged chicks. The researchers observed flushing at a distance of 174 meters. Their recommended buffer of 225 meters amounts to a 30% larger area, which seems to be a reasonable size. I urge the National Park Service to adopt the 225 meter buffer radius for unfledged chicks, instead of the proposed 1000 meter buffer radius as noted in Table 10 on page 123, and Table 11 on Page 127. A 1000 meter buffer radius is more than four times larger than studies suggest is necessary.
2) The placement of new Ramps, Interdunal Roads, and parking areas to increase pedestrian and ORV access in non-SMAs is a great way to promote human access in less critical areas.
3) In Table 9 on page 119, the Consent Decree requires that buffer areas are expanded in size in the case of deliberate vandalism. I disagree with this practice because it effectively punishes the innocent public for the acts of a criminal.
Thank you for your consideration of my comments. Feel free to contact me if you need any further information.

Correspondence: As an avid angler, who occasions the North Carolina seashore, I am strongly opposed to the National Park Service (NPS) preferred alternative, Alternative F, in the DEIS and urge you to make significant changes to the preferred alternative in order to provide both reasonable resource protection and reasonable public access to public land. Recreational fishing is one of the most enjoyable American pastimes, and Cape Hatteras National Seashore has some of the best surf fishing locations on the east coast ? accessible only by ORV.
Alternative F is the most restrictive management option to date, far exceeding any sense of balance between resource protection and public access and betraying all promises made to the public regarding recreational uses in the seashore. The majority of the provisions included within the preferred alternative far exceed anything proposed by a majority of the Negotiated Rulemaking Committee, including excessively large resource closures (buffers), unnecessary year-round and floating closures, and the lack of access corridors around or through resource closures.
In order to restore balance to the DEIS, I highly recommend that the NPS revisit the proposal put forth to the Negotiated Rulemaking Committee in December of 2009. It provides the necessary protections for wildlife resources while having the support of a majority of the local community. Without reasonable ORV access, responsible anglers like me, and the local economy that is supported by recreational fishing, suffer greatly. I urge you to provide a better balance between resource protection and recreational uses by incorporating the December 2009 recommendations from the Negotiated Rulemaking Committee into the preferred alternative.
Regard,
Ross Reiley

Correspondence: I believe the NPS preferred option (Alternative F) will provide adequate protection for species of conservation concern, but there were a few points I felt could use clarification or more specific language. My suggestions are below:
Pg. 108: Regarding carrying capacity requirements and periodic review. Will the density of cars (number per mile) only be reviewed, or will the method of figuring carrying capacity by density (as opposed to imposing an actual limit on total vehicles) be reviewed? And what will be the endpoints of the review (i.e., disturbance, population trends, habitat characteristics)?
Pg. 122: Piping plover nesting closures. Language states that a 75 m buffer will be established around nests outside existing closures. I would suggest language to automatically expand the buffer for nests inside existing closures if it is not at least 50 m (e.g., if birds nest close to the edge of existing closures). Then adjust based on observed bird behavior.
Pg. 122: Buffers around foraging piping plovers. The current language does not give a size for the buffer. I suggest 50 m, then adjust based on bird behavior as with nesting closures. But the intention should be made clear at any rate.
Pg. 123: Nonbreeding surveys. I would just add that the design should ensure specific sites are surveyed at multiple distinct tidal stages (low and high but also rising and falling). At CAHA this means taking into account not just predicted lunar tides but, because of wind effects, actual tidal height.
Pg. 124: Nonbreeding shorebird SMAs. Protecting important habitat is good, but a language should be included for buffering known foraging and roosting sites, similar to the language about buffering foraging sites in the breeding season. For instance, erect 50 m buffers around any place piping plovers were observed foraging or roosting at least twice in the nonbreeding season, until monitoring confirms the site is no longer used.

Correspondence: My family is one of the many families whose land was acquired by the Federal Government for the formation of The Cape Hatteras National Seashore Recreational Area. You were intrusted with our island beaches and with that the heritage of everyone who was born & raised on Hatteras Island. The NPS was to keep our beaches free & open for all, that was the deal. It was a contract the federal government (NPS) made with us, we certainly didn't go

out and solicit the government to come here and create an uninhabited bird sanctuary on the miles & miles of beaches that are here for all to enjoy. These beaches are now & have always been our lives, we have always respected, protected & coexisted with all wildlife that share our island home. Why has the agreement that was made with the original land owners been disregarded? It's like it never existed, so much that you would give more precedence to over zealous environmentalists, that have laid stake on our land & home, for a bird that isn't even indigenous (muchless endangered) to the island. The treatment of the local people should always remain first & foremost. These beautiful beaches are ours & for all who choose to share. We depend on these beaches being accessible to everyone fishermen, surfers, beachcombers, swimmers, boaters & yes even birdwatchers. They draw visitors that help provide jobs & sustain the local economy. Many of the local businesses have worked hard to establish themselves & these beach closures have been economically devastating, so with all due respect, if anything needs to be protected it's the PEOPLE and the HERITAGE of the Outer Banks. It's time to do the right thing, stand up and honor your contract with the people of Hatteras Island! Open up our beaches for all to enjoy. Make good on the original agreement. Keep your Word!

Correspondence: Cape Hatteras National Seashore holds a unique ecological, recreational and economic value. I believe that beaches are a public resource and should be held in the public trust for their preservation.
Cape Hatteras National Seashore provides some of the best recreational resources on the East Coast, including surfing and fishing, but I recognize that if not regulated correctly ORV use may detrimentally affect migratory species that nest in the area. I believe that a balance between access and preservation can be achieved and that allowing continued access with improved management of ORV use to the National Seashore is the optimal solution for this area.
I support Alternative C, a balanced solution that benefits the animal species while guaranteeing humans can continue to enjoy and protect this most-precious coastal resource for years to come.

Correspondence: The NPS must formulate a plan that is consistent with the legislation establishing Cape Hatteras National Seashore Recreation Area. The enabling legislation for the Recreational Area states, in part, "said area shall be, and is, established, dedicated, and set apart as a national seashore recreational area for the benefit and enjoyment of the people and shall be known as the Cape Hatteras National Seashore Recreational Area". Therefore, it is important to balance resource protection with reasonable access for recreation.
Corridors are a vital tool in providing access while managing resources. They provide a small path around temporary resource closures in order to provide access to open areas that would otherwise be blocked. Corridors should be permitted throughout the seashore during the entire breeding and nesting season including ML-1 portions of SMAs. These corridors would provide valuable access without impairment or damage to protected resources. Buffers, or closures, are important management practices for species recovery. However, to have long term benefit for the wildlife and the visiting public, buffers must be based on peer-reviewed science For example, the Piping Plover, a species classified as threatened and not endangered, is given a level of unprecedented protection in Alternative F. A 1,000-meter buffer in all directions represents over 771 acres. The DEIS does not cite any peer-reviewed science in supporting such closure. A more appropriate & effective buffer would be 200 meters.
Birds that are not listed as endangered should not be afforded the level of protection given to ESA (Endangered Species Act) protected species. Instead of 300-meter buffers for these birds, a more appropriate buffer would be 30 meters. Also, all birds in the same ecosystem of the seashore should be counted. This includes all the many birds on the dredge and spoil islands located just yards away and within sight of the seashore.
The National Park Service should consider turtle management practices successfully used in other federal and state areas to achieve nesting success. More proactive measures include relocating nests to more desirable locations, which is routinely and successfully done in other areas.
I must not add that many people can not access certain areas because of physical limitations, including members of my own family. Mechanical access is important to us as I am sure it is to many other families. Please don't shut us out of our own country.

Correspondence: Dear Superintendent Murray,
As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.
1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."
2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness...."
Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.
3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.
Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

Subject: DEIS Off-Road Vehicle Management Plan Comments
Our comments concern the DEIS of the Off-Road Vehicle Management Plan prepared by the National Park Service (NPS) for the Cape Hatteras

National Seashore Recreation Area. My wife and I have owned a vacation home in Avon, NC for fifteen years and have great concerns related to this plan.

1) Page 201: We disagree with the NPS statement: "Even with resource closures in place, protected species are still at risk [from pedestrians and ORVs]."

No Piping Plover deaths have been attributed to ORVs. ORV violations continue to decrease as signage and education improve. Pedestrian violations are much more significant than ORV violations. It seems to me that any transgressions into protected area are the result of lack of NPS manpower and enforcement than the public purposely and willfully violating out of bounds areas.

2) Page xxiv: We question the statement of as per the DEIS: "Carrying capacity would be a 'peak use limit' determined for all areas based on the linear feet of beachfront?" If you close off huge sections of the beach, you force more people into smaller areas, potentially resulting in more resource impairment and diminished visitor experience.

3) Page xix and page 23: We are against having two different closures rules pertaining to the North facing beaches (North side) and the South facing beaches (South side) as per the grid outlined in Alternative "F". We disagree with the NPS proposal to close the beaches in villages of Frisco, Hatteras and Ocracoke Villages to ORV access longer than the traditional May 15 to September 15 period for the Northern beaches, even though seasonal visitor statistics are similar for all villages. Please, make them the same: May 15 -> September 15.

4) Page 1: We agree with your statement "ORVs have long served as a primary form of access for many portions of the beach in the seashore, and continue to be the most practical means of access and parking for many visitors."

However, pedestrian only areas discriminate against individuals with limited mobility due to age or physical impairments, families with small children, and those wishing to engage in activities requiring recreational equipment (boogie boards, beach umbrellas, beach chairs, coolers, fishing rods and tackle, etc)

5) Page 53: We disagree with the special use permit proposed guidelines. It is impractical to allow the transportation of disabled visitors to the village beaches and then require the vehicle to be returned to the street or parking area. This necessitates the disabled person to have a driver to drop him (or her) off, then drive to a parking area, then trudge a long distance to the site of the drop off, then trudge the long distance through the sand back to get the vehicle.

Suppose the handicap person wants to go to the beach, is capable of driving himself, yet cannot find another person to go with him? Does he now not go to the beach? This rule creates unnecessary hardships and risks in the event of an emergency as well.

6) Page 121 ? 127. We strongly disagree with the buffers as presented. We must allow for pass-thru corridors. The beach is linear with the ocean buffering on one side and the dune line on the other. For example - If you pinch off access on one side of a 4 mile linear beach and pinch off access on the other side of the 4 mile section of beach with no corridor, then you effectively have closed off all 4 miles of the beach because you CAN'T get there. The proposed bird buffers are too large, blocking access to the interior sections from the two "buffered" ends.

We propose ORV pass-thru only corridors and to use breeding / nesting buffer distances to establish ORV pass through only corridors to ensure beach access in a way that does not hinder resource protection. We believe pass through corridors should be maintained for pedestrians and ORVs in all areas of the Cape Hatteras National Seashore Recreation Area throughout the entire breeding and nesting season. Corridors are vital to providing access in a way that does not hinder resource protection.

Piping Plover unfledged chicks buffer should move with the brood as it relocates to reliable food source, not expanded.

The 1,000 meter distance for the piping plover is way too large and not based upon peer reviewed science. Also, the distance from the ocean high tide line to Highway 12 on most of Hatteras Island is less than 1,000 meters. A more rational distance would be 200 meters per other sites in the nation for the piping plover. Ample scientific evidence and precedent exists to support a 200 meter buffer.

Buffers for other species, including American Oystercatchers, Least Terns and Colonial Waterbirds must also be changed. An effective 30 meter buffer should be established for these species rather than the 300 meter closure outlined in the DEIS.

NON-ENDANGERED BIRDS should not have same protection as if endangered. Not allowing ORV access is paramount to denying the public access to these beaches.

7) Page 468: We disagree with the limitations imposed on pedestrian and ORVs. Corridors or bypasses should be provided thru, around or below high tide line in all SMAs during entire breeding season to maintain access.

8) Page 124: We strongly disagree with the NPS slant of providing for over protection of resource management over that of the public's right to access the beaches. Pro-active initiatives include: Vegetation Management, Habitat Management, Enhanced Predator Management, Colonial Water bird social attraction, Piping Plover check fledge rate, Piping plover chick buffer distance, and pass-through buffers during the incubation period. Opportunities to implement less restrictive closures as a result of the above initiatives should be considered more frequently than the 5-year periodic review process identified in the DEIS.

9) We disagree with the NPS Resource Management Pedestrian / ORV Closure Policies. These policies address the least significant factors affecting nest survival with little chance to have more than negligible impact. For example: the AMOY Nest Failures are predominately due to non-human events. Using your own stats, the mammalian predation is 54%, Storm / Lunar Tides: 29%, Nest Abandonment: 6%, Avian Predation: 5%, and Ghost Crab Predation: 3%,

So what is the percentage due to human interference: just 3%! It's insignificant, yet the NPS wants to ban humans when their actions provide very little influence on the success rate of breeding birds and turtles.

10) We disagree with the stats of breeding plovers and the other birds in the Park when the NPS does not adequately consider locations neighboring the Recreational Area that are part of the same ecosystem, namely dredge and spoil island that are located just yards away and within sight of the seashore. These birds are part of the same ecosystem and should be included.

Those spoil islands, developed by man from dredging the waterways in the Pamlico Sound for channel upkeep are slammed full of birds. The reason why so many birds? NO PREDATORS. SO, birds are not as stupid as one might think. You have to count these birds and incorporate them in the stats when the NPS is talking about any so called decline in breeding pairs in the National Park.

11) Page 1: We do not think the DEIS responsibly addresses the cultural resource issues. The very purpose of the DEIS as set forth in the National Environmental Policy Act (NEPA) is to protect and preserve natural and cultural resources in the federal decision making process. In the DEIS, the statement "protect and preserve natural and cultural resources" appears in the first sentence of the first page of the plan, in the Purpose of the Plan section, and numerous times thereafter. Yet, the 810 page document devotes only two paragraphs to analysis of cultural resource issues.

As property owners we have great respect for the permanent residents and their way of life. The Hatteras Island community have always gotten together on the south beach on Sunday to enjoy the beach with our cookouts, gatherings, surf bathing, horse shoes and foot races, fishing, and surfing. Now the DEIS is proposing closing off most of the south beach during the summer which is the traditional period the local people use the beach. The continuation of this traditional pattern of land use is central to maintaining the historic identity of the island communities.

12) Pages 270-281; 561-598: We strongly disagree with your economic analysis of the impact of the DEIS. The region of influence (ROI) incorporates the Northern Beach communities, including Kill Devil Hills, Kitty Hawk, Southern Shores and Duck. These areas are almost completely disconnected from ORV use and access issues relating to the Seashore.

? Inclusion of the Northern Beaches in analysis significantly dilutes estimates of economic impact on the 8 Seashore Villages

? Analysis of economic impact to the Seashore Villages appears to be significantly down played. Emphasis in DEIS is on the ROI-wide or county-wide level impacts.

? Nowhere is it clearly addressed that the overwhelming majority of negative impacts will be felt by small businesses in the Seashore Villages rather than by overall economic interests within the greater ROI.

On page xlvi, Alternative F is characterized as having a "negligible to moderate" adverse impact on small businesses. I strongly disagree with this statement.

We believe the negligible to moderate projection is inaccurate and relies on economic surveys that has not yet been published. Furthermore, this material is not expected to be added to the DEIS until after the public comment period has ended. As home owners that rent during the vacation season we have great concern this will drop our rental income significantly.

Based upon the economic harm we have already experienced under the consent decree, Dare County projects the economic impact of Alternative F to be

substantial.

Beach closures have already had a devastating and unfair impact on many Dare County Businesses, causing foreclosures, bankruptcies, lay-offs, cutbacks, expensive refinancing, and depleted college funds and savings accounts.

Even businesses whose revenue has stayed level or showed a modest increase have accomplished this at a costly price. Many have had to cut back employee hours, forego much-needed capital improvements, and sacrifice profits. That is certainly the case with Hatteras Realty thru which we rent our house.

Pages 270-286, 561-598: The socio-economic data and analyses are incomplete and erroneous and result in an understatement of the effect the restrictions will have upon the Island, the region and the state of NC. The US Park Services answer: Businesses will have to "adapt" to the new rules. (p.383) The negative economic impacts of the decree ARE KNOWN, so to say that the added restrictions would have negligible to moderate impact is indefensible.

13) Overall Visitor Counts - Overall visitor counts appear to include visitors to Fort Raleigh National Historic Site and the Wright Brothers National Memorial. A large percentage of these visitors vacation in the Northern Beaches communities and recreate on the non-federal beaches outside of the Seashore. Visitors who patronize the Fort Raleigh National Historic Site and the Wright Brothers National Memorial but do not visit the actual seashore areas need to be factored out.

Maintenance of Future Access to Cape Point and South Point Ocracoke: All socioeconomic analyses related to Alternative F are predicated on the assumption that access corridors will remain open for at least an appreciable portion of the visitor high season. Under Alternative F, the access corridors will be subject to Resource Closures based on buffers similar or identical to the Consent Decree. Unless some predictability of access to Cape Point and South Point Ocracoke can be assured, economic analyses predicated on assumption of access are fundamentally flawed.

Why would a group of surf fisherman want to come to Hatteras Island to surf fish if they are not sure they can access the prime fishing grounds at Cape Point? The answer is they won't come. If they don't come, they don't rent vacation homes and spend their money on Hatteras and Ocracoke Islands.

The definition of the Region of Influence (ROI), faulty data on economic activity generated by specific type recreational activity, incomplete visitation/business survey data, inflated overall Seashore visitor counts pertaining to beach use, and flawed key assumptions concerning the maintenance of access under Alternative F, all lead to inaccurate conclusions in the socioeconomic analyses. Specifically, these inaccuracies can be seen as understating the negative socio-economic impact of the Seashore Villages. Further, this negative impact will be absorbed almost entirely by Small Businesses. Neither of these important aspects of the management alternatives are adequately presented in the DEIS.

14) Page 136: We strongly disagree with your pet restriction proposals. The "prohibition of pets in the Seashore during bird breeding season including in front of the villages." = No Pets in public areas beaches, campgrounds, soundfront, foot trails, park maintained roads -from March 15 to July 31. Hatteras Realty, thru which we book our home, books approximately 13,000 rental weeks for a total of 91,000 rental nights housing approximately 700,000 visitors. The ban on pets to July 31 will seriously hurt the rentals of vacation homes as pet homes encompass about 30% of rentals. We propose allowing pets on 6 foot leashes year-round in all areas open to pedestrians or ORVs.

15) Pages 125; 392 ? 396: SEA TURTLES. We disagree with the stats and procedures proposed. We think endangered sea turtles would benefit from management practices now in use at other federal seashores that are more proactive in efforts to achieve nesting success. This includes relocating nests to more desirable locations as is done in other state and federally controlled areas.

The Cape Hatteras National Seashore Recreational Area is on the northernmost fringe of turtle nesting locations for the southeast, accounting for about 1% of all turtle nests. Proposed buffer areas are not needed for protection of the turtles and amount to overprotection.

16) Pages 97- 101. We strongly disagree with proposals in this section saying that ORVs will be prohibited year round between ramps 27 and 30, at Hatteras Inlet (Hatteras Spit), Ocracoke Inlet (North Ocracoke Spit) and various other locations.

Not allowing ORV access is paramount to denying the public access to these beaches. They are located miles from the nearest parking or paved road area and too far to access on foot. As a matter of course, there has been no breeding of piping plover or other endangered species at the Hatteras Island Inlet (spit) area in the past 6 years.

17) Page 104: We disagree with the proposed night time driving closures. Per your proposals, night driving will be prohibited between May 1 and November 15th, forcing visitors off of the beaches early in the evening and preventing sunrise surf fishermen access in the morning. We propose a more moderate night time ban if one is needed, perhaps from June 1 to September 15 with times being 1 hour after sunset and 1 hour before sunrise to allow beach goers to gather their stuff and exit the beach area.

Certainly more proactive measures such as relocating nests prone to weather and ocean events would dramatically increase the nesting success rates.

18) Page 121: We disagree with the proposed beach closings, including pedestrian access from March 15 until July 31 in 8 different beach locations which have traditionally been available. Please leave these areas open to beach walkers, shell collectors and those that want to access the beaches in these areas.

Conclusion:

Please, incorporate access corridors through any SMA so we can get to the open beach beyond. Incorporate the birds into the count that nest on the spoil islands. Base your buffer zones on peer reviewed science and scale them back to more reasonable distances as discussed.

It is neither logical nor reasonable to spend so much time, money and energy to overprotect a bird (Piping Plover) in the Cape Hatteras National Seashore that is on the southernmost fringe area of its breeding ground. That goes for the loggerhead turtle that is in its northernmost breeding area. Let's scale back the buffer zones. You can always increase at a later date.

The USPS is leaning way over the line on over protection and not enough on the public's right to enjoy the beaches of the National Seashore. The proper balance is not achieved in the propose DEIS and needs to be modified so that the proper balance of reasonable resource protection and access to the beaches of the National Park is achieved. We could sum it up by saying "Protect, not Prohibit."

Thank you,

Michael and Carolyn Shearon

Correspondence: Off-Road Vehicles should be prohibited from public beaches and natural areas such as Cape Hatteras National Seashore and be confined to monitored tracks specifically designed for that purpose. Our national parks and seashores should be limited to foot traffic only in order to enjoy their natural settings. People should be encouraged to exercise and walk instead of using motorized transportation that is not Eco-friendly. ORVs cause considerable damage to plants and animals, as well as posing a danger to pedestrians. One cannot assume that an intelligent person will be operating an ORV and will confine himself to a designated trail. It's bad enough that we have a catastrophe currently at hand with the BP oil spill in the Gulf. Must man destroy all of our precious resources through careless inconsideration of our environmental legacy? Say no to off road vehicles. Enjoy nature the good old fashioned way. Go for a walk. Thank you in advance for your time and consideration of my comments.

Correspondence: Superintendent Murray,
I am in agreement with Senator Marc Basnight and Representative Tim Spear when they suggest that viable alternatives and compromises exist to satisfy all interested parties in the beach access dilemma. We must all think outside the box to reach a mature outcome. The decisions made on behalf of animals that may not even be indigenous need not be all or nothing.
The Honorable Senator and Representative outline excellent solutions to the situation which I pray you will give serious consideration.
Respectfully, Warren Walton Animal Lover/Beach Access Supporter

From:
Subject: DEIS Off-Road Vehicle Management Plan Comments
My comments concern the DEIS of the Off-Road Vehicle Management Plan prepared by the National Park Service (NPS) for the Cape Hatteras National Seashore Recreation Area.
1) Page 201: I disagree with the NPS statement: Even with resource closures in place, protected species are still at risk [from pedestrians and ORVs]. No Piping Plover deaths have been attributed to ORVs. ORV violations continue to decrease as signage and education improve. Pedestrian violations are much more significant than ORV violations. It seems to me that any transgressions into protected area are the result of lack of NPS manpower and enforcement than the public purposely and willfully violating out of bounds areas.
2) Page xxiv: I question the statement of as per the DEIS: Carrying capacity would be a peak use limit determined for all areas based on the linear feet of beachfront. If you close off huge sections of the beach, you force more people into smaller areas, potentially resulting in more resource impairment and diminished visitor experience.
3) Page xix and page 23: I am against having two different closure rules pertaining to the North facing beaches (North side) and the South facing beaches (South side) as per the grid outlined in Alternative F. I disagree with the NPS proposal to close the beaches in villages of Frisco, Hatteras and Ocracoke Villages to ORV access longer than the traditional May 15 to September 15 period for the Northern beaches, even though seasonal visitor statistics are similar for all villages. Please, make them the same: May 15 -> September 15.
4) Page 1: I agree with your statement ORVs have long served as a primary form of access for many portions of the beach in the seashore, and continue to be the most practical means of access and parking for many visitors.
However, pedestrian only areas discriminate against individuals with limited mobility due to age or physical impairments, families with small children, and those wishing to engage in activities requiring recreational equipment (boogie boards, beach umbrellas, beach chairs, coolers, fishing rods and tackle, etc)
5) Page 53: I disagree with the special use permit proposed guidelines. It is impractical to allow the transportation of disabled visitors to the village beaches and then require the vehicle to be returned to the street or parking area. This necessitates the disabled person to have a driver to drop him (or her) off, then drive to a parking area, then trudge a long distance to the site of the drop off, then trudge the long distance through the sand back to get the vehicle.
Suppose the handicap person wants to go to the beach, is capable of driving himself, yet cannot find another person to go with him? Does he now not go to the beach? This rule creates unnecessary hardships and risks in the event of an emergency as well.
6) Page 121 127. I strongly disagree with the buffers as presented. We must allow for pass-thru corridors. The beach is linear with the ocean buffering on one side and the dune line on the other. For example - If you pinch off access on one side of a 4 mile linear beach and pinch off access on the other side of the 4 mile section of beach with no corridor, then you effectively have closed off all 4 miles of the beach because you CANT get there. The proposed bird buffers are too large, blocking access to the interior sections from the two buffered ends.
I propose ORV pass-thru only corridors and to use breeding / nesting buffer distances to establish ORV pass through only corridors to ensure beach access in a way that does not hinder resource protection. I believe pass through corridors should be maintained for pedestrians and ORVs in all areas of the Cape Hatteras National Seashore Recreation Area throughout the entire breeding and nesting season. Corridors are vital to providing access in a way that does not hinder resource protection.
Piping Plover unfledged chicks buffer should move with the brood as it relocates to reliable food source, not expanded.
The 1,000 meter distance for the piping plover is way too large and not based upon peer reviewed science. A more rational distance would be 200 meters per other sites in the nation for the piping plover. Ample scientific evidence and precedent exists to support a 200 meter buffer.
Buffers for other species, including American Oystercatchers, Least Terns and Colonial Waterbirds must also be changed. An effective 30 meter buffer should be established for these species rather than the 300 meter closure outlined in the DEIS.
NON-ENDANGERED BIRDS should not have same protection as if endangered. Not allowing ORV access is paramount to denying the public access to these beaches.
7) Page 468: I disagree with the limitations imposed on pedestrian and ORVs. Corridors or bypasses should be provided thru, around or below high tide line in all SMAs during entire breeding season to maintain access.
8) Page 124: I strongly disagree with the NPS slant of providing for over protection of resource management over that of the public's right to access the beaches. Pro-active initiatives include: Vegetation Management, Habitat Management, Enhanced Predator Management, Colonial Water bird social attraction, Piping Plover check fledge rate, Piping plover chick buffer distance, and pass-through buffers during the incubation period. Opportunities to implement less restrictive closures as a result of the above initiatives should be considered more frequently than the 5-year periodic review process identified in the DEIS.
9) I disagree with the NPS Resource Management Pedestrian / ORV Closure Policies. These policies address the least significant factors affecting nest survival with little chance to have more than negligible impact. For example: the AMOY Nest Failures are predominately due to non-human events. Using your own stats, the mammalian predation is 54%, Storm / Lunar Tides: 29%, Nest Abandonment: 6%, Avian Predation: 5%, and Ghost Crab Predation: 3%,
So what is the percentage due to human interference: just 3%! Its insignificant, yet the NPS wants to ban humans when their actions provide very little influence on the success rate of breeding birds and turtles.

10) I disagree with the stats of breeding plovers and the other birds in the Park when the NPS does not adequately consider locations neighboring the Recreational Area that are part of the same ecosystem, namely dredge and spoil island that are located just yards away and within sight of the seashore. These birds are part of the same ecosystem and should be included.

Those spoil islands, developed by man from dredging the waterways in the Pamlico Sound for channel upkeep are slammed full of birds. The reason why so many birds? NO PREDATORS. SO, birds are not as stupid as one might think. You have to count these birds and incorporate them in the stats when the NPS is talking about any so called decline in breeding pairs in the National Park.

11) Page 1: I do not think the DEIS responsibly addresses the cultural resource issues. The very purpose of the DEIS as set forth in the National Environmental Policy Act (NEPA) is to protect and preserve natural and cultural resources in the federal decision making process. In the DEIS, the statement protect and preserve natural and cultural resources appears in the first sentence of the first page of the plan, in the Purpose of the Plan section, and numerous times thereafter. Yet, the 810 page document devotes only two paragraphs to analysis of cultural resource issues.

As a lifelong resident of Hatteras Island, we of the Hatteras Island community have always gotten together on the south beach on Sunday to enjoy the beach with our cookouts, gatherings, surf bathing, horse shoes and foot races, fishing, and surfing. Now the DEIS is proposing closing off most of the south beach during the summer which is the traditional period we local people use the beach. The continuation of this traditional pattern of land use is central to maintaining the historic identity of our island communities.

12) Pages 270-281; 561-598: I strongly disagree with your economic analysis of the impact of the DEIS. The region of influence (ROI) incorporates the Northern Beach communities, including Kill Devil Hills, Kitty Hawk, Southern Shores and Duck. These areas are almost completely disconnected from ORV use and access issues relating to the Seashore.

Inclusion of the Northern Beaches in analysis significantly dilutes estimates of economic impact on the 8 Seashore Villages

Analysis of economic impact to the Seashore Villages appears to be significantly down played. Emphasis in DEIS is on the ROI-wide or county-wide level impacts.

Nowhere is it clearly addressed that the overwhelming majority of negative impacts will be felt by small businesses in the Seashore Villages rather than by overall economic interests within the greater ROI.

On page xlvi, Alternative F is characterized as having a negligible to moderate adverse impact on small businesses. I strongly disagree with this statement.

I believe the negligible to moderate projection is inaccurate and relies on economic surveys that has not yet been published. Furthermore, this material is not expected to be added to the DEIS until after the public comment period has ended.

Based upon the economic harm we have already experienced under the consent decree, Dare County projects the economic impact of Alternative F to be substantial.

Beach closures have already had a devastating and unfair impact on many Dare County Businesses, causing foreclosures, bankruptcies, lay-offs, cutbacks, expensive refinancing, and depleted college funds and savings accounts.

Even businesses whose revenue has stayed level or showed a modest increase have accomplished this at a costly price. Many have had to cut back employee hours, forego much-needed capital improvements, and sacrifice profits. That is certainly the case with Hatteras Realty.

Pages 270-286, 561-598: The socio-economic data and analyses are incomplete and erroneous and result in an understatement of the effect the restrictions will have upon the Island, the region and the state of NC. The US Park Services answer: Businesses will have to adapt to the new rules.

(p.383) The negative economic impacts of the decree ARE KNOWN, so to say that the added restrictions would have negligible to moderate impact is indefensible.

13) Overall Visitor Counts - Overall visitor counts appear to include visitors to Fort Raleigh National Historic Site and the Wright Brothers National Memorial. A large percentage of these visitors vacation in the Northern Beaches communities and recreate on the non-federal beaches outside of the Seashore. Visitors who patronize the Fort Raleigh National Historic Site and the Wright Brothers National Memorial but do not visit the actual seashore areas need to be factored out.

Maintenance of Future Access to Cape Point and South Point Ocracoke: All socioeconomic analyses related to Alternative F are predicated on the assumption that access corridors will remain open for at least an appreciable portion of the visitor high season. Under Alternative F, the access corridors will be subject to Resource Closures based on buffers similar or identical to the Consent Decree. Unless some predictability of access to Cape Point and South Point Ocracoke can be assured, economic analyses predicated on assumption of access are fundamentally flawed.

Why would a group of surf fisherman want to come to Hatteras Island to surf fish if they are not sure they can access the prime fishing grounds at Cape Point? The answer is they won't come. If they don't come, they don't rent vacation homes and spend their money on Hatteras and Ocracoke Islands.

The definition of the Region of Influence (ROI), faulty data on economic activity generated by specific type recreational activity, incomplete visitation/business survey data, inflated overall Seashore visitor counts pertaining to beach use, and flawed key assumptions concerning the maintenance of access under Alternative F, all lead to inaccurate conclusions in the socioeconomic analyses. Specifically, these inaccuracies can be seen as understating the negative socio-economic impact of the Seashore Villages. Further, this negative impact will be absorbed almost entirely by Small Businesses. Neither of these important aspects of the management alternatives are adequately presented in the DEIS.

14) Page 136: I strongly disagree with your pet restriction proposals. The prohibition of pets in the Seashore during bird breeding season including in front of the villages. = No Pets in public areas beaches, campgrounds, soundfront, foot trails, park maintained roads -from March 15 July 31.

Hatteras Realty books approximately 13,000 rental weeks for a total of 91,000 rental nights housing approximately 700,000 visitors. The ban on pets to July 31 will seriously hurt the rentals of my vacation homes as our pet homes encompass about 30% of our rentals. I propose allowing pets on 6 foot leashes year-round in all areas open to pedestrians or ORVs.

15) Pages 125; 392 396: SEA TURTLES. I disagree with the stats and procedures proposed. I think endangered sea turtles would benefit from management practices now in use at other federal seashores that are more proactive in efforts to achieve nesting success. This includes relocating nests to more desirable locations as is done in other state and federally controlled areas.

The Cape Hatteras National Seashore Recreational Area is on the northernmost fringe of turtle nesting locations for the southeast, accounting for about 1% of all turtle nests. Proposed buffer areas are not needed for protection of the turtles and amount to overprotection.

16) Pages 97- 101. I strongly disagree with proposals in this section saying that ORVs will be prohibited year round between ramps 27 and 30, at Hatteras Inlet (Hatteras Spit), Ocracoke Inlet (North Ocracoke Spit) and various other locations.

Not allowing ORV access is paramount to denying the public access to these beaches. They are located miles from the nearest parking or paved road area and too far to access on foot. As a matter of course, there has been no breeding of piping plover or other endangered species at the Hatteras Island Inlet (spit) area in the past 6 years.

17) Page 104: I disagree with the proposed night time driving closures. Per your proposals, night driving will be prohibited between May 1 and November 15th, forcing visitors off of the beaches early in the evening and preventing sunrise surf fishermen access in the morning. I propose a more moderate night time ban if one is needed, perhaps from June 1 September 15 with times being 1 hour after sunset and 1 hour before sunrise to allow beach goers to gather their stuff and exit the beach area.

Certainly more proactive measures such as relocating nests prone to weather and ocean events would dramatically increase the nesting success rates.

18) Page 121: I disagree with the proposed beach closings, including pedestrian access from March 15 until July 31 in 8 different beach locations which have traditionally been available. Please leave these areas open to beach walkers, shell collectors and those that want to access the beaches in these areas.

Conclusion:

Please, incorporate access corridors through any SMA so we can get to the open beach beyond. Incorporate the birds into the count that nest on the spoil islands. Base your buffer zones on peer reviewed science and scale them back to more reasonable distances as discussed.

It is neither logical nor reasonable to spend so much time, money and energy to overprotect a bird (Piping Plover) in the Cape Hatteras National Seashore that is on the southernmost fringe area of its breeding ground. That goes for the loggerhead turtle that is in its northernmost breeding area. Lets scale back the buffer zones. You can always increase at a later date.

The USPS is leaning way over the line on over protection and not enough on the publics right to enjoy the beaches of the National Seashore. The proper balance is not achieved in the propose DEIS and needs to be modified so that the proper balance of reasonable resource protection and access to the beaches of the National Park is achieved. I could sum it up by saying Protect, not Prohibit.

Thank you,
James& Susan Goodling (home owners for 10 years on Hatteras Island, vacationers on hatteras for the past 30 years) Kingspoint Dr. Frisco, NC

I visit the Outer Banks for vacation. I enjoy the beach access it offers. I am even thinking of purchasing a home in Nags Head. If the ability to drive on the beach is denied. I will not move there or vacation there. I am familiar with bird sanctuaries in Florida. They used offshore islands for them and changed habitat off the beach for them. Why cant you do this? They also asked volunteers to mark turtle nests and bird nests. The citizens policed these areas and educated people of the meaning of the marks. The general public does respect nature. There are a few that never will! For these few make huge fines and have a civil beach patrol to help police and mark nests. I feel this is a power grab by a few in DC. Most people in DC only think this sounds like a good idea. They dont visit or live in the area. If beach access is denied? The economic impact will be huge for this area. Call we really afford to loose more job opportunities for a few "birds of concern"??? I am definitely against any limitations to beach access. The current controls are to much. Ask the people in the area to help solve this problem with you!!!!

Correspondence:

Dear Sirs,
My wife and I are long time owners of a home on Ocracoke (10+ years), part time residents and frequent visitors prior to that point. In addition my wifes family have been visiting the island since the 1930s and have many members of their extended family either living full or part time on the island. During that time the majority of the residents, visitors, native and migratory wildlife and lived and bred in relative harmony on what you have to admit is a national treasure much loved by all. Weathering storms, taking care of each other, the national seashore and surrounding waters without the need of the heavy hand of government, wildlife regulators and avoiding the hot heads who frequent other beaches to the north and south. So it is with great sadness we see all those years of stewardship, carefully building relationships with the locals, fishermen and the NPS, the education of new visitors by residents and long time visitors seemingly brushed aside by bureaucrats, lawyers, judges and those more interested in feathering their own nests rather than the wildlife they porport to protect, more interested in the letter than the spirit of any law. Adding regulations that seem to alienate everyone who previously worked so hard to keep the seashore safe while getting to enjoy and learn about its many moods. Silly things like bans on dogs on the beach when a stricter enforcement for the small minority who don't leash their dogs would make more sense. Total closure of beaches when limited access and selective closures make more sense. Better education and patrols rather than heavy handed rules and regulations. We all need to work together not be driven apart by petty arguments, it's the local people we need on the side of the seashore and all its residents as they have been in the past and are now if just given a bit of encouragement and I just don't see it happening, especially with 800 pages of regulations when 2 or 3 would do. I know that it tries to strike a balance and that is never an easy thing, such that no one is completely happy, but when no one is remotely happy then things fall apart in a hurry.
My suggestion is that you give the lawyers, regulators, and bureaucrats the day off, cut out everything written in legalese and have some common sense rules which protect not only the birds but also the human residents for which the outer banks is justly famous. With the overriding principle of "do no harm", strike a sensible balance, if the birds are nesting let them nest in peace but don't stop everyone else enjoying the beach, bringing their well behaved pets to enjoy the water etc. When turtles are nesting, I don't think anyone but a total idiot would want to disturb them so have extra patrols to catch those idiots but don't assume that everyone is so inclined. The outer banks is a wondrous place because there is a balance between nature and man built up over the centuries by people who understand and depend on that balance but once you start treating people like children rather than adults it is human nature to behave that way. Don't destroy what you have now because you can never get it back, and what you end up with is far worse.
Thank you

I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.

The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.

* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.

* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore. Conservation is our obligation.

Correspondence: Dear Superintendent Murray,
As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.
1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."
2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness..."
Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.
3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.
Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.
Sincerely, Stephenie Stephens

Correspondence Type: Web Form
Correspondence: Date: May 10, 2010 To: National Park Service From: Subject: DEIS Off-Road Vehicle Management Plan Comments My comments concern the DEIS of the Off-Road Vehicle Management Plan prepared by the National Park Service (NPS) for the Cape Hatteras National Seashore Recreation Area.
1) Page 201: I disagree with the NPS statement: "Even with resource closures in place, protected species are still at risk [from pedestrians and ORVs]." No Piping Plover deaths have been attributed to ORVs. ORV violations continue to decrease as signage and education improve. Pedestrian violations are much more significant than ORV violations. It seems to me that any transgressions into protected area are the result of lack of NPS manpower and

enforcement than the public purposely and willfully violating out of bounds areas. 2) Page xxiv: I question the statement of as per the DEIS: "Carrying capacity would be a 'peak use limit' determined for all areas based on the linear feet of beachfront?" If you close off huge sections of the beach, you force more people into smaller areas, potentially resulting in more resource impairment and diminished visitor experience.

3) Page xix and page 23: I am against having two different closures rules pertaining to the North facing beaches (North side) and the South facing beaches (South side) as per the grid outlined in Alternative "F". I disagree with the NPS proposal to close the beaches in villages of Frisco, Hatteras and Ocracoke Villages to ORV access longer than the traditional May 15 to September 15 period for the Northern beaches, even though seasonal visitor statistics are similar for all villages. Please, make them the same: May 15 -> September 15. 4) Page 1: I agree with your statement "ORVs have long served as a primary form of access for many portions of the beach in the seashore, and continue to be the most practical means of access and parking for many visitors."

However, pedestrian only areas discriminate against individuals with limited mobility due to age or physical impairments, families with small children, and those wishing to engage in activities requiring recreational equipment (boogie boards, beach umbrellas, beach chairs, coolers, fishing rods and tackle, etc) 5) Page 53: I disagree with the special use permit proposed guidelines. It is impractical to allow the transportation of disabled visitors to the village beaches and then require the vehicle to be returned to the street or parking area. This necessitates the disabled person to have a driver to drop him (or her) off, then drive to a parking area, then trudge a long distance to the site of the drop off, then trudge the long distance through the sand back to get the vehicle. Suppose the handicap person wants to go to the beach, is capable of driving himself, yet cannot find another person to go with him? Does he now not go to the beach? This rule creates unnecessary hardships and risks in the event of an emergency as well. 6) Page 121 ? 127. I strongly disagree with the buffers as presented. We must allow for pass-thru corridors. The beach is linear with the ocean buffering on one side and the dune line on the other. For example - If you pinch off access on one side of a 4 mile linear beach and pinch off access on the other side of the 4 mile section of beach with no corridor, then you effectively have closed off all 4 miles of the beach because you CAN'T get there. The proposed bird buffers are too large, blocking access to the interior sections from the two "buffered" ends. I propose ORV pass-thru only corridors and to use breeding / nesting buffer distances to establish ORV pass through only corridors to ensure beach access in a way that does not hinder resource protection. I believe pass through corridors should be maintained for pedestrians and ORVs in all areas of the Cape Hatteras National Seashore Recreational Area throughout the entire breeding and nesting season. Corridors are vital to providing access in a way that does not hinder resource protection. Piping Plover unfledged chicks buffer should move with the brood as it relocates to reliable food source, not expanded. The 1,000 meter distance for the piping plover is way too large and not based upon peer reviewed science. A more rational distance would be 200 meters per other sites in the nation for the piping plover. Ample scientific evidence and precedent exists to support a 200 meter buffer. Buffers for other species, including American Oystercatchers, Least Terns and Colonial Waterbirds must also be changed. An effective 30 meter buffer should be established for these species rather than the 300 meter closure outlined in the DEIS. NON-ENDANGERED BIRDS should not have same protection as if endangered. Not allowing ORV access is paramount to denying the public access to these beaches. 7) Page 468: I disagree with the limitations imposed on pedestrian and ORVs. Corridors or bypasses should be provided thru, around or below high tide line in all SMAs during entire breeding season to maintain access. 8) Page 124: I strongly disagree with the NPS slant of providing for over protection of resource management over that of the public's right to access the beaches. Pro-active initiatives include: Vegetation Management, Habitat Management, Enhanced Predator Management, Colonial Water bird social attraction, Piping Plover check fledge rate, Piping plover chick buffer distance, and pass-through buffers during the incubation period. Opportunities to implement less restrictive closures as a result of the above initiatives should be considered more frequently than the 5-year periodic review process identified in the DEIS. 9) I disagree with the NPS Resource Management Pedestrian / ORV Closure Policies. These policies address the least significant factors affecting nest survival with little chance to have more than negligible impact. For example: the AMOY Nest Failures are predominately due to non-human events. Using your own stats, the mammalian predation is 54%, Storm / Lunar Tides: 29%, Nest Abandonment: 6%, Avian Predation: 5%, and Ghost Crab Predation: 3%. So what is the percentage due to human interference: just 3%! It's insignificant, yet the NPS wants to ban humans when their actions provide very little influence on the success rate of breeding birds and turtles.

10) I disagree with the stats of breeding plovers and the other birds in the Park when the NPS does not adequately consider locations neighboring the Recreational Area that are part of the same ecosystem, namely dredge and spoil island that are located just yards away and within sight of the seashore. These birds are part of the same ecosystem and should be included. Those spoil islands, developed by man from dredging the waterways in the Pamlico Sound for channel upkeep are slammed full of birds. The reason why so many birds? NO PREDATORS. SO, birds are not as stupid as one might think. You have to count these birds and incorporate them in the stats when the NPS is talking about any so called decline in breeding pairs in the National Park. 11) Page 1: I do not think the DEIS responsibly addresses the cultural resource issues. The very purpose of the DEIS as set forth in the National Environmental Policy Act (NEPA) is to protect and preserve natural and cultural resources in the federal decision making process. In the DEIS, the statement "protect and preserve natural and cultural resources" appears in the first sentence of the first page of the plan, in the Purpose of the Plan section, and numerous times thereafter. Yet, the 810 page document devotes only two paragraphs to analysis of cultural resource issues.

12) Pages 270-281; 561-598: I strongly disagree with your economic analysis of the impact of the DEIS. The region of influence (ROI) incorporates the Northern Beach communities, including Kill Devil Hills, Kitty Hawk, Southern Shores and Duck. These areas are almost completely disconnected from ORV use and access issues relating to the Seashore. ? Inclusion of the Northern Beaches in analysis significantly dilutes estimates of economic impact on the 8 Seashore Villages ? Analysis of economic impact to the Seashore Villages appears to be significantly down played. Emphasis in DEIS is on the ROI-wide or county-wide level impacts. ? Nowhere is it clearly addressed that the overwhelming majority of negative impacts will be felt by small businesses in the Seashore Villages rather than by overall economic interests within the greater ROI. On page xlvi, Alternative F is characterized as having a "negligible to moderate" adverse impact on small businesses. I strongly disagree with this statement. I believe the negligible to moderate projection is inaccurate and relies on economic surveys that has not yet been published. Furthermore, this material is not expected to be added to the DEIS until after the public comment period has ended. Based upon the economic harm we have already experienced under the consent decree, Dare County projects the economic impact of Alternative F to be substantial. Beach closures have already had a devastating and unfair impact on many Dare County Businesses, causing foreclosures, bankruptcies, lay-offs, cutbacks, expensive refinancing, and depleted college funds and savings accounts. Pages 270-286, 561-598: The socio-economic data and analyses are incomplete and erroneous and result in an understatement of the effect the restrictions will have upon the Island, the region and the state of NC. The US Park Services answer: Businesses will have to "adapt" to the new rules. (p.383) The negative economic impacts of the decree ARE KNOWN, so to say that the added restrictions would have negligible to moderate impact is indefensible. 13) Overall Visitor Counts - Overall visitor counts appear to include visitors to Fort Raleigh National Historic Site and the Wright Brothers National Memorial. A large percentage of these visitors vacation in the Northern Beaches communities and recreate on the non-federal beaches outside of the Seashore. Visitors who patronize the Fort Raleigh National Historic Site and the Wright Brothers National Memorial but do not visit the actual seashore areas need to be factored out. Maintenance of Future Access to Cape Point and South Point Ocracoke: All socioeconomic analyses related to Alternative F are predicated on the assumption that access corridors will remain open for at least an appreciable portion of the visitor high season. Under Alternative F, the access corridors will be subject to Resource Closures based on buffers similar or identical to the Consent Decree. Unless some predictability of access to Cape Point and South Point Ocracoke can be assured, economic analyses predicated on assumption of access are fundamentally flawed. Why would a group of surf fisherman want to come to Hatteras Island to surf fish if they are not sure they can access the prime fishing grounds at Cape Point? The answer is they won't come. If they don't come, they don't rent vacation homes and spend their money on Hatteras and Ocracoke Islands. The definition of the Region of Influence (ROI), faulty data on economic activity generated by specific type recreational activity, incomplete visitation/business survey data, inflated overall Seashore visitor counts pertaining to beach use, and flawed key assumptions concerning the maintenance of access under Alternative F, all lead to inaccurate conclusions in the socioeconomic analyses. Specifically, these inaccuracies can be seen as understating the negative socio-economic impact of the Seashore Villages. Further, this negative impact will be absorbed almost entirely by Small Businesses. Neither of these important aspects of the management alternatives are adequately presented in the DEIS. 14) Page 136: I strongly disagree with your pet restriction proposals. The "prohibition of pets in the Seashore during bird breeding season including in front of the villages." = No Pets in public areas ?beaches, campgrounds, soundfront, foot trails, park maintained roads -from March 15 ?July 31.

15) Pages 125; 392 ? 396: SEA TURTLES. I disagree with the stats and procedures proposed. I think endangered sea turtles would benefit from management practices now in use at other federal seashores that are more proactive in efforts to achieve nesting success. This includes relocating nests to more desirable locations as is done in other state and federally controlled areas. The Cape Hatteras National Seashore Recreational Area is on the northernmost fringe of turtle nesting locations for the southeast, accounting for about 1% of all turtle nests. Proposed buffer areas are not needed for protection of the turtles and amount to overprotection. 16) Pages 97- 101. I strongly disagree with proposals in this section saying that ORVs will be

prohibited year round between ramps 27 and 30, at Hatteras Inlet (Hatteras Spit), Ocracoke Inlet (North Ocracoke Spit) and various other locations. Not allowing ORV access is paramount to denying the public access to these beaches. They are located miles from the nearest parking or paved road area and too far to access on foot. As a matter of course, there has been no breeding of piping plover or other endangered species at the Hatteras Island Inlet (spit) area in the past 6 years. 17) Page 104: I disagree with the proposed night time driving closures. Per your proposals, night driving will be prohibited between May 1 and November 15th, forcing visitors off of the beaches early in the evening and preventing sunrise surf fishermen access in the morning. I propose a more moderate night time ban if one is needed, perhaps from June 1 ? September 15 with times being 1 hour after sunset and 1 hour before sunrise to allow beach goers to gather their stuff and exit the beach area. Certainly more proactive measures such as relocating nests prone to weather and ocean events would dramatically increase the nesting success rates. 18) Page 121: I disagree with the proposed beach closings, including pedestrian access from March 15 until July 31 in 8 different beach locations which have traditionally been available. Please leave these areas open to beach walkers, shell collectors and those that want to access the beaches in these areas. Conclusion: Please, incorporate access corridors through any SMA so we can get to the open beach beyond. Incorporate the birds into the count that nest on the spoil islands. Base your buffer zones on peer reviewed science and scale them back to more reasonable distances as discussed. It is neither logical nor reasonable to spend so much time, money and energy to overprotect a bird (Piping Plover) in the Cape Hatteras National Seashore that is on the southernmost fringe area of its breeding ground. That goes for the loggerhead turtle that is in its northernmost breeding area. Let's scale back the buffer zones. You can always increase at a later date. The USPS is leaning way over the line on over protection and not enough on the public's right to enjoy the beaches of the National Seashore. The proper balance is not achieved in the propose DEIS and needs to be modified so that the proper balance of reasonable resource protection and access to the beaches of the National Park is achieved. I could sum it up by saying "Protect, not Prohibit." Thank you, =

Correspondence: Mr. Murray: My husband, my family and I have been enjoying the hospitality of the Outer Banks for over thirty-years. We have treated the area with great respect as it has been such a part of our lives and our children's.
I feel the locals and visitors are having a great disservice put upon them and cannot understand the reasoning behind any beach closures to the extent that the island cannot be enjoyed for what it is. For many, many years nature and the public have enjoyed the island and lived harmoniously with no interference as is being forced upon everyone at this time. Mother Nature has at times destroyed everything in sight, much more so than any human encroachment that has been made to look like the undoing of all shore life.
I don't see why a happy medium cannot be reached with the input of those who truly know what the island stands for and what it means as far as the enjoyment of all concerned. It is not a nature conservatory, nor was it ever meant to be. Those areas are already designated. Why is it now so imperative that everything must be closed to even pedestrians choosing to just walk on your sandy beaches? How is that detrimental to any habitat all of a sudden?? Much of the land donated by many local families was for the enjoyment of those visiting, knowing full well the wildlife was an important part of everything as well. This has been going on for years and years and nothing has been endangered to the point of extinction that has truly been caused by using the beaches as they were intended, for the enjoyment of all.
The shores of your area certainly have seen an increase in vehicular traffic over the many years we've been visitors. Again, not nearly as destructive as Mother Nature herself and all have survived as was intended. The area is still beautiful, and can and should be able to be enjoyed by visiting fishermen, families just wanting to enjoy a truly special island. The locals, who have truly made the island what it is, I am sure, are wondering if they have any say in what's to be. It seems to fall on deaf ears and I cannot and have not heard anything or read anything that would justify what I see happening. If there was any rhyme or reason that would truly make sense, I would welcome reading it.
I am sure everyone involved would like to see something take effect that would be to everyone's benefit, not just certain groups. There has to be someone out there with the knowledge and expertise so everyone can be in a win-win situation, the island, the outsiders, the visitors, the locals. If everyone would just work together, what a great solution to all concerned and a benefit to the local economy in this most trying of times. Please know that the visitors to the island care and want to see the wildlife and also see our grandchildren and those to follow be able to experience what has been in the past.

Correspondence: I wish to express my deepest concern regarding the Park Services Preferred alternative F. I am totally opposed to restrictions of access for ORVs and pedestrians especially during the designated seasons. The proposal will have a great impact on the way of life of all the citizens of this island, the economy of the area, the quality of life and the experience of visitors. Shutting down areas of the beach results in loss of jobs due to tourism. There will be few (with the exception of park service) who will not be affected. DOT employees, hyde county employees, health care employees as well as every other business that relies on tourist visitation will be reduce in size and numbers. While the park service will be guaranteed jobs (and probably increased numbers of jobs due to enforcement) the entire community will be reduced in work. The Outer Banks has thrived and, to my knowledge, lived in harmony with birds and other habitat. What good is it to have this beautiful environment if no one is there to enjoy it. Several of the birds species intended to be protected are interlopers, ie they are not endogenous to this area and I have yet to see a bird killed by on ORV. There are not any studies that show that ORVs are reducing numbers or that the restrictions which have been ongoing for the past two years are making any difference. The restrictions have demonstrated a decreased in tourism and the overall happiness of visitors and residents alike. The are ample nesting areas in dunes and on Portsmouth island as well as Pea Island. Perhaps the endangered species is the human race who has occupied this area for many generations. By closing down a great deal of the beach during the summer season, visitors are pressed together in small areas, that will lead to more undesirable and destructive behavior. Recent fishing tournaments - a positive effect on the economy - resulted in cramped anglers and very little beach on Ocracoke Island for any other tourists. I will use an analogy from scuba diving where uneducated individuals often destroyed the environments of the reef. Once educated, scuba diving and reef life and endangered marine lifeforms now thrive together. Education and reminder signage will decrease destruction and encourage better behavior of individuals on the Outer Banks. I would suggest turtle nests be relocated when in the ORV path, habitat for birds be constructed, scientific studies be conducted on habitat and support of nesting of endangered species and even perhaps some localized strategic closing of areas during known specified breeding periods. Closing land (beach) for long periods of time in the hopes that nesting will occur and without scientific studies to confirm hypothesis serves no one, except park service employees of course, and is overreacting. Enforce leash laws for animals, enforce speed limits, safe driving practices and use of alcohol on the beach. Please consider that the way of life and quality of life for the individual who has chosen to live and work here is more important than saving the beach from vehicular traffic. I support the positions of the Coalition for Beach Access. Alternative F is going way too far. If that alternative is selected, then the Park Service will essentially close the Outer Banks like it closed Core Banks and only the birds will be able to live here.

 Correspondence:

May 10, 2010 To: National Park Service From: Subject: DEIS Off-Road Vehicle Management Plan Comments My comments concern the DEIS of the Off-Road Vehicle Management Plan prepared by the National Park Service (NPS) for the Cape Hatteras National Seashore Recreation Area.

1) Page 201: I disagree with the NPS statement: "Even with resource closures in place, protected species are still at risk [from pedestrians and ORVs]." No Piping Plover deaths have been attributed to ORVs. ORV violations continue to decrease as signage and education improve. Pedestrian violations are much more significant than ORV violations. It seems to me that any transgressions into protected area are the result of lack of NPS manpower and enforcement than the public purposely and willfully violating out of bounds areas. 2) Page xxiv: I question the statement of as per the DEIS: "Carrying capacity would be a 'peak use limit' determined for all areas based on the linear feet of beachfront?" If you close off huge sections of the beach, you force more people into smaller areas, potentially resulting in more resource impairment and diminished visitor experience.

3) Page xix and page 23: I am against having two different closures rules pertaining to the North facing beaches (North side) and the South facing beaches (South side) as per the grid outlined in Alternative "F". I disagree with the NPS proposal to close the beaches in villages of Frisco, Hatteras and Ocracoke Villages to ORV access longer than the traditional May 15 to September 15 period for the Northern beaches, even though seasonal visitor statistics are similar for all villages. Please, make them the same: May 15 -> September 15. 4) Page 1: I agree with your statement "ORVs have long served as a primary form of access for many portions of the beach in the seashore, and continue to be the most practical means of access and parking for many visitors."

However, pedestrian only areas discriminate against individuals with limited mobility due to age or physical impairments, families with small children, and those wishing to engage in activities requiring recreational equipment (boogie boards, beach umbrellas, beach chairs, coolers, fishing rods and tackle, etc) 5) Page 53: I disagree with the special use permit proposed guidelines. It is impractical to allow the transportation of disabled visitors to the village beaches and then require the vehicle to be returned to the street or parking area. This necessitates the disabled person to have a driver to drop him (or her) off, then drive to a parking area, then trudge a long distance to the site of the drop off, then trudge the long distance through the sand back to get the vehicle. Suppose the handicap person wants to go to the beach, is capable of driving himself, yet cannot find another person to go with him? Does he now not go to the beach? This rule creates unnecessary hardships and risks in the event of an emergency as well. 6) Page 121 ? 127. I strongly disagree with the buffers as presented. We must allow for pass-thru corridors. The beach is linear with the ocean buffering on one side and the dune line on the other. For example - If you pinch off access on one side of a 4 mile linear beach and pinch off access on the other side of the 4 mile section of beach with no corridor, then you effectively have closed off all 4 miles of the beach because you CAN'T get there. The proposed bird buffers are too large, blocking access to the interior sections from the two "buffered" ends. I propose ORV pass-thru only corridors and to use breeding / nesting buffer distances to establish ORV pass through only corridors to ensure beach access in a way that does not hinder resource protection. I believe pass through corridors should be maintained for pedestrians and ORVs in all areas of the Cape Hatteras National Seashore Recreational Area throughout the entire breeding and nesting season. Corridors are vital to providing access in a way that does not hinder resource protection. Piping Plover unfledged chicks buffer should move with the brood as it relocates to reliable food source, not expanded. The 1,000 meter distance for the piping plover is way too large and not based upon peer reviewed science. A more rational distance would be 200 meters per other sites in the nation for the piping plover. Ample scientific evidence and precedent exists to support a 200 meter buffer. Buffers for other species, including American Oystercatchers, Least Terns and Colonial Waterbirds must also be changed. An effective 30 meter buffer should be established for these species rather than the 300 meter closure outlined in the DEIS. NON-ENDANGERED BIRDS should not have same protection as if endangered. Not allowing ORV access is paramount to denying the public access to these beaches. 7) Page 468: I disagree with the limitations imposed on pedestrian and ORVs. Corridors or bypasses should be provided thru, around or below high tide line in all SMAs during entire breeding season to maintain access. 8) Page 124: I strongly disagree with the NPS slant of providing for over protection of resource management over that of the public's right to access the beaches. Pro-active initiatives include: Vegetation Management, Habitat Management, Enhanced Predator Management, Colonial Water bird social attraction, Piping Plover check fledge rate, Piping plover chick buffer distance, and pass-through buffers during the incubation period. Opportunities to implement less restrictive closures as a result of the above initiatives should be considered more frequently than the 5-year periodic review process identified in the DEIS. 9) I disagree with the NPS Resource Management Pedestrian / ORV Closure Policies. These policies address the least significant factors affecting nest survival with little chance to have more than negligible impact. For example: the AMOY Nest Failures are predominately due to non-human events. Using your own stats, the mammalian predation is 54%, Storm / Lunar Tides: 29%, Nest Abandonment: 6%, Avian Predation: 5%, and Ghost Crab Predation: 3%. So what is the percentage due to human interference: just 3%! It's insignificant, yet the NPS wants to ban humans when their actions provide very little influence on the success rate of breeding birds and turtles.

10) I disagree with the stats of breeding plovers and the other birds in the Park when the NPS does not adequately consider locations neighboring the Recreational Area that are part of the same ecosystem, namely dredge and spoil island that are located just yards away and within sight of the seashore. These birds are part of the same ecosystem and should be included. Those spoil islands, developed by man from dredging the waterways in the Pamlico Sound for channel upkeep are slammed full of birds. The reason why so many birds? NO PREDATORS. SO, birds are not as stupid as one might think. You have to count these birds and incorporate them in the stats when the NPS is talking about any so called decline in breeding pairs in the National Park. 11) Page 1: I do not think the DEIS responsibly addresses the cultural resource issues. The very purpose of the DEIS as set forth in the National Environmental Policy Act (NEPA) is to protect and preserve natural and cultural resources in the federal decision making process. In the DEIS, the statement "protect and preserve natural and cultural resources" appears in the first sentence of the first page of the plan, in the Purpose of the Plan section, and numerous times thereafter. Yet, the 810 page document devotes only two paragraphs to analysis of cultural resource issues.

12) Pages 270-281; 561-598: I strongly disagree with your economic analysis of the impact of the DEIS. The region of influence (ROI) incorporates the Northern Beach communities, including Kill Devil Hills, Kitty Hawk, Southern Shores and Duck. These areas are almost completely disconnected from ORV use and access issues relating to the Seashore. ? Inclusion of the Northern Beaches in analysis significantly dilutes estimates of economic impact on the 8 Seashore Villages ? Analysis of economic impact to the Seashore Villages appears to be significantly down played. Emphasis in DEIS is on the ROI-wide or county-wide level impacts. ? Nowhere is it clearly addressed that the overwhelming majority of negative impacts will be felt by small businesses in the Seashore Villages rather than by overall economic interests within the greater ROI. On page xlvi, Alternative F is characterized as having a "negligible to moderate" adverse impact on small businesses. I strongly disagree with this statement. I believe the negligible to moderate projection is inaccurate and relies on economic surveys that has not yet been published. Furthermore, this material is not expected to be added to the DEIS until after the public comment period has ended. Based upon the economic harm we have already experienced under the consent decree, Dare County projects the economic impact of Alternative F to be substantial. Beach closures have already had a devastating and unfair impact on many Dare County Businesses, causing foreclosures, bankruptcies, lay-offs, cutbacks, expensive refinancing, and depleted college funds and savings accounts. Pages 270-286, 561-598: The socio-economic data and analyses are incomplete and erroneous and result in an understatement of the effect the restrictions will have upon the Island, the region and the state of NC. The US Park Services answer: Businesses will have to "adapt" to the new rules. (p.383) The negative economic impacts of the decree ARE KNOWN, so to say that the added restrictions would have negligible to moderate impact is indefensible. 13) Overall Visitor Counts - Overall visitor counts appear to include visitors to Fort Raleigh National Historic Site and the Wright Brothers National Memorial. A large percentage of these visitors vacation in the Northern Beaches communities and recreate on the non-federal beaches outside of the Seashore. Visitors who patronize the Fort Raleigh National Historic Site and the Wright Brothers National Memorial but do not visit the actual seashore areas need to be factored out. Maintenance of Future Access to Cape Point and South Point Ocracoke: All socioeconomic analyses related to Alternative F are predicated on the assumption that access corridors will remain open for at least an appreciable portion of the visitor high season. Under Alternative F, the access corridors will be subject to Resource Closures based on buffers similar or identical to the Consent Decree. Unless some predictability of access to Cape Point and South Point Ocracoke can be assured, economic analyses predicated on assumption of access are fundamentally flawed. Why would a group of surf fisherman want to come to Hatteras Island to surf fish if they are not sure they can access the prime fishing grounds at Cape Point? The answer is they won't come. If they don't come, they don't rent vacation homes and spend their money on Hatteras and Ocracoke Islands. The definition of the Region of Influence (ROI), faulty data on economic activity generated by specific type recreational activity, incomplete visitation/business survey data, inflated overall Seashore visitor counts pertaining to beach use, and flawed key assumptions concerning the maintenance of access under Alternative F, all lead to inaccurate conclusions in the socioeconomic analyses. Specifically, these inaccuracies can be seen as understating the negative socio-economic impact of the Seashore Villages. Further, this negative impact will be absorbed almost entirely by Small

Businesses. Neither of these important aspects of the management alternatives are adequately presented in the DEIS. 14) Page 136: I strongly disagree with your pet restriction proposals. The "prohibition of pets in the Seashore during bird breeding season including in front of the villages." = No Pets in public areas ?beaches, campgrounds, soundfront, foot trails, park maintained roads -from March 15 ?July 31.

15) Pages 125; 392 ? 396: SEA TURTLES. I disagree with the stats and procedures proposed. I think endangered sea turtles would benefit from management practices now in use at other federal seashores that are more proactive in efforts to achieve nesting success. This includes relocating nests to more desirable locations as is done in other state and federally controlled areas. The Cape Hatteras National Seashore Recreational Area is on the northernmost fringe of turtle nesting locations for the southeast, accounting for about 1% of all turtle nests. Proposed buffer areas are not needed for protection of the turtles and amount to overprotection. 16) Pages 97- 101. I strongly disagree with proposals in this section saying that ORVs will be prohibited year round between ramps 27 and 30, at Hatteras Inlet (Hatteras Spit), Ocracoke Inlet (North Ocracoke Spit) and various other locations. Not allowing ORV access is paramount to denying the public access to these beaches. They are located miles from the nearest parking or paved road area and too far to access on foot. As a matter of course, there has been no breeding of piping plover or other endangered species at the Hatteras Island Inlet (spit) area in the past 6 years. 17) Page 104: I disagree with the proposed night time driving closures. Per your proposals, night driving will be prohibited between May 1 and November 15th, forcing visitors off of the beaches early in the evening and preventing sunrise surf fishermen access in the morning. I propose a more moderate night time ban if one is needed, perhaps from June 1 ? September 15 with times being 1 hour after sunset and 1 hour before sunrise to allow beach goers to gather their stuff and exit the beach area. Certainly more proactive measures such as relocating nests prone to weather and ocean events would dramatically increase the nesting success rates. 18) Page 121: I disagree with the proposed beach closings, including pedestrian access from March 15 until July 31 in 8 different beach locations which have traditionally been available. Please leave these areas open to beach walkers, shell collectors and those that want to access the beaches in these areas. Conclusion: Please, incorporate access corridors through any SMA so we can get to the open beach beyond. Incorporate the birds into the count that nest on the spoil islands. Base your buffer zones on peer reviewed science and scale them back to more reasonable distances as discussed. It is neither logical nor reasonable to spend so much time, money and energy to overprotect a bird (Piping Plover) in the Cape Hatteras National Seashore that is on the southernmost fringe area of its breeding ground. That goes for the loggerhead turtle that is in its northernmost breeding area. Let's scale back the buffer zones. You can always increase at a later date. The USPS is leaning way over the line on over protection and not enough on the public's right to enjoy the beaches of the National Seashore. The USPS needs to remember that they do not own the beaches, they are only allowed to use them as a GIFT FROM GOD!!! The proper balance is not achieved in the proposed DEIS and needs to be modified so that the proper balance of reasonable resource protection and access to the beaches of the National Park is achieved. I could sum it up by saying "Protect, not Prohibit." Thank you, =

Mike Murray, Superintendent Cape Hatteras National Seashore 1401 National Park Drive Manteo, NC 27954 252-473-2111 x 148
Dear Mr. Murray:

I am writing to request that the National Park Service removes alternative A from the list of possible management plans for Cape Hatteras National Seashore. As stated in the purpose section of the plan, the goal is to develop a management plan that stipulates ORV use in a manner that will maintain the parks' resources. Being written as non-action plan negates the ability of this alternative to successfully accomplish the task.

The foundation of this plan is the buffer zones intended to protect the piping plover. However, there are many aspects within the written alternative that suggest this plan is flawed. To begin with, the frequently changing location of these zones often leaves visitors unaware of their current place. As a result, visitors unintentionally infringe upon the birds' habitat, damaging it. Although the park offers educational materials to prevent this, it often isn't adequate. Some visitors also knowingly ignore boundary signs.

Additionally, buffer zones aren't very effective at providing protection for the species. One of the necessary parameters to create a quality management plan is an accurate population count. Unfortunately, breaking the plover's habitat into segmented buffers presents a huge challenge in doing so, consequently underestimating the amount of space the specie needs. Furthermore, these buffers require impeccable timing in order to be useful, which also reduces their value.

The park service is planning to use these buffers for the management of the wintering/nonbreeding piping plover populations as well. These birds face all the above issues, along with other challenges admitted but not addressed within the plan. The first difficulty is the assumption that despite posted signs, the plover habitat will be disturbed and destroyed. The proposed solution is to further research the piping plovers patterns to decide the best protective measure. Not only will the population dwindle as researchers decide how to best protect the species, valuable habitat will also be destroyed. In light of Alternative A's lacking features, Alternative C is the more favorable, comprehensive, solution-oriented, environmentally friendly option. Instead of passively managing the seashore, this plan uses innovative actions to incorporate recreational uses into this sensitive environment. Relocating the ORV ramps to the less sensitive uplands will significantly reduce the negative impacts on the land, including piping plover habitat destruction. Although the construction of these ramps will cause some damages, the benefits far outweigh them.

An additional advantage of this plan is the replacement of the buffer zones with seasonal closings. These closings provide higher levels of protection to the endangered plovers because they allow a more consistent and enforceable boundary. Further land distinction also deters recreational users from violating signage and crossing onto protected property.

In summary, due to the dynamic nature of the buffers, Alternative A isn't well suited to provide adequate protection to the piping plovers. Recreational users are generally ignorant or unwilling to abide by the signs designated to limit ORV travel, thus destroying prime plover land. The seasonal closings offered by Alternative C are more likely to be obeyed and thus safeguard the birds' habitat and surrounding land. Since the latter option proposes a more holistic management plan, I encourage you to drop Alternative A and strongly consider Alternative C.

Sincerely, Kelly Winkelmeyer

Correspondence: We love the Outer Banks and try to go there several times a year. Our enjoyment stems from the unspoiled beaches, its wildlife, and the crashing of the waves.

Of the alternatives presented, I prefer "environmentally preferred" Alternative D. According to the law, Cape Hatteras was established to be used primarily for primitive wilderness. The use of Off Road Vehicles (ORVs) is destructive and should only be allowed where its use will not harm wildlife.

Thank you for the opportunity to comment. I appreciate the hardwork of the National Park personnel for making sure our national treasures remain treasures.

Mike Murray, Superintendent Cape Hatteras National Seashore 1401 National Park Drive Manteo, NC 27954

Dear Superintendent Murray:

On behalf of the Coalition of National Park Service Retirees (Coalition) we appreciate the opportunity to provide these comments on the Draft Environmental Impact Statement for the Off-Road Vehicle Management Plan at Cape Hatteras National Seashore. Representatives of the Coalition participated in the process for negotiated rulemaking leading up to this EIS. We believe that the negotiated rulemaking process, while not resulting in a product acceptable to all sides, served as a useful mechanism to allow the differing parties to fully develop and express their interests and concerns which were then used in the development of this EIS. Additionally, we commend park management and the NPS in their much-needed efforts to address the issue of off-highway vehicles at Cape Hatteras. The issue of beach driving at Cape Hatteras has been allowed to continue without required authorization or regulation for too long.

Document Adequacy

The document presents a full range of alternatives allowing for beach use as required under the National Environmental Policy Act, its implementing regulations and Department of the Interior and NPS standards. While a complete beach closure alternative scenario is not presented, such an analysis would not meet the stated purpose and need or management objectives described by the document.

The environmental analysis contained within the document represents a thorough and professional description of potential effects resulting from the alternatives. The document properly includes in the alternatives and the analysis provisions addressing species in addition to those species listed as threatened or endangered. The NPS Organic Act, Cape Hatteras enabling legislation, and the NPS Management Policies direct the preservation of native flora, fauna and natural processes. As a result, it is entirely appropriate that the plan and environmental analysis include provisions that take into account the presence of species of concern in the management of OHV use. Additionally, consideration of such species is consistent with the purpose and need as expressed in the document as well as the articulated management objectives for the plan.

Decision Standard

As the NPS moves forward in the decision-making process it is important to keep in mind the guiding legal precepts for any decision affecting NPS resources.

Any decision made must be in accord with the provisions of the Organic Act of the National Park System. While the 1916 Organic Act serves as the foundation of NPS administration, Congress further clarified the responsibilities of the NPS in with further legislative guidance. Under the provisions of 16 USC '1a1 Congress provided that:

"the national park system, which began with establishment of Yellowstone National Park in 1872, has since grown to include superlative natural, historic, and recreation areas in every major region of the United States, its territories and island possessions; that these areas, though distinct in character, are united through their inter-related purposes and resources into one national park system as cumulative expressions of a single national heritage; that, individually and collectively, these areas derive increased national dignity and recognition of their superb environmental quality through their inclusion jointly with each other in one national park system preserved and managed for the benefit and inspiration of all the people of the United States; and that it is the purpose of this Act to include all such areas in the System and to clarify the authorities applicable to the system. Congress further reaffirms, declares, and directs that the promotion and regulation of the various areas of the National Park System, as defined in section 1c of this title, shall be consistent with and founded in the purpose established by section 1 of this title, to the common benefit of all the people of the United States. The authorization of activities shall be construed and the protection, management, and administration of these areas shall be conducted in light of the high public value and integrity of the National Park System and shall not be exercised in derogation of the values and purposes for which these various areas have been established, except as may have been or shall be directly and specifically provided by Congress.

Thus, while the names of units administered by the NPS may differ in their classification as seashores, recreation areas, monuments or parks, the administration of the areas is carried out under a uniform standard. As stated in the Management Policies section 1.4.3, that standard "begins with the mandate to conserve park resources and values." Any decision made by the NPS needs to assure that such mandates are the foundation for any final determination concerning the operation of OHV vehicles at Cape Hatteras.

While the procedural provisions of NEPA have been closely adhered to during the development of this plan, the Coalition is concerned about the undue influence of local economic and political interests in the process. Local interests are often the most vocal and persistent in the planning process. However, in the end, Cape Hatteras is a unit of a national system and is recognized for its national significance. We note that the public meeting locations have centered around the area adjacent to Cape Hatteras and have not been held in areas of Northern Virginia or the metropolitan Washington DC area. These areas are home to many vacationers who enjoy the resources of Cape Hatteras as well as persons interested in the maintenance and survival of species and resources that may be influenced by OHV activity the park unit. We believe that a better cross section of the interested public could have been involved if public meetings were conducted in a broader geographic area.

Based on the above considerations, the Coalition urges the park to select Alternative D, the environmentally preferred alternative, as the option to be implemented.

We commend park managers for taking on the considerable task of developing a management plan for OHV use, and appreciate the opportunity to comment.

Sincerely,

Richard B. Smith Chair Coalition of National Park Service 2 Roadrunner Trail Placitas, NM 87043 Tel: 505-867-0047 Cell: 505-259-7161 Email: rsmith0921@comcast.net

Correspondence: Dear Superintendent Murray,

As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.

- 1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."
- 2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness...." Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.
- 3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.

Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

Sincerely, Stephen Carl

Correspondence: I have visited Cape Hatteras many times and always thought that the arrangement that allowed selected portions of the Cape to be segregated from vehicular traffic was ideal. In talking to the many other visitors I encountered while there, I never -- I emphasize NEVER -- heard anyone complain to the contrary. The arrangement is not "broke", so do not try to fix it.

Correspondence: The DEIS and its proposed plan for CAHA violate the very spirit of the Park's inception. I quote from Secretary of the Interior Harold Ickes from 1938, "The people can no longer get to the ocean...except by permission of those who monopolize the ocean front...Call this ocean a national park, or a national seashore, or a state park or anything you please - I say the people have a right to a fair share of it." The recent actions forced upon NPS and the American people by greedy lawyers have and will further destroy the intent of the Park and have made a mockery of the Park Service. The Cape Hatteras Recreation Area was set forth for the people of the United States to use for reasonable recreational purposes, from swimming and fishing to simply walking their pet. However, the unscientific attacks by well funded outsider environmental groups has taken acres and miles of shoreline and their surrounding areas from the people and turned the Park into a wildlife preserve for a very few animals. Please require hard scientific study rather than take the word of rich lawyers. Please take into consideration the rights by law and precedent of the American people to enjoy the Park in its original intent. Please take into consideration the hundreds of thousands of tax payer dollars spent to overly protect a few birds - while purposely killing mammals which is utter hypocrisy. Please allow law abiding citizens to continue the right to walk their pet in front of and near the villages where they live. Enforce existing leash laws rather than banning pets. Law enforcement doesn't close a road because a few people may speed. NPS has proposed a ORV management plan based on the concept of negotiating rulemaking but the few environmentalist organizations on the committee refused to negotiate at all during the process. If NPS really wants to serve all parties, it must break the stanglehold on the Park by a few lobbyists and lawyers, use peer reviewed science to make its recommendations for management which will by course return the Park to the letter and spirit of its original intent.
Sincerely, Henry Brent Larson

Correspondence: I do not have the time to thoroughly educate myself on this plan but I would like to express the importance of ORV access to me and my family. Most recently my family and I visited Okracoke Island. One of our favorite aspects of the trip was the beach.. (go figure). We were able to drive our 4x4 Suburban on the beach, park, and enjoy. It was November and accept for several other fishermen and their vehicles the beach was empty. It was one of the best beach experiences I remember. We can't wait to go back and part of what made it so great was being able to drive on the beach. I would not be going back if that was not available. Please figure out away to keep the animals safe but also allow people to enjoy the beach in a responsible way.

Correspondence: After reading the plan with all its options,I must disagree with these options.The ORV routes are extremely restrictive while the bird closures are extremely excessive. I can not find solid scientific data supporting the size of the closuers for the birds as well as the increased closure area for the turtles. As an Environmental Scientist, who has worked with endangered species and habitat modification, I understand the need for the protection of species but fail to see the need for the extreme measures being taken in the park.Since the data indicates the birds are in their southern most range of their habitat, increasing the closure area will do little if any to increase their overall population. Any first year Environmental Science student knows, these birds occupy the flatter ends of the population bell curve and that in itself becomes the limiting factor to increased the overall population.Although the birds can not read a graph,the data from the graph tell us that very little if any increase in the population will occur. If some one does read this, I thank you for your time and consideration.

Correspondence Type: Web Form
Correspondence: The NPS must formulate a plan that is consistent with the legislation establishing Cape Hatteras National Seashore Recreation Area. The enabling legislation for the Recreational Area states, in part, "said area shall be, and is, established, dedicated, and set apart as a national seashore recreational area for the benefit and enjoyment of the people and shall be known as the Cape Hatteras National Seashore Recreational Area". Therefore, it is important to balance resource protection with reasonable access for recreation. Corridors are a vital tool in providing access while managing resources. They provide a small path around temporary resource closures in order to provide access to open areas that would otherwise be blocked. Corridors should be permitted throughout the seashore during the entire breeding and nesting season including ML-1 portions of SMAs. These corridors would provide valuable access without impairment or damage to protected resources.
 Buffers, or closures, are important management practices for species recovery. However, to have long term benefit for the wildlife and the visiting public, buffers must be based on peer-reviewed science. For example, the Piping Plover, a species classified as threatened and not endangered, is given a level of unprecedented protection in Alternative F. A 1,000-meter buffer in all directions represents over 771 acres. The DEIS does not cite any peer-reviewed science in supporting such closure. A more appropriate & effective buffer would be 200 meters.
 Birds that are not listed as endangered should not be afforded the level of protection given to ESA (Endangered Species Act) protected species. Instead of 300-meter buffers for these birds, a more appropriate buffer would be 30 meters. Also, all birds in the same ecosystem of the seashore should be counted. This includes all the many birds on the dredge and spoil islands located just yards away and within sight of the seashore.
 The National Park Service should consider turtle management practices successfully used in other federal and state areas to achieve nesting success. More proactive measures include relocating nests to more desirable locations, which is routinely and successfully done in other areas.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
 This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
 The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
 *Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
 * Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
 * Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
 Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
 This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
 The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
 *Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
 * Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
 * Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Correspondence: Dear Superintendent Murray,
As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft

plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.

- 1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."
- 2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness..." Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.
- 3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.

Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

Yours truly,
Susan E. Porter

Correspondence: The NPS must formulate a plan that is consistent with the legislation establishing Cape Hatteras National Seashore Recreation Area. The enabling legislation for the Recreational Area states, in part, "said area shall be, and is, established, dedicated, and set apart as a national seashore recreational area for the benefit and enjoyment of the people and shall be known as the Cape Hatteras National Seashore Recreational Area". Therefore, it is important to balance resource protection with reasonable access for recreation. When we visit the Cape Hatteras area we look forward to riding atvs . Please don't take away our riding areas we use while vacationing . We'll be forced to vacation elsewhere where atvs are given an opportunity to ride . Thank you JB

Correspondence: To whom it may concern. I am submitting a comment relating to the DEIS study. My family and I have lived here for 19 years and still don't quite understand the over reaction by more than a few to destroy our livelihoods and wreck our way of life. Reasonable protection is a must for the future of all next generations, but over the boundary limitations to insure this protection is not the answer.

I encourage you to have a second, third, even fourth look at the serious impact your Alternative F will have on this already economically fragile Island(s).

There is no doubt, as we have already felt the negative impact, that your favored alternative will help to run others off the Island and others to close their family businesses. Isn't the National economy in enough danger that it would be critically dangerous to offer another significant section of unemployed persons to the Government?

We all hope there will be a much more favorable decision reached by the end of the year. Meanwhile, we are forced to struggle through another round of beach closures, damaging the natural landscape with the "closed" signs and ropes streaming all along Highway 12. Isn't there some concern for altering the National Seashore with all the hardware?

1)I disagree with the NPS Resource Management Pedestrian / ORV Closure Policies. These policies address the least significant factors affecting nest survival with little chance to have more than negligible impact. For example: the AMOY Nest Failures are predominately due to non-human events. Using your own stats, the mammalian predation is 54%, Storm / Lunar Tides: 29%, Nest Abandonment: 6%, Avian Predation: 5%, and Ghost Crab Predation: 3%, So what is the percentage due to human interference: just 3%! It's insignificant, yet the NPS wants to ban humans when their actions provide very little influence on the success rate of breeding birds and turtles.

2)I disagree with the stats of breeding plovers and the other birds in the Park when the NPS does not adequately consider locations neighboring the Recreational Area that are part of the same ecosystem, namely dredge and spoil island that are located just yards away and within sight of the seashore. These birds are part of the same ecosystem and should be included. Those spoil islands, developed by man from dredging the waterways in the Pamlico Sound for channel upkeep are slammed full of birds. The reason why so many birds? NO PREDATORS. SO, birds are not as stupid as one might think. You have to count these birds and incorporate them in the stats when the NPS is talking about any so called decline in breeding pairs in the National Park.

3)Page 121 ? 127. I strongly disagree with the buffers as presented. We must allow for pass-thru corridors. The beach is linear with the ocean buffering on one side and the dune line on the other. For example - If you pinch off access on one side of a 4 mile linear beach and pinch off access on the other side of the 4 mile section of beach with no corridor, then you effectively have closed off all 4 miles of the beach because you CAN'T get there. The proposed bird buffers are too large, blocking access to the interior sections from the two "buffered" ends. I propose ORV pass-thru only corridors and to use breeding / nesting buffer distances to establish ORV pass through only corridors to ensure beach access in a way that does not hinder resource protection. I believe pass through corridors should be maintained for pedestrians and ORVs in all areas of the Cape Hatteras National Seashore Recreational Area throughout the entire breeding and nesting season. Corridors are vital to providing access in a way that does not hinder resource protection. Piping Plover unfledged chicks buffer should move with the brood as it relocates to reliable food source, not expanded. The 1,000 meter distance for the piping plover is way too large and not based upon peer reviewed science. A more rational distance would be 200 meters per other sites in the nation for the piping plover. Ample scientific evidence and precedent exists to support a 200 meter buffer. Buffers for other species, including American Oystercatchers, Least Terns and Colonial Waterbirds must also be changed. An effective 30 meter buffer should be established for these species rather than the 300 meter closure outlined in the DEIS. NON-ENDANGERED BIRDS should not have same protection as if endangered. Not allowing ORV access is paramount to denying the public access to these beaches. 4)Pages 125; 392 ? 396: SEA TURTLES. I disagree with the stats and procedures proposed. I think endangered sea turtles would benefit from management practices now in use at other federal seashores that are more proactive in efforts to achieve nesting success. This includes relocating nests to more desirable locations as is done in other state and federally controlled areas. The Cape Hatteras National Seashore Recreational Area is on the northernmost fringe of turtle nesting locations for the southeast, accounting for about 1% of all turtle nests. Proposed buffer areas are not needed for protection of the turtles and amount to overprotection. It is neither logical nor reasonable to spend so much time, money and energy to overprotect a bird (Piping Plover) in the Cape Hatteras National Seashore that is on the southernmost fringe area of its breeding ground. That goes for the loggerhead turtle that is in its northernmost breeding area. Let's scale back the buffer zones. You can always increase at a later date.

Thank you, Sheila Collie

Correspondence: (1) After reviewing the NPS DEIS I must disagree with any of the six alternatives within the document. I have; however, reviewed the 77 page Coalition for Beach Access Poaition Statement signed by several groups that were a part of the negotiated rule making process and it by far succeeds in furnishing

the best visitor experience while maintaining the needs of protecting the fragile resources. Please consider all aspects of this alternative and put people back into the management of Cape Hatteras National Seashore Recreational Area. (2)I disagree with the extreme buffers outlined in DEIS pages 121 to 127. They must be modified to substantially reduce the minimum 1,000 meter buffer in all directions required in Alternative F for unfledged Piping Plover chicks. Dare County believes a more appropriate and yet effective buffer is 200 meters. Ample scientific evidence and precedent exists to support a 200 meter buffer. (3) I agree with the Coalition for Beach Access position statement on the DEIS. I do not believe the DEIS adequately addressed the cultural significance of access to the Cape Hatteras National Seashore Recreational Area.

Correspondence: My biggest concern is the livelihood and well being of the residents of Hatteras Island. The economic impact has and will continue to be unbearable for a growing number of them. The impact study should have focused on the island itself rather than all of Dare County. By including the whole Co., a skewed image is presented which does not reflect the true impact on the islander. The provisions for buffers at bird nest is another more specific concern. Unrealistically larger buffers are prescribed in the plan. For all the research I have done on these, I can find no scientific data that supports or recommends buffers of this size. Apparently the size is an arbitrary size which is many times larger than those used in any of the NPS holdings where Piping Plovers nest. There should be consistency in the provisions for the nesting birds and not just choosing a size in a non scientific manner.

Supt. Murray:
Please accept this letter as my additional comments on the ORV DEIS before you at this time.
After reviewing the NPS DEIS I must disagree with any of the six alternatives within the document.
I have however, reviewed the 77-page Coalition for Beach Access Position Statement signed by several groups that were a part of the negotiated rulemaking process, and it by far succeeds in furnishing the best visitor experience while maintaining the needs of protecting the fragile resources. Please consider all aspects of this alternative and put people back into the management of Cape Hatteras National Seashore.
In addition, issue all through the discussion of access, from negotiated rulemaking through the Park Service public comment meetings, has been whether or not birds that are not federally protected should be afforded large buffers and pre-nesting and nesting closures.
The piping plover is the only bird on the Cape Hatteras National Seashore that is listed under the federal Endangered Species Act. The other birds that get special treatment are listed only as "species of special concern" by the state of North Carolina.

Many people have written about this and commented on the issue at negotiated rulemaking. It also has been singled out in comments that access proponents have made during the NPS public meetings and in their comments.

State Sen. Marc Basnight and Rep. Tim Spear addressed this issue head on in their comments to the Park Service on the DEIS.

They asked why state-listed species of special concern are getting protected under the DEIS and Alternative F and why the Park Service will not recognize the entire ecosystem when counting these birds. Many of them are nesting in great numbers on dredge spoil islands just a stone's throw from the seashore.

Here is an excerpt from the Basnight/Spear comment:

"Another confusing issue in the buffers listed in the DEIS is the equal and even more protective status given to species not on the endangered species list. Birds listed as North Carolina species of concern should not be given protected status under the Endangered Species Act. We have spoken with both the Chairman and Executive Director of the North Carolina Wildlife Resources Commission regarding this matter. Both have informed us that these unnecessary protections were never the intent of the Commission's participation in this process, nor a requested outcome. They have also informed us that other species of concern are not given ESA status on other federal lands. Pre-nesting closures should be exclusively for the piping plover, the only federally listed threatened bird species. Also, non-ESA listed birds should not have buffers of 300 meters. The county feels a more appropriate buffer would be 30 meters. We also spoke with NCWRC regarding the inclusion of all birds in the ecosystem being counted when doing any type of management plan. Currently, birds on dredge spoil islands located adjacent to the Park are not being included in the population figures. They agree these islands have no predation and are ideal locations for nesting. To not include the populations of these islands is disingenuous to the intent of this process."

According to Gordon Myers, executive director of the Wildlife Resources Commission, confirmed in a telephone interview that he is working on DEIS comment for that agency that will request that the state species of special concern not be given the same status as federally listed birds.

"These restrictions on the use of public land have never been our intent," he said.

He added that what the Park Service has proposed in the DEIS is not what the agency is asking for.

He also said that the agency thinks that the entire ecosystem should be considered when assessing the health of bird populations.

He says that the Park Service, U.S. Fish and Wildlife Service, and the Wildlife Resources Commission, which all do bird counts, need to coordinate their efforts to give a composite picture of populations in the area ? not just focus on birds on the seashore.

The birds listed under the state's species of special concern should be protected ? as they have been for decades on Hatteras Island. But there is no reason that a federal agency should grant them equal protection with federally listed birds under the ESA.

Trim back those buffers.

WHAT ABOUT PEA ISLAND?

Pea Island National Wildlife Refuge is managed by the U.S. Fish and Wildlife Service, separately from the Park Service management of the Cape Hatteras National Seashore.

But the refuge is located on Hatteras Island within the seashore.

So why, access advocates ask, are the refuge's 12 miles of Hatteras Island beach not counted by the Park Service or environmental groups as part of the area that is closed to ORV access?

These are, and have been for years, 12 miles of the island set aside for pedestrian-only access.

One 12-mile long wildlife refuge is enough in the seashore.

PERMITS FOR BEACH FIRES AND IN THE VILLAGES ONLY?

Bonfires on the beach are a tradition for many islanders and visitors to Cape Hatteras National Seashore.

Beach fires have been limited by the night driving restrictions under the consent decree ? you must be off the beach by 10 p.m. from May 1 ? Sept 15.

However, under Alternative F, campfires would be allowed during the turtle nesting season from May 1 ? Nov. 15 ONLY in front of the Hatteras Island villages, Coquina Beach, and the Ocracoke Day Use Area.

A non-fee education permit would be required year-round for a beach fire.

This restriction has the practical effect of limiting beach fires to only those who rent the first row of expensive oceanfront homes on Hatteras Island.

At Coquina Beach and at the Ocracoke Day Use Area, I guess you could carry all your firewood over the dunes and down to the beach.

But on Hatteras Island, if you could build fires only in the villages, the Park Service would be putting them off limits to all but oceanfront owners or renters. There are few, if any, areas for people to park and even carry their wood to the beach in the villages.

I agree with the positions held by these organizations: - Coalition for Beach Access Coalition's 77-page position paper on the DEIS - Dare County's position paper and comments on the DEIS - Outer Banks Chamber of Commerce comments on the DEIS - Marc Basnight and Tim Spear comments on DEIS

Respectfully submitted,

Karen Wheelless American Citizen

Correspondence:	I liken the idea of closing public access to beaches to putting 3 Navy Seals on trial for the alleged physical abuse of a TERRORIST detainee who had recently killed 4 Americans. Why that even happened (the trials) is totally beyond me. It didn't make sense. Same as this attempt to close public beaches to save a species of bird which is not extinct or even close to extinction. It doesn't make sense. I guess the next move is to ban people from enjoying their yards because bluebirds and cardinals and finches and the rest of the birds in the wild use these yards to mate and nest. What's the difference? I have yet to hear a valid reason, and I can't believe that MY government chooses to "strong-arm" it's people in such a way. Because, that is exactly what this is. I am very disappointed in our government. In fact, you all make me sick!!!

Correspondence:	Historically I have stayed in the spectator gallery & allowed others to tilt at windmills & fight for causes & then complained when things did not happen as I felt they should. No more. I started coming to Hatteras National Seashore in the mid 80's. Our children grew up coming to the Outer Banks every summer. The first time we ever drove on the beach, we rented a very old suburban in Buxton we fondly called the Black Knight..that opened up a whole						

new world! I saw the "Point" for the very first time, we went to the Hatteras Inlet and crabbed as the ferrys to Okarcoke went back & forth, we spent whole days on South Beach swimming & fishing, sometimes not seeing anyone other than near the camp grounds. Since that time, we have invested in 4-wheel drive vehicles with which we have enjoyed access to the many beautiful beaches for many years. We respect the bird nesting areas, the turtle nests, the dunes. We pick up trash. Those folks we know who have also enjoyed open access to the beaches have done the same Closing the beaches to mollify a minority will again, as so often these days, be to the detriment of many. I advocate the protection of wild life..the beauty of the National Seashore is a testament to the wild life that inhabits it. I believe that wild life & humans can coexist if we act responsibly. I believe the proposed solutions by environmental groups are too extreme. Please do not take away this beautiful, last accessible wild area on the Atlantic coast.

Correspondence: Hasn't our land especially the beaches been devastated enough. Why must the protection that some do have, constantly be under threat of undoing? Of backtracking? None of which do the land any good. It's always an undoing of any good that may have been in place. PLEASE, do not undo any good that protects the land, wildlife and plants of this beach. I personally have never been to this area but will finally be able to visit in Sept. and Oct. I hope that my visit will be one in which I know that your organization protected this land. Thank you, Lee

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
I visit the Outer Banks at least twice each year, and providing an environment in which wildlife can thrive is important to me. North Carolinians are blessed to have beaches and mountains to enjoy, but we'll continue to enjoy them only if we take the responsibility of following policies that preserve habitat.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore. North Carolina needs to listen to the voices of its scientists and then assure protection of breeding grounds. This issue will have a direct impact on the beach my one-year-old granddaughter will enjoy. Give her a chance to see the wildlife that makes our beaches the best places--for families and for wildlife.

Correspondence: Mike Murray, Superintendent Cape Hatteras National Seashore 1401 National Park Drive Manteo, NC 27954 May 10, 2010
Dear National Park Service My comments concern the DEIS of the Off-Road Vehicle Management Plan prepared by the National Park Service (NPS) for the Cape Hatteras National Seashore Recreation Area.
1) Page 201: I disagree with the NPS statement: "Even with resource closures in place, protected species are still at risk [from pedestrians and ORVs]." No Piping Plover deaths have been attributed to ORVs. ORV violations continue to decrease as signage and education improve. Pedestrian violations are much more significant than ORV violations. It seems to me that any transgressions into protected area are the result of lack of NPS manpower and enforcement than the public purposely and willfully violating out of bounds areas. 2) Page xxiv: I question the statement of as per the DEIS: "Carrying capacity would be a 'peak use limit' determined for all areas based on the linear feet of beachfront?" If you close off huge sections of the beach, you force more people into smaller areas, potentially resulting in more resource impairment and diminished visitor experience.
3) Page xix and page 23: I am against having two different closures rules pertaining to the North facing beaches (North side) and the South facing beaches (South side) as per the grid outlined in Alternative "F". I disagree with the NPS proposal to close the beaches in villages of Frisco, Hatteras and Ocracoke Villages to ORV access longer than the traditional May 15 to September 15 period for the Northern beaches, even though seasonal visitor statistics are similar for all villages. Please, make them the same: May 15 -> September 15. 4) Page 1: I agree with your statement "ORVs have long served as a primary form of access for many portions of the beach in the seashore, and continue to be the most practical means of access and parking for many visitors."
However, pedestrian only areas discriminate against individuals with limited mobility due to age or physical impairments, families with small children, and those wishing to engage in activities requiring recreational equipment (boogie boards, beach umbrellas, beach chairs, coolers, fishing rods and tackle, etc) 5) Page 53: I disagree with the special use permit proposed guidelines. It is impractical to allow the transportation of disabled visitors to the village beaches and then require the vehicle to be returned to the street or parking area. This necessitates the disabled person to have a driver to drop him (or her) off, then drive to a parking area, then trudge a long distance to the site of the drop off, then trudge the long distance through the sand back to get the vehicle. Suppose the handicap person wants to go to the beach, is capable of driving himself, yet cannot find another person to go with him? Does he now not go to the beach? This rule creates unnecessary hardships and risks in the event of an emergency as well. 6) Page 121 ? 127. I strongly disagree with the buffers as presented. We must allow for pass-thru corridors. The beach is linear with the ocean buffering on one side and the dune line on the other. For example - If you pinch off access on one side of a 4 mile linear beach and pinch off access on the other side of the 4 mile section of beach with no corridor, then you effectively have closed off all 4 miles of the beach because you CAN'T get there. The proposed bird buffers are too large, blocking access to the interior sections from the two "buffered" ends. I propose ORV pass-thru only corridors and to use breeding / nesting buffer distances to establish ORV pass through only corridors to ensure beach access in a way that does not hinder resource protection. I believe pass through corridors should be maintained for pedestrians and ORVs in all areas of the Cape Hatteras National Seashore Recreational Area throughout the entire breeding and nesting season. Corridors are vital to providing access in a way that does not hinder resource protection. Piping Plover unfledged chicks buffer should move with the brood as it relocates to reliable food source, not expanded. The 1,000 meter distance for the piping plover is way too large and not based upon peer reviewed science. A more rational distance would be 200 meters per other sites in the nation for the piping plover. Ample scientific evidence and precedent exists to support a 200 meter buffer. Buffers for other species, including American Oystercatchers, Least Terns and Colonial Waterbirds must also be changed. An effective 30 meter buffer should be established for these species rather than the 300 meter closure outlined in the DEIS. NON-ENDANGERED BIRDS should not have same protection as if endangered. Not allowing ORV access is paramount to denying the public access to these beaches. 7) Page 468: I disagree with the limitations imposed on pedestrian and ORVs. Corridors or bypasses should be provided thru, around or below high tide line in all SMAs during entire breeding season to maintain access. 8) Page 124: I strongly disagree with the NPS slant of providing for over protection of resource management over that of the public's right to access the beaches. Pro-active initiatives include: Vegetation Management, Habitat Management, Enhanced Predator Management, Colonial Water bird social attraction, Piping Plover check fledge rate, Piping plover chick buffer distance, and pass-through buffers during the incubation period. Opportunities to implement less restrictive closures as a result of the above initiatives should be considered more frequently than the 5-year periodic review process identified in the DEIS. 9) I disagree with the NPS Resource Management Pedestrian / ORV Closure Policies. These policies address the least significant factors affecting nest survival with little chance to have more than negligible impact. For example: the AMOY Nest Failures are predominately due to non-human events. Using your own stats, the mammalian predation is 54%, Storm / Lunar Tides: 29%, Nest Abandonment: 6%, Avian Predation: 5%, and Ghost Crab Predation: 3%. So what is the percentage due to human interference: just 3%! It's insignificant, yet the NPS wants to ban humans when their actions provide very little influence on the success rate of breeding birds and turtles.
10) I disagree with the stats of breeding plovers and the other birds in the Park when the NPS does not adequately consider locations neighboring the Recreational Area that are part of the same ecosystem, namely dredge and spoil islands that are located just yards away and within sight of the seashore. These birds are part of the same ecosystem and should be included. Those spoil islands, developed by man from dredging the waterways in the Pamlico Sound for channel upkeep are slammed full of birds. The reason why so many birds? NO PREDATORS. SO, birds are not as stupid as one might think. You have to count these birds and incorporate them in the stats when the NPS is talking about any so called decline in breeding pairs in the National

Park. 11) Page 1: I do not think the DEIS responsibly addresses the cultural resource issues. The very purpose of the DEIS as set forth in the National Environmental Policy Act (NEPA) is to protect and preserve natural and cultural resources in the federal decision making process. In the DEIS, the statement "protect and preserve natural and cultural resources" appears in the first sentence of the first page of the plan, in the Purpose of the Plan section, and numerous times thereafter. Yet, the 810 page document devotes only two paragraphs to analysis of cultural resource issues. As a 20 year resident of Hatteras Island, we have always gotten together on the south beach on Sunday to enjoy the beach with our cookouts, gatherings, surf bathing, horse shoes and foot races, fishing, and surfing. Now the DEIS is proposing closing off most of the south beach during the summer which is the traditional period both local and rental people use the beach. The continuation of this traditional pattern of land use is central to maintaining the historic identity of our island communities. 12) Pages 270-281; 561-598: I strongly disagree with your economic analysis of the impact of the DEIS. The region of influence (ROI) incorporates the Northern Beach communities, including Kill Devil Hills, Kitty Hawk, Southern Shores and Duck. These areas are almost completely disconnected from ORV use and access issues relating to the Seashore. ? Inclusion of the Northern Beaches in analysis significantly dilutes estimates of economic impact on the 8 Seashore Villages ? Analysis of economic impact to the Seashore Villages appears to be significantly down played. Emphasis in DEIS is on the ROI-wide or county-wide level impacts. ? Nowhere is it clearly addressed that the overwhelming majority of negative impacts will be felt by small businesses in the Seashore Villages rather than by overall economic interests within the greater ROI. On page xlvi, Alternative F is characterized as having a "negligible to moderate" adverse impact on small businesses. I strongly disagree with this statement. I believe the negligible to moderate projection is inaccurate and relies on economic surveys that has not yet been published. Furthermore, this material is not expected to be added to the DEIS until after the public comment period has ended. Based upon the economic harm we have already experienced under the consent decree, Dare County projects the economic impact of Alternative F to be substantial. Beach closures have already had a devastating and unfair impact on many Dare County Businesses, causing foreclosures, bankruptcies, lay-offs, cutbacks, expensive refinancing, and depleted college funds and savings accounts. Over the last 5 years our rentals have consistently been substantially reduced. Our family has held on to our properties on Hatteras Island at a considerable cost and sacrifice. We have had to forego much-needed capital improvements, and sacrifice family activities in order to maintain our rental properties. If the proposed changes go into effect, we may be forced to sell and leave Hatteras Island. Pages 270-286, 561-598: The socio-economic data and analyses are incomplete and erroneous and result in an understatement of the effect the restrictions will have upon the Island, the region and the state of NC. The US Park Services answer: Businesses will have to "adapt" to the new rules. (p.383) The negative economic impacts of the decree ARE KNOWN, so to say that the added restrictions would have negligible to moderate impact is indefensible. 13) Overall Visitor Counts - Overall visitor counts appear to include visitors to Fort Raleigh National Historic Site and the Wright Brothers National Memorial. A large percentage of these visitors vacation in the Northern Beaches communities and recreate on the non-federal beaches outside of the Seashore. Visitors who patronize the Fort Raleigh National Historic Site and the Wright Brothers National Memorial but do not visit the actual seashore areas need to be factored out. Maintenance of Future Access to Cape Point and South Point Ocracoke: All socioeconomic analyses related to Alternative F are predicated on the assumption that access corridors will remain open for at least an appreciable portion of the visitor high season. Under Alternative F, the access corridors will be subject to Resource Closures based on buffers similar or identical to the Consent Decree. Unless some predictability of access to Cape Point and South Point Ocracoke can be assured, economic analyses predicated on assumption of access are fundamentally flawed. Why would a group of surf fisherman want to come to Hatteras Island to surf fish if they are not sure they can access the prime fishing grounds at Cape Point? The answer is they won't come. If they don't come, they don't rent vacation homes and spend their money on Hatteras and Ocracoke Islands. The definition of the Region of Influence (ROI), faulty data on economic activity generated by specific type recreational activity, incomplete visitation/business survey data, inflated overall Seashore visitor counts pertaining to beach use, and flawed key assumptions concerning the maintenance of access under Alternative F, all lead to inaccurate conclusions in the socioeconomic analyses. Specifically, these inaccuracies can be seen as understating the negative socio-economic impact of the Seashore Villages. Further, this negative impact will be absorbed almost entirely by Small Businesses. Neither of these important aspects of the management alternatives are adequately presented in the DEIS. 14) Page 136: I strongly disagree with your pet restriction proposals. The "?prohibition of pets in the Seashore during bird breeding season including in front of the villages." = No Pets in public areas ?beaches, campgrounds, soundfront, foot trails, park maintained roads -from March 15 ?July 31. As I pet owner, I propose allowing pets on 6 foot leashes year-round in all areas open to pedestrians or ORVs. 15) Pages 125; 392 ? 396: SEA TURTLES. I disagree with the stats and procedures proposed. I think endangered sea turtles would benefit from management practices now in use at other federal seashores that are more proactive in efforts to achieve nesting success. This includes relocating nests to more desirable locations as is done in other state and federally controlled areas. The Cape Hatteras National Seashore Recreational Area is on the northernmost fringe of turtle nesting locations for the southeast, accounting for about 1% of all turtle nests. Proposed buffer areas are not needed for protection of the turtles and amount to overprotection. 16) Pages 97- 101. I strongly disagree with proposals in this section saying that ORVs will be prohibited year round between ramps 27 and 30, at Hatteras Inlet (Hatteras Spit), Ocracoke Inlet (North Ocracoke Spit) and various other locations. Not allowing ORV access is paramount to denying the public access to these beaches. They are located miles from the nearest parking or paved road area and too far to access on foot. As a matter of course, there has been no breeding of piping plover or other endangered species at the Hatteras Island Inlet (spit) area in the past 6 years. 17) Page 104: I disagree with the proposed night time driving closures. Per your proposals, night driving will be prohibited between May 1 and November 15th, forcing visitors off of the beaches early in the evening and preventing sunrise surf fishermen access in the morning. I propose a more moderate night time ban if one is needed, perhaps from June 1 ? September 15 with times being 1 hour after sunset and 1 hour before sunrise to allow beach goers to gather their stuff and exit the beach area. Certainly more proactive measures such as relocating nests prone to weather and ocean events would dramatically increase the nesting success rates. 18) Page 121: I disagree with the proposed beach closings, including pedestrian access from March 15 until July 31 in 8 different beach locations which have traditionally been available. Please leave these areas open to beach walkers, shell collectors and those that want to access the beaches in these areas. Conclusion: Please, incorporate access corridors through any SMA so we can get to the open beach beyond. Incorporate the birds into the count that nest on the spoil islands. Base your buffer zones on peer reviewed science and scale them back to more reasonable distances as discussed. It is neither logical nor reasonable to spend so much time, money and energy to overprotect a bird (Piping Plover) in the Cape Hatteras National Seashore that is on the southernmost fringe area of its breeding ground. That goes for the loggerhead turtle that is in its northernmost breeding area. Let's scale back the buffer zones. You can always increase at a later date. The USPS is leaning way over the line on over protection and not enough on the public's right to enjoy the beaches of the National Seashore. The proper balance is not achieved in the propose DEIS and needs to be modified so that the proper balance of reasonable resource protection and access to the beaches of the National Park is achieved. I could sum it up by saying "Protect, not Prohibit." Thank you,
Jennifer Rodriguez

Correspondence:	<p>The NPS must formulate a plan that is consistent with the legislation establishing Cape Hatteras National Seashore Recreation Area. The enabling legislation for the Recreational Area states, in part, "said area shall be, and is, established, dedicated, and set apart as a national seashore recreational area for the benefit and enjoyment of the people and shall be known as the Cape Hatteras National Seashore Recreational Area". Therefore, it is important to balance resource protection with reasonable access for recreation.</p> <p>Corridors are a vital tool in providing access while managing resources. They provide a small path around temporary resource closures in order to provide access to open areas that would otherwise be blocked. Corridors should be permitted throughout the seashore during the entire breeding and nesting season including ML-1 portions of SMAs. These corridors would provide valuable access without impairment or damage to protected resources. Buffers, or closures, are important management practices for species recovery. However, to have long term benefit for the wildlife and the visiting public, buffers must be based on peer-reviewed science For example, the Piping Plover, a species classified as threatened and not endangered, is given a level of unprecedented protection in Alternative F. A 1,000-meter buffer in all directions represents over 771 acres. The DEIS does not cite any peer-reviewed science in supporting such closure. A more appropriate & effective buffer would be 200 meters.</p> <p>Birds that are not listed as endangered should not be afforded the level of protection given to ESA (Endangered Species Act) protected species. Instead of 300-meter buffers for these birds, a more appropriate buffer would be 30 meters. Also, all birds in the same ecosystem of the seashore should be counted. This includes all the many birds on the dredge and spoil islands located just yards away and within sight of the seashore.</p>						

The National Park Service should consider turtle management practices successfully used in other federal and state areas to achieve nesting success. More proactive measures include relocating nests to more desirable locations, which is routinely and successfully done in other areas.

Correspondence: Mike Murray, Superintendent Cape Hatteras National Seashore 1401 National Park Drive Manteo, NC 27954 May 10, 2010
Dear National Park Service My comments concern the DEIS of the Off-Road Vehicle Management Plan prepared by the National Park Service (NPS) for the Cape Hatteras National Seashore Recreation Area.

1) Page 201: I disagree with the NPS statement: "Even with resource closures in place, protected species are still at risk [from pedestrians and ORVs]." No Piping Plover deaths have been attributed to ORVs. ORV violations continue to decrease as signage and education improve. Pedestrian violations are much more significant than ORV violations. It seems to me that any transgressions into protected area are the result of lack of NPS manpower and enforcement than the public purposely and willfully violating out of bounds areas. 2) Page xxiv: I question the statement of as per the DEIS: "Carrying capacity would be a 'peak use limit' determined for all areas based on the linear feet of beachfront?" If you close off huge sections of the beach, you force more people into smaller areas, potentially resulting in more resource impairment and diminished visitor experience.

3) Page xix and page 23: I am against having two different closures rules pertaining to the North facing beaches (North side) and the South facing beaches (South side) as per the grid outlined in Alternative "F". I disagree with the NPS proposal to close the beaches in villages of Frisco, Hatteras and Ocracoke Villages to ORV access longer than the traditional May 15 to September 15 period for the Northern beaches, even though seasonal visitor statistics are similar for all villages. Please, make them the same: May 15 -> September 15. 4) Page 1: I agree with your statement "ORVs have long served as a primary form of access for many portions of the beach in the seashore, and continue to be the most practical means of access and parking for many visitors."

However, pedestrian only areas discriminate against individuals with limited mobility due to age or physical impairments, families with small children, and those wishing to engage in activities requiring recreational equipment (boogie boards, beach umbrellas, beach chairs, coolers, fishing rods and tackle, etc) 5) Page 53: I disagree with the special use permit proposed guidelines. It is impractical to allow the transportation of disabled visitors to the village beaches and then require the vehicle to be returned to the street or parking area. This necessitates the disabled person to have a driver to drop him (or her) off, then drive to a parking area, then trudge a long distance to the site of the drop off, then trudge the long distance through the sand back to get the vehicle. Suppose the handicap person wants to go to the beach, is capable of driving himself, yet cannot find another person to go with him? Does he now not go to the beach? This rule creates unnecessary hardships and risks in the event of an emergency as well. 6) Page 121 ? 127. I strongly disagree with the buffers as presented. We must allow for pass-thru corridors. The beach is linear with the ocean buffering on one side and the dune line on the other. For example - If you pinch off access on one side of a 4 mile linear beach and pinch off access on the other side of the 4 mile section of beach with no corridor, then you effectively have closed off all 4 miles of the beach because you CAN'T get there. The proposed bird buffers are too large, blocking access to the interior sections from the two "buffered" ends. I propose ORV pass-thru only corridors and to use breeding / nesting buffer distances to establish ORV pass through only corridors to ensure beach access in a way that does not hinder resource protection. I believe pass through corridors should be maintained for pedestrians and ORVs in all areas of the Cape Hatteras National Seashore Recreational Area throughout the entire breeding and nesting season. Corridors are vital to providing access in a way that does not hinder resource protection. Piping Plover unfledged chicks buffer should move with the brood as it relocates to reliable food source, not expanded. The 1,000 meter distance for the piping plover is way too large and not based upon peer reviewed science. A more rational distance would be 200 meters per other sites in the nation for the piping plover. Ample scientific evidence and precedent exists to support a 200 meter buffer. Buffers for other species, including American Oystercatchers, Least Terns and Colonial Waterbirds must also be changed. An effective 30 meter buffer should be established for these species rather than the 300 meter closure outlined in the DEIS. NON-ENDANGERED BIRDS should not have same protection as if endangered. Not allowing ORV access is paramount to denying the public access to these beaches. 7) Page 468: I disagree with the limitations imposed on pedestrian and ORVs. Corridors or bypasses should be provided thru, around or below high tide line in all SMAs during entire breeding season to maintain access. 8) Page 124: I strongly disagree with the NPS slant of providing for over protection of resource management over that of the public's right to access the beaches. Pro-active initiatives include: Vegetation Management, Habitat Management, Enhanced Predator Management, Colonial Water bird social attraction, Piping Plover check fledge rate, Piping plover chick buffer distance, and pass-through buffers during the incubation period. Opportunities to implement less restrictive closures as a result of the above initiatives should be considered more frequently than the 5-year periodic review process identified in the DEIS. 9) I disagree with the NPS Resource Management Pedestrian / ORV Closure Policies. These policies address the least significant factors affecting nest survival with little chance to have more than negligible impact. For example: the AMOY Nest Failures are predominately due to non-human events. Using your own stats, the mammalian predation is 54%, Storm / Lunar Tides: 29%, Nest Abandonment: 6%, Avian Predation: 5%, and Ghost Crab Predation: 3%. So what is the percentage due to human interference: just 3%! It's insignificant, yet the NPS wants to ban humans when their actions provide very little influence on the success rate of breeding birds and turtles.

10) I disagree with the stats of breeding plovers and the other birds in the Park when the NPS does not adequately consider locations neighboring the Recreational Area that are part of the same ecosystem, namely dredge and spoil island that are located just yards away and within sight of the seashore. These birds are part of the same ecosystem and should be included. Those spoil islands, developed by man from dredging the waterways in the Pamlico Sound for channel upkeep are slammed full of birds. The reason why so many birds? NO PREDATORS. SO, birds are not as stupid as one might think. You have to count these birds and incorporate them in the stats when the NPS is talking about any so called decline in breeding pairs in the National Park. 11) Page 1: I do not think the DEIS responsibly addresses the cultural resource issues. The very purpose of the DEIS as set forth in the National Environmental Policy Act (NEPA) is to protect and preserve natural and cultural resources in the federal decision making process. In the DEIS, the statement "protect and preserve natural and cultural resources" appears in the first sentence of the first page of the plan, in the Purpose of the Plan section, and numerous times thereafter. Yet, the 810 page document devotes only two paragraphs to analysis of cultural resource issues. As a 20 year resident of Hatteras Island, we have always gotten together on the south beach on Sunday to enjoy the beach with our cookouts, gatherings, surf bathing, horse shoes and foot races, fishing, and surfing. Now the DEIS is proposing closing off most of the south beach during the summer which is the traditional period both local and rental people use the beach. The continuation of this traditional pattern of land use is central to maintaining the historic identity of our island communities. 12) Pages 270-281; 561-598: I strongly disagree with your economic analysis of the impact of the DEIS. The region of influence (ROI) incorporates the Northern Beach communities, including Kill Devil Hills, Kitty Hawk, Southern Shores and Duck. These areas are almost completely disconnected from ORV use and access issues relating to the Seashore. ? Inclusion of the Northern Beaches in analysis significantly dilutes estimates of economic impact on the 8 Seashore Villages ? Analysis of economic impact to the Seashore Villages appears to be significantly down played. Emphasis in DEIS is on the ROI-wide or county-wide level impacts. ? Nowhere is it clearly addressed that the overwhelming majority of negative impacts will be felt by small businesses in the Seashore Villages rather than by overall economic interests within the greater ROI. On page xlvi, Alternative F is characterized as having a "negligible to moderate" adverse impact on small businesses. I strongly disagree with this statement. I believe the negligible to moderate projection is inaccurate and relies on economic surveys that has not yet been published. Furthermore, this material is not expected to be added to the DEIS until after the public comment period has ended. Based upon the economic harm we have already experienced under the consent decree, Dare County projects the economic impact of Alternative F to be substantial. Beach closures have already had a devastating and unfair impact on many Dare County Businesses, causing foreclosures, bankruptcies, lay-offs, cutbacks, expensive refinancing, and depleted college funds and savings accounts. Over the last 5 years our rentals have consistently been substantially reduced. Our family has held on to our properties on Hatteras Island at a considerable cost and sacrifice. We have had to forego much-needed capital improvements, and sacrifice family activities in order to maintain our rental properties. If the proposed changes go into effect, we may be forced to sell and leave Hatteras Island. Pages 270-286, 561-598: The socio-economic data and analyses are incomplete and erroneous and result in an understatement of the effect the restrictions will have upon the Island, the region and the state of NC. The US Park Services answer: Businesses will have to "adapt" to the new rules. (p.383) The negative economic impacts of the decree ARE KNOWN, so to say that the added restrictions would have negligible to moderate impact is indefensible. 13) Overall Visitor Counts - Overall visitor counts appear to include visitors to Fort Raleigh National Historic Site and the Wright Brothers National Memorial. A large percentage

of these visitors vacation in the Northern Beaches communities and recreate on the non-federal beaches outside of the Seashore. Visitors who patronize the Fort Raleigh National Historic Site and the Wright Brothers National Memorial but do not visit the actual seashore areas need to be factored out. Maintenance of Future Access to Cape Point and South Point Ocracoke: All socioeconomic analyses related to Alternative F are predicated on the assumption that access corridors will remain open for at least an appreciable portion of the visitor high season. Under Alternative F, the access corridors will be subject to Resource Closures based on buffers similar or identical to the Consent Decree. Unless some predictability of access to Cape Point and South Point Ocracoke can be assured, economic analyses predicated on assumption of access are fundamentally flawed. Why would a group of surf fishermen want to come to Hatteras Island to surf fish if they are not sure they can access the prime fishing grounds at Cape Point? The answer is they won't come. If they don't come, they don't rent vacation homes and spend their money on Hatteras and Ocracoke Islands. The definition of the Region of Influence (ROI), faulty data on economic activity generated by specific type recreational activity, incomplete visitation/business survey data, inflated overall Seashore visitor counts pertaining to beach use, and flawed key assumptions concerning the maintenance of access under Alternative F, all lead to inaccurate conclusions in the socioeconomic analyses. Specifically, these inaccuracies can be seen as understating the negative socio-economic impact of the Seashore Villages. Further, this negative impact will be absorbed almost entirely by Small Businesses. Neither of these important aspects of the management alternatives are adequately presented in the DEIS. 14) Page 136: I strongly disagree with your pet restriction proposals. The "prohibition of pets in the Seashore during bird breeding season including in front of the villages." = No Pets in public areas ?beaches, campgrounds, soundfront, foot trails, park maintained roads -from March 15 ?July 31. As I pet owner, I propose allowing pets on 6 foot leashes year-round in all areas open to pedestrians or ORVs. 15) Pages 125; 392 ? 396: SEA TURTLES. I disagree with the stats and procedures proposed. I think endangered sea turtles would benefit from management practices now in use at other federal seashores that are more proactive in efforts to achieve nesting success. This includes relocating nests to more desirable locations as is done in other state and federally controlled areas. The Cape Hatteras National Seashore Recreational Area is on the northernmost fringe of turtle nesting locations for the southeast, accounting for about 1% of all turtle nests. Proposed buffer areas are not needed for protection of the turtles and amount to overprotection. 16) Pages 97- 101. I strongly disagree with proposals in this section saying that ORVs will be prohibited year round between ramps 27 and 30, at Hatteras Inlet (Hatteras Spit), Ocracoke Inlet (North Ocracoke Spit) and various other locations. Not allowing ORV access is paramount to denying the public access to these beaches. They are located miles from the nearest parking or paved road area and too far to access on foot. As a matter of course, there has been no breeding of piping plover or other endangered species at the Hatteras Island Inlet (spit) area in the past 6 years. 17) Page 104: I disagree with the proposed night time driving closures. Per your proposals, night driving will be prohibited between May 1 and November 15th, forcing visitors off of the beaches early in the evening and preventing sunrise surf fishermen access in the morning. I propose a more moderate night time ban if one is needed, perhaps from June 1 ? September 15 with times being 1 hour after sunset and 1 hour before sunrise to allow beach goers to gather their stuff and exit the beach area. Certainly more proactive measures such as relocating nests prone to weather and ocean events would dramatically increase the nesting success rates. 18) Page 121: I disagree with the proposed beach closings, including pedestrian access from March 15 until July 31 in 8 different beach locations which have traditionally been available. Please leave these areas open to beach walkers, shell collectors and those that want to access the beaches in these areas. Conclusion: Please, incorporate access corridors through any SMA so we can get to the open beach beyond. Incorporate the birds into the count that nest on the spoil islands. Base your buffer zones on peer reviewed science and scale them back to more reasonable distances as discussed. It is neither logical nor reasonable to spend so much time, money and energy to overprotect a bird (Piping Plover) in the Cape Hatteras National Seashore that is on the southernmost fringe area of its breeding ground. That goes for the loggerhead turtle that is in its northernmost breeding area. Let's scale back the buffer zones. You can always increase at a later date. The USPS is leaning way over the line on over protection and not enough on the public's right to enjoy the beaches of the National Seashore. The proper balance is not achieved in the propose DEIS and needs to be modified so that the proper balance of reasonable resource protection and access to the beaches of the National Park is achieved. I could sum it up by saying "Protect, not Prohibit." Thank you,
Yvonne Rodriguez

Correspondence: Dear Superintendent Murray,

As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.

- 1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."
- 2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness..." Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.
- 3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.

Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

Correspondence: The NPS must formulate a plan that is consistent with the legislation establishing Cape Hatteras National Seashore Recreation Area. The enabling legislation for the Recreational Area states, in part, "said area shall be, and is, established, dedicated, and set apart as a national seashore recreational area for the benefit and enjoyment of the people and shall be known as the Cape Hatteras National Seashore Recreational Area". Therefore, it is important to balance resource protection with reasonable access for recreation.

Corridors are a vital tool in providing access while managing resources. They provide a small path around temporary resource closures in order to provide access to open areas that would otherwise be blocked. Corridors should be permitted throughout the seashore during the entire breeding and nesting season including ML-1 portions of SMAs. These corridors would provide valuable access without impairment or damage to protected resources. Buffers, or closures, are important management practices for species recovery. However, to have long term benefit for the wildlife and the visiting public, buffers must be based on peer-reviewed science For example, the Piping Plover, a species classified as threatened and not endangered, is given a level of unprecedented protection in Alternative F. A 1,000-meter buffer in all directions represents over 771 acres. The DEIS does not cite any peer-reviewed science in supporting such closure. A more appropriate & effective buffer would be 200 meters. Birds that are not listed as endangered should not be afforded the level of protection given to ESA (Endangered Species Act) protected species. Instead of 300-meter buffers for these birds, a more appropriate buffer would be 30 meters. Also, all birds in the same ecosystem of the seashore should be counted. This includes all the many birds on the dredge and spoil islands located just yards away and within sight of the seashore.

The National Park Service should consider turtle management practices successfully used in other federal and state areas to achieve nesting success. More proactive measures include relocating nests to more desirable locations, which is routinely and successfully done in other areas.

Correspondence: Dear Superintendent Murray,
The National Parks Conservation Association, of which I am a member, developed an excellent commentary on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. I will follow with that commentary. However, my most important point is that, in most cases, ORV use in National Parks is inconsistent with the preservation of what makes these places special to begin with. It also seriously impinges on the enjoyment of virtually every other type of visitor.
The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.
1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."
2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness...."
Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.
3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.
Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

Correspondence: I feel that dogs should be restrained by a 6 foot leash in the dune areas. At the surf zone, however, I feel that dogs should not need to be leashed if they are under control of their owner. Dogs in the water certainly present a greater danger to the owner and themselves when leashed than when unleashed.

Correspondence: I disagree with the assessment made by NPS that: "Visitor experience could be affected by conflicts between motorized and non-motorized recreation users." (p. vi).
I agree with the need to ask the question: Why has NPS never made public a list of reported incidents? Because ? In 10 years, only 1 minor incident involving a stuck vehicle and a pedestrian was disclosed. The driver was not blamed by those involved, nor was he charged. (p. 268)
I disagree with the statement made by NPS: Shorter Off-Season ORV access on South-facing Villages (p. xix)
I agree that the question needs to be asked: Why are Frisco, Hatteras and Ocracoke Villages closures to ORV access longer than the traditional May 15 to September 15 period, even though seasonal visitor statistics are similar for all villages? (p. 23)
I agree with the statement by NPS: "Carrying capacity would be a 'peak use limit' determined for all areas based on the linear feet of beachfront?" (p. xxiv)
But I also agree then the question needs to be asked: Why is capacity more restrictive on Bodie Island and Ocracoke than at Cape Point? (p. xxiv). (Bodie Island & Ocracoke -260 vehicles per mile and Cape Point ?400 vehicles per mile). This seems to be in conflict with the earlier assessment made by NPS regarding "Carrying Capacity". I also agree that the question needs to be asked of the NPS: Why do ORV counts provided for Memorial Day and July 4, 2009 which state: "ramp 4: includes Bodie Island Spit" and "ramp 43 to ramp 49: includes Cape Point" fail to recognize Bodie Island Spit

and Cape Point were closed to ORV access on these dates due to resource protection closures, which thereby increased ORV congestion at ramps 4, 43, 44, and 49? (p. 265)

I disagree with the assessment by NPS: "Because it is not administered by the NPS, the seashore cannot direct the visitor use at Pea Island NWR." (p. 1)
I agree with asking the question: Why does NPS refuse to acknowledge that Pea Island is a prime, pedestrian-only area for visitors to the seashore and overstate the need for more ORV free areas? By eliminating this vast stretch of beach which is already off limits to ORV access it makes the beach parcels they intend on closing look like a smaller percentage of the overall resource area under closure to ORV.

I agree with the DEIS descriptions of ORV access as historical in nature (pg. 83) and also both predating the Seashore and as being integral to the public use by both residents and visitors. The document also illustrates and captions historical commercial fishing (pg.18), historical recreational fishing (pgs. 15, 260) and historical general recreational activities (pg. 259). These same traditional cultural activities are featured on the front cover.

I disagree with the NPS failure to appropriately address the traditional cultural value of surf zone access. I disagree because the NPS failure stands in direct violation of its legal responsibility under Section 106 of the NEPA and the NEPA framework as a whole. Isn't it ironic that the DEIS has a collage of pictures on the very first depicting surf fishing and ORV usage, but all this 810 page document does is limit the access based on false science.

I disagree with the NPS definition that Large, Inflexible Buffers be used, (p. 121-127) because they are too large, too restrictive and do not allow for ORV pass-thru only corridors

I agree with the opinion that:

? buffers use breeding / nesting buffer distances to establish ORV pass through only corridors to ensure beach access is always maintained

? Piping Plover unfledged chicks buffer should move with the brood as it relocates to reliable food source, not expanded

I disagree with the overall assessment made by NPS Resource Management Pedestrian / ORV Closure Policies Address because the Least Significant Factor Affecting Nest Survival with Little Chance to have more than Negligible Impact, AMOY Nest Failures are predominately due to Non-human Events. ?for example:

? Mammalian Predation: 54% Highest Impact ? Storm / Lunar Tides: 29% ? Nest Abandonment: 6% ? Avian Predation: 5% ? Ghost Crab Predation: 3%
? Human Interference: 3% Insignificant Impact

I disagree with how NPS does not adequately consider locations neighboring the Recreational Area that are part of the same ecosystem. They did not consider:

? Villages, dredge and spoil islands, Pea Island National Wildlife Refuge

? Dredge and spoil islands typically have fewer predators to threaten nesting birds

? Bird activity within neighboring areas should be tracked and included in target productivity levels. Fluctuations and trends in Recreational Area bird populations should be viewed relative to regional and state experiences ?not in isolation.

I agree that all locations neighboring the Recreational Area that are part of the same ecosystem and should have been considered.

I disagree with the NPS: Around the clock closure from nest to surf line (p.125) from May 1 ?November 15th. If the area is closed around the clock from the nest to the surf line, it cuts off all access. Closing all the way to surf line blocks access to the entire beach. It would be better managed if the access were allowed to pass below the nest near the surf.

I agree with a Closure to surf line from 1 hour before sunset until dawn, monitored by Turtle Night Nest Watch Team because the proposed Night Driving Restrictions Penalize Pedestrian and ORV users. Education and awareness are the most beneficial to all parties involved. Simply eliminating access is not "managing" the resource. And the resource is supposed to be available to all parties.

I disagree with the NPS barriers 105 meters wide (p.125) this cuts off all access and one nest at the beginning of two consecutive ramps would block the entire section of beach between the two ramps. This does not take into account all of the beach between two different nests that are cut off completely because the blockage is all the way to the surf line leaving zero passage. I agree with the statement that "Closure should be 10 meters square during the day" This is a more effective way to allow for access. The plan should cover off-road vehicle access, not total off-road vehicle elimination. Eliminating access is not "managing" it.

I disagree with the Prohibition of PETS in the seashore during bird breeding season, including in front of the villages."(p136)= No pets in public areas- beaches, campgrounds, sound-front, foot trails, park maintained roads from March 15 -July 31.

It is perfectly acceptable to have dogs tethered utilizing the six foot leash rule.

I disagree with the NPS position: "Even with resource closures in place, protected species are still at risk [from pedestrians and ORVs]." (p. 210)

I agree with facts related to current ORV access that:

? No Piping Plover deaths have been attributed to ORVs.

? ORV violations continue to decrease as signage and education improve.

? Pedestrian violations are much more significant than ORV violations.

I also agree that the question needs to be asked of the NPS: Why are buffers and closures administered such that more people are forced into smaller areas, potentially resulting in more resource impairment and diminished visitor experience?

I disagree with the socioeconomic data and analyses in the DEIS (pg 270-281;561-598) because it results in misleading and sometimes erroneous conclusions and is directly manifested in both the Effected Environment and Socioeconomic Impact sections. Critical weaknesses in the analyses pertain to:

1) Statistical definition of the Region of Influence (ROI); 2) Incomplete visitation/business survey data (p.566); 3) Erroneous recreational user data; 4) inflated overall Seashore visitor counts pertaining to beach use; 5) Flawed key assumption concerning the maintenance of access under Alternative The definition that ROI incorporation of the Northern Beach communities, including Southern Shores and Duck is misleading. These areas are almost completely disconnected from ORV use and access issues relating to the Seashore

The inclusion of the Northern Beaches in analysis significantly dilutes estimates of economic impact on the Seashore Villages.

The analysis of economic impact to the Seashore Villages appears to be significantly down played. Emphasis in DEIS is on the ROI-wide or county-wide level impacts.

Nowhere is it clearly addressed that the overwhelming majority of negative impacts will be felt by small businesses in the Seashore Villages rather than by overall economic interests within the greater ROI.

Why is it OK to include all of these extraneous areas when it comes to Region of Influence (ROI); but NOT ok to include the populations of birds that exist on the dredge islands?

I disagree with the NPS: Use U shaped light filter fence to orient hatchlings

I agree with a proposed "Use Pea Island style keyhole pattern fence to the surf line at night".

I disagree with NPS that : "ORV and other recreational use would have long-term major adverse impacts on sea turtles due to the amount of Seashore available for ORV use and by allowing nighttime driving on the beach." (p. 377)

I agree with the assessment that "Major Adverse" (NPS definition, p.369) events have not occurred at the Recreational Area ?Night Driving Restrictions are not Necessary because: ? Nesting females have not "been killed"

? Complete or partial nest lost due to human activity has not "occurred frequently"

? This is all conjecture on the part of NPS. There is no documented evidence to support their accusations. They are merely speculating on a worst case scenario. Education and awareness are the best tools for the job here. An educated informed public addresses the true spirit of "managed" resource as opposed to total elimination of beach access, which requires no "management". ? Hatchling disorientation/disruption due to humans have not "occurred frequently" ? Direct hatchling mortality from human activity has not "frequently occurred" ? Pro-active Turtle Night Nest Watch program will insure no ORV impact.

I disagree with the position that NPS will not Adopt More Proactive Techniques Used at Other East Coast Locations to Encourage Turtle Nesting Success.

I agree with the assessment that NPS Inadequately Addresses Environmental Issues More Detrimental to Turtle Recovery Success than ORVs or Pedestrians (p. 392-396) because:

? 38.5% of nests had 0% hatchlings due to weather events. (p. 87, p. 219) ? 2009 Loggerhead Recovery Plan calls this catastrophic

? False crawl statistics do not support theory that light pollution is a significant problem at the Recreational Area. (p.125, p. 219)

? Predator management and nest enclosure practices encourage ghost crabs which are a primary predator of turtle eggs and hatchlings
 I disagree with NPS usage of The North Carolina Wildlife Resource Commission Relocation Guidelines.
 I agree with an assessment that the North Carolina Wildlife Resource Commission Relocation Guidelines are Inadequate because:
 ? Recreational Area and the State have lost 55% and 60% of Leatherback nests respectively over the past 10 years following these guidelines.
 ? Use of "average high tide line" (as used in other states) rather than "seaward of debris line marking spring high tide" to identify which nests to relocate leave many nests at risk.
 I disagree with the management decisions reflected in the DEIS that show a clear bias to implement actions that will adversely affect the visitor experience but to avoid actions that would benefit both natural resources and visitors. For instance:
 ? The NPS says it is OK to replace South Point wetlands with parking area because beach will be closed to ORVs.
 ? The NPS says it is OK to relocate Turtle Nests when storms are imminent, but not before (coincidentally the high risk nests are in prime ORV corridors).
 ? The NPS says it is OK to set aside areas of beach to replant the "extirpated" seabeach amaranth, but not OK to clear vegetation at Cape Point ponds to create more favorable piping plover habitat (outside of the prime ORV corridor).
 ? The NPS says it is OK to kill predators (greatest risk to birds and turtles), not OK to drive on the beach at night (deterrent to predators, low risk to turtles and birds).
 I disagree with the NPS assessment of Restrictive Species Management Areas (p. 468) Where they state:
 NPS: Established based on annual habitat assessment. NPS: Manage each SMA using ML1 or ML2 procedures. NPS: ML1 ?No pedestrian or ORV access during entire breeding season NPS: ML2 ?pedestrian only corridor thru SMA at Bodie Island Spit NPS: ML2 -pedestrian & ORV corridor thru SMA at Cape Point, South Point
 I agree with the opinion that: ML1 is overly restrictive. Pedestrian and ORV corridors or bypasses should be provided thru, around or below high tide line in all SMAs during entire breeding & nesting season (within guidelines) to maintain access.
 I disagree with the NPS assessment of Limited Pedestrian and ORV Corridors (p. 468) because:
 NPS: Only recognized in ML2 managed SMAs NPS: SMA management reverts to standard buffers when bird breeding activity first observed
 I agree with the opinion that:: Pedestrian and ORV corridors or bypasses should be provided thru, around or below high tide line in all SMAs during entire breeding season to maintain access.
 In conclusion:
 I disagree with the NPA proposed Alternative F restrictions because they far exceed those under the Consent Decree, the Interim Management Strategy, and the de facto ORV plan previously in place under Superintendent's Order #7.
 I disagree with the speakers at the public hearings being limited to three minutes to address an 810 page document!!!
 Supposedly the Park Service has budget issues. Have they published the cost of doing this do called impact? I disagree with this 810 page document even being called the DEIS. Since when did it become DEIS? It's supposed to be an off-road vehicle management plan. The title includes Cape Hatteras National Seashore and it includes the word off-road vehicle management plan. So why is it referred to as D(draft) EIS. Why is it referred to as CHNSORVMPEIS?

Correspondence: Mr. Murray,

It has been brought to the attention of the kiteboarding community that a variety of plans are being considered in response to proposed environmental and ecological concerns. The Outer Banks of North Carolina is a sanctuary for many beach goers, sports enthusiasts, wildlife observers and most importantly, the natural environment. We, as a community, feel that it is important for the environment to be protected and thus understand certain steps may be needed to achieve this goal. Thank you for evaluating the options to improve the environmental conditions at one of the greatest destinations in the United States of America.

However, with the aforementioned said, please consider the responses you choose carefully. Minimalist environmental management approaches have worked well throughout the United States' National Parks. Closing extensive sections of beaches, the sound, and water ways will strip away the very nature and reason for why we appreciate the land in its current state. It can be said with great certainty that all frequent and casual users of this place intend to preserve its natural beauty and respect its wildlife.

We strongly feel that the Historical, Cultural, and Economic ramifications of the proposed plans have not been adequately addressed by the Draft Environmental Impact Statement (DEIS) as is required.

Should the environmental changes impact our communities' sport (as it would in Plans D, E, & F) we would be forced to reconsider our frequent and environmentally friendly utilization of the Outer Banks. Other user groups such as surfers, fishermen, beachcombers, and virtually all other forms of tourism will also be discouraged from visiting Cape Hatteras if beach closures are greatly expanded. This will have a severely negative impact on the local economy and way of life that the residents of Hatteras Island have enjoyed for many generations. It will also take away something that is important to the lives of thousands of people throughout the United States and around the world.

If people, and especially children, can not experience the environment how are they going to learn to help you protect the environment?
 Kind Regards,
 Rob Lavis

Correspondence: I'm in favor of allowing vehicle beach access and submit the following:

The Coastal Conservation Association North Carolina wishes to comment on the recently released Draft Environmental Impact Statement on the ORV Management plan for Cape Hatteras National Seashore Recreation Area issued by the National Park Service. The objective of CCA is to conserve, promote and enhance the present and future availability of these coastal resources for the benefit and enjoyment of the general public. As such the thousands of members and volunteers of CCA NC and their nearly three quarters of a million associated recreational anglers are very disappointed in the six options for ORV management on CHNSRA. First of all the document itself is very difficult to follow in its 800+ pages. The tragedy is that none of the six options reflect the wishes of the vast majority of the CHNSRA visiting public and CCA NC. While there are preferred environmental and NPS options, there is no pro-access preferred option. The CHNSRA was established specifically for the American public to enjoy the seashore. To propose no option which provides a maximum access option certainly violates the spirit and perhaps the letter of the laws establishing this national park. Without serving the visiting public, The NPS has failed in its responsibility to our citizens. All the options presented in the DEIS seek to restrict public access well beyond any reasonable or legal requirement.

It is clear that significant facts have been ignored in the preparation of this DEIS. The success of turtle nesting and piping plover nesting and fledging is virtually unchanged since the de facto ORV plan was implemented in 1978. The primary causes of failed nesting and fledging are overwhelmingly predation and weather events which have occurred for hundreds of years. ORV caused mortality is a fraction of 1%. The USFWS and NPS personnel have caused more plover mortality. Yet, the NPS chooses to attack those users who are very sensitive to the wildlife in the CHNSRA.

The DEIS options all include restrictions which, when implemented as they have been under the consent decree, will unnecessarily close miles and miles of beach access both from the ocean and sound side. The many options describe no action which can circumvent a nesting closure in order to access an open area of the beach. Thus, while a stretch of waterfront may be "open" it is inaccessible. This represents nothing more than verbal trickery and masks the true available waterfront.

The specifics of option F, the NPS preferred option, require at least some comment as commenting on all options would extend beyond the available space and time constraints. Overall, the DEIS suggests there would be 52 of 68 miles of the waterfront "open" to ORV access but it is not clear that this includes any calculation of sound side access for ORVs or pedestrians. CCA NC strongly believes the "buffer" or closure areas suggested for piping plovers in various stages of nesting and fledging are beyond excessive. For nesting piping plovers 50 meters is more than adequate and as is 200 meters for unfledged chicks. To suggest that unfledged chicks of a bird that is less than 1 foot tall requires over a mile of seashore is ludicrous! All this with no pass through or corridor around these areas closes vast areas of the CHNSRA to the American public. All other shore birds should be allocated no more than 30m for nesting and 30m for unfledged chicks with pass through corridors as there is no legal requirement to provide excessive buffers. In addition, the NPS fails to recognize the role played by the spoil islands behind Bodie Island, Hatteras Island, Pea Island National Wildlife Refuge and Ocracoke Island in the breeding of shore birds. These areas are typically with a few hundred yards of the CHNSRA and harbor large populations of shore birds. If the NPS truly wants to help the population of piping plovers they should investigate the usage of large cages placed around the nests to keep predators out of the nests. These are used in the Northeast where the major piping plover nesting takes place. The NPS and the USFWS seem content to kill hundreds of other wildlife to try to protect piping plovers but refuse to implement simpler techniques improve shore bird breeding success while improving access as well.

Option F describes measures required to "improve turtle breeding success". Many of the restrictions described in option F have little basis in peer reviewed science. For example, there is no evidence that night driving of ORVs has any impact on turtle nesting or hatchling survival. There have been no female turtles killed by ORVs. To protect turtle nests and improve hatchling success, CCA NC recommends relocation of turtle nests when they are laid in areas exposed to weather events. Using the fences used on the Pea Island National Wildlife Refuge that are keyhole shaped are more effective for turtle hatchlings and would allow continued use of ORVs at night.

The surf zone of CHNSRA has been used for a hundred years for the purposes of swimming, sunbathing, fishing, birding and shelling. ORV usage is critical to the pursuit of these activities as much of the surf zone would be inaccessible without ORVs. The NPS, throughout the DEIS, seeks only to restrict ORV usage without proposing ways to improve access for ORVs and providing expanded habitat for those species which are threatened or endangered. It seems the NPS has forgotten the CHNSRA was established as a recreation area. Pea Island National Wildlife Sanctuary is for wildlife, yet under the de facto rules in place from 1978, there has been little difference in the successful breeding of piping plovers or endangered sea turtles. CCA NC urges you to revert to those rules put in place in 1978 to provide maximum access for ORVs and the American citizens.

Correspondence: I am a resident of Raleigh, North Carolina who enjoys recreational opportunities offered by the Cape Hatteras National Seashore and Recreational Area. Reasonable and safe pedestrian and vehicular access to the beach is essential to participate and enjoy these resources and opportunities. I also support restrictions and conditions necessary to protect the birds, sea turtles, and other biota that are supported by scientific data and can make the Seashore home for part of the year. I believe the favor alternative (#7) advanced by the NPS is more restrictive than necessary to meet protection of the Seashore. I have read and agree with the proposal to manage ORV's on the Seashore prepared and submitted for consideration by the Coalition for Beach Access. My position is that the NPS accept this alternative or at least postpone a final decision on the ORV Plan pending further review and negotiation on the counter points raised by the Coalition for Beach Access.

Correspondence: Dear Superintendent Murray,
As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.
1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."
2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness..." Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.
3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.
Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.
***** Thank you very much for taking the time to protect one of America's most beautiful stretches of Atlantic seashore! Sea turtles, nesting shorebirds, and generations to come will be grateful for your action today. Thanks again!
Sincerely,
Leslie Norman

Correspondence: I've been going to the Outer Banks/Cape Hatteras since 1949. The amount of damage done to the entire area by vehicles driving on the beach is shocking and depressing. These vehicles are the cause of erosion and destruction of habitation by the sand crabs, birds, etc that live on the beach. Even worse, Off the road vehicles come loaded up with canned drinks, papers, plastic, junk, etc which all gets dumped on the beach. They will pack it in, but they won't back it out. These people have no respect for nature or anyone but themselves.
If you permit year around ORVs on the beach, you might as well just destroy the beach outright. The beach will be totally devastated. Whatever your plan is, is should respect nature and people who venture out onto the beach on foot. Please do not destroy what little beauty remains of Cape Hatteras.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
Dear Supt. Murray, I write as a long-time visitor to the Outer Banks from Nags Head down to Ocracoke. The places on the national seashore where I spend the most time -- and the communities where I spend my money as a visitor -- are those where I can enjoy nature -- all of it, including birds and sea turtles, and not just fish. I have to believe that the greatest ECONOMIC benefit to Hatteras and Buxton in the long run will be the option -- Alternative D -- that preserves the birds and sea turtles as members of the ecosystem that makes the national seashore at Hatteras so appealing to the ORV drivers heading to their fishing spots. After all, if you suddenly proposed to pave the Hatteras beaches and stripe the asphalt with parking spots for the fishermen, they'd be horrified. They'd say that's not what they're there for. Well, the natural scene they enjoy while surf-casting is one that should include not just gulls but nesting colonial shorebirds and nesting sea turtles. It needs to be a complete and healthy beach ecosystem.
I support the alternative that will allow all to enjoy the Hatteras seashore including pedestrians. And I particularly think it's important to establish recovery goals for the species that have been beaten down and routed out by almost unlimited ORV use on the seashore -- recovery goals that should be based on the potential of the beach to support those species, whether turtles or terns. It is an absolute shame that things have gotten so far out of balance at Hatteras that only one group counts -- off-road vehicle drivers.
I want to be able to recommend the Hatteras seashore to my nature-loving friends, including those who come here from other states -- not tell them that they have to go to Ocracoke if they want to see what the national seashore can be -- or not to go south of Pea Island. Is that what motel and restaurant owners in Hatteras and Buxton want to hear? Of course not! Well, there's an alternative that would make me want to send my friends and myself to the Hatteras/Cape Point shore. Alternative D would make it happen. Respectfully submitted, Virginia Travis 5244 Old Woods Road Hillsborough, NC27278

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to

me.

The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.

* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.

* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence:	I am writing in regard to your plan for Cape Hatteras. ORVs don't need to drive on the beach, but many species need to live there. With pressure from global warming, environmental toxins, and general habitat loss, I hope you will give the wildlife more consideration than the drivers. I understand that the ORV lobby is rich and powerful, but that doesn't give them the right to make a mess of the beaches. I regularly visit the Outer Banks. I don't go there to drive on the beach, but rather to watch birds. Please act responsibly.

Correspondence:	NPS As an avid angler on the North Carolina seashore, I am strongly opposed to the National Park Service (NPS) preferred alternative, Alternative F, in the DEIS and urge you to make significant changes to the preferred alternative in order to provide both reasonable resource protection and reasonable public access to public land. Recreational fishing is one of the most enjoyable American pastimes, and Cape Hatteras National Seashore has some of the best surf fishing locations on the east coast ? accessible only by ORV. Alternative F is the most restrictive management option to date, far exceeding any sense of balance between resource protection and public access and betraying all promises made to the public regarding recreational uses in the seashore. The majority of the provisions included within the preferred alternative far exceed anything proposed by a majority of the Negotiated Rulemaking Committee, including excessively large resource closures (buffers), unnecessary year-round and floating closures, and the lack of access corridors around or through resource closures. In order to restore balance to the DEIS, I highly recommend that the NPS revisit the proposal put forth to the Negotiated Rulemaking Committee in December of 2009. It provides the necessary protections for wildlife resources while having the support of a majority of the local community. Without reasonable ORV access, responsible anglers like me, and the local economy that is supported by recreational fishing, suffer greatly. I urge you to provide a better balance between resource protection and recreational uses by incorporating the December 2009 recommendations from the Negotiated Rulemaking Committee into the preferred alternative. Sincerely, Bruce Hashinger

Correspondence:	I grew up in N.C. and have been a regular visitor to the Outer Banks for 45 years and a property owner in Buxton for almost 20 years. I believe that prior to the court ruling the Park Service non-plan was a good plan. I believe it was a very reasonable compromise between people and wildlife. The public/orv corridor to "historic" fishing areas had minimal if any impact on wildlife. The existing situation amounts to a taking of livelihood from businesses that have existed for years and rely on tourists that come year round for the best fishing area on the East Coast. In looking over the options on the Park Service management plan it would seem that the least restrictive option is still more restrictive than the present court ordered situation. Please consider returning to the rules that worked for so many years and make that the official plan. The present situation and any of the options in the proposed park service plan will choke the economic life out of the small towns, businesses and individuals, many of who's families have been part of the Outer Banks for generations. Correspondence:	<p>Dear Superintendent Murray,</p> <p>As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.</p> <p>1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."</p> <p>2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness...." Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.</p> <p>3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.</p> <p>Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.</p>

Correspondence:	<p>You may think it odd that someone in Arizona would care about the North Carolina coast, but it's true. I also live where there's lots of sand, and I can attest to destruction done by ATV's & ORV's. Dunes are extremely fragile, and sand can easily be displaced, to the point that your beach could eventually end up off Miami!! NOW is the time to make sure that doesn't happen.</p> <p>I am a long-time member of the National Parks Conservation Association. As such, I expect our prized landmarks to be maintained for this - and future generations. One would hate to see them simply eroded away due to lack of oversight. Protection is critical.</p>

Correspondence:	<p>I disagree with the NPS management of resource protection and visitor beach access following the DEIS. Alternative opportunities, stated in the Collation for Beach Access, for these beach closures have been put down in detail. One example in regard to the 5-year review process of the DEIS, on p.124, on specific beach and species management.</p> <p>As stated in the collation, there could be "less restrictive closures." There could be a shortened time frame for these review processes with multiple investigations within each management. Also, investigations within each closure could help determine further beach access opportunities and reports. Thus, more accurate data can be made along with helping the economic status of the North Carolina Coastline.</p>

Correspondence: I submit this comment in support of Dare County's proposal to urge the National Park Service to make changes in their preferred alternative F to incorporate the provisions outlined in their position statement.
 I too believe it will be beneficial to the long range success for wildlife, enhance the visitor experience and improve the lives of those living near the Cape Hatteras National Seashore Recreational Area.
 Without these changes, people will suffer continued harm to their livelihoods. I am a small business owner in Rodanthe/Hatteras Island; a mobile wedding ministry. The beaches of the Outer Banks continue to rank top in the country, and our area is specifically popular for 'destination beach weddings'. Beach closures have greatly impacted my business; TY 2009 revealed a 25% decrease in income!
 And may I also state it is unfair and inaccurate (and to my offense!) for the National Park Service to simply write off someone like myself and the income I depend on under Alternative F as "negligible to moderate."!
 I thank the NPS for wanting to be good stewards of God's wildlife here on the OBX--yet pray you will have utmost concern for His human lives and livelihoods!

Correspondence: Dear Supt. Murray,

My wife and I moved to Hatteras Island over 20 years ago with our young daughters. Both of them have since grown and prospered on the Island contributing as young business people and one is a Teacher at Cape Hatteras Secondary School. We came to the Island like most people do, because of the open beaches and multitude of recreational activities that are associated with those beaches. We built a small business during that time- The Islander Gifts, located on Rte 12 in Frisco, and have had a steady increase in business over the last 16 years until the Consent Decree and downturn in the overall economy.

My family, which has grown to include two local born son-in-laws and two locally born and bred grandchildren, is a solid contributing member of the Hatteras Island community. We disagree with the DEIS economic impact analysis. There seems to be little in the way of hard evidence that the impact analysis was conducted to any extent that it would be helpful in determining how any of the Alternatives impact the average local business owner.

1. On page 566- The DEIS states that a survey was conducted ... of potentially impacted businesses. We have many contacts within the community and attend many functions where other local business owners participate, and we have yet to hear of a single business owner on Hatteras Island that was a survey participant.

2. Page 566 also contains a table that refers to data collected in 2004. Surely, more current information is available from Dare County Officials, and my wife and I would be more than happy to provide real sales data- to the most recent monthly tax filings, that would show an accurate reflection of how the Consent Decree has impacted our business.

My wife, Elizabeth and I, as local business owners, respectfully urge you to consider the 'true' impacts of the DEIS and the alternatives contained therein. Our business, since the Consent Decree, has suffered a 14% decrease over the previous 5 years receipts. To a small business, that is the difference between paying the bills, and making a small profit, to being required to get another job to pay the bills. We can truly tell when Cape Point is closed- there are immediate effects to our daily sales for the days that the Point is closed to ORVs.

Please consider all of the impacts when you make this difficult decision- we can live with limitations to the beach driving, but believe that the scales have tipped in favor of the wildlife. We harbor no ill feelings towards the wildlife, but would appreciate the opportunity to show that we can be good stewards without onerous restrictions that affect all small businesses on Hatteras Island.

Thank you for your consideration,
 Arthur and Elizabeth Smock

Correspondence: Dear Sir: My family has been coming down to the Outer Banks for 5 years. We own a house in Rodanthe, N.C. and possibly are thinking of retiring there in a few years. The news of the beach closings was very, very alarming to all of us. I can't imagine not being able to go on the beach when we are there. We know that many people that we have spoken to about this, share our feelings also. Many visitors come down to Cape Hatteras throughout the year, and generate enormous revenue for the state. If beaches are closed, this will not only hurt rental seasons, but also affect the revenues of the businesses, employees and residents of the island. In Delaware and other northern beaches, they charge a small fee to pedestrians to use the beaches and to drive on designated beaches, a park pass is available for daily use or season pass. Isn't this an alternative, so traffic can be controlled on the beaches? It will also create revenue for the State, and help to replenish the shoreline, etc. A national seashore should be enjoyed by everyone, not only for wildlife but also by people that support them. To take this away from visitors to the island, is a great national tragedy.

Correspondence: BACKGROUND AND INTEREST:

I am an owner of an oceanfront property in Avon NC, part of the Cape Hatteras National Seashore. I spend 4 plus weeks per year in the house plus numerous weekends, and use the house to generate rental income to partially offset the mortgage and operational costs during the remainder of the year (normally rentals go from April ? November). Most of the times my family and I are there are during the off-season weeks or weekends in the fall, winter and spring, with perhaps one week during the summer tourist peak. I love the area and am very much interested in its conservation and preservation. I have always considered myself to be a strong environmentalist and have contributed to environmental causes and organizations. Professionally, I am a research molecular biologist, and have a Ph.D. in Biochemistry and Molecular Biology from Cornell University. I operate a small biotechnology business in Virginia.

OVERALL IMPRESSIONS:

As a scientist, I think that much of the data many of these proposals are based upon is not statistically significant. The main problem is the small number of bird breeding pairs due to the fact that Cape Hatteras is on the southernmost fringe of the Piping Plover's range. Less than 3% of the Atlantic population of Piping Plovers are in North Carolina (Melvin SM and Hecht A, Waterbirds 32(1):64-72. 2009), consisting of 46 pairs in the entire state (not just Hatteras Island). Hatteras Island seems to rarely have over 10 nesting pairs (p 195). Thus it is very difficult to make any statistically valid conclusions about ORV impact without an extremely long study period, especially with the number of confounding factors (variations in predator populations, weather variations, climate change, etc). Thus year to year comparisons attempting to show impact are very difficult to attribute to a specific cause, and the amount of human (and ORV) impact (if any) demonstrated in the document in Cape Hatteras National Seashore is statistically insignificant. It is clear from the Park Services own historic statistics that most failures to go from nesting to fledging are due to non-human factors, including mammalian predation (including predation from a large population of feral cats on the island), tidal and storm washouts, avian predation and crab predation. Human disturbances account for less than 5% of egg and chick mortality according to the park services own figures, and some of that has been from Park Service monitoring and banding activities.

As a vacationer in Avon, I am not enthusiastic about ORV's on the village beaches; however I cannot see much scientific justification for many of the

restrictions proposed in options B-F. The main problems I've had with ORV's in the off season on the village beaches have been caused by a small number of ORV operators, who see the beach as a chance for joyriding, and travel at excessive speeds, causing risk to children playing on the beach. There is rarely a problem with serious fishermen speeding or otherwise causing problems. I personally find the tire tracks on the beach to be very unaesthetic, and I am also concerned that the ORV traffic near the dunes breaks down dune formation that is essential to protecting my property from over-wash during major storms. Because of this I strongly favor a permit system and would support a longer closure of the village beaches to ORV's. But otherwise, it seems that the NPS had been doing an excellent job of protecting the bird and turtle breeding areas before the Consent Agreement, and therefore I would in general favor Alternative A, with the exception of implementing an ORV permit system for educational purposes. Finally, as a dog owner, and person who rents to many other dog owners, I see no justification for the restrictions on leashed dogs on the village beaches during the bird breeding season, which overlaps part of the peak tourism season. This would cause unnecessary kenneling expenses for the vacationers and would seriously degrade an important portion of the beach experience for many who enjoy walking on the beach with their dogs, without having any impact at all on bird survival.

SPECIFIC COMMENTS:

ORV's vs Piping Plover populations ? Cause and effect?

Page i of the executive summary includes the following paragraph:

"Historically, beach driving at the Seashore was for the purpose of transportation, and not recreation. The paving of NC-12, the completion of the Bonner Bridge connecting Bodie and Hatteras islands in 1963, and the introduction of the State of North Carolina ferry system to Ocracoke Island facilitated visitor access to the sound and ocean beaches. Improved access, increased population, and the popularity of the sport utility vehicle have resulted in a dramatic increase in vehicle use on Seashore beaches. There has also been a decline in most beach nesting bird populations on the Seashore since the 1990s."

This paragraph appears to imply that the period from 1963 to the present is not part of the "historical" pattern of beach use. This is almost half a century. Thus for the majority of the US population, who are under 47, there has been beach driving for all of their lives, and for those over 47, there has been 'recreational' driving on Hatteras Island for the greater part of their lives and driving in general for all of their lives.

To imply that the increase in SUV popularity in the 90's and the decline of the bird population are "correlated" is an attempt to impart cause and effect where none likely exists. Many other changes occurred on Hatteras Island during that period. There was a large building boom on the island during that time, there has been significant global warming over the past two decades, there has been a very significant decline in fish populations, bay scallops have greatly declined and predatory species such as sharks have declined in ways that affect the overall ecology (Meyers RA, et al, Science 30 March 2007: Vol. 315, pp. 1846 ? 1850). Thus to imply that the decline of the bird population is due to the increase in ORV popularity is unscientific and disingenuous. Nowhere in the report is there any direct data showing significant numbers of deaths, nest destruction, or failure to fledge caused by ORVs over the 1980's or 1990's in the Cape Hatteras National Seashore to support this conclusion. The data summarized on p 210 does not indicate ANY Plover deaths due to ORV's since 2000, just intrusions into enclosures, which is an enforcement problem. Thus this so called inverse "correlation" between ORV popularity and Piping Plover population cannot and should not be used as the basis for developing public policy.

Indeed, as stated in the report itself (p 208): "Small populations such as the Atlantic Coast piping plover populations face a heightened risk of extinction compared to large populations because they are more vulnerable to the following: (1) random environmental variations, such as storms; (2) reduction in genetic variations that limit a species' ability to adapt to local conditions; (3) sudden, random drops in birth and death rates; and (4) an impaired ability to find suitable mates (Lande 1988)."

Thus on the basis of the bird population, it certainly seems that Option A, or Option A with an educational ORV permit, would be adequate for protecting the Piping Plover and other shore bird populations on the island.

PETS:

On page 136, regarding the American Oyster Catcher, Alternative F proposes the prohibition of pets on the beaches in front of the villages.

"Implementation of a permit system with an educational component, larger buffer sizes, seasonal nightdriving restrictions, prohibition of pets in the Seashore during breeding season including in front of the villages, and establishment of breeding and nonbreeding SMAs would benefit the American oystercatcher."

First of all, this goes beyond the scope of an ORV management plan, as it is now talking about managing people and pets in the village areas, not vehicles. The village areas are of major economic importance to Hatteras Island, as these are where almost all of the visitors stay (other than those in the NPS campgrounds). A major part of the historic "beach experience" in this area has been the opportunity to bring pets, especially dogs, as many of the rental houses allow them. The park service has a leash law, and as a dog owner, I can tell you it is well enforced in the village beaches. The following statement is made regarding pets on pp 326, 329, 336, among others:

"The presence of pets at the Seashore, including during breeding season, has the potential to adversely impact piping plover as some visitors to the Seashore do not observe the requirement for pets to be restrained in some manner, as observed by Seashore staff. If there is little or limited compliance with pet restrictions in the areas of closures, a negative effect on the plovers could result (USFWS 1996a)"

This statement shows that it is a lack of enforcement that causes the potential to disturb the birds, not the presence of properly leashed pets. There is no reason to expect that if pet laws are not properly enforced, there would be any difference. Indeed, once someone is put in the position of already "breaking the law" by taking a pet to the beach, keeping it leashed would no longer seem relevant. The quoted statement also provides no evidence that Seashore staff have observed controlled or leashed pets disturbing birds, only that the leash laws are sometimes not observed. And even this does not mean that the pet is not under control of the owner. It is much more likely that any disturbance by unleashed pets will be while the pet is not under control of an owner, such as an irresponsible owner who allows their pet to roam outside while they are inside. There is no reason to punish the responsible pet owner who leashes and controls their pets in the beach areas in front of the villages for the irresponsible action of people who by all rights should not own pets.

It is much more likely that nest and bird disturbances are the result of uncontrolled or feral cats and dogs. There are soft-hearted locals who "adopt" these feral animals (especially cats) and continue to feed them, thus increasing their population. The most effective pet control would be to educate these people and to begin a serious effort to spay and neuter these "adopted" feral animals through free clinics. Prohibiting leashed dogs from the beach will likely have zero effect on bird survival.

CONCLUSION:

In conclusion, I feel options B ? F each contain items that are unnecessarily restrictive. Option A allows the local NPS professional staff adapt to changing conditions and to protect the bird breeding using their professional training and discretion, while still allowing recreational ORV access to most of the shoreline. I would be happy to see permitting of the ORV's as a means of educating the drivers about the need to be careful of nesting areas, and a strict speed limit in the village areas, however this and the other protective measures should be left to the discretion of the local park professionals.

Correspondence: I have been fishing the Outer Banks, in particular, the Buxton beaches down to the end of the island since 1980. I first began my quest for Red Drum by walking from ramp #44 to the point. I did this for three or four years before I realised a four wheel drive vehicle would save me a lot of effort walking

across the deep sand with rods, bucket, rod holders, etc. and in waders to boot. I recall the protected areas for the piping plover roped off even back then. However, the protected areas were reasonably structured and everyone I witnessed treated the protected areas with the utmost respect. They were not so intrusive that many acres of access were cut off from ORV's as it appears now as a result of environmental tenticles slithering over miles of recreational beaches.

My most recent trip was April 19.....to 22 of this spring. I was appalled at the amount of beach access denied to the surf fisherman who have enjoyed these beaches for well over a century. I have read the DEIS a couple of times and am still trying to digest all the alternatives of which very few favor the recreational fisherman. Not living on the island I have not been able to see the insidious encroachment of the environmental societies over the past few years. Posts and string with signage all over the place....even the ride to Okracoke is lined for miles with the beach access denial.

I also surf fish at IBSP in New Jersey. It is only 1 hour and 45 minute drive from Doylestown. I can imagine the angst those of us who fish the Jersey Coast would be faced with if the prime fishery, like Cape Point, was closed at the whim of environmentalists and the National Park Service who are doing a disservice to the fishery and it's economy by shutting down inordinate amounts of beach access. Fortunately IBSP is state owned and not under the control of the National Park Service aka Audubon Society. I am very discouraged by the efforts of the environmentalists to hold surf fisherman hostage in such an invasive and all encompassing way.

It would be absolutely refreshing and restore my faith in humanity if all the players involved sit down in a mature fashion and come up with a resolution to this problem that will not only protect the endangered species but do it in a way that is not so controlling and intrusive to the survival of the recreational aspect of the Outer Banks. If not, myself as well as many others will be put in the position of saving the wear and tear on their vehicles and thousands of dollars spent on lodging food, and supplies. It would be quite a loss as I love the Outer Banks.

Sincerely,

Harrison D. Woodruff NCBBA #7975

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: To: The National Park Service Regarding:2010 03Mar 05 - Draft ORV Management Plan/EIS
The Cape Hatteras National Seashore has provided my family with great benefit and recreational enjoyment over the years. The focus of this enjoyment is the ability to drive on the beach with our four children. They are now aged 12,13,18,20 and we have been visiting for many years. Please do not deprive my children the great family joys of beach driving on the National Seashore. Safely driving on the beach is what sets the Outer Banks apart from all other beach experiences. There are many people from these parts that travel to Cape Hatteras and find a great communion with nature driving out on the beach. Please consider my request to keep the beaches open for the benefit and enjoyment of the people of the United States.
Reasonable access has included Beach Driving since before the Cape Hatteras National Seashore Recreation Area was established by legislation. Please stop closing our National Recreational area! If you must protect an endangered species please keep driving corridors open around the species.
Non - endangered species should not be used to close the beach.
We must respect the creation we have been entrusted with. Even our laws require you to so. However,I am convinced that these Islands that were stabilized by man can and should continue to be used in the same manner that they always have.
I am convinced that the extreme weather experienced on the Cape has far more impact on the habitat than beach driving.
Most Sincerely, Patrick William Riley Accident,Md.

Correspondence: As a tourist to the outer banks on several occasions and past renter in village areas I fail to understand why opening an additional few miles of beach to motor vehicles is considered a balanced allocation to all users of a very limited resource. When going to a location such as the Outer Banks I am going for a beach environment to get away from my daily city work environment of Manhattan. I am not going in order to be surrounded by vehicles in a natural environment.
The individuals who seek expanded motor vehicle access already have tens and tens of miles of beach open to them. If I am going to spend thousands of dollars to rent a beach house I would like to know that I can enjoy the beach undisturbed and without fear of bodily harm to myself or my children. To continue limiting vehicle access in just the residential village areas is not an unreasonable limit on vehicle access given the preponderance of ready access that is available to them already. Vehicle access miles will still outweigh the amount of beach that is available for purely pedestrian type access in residential village areas if current restrictions remain in effect. Every major city in the world sees fit to balance the interest of pedestrian and cars. Even NYC saw fit to close off major areas of Time Square to allow pedestrians the opportunity for a richer experience of a national icon. I can walk the sidewalks and pedestrian ways of Manhattan and have a reasonable expectation that I will not be struck by a vehicle. I will not have the same reasonable assurance on the beach in villages that are proposed to be opened.

If open access for vehicles without open access for pedestrians is the result then I and no doubt many others will choose to spend our beach time in other locales where fear of bodily harm will not squelch the benefits of visiting the shore. It is not unreasonable the all three parties (cars, people and birds) be afford a balanced allocation of this scarce national resource.

Correspondence: Dear Superintendent Murray,
 As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.

- 1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."
- 2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness...." Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.
- 3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.

Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan

Correspondence: The off-road vehicle management plan/environmental impact statement is a flawed document, and I ask that you please consider the following:
 The plan is not just restrictive to off road vehicle use, but limits much pedestrian access as well, and can be considered as discriminatory to individuals with disabilities. Even the areas designated as open to ORVs and pedestrians are subject to closures of up to 1,000 meters in all directions, which is quite excessive, and will ultimately close a beach once designated as "open" for a lengthy periods which can be crucial in the midst of tourist season. For example, ramp 23, the only public beach access in all of the tri-village area, is currently closed. Its "temporary" nesting closure lasted the entire summer season last year, resulting in huge financial losses to retailers in the tri-villages; two are currently out of business in the Pamlico Station, a direct result of profit decline following the beach closure period. While there appears to be documentation that minimizes the impact of closures on Hatteras Island due to statistics involving visitors to northern beaches and the Wright Brothers Memorial, I'm certain other areas of the island have experienced similar circumstances and overall loss of revenue. The National Park Service should have a responsibility to the people of Hatteras and Ocracoke Islands as well as a commitment to the wildlife. It is inconsiderate to enforce beach closures at peak season weeks such as July 4th, Memorial Day, and Labor Day. Instead, enforce the protection of birds and turtles by holding individuals accountable for their actions while visiting our beaches rather than sacrificing the livelihoods of families that depend economically on beach accessibility. Furthermore, the proposed closures and restrictions may not even be in the best interests of the species in need of protection. For example, nest relocation should be considered. Why is this done when there is a threat of severe weather, yet the threat of economic destruction is not viewed as significant enough to move these nests to Pea Island? There are islands in the sound and other areas available which contain proper vegetation, improved habitat, with less likelihood of interference. Beach closures should be limited to a more reasonable 10 meters surrounding nesting areas. Prohibition of night driving also encourages the presence of predators who may have been previously deterred by vehicles, especially ghost crabs, a significant threat to turtle eggs. Rather than closing off entire sections of beach under the assumption that it will improve wildlife protection is irresponsible. Let's take a more aggressive approach that will benefit both the environment and the people who enjoy it. Other states are able to balance access by using the "average high tide lines" to determine which nests are at risk and to relocate as needed. For the most part, I believe our visitors and locals alike are law-abiding, and have demonstrated respect and restraint in regards to closure areas. In fact, the vast majority of threats to birds and turtles have been weather and predator related, with human interference having the absolute least impact. The National Park Service has not made public a record of incidents which indicate a significant conflict between ORV use and wildlife destruction, and no piping plover deaths have been attributed to ORV use that I know of. Therefore, please consider a more reasonable compromise, as the current proposals undermine our freedoms and cultural heritage. Upon its arrival on Cape Hatteras in the 1930s, the National Park Service committed itself verbally to the natives and in writing to the preservation of their cultural traditions. I would say that since roads didn't exist on Hatteras Island at the time, ORV use is part of the heritage, along with the recreational traditions such as surfing, fishing, sun-bathing, bonfires, picnics, swimming, kite boarding, etc. that continue to attract locals and tourists to our area. Please consider a less restrictive plan that will not only preserve wildlife, but preserve the lives of the families and their heritage on our National Seashore.

Correspondence: The NPS must formulate a plan that is consistent with the legislation establishing Cape Hatteras National Seashore Recreation Area. The enabling legislation for the Recreational Area states, in part, "said area shall be, and is, established, dedicated, and set apart as a national seashore recreational area for the benefit and enjoyment of the people and shall be known as the Cape Hatteras National Seashore Recreational Area". Therefore, it is important to balance resource protection with reasonable access for recreation.
 Corridors are a vital tool in providing access while managing resources. They provide a small path around temporary resource closures in order to provide access to open areas that would otherwise be blocked. Corridors should be permitted throughout the seashore during the entire breeding and nesting season including ML-1 portions of SMAs. These corridors would provide valuable access without impairment or damage to protected resources. Buffers, or closures, are important management practices for species recovery. However, to have long term benefit for the wildlife and the visiting public, buffers must be based on peer-reviewed science. For example, the Piping Plover, a species classified as threatened and not endangered, is given a level of unprecedented protection in Alternative F. A 1,000-meter buffer in all directions represents over 771 acres. The DEIS does not cite any peer-reviewed science in supporting such closure. A more appropriate & effective buffer would be 200 meters.
 Birds that are not listed as endangered should not be afforded the level of protection given to ESA (Endangered Species Act) protected species. Instead of 300-meter buffers for these birds, a more appropriate buffer would be 30 meters. Also, all birds in the same ecosystem of the seashore should be counted. This includes all the many birds on the dredge and spoil islands located just yards away and within sight of the seashore.
 The National Park Service should consider turtle management practices successfully used in other federal and state areas to achieve nesting success.

More proactive measures include relocating nests to more desirable locations, which is routinely and successfully done in other areas.

I think what is going on with the beaches is ridiculous. There is so much involved if the beaches close just because of the "birds"..Don't the people who live there have a right?.They are human. Without the beaches open there are people who's jobs are at risk. The economy is bad enough. People need their jobs..People come to the outer banks because of the beaches. People travel from all parts of the world to come HERE. Without the beaches you will have NO PEOPLE!.What part of this problem don't you understand!.The fisherman have a right to go fishing and families have the right to take their kids to the beaches to enjoy the sand and ocean. We are tax payers and I thought we have rights. But I guess the birds have more rights that HUMANS. I guess the birds can help pay people's wages. Years ago we didn't have this problem. People came and they had fun. The birds go to BIRD ISLAND. That island is still there with OH! yeah, BIRDS. Stop and count your blessing. The good LORD gave us these waters to enjoy. Don't try to take away something that isn't yours.

Subject: DEIS Off-Road Vehicle Management Plan Comments
My comments concern the DEIS Off-Road Vehicle Management Plan prepared by the National Park Service (NPS) for the Cape Hatteras National Seashore Recreation Area.
1) Page 201: I disagree with the NPS statement: Even with resource closures in place, protected species are still at risk [from pedestrians and ORVs.] Piping Plover deaths have not been attributed to ORVs. ORV violations continue to decrease as signage and education improve. Pedestrian violations are much more significant than ORV violations. It seems that any transgressions into protected area could be significantly reduced if NPS manpower was added, increasing enforcement, rather than supposing that the public purposefully or willingly violates violating out of bounds areas.
2) Page 1: I agree with your statement ORVs have traditionally served as a primary form of access for many portions of the beach in the seashore, and continue to be the most practical means of access and parking for many visitors.However, pedestrian only areas discriminate against individuals with limited mobility due to age or physical impairments, families with small children, and those wishing to engage in activities requiring recreational equipment (boogie boards, beach umbrellas, beach chairs, coolers, fishing rods and tackle, etc) 3) Page 53: I disagree with the special use permit proposed guidelines. It is impractical to allow the transportation of disabled visitors to the village beaches and then require the vehicle to be returned to the street or parking area. This makes the disabled person have a driver for drop off and pick up, repairing to a parking lot and back. Meanwhile, the disabled person must manage a long distance, through often hot and deep sand, to access the beach and return same,to get back to the vehicle. Should the handicapped person want to go to the beach, is capable of driving himself, yet cannot find another person to go with him. does he now not go to the beach? This rule creates unnecessary hardships and risks in the event of an emergency as well.
4) Page 121-127. I strongly disagree with the buffers as presented. We must allow for pass-thru corridors. The beach is linear with the ocean buffering on one side and the dune line on the other. For example - If you pinch off access on one side of a 4 mile linear beach and pinch off access on the other side of the 4 mile section of beach with no corridor, then you effectively have closed off all 4 miles of the beach because you CANT get there. The proposed bird buffers are too large, blocking access to the interior sections from the two bufferedends. Please consider ORV pass-thru only corridors and use breeding/nesting buffer distances to establish ORV pass through only corridors to ensure beach access in a way that does not hinder resource protection.Pass through corridors should be maintained for pedestrians and ORVs in all areas of the Cape Hatteras National Seashore Recreational Area throughout the entire breeding and nesting season. Corridors are vital to providing access in a way that does not hinder resource protection.
The 1000 meter distance for piping plover seems excessive and not founded on other scientific findings or successful operations in other areas hosting similar birds. Other precedent supports a 200 meter buffer.
Buffers for other species, including American Oystercatchers, Least Terns and Colonial Waterbirds need to be changed. An effective 30 meter buffer should be established for these species rather than the 300 meter closure outlined in the DEIS.
NON-ENDANGERED BIRDS should not have same protection as if endangered. Not allowing ORV access is paramount to denying the public access to these beaches.
5) Page 124: I disagree with the NPS slant of providing for over protection of resource management over that of the public's right to access the beaches. Pro-active initiatives include: Vegetation Management, Habitat Management, Enhanced Predator Management, Colonial Water bird social attraction, Piping Plover check fledge rate, Piping plover chick buffer distance, and pass-through buffers during the incubation period. Opportunities to implement less restrictive closures as a result of the above initiatives should be considered more frequently than the 5-year periodic review process identified in the DEIS.
6) I disagree with the NPS Resource Management Pedestrian/ORV Closure Policies. Nest failures are predominantly due to non-human events, according to your stats: mammalian predation is 54%; Storm/Lunar Tides: 29%; Nest Abandonment: 6%; Avian Predation: 5%; and Ghost Crab Predation: 3%. Percentage due to human interference is JUST 3% -- an insignificant amount. However, the NPS wants to ban humans when their actions provide very little influence on the success rate of breeding birds and turtles. This indicates a desire to apply power and control without cause, while denying public access. There is room for protection and public use of these beautiful coastal areas, and is historically the intent when the Cape Hatteras National Seashore was founded.
7) I disagree with the stats of breeding plovers and the other birds in the Park when the NPS does not adequately consider locations neighboring the Recreational Area that are part of the same ecosystem, namely dredge and spoil island that are located just yards away and within sight of the seashore. These birds are part of the same ecosystem and should be included. Those spoil islands, developed by man from dredging the waterways in the Pamlico Sound for channel upkeep are full of birds. The reason why so many birds? NO PREDATORS. SO, birds are resourceful. You have to count these birds and incorporate them in the stats when the NPS is talking about any so called decline in breeding pairs in the National Park.
8) Page 1: I do not think the DEIS responsibly addresses the cultural resource issues. The very purpose of the DEIS as set forth in the National Environmental Policy Act (NEPA) is to protect and preserve natural and cultural resources in the federal decision making process. In the DEIS, the statement protect and preserve natural and cultural resources appears in the first sentence of the first page of the plan, in the Purpose of the Plan section, and numerous times thereafter. Yet, the 810 page document devotes only two paragraphs to analysis of cultural resource issues.
Year round residents of Hatteras Island communities have traditions, and many returnees their own, have used south beach for gatherings, beach and surf activities. These are things passed through generations, and enjoyed by multiple generations, together. It allows for historical identity to perpetuate and for visitors to continue their own traditions while sharing this island.
9) Pages 270-281; 561-598: I strongly disagree with your economic analysis of the impact of the DEIS. The region of influence (ROI) incorporates the Northern Beach communities, including Kill Devil Hills, Kitty Hawk, Southern Shores and Duck. These areas are almost completely disconnected from ORV use and access issues relating to the Seashore. Inclusion of the Northern Beaches in analysis significantly dilutes estimates of economic impact on the 8 Seashore Villages. Many visitors pass through Hatteras Island from the northern villages, most do not engage in activities on these beaches. Nowhere is it clearly addressed that the overwhelming majority of negative impacts will be felt by small businesses in the Seashore Villages rather than by overall economic interests within the greater ROI.
Based upon the economic harm the village businesses have already experienced under the consent decree, Dare County projects the economic impact of

Alternative F to be substantial.

According to local business owners, beach closures have already had a devastating and unfair impact, causing foreclosures, bankruptcies, lay-offs, cutbacks, expensive refinancing, and depleted college funds and savings accounts.

Even businesses whose revenue has stayed level or showed a modest increase have accomplished this at a costly price. Many have had to cut back employee hours, forego much-needed capital improvements, and sacrifice profits.

Pages 270-286, 561-598: The socio-economic data and analyses are incomplete and erroneous and result in an understatement of the effect the restrictions will have upon the Island, the region and the state of NC. The US Park Services answer: Businesses will have to adapt to the new rules. (p.383) The negative economic impacts of the decree ARE KNOWN, so to say that the added restrictions would have negligible to moderate impact is indefensible.

10) Overall Visitor Counts - Overall visitor counts appear to include visitors to Fort Raleigh National Historic Site and the Wright Brothers National Memorial. A large percentage of these visitors vacation in the Northern Beaches communities and recreate on the non-federal beaches outside of the Seashore. Visitors who patronize the Fort Raleigh National Historic Site and the Wright Brothers National Memorial but do not visit the actual seashore areas need to be factored out.

Maintenance of Future Access to Cape Point and South Point Ocracoke: All socioeconomic analyses related to Alternative F are predicated on the assumption that access corridors will remain open for at least an appreciable portion of the visitor high season. Under Alternative F, the access corridors will be subject to Resource Closures based on buffers similar or identical to the Consent Decree. Unless some predictability of access to Cape Point and South Point Ocracoke can be assured, economic analyses predicated on assumption of access are fundamentally flawed.

Would a group of surf fishermen want to come to Hatteras Island to surf fish if they are not sure they can access the prime fishing grounds at Cape Point? The answer is they won't come. If they don't come, they don't rent vacation homes and spend their money on Hatteras and Ocracoke Islands. The definition of the Region of Influence (ROI), faulty data on economic activity generated by specific type recreational activity, incomplete visitation/business survey data, inflated overall Seashore visitor counts pertaining to beach use, and flawed key assumptions concerning the maintenance of access under Alternative F, all lead to inaccurate conclusions in the socioeconomic analyses. Specifically, these inaccuracies can be seen as understating the negative socio-economic impact of the Seashore Villages. Further, this negative impact will be absorbed almost entirely by Small Businesses. Neither of these important aspects of the management alternatives are adequately presented in the DEIS.

10) Pages 125; 392; 396: SEA TURTLES. I disagree with the stats and procedures proposed. I think endangered sea turtles would benefit from management practices now in use at other federal seashores that are more proactive in efforts to achieve nesting success. This includes relocating nests to more desirable locations as is done in other state and federally controlled areas.

The Cape Hatteras National Seashore Recreational Area is on the northernmost fringe of turtle nesting locations for the southeast, accounting for about 1% of all turtle nests. Proposed buffer areas are not needed for protection of the turtles and amount to overprotection.

11) Pages 97- 101. I strongly disagree with proposals in this section saying that ORVs will be prohibited year round between ramps 27 and 30, at Hatteras Inlet (Hatteras Spit), Ocracoke Inlet (North Ocracoke Spit) and various other locations.

Not allowing ORV access actually means denying the public access to these beaches. They are located miles from the nearest parking or paved road area and too far to access on foot. This is far excessive and offers no attempt to balance public use with resource management -- again, violating the spirit of the original creation and establishment of Cape Hatteras National Seashore.

12) Page 104: I disagree with the proposed night time driving closures. Per your proposals, night driving will be prohibited between May 1 and November 15th, forcing visitors off of the beaches early in the evening and preventing sunrise surf fishermen access in the morning. Please consider a more moderate night time ban if one is needed, perhaps from June 1 September 15 with times being 1 hour after sunset and 1 hour before sunrise to allow beach goers to gather their stuff and exit the beach area.

Certainly more proactive measures such as relocating nests prone to weather and ocean events would dramatically increase the nesting success rates.

13) Page 121: I disagree with the proposed beach closings, including pedestrian access from March 15 until July 31 in 8 different beach locations which have traditionally been available. Please leave these areas open to beach walkers, shell collectors and those who want to access the beaches in these areas. This appears such an arbitrary act if not overturned.

Conclusion: Harold Ickes, Secretary of the Interior, 1938 said, "When we look up and down the ocean fronts of America, we find that everywhere they are passing behind the fences of private ownership. The people can no longer get to the ocean. When we have reached the point that a nation of 125 million people cannot set foot upon the thousands of miles of beaches that border the Atlantic and Pacific Oceans, except by permission of those who monopolize the ocean front, then I say it is the prerogative and the duty of the Federal and State Governments to step in and acquire, not a swimming beach here and there, but solid blocks of ocean front hundreds of miles in length. Call this ocean front a national park, or a national seashore, or a state park or anything you please? I say that the people have a right to a fair share of it." Quote from: Creating and Establishment of Cape Hatteras National Seashore: The Great Depression through Mission 66 August 2007, Cameron Binkley, SE Regional Office, Cultural Resource Division, National Park Service

Please, let's not create a situation where "The people can no longer get to the ocean." Let us not swing so far from the original intent of beach access and preservation, where we allow the loss of one over the other. There is room for both -- public access and resource promotion.

So we all need to make sure that the DEIS proposal is not really about issues of power and control gained by a committed group with vast resources, over historic community residents and visitors who believe and work towards human beach access and resource promotion/protection. Be successful in your quest for due diligence, and, due not fail us all.

Protect, not Prohibit.

Respectfully, Cathy Raich

Correspondence: Dear Superintendent Murray,

As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.

1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."

2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness..." Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.

3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.

Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management.

Sincerely,
M. Julie Straub

Correspondence:	<p>As a new property owner on Hatteras Island and a long-time visitor, I am appalled by the bureaucratic and political mess that this relatively simple issue has become. The beaches of Hatteras Island belong to the public. There is no evidence whatsoever that any bird or animal is threatened by public foot and ORV access. The fact that environmental groups have been able to buy their way into this access issue proves that they have no concern about the traditions and culture of the Outer Banks. Surf fishing, beach combing, relaxing, swimming, surfing, etc. have been practiced on the Outer Banks for decades. The entire economy of the villages on Hatteras Island is based on the tourists that these activities draw throughout the year. The piping plovers, American Oystercatchers and other shorebirds have thrived on the Banks along with the tourism and economy of the island until a few years ago. I believe that limiting access by foot and ORV only serves the interests of a relatively few radical environmentalists to the detriment of hundreds of businesses and thousands of tax-paying, law-abiding citizens who only want to enjoy the beach with their families and friends. If there is such a big threat to the birds, why doesn't the NPS add some staff on the island and stop spending its precious discretionary resources on responding to frivolous lawsuits for birds that are alot less endangered than the precious way of life of an entire island.</p> <p>I appreciate the opportunity to comment and hope that the Federal Government will take a close look at the real issue facing the island - the deteriorated state of the Bonner Bridge over Oregon Inlet.</p>

Correspondence:	<p>We have been visiting the outerbanks since the 60's. In that time we have always enjoyed the beaches. In the past we would camp at Cape Point campground. One of our most anticipated activities was to go to the point to fish. It was always a major part of our trip going there almost everyday. Now the point is often closed to not only vehicle traffic but also to pedestrian traffic as well. If the national seashore is there for the enjoyment of the people, then it should be accessible for all. I feel it is criminal that one group can dictate what is to be for everyone else. I believe that we should protect wildlife but, I feel that some compromise should and can be made here. There is after all a wildlife refuge not to far to the North of Rodanthe that is designated for wildlife protection. I can understand the closing of the beach in this area, that is what it is for. I do not understand that in the areas where they think birds are nesting, why such a large area needs to be closed. It seems that the recreational user is punished for no reason. I do believe that if the ORV and recreational users can access the area they too will protect the wildlife as well. Some where along the way it has been decided that if you are an ORV or recreational user that you do not like wildlife. I think this is the furthest from the truth. We are outdoor people instead of eliminating us from participating, let us continue to use the areas and we will make sure that no one is doing any harm as well.</p>

Correspondence:	<p>I disagree with the proposed plan. There several businesses that will be adversely affected by the beach closures. I have a rental house in Waves and could very well not have a full season of rents if the beach closure plan goes through. It seems a "median" could be reached if more input could be given by the business owners and by environmentalists. Why not help the unemployment rate and hire more Park Rangers to better police the nesting sites to make sure no one violates the boundaries? Please reconsider before it's too late and an economic nightmare happens! Sincerely, Brenda Smith</p>

Correspondence: I disagree strongly with many of the proposals in the DEIS and I see a large disconnect with it and the enacting legislation of the Cape Hatteras National Seashore Recreational Area. What has happened!? This park was formed for the recreational use of the citizens and visitors of our country and now that legislated use is at risk by the proposals of this DEIS. I acknowledge the enabling legislation also includes the mandate to protect the wildlife of the park and I have always been a proponent of doing so but, it seems so incongruous to restrict access, to so many areas that are traditionally heavily used and true geographic wonders to behold, in pursuit of dubious wildlife protection measures. The keep away distances of nests is extreme ? 1000 meters seems absurd to me. With Pea Island National Wildlife Refuge to the North and the virtual wildlife refuge of the Core Banks National Park islands of Portsmouth, Core Banks and Shackleford Island to the southwest and the Alligator River National Wildlife Refuge to the Northwest and the Swan Quarter National Wildlife Refuge and Lake Mattamuskeet National Wildlife Refuge to the west, it is hard to justify these closures for wildlife that your own statistics state are impacted insignificantly by human interference. Likewise I object to the year round closing of the 2 spits of Hatteras Inlet and other areas - that would be contrary to the intended recreational use of the Park and go against the promise of the NPS superintendent during the establishment of the park, Conrad Wirth, when he addressed the local concern of the access by saying " you will always have ocean and sound side access". I also disagree with the documents assessment of the minimal effects on our local economy it will pose. Since the parks' inception the local economy has changed from one of commercial fishing, very small businesses and subsistence living (gardening, livestock and fishing) to one that is almost entirely dependent on tourism. Conrad Wirth encouraged the local population to accommodate the expected visitors and now it is dependent on them. People like to visit CHNSRA ? many like it a lot. It is an uplifting experience for so many who, by and large, are urban dwellers and benefit from seeing wildlife and unique geography ? it helps them to de-stress, to "chill out". It is valuable to them and our society. The inlets, spits and points are a big part of this. I DO AGREE with the proposed 15 mph speed limit. It is plenty fast. We are fortunate that most of the ORV users in the park are not looking to use their ORV for anything more than access to areas that would be difficult to get to by foot especially with the numerous items they carry for sport (fishing, kayaking, surfing, bogie boarding, wind surfing, kite boarding, volley ball, etc.) and relaxing (chairs, umbrellas, coolers etc.). They drive to a suitable location and park ? some relax while others go at some harmless sport with passion. All leave refreshed and most leave with a reinforced respect for Mother Nature and appreciation for the access our National Park provides. These are good, wholesome, often family based activities that are very beneficial to the users ? especially mentally and spiritually. I have been visiting this park for more than 45 years and only rarely seen any behavior that was detrimental to the Park or its' wildlife. It is not something that is on the agenda of most visitors. I believe the rare cases of improper behavior can be addressed through good law enforcement rather than restricting the entire population. I know some ORV restrictions are necessary and I welcome them. In areas that are near to the road, pedestrian only access should be promoted. Four more ocean side parking areas and four more sound side parking areas would be a big help toward achieving this. Many people in this modern world are overweight partially due to lack of physical activities. Almost anyone can walk. For those who, unfortunately, can't or are otherwise limited, a few more wheel chair accessible walkovers like the "bath house" in Frisco would be helpful. At the spits and points, ORV access would give them the opportunity to experience more of the Recreational Area and these are truly the geographical gems of the Park. I know there is a good chance you will receive many comments in favor of this proposed DEIS and I would be willing to bet most of them will come from people who have never visited the park. It is easy for conservation organizations to paint ORV users as a bunch of dune buggy cowboys speeding around tearing up the terrain and terrorizing wild life in an effort to incite their supporters (one of whom I used to be but??. I was never "incite-able") and get them to flood you with letters in favor of "saving the birds at all costs". The traditional ORV use in the CHNSRA has never been about destruction, it has been about recreation. Please give weighted consideration to the comments of the visitors of the park, they know a lot more about it, they are stake holders and they are for whom the Cape Hatteras National Seashore RECREATIONAL Area was created.

Correspondence: I disagree with the access reducing features of the DEIS and I fear they will have a devastating effect on my life, family and the economy of Hatteras Island. My father and other family members lost property to the establishment of the Cape Hatteras National Seashore Recreational Area but, were told they would benefit more than they would lose. Conrad Wirth encouraged local residents to start visitor based businesses and promised them "you will always have ocean and sound side access". We believed it for quite some time. If this proposal goes into effect our businesses will suffer and our access, as well as the access of the visitors we depend on, will be greatly diminished. Like many locals, I struggled to establish a business through storms, tides and falling bridges and managed to send my children to college and see them prosper off the Island. Since they have recently had children of their own they are excited about returning home to raise them on the Island of their forefathers. This DEIS makes that look difficult and it breaks my heart. I walk through the Park to the beach almost daily. For many years my husband worked with Park interpreters to do a commercial beach fishing demonstration for the visitors. My family and friends have had countless Sunday picnics on the south beach of the Park where our children enjoyed themselves surrounded by nature. My husband surfs, kite boards and fishes, in the Park. He has fought wild fires side by side with NPS personnel both in the Park and on private lands. We often take visitors out to Cape Point and they are always impressed with the uniqueness of it. We share a long property border with the Park. We are intertwined with the Park and we never harm a thing. We like to walk in the park but always keep a functioning ORV to access Cape Point and the other more remote areas. I find it hard to believe our activities are detrimental to birds or turtles. Your own studies state human interference has an insignificant impact on nesting survival. For the rare cases of human activities that are detrimental to wildlife, the enforcement of the law should be employed to address the issue. I know these proposed access reductions will hurt our already suffering economy. The change my family has experienced, from subsistence living and taking a bath once a week, to electricity, year round fresh produce, medical care and a bridge has been a much appreciated improvement. It is our economy that supports these improvements and it is already suffering like much of the country. It cannot be truly viable without the visitors who come for the multiple recreation opportunities the Park provides. The Park belongs to the citizens of this country and it is your job to manage it on their behalf, not on the behalf of a small but well financed and connected group of extremists. Thank you for reading this letter and the consideration I hope you will give to the points made.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access. This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me. The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this

approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.

* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.

* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
Dear Superintendent Murray:
Thank you for your time and consideration of this vitally important matter. As a citizen of the Florida Gulf Coast I feel compelled to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras national Seashore. For many reasons, I support Alternative D. "environmentally preferred," (if it is modified to grant greater pedestrian access).
On the Florida Gulf Coast we see all too much disruption of wildlife habitats. This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
Thank you for the opportunity to provide these comments. My colleagues and I will be following the progress of your efforts at Cape Hatteras as actions there could, ultimately, affect all coastal regions. I look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.
Most Sincerely,
Pamela K. Kaiser, Ph D 9543 Woodville Hwy Tallahassee, FL 32305

Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
It is important to manage the Seashore for all Americans, not just for the minority of visitors with ORVs, whose way of life is to despoil the environment.
The first priority should be to protect the natural resources and wildlife of the Seashore.

Correspondence: I have lived on Hatteras Island since 1966 and have experienced many positive and wonderful things while living here. What concerns me greatly with this document and the way it has been presented to the public as an ORV issue against the birds. What I read is the gradual elimination of people from the Cape Hatteras Seashore Recreational Area which is my home and the home to all my children and grandchildren.
The ability for the disabled to get the beach here, especially Cape Point, is an incredible opportunity for them. To experience the meeting of the Labrador Current and the Gulf Stream at the Point is breathtaking. To watch nature, to fish, to watch families enjoy nature is beyond words. A trip to the point in a vehicle driving near the ocean's edge is a way to for them to forget their disability.
I looked up the NPS future plans in the DEIS and was not satisfied at all with what I read. On Page 14, I read that only with a special use permit for areas in front of the villages would ORVs be allowed to take disabled visitors to the beach. But, they can't keep the vehicle on the beach? Does that mean that they can't drive themselves to the beach? I am worried through vague and hard to understand language in this document that vehicles won't be allowed to the Point and Hatteras Inlet at all. How can the National Park Service deprive people of this area? It is similar to not allowing people into the Grand Canyon.
I also find the concept of loaning out beach wheelchairs on a first-come, first-serve basis is totally silly. Who is going to push them? Once again, the independence of the disabled in the Cape Hatteras National Seashore Recreational Area is just not addressed.
What is so wrong with driving along the beach which is something that has been done on Hatteras since the first vehicle came here? What about our culture here?? The birds do not nest next to the ocean unless their habitat has been disturbed and everyone who has lived here for anytime has watched the Park Service change the habitat at Cape Point. By not taking down the string barriers year after year, what used to be the muddy flats behind the dunes where the birds used to nest, is now a perfect area for raccoons, foxes, deer, etc. Now, birds are forced to nest on the wrong side of the dunes where the ocean is almost guaranteed to ruin them in a strong blow, storm and lunar tide.
I strongly disagree with the way the DEIS deals with the handicapped and with the DEIS lack of common sense.

Correspondence: I disagree with the fact that even with resource closures in place, protective species are still at risk when no piping plovers deaths can be attributed to ORVs
I disagree that visitor experience will be negatively impacted by conflicts between pedestrian and ORV users. Why is this when only one minor incident has ever been recorded?
I disagree that Ocracoke, Hatteras and Frisco should have longer ORV closures than other villages even though even though other villages have statistically similar visitor statistics.
Regarding negative impact on ROI, I completely disagree with the fact that you are you making judgments based on 2008 vs. the full year of 2009 to fully assess the future economic and socioeconomic impact on this cultural and historic area.

Correspondence: I DISAGREE with the fact that even though Pea Island NWR is ABUNDANT ORV free beaches, that we need MORE ORV free areas. How can one be mutually exclusive, and then expect the other to exclude as well.
I DISAGREE with the idea that NPS should be charged with protecting species that are not threatened, nor are they protected elsewhere, as there is no need. I AGREE that the Defenders of Wildlife have added this as a bargaining tool to offer up without giving up anything.
I DISAGREE that Human Intervention is significant enough of a factor to warrant the beach closures.
I DISAGREE with the NPS not considering all locations neighboring the Recreational Area as part of the same ecosystem. Why would spoil islands and beaches in the villages not be considered the same as the parts of the beach that ORV users enjoy?
I DISAGREE that the 30 seconds of the headlights of my truck driving past at night will confuse that same turtle that swam half the length of the eastern

seaboard to come back to the same beach. What about when the moon is setting in the west, why does that not confuse the turtles?

I DISAGREE with the fact that NPS will not adopt turtle management techniques already used in other east coast locations. Why would ours need to be more restrictive?

I DISAGREE with "selective" species eradication. Is the NPS not playing "God" by deciding which species are allowed to be on our beaches and which are not? If a species is native to that ecosystem, how can we choose which ones we want to stay and which to kill?

I DISAGREE with the notion that is a good idea to replace wetlands in this coastal ecosystem setting to provide a parking lot, when all that need be done is allow access to park on the beach.

I DISAGREE with the failure to recognize the de facto plan in place in years leading up to the interim plan.

I DISAGREE with the notion that the only answer to the beach driving issue has to be so broad stroked. Why does something my forefathers have done for generations suddenly become a crime for me or the generations that come after me? I AGREE with wildlife management and responsible use of natural resources. I DISAGREE that man and plover can not get along. NPS MUST find a realistic solution to allow me and my children free and open access to fish on the beach, as has happened for generations.

Correspondence: As someone who spends a lot of time and money on Hatteras Island I reviewed this document with great interest. Here are my comments:

1. I disagree with the extent of the buffers discussed on pages 121-127. 1000 meters is excessive. There is nothing that indicates that 1000 meters is more protective than 200 meters. I advocate for the alternative 200 meters with daily observation.

2. Having closures and buffers for birds that are not on the endangered list is also excessive. Standard roping off of the nest should be sufficient.

3. I disagree with the stand on no dogs on page 136. The current leash rule on the beach, if strictly enforced, would accomplish the same thing as banning all dogs.

Thank you for giving me the opportunity to review and comment on this document

Correspondence: I agree that there needs to be a predictable and fair plan for accessing our beaches. There are several items that need to be addressed that will help provide a balanced and reasonable plan to protect and provide access to our national seashore shores.

1) Large, inflexible buffers (p.121-127). These buffers that are being considered in the DEIS of 1,000 meter buffer in all directions for the piping plover is to large to allow a balance of human use of the seashore as stated in the original "Park Enabling Legislation". The DEIS does not cite any peer-reviewed science in supporting such large closures and these extremely large buffers are not used in other federal and state areas for the piping plover! A more appropriate & effective buffer would be 200 meters

2) Non-endangered species, such as American Oystercatchers, Least Terns and Colonial Water birds are given Pre-Nesting closures and buffers up to 300 meters. Birds that are not listed as endangered should not be afforded the level of protection given to ESA (Endangered Species Act) protected species. Instead of 300 meter buffers for these birds, a more appropriate buffer would be 30 meters

3) Corridors are a vital tool in providing access while managing resources. They provide a small path around temporary resource closures in order to provide access to open area that would otherwise be blocked. In alternative F Corridors are only allowed in ML-2 portions of SMA's and are subject to resource closures at any time. In a more reasonable approach Corridors should be permitted throughout the seashore during the entire breeding and nesting season including ML-1 portions of SMA's. These corridors would provide valuable access without impairment or damage to protected resources

4) Turtle Management (Pg.125, 392-396) DEIS claims North Carolina Wildlife Resources Commission turtle guidelines will be followed. The National Park Service should consider turtle management practices successfully used in other federal and state areas to achieve nesting success. More proactive measures include relocating nests to more desirable locations, which is routinely and successfully done in other areas and this would allow better access to beach areas for visitors enjoyment and night driving and fishing.

5) Prohibition of Pets (p136) in the seashore during bird breeding season, including in front of the villages. No pets in public areas, beaches, campgrounds, sound-front, foot trails, park maintained roads from March 15 -July 31 The DEIS does not cite any peer-reviewed science supporting that such a ban on pets would have any positive impact on the breeding birds over the current rules of pets on 6ft leash.

6) Year Round Closures: Hatteras Inlet, North End Ocracoke Island, Ramp 27-Ramp 30 (Salvo) are set to be closed year round to ORV, I am most familiar with the Hatteras inlet area and this area does not have the characteristics of prime habitat for the plover and the other supposed reason for the closure was the need for a pedestrian only area. It would not be economically or environmentally feasible to pave "pole road" and create parking lots in a beautiful and natural setting at the Hatteras Inlet. The need for pedestrian only areas is addressed in adjacent 15 miles of beach on Pea Island, which never gets included in the amount of beach for pedestrian only and is also a wildlife refuge.

7) Economical Impact: the negative economical impact of the "consent decree" has been profound and well documented. Any projected financial losses from these changes will only affect the businesses that are on Hatteras and Ocracoke islands and the impact studies should reflect that and not be spread across the region to lessen the negative financial impact on the villages.

Correspondence: A couple weeks ago I watched on the news as people stood at a hearing on beach driving in a coastal town. Most of those present were in favor of lifting restrictions on beach driving. Some of the reasons that they gave were quite simply, pretty lame. I listened as one gentleman said that this was a right given to us by our forefathers. Forefathers? Is that what Thomas Jefferson meant by "pursuit of happiness"? Not being able to drive on the beach does no more to hurt their economy than banning smoking in restaurants. I have noticed since the ban was put in place to ban all smoking in restaurants, many restaurants that use to only have a few customers, are now packed much more than they were prior to the smoking ban. Yet, they fought it tooth and nail. Their war-cry: "It'll hurt our business!" But it didn't. Protecting the environment and doing the right thing does not need statistics to support it or prop it up. The right thing never does. To many it may not make sense right now. To many it may not make sense in the short run. But when righteous decisions are made, they always reward. Maybe not in the ways people expect, but always in ways they realize are much more rewarding. All the tourism will vanish if the environment vanishes. It's not rocket science.

Sincerely, Kevin Gregson

Correspondence: Hello from Common Sense Pennsylvania.

I have been a 36 year visitor to the Outer Banks and have explored and enjoyed every mile from Corolla to Hatteras Landing. I have great respect for the locals for their tireless efforts to treat tourists like myself as family. Last fall, we spent a month with the Moore's in South Nags Head in two of their

ocean front cottages and have done so for the past 3 years. Some other years we made 3 or 4 individual week long trips throughout the year. From this experience, I have seen the local economy change first handed. Since I own a small customer service oriented business, I am keenly aware of how the public perception of a location directly affects that locations economy. It is obvious from my last visit that Hatteras Island is in financial peril and it seems perverse that such a war of legal eagles is unsympathetic to this fact. With such high unemployment in this country, competition for the few luxury travel dollars is fierce. It is very understandable why the local population is so mad at the ridiculous access restrictions put on by the injunction. Closing mile after mile of prime tourist beach during the peak season has hurt the economy as a whole and threatens people's homesteads and way of life. These people are fighting for their lives and I fully agree with them. If you need proof of this, the Frisco pier is a clear example. Damaged a few years back, the owners obviously don't want to invest money that they have very little chance to make a return on. This is a direct effect of the beach access injunction. How? Years back we used to stay in the area from Rodanthe to Buxton, now with so many local businesses closed in the area, we stay in South Nags Head. Our move north is the direct impact of the beach closures. There is no reason for us to cross the Bonner Bridge if the beach is closed. Now, multiply my exact reaction by tens of thousands and you can obviously see the impact on the Hatteras Island economy. Now, the common sense part. We have an obligation to future generations to protect any endangered species. How this is to be done needs some clear scientific merit. Since the Cape Hatteras National Seashore is only a part of the breeding grounds for the Piping Plover, where endangered species and local economies collide, there should be a minimalist starting approach to area management. Since this area is not the only breeding ground, danger of extinction is reduced if a specific management plan fails to protect the subject species. As many people have said, flexibility is the key to any successful plan that deals with a freely moving life form. Closure of hundreds of acres for each Piping Plover nest site and miles of beach for non threatened species just does not make economic sense. The 1000M proposal for fledgling bird nests seems quite excessive. Being a PA hunter, I know that 700+ acres is quite an area to restrict access to. It requires excessive cost to post and to patrol effectively with no guarantee that natural predation will not occur. Additional money spent to trap possums, raccoons, fox, and stray cats will need to occur and most likely has. Removing these animals from the natural environment can increase the rodent population and upset the natural predator - prey balance. The point of this is that there are consequences for every excessive knee jerk action. By not minimizing the closure area, the tourists don't come. When the tourists don't come, the local economy dies. Traditional ways of life and the cultures they support are forever lost. While this is a difficult problem legally, it just seems to me that all common sense has been ignored for the people who are the guardians of the islands. I hope that some common ground can be reached to protect the Piping Plovers and also the islands traditional way of life.

PS ? I am not implying that Pennsylvania is full of common sense but only offer one educated mans opinion on the impact to local economies when people make unrealistic rules that adversely impact others.

Correspondence:	All the appropriate comments have been made by Outer Banks residents before my comment tonight on Monday, May 10, 2010 so I do not need to repeat what other residents have said before me. The important point is that the residents of Hatteras and Ocracoke Islands and the northern Outer Banks are all protective of our fragile coastline. We are NOT "off the road" negligent beach drivers. Pedestrians along with handicapped individuals need to be able to access the National Seashore. Please use the results of REAL scientific studies from other states in setting the standards for NC. This issue is nothing more than political gain for a few with little or no understanding of how we live in harmony with our environment. It IS Cape Hatteras National Recreational Seashore. Why is "Recreational" now removed? Remove the politics and look at the data WITHOUT hidden agendas! It is important to our county, state and country. We are a special place and many will never enjoy it if the special interests groups have their way!

Correspondence:	The impact of shutting the beaches down will be devastating to the economy in the outerbanks. Worrying about the species of birds disappearing when the human aspect will die out here too. When did we begin feeling that human life is less than that of our feathered friends who have other areas to survive in the region? Our family has been enjoying this human recreational area provided by those who wanted it to be for human recreation. What if they decided to take it all back? Where would the parks and recreation go to earn their living? If this is now all private property hunting birds could become fair game. I am not an advocate of this solution either but I don't see any harm in how we have been able to work and live in conjunction with the birds, turtles, sea and air to the enjoyment for all. Lets not let our blindness and unrealistic expectations push our families out of the right to live where they have for many centuries. It has only been in recent years that this has become an issue for some.

Correspondence:

I agree with both the Coalition for Beach Access and Dare County assessment of the DEIS.

In addition, I would like to express my opinion on the following specific aspects:

I disagree with the extent of the resource closures (p. 121-127). I feel that they are too extensive. 1,000 meters in all directions is extreme. Please modify these buffers to more reasonable distances and set them based on peer reviewed science.

I disagree with the additional restrictions on pets (p. xxix, p.136). Please do not restrict pets any further than they are already restricted (6' leash on the beach). Pets (dogs in particular) are an important part of the lives of residents and visitors. Restricting pets will have tremendously damaging consequences to the local economy.

Reliable year round access to Cape Point is extremely important. Provide corridors past closure areas but do not restrict Cape Point at any time during the year.

I disagree with choosing to protect certain species over others via predator management (p. 120). Fox, raccoon and other "predators" are wildlife too and should not be trapped and killed to save other "favored" wildlife.

Each of the action alternatives will clearly involve incremental tax payer costs to implement and manage. The environmental groups that demand this additional management should be required to fund it. I would like to see them employ their own resources to monitor the nests around the clock if they so desire.

Please re-consider the cultural and historic implications that these closures disregard. The National Seashore was founded as a recreation area. In order for it to remain a recreation area people need to have access to it.

Dear Superintendent Murray,

As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.

1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."

2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness...."

Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.

3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals. Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

Sincerely,

David T. Tayloe, Jr., MD, FAAP

***** Thank you very much for taking the time to protect one of America's most beautiful stretches of Atlantic seashore! Sea turtles, nesting shorebirds, and generations to come will be grateful for your action today. Thanks again!

Correspondence:

May 10,2010 National Park Service (NPS) DEIS off-road Vehicle Management Plan Comments

Hello, my name is Ron. We have owned a vacation home for about 15 years in Avon, NC. We first came down with our kids and are now coming down

with them and our grand kids. Hatteras is a perfect vacation spot. Not too crowded, affordable, fishing for the entire family and the ocean is accessible by 4 wheel drive. The NPS appears to want all of that to change and completely drive out the real estate market. If this goes through as proposed, I might as well give my keys to the bank and tell them to shut off the lights when they leave.

I would like to specifically address my concerns to many of the issues raised in the proposal.

1. Page 201. I disagree the statement that with closures, protected species are still at risk. With closures, the risk is that tourism will dry up. People come to NC to enjoy the beaches. People that I know that drive on the beach avoid all nesting areas. I can not say the same for pedestrians walking through nesting areas.
2. Page six and 23. I disagree with the NPS proposal to close the beaches in villages of Frisco, Hatteras and Ocrakoke to ORV access longer than the traditional may 15 to September 15 period for the northern beaches even though this would make our house more desirable in Avon, because I know that if this drastic measure goes through, it is only a matter of time until you also go after all the other villages or towns.
3. Page 1. I agree that ORVs have long served as a primary form of access to the beaches. We load up the SUV with coolers, fishing gear, tools and the kids and spend the entire day at the beach. My house is also handicapped friendly. How are these people able to enjoy the beach if you can not drive on the beach? These people also enjoy getting out of the sun by sitting in the car when the sun is too hot. This is why I also disagree with page 53.
4. Page 121-127. I disagree with the buffers as presented. Popping plover buffers should move with the brood and not expanded. The 1,000 meters is way too excessive. I would recommend 199 meters. The buffers for the other species should be 30 meters and not 300. Non-endangered birds should not have the same protection as if endangered.
5. Page 124. I strongly disagree with the NPS notion of overprotecting resource management and not the public's right to beach access. If the NPS was a body voted into office, I guarantee that they would have a different slant on this entire issue.
6. In general, the NPS proposals appear to ignore the wishes and long help preferences of the local citizens and local island communities.
7. Page xlvi, Alternative F is pictured as having a "negligible to moderate" adverse impact on small business. Tourists will stop coming, the real estate market will dry up. No need for fish and tackle shops. Summer tourists will not economically support the schools, police force or fire company. It would not surprise me if taxes doubled and with the economy in the tank, the local community can not support the existing system. Business's will lay off employees.
8. Page 270-286 & 561-598. I strongly disagree with the socio-economic data and result in an understatement of the effect of the restrictions will have upon the island and the region. The villages and towns of Hatteras will experience extreme and unrevocable economic harm if Alternative F is approved as is. Can the banks survive another rash of housing foreclosures?
9. Page 136. I strongly disagree with your pet restriction proposals. And we do not own a pet. I would suggest a six foot leash requirement year round where pedestrians are allowed. I would also suggest a much higher penalty to owners who do not clean up after their pets.
10. Pages 125, 392-396 SEA TURTLES. I support other federal seashores that are more proactive in efforts to achieve nesting success. This includes relocating nests to more desirable locations as done in other state and federally controlled areas. I guess I do not understand all the sea turtle hoopla if Hatteras only produces 1% of all turtle nests.
11. pages 97-101. I cannot disagree more strongly with the proposal to restrict ORV's between ramps 27 and 30. What is the reason or what are you trying to protect in this area?
12. Page 104. I disagree with the proposed night time driving ban. I would suggest no night time driving from 10 PM until 4 AM.
13. Page 121. I disagree with the proposed beach closings from March 15 until July 31 in 8 different beach locations which have traditionally been available.

In conclusion, I would suggest a much smaller buffer area. As proposed, the buffers appear excessive and arbitrary. I think way too much time and energy is spent on protecting the Piping Plover, when I do not know if I have ever seen one. The only turtle that I have seen was a dead one on the beach. You should consider scaling back the buffers and they can be increased at a later date. I also wonder if all these restrictions are the origin of outside groups to keep all pedestrians and ORV's permanently off the beaches. Finally, we should "protect, not prohibit."

Ronald A. Hibbs

p.s. I think we need to learn lessons from our Canadian friends. They don't allow people to go in and tear up their parks. I am going to Banff in two weeks and will have to pay an entrance fee every single day of the five days I am there. The fees are used to directly maintain the parks. That is common sense. We don't seem to have too much of that down here in USA. Let people who want to ride in motorized vehicles stay on paved roads where they belong. Motors and pavement, feet and soil. Common sense.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.

This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.

The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

- *Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
- * Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
- * Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

- * Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I know you folks are faced with tough decisions every day, But to restrict the public access to surf fishing don't quite seem as it is in the best interest of all concerned (including the birds) It is our dues, license and fees that support the Wildlife Resources Commission. Our attendance to the sea shore provides income to lots of local businesses, which stimulates the economy for a large region. Wildlife Management has been successful in finding creative ways for Man and Beast to co-habitat in various scenarios all over the world. Why is it now the only way this bird can survive is to restrict taxpayers from enjoying the Public Land we have fought and paid for. I would plead with you to take a closer look at the impact to the people who pay your salary and reverse this easy fix plan you have carelessly put into place. Spend a little more time to research all options and come up with a new game plan that works for everybody.
Thank You
Terral Smith

Correspondence: Please keep our beaches open for recreational use - horseback riding, fishing, walking, surfing, etc. It is vital to the people of Hatteras Island who make their living here for the beaches to remain open for people to freely use. I would not be able to stay on Hatteras without my Horseback riding business. Please put the welfare of Hatteras Island residents over everything else - birds, turtles, politics. Please protect the people.

Correspondence: Dear Sir,
My family has been driving down to the Outer Banks for the last 18 years. We missed one year and we all sat home and cried. I was first reluctant to drive on the beach because I was afraid of getting my 4X4 stuck in the sand. However once I learned all the in and outs it was simple. I have taken more photo's of the birds coming up to within 2 feet of me than I have of the fish that I have caught. I have never seen a off roader harass or cause any damage to the wildlife on the beach or dunes. I have seen fishermen go out of their way to avoid harassing the animals. If the beach is closed down then my family and I will not be the only ones loosing out. The village of Buxton and the State of North Carolina will be the big losers.

Correspondence: George Santayana was a famous philosopher who was quoted as saying basically "Fanaticism results in doubling your efforts while losing sight of your goals".
Point in case: before the environmentalist took over control of the NPS and the Cape Hatteras National Seashore RECREATION Area we frequently enjoyed riding north from Ramp 34 where we could watch the oyster catchers hatch new babies every year - in their roped off protected area, erected by the NPS, purposely away from the surf. We could observe and enjoy their development from week to week each time we were able to visit the RECREATION Area. But a few years ago control was taken from the NPS by the new boss in town (Audubon, DOW, SELC)- they saw fit to close the entire beach. The oyster catchers took advantage of their unrestricted area and apparently nested too close to the water. An inevitable storm occurred and the nest was over washed. No babies! No problem, no witnesses!!! Just another statistic though, to be used for the environmentalist cause.
Please return management responsibility to the NPS. The Audubon, DOW and SELC are blinded by fanaticism. They clearly want to turn the Cape Hatteras National Seashore RECREATION Area into a preserve area. It was never intended as such. We want control of our recreational park returned to the NPS for our responsible use. To think we may not even be able to walk our leashed dogs in the park in the future is absurd and epitomizes just how much lawyers and special interest groups (whose members statistically don't even patronize the recreation area) will do anything to impose their will without regard for real consequences.
WE'RE TIRED OF THE POLITICS, WE'RE TIRED OF THE BAD SCIENCE, AND WE ARE FED UP WITH THE LACK OF COMMON SENSE.
GIVE US BACK THE CAPE HATTERAS NATIONAL SEASHORE RECREATION AREA.

Correspondence: Dear Superintendent Murray,
As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.
1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."
2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness..."
Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.
3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.
Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

Correspondence: My comments concern the DEIS of the Off-Road Vehicle Management Plan prepared by the National Park Service (NPS) for the Cape Hatteras National Seashore Recreation Area.

- 1) Page 201: I disagree with the NPS statement: "Even with resource closures in place, protected species are still at risk [from pedestrians and ORVs]." No Piping Plover deaths have been attributed to ORVs. ORV violations continue to decrease as signage and education improve. Pedestrian violations are much more significant than ORV violations. It seems to me that any transgressions into protected area are the result of lack of NPS manpower and enforcement than the public purposely and willfully violating out of bounds areas.
- 2) Page xxiv: I question the statement of as per the DEIS: "Carrying capacity would be a 'peak use limit' determined for all areas based on the linear feet of beachfront?" If you close off huge sections of the beach, you force more people into smaller areas, potentially resulting in more resource impairment and diminished visitor experience.
- 3) Page xix and page 23: I am against having two different closures rules pertaining to the North facing beaches (North side) and the South facing beaches (South side) as per the grid outlined in Alternative "F". I disagree with the NPS proposal to close the beaches in villages of Frisco, Hatteras and Ocracoke Villages to ORV access longer than the traditional May 15 to September 15 period for the Northern beaches, even though seasonal visitor statistics are similar for all villages. Please, make them the same: May 15 -> September 15.
- 4) Page 1: I agree with your statement "ORVs have long served as a primary form of access for many portions of the beach in the seashore, and continue to be the most practical means of access and parking for many visitors."
However, pedestrian only areas discriminate against individuals with limited mobility due to age or physical impairments, families with small children, and those wishing to engage in activities requiring recreational equipment (boogie boards, beach umbrellas, beach chairs, coolers, fishing rods and tackle, etc)
- 5) Page 53: I disagree with the special use permit proposed guidelines. It is impractical to allow the transportation of disabled visitors to the village beaches and then require the vehicle to be returned to the street or parking area. This necessitates the disabled person to have a driver to drop him (or her) off, then drive to a parking area, then trudge a long distance to the site of the drop off, then trudge the long distance through the sand back to get the vehicle.
Suppose the handicap person wants to go to the beach, is capable of driving himself, yet cannot find another person to go with him? Does he now not go to the beach? This rule creates unnecessary hardships and risks in the event of an emergency as well.
- 6) Page 121 ? 127. I strongly disagree with the buffers as presented. We must allow for pass-thru corridors. The beach is linear with the ocean buffering on one side and the dune line on the other. For example - If you pinch off access on one side of a 4 mile linear beach and pinch off access on the other side of the 4 mile section of beach with no corridor, then you effectively have closed off all 4 miles of the beach because you CAN'T get there. The proposed bird buffers are too large, blocking access to the interior sections from the two "buffered" ends.
I propose ORV pass-thru only corridors and to use breeding / nesting buffer distances to establish ORV pass through only corridors to ensure beach access in a way that does not hinder resource protection. I believe pass through corridors should be maintained for pedestrians and ORVs in all areas of the Cape Hatteras National Seashore Recreational Area throughout the entire breeding and nesting season. Corridors are vital to providing access in a way that does not hinder resource protection.
Piping Plover unfledged chicks buffer should move with the brood as it relocates to reliable food source, not expanded.
The 1,000 meter distance for the piping plover is way too large and not based upon peer reviewed science. A more rational distance would be 200 meters per other sites in the nation for the piping plover. Ample scientific evidence and precedent exists to support a 200 meter buffer.
Buffers for other species, including American Oystercatchers, Least Terns and Colonial Waterbirds must also be changed. An effective 30 meter buffer should be established for these species rather than the 300 meter closure outlined in the DEIS.
NON-ENDANGERED BIRDS should not have same protection as if endangered. Not allowing ORV access is paramount to denying the public access to these beaches.
- 7) Page 468: I disagree with the limitations imposed on pedestrian and ORVs. Corridors or bypasses should be provided thru, around or below high tide line in all SMAs during entire breeding season to maintain access.
- 8) Page 124: I strongly disagree with the NPS slant of providing for over protection of resource management over that of the public's right to access the beaches. Pro-active initiatives include: Vegetation Management, Habitat Management, Enhanced Predator Management, Colonial Water bird social attraction, Piping Plover check fledge rate, Piping plover chick buffer distance, and pass-through buffers during the incubation period. Opportunities to implement less restrictive closures as a result of the above initiatives should be considered more frequently than the 5-year periodic review process identified in the DEIS.
- 9) I disagree with the NPS Resource Management Pedestrian / ORV Closure Policies. These policies address the least significant factors affecting nest survival with little chance to have more than negligible impact. For example: the AMOY Nest Failures are predominately due to non-human events. Using your own stats, the mammalian predation is 54%, Storm / Lunar Tides: 29%, Nest Abandonment: 6%, Avian Predation: 5%, and Ghost Crab Predation: 3%,
So what is the percentage due to human interference: just 3%! It's insignificant, yet the NPS wants to ban humans when their actions provide very little influence on the success rate of breeding birds and turtles.
- 10) I disagree with the stats of breeding plovers and the other birds in the Park when the NPS does not adequately consider locations neighboring the Recreational Area that are part of the same ecosystem, namely dredge and spoil island that are located just yards away and within sight of the seashore. These birds are part of the same ecosystem and should be included.
Those spoil islands, developed by man from dredging the waterways in the Pamlico Sound for channel upkeep are slammed full of birds. The reason why so many birds? NO PREDATORS. SO, birds are not as stupid as one might think. You have to count these birds and incorporate them in the stats when the NPS is talking about any so called decline in breeding pairs in the National Park.
- 11) Page 1: I do not think the DEIS responsibly addresses the cultural resource issues. The very purpose of the DEIS as set forth in the National Environmental Policy Act (NEPA) is to protect and preserve natural and cultural resources in the federal decision making process. In the DEIS, the statement "protect and preserve natural and cultural resources" appears in the first sentence of the first page of the plan, in the Purpose of the Plan section, and numerous times thereafter. Yet, the 810 page document devotes only two paragraphs to analysis of cultural resource issues.
The Hatteras Island community has always gotten together on the south beach on Sunday to enjoy the beach with our cookouts, gatherings, surf bathing, horse shoes and foot races, fishing, and surfing. Now the DEIS is proposing closing off most of the south beach during the summer which is the traditional period when local people use the beach. The continuation of this traditional pattern of land use is central to maintaining the historic identity of our island communities.
- 12) Pages 270-281; 561-598: I strongly disagree with your economic analysis of the impact of the DEIS. The region of influence (ROI) incorporates the Northern Beach communities, including Kill Devil Hills, Kitty Hawk, Southern Shores and Duck. These areas are almost completely disconnected from ORV use and access issues relating to the Seashore.
? Inclusion of the Northern Beaches in analysis significantly dilutes estimates of economic impact on the 8 Seashore Villages
? Analysis of economic impact to the Seashore Villages appears to be significantly down played. Emphasis in DEIS is on the ROI-wide or county-wide level impacts.
? Nowhere is it clearly addressed that the overwhelming majority of negative impacts will be felt by small businesses in the Seashore Villages rather than by overall economic interests within the greater ROI.
On page xlvi, Alternative F is characterized as having a "negligible to moderate" adverse impact on small businesses. I strongly disagree with this statement.
I believe the negligible to moderate projection is inaccurate and relies on economic surveys that has not yet been published. Furthermore, this material is not expected to be added to the DEIS until after the public comment period has ended.
Based upon the economic harm we have already experienced under the consent decree, Dare County projects the economic impact of Alternative F to be substantial.
Beach closures have already had a devastating and unfair impact on many Dare County Businesses, causing foreclosures, bankruptcies, lay-offs, cutbacks, expensive refinancing, and depleted college funds and savings accounts.
Even businesses whose revenue has stayed level or showed a modest increase have accomplished this at a costly price. Many have had to cut back employee hours, forego much-needed capital improvements, and sacrifice profits. That is certainly the case with Hatteras Realty.

Pages 270-286, 561-598: The socio-economic data and analyses are incomplete and erroneous and result in an understatement of the effect the restrictions will have upon the Island, the region and the state of NC. The US Park Services answer: Businesses will have to "adapt" to the new rules. (p.383) The negative economic impacts of the decree ARE KNOWN, so to say that the added restrictions would have negligible to moderate impact is indefensible.

13) Overall Visitor Counts - Overall visitor counts appear to include visitors to Fort Raleigh National Historic Site and the Wright Brothers National Memorial. A large percentage of these visitors vacation in the Northern Beaches communities and recreate on the non-federal beaches outside of the Seashore. Visitors who patronize the Fort Raleigh National Historic Site and the Wright Brothers National Memorial but do not visit the actual seashore areas need to be factored out.

Maintenance of Future Access to Cape Point and South Point Ocracoke: All socioeconomic analyses related to Alternative F are predicated on the assumption that access corridors will remain open for at least an appreciable portion of the visitor high season. Under Alternative F, the access corridors will be subject to Resource Closures based on buffers similar or identical to the Consent Decree. Unless some predictability of access to Cape Point and South Point Ocracoke can be assured, economic analyses predicated on assumption of access are fundamentally flawed.

Why would a group of surf fisherman want to come to Hatteras Island to surf fish if they are not sure they can access the prime fishing grounds at Cape Point? The answer is they won't come. If they don't come, they don't rent vacation homes and spend their money on Hatteras and Ocracoke Islands. The definition of the Region of Influence (ROI), faulty data on economic activity generated by specific type recreational activity, incomplete visitation/business survey data, inflated overall Seashore visitor counts pertaining to beach use, and flawed key assumptions concerning the maintenance of access under Alternative F, all lead to inaccurate conclusions in the socioeconomic analyses. Specifically, these inaccuracies can be seen as understating the negative socio-economic impact of the Seashore Villages. Further, this negative impact will be absorbed almost entirely by Small Businesses. Neither of these important aspects of the management alternatives are adequately presented in the DEIS.

14) Page 136: I strongly disagree with your pet restriction proposals. The "prohibition of pets in the Seashore during bird breeding season including in front of the villages." = No Pets in public areas ?beaches, campgrounds, soundfront, foot trails, park maintained roads -from March 15 ?July 31. Hatteras Realty books approximately 13,000 rental weeks for a total of 91,000 rental nights housing approximately 700,000 visitors. The ban on pets to July 31 will seriously hurt the rentals of my rental company as their pet homes encompass about 30% of our rentals. I propose allowing pets on 6 foot leashes year-round in all areas open to pedestrians or ORVs.

15) Pages 125; 392 ? 396: SEA TURTLES. I disagree with the stats and procedures proposed. I think endangered sea turtles would benefit from management practices now in use at other federal seashores that are more proactive in efforts to achieve nesting success. This includes relocating nests to more desirable locations as is done in other state and federally controlled areas.

The Cape Hatteras National Seashore Recreational Area is on the northernmost fringe of turtle nesting locations for the southeast, accounting for about 1% of all turtle nests. Proposed buffer areas are not needed for protection of the turtles and amount to overprotection.

16) Pages 97- 101. I strongly disagree with proposals in this section saying that ORVs will be prohibited year round between ramps 27 and 30, at Hatteras Inlet (Hatteras Spit), Ocracoke Inlet (North Ocracoke Spit) and various other locations.

Not allowing ORV access is paramount to denying the public access to these beaches. They are located miles from the nearest parking or paved road area and too far to access on foot. As a matter of course, there has been no breeding of piping plover or other endangered species at the Hatteras Island Inlet (spit) area in the past 6 years.

17) Page 104: I disagree with the proposed night time driving closures. Per your proposals, night driving will be prohibited between May 1 and November 15th, forcing visitors off of the beaches early in the evening and preventing sunrise surf fishermen access in the morning. I propose a more moderate night time ban if one is needed, perhaps from June 1 ? September 15 with times being 1 hour after sunset and 1 hour before sunrise to allow beach goers to gather their stuff and exit the beach area.

Certainly more proactive measures such as relocating nests prone to weather and ocean events would dramatically increase the nesting success rates.

18) Page 121: I disagree with the proposed beach closings, including pedestrian access from March 15 until July 31 in 8 different beach locations which have traditionally been available. Please leave these areas open to beach walkers, shell collectors and those that want to access the beaches in these areas.

Conclusion:

Please, incorporate access corridors through any SMA so we can get to the open beach beyond. Incorporate the birds into the count that nest on the spoil islands. Base your buffer zones on peer reviewed science and scale them back to more reasonable distances as discussed.

It is neither logical nor reasonable to spend so much time, money and energy to overprotect a bird (Piping Plover) in the Cape Hatteras National Seashore that is on the southernmost fringe area of its breeding ground. That goes for the loggerhead turtle that is in its northernmost breeding area.

Let's scale back the buffer zones. You can always increase at a later date.

The USPS is leaning way over the line on over protection and not enough on the public's right to enjoy the beaches of the National Seashore. The proper balance is not achieved in the propose DEIS and needs to be modified so that the proper balance of reasonable resource protection and access to the beaches of the National Park is achieved. I could sum it up by saying "Protect, not Prohibit."

Thank you,

Dave Johel Hatteras Island Property Owner

Based upon the economic harm we have already experienced under the consent decree, Dare County projects the economic impact of Alternative F to be substantial. Beach closures have already had a devastating and unfair impact on many Dare County Businesses, causing foreclosures, bankruptcies, lay-offs, cutbacks, expensive refinancing, and depleted college funds and savings accounts. As a person who owns a vacation rental home for the past 15 years I have watch the rentals week reduced especially for the last couple years. I realize that the economy has changed but in my particular case many of my past renters chose my house because it being a well maintained older home, less expensive with excellent fish cleaning facilities. Since many were down to just fish the loss of access to the beach has made them change there choice of vacation/fishing locations. With the proposed reduced access more restricted plans for Hatteras Island in the future the decline will continue!! This overall decline is impacting me as well as filtering through the entire local economy. Visitors that once made this Island especially an "off" season area to visit will not return; not to mention the "in" season families that like to visit the more isolated beaches and have memorable times!!! Please understand I want my children to be able to show their children the same great things that the beaches of Hatteras Island have to offer as my						

Grandfather showed and told me. These restrictions will take that opportunity away forever.
 With much respect,
 Daniel L. Neal, Registered Professional Forester State of Maryland #266

? Inclusion of the Northern Beaches in analysis significantly dilutes estimates of economic impact on the 8 Seashore Villages

? Analysis of economic impact to the Seashore Villages appears to be significantly down played. Emphasis in DEIS is on the ROI-wide or county-wide level impacts.

? Nowhere is it clearly addressed that the overwhelming majority of negative impacts will be felt by small businesses in the Seashore Villages rather

than by overall economic interests within the greater ROI.

On page xlvi, Alternative F is characterized as having a "negligible to moderate" adverse impact on small businesses. I strongly disagree with this statement.

I believe the negligible to moderate projection is inaccurate and relies on economic surveys that has not yet been published. Furthermore, this material is not expected to be added to the DEIS until after the public comment period has ended.

Based upon the economic harm we have already experienced under the consent decree, Dare County projects the economic impact of Alternative F to be substantial.

Beach closures have already had a devastating and unfair impact on many Dare County Businesses, causing foreclosures, bankruptcies, lay-offs, cutbacks, expensive refinancing, and depleted college funds and savings accounts.

Even businesses whose revenue has stayed level or showed a modest increase have accomplished this at a costly price. Many have had to cut back employee hours, forego much-needed capital improvements, and sacrifice profits. That is certainly the case with Hatteras Realty.

Pages 270-286, 561-598: The socio-economic data and analyses are incomplete and erroneous and result in an understatement of the effect the restrictions will have upon the Island, the region and the state of NC. The US Park Services answer: Businesses will have to "adapt" to the new rules. (p.383) The negative economic impacts of the decree ARE KNOWN, so to say that the added restrictions would have negligible to moderate impact is indefensible.

13) Overall Visitor Counts - Overall visitor counts appear to include visitors to Fort Raleigh National Historic Site and the Wright Brothers National Memorial. A large percentage of these visitors vacation in the Northern Beaches communities and recreate on the non-federal beaches outside of the Seashore. Visitors who patronize the Fort Raleigh National Historic Site and the Wright Brothers National Memorial but do not visit the actual seashore areas need to be factored out.

Maintenance of Future Access to Cape Point and South Point Ocracoke: All socioeconomic analyses related to Alternative F are predicated on the assumption that access corridors will remain open for at least an appreciable portion of the visitor high season. Under Alternative F, the access corridors will be subject to Resource Closures based on buffers similar or identical to the Consent Decree. Unless some predictability of access to Cape Point and South Point Ocracoke can be assured, economic analyses predicated on assumption of access are fundamentally flawed.

Why would a group of surf fisherman want to come to Hatteras Island to surf fish if they are not sure they can access the prime fishing grounds at Cape Point? The answer is they won't come. If they don't come, they don't rent vacation homes and spend their money on Hatteras and Ocracoke Islands.

The definition of the Region of Influence (ROI), faulty data on economic activity generated by specific type recreational activity, incomplete visitation/business survey data, inflated overall Seashore visitor counts pertaining to beach use, and flawed key assumptions concerning the maintenance of access under Alternative F, all lead to inaccurate conclusions in the socioeconomic analyses. Specifically, these inaccuracies can be seen as understating the negative socio-economic impact of the Seashore Villages. Further, this negative impact will be absorbed almost entirely by Small Businesses. Neither of these important aspects of the management alternatives are adequately presented in the DEIS.

14) Page 136: I strongly disagree with your pet restriction proposals. The "prohibition of pets in the Seashore during bird breeding season including in front of the villages." = No Pets in public areas ?beaches, campgrounds, soundfront, foot trails, park maintained roads -from March 15 ?July 31.

Hatteras Realty books approximately 13,000 rental weeks for a total of 91,000 rental nights housing approximately 700,000 visitors. The ban on pets to July 31 will seriously hurt the rentals of my vacation homes as our pet homes encompass about 30% of our rentals. I propose allowing pets on 6 foot leashes year-round in all areas open to pedestrians or ORVs.

15) Pages 125; 392 ? 396: SEA TURTLES. I disagree with the stats and procedures proposed. I think endangered sea turtles would benefit from management practices now in use at other federal seashores that are more proactive in efforts to achieve nesting success. This includes relocating nests to more desirable locations as is done in other state and federally controlled areas.

The Cape Hatteras National Seashore Recreational Area is on the northernmost fringe of turtle nesting locations for the southeast, accounting for about 1% of all turtle nests. Proposed buffer areas are not needed for protection of the turtles and amount to overprotection.

16) Pages 97- 101. I strongly disagree with proposals in this section saying that ORVs will be prohibited year round between ramps 27 and 30, at Hatteras Inlet (Hatteras Spit), Ocracoke Inlet (North Ocracoke Spit) and various other locations.

Not allowing ORV access is paramount to denying the public access to these beaches. They are located miles from the nearest parking or paved road area and too far to access on foot. As a matter of course, there has been no breeding of piping plover or other endangered species at the Hatteras Island Inlet (spit) area in the past 6 years.

17) Page 104: I disagree with the proposed night time driving closures. Per your proposals, night driving will be prohibited between May 1 and November 15th, forcing visitors off of the beaches early in the evening and preventing sunrise surf fishermen access in the morning. I propose a more moderate night time ban if one is needed, perhaps from June 1 ? September 15 with times being 1 hour after sunset and 1 hour before sunrise to allow beach goers to gather their stuff and exit the beach area.

Certainly more proactive measures such as relocating nests prone to weather and ocean events would dramatically increase the nesting success rates.

18) Page 121: I disagree with the proposed beach closings, including pedestrian access from March 15 until July 31 in 8 different beach locations which have traditionally been available. Please leave these areas open to beach walkers, shell collectors and those that want to access the beaches in these areas.

Conclusion:

Please, incorporate access corridors through any SMA so we can get to the open beach beyond. Incorporate the birds into the count that nest on the spoil islands. Base your buffer zones on peer reviewed science and scale them back to more reasonable distances as discussed.

It is neither logical nor reasonable to spend so much time, money and energy to overprotect a bird (Piping Plover) in the Cape Hatteras National Seashore that is on the southernmost fringe area of its breeding ground. That goes for the loggerhead turtle that is in its northernmost breeding area.

Let's scale back the buffer zones. You can always increase at a later date.

The USPS is leaning way over the line on over protection and not enough on the public's right to enjoy the beaches of the National Seashore. The proper balance is not achieved in the propose DEIS and needs to be modified so that the proper balance of reasonable resource protection and access to the beaches of the National Park is achieved. I could sum it up by saying "Protect, not Prohibit."

Thank you,

Correspondence Type: Web Form

Correspondence: My comments concern the DEIS of the Off-Road Vehicle Management Plan prepared by the National Park Service (NPS) for the Cape Hatteras National Seashore Recreation Area.

1) Page 201: I disagree with the NPS statement: "Even with resource closures in place, protected species are still at risk [from pedestrians and ORVs]." No Piping Plover deaths have been attributed to ORVs. ORV violations continue to decrease as signage and education improve. Pedestrian violations are much more significant than ORV violations. It seems to me that any transgressions into protected area are the result of lack of NPS manpower and enforcement than the public purposely and willfully violating out of bounds areas.

2) Page xxiv: I question the statement of as per the DEIS: "Carrying capacity would be a 'peak use limit' determined for all areas based on the linear feet of beachfront?" If you close off huge sections of the beach, you force more people into smaller areas, potentially resulting in more resource impairment and diminished visitor experience.

3) Page xix and page 23: I am against having two different closures rules pertaining to the North facing beaches (North side) and the South facing beaches (South side) as per the grid outlined in Alternative "F". I disagree with the NPS proposal to close the beaches in villages of Frisco, Hatteras and Ocracoke Villages to ORV access longer than the traditional May 15 to September 15 period for the Northern beaches, even though seasonal visitor statistics are similar for all villages. Please, make them the same: May 15 -> September 15.

4) Page 1: I agree with your statement "ORVs have long served as a primary form of access for many portions of the beach in the seashore, and continue

to be the most practical means of access and parking for many visitors."

However, pedestrian only areas discriminate against individuals with limited mobility due to age or physical impairments, families with small children, and those wishing to engage in activities requiring recreational equipment (boogie boards, beach umbrellas, beach chairs, coolers, fishing rods and tackle, etc)

5) Page 53: I disagree with the special use permit proposed guidelines. It is impractical to allow the transportation of disabled visitors to the village beaches and then require the vehicle to be returned to the street or parking area. This necessitates the disabled person to have a driver to drop him (or her) off, then drive to a parking area, then trudge a long distance to the site of the drop off, then trudge the long distance through the sand back to get the vehicle.

Suppose the handicap person wants to go to the beach, is capable of driving himself, yet cannot find another person to go with him? Does he now not go to the beach? This rule creates unnecessary hardships and risks in the event of an emergency as well.

6) Page 121 ? 127. I strongly disagree with the buffers as presented. We must allow for pass-thru corridors. The beach is linear with the ocean buffering on one side and the dune line on the other. For example - If you pinch off access on one side of a 4 mile linear beach and pinch off access on the other side of the 4 mile section of beach with no corridor, then you effectively have closed off all 4 miles of the beach because you CAN'T get there. The proposed bird buffers are too large, blocking access to the interior sections from the two "buffered" ends.

I propose ORV pass-thru only corridors and to use breeding / nesting buffer distances to establish ORV pass through only corridors to ensure beach access in a way that does not hinder resource protection. I believe pass through corridors should be maintained for pedestrians and ORVs in all areas of the Cape Hatteras National Seashore Recreational Area throughout the entire breeding and nesting season. Corridors are vital to providing access in a way that does not hinder resource protection.

Piping Plover unfledged chicks buffer should move with the brood as it relocates to reliable food source, not expanded.

The 1,000 meter distance for the piping plover is way too large and not based upon peer reviewed science. A more rational distance would be 200 meters per other sites in the nation for the piping plover. Ample scientific evidence and precedent exists to support a 200 meter buffer.

Buffers for other species, including American Oystercatchers, Least Terns and Colonial

Waterbirds must also be changed. An effective 30 meter buffer should be established for these species rather than the 300 meter closure outlined in the DEIS.

NON-ENDANGERED BIRDS should not have same protection as if endangered. Not allowing ORV access is paramount to denying the public access to these beaches.

7) Page 468: I disagree with the limitations imposed on pedestrian and ORVs. Corridors or bypasses should be provided thru, around or below high tide line in all SMAs during entire breeding season to maintain access.

8) Page 124: I strongly disagree with the NPS slant of providing for over protection of resource management over that of the public's right to access the beaches. Pro-active initiatives include: Vegetation Management, Habitat Management, Enhanced Predator Management, Colonial Water bird social attraction, Piping Plover check fledge rate, Piping plover chick buffer distance, and pass-through buffers during the incubation period. Opportunities to implement less restrictive closures as a result of the above initiatives should be considered more frequently than the 5-year periodic review process identified in the DEIS.

9) I disagree with the NPS Resource Management Pedestrian / ORV Closure Policies. These policies address the least significant factors affecting nest survival with little chance to have more than negligible impact. For example: the AMOY Nest Failures are predominately due to non-human events. Using your own stats, the mammalian predation is 54%, Storm / Lunar Tides: 29%, Nest Abandonment: 6%, Avian Predation: 5%, and Ghost Crab Predation: 3%,

So what is the percentage due to human interference: just 3%! It's insignificant, yet the NPS wants to ban humans when their actions provide very little influence on the success rate of breeding birds and turtles.

10) I disagree with the stats of breeding plovers and the other birds in the Park when the NPS does not adequately consider locations neighboring the Recreational Area that are part of the same ecosystem, namely dredge and spoil island that are located just yards away and within sight of the seashore. These birds are part of the same ecosystem and should be included.

Those spoil islands, developed by man from dredging the waterways in the Pamlico Sound for channel upkeep are slammed full of birds. The reason why so many birds? NO PREDATORS. SO, birds are not as stupid as one might think. You have to count these birds and incorporate them in the stats when the NPS is talking about any so called decline in breeding pairs in the National Park.

11) Page 1: I do not think the DEIS responsibly addresses the cultural resource issues. The very purpose of the DEIS as set forth in the National Environmental Policy Act (NEPA) is to protect and preserve natural and cultural resources in the federal decision making process. In the DEIS, the statement "protect and preserve natural and cultural resources" appears in the first sentence of the first page of the plan, in the Purpose of the Plan section, and numerous times thereafter. Yet, the 810 page document devotes only two paragraphs to analysis of cultural resource issues.

As a home owner on Hatteras Island, we of the Hatteras Island community have always gotten together on the south beach on Sunday to enjoy the beach with our cookouts, gatherings, surf bathing, horse shoes and foot races, fishing, and surfing. Now the DEIS is proposing closing off most of the south beach during the summer which is the traditional period we local people use the beach. The continuation of this traditional pattern of land use is central to maintaining the historic identity of our island communities.

12) Pages 270-281; 561-598: I strongly disagree with your economic analysis of the impact of the DEIS. The region of influence (ROI) incorporates the Northern Beach communities, including Kill Devil Hills, Kitty Hawk, Southern Shores and Duck. These areas are almost completely disconnected from ORV use and access issues relating to the Seashore.

? Inclusion of the Northern Beaches in analysis significantly dilutes estimates of economic impact on the 8 Seashore Villages

? Analysis of economic impact to the Seashore Villages appears to be significantly down played. Emphasis in DEIS is on the ROI-wide or county-wide level impacts.

? Nowhere is it clearly addressed that the overwhelming majority of negative impacts will be felt by small businesses in the Seashore Villages rather than by overall economic interests within the greater ROI.

On page xlvi, Alternative F is characterized as having a "negligible to moderate" adverse impact on small businesses. I strongly disagree with this statement.

I believe the negligible to moderate projection is inaccurate and relies on economic surveys that has not yet been published. Furthermore, this material is not expected to be added to the DEIS until after the public comment period has ended.

Based upon the economic harm we have already experienced under the consent decree, Dare County projects the economic impact of Alternative F to be substantial.

Beach closures have already had a devastating and unfair impact on many Dare County Businesses, causing foreclosures, bankruptcies, lay-offs, cutbacks, expensive refinancing, and depleted college funds and savings accounts.

Even businesses whose revenue has stayed level or showed a modest increase have accomplished this at a costly price. Many have had to cut back employee hours, forego much-needed capital improvements, and sacrifice profits. That is certainly the case with Hatteras Realty.

Pages 270-286, 561-598: The socio-economic data and analyses are incomplete and erroneous and result in an understatement of the effect the restrictions will have upon the Island, the region and the state of NC. The US Park Services answer: Businesses will have to "adapt" to the new rules. (p.383) The negative economic impacts of the decree ARE KNOWN, so to say that the added restrictions would have negligible to moderate impact is indefensible.

13) Overall Visitor Counts - Overall visitor counts appear to include visitors to Fort Raleigh National Historic Site and the Wright Brothers National Memorial. A large percentage of these visitors vacation in the Northern Beaches communities and recreate on the non-federal beaches outside of the Seashore. Visitors who patronize the Fort Raleigh National Historic Site and the Wright Brothers National Memorial but do not visit the actual seashore areas need to be factored out.

Maintenance of Future Access to Cape Point and South Point Ocracoke: All socioeconomic analyses related to Alternative F are predicated on the assumption that access corridors will remain open for at least an appreciable portion of the visitor high season. Under Alternative F, the access corridors will be subject to Resource Closures based on buffers similar or identical to the Consent Decree. Unless some predictability of access to Cape Point and South Point Ocracoke can be assured, economic analyses predicated on assumption of access are fundamentally flawed.

Why would a group of surf fisherman want to come to Hatteras Island to surf fish if they are not sure they can access the prime fishing grounds at Cape Point? The answer is they won't come. If they don't come, they don't rent vacation homes and spend their money on Hatteras and Ocracoke Islands. The definition of the Region of Influence (ROI), faulty data on economic activity generated by specific type recreational activity, incomplete visitation/business survey data, inflated overall Seashore visitor counts pertaining to beach use, and flawed key assumptions concerning the maintenance of access under Alternative F, all lead to inaccurate conclusions in the socioeconomic analyses. Specifically, these inaccuracies can be seen as understating the negative socio-economic impact of the Seashore Villages. Further, this negative impact will be absorbed almost entirely by Small Businesses. Neither of these important aspects of the management alternatives are adequately presented in the DEIS.

14) Page 136: I strongly disagree with your pet restriction proposals. The "prohibition of pets in the Seashore during bird breeding season including in front of the villages." = No Pets in public areas ?beaches, campgrounds, soundfront, foot trails, park maintained roads -from March 15 ?July 31. Hatteras Realty books approximately 13,000 rental weeks for a total of 91,000 rental nights housing approximately 700,000 visitors. The ban on pets to July 31 will seriously hurt the rentals of my vacation homes as our pet homes encompass about 30% of our rentals. I propose allowing pets on 6 foot leashes year-round in all areas open to pedestrians or ORVs.

15) Pages 125; 392 ? 396: SEA TURTLES. I disagree with the stats and procedures proposed. I think endangered sea turtles would benefit from management practices now in use at other federal seashores that are more proactive in efforts to achieve nesting success. This includes relocating nests to more desirable locations as is done in other state and federally controlled areas.

The Cape Hatteras National Seashore Recreational Area is on the northernmost fringe of turtle nesting locations for the southeast, accounting for about 1% of all turtle nests. Proposed buffer areas are not needed for protection of the turtles and amount to overprotection.

16) Pages 97- 101. I strongly disagree with proposals in this section saying that ORVs will be prohibited year round between ramps 27 and 30, at Hatteras Inlet (Hatteras Spit), Ocracoke Inlet (North Ocracoke Spit) and various other locations.

Not allowing ORV access is paramount to denying the public access to these beaches. They are located miles from the nearest parking or paved road area and too far to access on foot. As a matter of course, there has been no breeding of piping plover or other endangered species at the Hatteras Island Inlet (spit) area in the past 6 years.

17) Page 104: I disagree with the proposed night time driving closures. Per your proposals, night driving will be prohibited between May 1 and November 15th, forcing visitors off of the beaches early in the evening and preventing sunrise surf fishermen access in the morning. I propose a more moderate night time ban if one is needed, perhaps from June 1 ? September 15 with times being 1 hour after sunset and 1 hour before sunrise to allow beach goers to gather their stuff and exit the beach area.

Certainly more proactive measures such as relocating nests prone to weather and ocean events would dramatically increase the nesting success rates.

18) Page 121: I disagree with the proposed beach closings, including pedestrian access from March 15 until July 31 in 8 different beach locations which have traditionally been available. Correspondence: I support alternative A because Piping Plover nor any of the species proposed (oyster catchers, etc) to be protected by the ORV management plan are endangered and the Hatteras seashore area is not critical to their survival. The science is absolutely biased and incomplete for support of any plan except alternative A. This area was originally designated a "recreational area" and that is exactly what it is. It never was meant to be wholly a "preserve" for wildlife at the expense of enjoyment of the whole resource including complete access by ORV.

Correspondence: A lack of parking and access areas have contributed greatly to the number of vehicles on the beach. If you are wealthy and have a beach front home you have a virtual private beach, the public can not get access to the beaches with private property between highway 12 and the ocean. Those who are not within walking distance have few options but to drive on the beach. Most access areas require crossing highway 12, this is difficult and dangerous with children and the assorted items that go with them. More access areas AWAY from, not adjacent to the ramps are needed. The area in Frisco is an example of what should be, more areas like it are needed. In the summer the parking lot is usually full. If you doubled the parking capacity it would probably still fill up. Instead of trying to justify denying the public access to a public recreation area, why not try maximizing usage in areas where the birds are not likely to go. The beaches between Frisco and Hatteras village are perfect for that. Also on the subject of access. The handicap access at the Frisco area is excellent, good job. Why are there not more of them?

Correspondence: If you pass this regulation you will be causing damage to the people of the Island as well as Dare County. The County lost over \$2,000,000 in sales tax revenue alone last year not counting the income to the residents that live and work on Hatteras. You are requesting a much larger amount of land than is used on other beaches on the East Coast. You are also changing a way of life for the people. THE numbers you are using should be based on the Island not on numbers used by Kill Devils Hills. You are not protecting an endangered bird but making people endangered.

Correspondence: Dear Superintendent Murray,
As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement

privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.

- 1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."
- 2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness..." Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.
- 3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.

Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

Correspondence ID:	13227	Project:	10641	Document:	32596	Private:	Y

Correspondence Type:	Web Form						
Correspondence:	My comments concern the DEIS of the Off-Road Vehicle Management Plan prepared by the National Park Service (NPS) for the Cape Hatteras National Seashore Recreation Area.						
	1) Page 201: I disagree with the NPS statement: "Even with resource closures in place, protected species are still at risk [from pedestrians and ORVs]." No Piping Plover deaths have been attributed to ORVs. ORV violations continue to decrease as signage and education improve. Pedestrian violations are much more significant than ORV violations. It seems to me that any transgressions into protected area are the result of lack of NPS manpower and enforcement than the public purposely and willfully violating out of bounds areas.						
	2) Page xxiv: I question the statement of as per the DEIS: "Carrying capacity would be a 'peak use limit' determined for all areas based on the linear feet of beachfront?" If you close off huge sections of the beach, you force more people into smaller areas, potentially resulting in more resource impairment and diminished visitor experience.						
	3) Page xix and page 23: I am against having two different closures rules pertaining to the North facing beaches (North side) and the South facing beaches (South side) as per the grid outlined in Alternative "F". I disagree with the NPS proposal to close the beaches in villages of Frisco, Hatteras and Ocracoke Villages to ORV access longer than the traditional May 15 to September 15 period for the Northern beaches, even though seasonal visitor statistics are similar for all villages. Please, make them the same: May 15 -> September 15.						
	4) Page 1: I agree with your statement "ORVs have long served as a primary form of access for many portions of the beach in the seashore, and continue to be the most practical means of access and parking for many visitors." However, pedestrian only areas discriminate against individuals with limited mobility due to age or physical impairments, families with small children, and those wishing to engage in activities requiring recreational equipment (boogie boards, beach umbrellas, beach chairs, coolers, fishing rods and tackle, etc)						
	5) Page 53: I disagree with the special use permit proposed guidelines. It is impractical to allow the transportation of disabled visitors to the village beaches and then require the vehicle to be returned to the street or parking area. This necessitates the disabled person to have a driver to drop him (or her) off, then drive to a parking area, then trudge a long distance to the site of the drop off, then trudge the long distance through the sand back to get the vehicle. Suppose the handicap person wants to go to the beach, is capable of driving himself, yet cannot find another person to go with him? Does he now not go to the beach? This rule creates unnecessary hardships and risks in the event of an emergency as well.						
	6) Page 121 ? 127. I strongly disagree with the buffers as presented. We must allow for pass-thru corridors. The beach is linear with the ocean buffering on one side and the dune line on the other. For example - If you pinch off access on one side of a 4 mile linear beach and pinch off access on the other side of the 4 mile section of beach with no corridor, then you effectively have closed off all 4 miles of the beach because you CAN'T get there. The proposed bird buffers are too large, blocking access to the interior sections from the two "buffered" ends. I propose ORV pass-thru only corridors and to use breeding / nesting buffer distances to establish ORV pass through only corridors to ensure beach access in a way that does not hinder resource protection. I believe pass through corridors should be maintained for pedestrians and ORVs in all areas of the Cape Hatteras National Seashore Recreation Area throughout the entire breeding and nesting season. Corridors are vital to providing access in a way that does not hinder resource protection. Piping Plover unfledged chicks buffer should move with the brood as it relocates to reliable food source, not expanded. The 1,000 meter distance for the piping plover is way too large and not based upon peer reviewed science. A more rational distance would be 200 meters per other sites in the nation for the piping plover. Ample scientific evidence and precedent exists to support a 200 meter buffer. Buffers for other species, including American Oystercatchers, Least Terns and Colonial Waterbirds must also be changed. An effective 30 meter buffer should be established for these species rather than the 300 meter closure outlined in the DEIS. NON-ENDANGERED BIRDS should not have same protection as if endangered. Not allowing ORV access is paramount to denying the public access to these beaches.						
	7) Page 468: I disagree with the limitations imposed on pedestrian and ORVs. Corridors or bypasses should be provided thru, around or below high tide line in all SMAs during entire breeding season to maintain access.						
	8) Page 124: I strongly disagree with the NPS slant of providing for over protection of resource management over that of the public's right to access the beaches. Pro-active initiatives include: Vegetation Management, Habitat Management, Enhanced Predator Management, Colonial Water bird social attraction, Piping Plover check fledge rate, Piping plover chick buffer distance, and pass-through buffers during the incubation period. Opportunities to implement less restrictive closures as a result of the above initiatives should be considered more frequently than the 5-year periodic review process identified in the DEIS.						
	9) I disagree with the NPS Resource Management Pedestrian / ORV Closure Policies. These policies address the least significant factors affecting nest survival with little chance to have more than negligible impact. For example: the AMOY Nest Failures are predominately due to non-human events. Using your own stats, the mammalian predation is 54%, Storm / Lunar Tides: 29%, Nest Abandonment: 6%, Avian Predation: 5%, and Ghost Crab Predation: 3%, So what is the percentage due to human interference: just 3%! It's insignificant, yet the NPS wants to ban humans when their actions provide very little influence on the success rate of breeding birds and turtles.						
	10) I disagree with the stats of breeding plovers and the other birds in the Park when the NPS does not adequately consider locations neighboring the Recreation Area that are part of the same ecosystem, namely dredge and spoil island that are located just yards away and within sight of the seashore. These birds are part of the same ecosystem and should be included. Those spoil islands, developed by man from dredging the waterways in the Pamlico Sound for channel upkeep are slammed full of birds. The reason why so many birds? NO PREDATORS. SO, birds are not as stupid as one might think. You have to count these birds and incorporate them in the stats when the NPS is talking about any so called decline in breeding pairs in the National Park.						
	11) Page 1: I do not think the DEIS responsibly addresses the cultural resource issues. The very purpose of the DEIS as set forth in the National Environmental Policy Act (NEPA) is to protect and preserve natural and cultural resources in the federal decision making process. In the DEIS, the statement "protect and preserve natural and cultural resources" appears in the first sentence of the first page of the plan, in the Purpose of the Plan						

section, and numerous times thereafter. Yet, the 810 page document devotes only two paragraphs to analysis of cultural resource issues.

As a home owner on Hatteras Island, we of the Hatteras Island community have always gotten together on the south beach on Sunday to enjoy the beach with our cookouts, gatherings, surf bathing, horse shoes and foot races, fishing, and surfing. Now the DEIS is proposing closing off most of the south beach during the summer which is the traditional period we local people use the beach. The continuation of this traditional pattern of land use is central to maintaining the historic identity of our island communities.

12) Pages 270-281; 561-598: I strongly disagree with your economic analysis of the impact of the DEIS. The region of influence (ROI) incorporates the Northern Beach communities, including Kill Devil Hills, Kitty Hawk, Southern Shores and Duck. These areas are almost completely disconnected from ORV use and access issues relating to the Seashore.

? Inclusion of the Northern Beaches in analysis significantly dilutes estimates of economic impact on the 8 Seashore Villages

? Analysis of economic impact to the Seashore Villages appears to be significantly down played. Emphasis in DEIS is on the ROI-wide or county-wide level impacts.

? Nowhere is it clearly addressed that the overwhelming majority of negative impacts will be felt by small businesses in the Seashore Villages rather than by overall economic interests within the greater ROI.

On page xlvi, Alternative F is characterized as having a "negligible to moderate" adverse impact on small businesses. I strongly disagree with this statement.

I believe the negligible to moderate projection is inaccurate and relies on economic surveys that has not yet been published. Furthermore, this material is not expected to be added to the DEIS until after the public comment period has ended.

Based upon the economic harm we have already experienced under the consent decree, Dare County projects the economic impact of Alternative F to be substantial.

Beach closures have already had a devastating and unfair impact on many Dare County Businesses, causing foreclosures, bankruptcies, lay-offs, cutbacks, expensive refinancing, and depleted college funds and savings accounts.

Even businesses whose revenue has stayed level or showed a modest increase have accomplished this at a costly price. Many have had to cut back employee hours, forego much-needed capital improvements, and sacrifice profits. That is certainly the case with Hatteras Realty.

Pages 270-286, 561-598: The socio-economic data and analyses are incomplete and erroneous and result in an understatement of the effect the restrictions will have upon the Island, the region and the state of NC. The US Park Services answer: Businesses will have to "adapt" to the new rules. (p.383) The negative economic impacts of the decree ARE KNOWN, so to say that the added restrictions would have negligible to moderate impact is indefensible.

13) Overall Visitor Counts - Overall visitor counts appear to include visitors to Fort Raleigh National Historic Site and the Wright Brothers National Memorial. A large percentage of these visitors vacation in the Northern Beaches communities and recreate on the non-federal beaches outside of the Seashore. Visitors who patronize the Fort Raleigh National Historic Site and the Wright Brothers National Memorial but do not visit the actual seashore areas need to be factored out.

Maintenance of Future Access to Cape Point and South Point Ocracoke: All socioeconomic analyses related to Alternative F are predicated on the assumption that access corridors will remain open for at least an appreciable portion of the visitor high season. Under Alternative F, the access corridors will be subject to Resource Closures based on buffers similar or identical to the Consent Decree. Unless some predictability of access to Cape Point and South Point Ocracoke can be assured, economic analyses predicated on assumption of access are fundamentally flawed.

Why would a group of surf fishermen want to come to Hatteras Island to surf fish if they are not sure they can access the prime fishing grounds at Cape Point? The answer is they won't come. If they don't come, they don't rent vacation homes and spend their money on Hatteras and Ocracoke Islands.

The definition of the Region of Influence (ROI), faulty data on economic activity generated by specific type recreational activity, incomplete visitation/business survey data, inflated overall Seashore visitor counts pertaining to beach use, and flawed key assumptions concerning the maintenance of access under Alternative F, all lead to inaccurate conclusions in the socioeconomic analyses. Specifically, these inaccuracies can be seen as understating the negative socio-economic impact of the Seashore Villages. Further, this negative impact will be absorbed almost entirely by Small Businesses. Neither of these important aspects of the management alternatives are adequately presented in the DEIS.

14) Page 136: I strongly disagree with your pet restriction proposals. The "prohibition of pets in the Seashore during bird breeding season including in front of the villages." = No Pets in public areas ?beaches, campgrounds, soundfront, foot trails, park maintained roads -from March 15 ?July 31.

Hatteras Realty books approximately 13,000 rental weeks for a total of 91,000 rental nights housing approximately 700,000 visitors. The ban on pets to July 31 will seriously hurt the rentals of my vacation homes as our pet homes encompass about 30% of our rentals. I propose allowing pets on 6 foot leashes year-round in all areas open to pedestrians or ORVs.

15) Pages 125; 392 ? 396: SEA TURTLES. I disagree with the stats and procedures proposed. I think endangered sea turtles would benefit from management practices now in use at other federal seashores that are more proactive in efforts to achieve nesting success. This includes relocating nests to more desirable locations as is done in other state and federally controlled areas.

The Cape Hatteras National Seashore Recreational Area is on the northernmost fringe of turtle nesting locations for the southeast, accounting for about 1% of all turtle nests. Proposed buffer areas are not needed for protection of the turtles and amount to overprotection.

16) Pages 97- 101. I strongly disagree with proposals in this section saying that ORVs will be prohibited year round between ramps 27 and 30, at Hatteras Inlet (Hatteras Spit), Ocracoke Inlet (North Ocracoke Spit) and various other locations.

Not allowing ORV access is paramount to denying the public access to these beaches. They are located miles from the nearest parking or paved road area and too far to access on foot. As a matter of course, there has been no breeding of piping plover or other endangered species at the Hatteras Island Inlet (spit) area in the past 6 years.

17) Page 104: I disagree with the proposed night time driving closures. Per your proposals, night driving will be prohibited between May 1 and November 15th, forcing visitors off of the beaches early in the evening and preventing sunrise surf fishermen access in the morning. I propose a more moderate night time ban if one is needed, perhaps from June 1 ? September 15 with times being 1 hour after sunset and 1 hour before sunrise to allow beach goers to gather their stuff and exit the beach area.

Certainly more proactive measures such as relocating nests prone to weather and ocean events would dramatically increase the nesting success rates.

18) Page 121: I disagree with the proposed beach closings, including pedestrian access from March 15 until July 31 in 8 different beach locations which have traditionally been available. Please leave these areas open to beach walkers, shell collectors and those that want to access the beaches in these areas.

Conclusion:

Please, incorporate access corridors through any SMA so we can get to the open beach beyond. Incorporate the birds into the count that nest on the spoil islands. Base your buffer zones on peer reviewed science and scale them back to more reasonable distances as discussed.

It is neither logical nor reasonable to spend so much time, money and energy to overprotect a bird (Piping Plover) in the Cape Hatteras National Seashore that is on the southernmost fringe area of its breeding ground. That goes for the loggerhead turtle that is in its northernmost breeding area.

Let's scale back the buffer zones. You can always increase at a later date.

The USPS is leaning way over the line on over protection and not enough on the public's right to enjoy the beaches of the National Seashore. The proper balance is not achieved in the propose DEIS and needs to be modified so that the proper balance of reasonable resource protection and access to the beaches of the National Park is achieved. I could sum it up by saying "Protect, not Prohibit."

Thank you,

Correspondence: My family has vacationed at the Outer Banks for decades. It is one of the few places where my husband can relax from his very stressful job. We like the Outer Banks so much we purchased a rental home in 2006 and each year spend our few free weeks exploring the Outer Banks, fishing in the surf, in

the sound and off the shore. The decision to close beaches to fishing and people enjoying the Outer Banks experience is very disturbing. I care about the health of the different birds and wildlife. But people aren't the only factors that influence the environmental change on the Outer Banks. People cannot control hurricanes or North-Eastern Winds that move sand and water--disrupting the nests of birds and wildlife. Since people want to preserve the Outer Banks, people repair roads and sand dunes. Birds and wildlife find other places to nest--they have adjusted to the whims of the wind and sand for centuries longer than humans populating the same islands! Common sense must reign in addressing the preservation of the birds and wildlife. Please keep the beaches open to fishing and people and allow dogs to walk on the beach (on a leash). Signage can encourage people to stay off the dunes and leave birds and wildlife in peace. Closing beaches has a tremendous economic impact on the State of North Carolina. People who come to fish and enjoy the Outer Banks need a place to stay, food to eat, stores to buy various sundries and fishing gear. Those demands provide jobs for many North Carolinians. The loss of revenue to the State is astronomical when overly strict rules to close beaches becomes a disincentive to people to come to the Outer Banks! There must be a compromise so that people have the freedom to enjoy the Outer Banks and the fishing opportunities it employs and allow peace for the birds and wildlife to flourish.

Correspondence: Dear Superintendent Murray,
As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.
1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."
2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness...."
Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.
3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.
Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

Correspondence: Supt.Murray,
I am writing to implore you to keep the promise of past superintendants and protect the livlyhood and well-being of the residents of Hatteras Island. By adopting option A a balance can be maintained between protecting the wildlife in question and the economic health to one of the greatest recreational treasures in our nation. My husband and I are property owners in Frisco, and are concerned of the disasterous effects the adoption that plan F would have to the overall economic health of the entire county. Not only is plan F a certain death sentence to life on Hatteras Island as we know it, the plan is based on misleading and unproven data. The plan is reactionary and without an iota of concern for the thousands of hard working people who have made this area their homes for generations.The flexibility that Plan A proposes will allow small business owners to contine to survive by allowing changes that will keep areas of beaches open for fising. Without this access, the impact to the economy will be monumental, unlike the misleading and false conclusion of the proponents of Plan F. Please use your wisdom and good conscience to adopt Plan A that will protect the wildlife we treasure,along with the lives of thousands that make a living from all that Hatteras Island has to offer.
Respectfully, Janice Bofinger

2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness...."
Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.
3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.
Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.
Our National Parks are treasured open spaces, and the National Seashore in particular is part of what makes the Outer Banks so unique among beach communities. There are plenty of areas on the Outer Banks where ORV are allowed. I would hate to see this expanse turned into either a parking lot or a racetrack for off road vehicles. I fail to see what would prevent it from becoming another off-road Corolla.
Thank you very much for taking the time to protect one of America's most beautiful stretches of Atlantic seashore! Sea turtles, nesting shorebirds, and

generations to come will be grateful for your action today. Thanks again!

Sincerely,
Barbara Kneeland

Correspondence: I am a local resident of the Outer Banks.
 I believe that the DEIS is a political document that ignores scientific data and whose only purpose is to deny access. The DEIS ignores the fact that predation and storms/ocean overwash are the primary cause of decline in bird populations.
 Alternative F unnecessarily restricts ORV access at a level that is not supported by data. Alternative C is the least evil of all alternatives; however, none of the alternatives are appropriate in order to help the bird and turtle populations.
 The NPS should not be able to close resources for a state designated "species of concern" when that species (American Oystercatcher) is neither endangered nor threatened according to the ESA.
 The NC Wildlife Resources Commission supports access. They are the scientists that live here and have no political agenda. The NPS should not be allowed to cater to special interests, such as the Audubon Society, to the detriment of the local economy, the locals who will protect what they are allowed to enjoy, and the resource itself.
 The DEIS should be thrown in the trash and access prior to the Consent Decree should be the rule.
 Sincerely,
 Brooke Shive Coinjock, NC

Correspondence: As an avid angler on the North Carolina seashore, I am strongly opposed to the National Park Service (NPS) preferred alternative, Alternative F, in the DEIS and urge you to make significant changes to the preferred alternative in order to provide both reasonable resource protection and reasonable public access to public land. Recreational fishing is one of the most enjoyable American pastimes, and Cape Hatteras National Seashore has some of the best surf fishing locations on the east coast - accessible only by ORV.
 Alternative F is the most restrictive management option to date, far exceeding any sense of balance between resource protection and public access and betraying all promises made to the public regarding recreational uses in the seashore. The majority of the provisions included within the preferred alternative far exceed anything proposed by a majority of the Negotiated Rulemaking Committee, including excessively large resource closures (buffers), unnecessary year-round and floating closures, and the lack of access corridors around or through resource closures.
 I support Alternative A. In order to restore balance to the DEIS, I highly recommend that the NPS revisit the proposal put forth to the Negotiated Rulemaking Committee in December of 2009. It provides the necessary protections for wildlife resources while having the support of a majority of the local community.
 Without reasonable ORV access, responsible anglers like me, and the local economy that is supported by recreational fishing, suffer greatly. I urge you to provide a better balance between resource protection and recreational uses by incorporating the December 2009 recommendations from the Negotiated Rulemaking Committee into the preferred alternative.
 Sincerely,
 Philip Whichard 8433321250

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
 This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
 The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
 *Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
 * Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
 * Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
 Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence Type: Web Form
Correspondence: My comments concern the DEIS of the Off-Road Vehicle Management Plan prepared by the National Park Service (NPS) for the Cape Hatteras National Seashore Recreation Area.

1) Page 201: I disagree with the NPS statement: "Even with resource closures in place, protected species are still at risk [from pedestrians and ORVs]." No Piping Plover deaths have been attributed to ORVs. ORV violations continue to decrease as signage and education improve. Pedestrian violations are much more significant than ORV violations. It seems to me that any transgressions into protected area are the result of lack of NPS manpower and enforcement than the public purposely and willfully violating out of bounds areas.

2) Page xxiv: I question the statement of as per the DEIS: "Carrying capacity would be a 'peak use limit' determined for all areas based on the linear feet of beachfront?" If you close off huge sections of the beach, you force more people into smaller areas, potentially resulting in more resource impairment and diminished visitor experience.

3) Page xix and page 23: I am against having two different closures rules pertaining to the North facing beaches (North side) and the South facing beaches (South side) as per the grid outlined in Alternative "F". I disagree with the NPS proposal to close the beaches in villages of Frisco, Hatteras and Ocracoke Villages to ORV access longer than the traditional May 15 to September 15 period for the Northern beaches, even though seasonal visitor statistics are similar for all villages. Please, make them the same: May 15 -> September 15.

4) Page 1: I agree with your statement "ORVs have long served as a primary form of access for many portions of the beach in the seashore, and continue to be the most practical means of access and parking for many visitors." However, pedestrian only areas discriminate against individuals with limited mobility due to age or physical impairments, families with small children, and those wishing to engage in activities requiring recreational equipment (boogie boards, beach umbrellas, beach chairs, coolers, fishing rods and tackle, etc)

5) Page 53: I disagree with the special use permit proposed guidelines. It is impractical to allow the transportation of disabled visitors to the village beaches and then require the vehicle to be returned to the street or parking area. This necessitates the disabled person to have a driver to drop him (or her) off, then drive to a parking area, then trudge a long distance to the site of the drop off, then trudge the long distance through the sand back to get the vehicle. Suppose the handicap person wants to go to the beach, is capable of driving himself, yet cannot find another person to go with him? Does he now not go to the beach? This rule creates unnecessary hardships and risks in the event of an emergency as well.

6) Page 121 ? 127. I strongly disagree with the buffers as presented. We must allow for pass-thru corridors. The beach is linear with the ocean buffering on one side and the dune line on the other. For example - If you pinch off access on one side of a 4 mile linear beach and pinch off access on the other side of the 4 mile section of beach with no corridor, then you effectively have closed off all 4 miles of the beach because you CAN'T get there. The proposed bird buffers are too large, blocking access to the interior sections from the two "buffered" ends. I propose ORV pass-thru only corridors and to use breeding / nesting buffer distances to establish ORV pass through only corridors to ensure beach access in a way that does not hinder resource protection. I believe pass through corridors should be maintained for pedestrians and ORVs in all areas of the Cape Hatteras National Seashore Recreational Area throughout the entire breeding and nesting season. Corridors are vital to providing access in a way that does not hinder resource protection. Piping Plover unfledged chicks buffer should move with the brood as it relocates to reliable food source, not expanded. The 1,000 meter distance for the piping plover is way too large and not based upon peer reviewed science. A more rational distance would be 200 meters per other sites in the nation for the piping plover. Ample scientific evidence and precedent exists to support a 200 meter buffer. Buffers for other species, including American Oystercatchers, Least Terns and Colonial Waterbirds must also be changed. An effective 30 meter buffer should be established for these species rather than the 300 meter closure outlined in the DEIS.

NON-ENDANGERED BIRDS should not have same protection as if endangered. Not allowing ORV access is paramount to denying the public access to these beaches.

7) Page 468: I disagree with the limitations imposed on pedestrian and ORVs. Corridors or bypasses should be provided thru, around or below high tide line in all SMAs during entire breeding season to maintain access.

8) Page 124: I strongly disagree with the NPS slant of providing for over protection of resource management over that of the public's right to access the beaches. Pro-active initiatives include: Vegetation Management, Habitat Management, Enhanced Predator Management, Colonial Water bird social attraction, Piping Plover check fledge rate, Piping plover chick buffer distance, and pass-through buffers during the incubation period. Opportunities to implement less restrictive closures as a result of the above initiatives should be considered more frequently than the 5-year periodic review process identified in the DEIS.

9) I disagree with the NPS Resource Management Pedestrian / ORV Closure Policies. These policies address the least significant factors affecting nest survival with little chance to have more than negligible impact. For example: the AMOY Nest Failures are predominately due to non-human events. Using your own stats, the mammalian predation is 54%, Storm / Lunar Tides: 29%, Nest Abandonment: 6%, Avian Predation: 5%, and Ghost Crab Predation: 3%, So what is the percentage due to human interference: just 3%! It's insignificant, yet the NPS wants to ban humans when their actions provide very little influence on the success rate of breeding birds and turtles.

10) I disagree with the stats of breeding plovers and the other birds in the Park when the NPS does not adequately consider locations neighboring the Recreational Area that are part of the same ecosystem, namely dredge and spoil island that are located just yards away and within sight of the seashore. These birds are part of the same ecosystem and should be included. Those spoil islands, developed by man from dredging the waterways in the Pamlico Sound for channel upkeep are slammed full of birds. The reason why so many birds? NO PREDATORS. SO, birds are not as stupid as one might think. You have to count these birds and incorporate them in the stats when the NPS is talking about any so called decline in breeding pairs in the National Park.

11) Page 1: I do not think the DEIS responsibly addresses the cultural resource issues. The very purpose of the DEIS as set forth in the National Environmental Policy Act (NEPA) is to protect and preserve natural and cultural resources in the federal decision making process. In the DEIS, the statement "protect and preserve natural and cultural resources" appears in the first sentence of the first page of the plan, in the Purpose of the Plan

section, and numerous times thereafter. Yet, the 810 page document devotes only two paragraphs to analysis of cultural resource issues.

As a home owner on Hatteras Island, we of the Hatteras Island community have always gotten together on the south beach on Sunday to enjoy the beach with our cookouts, gatherings, surf bathing, horse shoes and foot races, fishing, and surfing. Now the DEIS is proposing closing off most of the south beach during the summer which is the traditional period we local people use the beach. The continuation of this traditional pattern of land use is central to maintaining the historic identity of our island communities.

12) Pages 270-281; 561-598: I strongly disagree with your economic analysis of the impact of the DEIS. The region of influence (ROI) incorporates the Northern Beach communities, including Kill Devil Hills, Kitty Hawk, Southern Shores and Duck. These areas are almost completely disconnected from ORV use and access issues relating to the Seashore.

? Inclusion of the Northern Beaches in analysis significantly dilutes estimates of economic impact on the 8 Seashore Villages

? Analysis of economic impact to the Seashore Villages appears to be significantly down played. Emphasis in DEIS is on the ROI-wide or county-wide level impacts.

? Nowhere is it clearly addressed that the overwhelming majority of negative impacts will be felt by small businesses in the Seashore Villages rather than by overall economic interests within the greater ROI.

On page xlvi, Alternative F is characterized as having a "negligible to moderate" adverse impact on small businesses. I strongly disagree with this statement.

I believe the negligible to moderate projection is inaccurate and relies on economic surveys that has not yet been published. Furthermore, this material is not expected to be added to the DEIS until after the public comment period has ended.

Based upon the economic harm we have already experienced under the consent decree, Dare County projects the economic impact of Alternative F to be substantial.

Beach closures have already had a devastating and unfair impact on many Dare County Businesses, causing foreclosures, bankruptcies, lay-offs, cutbacks, expensive refinancing, and depleted college funds and savings accounts.

Even businesses whose revenue has stayed level or showed a modest increase have accomplished this at a costly price. Many have had to cut back employee hours, forego much-needed capital improvements, and sacrifice profits. That is certainly the case with Hatteras Realty.

Pages 270-286, 561-598: The socio-economic data and analyses are incomplete and erroneous and result in an understatement of the effect the restrictions will have upon the Island, the region and the state of NC. The US Park Services answer: Businesses will have to "adapt" to the new rules. (p.383) The negative economic impacts of the decree ARE KNOWN, so to say that the added restrictions would have negligible to moderate impact is indefensible.

13) Overall Visitor Counts - Overall visitor counts appear to include visitors to Fort Raleigh National Historic Site and the Wright Brothers National Memorial. A large percentage of these visitors vacation in the Northern Beaches communities and recreate on the non-federal beaches outside of the Seashore. Visitors who patronize the Fort Raleigh National Historic Site and the Wright Brothers National Memorial but do not visit the actual seashore areas need to be factored out.

Maintenance of Future Access to Cape Point and South Point Ocracoke: All socioeconomic analyses related to Alternative F are predicated on the assumption that access corridors will remain open for at least an appreciable portion of the visitor high season. Under Alternative F, the access corridors will be subject to Resource Closures based on buffers similar or identical to the Consent Decree. Unless some predictability of access to Cape Point and South Point Ocracoke can be assured, economic analyses predicated on assumption of access are fundamentally flawed.

Why would a group of surf fishermen want to come to Hatteras Island to surf fish if they are not sure they can access the prime fishing grounds at Cape Point? The answer is they won't come. If they don't come, they don't rent vacation homes and spend their money on Hatteras and Ocracoke Islands.

The definition of the Region of Influence (ROI), faulty data on economic activity generated by specific type recreational activity, incomplete visitation/business survey data, inflated overall Seashore visitor counts pertaining to beach use, and flawed key assumptions concerning the maintenance of access under Alternative F, all lead to inaccurate conclusions in the socioeconomic analyses. Specifically, these inaccuracies can be seen as understating the negative socio-economic impact of the Seashore Villages. Further, this negative impact will be absorbed almost entirely by Small Businesses. Neither of these important aspects of the management alternatives are adequately presented in the DEIS.

14) Page 136: I strongly disagree with your pet restriction proposals. The "prohibition of pets in the Seashore during bird breeding season including in front of the villages." = No Pets in public areas beaches, campgrounds, soundfront, foot trails, park maintained roads -from March 15 to July 31.

Hatteras Realty books approximately 13,000 rental weeks for a total of 91,000 rental nights housing approximately 700,000 visitors. The ban on pets to July 31 will seriously hurt the rentals of my vacation homes as our pet homes encompass about 30% of our rentals. I propose allowing pets on 6 foot leashes year-round in all areas open to pedestrians or ORVs.

15) Pages 125; 392 to 396: SEA TURTLES. I disagree with the stats and procedures proposed. I think endangered sea turtles would benefit from management practices now in use at other federal seashores that are more proactive in efforts to achieve nesting success. This includes relocating nests to more desirable locations as is done in other state and federally controlled areas.

The Cape Hatteras National Seashore Recreational Area is on the northernmost fringe of turtle nesting locations for the southeast, accounting for about 1% of all turtle nests. Proposed buffer areas are not needed for protection of the turtles and amount to overprotection.

16) Pages 97- 101. I strongly disagree with proposals in this section saying that ORVs will be prohibited year round between ramps 27 and 30, at Hatteras Inlet (Hatteras Spit), Ocracoke Inlet (North Ocracoke Spit) and various other locations.

Not allowing ORV access is paramount to denying the public access to these beaches. They are located miles from the nearest parking or paved road area and too far to access on foot. As a matter of course, there has been no breeding of piping plover or other endangered species at the Hatteras Island Inlet (spit) area in the past 6 years.

17) Page 104: I disagree with the proposed night time driving closures. Per your proposals, night driving will be prohibited between May 1 and November 15th, forcing visitors off of the beaches early in the evening and preventing sunrise surf fishermen access in the morning. I propose a more moderate night time ban if one is needed, perhaps from June 1 to September 15 with times being 1 hour after sunset and 1 hour before sunrise to allow beach goers to gather their stuff and exit the beach area.

Certainly more proactive measures such as relocating nests prone to weather and ocean events would dramatically increase the nesting success rates.

18) Page 121: I disagree with the proposed beach closings, including pedestrian access from March 15 until July 31 in 8 different beach locations which have traditionally been available. Please leave these areas open to beach walkers, shell collectors and those that want to access the beaches in these areas.

Conclusion:

Please, incorporate access corridors through any SMA so we can get to the open beach beyond. Incorporate the birds into the count that nest on the spoil islands. Base your buffer zones on peer reviewed science and scale them back to more reasonable distances as discussed.

It is neither logical nor reasonable to spend so much time, money and energy to overprotect a bird (Piping Plover) in the Cape Hatteras National Seashore that is on the southernmost fringe area of its breeding ground. That goes for the loggerhead turtle that is in its northernmost breeding area. Let's scale back the buffer zones. You can always increase at a later date.

The USPS is leaning way over the line on over protection and not enough on the public's right to enjoy the beaches of the National Seashore. The proper balance is not achieved in the propose DEIS and needs to be modified so that the proper balance of reasonable resource protection and access to the beaches of the National Park is achieved. I could sum it up by saying "Protect, not Prohibit."

Thank you,

The motto of the Park service was "Recreation for the people and protection of the wild life". You have changes this to protection of the wild life from the people.
One of my greatest pleasures here is to have a care free walk on miles of beach enjoying the wind, birds and fish.
Your Desire seems to be to take that pleasure away and ruin the lives and home for many others.
Lest you think I am negative on Parks, let me tell you that I have VIP status with another park. When I visit a park I always start at the visitor center and sign up for hikes or nature activities.
I also inquire here about beach closures. None of your rangers can give a clear answer. They have maps with scales of no use to walkers. Yet, your enforcement people know exactly where to be to spoil a vacation for somebody.
Turtles: Last year you had very large turtle enclosures with an inner chamber near the old light house site. Your enclosures went from the water to the dunes. People had to walk in the water or on the dunes. The first rule I learned at the beach was DO NOT WALK on the dunes. The enclosures were so large that your staff drove their ATVs inside the enclosure.
You need to visit Topsail Island where volunteers mark nest sites erect enclosures large enough to protect the nest. You are missing a great opportunity to include volunteers in your turtle program.
I picked no trash for you this year or last. If you have the manpower to build huge enclosures then have enough people for trash clean up. How many bags did the bird watchers pick up for you?
Is it possible that the people who love to walk the beach, fish occasionally, love nature as much as you could form a SPECIAL INTEREST GROUP to which you would pay as much attention as you give to the bird watchers?
What is the nesting rate for Sanderlings and Willets? Is it increasing with the beach closures? I was told there were 10 Plover nest sights. Should we expect 20 this year due to you previous closure efforts?
Well you are about to get your Desire. A park with no tourist. I have asked my congressman to reduce your budget as you reduce our access.
Remember, with the Bird Watchers you will always be a servant. You could have been a partner with us.

Correspondence: The NPS must formulate a plan that is consistent with the legislation establishing Cape Hatteras National Seashore Recreation Area. The enabling legislation for the Recreational Area states, in part, "said area shall be, and is, established, dedicated, and set apart as a national seashore recreational area for the benefit and enjoyment of the people and shall be known as the Cape Hatteras National Seashore Recreational Area". Therefore, it is important to balance resource protection with reasonable access for recreation.
Corridors are a vital tool in providing access while managing resources. They provide a small path around temporary resource closures in order to provide access to open areas that would otherwise be blocked. Corridors should be permitted throughout the seashore during the entire breeding and nesting season including ML-1 portions of SMAs. These corridors would provide valuable access without impairment or damage to protected resources. Buffers, or closures, are important management practices for species recovery. However, to have long term benefit for the wildlife and the visiting public, buffers must be based on peer-reviewed science For example, the Piping Plover, a species classified as threatened and not endangered, is given a level of unprecedented protection in Alternative F. A 1,000-meter buffer in all directions represents over 771 acres. The DEIS does not cite any peer-reviewed science in supporting such closure. A more appropriate & effective buffer would be 200 meters.
Birds that are not listed as endangered should not be afforded the level of protection given to ESA (Endangered Species Act) protected species. Instead of 300-meter buffers for these birds, a more appropriate buffer would be 30 meters. Also, all birds in the same ecosystem of the seashore should be counted. This includes all the many birds on the dredge and spoil islands located just yards away and within sight of the seashore.
The National Park Service should consider turtle management practices successfully used in other federal and state areas to achieve nesting success. More proactive measures include relocating nests to more desirable locations, which is routinely and successfully done in other areas.

Correspondence: Cape Hatteras National Seashore Recreational Area should have as it's primary focus exactly what it's title reflects, a recreational area for people. This is the purpose that it was established for and it should continue to be exactly that. Rules are important, but the present set is not supporting the recreation aspect.
The present direction of providing extreme protective status to species not currently on the endangered species lists is without merit. Where would this end?
The current process of expanding buffers based on any minor damage to the buffer could encourage those who wish to see the expansion commit an infraction just for that purpose. The process does not seem to attempt to locate a guilty party but punish the public. I do not see where the science that backs the current extreme boundaries, or any boundaries, is presented by the Park Service. Given the environment, I do not see how the birds can see or hear pedestrian or vehicular traffic close to the current range.
Regarding the turtle nests, it would seem that either these should be moved to protected areas or have minimal enclosures that do not extend to the surf. The turtle nests appear to be at the northern end of the habitat and not that productive compared to southern areas.
The closures of beach negatively impacts our family enjoyment of the beach. We utilize a vehicle to provide access to the beach for our family. Without the ability to drive on the beach, some family members would not be able to walk the distance necessary to reach the beach.
We need to return to the idea of people first and in these hard economic times support those people whom wish to enjoy the Cape Hatteras National Seashore Recreation Area in the manner it was intended which in turn will support the local businesses.

Correspondence: I encourage you to consider something else to do besides close the beaches on Hatteras Island. I have already seen the damage that has been done just with the "little" closures you've done. My family has been born and raised on this island for centuries. We always had the right to walk, ride, play on the beaches. Now my grandchildren are in danger of loosing that right. I'm seeing business struggle with keep themselves a float. I've heard comments from vacationers, we're not coming back if we can't go on the beach and fish, etc. How would you like it, knowing that tomorrow your house payment can't be made because there's no business to support you (JOB). I'm not a person who believes in just killing animals of any sort, but God gave man dominion over all the earth. Man, named the fish, bird and all creeping things. Birds will move their habitat to another place if someone comes near their nest. Turtles aren't extent likes being said. You know it only took one Woman to take prayer out of schools, now its only taking one group of people to kill our island. How sad to know that in another decade it will be a ghost island because no one will come. What a shame and disgrace to stand by and see the hard working people that I grew up with loose it all. I want my grandchildren and friends to be able to walk and ride freely on our beaches. We're not just talking about one nest, we're talking about peoples lives and their living on Hatteras Island. The economy is bad enough, don't create more problems.

Correspondence: Dear Superintendent Murray,
I'm a native and life-long resident of N.C. who has regularly enjoyed the historic and serene natural coastline of my state. As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is truly a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.
1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."
2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness...."
Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.
3) The final Plan/EIS MUST assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.
Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

Correspondence: Mr. Murray,
Greetings sir i hope this comment finds you well and in good spirits. I want to start by saying that Im truly sorry such an idiotic and time consuming debate has had to come forth during your administration. The issues are plain. However the research and statistacal information are not. The piping Plover while having passed thru over the years, is not specifically indigenous to north carolina, therefore it is a serious waste of taxpayer money to fight for something that basically uses our state as a red roof inn to get its "Groove" on. As i understand there are 4 or less on hatteras at any given time. I also understand current events to read as NPS being responsible for running 20 of them to death in the name of research over the years. While only 1 death can be attributed to a non NPS human. I care not, believe me i forgive the NPS. No animal even unto the LAST of its kind should ever be allowed to interfere with human rights. Before 2007 the NPS did a stellar job. Im sorry this particular influential blowhard has been able to push forth this lawsuit to grievance you. Prior to 2007 you adequately roped off nesting sights and so forth. People did not go near them. The system worked. If the outer banks suffers from anything its LACK OF NPS manpower. If you had more rangers able to patrol this would be a mute issue.
Here are a few suggestions: 1 Increase nps manpower
2 Remove birds to pea island
3 Catch and swab a few birds for dna against the day cloning becomes perfected
4 (personally preferred) exterminate the birds, after all if they are not there well there is no reason for your organization to go to all this trouble.
Im also disturbed by this cry of unfairness by people who want to walk on the beach.
1 The outer banks will never be Wrightsville or Carolina beach the very idea is ludicrous.
2 The outer Banks is a rough, wild, and sometimes downright inhospitable place. In my personal experiance the last thing i would want to deal with on the obx is a beach setting like wrightsville or carolina where 10000 pedestrians are on the beach and what i like to call a 5 minute storm comes up. Now when i say 5 minute storm i dont mean a storm that lasts 5 minutes, i mean a storm that from the time you see the clouds you have 5 minutes to GET OFF the beach.
3 The local folks depend on the fishermen who come and drive out on the beaches to fish. I thought america stopped its genocidal tendencies after driving the native americans to being an endangered species. Perhaps not though seeing as how a few special interest blowhards have been able to elevate animals to a higher pedastal than human rights.
In conclusion I want it to be clear that the NPS was doing a fine job before this lawsuit. A few more rangers would be prudent to ensure the enforcement of the applicable restrictions. I agree with one of the speakers at the raleigh meeting when he asked that you not fall victim to political blackmail. I hope that common sense will prevail, and may god assist you in finding the way.
Thank you for your time, Chris Sewell

Correspondence:	To whom it may concern. I sincerely hope that you choose to keep public access on the beaches. My ancestors on my father's side all came from Avon, Buxton, and Frisco. We always enjoyed our summers on Hatteras island. Driving on the beach, fishing from the point, surfing, riding horses on the beach, and having everything you may need close by in the truck. That may seem superficial but I don't think it should be a problem. We always respected the wildlife and never left any trash on the beach, I think most people would do the same. Afterall Hatteras is beautiful, and peaceful. I think you could hurt the island in the long run if you choose to close the beaches to 4X4's. Many people may choose to go elsewhere. My family and I would not but it would not be the same. Many of my fondest childhood memories are from the beaches on Hatteras island. Please keep the beaches open. Thank you and God bless!

Correspondence:	I disagree with the thousand meter closure for the piping plover, a bird which does not need more than 200 meters for protection, per the U.S. Fish and Wildlife Commission. Nowhere within the DEIS document does it state WHY there needs to be a thousand meter closure, nor does the document provide scientific evidence supporting the need for such a large closure. I disagree with page 419 of the DEIS. The closures for the North Carolina's "Birds of concern," should not be the same as the piping plover since, unlike the Piping plover, "birds of concern" are not under the Endangered Species Protection Act. According to Gordon Meyers, executive director of the North Carolina Wildlife Resources Commission, "State listed 'species of concern' -such as the American oystercatcher -do not require the extensive buffers and beach closures mandated for federally listed species such as the piping plover" as published May 9th in the Virginian-Pilot. I disagree with the NPS Resource Management Pedestrian/ORV closure policies within the DEIS -these address the least significant factor affecting nest survival. The management plan should address the two most significant risks to nest survival, which are mammalian predation and strom/lunar tides. Eliminating predation habitat around the ponds near Cape Point and other similar areas, by clearing the brush and trees, would help nest survival because the nests would be farther away from the shore line and potential human interaction. This would provide the ultimate birding habitat -accessible to water, flat sandy areas free of predators. As a local business owner who's business caters to fisherman and tourists who enjoy beach fishing, we see a decline in business when Cape Point south to Frisco is closed to ORVs and pedestrians. A more restrictive plan favored by the NPS would only continue to deteriorate our business and others as well.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me and many other Americans.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Correspondence: I have vacationed and fished on the Outer Banks of North Carolina for many years in all seasons. In the last few years I have seen the impact of closed beaches on the economy of the people who try to make a living on those islands. I think it is a shame that certain groups are favored by the Federal government when animals as opposed to humans are involved and truth does not always prevail. I feel access to the beaches by vehicles are needed to keep the economy on the islands stimulated. Using real facts and common sense solutions for the birds, turtles, and humans can be solved. Make the areas for the birds based on what is really needed not some inflated area to please certain groups. Moving turtle eggs can be done. There are plenty of volunteers that would love to help relocate turtle eggs. Keep the park beaches available to vehicles, for people to see all of nature.

Correspondence: Dear Superintendent Murray,
As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.
1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."
2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness..." Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.
3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.
Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

Correspondence: My comments concern the DEIS of the Off-Road Vehicle Management Plan prepared by the National Park Service (NPS) for the Cape Hatteras National Seashore Recreation Area.
1) Page 201: I disagree with the NPS statement: "Even with resource closures in place, protected species are still at risk [from pedestrians and ORVs]." No Piping Plover deaths have been attributed to ORVs. ORV violations continue to decrease as signage and education improve. Pedestrian violations are much more significant than ORV violations. It seems to me that any transgressions into protected area are the result of lack of NPS manpower and enforcement than the public purposely and willfully violating out of bounds areas.
2) Page xxiv: I question the statement of as per the DEIS: "Carrying capacity would be a 'peak use limit' determined for all areas based on the linear feet of beachfront?" If you close off huge sections of the beach, you force more people into smaller areas, potentially resulting in more resource impairment and diminished visitor experience.
3) Page xix and page 23: I am against having two different closures rules pertaining to the North facing beaches (North side) and the South facing

beaches (South side) as per the grid outlined in Alternative "F". I disagree with the NPS proposal to close the beaches in villages of Frisco, Hatteras and Ocracoke Villages to ORV access longer than the traditional May 15 to September 15 period for the Northern beaches, even though seasonal visitor statistics are similar for all villages. Please, make them the same: May 15 -> September 15.

4) Page 1: I agree with your statement "ORVs have long served as a primary form of access for many portions of the beach in the seashore, and continue to be the most practical means of access and parking for many visitors."

However, pedestrian only areas discriminate against individuals with limited mobility due to age or physical impairments, families with small children, and those wishing to engage in activities requiring recreational equipment (boogie boards, beach umbrellas, beach chairs, coolers, fishing rods and tackle, etc)

5) Page 53: I disagree with the special use permit proposed guidelines. It is impractical to allow the transportation of disabled visitors to the village beaches and then require the vehicle to be returned to the street or parking area. This necessitates the disabled person to have a driver to drop him (or her) off, then drive to a parking area, then trudge a long distance to the site of the drop off, then trudge the long distance through the sand back to get the vehicle.

Suppose the handicap person wants to go to the beach, is capable of driving himself, yet cannot find another person to go with him? Does he now not go to the beach? This rule creates unnecessary hardships and risks in the event of an emergency as well.

6) Page 121 ? 127. I strongly disagree with the buffers as presented. We must allow for pass-thru corridors. The beach is linear with the ocean buffering on one side and the dune line on the other. For example - If you pinch off access on one side of a 4 mile linear beach and pinch off access on the other side of the 4 mile section of beach with no corridor, then you effectively have closed off all 4 miles of the beach because you CAN'T get there. The proposed bird buffers are too large, blocking access to the interior sections from the two "buffered" ends.

I propose ORV pass-thru only corridors and to use breeding / nesting buffer distances to establish ORV pass through only corridors to ensure beach access in a way that does not hinder resource protection. I believe pass through corridors should be maintained for pedestrians and ORVs in all areas of the Cape Hatteras National Seashore Recreational Area throughout the entire breeding and nesting season. Corridors are vital to providing access in a way that does not hinder resource protection.

Piping Plover unfledged chicks buffer should move with the brood as it relocates to reliable food source, not expanded.

The 1,000 meter distance for the piping plover is way too large and not based upon peer reviewed science. A more rational distance would be 200 meters per other sites in the nation for the piping plover. Ample scientific evidence and precedent exists to support a 200 meter buffer.

Buffers for other species, including American Oystercatchers, Least Terns and Colonial Waterbirds must also be changed. An effective 30 meter buffer should be established for these species rather than the 300 meter closure outlined in the DEIS.

NON-ENDANGERED BIRDS should not have same protection as if endangered. Not allowing ORV access is paramount to denying the public access to these beaches.

7) Page 468: I disagree with the limitations imposed on pedestrian and ORVs. Corridors or bypasses should be provided thru, around or below high tide line in all SMAs during entire breeding season to maintain access.

8) Page 124: I strongly disagree with the NPS slant of providing for over protection of resource management over that of the public's right to access the beaches. Pro-active initiatives include: Vegetation Management, Habitat Management, Enhanced Predator Management, Colonial Water bird social attraction, Piping Plover check fledge rate, Piping plover chick buffer distance, and pass-through buffers during the incubation period. Opportunities to implement less restrictive closures as a result of the above initiatives should be considered more frequently than the 5-year periodic review process identified in the DEIS.

9) I disagree with the NPS Resource Management Pedestrian / ORV Closure Policies. These policies address the least significant factors affecting nest survival with little chance to have more than negligible impact. For example: the AMOY Nest Failures are predominately due to non-human events. Using your own stats, the mammalian predation is 54%, Storm / Lunar Tides: 29%, Nest Abandonment: 6%, Avian Predation: 5%, and Ghost Crab Predation: 3%.

So what is the percentage due to human interference: just 3%! It's insignificant, yet the NPS wants to ban humans when their actions provide very little influence on the success rate of breeding birds and turtles.

10) I disagree with the stats of breeding plovers and the other birds in the Park when the NPS does not adequately consider locations neighboring the Recreational Area that are part of the same ecosystem, namely dredge and spoil island that are located just yards away and within sight of the seashore. These birds are part of the same ecosystem and should be included.

Those spoil islands, developed by man from dredging the waterways in the Pamlico Sound for channel upkeep are slammed full of birds. The reason why so many birds? NO PREDATORS. SO, birds are not as stupid as one might think. You have to count these birds and incorporate them in the stats when the NPS is talking about any so called decline in breeding pairs in the National Park.

11) Page 1: I do not think the DEIS responsibly addresses the cultural resource issues. The very purpose of the DEIS as set forth in the National Environmental Policy Act (NEPA) is to protect and preserve natural and cultural resources in the federal decision making process. In the DEIS, the statement "protect and preserve natural and cultural resources" appears in the first sentence of the first page of the plan, in the Purpose of the Plan section, and numerous times thereafter. Yet, the 810 page document devotes only two paragraphs to analysis of cultural resource issues.

As a lifelong resident of Hatteras Island, we of the Hatteras Island community have always gotten together on the south beach on Sunday to enjoy the beach with our cookouts, gatherings, surf bathing, horse shoes and foot races, fishing, and surfing. Now the DEIS is proposing closing off most of the south beach during the summer which is the traditional period we local people use the beach. The continuation of this traditional pattern of land use is central to maintaining the historic identity of our island communities.

12) Pages 270-281; 561-598: I strongly disagree with your economic analysis of the impact of the DEIS. The region of influence (ROI) incorporates the Northern Beach communities, including Kill Devil Hills, Kitty Hawk, Southern Shores and Duck. These areas are almost completely disconnected from ORV use and access issues relating to the Seashore. ? Inclusion of the Northern Beaches in analysis significantly dilutes estimates of economic impact on the 8 Seashore Villages

? Analysis of economic impact to the Seashore Villages appears to be significantly down played. Emphasis in DEIS is on the ROI-wide or county-wide level impacts.

? Nowhere is it clearly addressed that the overwhelming majority of negative impacts will be felt by small businesses in the Seashore Villages rather than by overall economic interests within the greater ROI.

On page xlvi, Alternative F is characterized as having a "negligible to moderate" adverse impact on small businesses. I strongly disagree with this statement.

I believe the negligible to moderate projection is inaccurate and relies on economic surveys that has not yet been published. Furthermore, this material is not expected to be added to the DEIS until after the public comment period has ended.

Based upon the economic harm we have already experienced under the consent decree, Dare County projects the economic impact of Alternative F to be substantial.

Beach closures have already had a devastating and unfair impact on many Dare County Businesses, causing foreclosures, bankruptcies, lay-offs, cutbacks, expensive refinancing, and depleted college funds and savings accounts.

Even businesses whose revenue has stayed level or showed a modest increase have accomplished this at a costly price. Many have had to cut back employee hours, forego much-needed capital improvements, and sacrifice profits. That is certainly the case with Hatteras Realty.

Pages 270-286, 561-598: The socio-economic data and analyses are incomplete and erroneous and result in an understatement of the effect the restrictions will have upon the Island, the region and the state of NC. The US Park Services answer: Businesses will have to "adapt" to the new rules. (p.383) The negative economic impacts of the decree ARE KNOWN, so to say that the added restrictions would have negligible to moderate impact is indefensible.

13) Overall Visitor Counts - Overall visitor counts appear to include visitors to Fort Raleigh National Historic Site and the Wright Brothers National Memorial. A large percentage of these visitors vacation in the Northern Beaches communities and recreate on the non-federal beaches outside of the Seashore. Visitors who patronize the Fort Raleigh National Historic Site and the Wright Brothers National Memorial but do not visit the actual seashore areas need to be factored out.

Maintenance of Future Access to Cape Point and South Point Ocracoke: All socioeconomic analyses related to Alternative F are predicated on the

assumption that access corridors will remain open for at least an appreciable portion of the visitor high season. Under Alternative F, the access corridors will be subject to Resource Closures based on buffers similar or identical to the Consent Decree. Unless some predictability of access to Cape Point and South Point Ocracoke can be assured, economic analyses predicated on assumption of access are fundamentally flawed.

Why would a group of surf fisherman want to come to Hatteras Island to surf fish if they are not sure they can access the prime fishing grounds at Cape Point? The answer is they won't come. If they don't come, they don't rent vacation homes and spend their money on Hatteras and Ocracoke Islands. The definition of the Region of Influence (ROI), faulty data on economic activity generated by specific type recreational activity, incomplete visitation/business survey data, inflated overall Seashore visitor counts pertaining to beach use, and flawed key assumptions concerning the maintenance of access under Alternative F, all lead to inaccurate conclusions in the socioeconomic analyses. Specifically, these inaccuracies can be seen as understating the negative socio-economic impact of the Seashore Villages. Further, this negative impact will be absorbed almost entirely by Small Businesses. Neither of these important aspects of the management alternatives are adequately presented in the DEIS.

14) Page 136: I strongly disagree with your pet restriction proposals. The "prohibition of pets in the Seashore during bird breeding season including in front of the villages." = No Pets in public areas ?beaches, campgrounds, soundfront, foot trails, park maintained roads -from March 15 ?July 31.

Hatteras Realty books approximately 13,000 rental weeks for a total of 91,000 rental nights housing approximately 700,000 visitors. The ban on pets to July 31 will seriously hurt the rentals of my vacation homes as our pet homes encompass about 30% of our rentals. I propose allowing pets on 6 foot leashes year-round in all areas open to pedestrians or ORVs. 15) Pages 125; 392 ? 396: SEA TURTLES. I disagree with the stats and procedures proposed. I think endangered sea turtles would benefit from management practices now in use at other federal seashores that are more proactive in efforts to achieve nesting success. This includes relocating nests to more desirable locations as is done in other state and federally controlled areas.

The Cape Hatteras National Seashore Recreational Area is on the northernmost fringe of turtle nesting locations for the southeast, accounting for about 1% of all turtle nests. Proposed buffer areas are not needed for protection of the turtles and amount to overprotection.

16) Pages 97- 101. I strongly disagree with proposals in this section saying that ORVs will be prohibited year round between ramps 27 and 30, at Hatteras Inlet (Hatteras Spit), Ocracoke Inlet (North Ocracoke Spit) and various other locations.

Not allowing ORV access is paramount to denying the public access to these beaches. They are located miles from the nearest parking or paved road area and too far to access on foot. As a matter of course, there has been no breeding of piping plover or other endangered species at the Hatteras Island Inlet (spit) area in the past 6 years.

17) Page 104: I disagree with the proposed night time driving closures. Per your proposals, night driving will be prohibited between May 1 and November 15th, forcing visitors off of the beaches early in the evening and preventing sunrise surf fishermen access in the morning. I propose a more moderate night time ban if one is needed, perhaps from June 1 ? September 15 with times being 1 hour after sunset and 1 hour before sunrise to allow beach goers to gather their stuff and exit the beach area.

Certainly more proactive measures such as relocating nests prone to weather and ocean events would dramatically increase the nesting success rates.

18) Page 121: I disagree with the proposed beach closings, including pedestrian access from March 15 until July 31 in 8 different beach locations which have traditionally been available. Please leave these areas open to beach walkers, shell collectors and those that want to access the beaches in these areas.

Conclusion:

Please, incorporate access corridors through any SMA so we can get to the open beach beyond. Incorporate the birds into the count that nest on the spoil islands. Base your buffer zones on peer reviewed science and scale them back to more reasonable distances as discussed.

It is neither logical nor reasonable to spend so much time, money and energy to overprotect a bird (Piping Plover) in the Cape Hatteras National Seashore that is on the southernmost fringe area of its breeding ground. That goes for the loggerhead turtle that is in its northernmost breeding area. Let's scale back the buffer zones. You can always increase at a later date.

The USPS is leaning way over the line on over protection and not enough on the public's right to enjoy the beaches of the National Seashore. The proper balance is not achieved in the propose DEIS and needs to be modified so that the proper balance of reasonable resource protection and access to the beaches of the National Park is achieved. I could sum it up by saying "Protect, not Prohibit."

Thank you,

Based upon the economic harm we have already experienced under the consent decree, Dare County projects the economic impact of Alternative F to be substantial.

Beach closures have already had a devastating and unfair impact on many Dare County Businesses, causing foreclosures, bankruptcies, lay-offs, cutbacks, expensive refinancing, and depleted college funds and savings accounts.

Even businesses whose revenue has stayed level or showed a modest increase have accomplished this at a costly price. Many have had to cut back employee hours, forego much-needed capital improvements, and sacrifice profits. That is certainly the case with Hatteras Realty.

Pages 270-286, 561-598: The socio-economic data and analyses are incomplete and erroneous and result in an understatement of the effect the restrictions will have upon the Island, the region and the state of NC. The US Park Services answer: Businesses will have to "adapt" to the new rules.

(p.383) The negative economic impacts of the decree ARE KNOWN, so to say that the added restrictions would have negligible to moderate impact is indefensible.

13) Overall Visitor Counts - Overall visitor counts appear to include visitors to Fort Raleigh National Historic Site and the Wright Brothers National Memorial. A large percentage of these visitors vacation in the Northern Beaches communities and recreate on the non-federal beaches outside of the Seashore. Visitors who patronize the Fort Raleigh National Historic Site and the Wright Brothers National Memorial but do not visit the actual seashore areas need to be factored out.

Maintenance of Future Access to Cape Point and South Point Ocracoke: All socioeconomic analyses related to Alternative F are predicated on the assumption that access corridors will remain open for at least an appreciable portion of the visitor high season. Under Alternative F, the access corridors will be subject to Resource Closures based on buffers similar or identical to the Consent Decree. Unless some predictability of access to Cape Point and South Point Ocracoke can be assured, economic analyses predicated on assumption of access are fundamentally flawed.

Why would a group of surf fisherman want to come to Hatteras Island to surf fish if they are not sure they can access the prime fishing grounds at Cape Point? The answer is they won't come. If they don't come, they don't rent vacation homes and spend their money on Hatteras and Ocracoke Islands.

The definition of the Region of Influence (ROI), faulty data on economic activity generated by specific type recreational activity, incomplete visitation/business survey data, inflated overall Seashore visitor counts pertaining to beach use, and flawed key assumptions concerning the maintenance of access under Alternative F, all lead to inaccurate conclusions in the socioeconomic analyses. Specifically, these inaccuracies can be seen as understating the negative socio-economic impact of the Seashore Villages. Further, this negative impact will be absorbed almost entirely by Small Businesses. Neither of these important aspects of the management alternatives are adequately presented in the DEIS.

14) Page 136: I strongly disagree with your pet restriction proposals. The "?prohibition of pets in the Seashore during bird breeding season including in front of the villages." = No Pets in public areas ?beaches, campgrounds, soundfront, foot trails, park maintained roads -from March 15 ?July 31.

Hatteras Realty books approximately 13,000 rental weeks for a total of 91,000 rental nights housing approximately 700,000 visitors. The ban on pets to July 31 will seriously hurt the rentals of my vacation homes as our pet homes encompass about 30% of our rentals. I propose allowing pets on 6 foot leashes year-round in all areas open to pedestrians or ORVs.

15) Pages 125; 392 ? 396: SEA TURTLES. I disagree with the stats and procedures proposed. I think endangered sea turtles would benefit from management practices now in use at other federal seashores that are more proactive in efforts to achieve nesting success. This includes relocating nests to more desirable locations as is done in other state and federally controlled areas.

The Cape Hatteras National Seashore Recreational Area is on the northernmost fringe of turtle nesting locations for the southeast, accounting for about 1% of all turtle nests. Proposed buffer areas are not needed for protection of the turtles and amount to overprotection.

16) Pages 97- 101. I strongly disagree with proposals in this section saying that ORVs will be prohibited year round between ramps 27 and 30, at Hatteras Inlet (Hatteras Spit), Ocracoke Inlet (North Ocracoke Spit) and various other locations.

Not allowing ORV access is paramount to denying the public access to these beaches. They are located miles from the nearest parking or paved road area and too far to access on foot. As a matter of course, there has been no breeding of piping plover or other endangered species at the Hatteras Island Inlet (spit) area in the past 6 years.

17) Page 104: I disagree with the proposed night time driving closures. Per your proposals, night driving will be prohibited between May 1 and

November 15th, forcing visitors off of the beaches early in the evening and preventing sunrise surf fishermen access in the morning. I propose a more moderate night time ban if one is needed, perhaps from June 1 ? September 15 with times being 1 hour after sunset and 1 hour before sunrise to allow beach goers to gather their stuff and exit the beach area.

Certainly more proactive measures such as relocating nests prone to weather and ocean events would dramatically increase the nesting success rates.

18) Page 121: I disagree with the proposed beach closings, including pedestrian access from March 15 until July 31 in 8 different beach locations which have traditionally been available. Please leave these areas open to beach walkers, shell collectors and those that want to access the beaches in these areas.

Conclusion:

Please, incorporate access corridors through any SMA so we can get to the open beach beyond. Incorporate the birds into the count that nest on the spoil islands. Base your buffer zones on peer reviewed science and scale them back to more reasonable distances as discussed.

It is neither logical nor reasonable to spend so much time, money and energy to overprotect a bird (Piping Plover) in the Cape Hatteras National Seashore that is on the southernmost fringe area of its breeding ground. That goes for the loggerhead turtle that is in its northernmost breeding area. Let's scale back the buffer zones. You can always increase at a later date.

The USPS is leaning way over the line on over protection and not enough on the public's right to enjoy the beaches of the National Seashore. The proper balance is not achieved in the propose DEIS and needs to be modified so that the proper balance of reasonable resource protection and access to the beaches of the National Park is achieved. I could sum it up by saying "Protect, not Prohibit."

Thank you,

Correspondence: I am an Associate in Medicine at Duke Medical Center Duke Clinical Research Institute at Duke Medical Center with 36 years of experience in clinical research. I have tried to critically review the 800+ page DEIS report as time allowed.

I made my first trip to the Outer Banks with my parents in 1961 and have been an ORV and pedestrian angler, shell picker and bird watcher for 2-4 weeks each year since the late 1960's. I have always felt I was a conservationist and environmentalist but never to the exclusion of allowing reasonable and responsible access to the Seashore

I disagree with the bulk of the management options (A-F) proposed in the DEIS but instead offer the well-reasoned management options proposed by the Coalition For Beach Access ORV Access Environmental Impact Position Statement (www.obpa-nc.org/position/statement.pdf).

Additionally:

Return to the corridors around non-ESA listed species during the breeding and nesting period to allow ORV and pedestrian access to non-critical portions of the beach. Expand and close to the water these area during the hatch window and until fledging. Just recently Gordon Myers, executive director of the North Carolina Wildlife Resources Commission, has stated NC never intended the beach closures and buffers the NPS has proposed. Implement moving, 200-meter buffers for piping plover chicks. These chicks are intensely monitored by the resource staff and the staff can move and adjusted closures. The 1000 meter buffer is punitive and not justified by science. Pea Island is a prime, ORV-free pedestrian area in close proximity Rodanthe-Waves-Salvo. This must be included in the calculations. Respectfully, exclusion of this area simply due to management by a different governmental entities is nonsensical and is non-inclusion of species of concern in areas in close proximity to the Seashore.

The NPS should implement a proactive strategy of protecting turtle nests and hatchlings as outlined in the white paper by Hardham and Davis: Sea Turtle Management ? A Common Sense Approach for the Cape Hatteras Seashore Recreational Area.

I am disappointed that NPS has chosen to present management options that subjugate visitor recreational opportunities - the reason for the creation of Cape Hatteras National Seashore Recreational Area - to over-reaching resource management options that will do little to mitigate losses by predation and weather.

Correspondence: Mr. Murry,

I am writing in regard to the Draft Environmental Impact Statement pertaining to beach access on Hatteras Island. As a property owner and visitor for over 20 years I am very familiar with the history and culture on Hatteras Island. I have also marveled at and studied the wildlife that inhabits the island. I strongly oppose Alternative F due to many missing elements and flawed scientific facts as it pertains to both endangered species and non-endangered species. This plan is clearly written to add protection to non-endangered species which is not the intent of a written access plan. Alternative F does not address the abundant dredge islands surrounding Hatteras Island that is an active breeding habitat for endangered birds. These dredge islands have no predators to the endangered species yet they were not considered in the study.

The economic impact from Alternative F on Hatteras Island would have a devastating impact to residents, property owners and businesses on the island. It would irradicate a culture that spans generations. I have seen the recent effects from the economy but more concerning how it has been exacerbated by the temporary restrictions to beach access.

A promise was made to keep President Roosevelt's vision of providing beach access to this great National Seashore. Alternative F is not a viable solution.

Correspondence: Please consider my comments below upon review of the Cape Hatteras Draft ORV Management Plan/DEIS.

The NPS must formulate a plan that is consistent with the legislation establishing Cape Hatteras National Seashore Recreation Area. The enabling legislation for the Recreational Area states, in part, "said area shall be, and is, established, dedicated, and set apart as a national seashore recreational area for the benefit and enjoyment of the people and shall be known as the Cape Hatteras National Seashore Recreational Area". Therefore, it is important to balance resource protection with reasonable access for recreation.

Corridors are a vital tool in providing access while managing resources. They provide a small path around temporary resource closures in order to provide access to open areas that would otherwise be blocked. Corridors should be permitted throughout the seashore during the entire breeding and nesting season including ML-1 portions of SMAs. These corridors would provide valuable access without impairment or damage to protected resources. Buffers, or closures, are important management practices for species recovery. However, to have long term benefit for the wildlife and the visiting public, buffers must be based on peer-reviewed science. For example, the Piping Plover, a species classified as threatened and not endangered, is given a level of unprecedented protection in Alternative F. A 1,000-meter buffer in all directions represents over 771 acres. The DEIS does not cite any peer-reviewed science in supporting such closure. A more appropriate & effective buffer would be 200 meters.

Birds that are not listed as endangered should not be afforded the level of protection given to ESA (Endangered Species Act) protected species. Instead of 300-meter buffers for these birds, a more appropriate buffer would be 30 meters. Also, all birds in the same ecosystem of the seashore should be counted. This includes all the many birds on the dredge and spoil islands located just yards away and within sight of the seashore.

The National Park Service should consider turtle management practices successfully used in other federal and state areas to achieve nesting success.

More proactive measures include relocating nests to more desirable locations, which is routinely and successfully done in other areas.

Correspondence: I feel that beach access is too restrictive. Pets should be allowed as long as they are on a leash at all times. Access for watersports should continue to be permitted especially at the following locations: The Haulover (Canadian Hole) near (58) South of Avon Kite Point near (59) North of Buxton Frisco Day Use Area near proposed new ramp 51 Sandy Bay Soundside north of Hatteras Village
 These areas are much enjoyed for watersports and the parking and facilities are much appreciated by the many seasonal tourists. Canadian Hole and Kite Point have become an important and famous attraction for the Outer Banks.

Correspondence: Dear Superintendent Murray,
 As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.
 1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."
 2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness...."
 Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.
 3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.
 Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

Correspondence: I disagree with page 136 of the DEIS that supports the prohibition of pets in the seashore during bird breeding season including in front of the villages. This essentially prohibits pets from all public areas of the National Park including beaches, campgrounds, soundfront, foottrails and park maintained roads - even though the majority of these areas do not have piping plover nests or closures associated with nests and therefore, dogs would not pose any potential threat to the birds.
 Furthermore, pets must be on a leash on the beach and it is the NPS responsibility to manage the park and ensure that pets are on a leash as part of all rules that must be obeyed such as bonfires below high tide line. As responsible citizens enjoying our national park that we pay for, it is absurd to prohibit pets from the park without sound scientific evidence and proof of the potential threat dogs pose to nests. The DEIS does not document any past events where a dog has hurt or threatened a nest.
 Our economy depends on tourism to survive. Each property management company recognizes the popularity and demand for pet friendly accommodations in the Cape Hatteras National Seashore Recreational area. Each company has "pet friendly" as a searchable amenity. The fact that so many vacation rental homes are pet friendly proves the importance of continuing to allow free and open access to the beaches and all National Park public areas for pets. Locals and tourists alike are well informed of the leash law and respect the leash law.
 The DEIS does not document or outline the potential harm to the local economy if pets are prohibited in the seashore, in front of the villages and essentially in all public places within the National Park. To propose the prohibition of pets, without concrete evidence to support their perceived danger to nests, and without identifying the potential economic harm this could cause, does not provide a sound argument.

Correspondence: My comments concern the DEIS of the Off-Road Vehicle Management Plan prepared by the National Park Service (NPS) for the Cape Hatteras National Seashore Recreation Area.

1) Page 201: I disagree with the NPS statement: "Even with resource closures in place, protected species are still at risk [from pedestrians and ORVs]." No Piping Plover deaths have been attributed to ORVs. ORV violations continue to decrease as signage and education improve. Pedestrian violations are much more significant than ORV violations. It seems to me that any transgressions into protected area are the result of lack of NPS manpower and enforcement than the public purposely and willfully violating out of bounds areas.

2) Page xxiv: I question the statement of as per the DEIS: "Carrying capacity would be a 'peak use limit' determined for all areas based on the linear feet of beachfront?" If you close off huge sections of the beach, you force more people into smaller areas, potentially resulting in more resource impairment and diminished visitor experience.

3) Page xix and page 23: I am against having two different closures rules pertaining to the North facing beaches (North side) and the South facing beaches (South side) as per the grid outlined in Alternative "F". I disagree with the NPS proposal to close the beaches in villages of Frisco, Hatteras and Ocracoke Villages to ORV access longer than the traditional May 15 to September 15 period for the Northern beaches, even though seasonal visitor statistics are similar for all villages. Please, make them the same: May 15 -> September 15. 4) Page 1: I agree with your statement "ORVs have long served as a primary form of access for many portions of the beach in the seashore, and continue to be the most practical means of access and parking for many visitors."

However, pedestrian only areas discriminate against individuals with limited mobility due to age or physical impairments, families with small children, and those wishing to engage in activities requiring recreational equipment (boogie boards, beach umbrellas, beach chairs, coolers, fishing rods and tackle, etc) 5) Page 53: I disagree with the special use permit proposed guidelines. It is impractical to allow the transportation of disabled visitors to the village beaches and then require the vehicle to be returned to the street or parking area. This necessitates the disabled person to have a driver to drop him (or her) off, then drive to a parking area, then trudge a long distance to the site of the drop off, then trudge the long distance through the sand back to get the vehicle. Suppose the handicap person wants to go to the beach, is capable of driving himself, yet cannot find another person to go with him? Does he now not go to the beach? This rule creates unnecessary hardships and risks in the event of an emergency as well. 6) Page 121 ? 127. I strongly disagree with the buffers as presented. We must allow for pass-thru corridors. The beach is linear with the ocean buffering on one side and the dune line on the other. For example - If you pinch off access on one side of a 4 mile linear beach and pinch off access on the other side of the 4 mile section of beach with no corridor, then you effectively have closed off all 4 miles of the beach because you CAN'T get there. The proposed bird buffers are too large, blocking access to the interior sections from the two "buffered" ends. I propose ORV pass-thru only corridors and to use breeding / nesting buffer distances to establish ORV pass through only corridors to ensure beach access in a way that does not hinder resource protection. I believe pass through corridors should be maintained for pedestrians and ORVs in all areas of the Cape Hatteras National Seashore Recreational Area throughout the entire breeding and nesting season. Corridors are vital to providing access in a way that does not hinder resource protection.

Piping Plover unfledged chicks buffer should move with the brood as it relocates to reliable food source, not expanded. The 1,000 meter distance for the piping plover is way too large and not based upon peer reviewed science. A more rational distance would be 200 meters per other sites in the nation for the piping plover. Ample scientific evidence and precedent exists to support a 200 meter buffer.

Buffers for other species, including American Oystercatchers, Least Terns and Colonial

Waterbirds must also be changed. An effective 30 meter buffer should be established for these species rather than the 300 meter closure outlined in the DEIS.

NON-ENDANGERED BIRDS should not have same protection as if endangered. Not allowing ORV access is paramount to denying the public access to these beaches. 7) Page 468: I disagree with the limitations imposed on pedestrian and ORVs. Corridors or bypasses should be provided thru, around or below high tide line in all SMAs during entire breeding season to maintain access. 8) Page 124: I strongly disagree with the NPS slant of providing for over protection of resource management over that of the public's right to access the beaches. Pro-active initiatives include: Vegetation Management, Habitat Management, Enhanced Predator Management, Colonial Water bird social attraction, Piping Plover check fledge rate, Piping plover chick buffer distance, and pass-through buffers during the incubation period. Opportunities to implement less restrictive closures as a result of the above initiatives should be considered more frequently than the 5-year periodic review process identified in the DEIS. 9) I disagree with the NPS Resource Management Pedestrian / ORV Closure Policies. These policies address the least significant factors affecting nest survival with little chance to have more than negligible impact. For example: the AMOY Nest Failures are predominately due to non-human events. Using your own stats, the mammalian predation is 54%, Storm / Lunar Tides: 29%, Nest Abandonment: 6%, Avian Predation: 5%, and Ghost Crab Predation: 3%, So what is the percentage due to human interference: just 3%! It's insignificant, yet the NPS wants to ban humans when their actions provide very little influence on the success rate of breeding birds and turtles.

10) I disagree with the stats of breeding plovers and the other birds in the Park when the NPS does not adequately consider locations neighboring the Recreational Area that are part of the same ecosystem, namely dredge and spoil island that are located just yards away and within sight of the seashore. These birds are part of the same ecosystem and should be included. Those spoil islands, developed by man from dredging the waterways in the Pamlico Sound for channel upkeep are slammed full of birds. The reason why so many birds? NO PREDATORS. SO, birds are not as stupid as one might think. You have to count these birds and incorporate them in the stats when the NPS is talking about any so called decline in breeding pairs in the National Park. 11) Page 1: I do not think the DEIS responsibly addresses the cultural resource issues. The very purpose of the DEIS as set forth in the National Environmental Policy Act (NEPA) is to protect and preserve natural and cultural resources in the federal decision making process. In the DEIS, the statement "protect and preserve natural and cultural resources" appears in the first sentence of the first page of the plan, in the Purpose of the Plan section, and numerous times thereafter. Yet, the 810 page document devotes only two paragraphs to analysis of cultural resource issues. As a lifelong resident of Hatteras Island, we of the Hatteras Island community have always gotten together on the south beach on Sunday to enjoy the beach with our cookouts, gatherings, surf bathing, horse shoes and foot races, fishing, and surfing. Now the DEIS is proposing closing off most of the south beach during the summer which is the traditional period we local people use the beach. The continuation of this traditional pattern of land use is central to maintaining the historic identity of our island communities. 12) Pages 270-281; 561-598: I strongly disagree with your economic analysis of the impact of the DEIS. The region of influence (ROI) incorporates the Northern Beach communities, including Kill Devil Hills, Kitty Hawk, Southern Shores and Duck. These areas are almost completely disconnected from ORV use and access issues relating to the Seashore. ? Inclusion of the Northern Beaches in analysis significantly dilutes estimates of economic impact on the 8 Seashore Villages ? Analysis of economic impact to the Seashore Villages appears to be significantly down played. Emphasis in DEIS is on the ROI-wide or county-wide level impacts. ? Nowhere is it clearly addressed that the overwhelming majority of negative impacts will be felt by small businesses in the Seashore Villages rather than by overall economic interests within the greater ROI. On page xlvi, Alternative F is characterized as having a "negligible to moderate" adverse impact on small businesses. I strongly disagree with this statement.

I believe the negligible to moderate projection is inaccurate and relies on economic surveys that has not yet been published. Furthermore, this material is not expected to be added to the DEIS until after the public comment period has ended.

Based upon the economic harm we have already experienced under the consent decree, Dare County projects the economic impact of Alternative F to be substantial.

Beach closures have already had a devastating and unfair impact on many Dare County Businesses, causing foreclosures, bankruptcies, lay-offs, cutbacks, expensive refinancing, and depleted college funds and savings accounts.

Even businesses whose revenue has stayed level or showed a modest increase have accomplished this at a costly price. Many have had to cut back employee hours, forego much-needed capital improvements, and sacrifice profits. That is certainly the case with Hatteras Realty.

Pages 270-286, 561-598: The socio-economic data and analyses are incomplete and erroneous and result in an understatement of the effect the restrictions will have upon the Island, the region and the state of NC. The US Park Services answer: Businesses will have to "adapt" to the new rules. (p.383) The negative economic impacts of the decree ARE KNOWN, so to say that the added restrictions would have negligible to moderate impact is indefensible.

13) Overall Visitor Counts - Overall visitor counts appear to include visitors to Fort Raleigh National Historic Site and the Wright Brothers National Memorial. A large percentage of these visitors vacation in the Northern Beaches communities and recreate on the non-federal beaches outside of the Seashore. Visitors who patronize the Fort Raleigh National Historic Site and the Wright Brothers National Memorial but do not visit the actual seashore areas need to be factored out. Maintenance of Future Access to Cape Point and South Point Ocracoke: All socioeconomic analyses related to Alternative F are predicated on the assumption that access corridors will remain open for at least an appreciable portion of the visitor high season. Under Alternative F, the access corridors will be subject to Resource Closures based on buffers similar or identical to the Consent Decree. Unless some predictability of

access to Cape Point and South Point Ocracoke can be assured, economic analyses predicated on assumption of access are fundamentally flawed. Why would a group of surf fisherman want to come to Hatteras Island to surf fish if they are not sure they can access the prime fishing grounds at Cape Point? The answer is they won't come. If they don't come, they don't rent vacation homes and spend their money on Hatteras and Ocracoke Islands. The definition of the Region of Influence (ROI), faulty data on economic activity generated by specific type recreational activity, incomplete visitation/business survey data, inflated overall Seashore visitor counts pertaining to beach use, and flawed key assumptions concerning the maintenance of access under Alternative F, all lead to inaccurate conclusions in the socioeconomic analyses. Specifically, these inaccuracies can be seen as understating the negative socio-economic impact of the Seashore Villages. Further, this negative impact will be absorbed almost entirely by Small Businesses. Neither of these important aspects of the management alternatives are adequately presented in the DEIS. 14) Page 136: I strongly disagree with your pet restriction proposals. The "prohibition of pets in the Seashore during bird breeding season including in front of the villages." = No Pets in public areas ?beaches, campgrounds, soundfront, foot trails, park maintained roads -from March 15 ?July 31. Hatteras Realty books approximately 13,000 rental weeks for a total of 91,000 rental nights housing approximately 700,000 visitors. The ban on pets to July 31 will seriously hurt the rentals of my vacation homes as our pet homes encompass about 30% of our rentals. I propose allowing pets on 6 foot leashes year-round in all areas open to pedestrians or ORVs. 15) Pages 125; 392 ? 396: SEA TURTLES. I disagree with the stats and procedures proposed. I think endangered sea turtles would benefit from management practices now in use at other federal seashores that are more proactive in efforts to achieve nesting success. This includes relocating nests to more desirable locations as is done in other state and federally controlled areas.

The Cape Hatteras National Seashore Recreational Area is on the northernmost fringe of turtle nesting locations for the southeast, accounting for about 1% of all turtle nests. Proposed buffer areas are not needed for protection of the turtles and amount to overprotection.

16) Pages 97- 101. I strongly disagree with proposals in this section saying that ORVs will be prohibited year round between ramps 27 and 30, at Hatteras Inlet (Hatteras Spit), Ocracoke Inlet (North Ocracoke Spit) and various other locations.

Not allowing ORV access is paramount to denying the public access to these beaches. They are located miles from the nearest parking or paved road area and too far to access on foot. As a matter of course, there has been no breeding of piping plover or other endangered species at the Hatteras Island Inlet (spit) area in the past 6 years.

17) Page 104: I disagree with the proposed night time driving closures. Per your proposals, night driving will be prohibited between May 1 and November 15th, forcing visitors off of the beaches early in the evening and preventing sunrise surf fishermen access in the morning. I propose a more moderate night time ban if one is needed, perhaps from June 1 ? September 15 with times being 1 hour after sunset and 1 hour before sunrise to allow beach goers to gather their stuff and exit the beach area.

Certainly more proactive measures such as relocating nests prone to weather and ocean events would dramatically increase the nesting success rates.

18) Page 121: I disagree with the proposed beach closings, including pedestrian access from March 15 until July 31 in 8 different beach locations which have traditionally been available. Please leave these areas open to beach walkers, shell collectors and those that want to access the beaches in these areas.

Conclusion:

Please, incorporate access corridors through any SMA so we can get to the open beach beyond. Incorporate the birds into the count that nest on the spoil islands. Base your buffer zones on peer reviewed science and scale them back to more reasonable distances as discussed.

It is neither logical nor reasonable to spend so much time, money and energy to overprotect a bird (Piping Plover) in the Cape Hatteras National Seashore that is on the southernmost fringe area of its breeding ground. That goes for the loggerhead turtle that is in its northernmost breeding area. Let's scale back the buffer zones. You can always increase at a later date.

The USPS is leaning way over the line on over protection and not enough on the public's right to enjoy the beaches of the National Seashore. The proper balance is not achieved in the propose DEIS and needs to be modified so that the proper balance of reasonable resource protection and access to the beaches of the National Park is achieved. I could sum it up by saying "Protect, not Prohibit."

Thank you,

Jay Hughes

This is in agreement with fellow friend Stewart Couch's recommendations.

Thank you for taking the time to read my comments. I agree that we humans should respect nature and avoid altering the natural course of life and it's cycles. This can be done harmoniously without excessive measures. I disagree with your statement (p. 210)in the DEIS which states "Even with resource closures in place, protected species are still at risk [from pedestrians and ORVs]." The facts are that no Piping Plover deaths have been attributed to ORVs. As we continue to educate through signage and other means, ORV violations continue to decrease. I agree with your statement (p.1) in the DEIS which states that "ORVs have long served as a primary form of access for many portions of the beach in the seashore, and continue to be the most practical means of access and parking for many visitors". Many of the activities enjoyed on the seashore require recreational equipment that is best transported by way of ORVs. Pedestrian only areas discriminate against individuals with limited mobility due to age or physical impairments , families with small children, and those who to engage in activities requiring the aforementioned recreational equipment. On (p.58) you mention Special Use permits to allow transportation of disabled visitors to the village beaches. While the premise of this is logical, I disagree with requiring the vehicle to be returned to the street; as this creates unnecessary hardships and risks in the event of emergencies which are more likely to occur with those disabled or those who have health risks. On (pages 121-127) I don't agree with the size nor inflexible buffers. These buffers should allow for ORV pass-through only corridors. There should also be pass-through only corridors for pedestrians. Again, we can protect and live harmoniously with birds, turtles etc... with proper education and enforcement, not by totally denying access. I disagree with your proposed buffers for Breeding/Nesting as they are too large and excessive. Where you propose 75m, I propose 50m. Where you propose 300m, I propose 30m. I disagree with your buffers for unfledged chicks. Where you propose 1000m, I propose 200m. An example of how excessive 1000m is should be directed to Cape Point in Buxton. 1000m would totally shut off the whole point. In some areas, 1000m would shut off hwy 12. I disagree with your 5 year periodic review process identified in the DEIS with regard to initiatives such as Vegetation Management, Enhanced Predator Management, Piping Plover chick buffer distance etc...and propose that these initiatives be considered more frequently. These initiatives are logical but need to be reviewed more frequently given the fact that this is a new process. I disagree with your highlighting of the least significant factor affecting nest survival regarding birds: HUMANS. Consider these statistics with regard to AMOY nest failures: Mammalian Predation: 54% Highly significant risk. Storm/Lunar Tides: 29%, Nest Abandonment: 6%, Avian Predation 5%, Ghost Crab Predation: 3%, Human Interference: 3% INSIGNIFICANT IMPACT. Again, thank you for your time and please consider my comments as well as all others.

I disagree with all options contained in the Draft ORV Management Plan. The options are all extreme and biased. I have had many visits over the years on the Outer Banks and do not think there is a need for such ridiculous closures. I disagree with the proposed closures because of the lack of understanding of this fluid environment. Nor'easters and Hurricanes kill more species on Hatteras Island than any other factor. Keep it Natural? The NPS has systematically killed off the predators of the island. There has also been an effort to eliminate the ghost crab which used to be so plentiful it appeared as though sand was moving. Most outrageous is the elimination of owls from Hatteras Island as they were deemed to be predacious to the migratory birds. The rhetoric concerning the economic and cultural aspects of the island is ruining the stability of this sensitive community. There are no hard facts to back up the numbers brought forth. Most disappointing is the lack of input from those families that have lived on the island for hundreds of years and

were always promised access.

I am a conservationist at heart. I do not see how letting turtle eggs drown and not moving bird eggs that are about to be washed over can be part of the management plan. Why isn't Pea Island acknowledged as an already existing refuge for birds and a prime pedestrian area? Why isn't the success of the dredge spoils island considered? Species that are not on the endangered species list should not have closures consistent with those birds that are on the endangered list. Bird activity of the entire island needs to be assessed not just the areas in the National Park.

Why has the cultural practice of mowing the Cape Point Pond banks been discontinued when it brought so much success for so many years? Many of the rules being made up are being brought forth by those that do not live or vacation on the island. I do not agree on legislating from the bench. Those who live on the island should be allowed to be more involved in this process.

Cape Hatteras will incur excessive costs building parking lots and other facilities to accommodate people who would otherwise have access to the beach. I believe that building these things will be more detrimental than allowing access. When the beaches were reopened after the extended closure last year they were a mess because we were not there to clean them. That is what makes this area unique. We care about it, we take care it. Expelling those that break the law is a must. Do not let those that break the law ruin the law abiding citizen's time on the island.

I will be contacting my congressman and senator to voice my concerns on this proposed management plan.

John Hartnett

Correspondence: I disagree with the Alternative E and F. As a property investment owner, I'm concerned about the restrictive nature of these proposals. The limitation of beach access and pet walking on Outerbanks beaches could greatly impact the rental business. Limiting beach access from March 15 - July 31st will have a great impact on our rental property. The environmental impact for restricting this access is not clearly known and thereby just a restriction guessing game. Management of this beautiful area must take into consideration the livelihood of all concerned. Humans as well as animals deserve consideration. To limit access solely on incomplete data could GREATLY affect the economic impact of the entire state of NC. In this economic downturn, is North Carolina willing to take the chance that it won't have an impact on business and that business will be able to adapt to the new restrictions? That's a gamble I hope your not willing to take.
I strongly disagree with the piping plover unfledged chick brood situation that has occurred in the Outerbanks. As an elementary school teacher, I teach the Ecosystem to fifth-graders. An important part of every ecosystem is adaptation. Animals either adapt, move or become extinct. The protection of birds living outside their natural habitat is morally incorrect. Natural predators to the Outerbanks have kept this unnative bird from adapting to the area and that has caused the piping plover numbers to remain small. By providing a protected area, the bird is able to breed and multiply but it will only do so with CONTINUED protection because it has not adapted to its new habitat naturally. Humans are providing an unnatural habitat and protection that nature is not. Let nature take its course and if the non-native piping plover can adapt to the Outerbanks, it will be able to multiply in numbers on its own without the intervention of humans. If this bird requires human intervention, than I suggest a zoo research facility where hatchlings can be freed into their native environment where they will naturally survive.

Correspondence: My comments concern the DEIS of the Off-Road Vehicle Management Plan prepared by the National Park Service (NPS) for the Cape Hatteras National Seashore Recreation Area.
1) Page 201: I disagree with the NPS statement: "Even with resource closures in place, protected species are still at risk [from pedestrians and ORVs]." No Piping Plover deaths have been attributed to ORVs. ORV violations continue to decrease as signage and education improve. Pedestrian violations are much more significant than ORV violations. It seems to me that any transgressions into protected area are the result of lack of NPS manpower and enforcement than the public purposely and willfully violating out of bounds areas.
2) Page xxiv: I question the statement of as per the DEIS: "Carrying capacity would be a 'peak use limit' determined for all areas based on the linear feet of beachfront?" If you close off huge sections of the beach, you force more people into smaller areas, potentially resulting in more resource impairment and diminished visitor experience.
3) Page six and page 23: I am against having two different closures rules pertaining to the North facing beaches (North side) and the South facing beaches (South side) as per the grid outlined in Alternative "F". I disagree with the NPS proposal to close the beaches in villages of Frisco, Hatteras and Ocracoke Villages to ORV access longer than the traditional May 15 to September 15 period for the Northern beaches, even though seasonal visitor statistics are similar for all villages. Please, make them the same: May 15 -> September 15.
4) Page 1: I agree with your statement "ORVs have long served as a primary form of access for many portions of the beach in the seashore, and continue to be the most practical means of access and parking for many visitors."
However, pedestrian only areas discriminate against individuals with limited mobility due to age or physical impairments, families with small children, and those wishing to engage in activities requiring recreational equipment (boogie boards, beach umbrellas, beach chairs, coolers, fishing rods and tackle, etc)
5) Page 53: I disagree with the special use permit proposed guidelines. It is impractical to allow the transportation of disabled visitors to the village beaches and then require the vehicle to be returned to the street or parking area. This necessitates the disabled person to have a driver to drop him (or her) off, then drive to a parking area, then trudge a long distance to the site of the drop off, then trudge the long distance through the sand back to get the vehicle.
Suppose the handicap person wants to go to the beach, is capable of driving himself, yet cannot find another person to go with him? Does he now not go to the beach? This rule creates unnecessary hardships and risks in the event of an emergency as well.
6) Page 121 ? 127. I strongly disagree with the buffers as presented. We must allow for pass-thru corridors. The beach is linear with the ocean buffering on one side and the dune line on the other. For example - If you pinch off access on one side of a 4 mile linear beach and pinch off access on the other side of the 4 mile section of beach with no corridor, then you effectively have closed off all 4 miles of the beach because you CAN'T get there. The proposed bird buffers are too large, blocking access to the interior sections from the two "buffered" ends.
I propose ORV pass-thru only corridors and to use breeding / nesting buffer distances to establish ORV pass through only corridors to ensure beach access in a way that does not hinder resource protection. I believe pass through corridors should be maintained for pedestrians and ORVs in all areas of the Cape Hatteras National Seashore Recreation Area throughout the entire breeding and nesting season. Corridors are vital to providing access in a way that does not hinder resource protection.
Piping Plover unfledged chicks buffer should move with the brood as it relocates to reliable food source, not expanded.
The 1,000 meter distance for the piping plover is way too large and not based upon peer reviewed science. A more rational distance would be 200 meters per other sites in the nation for the piping plover. Ample scientific evidence and precedent exists to support a 200 meter buffer.
Buffers for other species, including American Oystercatchers, Least Terns and Colonial Waterbirds must also be changed. An effective 30 meter buffer should be established for these species rather than the 300 meter closure outlined in the DEIS.
NON-ENDANGERED BIRDS should not have same protection as if endangered. Not allowing ORV access is paramount to denying the public access to these beaches.
7) Page 468: I disagree with the limitations imposed on pedestrian and ORVs. Corridors or bypasses should be provided thru, around or below high tide line in all SMAs during entire breeding season to maintain access.
8) Page 124: I strongly disagree with the NPS slant of providing for over protection of resource management over that of the public's right to access the beaches. Pro-active initiatives include: Vegetation Management, Habitat Management, Enhanced Predator Management, Colonial Water bird social

attraction, Piping Plover check fledge rate, Piping plover chick buffer distance, and pass-through buffers during the incubation period. Opportunities to implement less restrictive closures as a result of the above initiatives should be considered more frequently than the 5-year periodic review process identified in the DEIS.

9) I disagree with the NPS Resource Management Pedestrian / ORV Closure Policies. These policies address the least significant factors affecting nest survival with little chance to have more than negligible impact. For example: the AMOY Nest Failures are predominately due to non-human events. Using your own stats, the mammalian predation is 54%, Storm / Lunar Tides: 29%, Nest Abandonment: 6%, Avian Predation: 5%, and Ghost Crab Predation: 3%,

So what is the percentage due to human interference: just 3%! It's insignificant, yet the NPS wants to ban humans when their actions provide very little influence on the success rate of breeding birds and turtles.

Correspondence: First I'm going to list a few brief concerns about the DEIS, followed by a more personal essay that I wrote last summer about my observations of the effects of the "Consent Decree", as well as some misconceptions perpetrated by the NPS. It was meant to be a response to an article in the Raleigh News & Observer, however I never published the entire essay because of character restrictions on their website.

1) The buffers are not based on "peer reviewed" science 2) What is the difference between "threatened" & "endangered"? 3) Why are birds that are considered "threatened" given the same buffer as those which are considered "endangered"? 4) Considering the turtles- The NPS should utilize strategies used else where in the United States, which were successful. (During the last meeting I attended, we weren't given any authentic, conclusive evidence regarding turtle numbers on Cape Hatteras. We were only told about what happened on a beach in Daytona Beach, Florida. The woman who did the presentation gave us a lot of vague answers, often contradicting what she had said moments before.) 5) The data used to prepare the DEIS needs to be authentic & validated by a real panel of scientists. A lot of the information we were presented with during the meetings that took place before this DEIS, was full of theories & conjecture, & comes from research papers written by students. According to the EPA the data is supposed to be reviewed by real scientists before it can be considered "law".

"Observations on the effect of recent politics & the reality of living on Cape Hatteras"
 by Jay Balfie, Summer, 2009

I've worked here 7 years & this is by far the slowest year, business wise. Even when you drive by the parking lots there are a lot of empty spaces, more than usual. I talked to someone who works at one of the local businesses here in Buxton & they told me that usually after the 4th of July things are pretty steady, but that this year the week following July 4th was "early quiet". From what I've seen, I believe that the week following July 4th was relatively quiet, compared to previous years. In the restaurant that I work in, it was also unusually quiet after the 4th. Here we are in the summer & we're having days mid week that feel more like the fall season than the summer. Contrary to what was said here in an article, people that were visiting this year, did know there were problems regarding the beach. We had many customers ask what was going on with it. I had one customer say to me: "We knew there was something wrong right away, because when we drove over the Bonner Bridge there were no cars down below. The beach was completely empty & there were also signs all over the side of the road, the whole way down the beach." At that point we decided to put informative flyers on the tables & by the register. I've talked to business owners on Ocracoke, who also say this is one of the worst years they've ever had. One business owner in particular in Ocracoke told me that last year he made more money in one day, then he has on an entire weekend this year. He also mentioned something else that I hadn't thought about. He said "this place doesn't exactly feel warm, friendly & inviting". "When you turn the corner at Whalebone Junction onto highway 12, you don't see a bright & colorful sign that says "Welcome To Cape Hatteras Recreational Area", you instead see an enormous black traffic sign that says: "BEACH DRIVING AT NIGHT PROHIBITED", & "FIREWORKS PROHIBITED". When I was riding the ferry last week, I talked to a family from Maryland that had been coming to Buxton for 25 years. She told me that they were confused when they got here, because the signs up at Whalebone Junction said that only night driving was prohibited, so they thought they could still get on the beach during the day. Then when they arrived in Buxton, they were surprised that they couldn't fish their favorite spot out at The Point, even during the day. So since the point was closed they instead sought out a campground further down the road that was closer to a small beach area that was open for driving. So that would solidify my belief in the fact that closures have & will continue to effect business, the longer they go on. The classic excuse of the "special interest groups" (Audobon, Defenders of Wildlife, & SELC) is that the entire economy is a mess, which is true to a degree. However, to say that extensive beach closures to pedestrians & ORV drivers, will not affect an area that predominately depends on tourism, is absolutely ridiculous. It's ludicrous that both Daniel Wenk & Derb Carter feel that the closures were a "success". The fact is that nobody can predict exactly what mother nature will do. The turtles don't think like we do. They're not swimming around out in the ocean thinking, "Oh great, there are less cars on the beach, now we can get up there & lay more eggs than we did last year!" Nobody knows exactly why they do what they do. I would say that they act on some primitive biological impulse. Maybe they just happened to swim to our beach this year & not some where else. The same thing goes for the birds. I noticed that in the recent articles by the Virginia Pilot & Raleigh Observer, they said that the animals were "vulnerable" not "endangered". So please tell me what exactly is the difference between "vulnerable" & "endangered"? Piping plovers exist all over U.S. & Canada & their numbers are up, not down. I just don't believe that the environment is benefitting from recent closures which is a matter of weeks. Bird populations do not increase in a matter of weeks. It takes years of close scientific study by real scientists, to determine whether those numbers are up or down & although I'm not a scientist, I'm sure there are several factors which go into determining that, such as storms & tide which have amazingly not been discussed by anyone. Over the years, bird & turtle areas have always been roped off & those areas for the most part have been respected. I also noticed on my last trip to Ocracoke that all the beaches there are open again. All the roped off signs by the road side had been taken down. I thought it was a pretty dramatic thing that everything over there had been opened back up. When talking to a store owner, I asked why the beaches had suddenly reopened, & he said that the tide had come up high a few weeks ago & washed away all the nests. I couldn't help but chuckle at the irony. Isn't that one of the things that we "the intervenors" brought up? That storms & tides have always affected the breeding habits of shore birds here on Hatteras Island? I can't believe that the Park Service, SELC, Audobon, or Defenders of Wildlife never considered this. This goes way beyond ORV driving on the beach & arguments over replacing the Herbert C. Bonner Bridge. It is all part of a large scale effort of multiple special interest groups to privatize a recreational area which has always been open to the public. Thus far, the case has been handled poorly. No authentic, peer reviewed, scientific evidence has been presented. There has also been no study or consideration of the economic impact this will have on the island communities. The judge who issued the "Consent Decree" has had family involved in an altercation on a Hatteras beach, which is an enormous conflict of interest. He shouldn't even have been given the case. The judge also has never been here & has only read about the islands on paper. Judge Terrance Boyle is not supported by the North Carolina Bar Association & has a known track record for siding with special interest groups. So why is such a critical decision given to somebody who is biased & prejudiced? The Piping Plovers have already been given to much space as it is. Restriction & closing of Cape Point during the summer months will continue to hurt local businesses & it will also hurt the Park Service itself as well. Who will want to camp at the Cape Point Campground if they can't even walk on the beach? How will they be able to afford to pay all the extra Park Service attendants, when nobody wants to use the campgrounds anymore? Why are the nesting areas of the Terns still roped off when they're under water? Is a buffer zone of 2 football fields really necessary for birds that are technically not considered "endangered"? Why was it not considered to use Portsmouth island as a bird refuge, where there is plenty of uninhabited, undisturbed shoreline? Why has the Park Service been allowed to kill thousands of endangered Grey foxes & other "endangered" animals (in broad daylight)? Why has the Herbert C. Bonner Bridge not been replaced, when the funding has been approved since 1994? Is a ferry system really a safe efficient means of transportation in a storm prone area? Why has there been such a lack of consideration of human lives in a vacation area which generates a large amount of revenue for the

state of North Carolina? Jim Cantore scared away & ruined business last September by exaggerating a "North Easter" storm. He returned this season to do an expose on local businesses. He only covered 2 or 3 local businesses & that was it. How come he didn't discuss the "Consent Decree", or the politics which are destroying the island communities? Recently there have been events where a lack of decision making has cost the lives of thousands of people. The bridge collapse in Minneapolis Minnesota & a lack of communication & evacuation procedures in New Orleans where thousands of people lost their lives in hurricane Katrina. In these times of "going green" & "green consciousness" it is confusing to know what & who is right or wrong. Just because we're "going green" doesn't mean we have to go blind. Obviously as our natural resources are running low we need to find new fuel & energy alternatives. Just because we believe in these things doesn't mean we have to close a recreational area which has always been open to the public. Recently the size of the turtle area at the "Old Lighthouse/Jetty" was increased. What I would really like to know is how do we know the person who did it, is not affiliated w/ the NPS or one of the "special interest groups"? I seriously doubt the integrity of the NPS. It's been documented on this website that they've killed a plethora of animals such as Grey foxes, & Ospreys in order to save Piping Plovers. The U.S. Fish & Wildlife wants to completely shut down the entire lighthouse beach in Buxton. Their idea of conservation is to kill endangered grey foxes & other animals on the beach, in order to help birds that are not even technically considered "endangered". It seems a bit counter productive & hypocritical to kill animals in order to preserve others. There are only a small handful of parking lots along Cape Hatteras where you can park & safely walk over a ramp or stairs to the ocean. As we speak, restrictions are being placed on these areas. This is not just about fishing, this will restrict all activities: Surfing, hiking, sun bathing, windsurfing, & kiteboarding, & any other activity you can think of that takes place on the beach. The numbers regarding the miles of open beach are very misleading. While the Point was closed there may have been 55 miles of "open beach", however, you would have to pull over the side of the road & risk getting your vehicle stuck in the sand, as well as you'd have to cross highway 12 which is a very busy road during the summer. Then once you get across the road, you'd have to walk up a steep dune & hop over a sand fence to get to the beach on the other side. I've read all the history regarding these issues. I understand that this all began back in the 70's w/ Richard Nixon saying that there needs to be a management strategy for the Cape Hatteras Recreational Seashore. I don't disagree that the beach is over crowded w/ vehicles during the summer, & that there needs to be some basic rules about the beach driving such as: slacking tires, having tow cables, jacks, flashlights, etc, but this mentality that "we need to shut it all down" is wrong. There are such things as compassion and compromise & so far the special interest groups such as SELC, Audobon & Defenders of Wildlife have showed no signs of these virtues. They seek only to further their own agenda of financial gain & privatization. I'm also suspicious of the NPS inadvertently destroying turtle & bird nests. Anyone who's been out on the beach at night knows that they drive higher up next to the dune line then other vehicles do. Privatization is unconstitutional as it denies us basic human rights such as freedom of choice & freedom of economic prosperity. I say this because we have not been given any choice in matters that will affect us personally. Some people in the near future may not even be able to go swimming in the ocean or walk on the beach in front of their home. It will also become more difficult for people to adequately provide for their families. The people who pushed for these regulations are selfish. Most of these people don't even live here, or they are either retired, or they visit here maybe 2 weeks out of the year. So they either do not care, or just have no clue what it's like to live here year round & earn a living. Something that should be understood is that when you invite the government to make regulations, this will eventually lead to more decisions being made without our input. Gradually our freedoms slip away, & before we know it, we can't even walk in our front yard. Be careful who you support & be sure of their motives. Please think about this. If the "Old Lighthouse Beach" is closed, there will be no fishing, swimming, hiking, surfing, sun bathing, kiteboarding, etc. There would be no ESA tournament & there would also be no Drum tournament in the fall which Buxton businesses depend on, just to break even. I read that Chris Canfield very recently said that he'd been to Hatteras for a 2 day visit & said that things were going great & that the management plan was working & that bird numbers are up. It is correct to say that the numbers for the Plovers & Oyster Catchers are up, but that is only because the way that the beach had been managed in recent years was working. I'm really curious how Chris Canfield can come down here for 2 days & pretend to know everything about this complex island community? I think it's great that the editor of the Island free press acknowledged Chris Canfield, Jason Rylander & Derb Carter as people who are only doing what they feel is right. However, I will have to continue my skepticism of their beliefs & sincerity, for the lack of concern that they've continued to show towards the people who live here on Hatteras & Ocracoke. Especially since they've presented no solid, recent, authentic, peer reviewed, scientific evidence to support their case. At the meetings I was surprised at the demeanor of the attorneys representing the environmental groups. Local people gave very passionate, detailed speeches about how the beach closures were effecting them, & these guys sat there, blank & callous, like they were bored & didn't really care about the people or what they felt & endured. I do agree that folks need to be mindful of these "wanted" posters that have been posted locally. I think the "I Support Open Beach Access" bumper stickers are great. However, putting up posters with hateful comments about locals only serves to make us look like a bunch of drunken shotgun wielding savages. I think it's extremely important to get the facts out there to folks. I've taken a look at the Defenders of Wildlife website & they still continue to misrepresent the facts. If you take a look at their website & the pdf's regarding the beach closures, they also say that the beach should not be managed by "special interest groups". When they say this, they mean US... the OBPA & the NC Beach Buggy Association, & basically anyone who lives on Cape Hatteras. They make it sound like they're on our side, when in fact they're not. One must look closely to understand how these groups operate. This is also why I'm still skeptical of their sincerity regarding these issues. On the surface they've made it look like a bunch of redneck "special interest groups" squabbling over beach access, when really this goes much deeper than that. To me this looks like it can affect peoples human rights, because people live & own property on or near the closures & own businesses that rely on tourism. There have been recent acts of vandalism. My question is: How do we know that it isn't the bird watchers & environmentalists who are doing the vandalism? They know that the "buffers" will be increased if there are problems. So perhaps they decided to use this to their advantage. Maybe they go out on the beach at night & tear down signs because they know it will automatically be blamed on other locals who oppose the recent closures. They are just as angry & upset if not more so then then the folks who live here. Vandalism should be investigated & dealt with on an individual basis. Our community should not be penalized as a whole & have to suffer because of this. Special interest groups have always bordered on fanatical & have been known to engage in illegal activities. When I lived in California, I met people who thought that smashing the store front windows of The Gap was the best way to explain to the public that The Gap corporation was supporting clear-cutting of old growth Redwood forests. Violence & vandalism will not resolve any issue, political or environmental. When you talk about vandalism, your completely missing the point here. This goes beyond vandalism on the beach. This is large scale privatization & rural gentrification & it's unconstitutional. Very recently in an island free press article Mike Murray said: "We had difficulty finding experts to back up the interim strategy." Obviously the plaintiffs had no problem paying an independent company to do a biased, incomplete, haphazard study of the area. Sitting here at my computer I've found plenty of information supporting that the "interim strategy" was working just fine. Even if you go on the U.S. Fish & wildlife website, even they were saying the numbers regarding the birds nation wide were up & not down. The following information was taken from a U.S. Fish & Wildlife website: "Atlantic coast the Piping Plover numbers have increased from 790 pairs in 1986 to 1,386 pairs in 1999" (U.S. Fish & Wildlife Service). Also according to this document: <http://fresc.usgs.gov/products/ppl/> "Overall winter numbers were very high..." & "Breeding season numbers also appear higher than 2001 in general." So if I was able to simply click on a website & ascertain this information then why was Mike Murray & the NPS not able to find any information to use in court? After all, it is their job to protect the parks & make them available for people to use. They should know more about the animals here then anyone. If Mike Murry & the rest of the NPS really cared about keeping the beaches open, they should have been documenting animal habitats decades ago. The fact that they didn't have any evidence to defend themselves in court, is not only lazy, but completely irresponsible. It shows me that they didn't really care whether the beaches stayed open or not. Lets step away from the internet for a moment. Anyone who lives here & spends a lot of time on the beach & in the water, knows where the birds are & understands how they adapt to the environment which is ever changing because of storms & tide. I was down at the bath house beach a month or so ago & I saw at least a dozen Skimmers flying around, happily doing their thing. I didn't see any Park Service official, nor any bird watcher with binoculars. In fact, I don't think anyone knew they were there, except for myself. Again, I also saw dozens of these birds on a dredge island during a ferry ride to Ocracoke. To say that these birds are gone, would be incorrect. They obviously move, according to changes in their environment. I don't need any Park Service or biology credentials to figure out that the birds are still here & they move around. Even Mike Murray said: "We're running around closing areas, and then we are moving the closures as the birds move.... We are chasing the birds." "The long-term plan has got to be different from the consent decree and the interim plan." He went on to say that a possible solution could be to identify areas that the birds like and just say they will be closed from this date to this date." Once again I criticize that statement because it does not take into consideration the economic impact it would have on the community. If you close the entire Cape Point for the summer then whose going to want to stay in Buxton & eat at any of the restaurants or visit any of the shops? Furthermore, closing the entire Old Lighthouse beach/Jetty area as the U.S. Fish & Wildlife proposed for "Critical Habitat Designation" for the Piping Plover, would severely damage the small businesses here in Buxton. Obviously if you can't fish or surf one of the most popular places on the island or the east coast for that matter, then why would you want to stay here? When I first visited Cape Hatteras I was in awe of the freedom. I couldn't believe that you could drive your car right up to the ocean, hop out & go jump in the ocean

0012453

& swim, all without paying! I think the freedom here is a very large part of the beauty & mystique. I grew up in Connecticut going to Rhode Island & Cape Cod beaches. In Cape Cod, even if you a resident you still have to pay for a beach permit sticker for your car. Regardless of whether you a resident or tourist, if you don't have a sticker on your vehicle, you'll get towed because there are officers that patrol the parking lots hourly looking for vehicles without permits. You also cannot have fires on the beach at all. At Misquamicut State Beach in Westerly Rhode Island they not only make you pay for parking, but you also have to pay for the shower & bathroom facilities! The small strip of beach there is so over crowded that you literally trip & fall over people as you try to walk in between the beach blankets. There are so many blankets on the beach that you cannot even see the sand. Rocky Neck State Park in Connecticut is over crowded & uncomfortable. Of course you cannot drive on the beach there, there are no fires allowed on the beach & you have to pay for parking. The ocean there is a brownish black. It's been & continues to be polluted thanks to the nearby Pfizer plant. Folks, please think about the decisions you make regarding the beach. The beach here is our livelihood. Don't let Cape Hatteras & Ocracoke turn into ghost towns. More beach closures will lead to more & more regulations which will destroy that which makes this unique microcosm so special.

Correspondence: I am strongly in favor of protecting wildlife and their habitat. I am also strongly in favor of allowing humans to enjoy the beauty and recreational use of Hatteras island in a reasonable manner. When these two goals conflict, I would ask that our government makes an effort to balance them. Many of the proposed restrictions seem to favor the wildlife over the humans, and I have to disagree with that.
Page 124: I strongly disagree with the NPS plan of providing for over protection of resource management over that of the public's right to access the beaches. Pro-active initiatives include: Vegetation Management, Habitat Management, Enhanced Predator Management, Colonial Water bird social attraction, Piping Plover check fledge rate, Piping plover chick buffer distance, and pass-through buffers during the incubation period. Opportunities to implement less restrictive closures as a result of the above initiatives should be considered more frequently than the 5-year periodic review process identified in the DEIS.
I disagree with the NPS Resource Management Pedestrian / ORV Closure Policies. These policies address the least significant factors affecting nest survival with little chance to have more than negligible impact. For example: the AMOY Nest Failures are predominately due to non-human events. Using your own stats, the mammalian predation is 54%, Storm / Lunar Tides: 29%, Nest Abandonment: 6%, Avian Predation: 5%, and Ghost Crab Predation: 3%,
So what is the percentage due to human interference: just 3% ! It's insignificant, yet the NPS wants to ban humans when their actions provide very little influence on the success rate of breeding birds and turtles.
Page 1: I agree with your statement "ORVs have long served as a primary form of access for many portions of the beach in the seashore, and continue to be the most practical means of access and parking for many visitors."
However, pedestrian only areas discriminate against individuals with limited mobility due to age or physical impairments, families with small children, and those wishing to engage in activities requiring recreational equipment (boogie boards, beach umbrellas, beach chairs, coolers, surfboards. fishing rods and tackle, etc).
Thank You, Stuart Cash

Correspondence: My name is Corey Bennett, I'm a 24yr old Mechanic and avid 4wd enthusiast as well as someone who thoroughly enjoys nature and just being outside, the beach especially. I've been coming down to the Nags Head/Cape Hatteras area with family and friends for 15yrs or more since I was just a kid. I can understand perfectly what you are trying to do with preserving nature in this area and I'm all for it, but to deny responsible access to beaches that this area has enjoyed and used to attract tourism and business as well as recreation due to some birds that aren't even endangered is quite frankly unacceptable and irresponsible on YOUR part. Sea turtle nests are also a big concern and I can also understand the need to preserve and help the turtles, these nests are moved all the time in other parts of the country to safer areas where there will be no people traffic aside from the qualified scientists there to monitor and study them to interfere or affect them in any way. Why can't similar methods be used in this case, surely this would save the lives of more baby sea turtles then leaving them on beaches travelled by people. I'm not going to pretend to have all the answers to this situation, BUT closing the beaches is NOT the answer to this situation.

Correspondence: Overall, I have general concerns on the ORV Management plan. The more I read it the worse it seems. Based on how the beach has been managed since the consent decree much of the F and certainly D seem like convoluted ways to ultimately eliminate ORV traffic from the seashore. That would be tragic for the visitors and residents. Please use some rational judgement instead of resorting to layer after layer of rules to eliminate human presence from the seashore.
I prefer a combination of C and F with modifications as listed later. Mostly to accommodate more night driving, smaller closures in nesting areas, and pass through corridors. .
An ORV management plan is required; however the NPS is recommending drastic restrictions without any data to show a specific benefit. All published reports show that ORV traffic is very low on the list of impacting Piping Plover and Turtles but the proposed restrictions are major. ORV and pedestrian use is vital to a strong park. Long term parks protection depends on people who care about the park. If people are not able to see and use the Park then long term general public support will diminish. I know it is debatable, but if no one ever sees the protected environment and all the species does it really matter if they exist?
Management and restrictions must match benefits Stricter protection needs to be in line with the potential species benefit. Species protection and use should be balanced on potential benefit and impact to usage. The proposed measures are out of balance with the best case species benefits gained at CAHA. NC is on the southern end of the Piping Plover nesting area, and since 1992, according to USFWS data NC has accounted for an average of only 3.3% of the East coast breeding pairs. The breeding pairs at Cape Hatteras since 1992 have averaged only .6% of the total East Coast population. Statistically it would seem that nothing we do at CAHA will materially impact the East Coast Plover population?.but it will impact the use and local economy.
NPS has not shown correlation to ORV traffic and protected species. The decline in Piping Plover nesting at Cape Hatteras National Sea Shore over the last 20 years most likely relates to the dramatic increase in development in the late 90's early 2000's and the associated impact of developments such a decreased habitat and predator growth. The recent slight rebound in PIPL nesting is most likely attributable to the aggressive predator control

implemented in 2007. During the time of decreased PIPL nesting, CAHA recreation and ORV use has remained relatively constant and thus does not appear to have any impact on the PIPL population.

The Endangered Piping Plover (PIPL) species has been monitored on the Cape Hatteras National Seashore for the last 20 years. The CAHA nesting population of the PIPL remained relatively constant until 1997, when it took a dramatic downturn during the period 1997 to 2001. After 2001 nesting remained constant in the 2-4 nest range until 2007 when an aggressive predator control program was implemented. While the impacts are not completely understood the most likely influencers in PIPL nesting on CAHA are development and predator control. The chart below shows a direct relation to the increase in building permits and decline in nesting, while also a direct increase in nesting in 2007 with the introduction of predator control. Recreational use of CAHA, including ORV, has remained relatively constant over the last 19 years, peaking in 2002, and does not appear to have any direct relation to the PIPL nesting behavior.

From 1997 to 2001 the number of annual PIPL nests decreased from 16 to 3, an 81% reduction. The other major change in the CAHA area during this time was a huge increase in development. Housing units increased dramatically from 1997 to 2001. Only 233 residential units building permits were issued in 1997, while in 2001 944 permits were issued. In the 5 year period (1997 to 2001) 3397 residential building permits were issued, a 77% increase over the previous 5 year period (1992-1996). This dramatic increase in building brought higher population and summer tourists to the villages surrounding CAHA which in turn may have increased predator growth. This potential impact is noted in the USFWS Piping Plover Recovery plan where human activity and the associated garbage increases predators such as raccoons and feral cats. This study notes that "Predation has been identified as a major factor limiting piping plover reproductive success at many Atlantic Coast sites."

From 2001 to 2006 CAHA PIPL nesting stayed constant in the 2-4 nest range until 2007 when PIPL nesting increased dramatically to 10 nests in 2007, 13 in 2008, and 9 in 2009. The most significant change in the CAHA management at that time was the introduction of an aggressive predator control plan where natural PIPL predators (fox, opossum, raccoon, mink and feral cats) were aggressively trapped and exterminated. In the time period from 2002 to 2006 a total of 247 predators were exterminated, an average of 50 per year. In 2007, 304 predators were exterminated in CAHA, a 6x increase over 2006. This continues with 382 exterminations in 2008 and 464 in 2009.

Recreational and ORV Use Recreational use of CAH remained relatively constant from 1997 to 2001 with a 10% fluctuation. While usage peaked in 2002, the visitation has remained constant in the 2.2M-2.6M user range. ORV usage as a percentage of recreational users seems to have remained constant over the last 10 years (is there documentation for this?). Since the consent decree was put in place ORV and pedestrian use has been restricted however PIPL nesting has shown no constant trend. PIPL nesting was up 30% YtY in 2008 and down 30% YtY in 2010.

Specific Comments

iv Objectives Section, Visitor use and Experience: Comment: there should be a specific objective to ensure ORV usage to provide access to the park for visitors

vi: State-Listed and Special Status Species: Reasons for Analysis is noted as ORV "may have impact". Comment: Drastic measures should not be taken for "May Have impact", this is not backed by science

xii: Seasonal night-driving restrictions ?one hour after sunset until after turtle patrol has checked the beaches in the morning?... Comment: sunset to sunup closure is too restrictive and closes the beach during a prime usage time of spring, summer, and early fall. This is more restrictive than other seashores. No data exists to show that night driving has an impact on turtles.

Page 8: Long term Piping Plover target of 30 breeding pairs from 1996 study of USFWS. Comment: Since the available data of 1992 there have never been more than 21 nests. This is a 14 year old study. Setting a long term goal on a 14 year old study is not fair. Too much has changed and it set unrealistic goals that can never be met. This is only laying the ground for more restrictions on activities to achieve an unreachable goal

Page 67 B : Delineates the habitat that will be posted or fenced prior to April 1 to assure a high probability that territorial plovers will select protected areas in which to court and nest. Sites where nesting or courting plovers were observed during the last three seasons as well as other habitat deemed most likely to be pioneered by plovers should be included in the posted and/or fenced area. Comment: This is unacceptable as it closes beach based on past nesting not current. Closing beach that has been nested in the last 3 years will lead to massize beach closures.

Page 67: 1000 Meter vehicle free area on each side of a nest. Comment: What is the basis for 1000 meters? This creates 2000 Meters or 1.24 miles of closure for one nest. Does a chick(s) really need 1.24 miles of seclusion? Are there any facts for that, it seems grossly punitive for other users. With the goal of 15 nests, this could close 18.6 miles of beach every year. On page 73 your say?? Researchers reported that the minimum agitation distance to nesting piping plover was 50 meters, and suggested a buffer radius of 225 meters??yet the plan calls for 1000 meters" Recommend closures of 50M per nest and 200M for chicks.

P67 All closed sections should include a pass through corridor to provide access to open parts of the beach. Otherwise vast sections of the beach will be closed.

Page 71 (and 82 on option F): 6121. Prohibit nighttime driving on beaches during the loggerhead nesting season. Vehicles on the beach have the greatest potential to come into contact with nesting females and emerging hatchlings at night. In areas where beach driving is still allowed, nighttime vehicle use should be limited to essential vehicles (e.g., emergency or permitted research vehicles) only Comment: There have been no known or documented issues of an ORV hitting a turtle at night at CAHA. This is onerous and not impacting any nesting. Night fishing at the point and other areas in season is a traditional time to catch Red Drum and other fish. It is also an ideal way to star gaze away from light pollution.

Page 89: Give Special Consideration Only to Flora and Fauna Listed as Threatened and Endangered There is no logical rationale or data to justify protection of non-endangered species, no data to show this would have an impact. The ORV impact on wildlife assessment is a judgement call. Any activity, including hiking has some impact on wildlife. NPS allows a range of activities on park service land: roads, construction, forestry mining, etc that all impact wildlife in some way. ORV access has been present for years, there is no need to restrict if impact is not evident.

Page 94: Environmentally Preferred alternative. This proposal effectively eliminates ORV traffic from the beach. If the NPS is serious about maintaining access they can in no way support Alt d. Providing SMAs in known breeding/nesting areas throughout the Seashore, all under MLI management. Comment: The entire coast could be considered a known breeding/nesting area. This statement is a back door way to remove ORV access completely.

Page 94: A proactive way to protect large areas of the Seashore where protected species are known to breed and nest by prohibiting ORV use and pets in these areas year-round and only allowing pedestrian access outside of the breeding season. Comment: This is unacceptable and would eventually close the ENTIRE beach to ORV. Every time someone sees a protected species in breeding system that beach would be a "known breeding ground" for at least 3 years. With the wide range of protected species this would ultimately close almost all beaches to ORV and much of it to pedestrian.

Page 112: IN option F why is camping in the campgrounds limited to SCV?

Page 270 Chapter 3: SOCIOECONOMIC RESOURCES Page 270 ROI should not include the Towns and population North of Nags Head. This area is not in the National park and most of the tourists that go there rarely if every visit Hatteras Island due to the distance. These vacationers y are going for a commercial vacation experience and no changes to Hatteras Island will impact their decision to visit the northern towns.

If you include Duck, 2 hours 48 minute from Ocracoke, you should also include SwanQuarter which is in Hyde County and at only 2 hours and 30 minutes from Ocracoke is closer than Duck. This is just as viable a population from proximity and use. Since Ocracoke is in Hyde County, and is a major tax base for Hyde county, any impact to Ocracoke will have a major impact to the Tax Revenue for Hyde County.

Other Maintenance of Future Access to Cape Point and South Point Ocracoke All socioeconomic analyses related to Alternative F are predicated on the assumption that access corridors will remain open for at least an appreciable portion of the visitor high season. Under Alternative F, the access corridors will be subject to Resource Closures based on buffers similar or identical to the Consent Decree. Unless some predictability of access to Cape Point and South Point Ocracoke can be assured, economic analyses predicated on assumption of access are fundamentally flawed.

Recognition of Pea Island National Wildlife refuge for species and as an dedicated Pedestrian area. This refuge is surrounded by the park and is a defacto part of the park. The report includes village areas as part of the covered area they should use Pea Island. Does the park service measure or

monitor species in the Park?

Agree Permits are necessary for drives. Carrying Capacity is OK but should be reasonable. Add additional parking and ramps Pet Leash laws. OK
Speed limits and ORV requirements Do not allow ATVs Reasonable closures

Correspondence: Dear Superintendent Murray,
 As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.
 1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."
 2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness..." Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.
 3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.
 Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
 This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
 The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
 *Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
 * Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
 * Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
 Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: For eleven years, I have been self-employed in Frisco, one of the eight villages located within the boundaries of the Cape Hatteras National Seashore Recreational Area. Eleven years is a proper amount of time to see shopping trends and learn who my customer is.
I struggle to understand how the economic conclusions were made in the DEIS. While struggling through pages 270-281 and again in pages 561 forward, I don't know how Hatteras Island can be grouped with the northern beaches. Our visitation and accommodations are about 1/3 of the area north of the Oregon Inlet Bridge. This translates into less people to begin with.
It is a different type of customer, too. The tourist who plans their vacation to visit Roanoke Island, Fort Raleigh and the Wright Brother's Memorial is not the same visitor who enjoys the ruggedness that is Hatteras Island where people are actively surfing, kayaking, wind and kite surfing as well as fishing. The northern beaches do not have the wide open beaches like Hatteras and the beach access issue does not relate to them as it does to us. The fact that DEIS data was developed from using economic models that had Northern beaches lumped together with Hatteras and Ocracoke is bogus and lacks logic because we are completely different and have a totally different clientele.
In my opinion, I strongly feel that the economic impact to Hatteras businesses like mine has been seriously downplayed. No economic survey has been conducted here. I was unable to find in the DEIS where the addresses the serious economic impacts that will be felt by Hatteras and Ocracoke businesses. I feel that data from 2008-2009 should have been seriously considered as these were 2 seasons under the Consent Decree where most of the prime beach access were closed DURING THE HEIGHT OF TOURIST SEASON. Numbers from these 2 years would have spoken volumes as to the economic stress the stores, restaurants and lodging has endured as our customer find other spots to vacation.
I believe there is a balance where all interests can be protected. The people of Hatteras are good stewards of the seashore. I disagree that the people of these seashore villages are treated without respect which is what I get out of the DEIS

Correspondence: My comments concern the DEIS of the Off-Road Vehicle Management Plan prepared by the National Park Service (NPS) for the Cape Hatteras National Seashore Recreation Area.

1) Page 201: I disagree with the NPS statement: "Even with resource closures in place, protected species are still at risk [from pedestrians and ORVs]." No Piping Plover deaths have been attributed to ORVs. ORV violations continue to decrease as signage and education improve. Pedestrian violations are much more significant than ORV violations. It seems to me that any transgressions into protected area are the result of lack of NPS manpower and enforcement than the public purposely and willfully violating out of bounds areas.

2) Page xxiv: I question the statement of as per the DEIS: "Carrying capacity would be a 'peak use limit' determined for all areas based on the linear feet of beachfront?" If you close off huge sections of the beach, you force more people into smaller areas, potentially resulting in more resource impairment and diminished visitor experience.

3) Page xix and page 23: I am against having two different closures rules pertaining to the North facing beaches (North side) and the South facing beaches (South side) as per the grid outlined in Alternative "F". I disagree with the NPS proposal to close the beaches in villages of Frisco, Hatteras and Ocracoke Villages to ORV access longer than the traditional May 15 to September 15 period for the Northern beaches, even though seasonal visitor statistics are similar for all villages. Please, make them the same: May 15 -> September 15.

4) Page 1: I agree with your statement "ORVs have long served as a primary form of access for many portions of the beach in the seashore, and continue to be the most practical means of access and parking for many visitors."

However, pedestrian only areas discriminate against individuals with limited mobility due to age or physical impairments, families with small children, and those wishing to engage in activities requiring recreational equipment (boogie boards, beach umbrellas, beach chairs, coolers, fishing rods and tackle, etc)

5) Page 53: I disagree with the special use permit proposed guidelines. It is impractical to allow the transportation of disabled visitors to the village beaches and then require the vehicle to be returned to the street or parking area. This necessitates the disabled person to have a driver to drop him (or her) off, then drive to a parking area, then trudge a long distance to the site of the drop off, then trudge the long distance through the sand back to get the vehicle.

Suppose the handicap person wants to go to the beach, is capable of driving himself, yet cannot find another person to go with him? Does he now not go to the beach? This rule creates unnecessary hardships and risks in the event of an emergency as well.

6) Page 121 ? 127. I strongly disagree with the buffers as presented. We must allow for pass-thru corridors. The beach is linear with the ocean buffering on one side and the dune line on the other. For example - If you pinch off access on one side of a 4 mile linear beach and pinch off access on the other side of the 4 mile section of beach with no corridor, then you effectively have closed off all 4 miles of the beach because you CAN'T get there. The proposed bird buffers are too large, blocking access to the interior sections from the two "buffered" ends.

I propose ORV pass-thru only corridors and to use breeding / nesting buffer distances to establish ORV pass through only corridors to ensure beach access in a way that does not hinder resource protection. I believe pass through corridors should be maintained for pedestrians and ORVs in all areas of the Cape Hatteras National Seashore Recreational Area throughout the entire breeding and nesting season. Corridors are vital to providing access in a way that does not hinder resource protection.

Piping Plover unfledged chicks buffer should move with the brood as it relocates to reliable food source, not expanded.

The 1,000 meter distance for the piping plover is way too large and not based upon peer reviewed science. A more rational distance would be 200 meters per other sites in the nation for the piping plover. Ample scientific evidence and precedent exists to support a 200 meter buffer.

Buffers for other species, including American Oystercatchers, Least Terns and Colonial Waterbirds must also be changed. An effective 30 meter buffer should be established for these species rather than the 300 meter closure outlined in the DEIS.

NON-ENDANGERED BIRDS should not have same protection as if endangered. Not allowing ORV access is paramount to denying the public access to these beaches.

7) Page 468: I disagree with the limitations imposed on pedestrian and ORVs. Corridors or bypasses should be provided thru, around or below high tide line in all SMAs during entire breeding season to maintain access.

7) Page 468: I disagree with the limitations imposed on pedestrian and ORVs. Corridors or bypasses should be provided thru, around or below high tide line in all SMAs during entire breeding season to maintain access.

8) Page 124: I strongly disagree with the NPS slant of providing for over protection of resource management over that of the public's right to access the beaches. Pro-active initiatives include: Vegetation Management, Habitat Management, Enhanced Predator Management, Colonial Water bird social attraction, Piping Plover check fledge rate, Piping plover chick buffer distance, and pass-through buffers during the incubation period. Opportunities to implement less restrictive closures as a result of the above initiatives should be considered more frequently than the 5-year periodic review process identified in the DEIS.

9) I disagree with the NPS Resource Management Pedestrian / ORV Closure Policies. These policies address the least significant factors affecting nest survival with little chance to have more than negligible impact. For example: the AMOY Nest Failures are predominately due to non-human events.

Using your own stats, the mammalian predation is 54%, Storm / Lunar Tides: 29%, Nest Abandonment: 6%, Avian Predation: 5%, and Ghost Crab Predation: 3%,

So what is the percentage due to human interference: just 3%! It's insignificant, yet the NPS wants to ban humans when their actions provide very little influence on the success rate of breeding birds and turtles.

My comments concern the DEIS of the Off-Road Vehicle Management Plan prepared by the National Park Service (NPS) for the Cape Hatteras National Seashore Recreation Area.

1) Page 201: I disagree with the NPS statement: "Even with resource closures in place, protected species are still at risk [from pedestrians and ORVs]." Correspondence: Dear Superintendent Murray,

As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.

1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."

2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness..." Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.

3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.

Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

Charles Elliott

Correspondence: As President of The Outer Banks Wedding Association, I disagree with the DEIS proposing limited and prohibited access to the Cape Hatteras National Seashore Recreational area. Hatteras Island has become a top location in the world for destination beach weddings. People come from all over the world to get married on the beach here. They choose our beaches because they are clean and wide with natural seascapes and a large majority of the couples choose Hatteras Island because they can have their pet in the wedding. That is one of the aspects of our beautiful National Park that makes us so unique. Pedestrian access to the beach is vital to the continued popularity and positive economic impact that beach weddings have on our area. Being able to walk right out to the beach for a ceremony is attractive for many couples seeking a destination beach wedding. The majority of these weddings are essentially week long vacations with family, friends and wedding guests enjoying the beach, activities and local attractions, like the Cape Hatteras Lighthouse, Cape Point, and more. Weddings bring increased income to our local economy. Our association is comprised of over 200 wedding-related businesses catering to the increased popularity and demand for destination beach weddings. I urge you to consider all aspects of beach access and the potential negative harm that prohibiting and/or limiting access will have on the beach economy and wedding industry on the outer banks.

Correspondence Type: Web Form
Correspondence: Date: May 10, 2010 To: National Park Service From: Jane Klein Conklin Subject: DEIS Off-Road Vehicle Management Plan Comments
Our comments concern the DEIS of the Off-Road Vehicle Management Plan prepared by the National Park Service (NPS) for the Cape Hatteras National Seashore Recreation Area. ??
1) Page 201: We disagree with the NPS statement: "Even with resource closures in place, protected species are still at risk [from pedestrians and ORVs]." Although pedestrians may have an impact on protected species and their nesting spots, this may be comparable with natural predators who naturally have an impact on animal nesting. Pedestrian incursions into protected areas may be due to insufficient publicity and education. Traditionally, the NPS has used small outdated and often barely legible signs. We feel that increased signage including reflective materials as well as additional NPS enforcement will be sufficient to dissuade or deter both pedestrians and ORV's from entering boundary areas.
2) Page xxiv: We disagree with the statement of as per the DEIS: "Carrying capacity would be a 'peak use limit' determined for all areas based on the linear feet of beachfront?"
Preventing usage of large portions of beach will eliminate the purpose of having a national park for people to be able to come and enjoy it. It would severely impact the current economy for local businesses and beach rentals. Traditionally, the NPS has used small outdated and often barely legible signs. We feel improved signage with additional publicity in the area (such as posters in local shops similar to those warning of rip tides) would help educate the visiting public and minimize any impact to the natural splendor.
3) Page xix and page 23: We am against having two different closures rules pertaining to the North facing beaches (North side) and the South facing beaches (South side) as per the grid outlined in Alternative "F". We disagree with the NPS proposal to close the beaches in villages of Frisco, Hatteras and Ocracoke Villages to ORV access longer than the traditional May 15 to September 15 period for the Northern beaches, even though seasonal visitor statistics are similar for all villages. Please, make them the same: May 15 -> September 15. 4) Page 1: We agree with your statement "ORVs have long served as a primary form of access for many portions of the beach in the seashore, and continue to be the most practical means of access and parking for many visitors." ?However, pedestrian only areas discriminate against individuals with limited mobility due to age or physical impairments, families with small children, and those wishing to engage in activities requiring recreational equipment (boogie boards, beach umbrellas, beach chairs, coolers, fishing rods and tackle, etc) 5) Page 53: We disagree with the special use permit proposed guidelines. It is impractical to allow the transportation of disabled visitors to the village beaches and then require the vehicle to be returned to the street or parking area. This necessitates the disabled person to have a driver to drop him (or her) off, then drive to a parking area, then trudge a long distance to the site of the drop off, then trudge the long distance through the sand back to get the vehicle. This would also result in the vehicle traveling twice the distance on the beach. Instead of one round trip, the vehicle would also need to make a second round trip in order to retrieve the handicapped person(s). Furthermore, the driver of the vehicle would also become a pedestrian. Suppose the handicap person wants to go to the beach, is capable of driving himself, yet cannot find another person to go with him? Does he now not go to the beach? This rule creates unnecessary hardships and risks in the event of an emergency as well. 6) Page 121 ? 127. We strongly disagree with the buffers as presented. The 1,000 meter distance for the piping plover is extremely oversized and does not seem to be based upon peer reviewed science. Ample scientific evidence and precedent exists to support a 200 meter buffer and would be consistent with other managed areas across the Nation. We should be an allowance for pass-thru corridors which would provide for ORVs to travel past an area using breeding / nesting buffer distances allowing for access as well as resource protection. We believe pass through corridors should be maintained for pedestrians and ORVs in all areas of the Cape Hatteras National Seashore Recreational Area throughout the entire breeding and nesting season. Corridors are vital to providing access in a way that does not hinder resource protection. Piping Plover unfledged chicks buffer should move with the brood as it relocates to

reliable food source, not expanded. Buffers for other species, including American Oystercatchers, Least Terns and Colonial Waterbirds must also be changed. An effective 30 meter buffer should be established for these species rather than the 300 meter closure outlined in the DEIS. NON-ENDANGERED BIRDS should not have same protection as if endangered. Not allowing ORV and/or pedestrian access denies the public access to these beaches which were established as National Parks for use by the people. It also prevents the same ORV's/pedestrians from enjoying these species and being able to study them. 7) Page 468: We disagree with the limitations imposed on pedestrian and ORVs. Corridors or bypasses should be provided thru, around or below high tide line in all SMAs during entire breeding season to maintain access. 8) Page 124: We strongly disagree with the NPS providing for over protection of resource management versus the public's right to access the beaches. Pro-active initiatives include: Vegetation Management, Habitat Management, Enhanced Predator Management, Colonial Water bird social attraction, Piping Plover check fledged rate, Piping Plover chick buffer distance, and pass-through buffers during the incubation period. Opportunities to implement less restrictive closures as a result of the above initiatives should be considered more frequently than the 5-year periodic review process identified in the DEIS. 9) We disagree with the NPS Resource Management Pedestrian / ORV Closure Policies. These policies address the least significant factors affecting nest survival with little chance to have more than negligible impact. For example: the AMOY Nest Failures are predominately due to non-human events. Using your own stats, the mammalian predation is 54%, Storm / Lunar Tides: 29%, Nest Abandonment: 6%, Avian Predation: 5%, and Ghost Crab Predation: 3%. So what is the percentage due to human interference: just 3%! It's insignificant, yet the NPS wants to ban humans when their actions provide very little influence on the success rate of breeding birds and turtles. ??

10) We disagree with the stats of breeding plovers and the other birds in the Park when the NPS does not adequately consider locations neighboring the Recreational Area that are part of the same ecosystem, namely dredge and spoil island that are located just yards away and within sight of the seashore. These birds are part of the same ecosystem and should be included. Those spoil islands, developed by man from dredging the waterways in the Pamlico Sound for channel upkeep are slammed full of birds. The reason why so many birds? NO PREDATORS. SO, birds are not as stupid as one might think. You have to count these birds and incorporate them in the stats when the NPS is talking about any so called decline in breeding pairs in the National Park. Don't forget to count all of the nests and birds living on top of the local grocery stores as well when you are counting too. These roofs offer wind protection, rainwater pools, and fewer predators than the dunes and have become a new nesting area for many birds. 11) Page 1: We do not think the DEIS responsibly addresses the cultural resource issues. The very purpose of the DEIS as set forth in the National Environmental Policy Act (NEPA) is to protect and preserve natural and cultural resources in the federal decision making process. In the DEIS, the statement "protect and preserve natural and cultural resources" appears in the first sentence of the first page of the plan, in the Purpose of the Plan section, and numerous times thereafter. Yet, the 810 page document devotes only two paragraphs to analysis of cultural resource issues. Hatteras Island has a tight knit community of local residents that have modified their livelihoods over the last few generations. Many aren't making a living fishing anymore rather they are in the tourism business to help enable their countrymen and women the opportunity to enjoy the natural beaches and marshes that the Federal Government saw fit to establish as a National Park so that the people could enjoy it. That doesn't preclude them from continuing to maintain their easy going laid back demeanor and atmosphere. The serenity of the environment and access to the beaches is the center point of the local culture. It has defined many generations and how the local inhabitants interact with each other. The people of Hatteras Island are well aware of how lucky they are. They cherish and protect the environment. To deny access to the beaches also denies them of their past, present and future.

Currently the culture as well as the economic stability of Hatteras Island is based on Tourism which has felt a significant impact by the current decline in the national economic downturn. Any additional decline of revenues felt by a decrease in visitors to the NPS due to lack of access may force widespread foreclosures and bankruptcies which are already at an all time high.

12) Pages 270-281; 561-598: We strongly disagree with your economic analysis of the impact of the DEIS. The region of influence (ROI) incorporates the Northern Beach communities, including Kill Devil Hills, Kitty Hawk, Southern Shores and Duck. These areas are almost completely disconnected from ORV use and access issues relating to the Seashore. ? Inclusion of the Northern Beaches in analysis significantly dilutes estimates of economic impact on the 8 Seashore Villages ? Analysis of economic impact to the Seashore Villages appears to be significantly down played. Emphasis in DEIS is on the ROI-wide or county-wide level impacts. ? Nowhere is it clearly addressed that the overwhelming majority of negative impacts will be felt by small businesses in the Seashore Villages rather than by overall economic interests within the greater ROI. On page xviii, Alternative F is characterized as having a "negligible to moderate" adverse impact on small businesses. We strongly disagree with this statement. We believe the negligible to moderate projection is inaccurate and relies on economic surveys that has not yet been published. Furthermore, this material is not expected to be added to the DEIS until after the public comment period has ended. Based upon the economic harm we have already experienced under the consent decree, Dare County projects the economic impact of Alternative F to be substantial. Added to the current economic recession this would exponentially multiply the dire financial issues plaguing the seashore village communities as well as force property values to plummet yet again. Beach closures have already had a devastating and unfair impact on many Dare County Businesses, causing foreclosures, bankruptcies, lay-offs, cutbacks, expensive refinancing, and depleted college funds and savings accounts. Many of the properties located on Hatteras Island are rental properties. As such, We feel that they too should be considered small businesses. Corporations or LLC entities own many rental properties, while individuals own the others. What they all have in common is that they rely on rental income to continue their operation. If the number of visitors to Hatteras Island is reduced, the ability of the owners to continue to pay the costs associated with running their business will be placed at risk. This could result in further impact to local businesses that rely on the performance of contract work on these properties. Furthermore, these owners may be forced out-of-business. In this case, the property may end up in foreclosure, which would expand the economic impact beyond the local area. In turn, this would result in lower property values for other houses in the area.

We own three properties on Hatteras Island and have been already severely impacted by the previous bans on usage. Our property values have declined so much that we have lost all our equity and then some. Our rental numbers have decreased to the point that if we lose any additional rentals we'll be in danger of losing everything which has already happened to many owners and investors in the community. Pages 270-286, 561-598: The socio-economic data and analyses are incomplete and erroneous and result in an understatement of the effect the restrictions will have upon the Island, the region and the state of NC. The US Park Services answer: Businesses will have to "adapt" to the new rules. (p.383) The negative economic impacts of the decree ARE KNOWN, so to say that the added restrictions would have negligible to moderate impact is indefensible. Economic issues in the country have already caused vacation travel to decrease and stressed almost all of the island business. Beach closures have also pushed numbers lower and plagued the entire industry yet again. This would result in fewer visitors to an area which is highly dependent on tourism would be devastating with widespread financial disaster. 13) Overall Visitor Counts - Overall visitor counts appear to include visitors to Fort Raleigh National Historic Site and the Wright Brothers National Memorial. A large percentage of these visitors vacation in the Northern Beaches communities and recreate on the non-federal beaches outside of the Seashore. Visitors who patronize the Fort Raleigh National Historic Site and the Wright Brothers National Memorial but do not visit the actual seashore areas need to be factored out. Maintenance of Future Access to Cape Point and South Point Ocracoke: All socioeconomic analyses related to Alternative F are predicated on the assumption that access corridors will remain open for at least an appreciable portion of the visitor high season. Under Alternative F, the access corridors will be subject to Resource Closures based on buffers similar or identical to the Consent Decree. Unless some predictability of access to Cape Point and South Point Ocracoke can be assured, economic analyses predicated on assumption of access are fundamentally flawed. Why would a group of surf fisherman want to come to Hatteras Island to surf fish if they are not sure they can access the prime fishing grounds at Cape Point? The answer is they won't come. If they don't come, they don't rent vacation homes and spend their money on Hatteras and Ocracoke Islands. The definition of the Region of Influence (ROI), faulty data on economic activity generated by specific type recreational activity, incomplete visitation/business survey data, inflated overall Seashore visitor counts pertaining to beach use, and flawed key assumptions concerning the maintenance of access under Alternative F, all lead to inaccurate conclusions in the socioeconomic analyses. Specifically, these inaccuracies can be seen as understating the negative socio-economic impact of the Seashore Villages. Further, this negative impact will be absorbed almost entirely by Small Businesses. Neither of these important aspects of the management alternatives are adequately presented in the DEIS. 14) Page 136: We strongly disagree with your pet restriction proposals. The "prohibition of pets in the Seashore during bird breeding season including in front of the villages." = No Pets in public areas ?beaches, campgrounds, soundfront, foot trails, park maintained roads -from March 15 ?July 31. Hatteras Island is a family vacation destination. As such, many vacationers bring an important part of their family, their dog. Due to the high cost of care for a dog while the owners are away, would be vacationers may be forced to remain at home. It seems to me that limiting the dogs to a 6 foot leash during the proposed timeframe to ban dogs would have the desired results. 15) Pages 125; 392 ? 396: SEA TURTLES. We disagree with the stats and procedures proposed. We think endangered sea turtles would benefit from management practices now in use at other federal seashores that are more proactive in efforts to achieve nesting success. This includes relocating nests to more desirable locations as is done in other state and federally controlled areas. The Cape

Hatteras National Seashore Recreational Area is on the northernmost fringe of turtle nesting locations for the southeast, accounting for about 1% of all turtle nests. Proposed buffer areas are not needed for protection of the turtles and amount to overprotection. 16) Pages 97- 101. We strongly disagree with proposals in this section saying that ORVs will be prohibited year round between ramps 27 and 30, at Hatteras Inlet (Hatteras Spit), Ocracoke Inlet (North Ocracoke Spit) and various other locations. Not allowing ORV access is paramount to denying the public access to these beaches. They are located miles from the nearest parking or paved road area and too far to access on foot. As far as we know there are no proposed new access roads or parking areas planned. As a matter of course, there has been no breeding of piping plover or other endangered species at the Hatteras Island Inlet (spit) area in the past 6 years. 17) Page 104: We disagree with the proposed nighttime driving closures. Per your proposals, night driving will be prohibited between May 1 and November 15th, forcing visitors off of the beaches early in the evening and preventing sunrise surf fishermen access in the morning. We propose a more moderate night time ban if one is needed, perhaps from June 1 ? September 15 with times being 1 hour after sunset and 1 hour before sunrise to allow beach goers to gather their stuff and exit the beach area. Certainly more proactive measures such as relocating nests prone to weather and ocean events would dramatically increase the nesting success rates. 18) Page 121: We disagree with the proposed beach closings, including pedestrian access from March 15 until July 31 in 8 different beach locations which have traditionally been available. Please leave these areas open to beach walkers, shell collectors, artists, and those that want to access the beaches in these areas. Conclusion: Please, incorporate access corridors through any SMA so we can get to the open beach beyond. Incorporate the birds into the count that nest on the spoil islands. Base your buffer zones on peer reviewed science and scale them back to more reasonable distances as discussed. It is neither logical nor reasonable to spend so much time, money and energy to overprotect a bird (Piping Plover) in the Cape Hatteras National Seashore that is on the southernmost fringe area of its breeding ground. That goes for the loggerhead turtle that is in its northernmost breeding area. Let's scale back the buffer zones. You can always increase at a later date. We understand that there is legal pressure by highly funded activist groups. We respect nature, and would like to help preserve species, yet we understand that over time evolution happens. Our lives are changed as society evolves, just like animals have their own evolution. Birds are finding safe havens on the roofs of grocery stores instead of trees and dunes! It happens as they adopt to the changing world.

The NPS is leaning way over the line on over protection and not enough on the public's right to enjoy the beaches of the National Seashore. The proper balance is not achieved in the propose DEIS and needs to be modified so that the proper balance of reasonable resource protection and access to the beaches of the National Park is achieved. We could sum it up by saying "Protect, not Prohibit." Thank you, Respectfully, Jane Klein Conklin Hamilton Square, NJ

Correspondence: Dear Superintendent Murray,

As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a wonderful resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. This approach won't work to preserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.

- 1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."
- 2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness..." Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.
- 3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.

Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

Correspondence: My comments on the proposed DEIS for Cape Hatteras National Seashore Recreational Area:

I've been vacationing with my family on Cape Hatteras for over 10 years enjoying all that the island has to offer, from fishing to enjoying all the wildlife native to the islands. I hope to be able to continue this tradition for many years, but I feel the Consent Decree and Alternative F are far too restrictive to beach access. I believe a more balanced approach between access and wildlife preservation needs to be worked out. For example:
 Buffer Sizes - I can't understand why a nest of birds would require nearly 800 acres of closure (1000m radius for the piping plover).
 Corridors - I feel that corridors play a vital role in providing access to both pedestrians and ORVs alike and need to be included in the final plan for all areas of the seashore all year long.
 Non-Endangered Species - I fail to understand the logic behind giving birds not listed as endangered the same level of protection given to endangered species. I also believe that all of the birds that nest on the dredge and spoil islands should be counted.
 To Summarize - I do not feel the proposed DEIS strikes the necessary balance between access and resource protection. I fear that economic and cultural losses as a result of an overly-restrictive plan will be far more substantial than is necessary.

Correspondence: My comments concern the DEIS of the Off-Road Vehicle Management Plan prepared by the National Park Service (NPS) for the Cape Hatteras National Seashore Recreation Area.

- 1) Page 201: I disagree with the NPS statement: "Even with resource closures in place, protected species are still at risk [from pedestrians and ORVs]." No Piping Plover deaths have been attributed to ORVs. ORV violations continue to decrease as signage and education improve. Pedestrian violations are much more significant than ORV violations. It seems to me that any transgressions into protected area are the result of lack of NPS manpower and enforcement than the public purposely and willfully violating out of bounds areas.
- 2) Page xxiv: I question the statement of as per the DEIS: "Carrying capacity would be a 'peak use limit' determined for all areas based on the linear feet of beachfront?" If you close off huge sections of the beach, you force more people into smaller areas, potentially resulting in more resource impairment and diminished visitor experience.
- 3) Page xix and page 23: I am against having two different closures rules pertaining to the North facing beaches (North side) and the South facing beaches (South side) as per the grid outlined in Alternative "F". I disagree with the NPS proposal to close the beaches in villages of Frisco, Hatteras and

Ocracoke Villages to ORV access longer than the traditional May 15 to September 15 period for the Northern beaches, even though seasonal visitor statistics are similar for all villages. Please, make them the same: May 15 -> September 15.

4) Page 1: I agree with your statement "ORVs have long served as a primary form of access for many portions of the beach in the seashore, and continue to be the most practical means of access and parking for many visitors."

However, pedestrian only areas discriminate against individuals with limited mobility due to age or physical impairments, families with small children, and those wishing to engage in activities requiring recreational equipment (boogie boards, beach umbrellas, beach chairs, coolers, fishing rods and tackle, etc)

5) Page 53: I disagree with the special use permit proposed guidelines. It is impractical to allow the transportation of disabled visitors to the village beaches and then require the vehicle to be returned to the street or parking area. This necessitates the disabled person to have a driver to drop him (or her) off, then drive to a parking area, then trudge a long distance to the site of the drop off, then trudge the long distance through the sand back to get the vehicle.

Suppose the handicap person wants to go to the beach, is capable of driving himself, yet cannot find another person to go with him? Does he now not go to the beach? This rule creates unnecessary hardships and risks in the event of an emergency as well.

6) Page 121 ? 127. I strongly disagree with the buffers as presented. We must allow for pass-thru corridors. The beach is linear with the ocean buffering on one side and the dune line on the other. For example - If you pinch off access on one side of a 4 mile linear beach and pinch off access on the other side of the 4 mile section of beach with no corridor, then you effectively have closed off all 4 miles of the beach because you CAN'T get there. The proposed bird buffers are too large, blocking access to the interior sections from the two "buffered" ends.

I propose ORV pass-thru only corridors and to use breeding / nesting buffer distances to establish ORV pass through only corridors to ensure beach access in a way that does not hinder resource protection. I believe pass through corridors should be maintained for pedestrians and ORVs in all areas of the Cape Hatteras National Seashore Recreational Area throughout the entire breeding and nesting season. Corridors are vital to providing access in a way that does not hinder resource protection.

Piping Plover unfledged chicks buffer should move with the brood as it relocates to reliable food source, not expanded.

The 1,000 meter distance for the piping plover is way too large and not based upon peer reviewed science. A more rational distance would be 200 meters per other sites in the nation for the piping plover. Ample scientific evidence and precedent exists to support a 200 meter buffer.

Buffers for other species, including American Oystercatchers, Least Terns and Colonial Waterbirds must also be changed. An effective 30 meter buffer should be established for these species rather than the 300 meter closure outlined in the DEIS.

NON-ENDANGERED BIRDS should not have same protection as if endangered. Not allowing ORV access is paramount to denying the public access to these beaches.

7) Page 468: I disagree with the limitations imposed on pedestrian and ORVs. Corridors or bypasses should be provided thru, around or below high tide line in all SMAs during entire breeding season to maintain access.

7) Page 468: I disagree with the limitations imposed on pedestrian and ORVs. Corridors or bypasses should be provided thru, around or below high tide line in all SMAs during entire breeding season to maintain access.

8) Page 124: I strongly disagree with the NPS slant of providing for over protection of resource management over that of the public's right to access the beaches. Pro-active initiatives include: Vegetation Management, Habitat Management, Enhanced Predator Management, Colonial Water bird social attraction, Piping Plover check fledge rate, Piping plover chick buffer distance, and pass-through buffers during the incubation period. Opportunities to implement less restrictive closures as a result of the above initiatives should be considered more frequently than the 5-year periodic review process identified in the DEIS.

9) I disagree with the NPS Resource Management Pedestrian / ORV Closure Policies. These policies address the least significant factors affecting nest survival with little chance to have more than negligible impact. For example: the AMOY Nest Failures are predominately due to non-human events. Using your own stats, the mammalian predation is 54%, Storm / Lunar Tides: 29%, Nest Abandonment: 6%, Avian Predation: 5%, and Ghost Crab Predation: 3%,

So what is the percentage due to human interference: just 3%! It's insignificant, yet the NPS wants to ban humans when their actions provide very little influence on the success rate of breeding birds and turtles.

My comments concern the DEIS of the Off-Road Vehicle Management Plan prepared by the National Park Service (NPS) for the Cape Hatteras National Seashore Recreation Area.

1) Page 201: I disagree with the NPS statement: "Even with resource closures in place, protected species are still at risk [from pedestrians and ORVs]." No Piping Plover deaths have been attributed to ORVs. ORV violations continue to decrease as signage and education improve. Pedestrian violations are much more significant than ORV violations. It seems to me that any transgressions into protected area are the result of lack of NPS manpower and enforcement than the public purposely and willfully violating out of bounds areas.

2) Page xxiv: I question the statement of as per the DEIS: "Carrying capacity would be a 'peak use limit' determined for all areas based on the linear feet of beachfront?" Correspondence: The Cape Hatteras National Seashore Recreational Area was created to be what it's name implies: a recreational area. My family has been vacationing at the Outer Banks since the early 1970s. We respect nature and treat it with care. Closing much of the beach to even pedestrian traffic prevents us from enjoying our favorite beach activities: walking and surf fishing. I can't imagine how a person walking along the water's edge could cause harm to nesting birds. I dream of my hour long beach walks throughout the year. They certainly are less enjoyable when I must repeatedly turn around and tread over the same sand. It is ridiculous to be so limited when there is so much shoreline. Similarly, driving on the beach is our primary method of access for surf fishing. Without the ability to drive on the beach, some of our family members (elderly and children) would not be able to fish due to the long walks required. Great lengths are being taken to protect birds that are not even endangered species. The cost of this extensive "protection" is a reduction in vacationers' enjoyment of the beach which has a direct impact on the local economy. Please reduce the restrictions in human beach access on Hatteras Island so that we can continue to enjoy our favorite place on Earth and support local businesses.

Correspondence: The NPS must formulate a plan that is consistent with the legislation establishing Cape Hatteras National Seashore Recreation Area. The enabling legislation for the Recreational Area states, in part, "said area shall be, and is, established, dedicated, and set apart as a national seashore recreational area for the benefit and enjoyment of the people and shall be known as the Cape Hatteras National Seashore Recreational Area". Therefore, it is important to balance resource protection with reasonable access for recreation. Corridors are a vital tool in providing access while managing resources. They provide a small path around temporary resource closures in order to provide access to open areas that would otherwise be blocked. Corridors should be permitted throughout the seashore during the entire breeding and nesting season including ML-1 portions of SMAs. These corridors would provide valuable access without impairment or damage to protected resources. Buffers, or closures, are important management practices for species recovery. However, to have long term benefit for the wildlife and the visiting public, buffers must be based on peer-reviewed science. For example, the Piping Plover, a species classified as threatened and not endangered, is given a level of unprecedented protection in Alternative F. A 1,000-meter buffer in all directions represents over 771 acres. The DEIS does not cite any peer-reviewed science in supporting such closure. A more appropriate & effective buffer would be 200 meters. Birds that are not listed as endangered should not be afforded the level of protection given to ESA (Endangered Species Act) protected species. Instead of 300-meter buffers for these birds, a more appropriate buffer would be 30 meters. Also, all birds in the same ecosystem of the seashore should be counted. This includes all the many birds on the dredge and spoil islands located just yards away and within sight of the seashore. The National Park Service should consider turtle management practices successfully used in other federal and state areas to achieve nesting success. More proactive measures include relocating nests to more desirable locations, which is routinely and successfully done in other areas.

Correspondence Type: Web Form
Correspondence: My comments concern the DEIS of the Off-Road Vehicle Management Plan prepared by the National Park Service (NPS) for the Cape Hatteras National Seashore Recreation Area.
1) Page 201: I disagree with the NPS statement: "Even with resource closures in place, protected species are still at risk [from pedestrians and ORVs]." No Piping Plover deaths have been attributed to ORVs. ORV violations continue to decrease as signage and education improve. Pedestrian violations are much more significant than ORV violations. It seems to me that any transgressions into protected area are the result of lack of NPS manpower and enforcement than the public purposely and willfully violating out of bounds areas.
2) Page xxiv: I question the statement of as per the DEIS: "Carrying capacity would be a 'peak use limit' determined for all areas based on the linear feet of beachfront?" If you close off huge sections of the beach, you force more people into smaller areas, potentially resulting in more resource impairment and diminished visitor experience.
3) Page xix and page 23: I am against having two different closures rules pertaining to the North facing beaches (North side) and the South facing beaches (South side) as per the grid outlined in Alternative "F". I disagree with the NPS proposal to close the beaches in villages of Frisco, Hatteras and Ocracoke Villages to ORV access longer than the traditional May 15 to September 15 period for the Northern beaches, even though seasonal visitor statistics are similar for all villages. Please, make them the same: May 15 -> September 15.
4) Page 1: I agree with your statement "ORVs have long served as a primary form of access for many portions of the beach in the seashore, and continue to be the most practical means of access and parking for many visitors." However, pedestrian only areas discriminate against individuals with limited mobility due to age or physical impairments, families with small children, and those wishing to engage in activities requiring recreational equipment (boogie boards, beach umbrellas, beach chairs, coolers, fishing rods and tackle, etc)
5) Page 53: I disagree with the special use permit proposed guidelines. It is impractical to allow the transportation of disabled visitors to the village beaches and then require the vehicle to be returned to the street or parking area. This necessitates the disabled person to have a driver to drop him (or her) off, then drive to a parking area, then trudge a long distance to the site of the drop off, then trudge the long distance through the sand back to get the vehicle. Suppose the handicap person wants to go to the beach, is capable of driving himself, yet cannot find another person to go with him? Does he now not go to the beach? This rule creates unnecessary hardships and risks in the event of an emergency as well.
6) Page 121 ? 127. I strongly disagree with the buffers as presented. We must allow for pass-thru corridors. The beach is linear with the ocean buffering on one side and the dune line on the other. For example - If you pinch off access on one side of a 4 mile linear beach and pinch off access on the other

side of the 4 mile section of beach with no corridor, then you effectively have closed off all 4 miles of the beach because you CAN'T get there. The proposed bird buffers are too large, blocking access to the interior sections from the two "buffered" ends.

I propose ORV pass-thru only corridors and to use breeding / nesting buffer distances to establish ORV pass through only corridors to ensure beach access in a way that does not hinder resource protection. I believe pass through corridors should be maintained for pedestrians and ORVs in all areas of the Cape Hatteras National Seashore Recreational Area throughout the entire breeding and nesting season. Corridors are vital to providing access in a way that does not hinder resource protection.

Piping Plover unfledged chicks buffer should move with the brood as it relocates to reliable food source, not expanded.

The 1,000 meter distance for the piping plover is way too large and not based upon peer reviewed science. A more rational distance would be 200 meters per other sites in the nation for the piping plover. Ample scientific evidence and precedent exists to support a 200 meter buffer.

Buffers for other species, including American Oystercatchers, Least Terns and Colonial Waterbirds must also be changed. An effective 30 meter buffer should be established for these species rather than the 300 meter closure outlined in the DEIS.

NON-ENDANGERED BIRDS should not have same protection as if endangered. Not allowing ORV access is paramount to denying the public access to these beaches.

7) Page 468: I disagree with the limitations imposed on pedestrian and ORVs. Corridors or bypasses should be provided thru, around or below high tide line in all SMAs during entire breeding season to maintain access.

8) Page 124: I strongly disagree with the NPS slant of providing for over protection of resource management over that of the public's right to access the beaches. Pro-active initiatives include: Vegetation Management, Habitat Management, Enhanced Predator Management, Colonial Water bird social attraction, Piping Plover check fledge rate, Piping plover chick buffer distance, and pass-through buffers during the incubation period. Opportunities to implement less restrictive closures as a result of the above initiatives should be considered more frequently than the 5-year periodic review process identified in the DEIS.

9) I disagree with the NPS Resource Management Pedestrian / ORV Closure Policies. These policies address the least significant factors affecting nest survival with little chance to have more than negligible impact. For example: the AMOY Nest Failures are predominately due to non-human events. Using your own stats, the mammalian predation is 54%, Storm / Lunar Tides: 29%, Nest Abandonment: 6%, Avian Predation: 5%, and Ghost Crab Predation: 3%,

So what is the percentage due to human interference: just 3%! It's insignificant, yet the NPS wants to ban humans when their actions provide very little influence on the success rate of breeding birds and turtles.

10) I disagree with the stats of breeding plovers and the other birds in the Park when the NPS does not adequately consider locations neighboring the Recreational Area that are part of the same ecosystem, namely dredge and spoil island that are located just yards away and within sight of the seashore. These birds are part of the same ecosystem and should be included.

Those spoil islands, developed by man from dredging the waterways in the Pamlico Sound for channel upkeep are slammed full of birds. The reason why so many birds? NO PREDATORS. SO, birds are not as stupid as one might think. You have to count these birds and incorporate them in the stats when the NPS is talking about any so called decline in breeding pairs in the National Park. Interesting that man is credited with endangering wildlife, yet not given to creating these safe islands where they flourish!

11) Page 1: I do not think the DEIS responsibly addresses the cultural resource issues. The very purpose of the DEIS as set forth in the National Environmental Policy Act (NEPA) is to protect and preserve natural and cultural resources in the federal decision making process. In the DEIS, the statement "protect and preserve natural and cultural resources" appears in the first sentence of the first page of the plan, in the Purpose of the Plan section, and numerous times thereafter. Yet, the 810 page document devotes only two paragraphs to analysis of cultural resource issues.

As a relatively new home owner on Hatteras Island, I have quickly come to realize the tight bond of the local residents and their appreciation of tradition. I come to the island frequently and will feel the pain of these restrictions, I can't imagine lifelong residents that have had the ability to freely use and co-mingle with the natural resources, that all their steep traditions will quickly be snuffed out due to irrational decisions.

12) Pages 270-281; 561-598: I strongly disagree with your economic analysis of the impact of the DEIS. The region of influence (ROI) incorporates the Northern Beach communities, including Kill Devil Hills, Kitty Hawk, Southern Shores and Duck. These areas are almost completely disconnected from ORV use and access issues relating to the Seashore. ? Inclusion of the Northern Beaches in analysis significantly dilutes estimates of economic impact on the 8 Seashore Villages

? Analysis of economic impact to the Seashore Villages appears to be significantly down played. Emphasis in DEIS is on the ROI-wide or county-wide level impacts.

? Nowhere is it clearly addressed that the overwhelming majority of negative impacts will be felt by small businesses in the Seashore Villages rather than by overall economic interests within the greater ROI.

On page xlviii, Alternative F is characterized as having a "negligible to moderate" adverse impact on small businesses. I strongly disagree with this statement.

I believe the negligible to moderate projection is inaccurate and relies on economic surveys that has not yet been published. Furthermore, this material is not expected to be added to the DEIS until after the public comment period has ended.

Based upon the economic harm we have already experienced under the consent decree, Dare County projects the economic impact of Alternative F to be substantial.

Beach closures have already had a devastating and unfair impact on many Dare County Businesses, causing foreclosures, bankruptcies, lay-offs, cutbacks, expensive refinancing, and depleted college funds and savings accounts.

Pages 270-286, 561-598: The socio-economic data and analyses are incomplete and erroneous and result in an understatement of the effect the restrictions will have upon the Island, the region and the state of NC. The US Park Services answer: Businesses will have to "adapt" to the new rules. (p.383) The negative economic impacts of the decree ARE KNOWN, so to say that the added restrictions would have negligible to moderate impact is indefensible.

13) Overall Visitor Counts - Overall visitor counts appear to include visitors to Fort Raleigh National Historic Site and the Wright Brothers National Memorial. A large percentage of these visitors vacation in the Northern Beaches communities and recreate on the non-federal beaches outside of the Seashore. Visitors who patronize the Fort Raleigh National Historic Site and the Wright Brothers National Memorial but do not visit the actual seashore areas need to be factored out.

Maintenance of Future Access to Cape Point and South Point Ocracoke: All socioeconomic analyses related to Alternative F are predicated on the assumption that access corridors will remain open for at least an appreciable portion of the visitor high season. Under Alternative F, the access corridors will be subject to Resource Closures based on buffers similar or identical to the Consent Decree. Unless some predictability of access to Cape Point and South Point Ocracoke can be assured, economic analyses predicated on assumption of access are fundamentally flawed.

Why would a group of surf fisherman want to come to Hatteras Island to surf fish if they are not sure they can access the prime fishing grounds at Cape Point? The answer is they won't come. If they don't come, they don't rent vacation homes and spend their money on Hatteras and Ocracoke Islands.

The definition of the Region of Influence (ROI), faulty data on economic activity generated by specific type recreational activity, incomplete visitation/business survey data, inflated overall Seashore visitor counts pertaining to beach use, and flawed key assumptions concerning the maintenance of access under Alternative F, all lead to inaccurate conclusions in the socioeconomic analyses. Specifically, these inaccuracies can be seen as understating the negative socio-economic impact of the Seashore Villages. Further, this negative impact will be absorbed almost entirely by Small Businesses. Neither of these important aspects of the management alternatives are adequately presented in the DEIS.

14) Page 136: I strongly disagree with your pet restriction proposals. The "prohibition of pets in the Seashore during bird breeding season including in front of the villages." = No Pets in public areas ?beaches, campgrounds, soundfront, foot trails, park maintained roads -from March 15 ?July 31.

As a vacation home homeowner that allows guest to bring their pets, this is very disturbing. Approximately 40% of my rental weeks are those with guests that bring their pets. I too love to bring our family dog to the beach. And as a responsible pet owner we never allow our dog to run free. As many of the times I visited I did not see anyone having pets unleashed. Prohibiting pets would be a significant hardship to my family. Data shows that families that take their pets on vacation treat them as part of the family and do not allow them to be undisciplined. I propose allowing pets on 6 foot leashes year-round in all areas open to pedestrians or ORVs. 15) Pages 125; 392 ? 396: SEA TURTLES. I disagree with the stats and procedures proposed. I think endangered sea turtles would benefit from management practices now in use at other federal seashores that are more proactive in efforts to achieve

nesting success. This includes relocating nests to more desirable locations as is done in other state and federally controlled areas.

The Cape Hatteras National Seashore Recreational Area is on the northernmost fringe of turtle nesting locations for the southeast, accounting for about 1% of all turtle nests. Proposed buffer areas are not needed for protection of the turtles and amount to overprotection.

16) Pages 97- 101. I strongly disagree with proposals in this section saying that ORVs will be prohibited year round between ramps 27 and 30, at Hatteras Inlet (Hatteras Spit), Ocracoke Inlet (North Ocracoke Spit) and various other locations.

Not allowing ORV access is paramount to denying the public access to these beaches. They are located miles from the nearest parking or paved road area and too far to access on foot. As a matter of course, there has been no breeding of piping plover or other endangered species at the Hatteras Island Inlet (spit) area in the past 6 years.

17) Page 104: I disagree with the proposed night time driving closures. Per your proposals, night driving will be prohibited between May 1 and November 15th, forcing visitors off of the beaches early in the evening and preventing sunrise surf fishermen access in the morning. I propose a more moderate night time ban if one is needed, perhaps from June 1 ? September 15 with times being 1 hour after sunset and 1 hour before sunrise to allow beach goers to gather their stuff and exit the beach area.

Certainly more proactive measures such as relocating nests prone to weather and ocean events would dramatically increase the nesting success rates.

18) Page 121: I disagree with the proposed beach closings, including pedestrian access from March 15 until July 31 in 8 different beach locations which have traditionally been available. Please leave these areas open to beach walkers, shell collectors and those that want to access the beaches in these areas. If pedestrians are prohibited access to the beach, what is the purpose of preserving the land for the enjoyment of future generations. If "bad apples" disobey, disciplinary action should be taken, but to deny enjoyment for the rest is against the founding principles of the USPS.

Conclusion:

Please, incorporate access corridors through any SMA so we can get to the open beach beyond. Incorporate the birds into the count that nest on the spoil islands. Base your buffer zones on peer reviewed science and scale them back to more reasonable distances as discussed.

It is neither logical nor reasonable to spend so much time, money and energy to overprotect a bird (Piping Plover) in the Cape Hatteras National Seashore that is on the southernmost fringe area of its breeding ground. That goes for the loggerhead turtle that is in its northernmost breeding area. Let's scale back the buffer zones. You can always increase at a later date.

The USPS is leaning way over the line on over protection and not enough on the public's right to enjoy the beaches of the National Seashore. The proper balance is not achieved in the propose DEIS and needs to be modified so that the proper balance of reasonable resource protection and access to the beaches of the National Park is achieved. I could sum it up by saying "Protect, not Prohibit."

Thank you,

Correspondence: Dear Superintendent Murray,

As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage ORV use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.

1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."

2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness..."

Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.

3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.

Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

Correspondence: Date: May 10, 2010 To: National Park Service From: David Conklin Subject: DEIS Off-Road Vehicle Management Plan Comments

Our comments concern the DEIS of the Off-Road Vehicle Management Plan prepared by the National Park Service (NPS) for the Cape Hatteras National Seashore Recreation Area. ??

1) Page 201: I disagree with the NPS statement: "Even with resource closures in place, protected species are still at risk [from pedestrians and ORVs]." Although pedestrians may have an impact on protected species and their nesting spots, this may be comparable with natural predators who naturally have an impact on animal nesting. Pedestrian incursions into protected areas may due to insufficient publicity and education. Traditionally, the NPS has used small outdated and often barely legible signs. I feel that increased signage including reflective materials as well as additional NPS enforcement will be sufficient to dissuade or deter both pedestrians and ORV's from entering boundary areas.

2) Page xxiv: I disagree with the statement of as per the DEIS: "Carrying capacity would be a 'peak use limit' determined for all areas based on the linear feet of beachfront?"

Preventing usage of large portions of beach will eliminate the purpose of having a national park for people to be able to come and enjoy it. It would severely impact the current economy for local businesses and beach rentals. Traditionally, the NPS has used small outdated and often barely legible signs. I feel improved signage with additional publicity in the area (such as posters in local shops similar to those warning of rip tides) would help educate the visiting public and minimize any impact to the natural splendor.

3) Page xix and page 23: I am against having two different closures rules pertaining to the North facing beaches (North side) and the South facing beaches (South side) as per the grid outlined in Alternative "F". I disagree with the NPS proposal to close the beaches in villages of Frisco, Hatteras and Ocracoke Villages to ORV access longer than the traditional May 15 to September 15 period for the Northern beaches, even though seasonal visitor statistics are similar for all villages. Please, make them the same: May 15 -> September 15. 4) Page 1: I agree with your statement "ORVs have long served as a primary form of access for many portions of the beach in the seashore, and continue to be the most practical means of access and parking for many visitors." ?However, pedestrian only areas discriminate against individuals with limited mobility due to age or physical impairments, families with small children, and those wishing to engage in activities requiring recreational equipment (boogie boards, beach umbrellas, beach chairs, coolers, fishing rods and tackle, etc) 5) Page 53: I disagree with the special use permit proposed guidelines. It is impractical to allow the transportation of disabled visitors to the village beaches and then require the vehicle to be returned to the street or parking area. This necessitates the disabled person to have a driver to drop him (or her) off, then drive to a parking area, then trudge a long distance to the site of the drop off, then trudge the long distance through the sand back to get the vehicle. This would also result in the vehicle traveling twice the distance on the beach. Instead of one round trip, the

vehicle would also need to make a second round trip in order to retrieve the handicapped person(s). Furthermore, the driver of the vehicle would also become a pedestrian. Suppose the handicap person wants to go to the beach, is capable of driving himself, yet cannot find another person to go with him? Does he now not go to the beach? This rule creates unnecessary hardships and risks in the event of an emergency as well. 6) Page 121 ? 127. I strongly disagree with the buffers as presented. The 1,000 meter distance for the piping plover is extremely oversized and does not seem to be based upon peer reviewed science. Ample scientific evidence and precedent exists to support a 200 meter buffer and would be consistent with other managed areas across the Nation. I should be an allowance for pass-thru corridors which would provide for ORVs to travel past an area using breeding / nesting buffer distances allowing for access as well as resource protection. I believe pass through corridors should be maintained for pedestrians and ORVs in all areas of the Cape Hatteras National Seashore Recreational Area throughout the entire breeding and nesting season. Corridors are vital to providing access in a way that does not hinder resource protection. Piping Plover unfledged chicks buffer should move with the brood as it relocates to reliable food source, not expanded. Buffers for other species, including American Oystercatchers, Least Terns and Colonial Waterbirds must also be changed. An effective 30 meter buffer should be established for these species rather than the 300 meter closure outlined in the DEIS. NON-ENDANGERED BIRDS should not have same protection as if endangered. Not allowing ORV and/or pedestrian access denies the public access to these beaches which were established as National Parks for use by the people. It also prevents the same ORVs/pedestrians from enjoying these species and being able to study them. 7) Page 468: I disagree with the limitations imposed on pedestrian and ORVs. Corridors or bypasses should be provided thru, around or below high tide line in all SMAs during entire breeding season to maintain access. 8) Page 124: I strongly disagree with the NPS providing for over protection of resource management versus the public's right to access the beaches. Pro-active initiatives include: Vegetation Management, Habitat Management, Enhanced Predator Management, Colonial Water bird social attraction, Piping Plover check fledge rate, Piping Plover chick buffer distance, and pass-through buffers during the incubation period. Opportunities to implement less restrictive closures as a result of the above initiatives should be considered more frequently than the 5-year periodic review process identified in the DEIS. 9) I disagree with the NPS Resource Management Pedestrian / ORV Closure Policies. These policies address the least significant factors affecting nest survival with little chance to have more than negligible impact. For example: the AMOY Nest Failures are predominately due to non-human events. Using your own stats, the mammalian predation is 54%, Storm / Lunar Tides: 29%, Nest Abandonment: 6%, Avian Predation: 5%, and Ghost Crab Predation: 3%, So what is the percentage due to human interference: just 3%! It's insignificant, yet the NPS wants to ban humans when their actions provide very little influence on the success rate of breeding birds and turtles. ??

10) I disagree with the stats of breeding plovers and the other birds in the Park when the NPS does not adequately consider locations neighboring the Recreational Area that are part of the same ecosystem, namely dredge and spoil island that are located just yards away and within sight of the seashore. These birds are part of the same ecosystem and should be included. Those spoil islands, developed by man from dredging the waterways in the Pamlico Sound for channel upkeep are slammed full of birds. The reason why so many birds? NO PREDATORS. SO, birds are not as stupid as one might think. You have to count these birds and incorporate them in the stats when the NPS is talking about any so called decline in breeding pairs in the National Park. Don't forget to count all of the nests and birds living on top of the local grocery stores as well when you are counting too. These roofs offer wind protection, rainwater pools, and fewer predators than the dunes and have become a new nesting area for many birds. 11) Page 1: I do not think the DEIS responsibly addresses the cultural resource issues. The very purpose of the DEIS as set forth in the National Environmental Policy Act (NEPA) is to protect and preserve natural and cultural resources in the federal decision making process. In the DEIS, the statement "protect and preserve natural and cultural resources" appears in the first sentence of the first page of the plan, in the Purpose of the Plan section, and numerous times thereafter. Yet, the 810 page document devotes only two paragraphs to analysis of cultural resource issues. Hatteras Island has a tight knit community of local residents that have modified their livelihoods over the last few generations. Many aren't making a living fishing anymore rather they are in the tourism business to help enable their countrymen and women the opportunity to enjoy the natural beaches and marshes that the Federal Government saw fit to establish as a National Park so that the people could enjoy it. That doesn't preclude them from continuing to maintain their easy going laid back demeanor and atmosphere. The serenity of the environment and access to the beaches is the center point of the local culture. It has defined many generations and how the local inhabitants interact with each other. The people of Hatteras Island are well aware of how lucky they are. They cherish and protect the environment. To deny access to the beaches also denies them of their past, present and future. Currently the culture as well as the economic stability of Hatteras Island is based on Tourism which has felt a significant impact by the current decline in the national economic downturn. Any additional decline of revenues felt by a decrease in visitors to the NPS due to lack of access may force widespread foreclosures and bankruptcies which are already at an all time high.

12) Pages 270-281; 561-598: I strongly disagree with your economic analysis of the impact of the DEIS. The region of influence (ROI) incorporates the Northern Beach communities, including Kill Devil Hills, Kitty Hawk, Southern Shores and Duck. These areas are almost completely disconnected from ORV use and access issues relating to the Seashore. ? Inclusion of the Northern Beaches in analysis significantly dilutes estimates of economic impact on the 8 Seashore Villages ? Analysis of economic impact to the Seashore Villages appears to be significantly down played. Emphasis in DEIS is on the ROI-wide or county-wide level impacts. ? Nowhere is it clearly addressed that the overwhelming majority of negative impacts will be felt by small businesses in the Seashore Villages rather than by overall economic interests within the greater ROI. On page xlvi, Alternative F is characterized as having a "negligible to moderate" adverse impact on small businesses. I strongly disagree with this statement. I believe the negligible to moderate projection is inaccurate and relies on economic surveys that have not yet been published. Furthermore, this material is not expected to be added to the DEIS until after the public comment period has ended. Based upon the economic harm we have already experienced under the consent decree, Dare County projects the economic impact of Alternative F to be substantial. Added to the current economic recession this would exponentially multiply the dire financial issues plaguing the seashore village communities as well as force property values to plummet yet again. Beach closures have already had a devastating and unfair impact on many Dare County Businesses, causing foreclosures, bankruptcies, lay-offs, cutbacks, expensive refinancing, and depleted college funds and savings accounts. Many of the properties located on Hatteras Island are rental properties. As such, I feel that they too should be considered small businesses. Corporations or LLC entities own many rental properties, while individuals own the others. What they all have in common is that they rely on rental income to continue their operation. If the number of visitors to Hatters Island is reduced, the ability of the owners to continue to pay the costs associated with running their business will be placed at risk. This could result in further impact to local businesses that rely on the performance of contract work on these properties. Furthermore, these owners may be forced out-of-business. In this case, the property may end up in foreclosure, which would expand the economic impact beyond the local area. In turn, this would result in lower property values for other houses in the area.

I own three properties on Hatteras Island and have been already severely impacted by the previous bans on usage. Our property values have declined so much that we have lost all our equity and then some. Our rental numbers have decreased to the point that if we lose any additional rentals we'll be in danger of losing everything which has already happened to many owners and investors in the community. Pages 270-286, 561-598: The socio-economic data and analyses are incomplete and erroneous and result in an understatement of the effect the restrictions will have upon the Island, the region and the state of NC. The US Park Services answer: Businesses will have to "adapt" to the new rules. (p.383) The negative economic impacts of the decree ARE KNOWN, so to say that the added restrictions would have negligible to moderate impact is indefensible. Economic issues in the country have already caused vacation travel to decrease and stressed almost all of the island business. Beach closures have also pushed numbers lower and plagued the entire industry yet again. This would result in fewer visitors to an area which is highly dependent on tourism would be devastating with widespread financial disaster. 13) Overall Visitor Counts - Overall visitor counts appear to include visitors to Fort Raleigh National Historic Site and the Wright Brothers National Memorial. A large percentage of these visitors vacation in the Northern Beaches communities and recreate on the non-federal beaches outside of the Seashore. Visitors who patronize the Fort Raleigh National Historic Site and the Wright Brothers National Memorial but do not visit the actual seashore areas need to be factored out. Maintenance of Future Access to Cape Point and South Point Ocracoke: All socioeconomic analyses related to Alternative F are predicated on the assumption that access corridors will remain open for at least an appreciable portion of the visitor high season. Under Alternative F, the access corridors will be subject to Resource Closures based on buffers similar or identical to the Consent Decree. Unless some predictability of access to Cape Point and South Point Ocracoke can be assured, economic analyses predicated on assumption of access are fundamentally flawed. Why would a group of surf fisherman want to come to Hatteras Island to surf fish if they are not sure they can access the prime fishing grounds at Cape Point? The answer is they won't come. If they don't come, they don't rent vacation homes and spend their money on Hatteras and Ocracoke Islands. The definition of the Region of Influence (ROI), faulty data on economic activity generated by specific type recreational activity, incomplete visitation/business survey data, inflated overall Seashore visitor counts pertaining to beach use, and flawed key assumptions concerning the maintenance of access under Alternative F, all lead to inaccurate conclusions in the socioeconomic analyses. Specifically, these inaccuracies can be seen

as understating the negative socio-economic impact of the Seashore Villages. Further, this negative impact will be absorbed almost entirely by Small Businesses. Neither of these important aspects of the management alternatives are adequately presented in the DEIS. 14) Page 136: I strongly disagree with your pet restriction proposals. The "prohibition of pets in the Seashore during bird breeding season including in front of the villages." = No Pets in public areas beaches, campgrounds, soundfront, foot trails, park maintained roads -from March 15 -July 31. Hatteras Island is a family vacation destination. As such, many vacationers bring an important part of their family, their dog. Due to the high cost of care for a dog while the owners are away, would be vacationers may be forced to remain at home. It seems to me that limiting the dogs to a 6 foot leash during the proposed timeframe to ban dogs would have the desired results. 15) Pages 125; 392 ? 396: SEA TURTLES. I disagree with the stats and procedures proposed. I think endangered sea turtles would benefit from management practices now in use at other federal seashores that are more proactive in efforts to achieve nesting success. This includes relocating nests to more desirable locations as is done in other state and federally controlled areas. The Cape Hatteras National Seashore Recreational Area is on the northernmost fringe of turtle nesting locations for the southeast, accounting for about 1% of all turtle nests. Proposed buffer areas are not needed for protection of the turtles and amount to overprotection. 16) Pages 97- 101. I strongly disagree with proposals in this section saying that ORVs will be prohibited year round between ramps 27 and 30, at Hatteras Inlet (Hatteras Spit), Ocracoke Inlet (North Ocracoke Spit) and various other locations. Not allowing ORV access is paramount to denying the public access to these beaches. They are located miles from the nearest parking or paved road area and too far to access on foot. As far as we know there are no proposed new access roads or parking areas planned. As a matter of course, there has been no breeding of piping plover or other endangered species at the Hatteras Island Inlet (spit) area in the past 6 years. 17) Page 104: I disagree with the proposed nighttime driving closures. Per your proposals, night driving will be prohibited between May 1 and November 15th, forcing visitors off of the beaches early in the evening and preventing sunrise surf fishermen access in the morning. I propose a more moderate night time ban if one is needed, perhaps from June 1 - September 15 with times being 1 hour after sunset and 1 hour before sunrise to allow beach goers to gather their stuff and exit the beach area. Certainly more proactive measures such as relocating nests prone to weather and ocean events would dramatically increase the nesting success rates. 18) Page 121: I disagree with the proposed beach closings, including pedestrian access from March 15 until July 31 in 8 different beach locations which have traditionally been available. Please leave these areas open to beach walkers, shell collectors, artists, and those that want to access the beaches in these areas. Conclusion: Please, incorporate access corridors through any SMA so we can get to the open beach beyond. Incorporate the birds into the count that nest on the spoil islands. Base your buffer zones on peer reviewed science and scale them back to more reasonable distances as discussed. It is neither logical nor reasonable to spend so much time, money and energy to overprotect a bird (Piping Plover) in the Cape Hatteras National Seashore that is on the southernmost fringe area of its breeding ground. That goes for the loggerhead turtle that is in its northernmost breeding area. Let's scale back the buffer zones. You can always increase at a later date. I understand that there is legal pressure by highly funded activist groups. I respect nature, and would like to help preserve species, yet we understand that over time evolution happens. Our lives are changed as society evolves, just like animals have their own evolution. Birds are finding safe havens on the roofs of grocery stores instead of trees and dunes! It happens as they adopt to the changing world. The NPS is leaning way over the line on over protection and not enough on the public's right to enjoy the beaches of the National Seashore. The proper balance is not achieved in the propose DEIS and needs to be modified so that the proper balance of reasonable resource protection and access to the beaches of the National Park is achieved. I could sum it up by saying "Protect, not Prohibit." Thank you, Respectfully, David Conklin Hamilton Square, NJ

Correspondence: I strongly disagree with the statement on page vi that reads "visitor experience could be affected by conflicts between motorized and non-motorized recreation uses." I am an avid windsurfer and have been on the beaches of the Cape Hatteras National Seashore Recreational Area for 20 years. I have lived here for 13 of those 20 years. Through the years, I have spent has many as 150 days a year on the beaches. Yes, I like to keep a log of how many days I windsurf a year. I have never witnessed or heard of the type of conflict described on page vi. Has the NPS made these incidents public? When I researched this, there has been only one minor incident and the driver was not blamed or ticketed in the incident. No piping plover deaths have ever been attributed to trucks on the beach. Why would the DEIS make such a flawed assumption as found on page vi?

Correspondence: Please take a hard look at the damage ORV do to our beaches. Even in our parks ORV do a lot of damage to the ground and the drivers to these vehicles, in many cases, do not seem to care. It's a good reason many parks do not allow them. Our beaches are precious as are the critters that rely on them to survive. Please help protect them. Thank you for your time and attention to this very important topic. Sincerely, F. "Sam" Burnette

Correspondence: My comments concern the DEIS of the Off-Road Vehicle Management Plan prepared by the National Park Service (NPS) for the Cape Hatteras National Seashore Recreation Area.
1) Page 201: I disagree with the NPS statement: "Even with resource closures in place, protected species are still at risk [from pedestrians and ORVs]." No Piping Plover deaths have been attributed to ORVs. ORV violations continue to decrease as signage and education improve. Pedestrian violations are much more significant than ORV violations. It seems to me that any transgressions into protected area are the result of lack of NPS manpower and enforcement than the public purposely and willfully violating out of bounds areas.
2) Page xxiv: I question the statement of as per the DEIS: "Carrying capacity would be a 'peak use limit' determined for all areas based on the linear feet of beachfront?" If you close off huge sections of the beach, you force more people into smaller areas, potentially resulting in more resource impairment and diminished visitor experience.
3) Page xix and page 23: I am against having two different closures rules pertaining to the North facing beaches (North side) and the South facing beaches (South side) as per the grid outlined in Alternative "F". I disagree with the NPS proposal to close the beaches in villages of Frisco, Hatteras and Ocracoke Villages to ORV access longer than the traditional May 15 to September 15 period for the Northern beaches, even though seasonal visitor statistics are similar for all villages. Please, make them the same: May 15 -> September 15.
4) Page 1: I agree with your statement "ORVs have long served as a primary form of access for many portions of the beach in the seashore, and continue to be the most practical means of access and parking for many visitors." However, pedestrian only areas discriminate against individuals with limited mobility due to age or physical impairments, families with small children, and those wishing to engage in activities requiring recreational equipment (boogie boards, beach umbrellas, beach chairs, coolers, fishing rods and tackle, etc)
5) Page 53: I disagree with the special use permit proposed guidelines. It is impractical to allow the transportation of disabled visitors to the village beaches and then require the vehicle to be returned to the street or parking area. This necessitates the disabled person to have a driver to drop him (or

her) off, then drive to a parking area, then trudge a long distance to the site of the drop off, then trudge the long distance through the sand back to get the vehicle.

Suppose the handicap person wants to go to the beach, is capable of driving himself, yet cannot find another person to go with him? Does he now not go to the beach? This rule creates unnecessary hardships and risks in the event of an emergency as well.

6) Page 121 ? 127. I strongly disagree with the buffers as presented. We must allow for pass-thru corridors. The beach is linear with the ocean buffering on one side and the dune line on the other. For example - If you pinch off access on one side of a 4 mile linear beach and pinch off access on the other side of the 4 mile section of beach with no corridor, then you effectively have closed off all 4 miles of the beach because you CAN'T get there. The proposed bird buffers are too large, blocking access to the interior sections from the two "buffered" ends.

I propose ORV pass-thru only corridors and to use breeding / nesting buffer distances to establish ORV pass through only corridors to ensure beach access in a way that does not hinder resource protection. I believe pass through corridors should be maintained for pedestrians and ORVs in all areas of the Cape Hatteras National Seashore Recreational Area throughout the entire breeding and nesting season. Corridors are vital to providing access in a way that does not hinder resource protection.

Piping Plover unfledged chicks buffer should move with the brood as it relocates to reliable food source, not expanded.

The 1,000 meter distance for the piping plover is way too large and not based upon peer reviewed science. A more rational distance would be 200 meters per other sites in the nation for the piping plover. Ample scientific evidence and precedent exists to support a 200 meter buffer.

Buffers for other species, including American Oystercatchers, Least Terns and Colonial Waterbirds must also be changed. An effective 30 meter buffer should be established for these species rather than the 300 meter closure outlined in the DEIS.

NON-ENDANGERED BIRDS should not have same protection as if endangered. Not allowing ORV access is paramount to denying the public access to these beaches.

7) Page 468: I disagree with the limitations imposed on pedestrian and ORVs. Corridors or bypasses should be provided thru, around or below high tide line in all SMAs during entire breeding season to maintain access. 7) Page 468: I disagree with the limitations imposed on pedestrian and ORVs. Corridors or bypasses should be provided thru, around or below high tide line in all SMAs during entire breeding season to maintain access.

8) Page 124: I strongly disagree with the NPS slant of providing for over protection of resource management over that of the public's right to access the beaches. Pro-active initiatives include: Vegetation Management, Habitat Management, Enhanced Predator Management, Colonial Water bird social attraction, Piping Plover check fledge rate, Piping plover chick buffer distance, and pass-through buffers during the incubation period. Opportunities to implement less restrictive closures as a result of the above initiatives should be considered more frequently than the 5-year periodic review process identified in the DEIS.

9) I disagree with the NPS Resource Management Pedestrian / ORV Closure Policies. These policies address the least significant factors affecting nest survival with little chance to have more than negligible impact. For example: the AMOY Nest Failures are predominately due to non-human events. Using your own stats, the mammalian predation is 54%, Storm / Lunar Tides: 29%, Nest Abandonment: 6%, Avian Predation: 5%, and Ghost Crab Predation: 3%,

So what is the percentage due to human interference: just 3%! It's insignificant, yet the NPS wants to ban humans when their actions provide very little influence on the success rate of breeding birds and turtles.

My comments concern the DEIS of the Off-Road Vehicle Management Plan prepared by the National Park Service (NPS) for the Cape Hatteras National Seashore Recreation Area.

1) Page 201: I disagree with the NPS statement: "Even with resource closures in place, protected species are still at risk [from pedestrians and ORVs]." Correspondence:	<p>I have been visiting Cape Hatteras National Seashore since the 1970's. I keep a travel trailer on a campsite in Buxton year round. I enjoy the freedom of driving on the beach and I love to surf fish. It is sad for me to see the negative impact of the beach closures on the local businesses.</p> <p>I disagree with the economic analysis presented. I do not feel it focused on the villages whose economies are most closely tied to the affected beaches, such as Buxton, Frisco, and Hatteras. Areas such as Duck and Southern Shores should not be included in the analysis.</p> <p>I don't agree with not allowing pass-through access corridors. I think properly managed corridors should be allowed at all times. There is no evidence that a corridor in the tide zone is detrimental to nesting birds.</p> <p>I do not think that the proper scientific studies were performed to back up the large buffers that are in the proposed plan. Also, I do not agree with not considering the populations of birds that inhabit the islands made from dredging in the study.</p> <p>I did not see any evidence-based science presented that indicated the impact of the plan on the nest survival would be significant. I have read the Piping Plover reports for the past few years and the impact of predators, storms, and ghost crabs on nest survival was much higher than the impact of humans. I disagree with closing beaches to ORVs and pedestrians without strong evidence-based peer-reviewed science to back up the decisions.</p> <p>I have lived in Florida and there are many turtle nests on the Florida beaches. They are marked and sometimes moved to protect them, but they do not close large areas of beach because of the turtle nests. I do not agree with closing the beaches and restricting night driving because of the turtle nests. I think a better management plan would be the use of a volunteer night watch program (I know there are programs like this on other North Carolina beaches such as Holden Beach) and nest relocation. There is evidence that these programs work.</p> <p>I do not understand why the National Park Service is killing off some species to protect others. I do not agree with the predator management program and think if one species is to be protected they should all be protected.</p> <p>I don't see any substantiated evidence presented that shows that the way the park was managed before the lawsuit was inadequate to protect the wildlife and natural resources. I think the energy put into restricting visitor access to this beautiful National Park that is paid for by my tax dollars would be better used if put towards an education program. I see no reason why we cannot enjoy the beaches and protect the wildlife. These are not mutually exclusive activities. I do not feel that the recommended alternative F protects my rights to enjoy the land set aside as a recreational area.</p>

Correspondence:	<p>I agree with the statements in support of Beach Access made by Senator Basnight & Representative Spear in the letter they have submitted to you. Please do everything possible to preserve public access to the beaches. I have been going to Hatteras on family trips since I was an infant and have raised my son to do the same! We have spent countless hours-day and night fishing on the beach, camping at Cape Woods and the federal campground near the Cape Hatteras Lighthouse, swimming, fishing, shell collecting, star-gazing. Since the closures began a few years ago-our trips to Hatteras have greatly decreased. It seems all of the best fishing areas are the ones roped off and or closed at the point and Hatteras Inlet. Please keep the beaches open for everyone to enjoy! Tina McPherran</p>

Correspondence:	<p>I am both a full-time resident of Hatteras Island and also the owner of three vacation rental properties on the island. I substitute teach at Cape Hatteras Secondary School of Coastal Studies. I have learned through the years that the beach and access to the ocean and sound are a vital part of life for island residents and tourists. Please note that the school is even titled "School of Coastal Studies". On any given day you can see how limited beach access is to our residents and tourists by the number of cars parked up and down HY 12 of people attempting to access the water. Can you imagine how many cars will line Highway 12 and the various oceanfront housing additions if beach access is limited even further? My daughter was recently involved in a costly accident when one of those cars did a u-turn directly into her vehicle on her way to work. People are concerned with the safety of vehicles on the beach when we already have a safety problem on HY 12 which will only be exacerbated if beach access is even more limited. Please remember that not every resident is fortunate enough to own waterfront property but every resident lives here because they love this area and want to enjoy the same water that tourists come here to enjoy. Access to the beach and sound are vital to the continuation of our tourist industry, the safety of our residents and the future of our children. There are very limited activities for the youth of our island. If you limit their access to the beaches even further what alternatives are there for them to stay out of trouble and to stay on this island. I too care about the welfare of the birds and turtles as all islanders care about the health of our island and wildlife but we have to put people first. PLEASE consider the safety and well being of the majority of residents and tourists.</p>

Correspondence:	<p>Dear Superintendent Murray,</p> <p>As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. This approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.</p> <p>1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take</p>				

precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."

2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... the said area shall be permanently reserved as a primitive wilderness..."

Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.

3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.

Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
In fact, I'd rather see no vehicles at all on the beach. It's dangerous for people, wildlife and the landscape equally. Someone was killed here in Florida,

hit by a vehicle on the beach. You've got little children, families, old people. Driving on the beach is a ridiculous idea and if people want to drive vehicles of any kind they can use a road. That's what they are there for. I don't like the idea of vehicles destroying national seashores. Even walking on dunes is a disturbance. Dunes and seashores are fragile environments that are easily disturbed and degraded. The more you let this environment be degraded, the less national seashore you end up with. You'll have less and less what with global warming and rising seas, which is not a myth.

* Put Natural Resources First. I am an Audubon member, so MY FIRST PRIORITY IS PROTECTION OF THE CREATURES, BIRDS, SEA TURTLES, ETC. If humans want to go around driving and ripping up the landscape, let them do it on private property, not in my national seashore. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.

Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: DEIS
I am strongly opposed to the National Park Service's Alternative F for several reasons. First, the requirement that corridors are only allowed in ML-2 portions of SMA's and are subject to resource closures at any time are not reasonable (Pages xii, xviii, and 468) Such corridors are a vital tool in providing access while managing resources. They provide a small path around temporary resource closures in order to provide access to open area that would otherwise be blocked. Corridors should be permitted throughout the seashore during the entire breeding and nesting season including ML-1 portions of SMA's. These corridors would provide valuable access without impairing or damaging protected resources!
Second, the NPS' buffers are larger than required by species recovery plans. For example, Piping Plover unfledged chicks, are given a protective buffer of a minimum of 1,000 meters in all directions. Buffers are an important management practice for species recovery. (Pages 121-127) However, to have long term benefit for the wildlife as well as the public which uses the beaches for recreation purposes, buffers must be based on peer-reviewed science. For example, the Piping Plover, a species classified as threatened and not endangered, is given a level of unprecedented protection in Alternative F. A 1,000 meter buffer in all directions represents over 771 acres and is excessive above and beyond the additional benefits it might provide over a 200 meter buffer. The DEIS does not cite any peer-reviewed science in supporting such closure. A more appropriate & reasonable buffer would be 200 meters
Third, non-endangered species, such as American Oystercatchers, Least Terns and Colonial Waterbirds are granted pre-nesting closures and buffers up to 300 meters. (Pages 121-127) However, birds that are not listed as endangered should not be afforded the same level of protection given to ESA (Endangered Species Act) protected species. Instead of 300 meter buffers for these birds, a more appropriate buffer would be 30 meters. Also, all birds in the same ecosystem of the seashore should be counted, including all of the birds on the dredge and spoil islands located just yards away and within sight of the seashore.
Finally, DEIS claims North Carolina Wildlife Resources Commission turtle guidelines will be followed. (Pages 125, 392-396) As an alternative, the NPS on Hatteras Island should utilize turtle management practices successfully used by the NPS on Padre Island as well as other areas. More proactive measures include relocating nests to more desirable locations, which is routinely and successfully done in other areas. Moreover, the Park Service could dig up and relocate unhatched turtle eggs to the state aquarium at Manteo, incubate the eggs in a protected environment, and then release the hatchlings on a predetermined day. The result would be far more effective in protecting/increasing the turtle population while simultaneously fostering good-will and support of both the community as well as the multitude of tourists who annually visit the Cape Hatteras National Recreation Area. Below attached is a description of the relocation and release program used at Padre Island National Seashore to increase the turtle population: "Sea Turtle Hatchling Releases"
"Eggs from most sea turtle nests found at Padre Island National Seashore and northward along the Texas coast are transported to the Padre Island National Seashore incubation facility for protected care and monitoring and the hatchlings are released at the northern end of Padre Island National Seashore. However, eggs from some of the nests found at the southern end of Padre Island National Seashore are incubated in a screen enclosure called a corral, located at the base camp near the National Seashore's 40 mile marker, and the resulting hatchlings are released there. Eggs from nests found on South Padre Island and Boca Chica Beach are transported to a corral on South Padre Island and hatchlings emerging from those nests are released on South Padre Island. Hatchlings from the incubation facility and corrals are released after they enter an active state called a frenzy which occurs about 1-

3 days after the slow process of hatching is first detected. Hatchlings are guarded during release to ensure that they safely enter the surf. A few nests are not found on the Texas coast at egg laying and thus incubate at the nest site (in situ). Since these nests are not protected, they typically have a lower survival rate than protected nests. Public Hatchling Releases at Padre Island National Seashore Each year, the public is invited to attend 15-25 of the releases of hatchlings that emerge from eggs cared for at the Padre Island National Seashore incubation facility. These releases are open to the public free-of-charge and are held at the northern end of the National Seashore, starting at about 6:30-6:45 am. Hatchling releases are extremely popular with the public. Thousands of people attend each year. Local citizens attend in large numbers, as do visitors from out of town."

Since this program has been proven to be successfully implemented on Padre Island for years, why has it not been considered as a viable alternative on Hatteras Island? For all of the above cited reasons, it appears that Alternative F is more punitive than protective. I strongly urge the National Park Service to reconsider its current position and instead support Alternative A. Until Judge Boyle's Decree, the rules that were observed by the NPS and the public resulted in a balance of protecting both wildlife and the environment while also affording humans the opportunity to enjoy the resources of Hatteras Island. In the time since the imposition of the Decree, the positive impact on the piping plover and sea turtle populations has been negligible when weighed against the stringent rules and restrictions on beach utilization imposed on the human population.

Correspondence: I grew up going to Myrtle Beach every summer. We camped at Lake Arrowhead and loved it. As it became more of a tourist town, I stopped going. I then tried Daytona Beach and was shocked that cars were allowed on the beaches. What an awful experience. I then tried Hilton Head and really enjoyed it. I have also been to Cape Hatteras and enjoyed that beach as well. The bottom line: we need to have places where we can relax and enjoy nature, not worry about being run down by an ORV or car. I never went back to Daytona and would not return to Cape Hatteras if it was turned over to ORV's.

Correspondence: Dear Superintendent Murray,
As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.
1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."
2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness...."
Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.
3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.
I would also like to mention that as an avid ORV user myself here in Kentucky, I can first hand tell you about the extreme damage capable of being caused by irresponsible off-rovers. There are certain areas of the Daniel Boone National Forest here in Kentucky that are setup and designated for ORV use and travel. While these "trails" offer spectacular scenery and views not readily available to most, there are some people who do not see it as such. Every year more and more new and unauthorized trails are being created by ORV users that cause irreputable damage to our forestry. Knowing and seeing how such damage can be caused very quickly I fear that if ORV use is allowed free roam year round at Cape Hatteras there will be devastating damage caused. While I'm not against ORV use entirely, I feel that it should be limited and restricted to certain times and areas.
Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

Correspondence: Figure 1 submitted by Dave Wilson with his comments during the public hearing in Buxton, NC on April 26, 2010 shows the relationship between the number of Piping Plovers found on the Outer Banks and the named storms that have struck the Outer Banks from 1987 to 2009. The Piping Plover population began to decline in 1996. That same year the first named storms struck the Outer Banks in over a decade. Named storms made regular landfall on the Outer Banks for more than a decade after 1996. This evidence clearly indicates that storms, not off-road vehicles, have been the cause of the decline in the Piping Plover population. Because storms and not vehicles caused the decline in the bird population the "environmental impact" of any one of the proposed off-road vehicle management plans will be negligible. Placing broad new restrictions on the use of off-road vehicles on Hatteras Island is not going to cause the Piping Plover population to increase above its current level.
The "environmental impact" of any one of the proposed plans on the Hatteras Island economy will be devastating. Fishing and beach access are the two main reasons that most tourists visit Hatteras Island.
The final off-road vehicle plan adopted by the National Park Service should not restrict access to the beach any more than beach access was restricted during the decade from 1987 to 1996, when the Piping Plover population was at its normal historical level (see American Birds magazine, March 1980, volume 34, number 2, page 207) and co-existing with off-road vehicles.

Correspondence: My wife and I enjoy traveling the US in out RV. We are especially drawn to areas where we can enjoy our ATV.

I regards to Cape Hatteras National Seashore Recreation Area.

The NPS must formulate a plan that is consistent with the legislation establishing Cape Hatteras National Seashore Recreation Area. The enabling legislation for the Recreational Area states, in part, "said area shall be, and is, established, dedicated, and set apart as a national seashore recreational area for the benefit and enjoyment of the people and shall be known as the Cape Hatteras National Seashore Recreational Area". Therefore, it is important to balance resource protection with reasonable access for recreation.

Corridors are a vital tool in providing access while managing resources. They provide a small path around temporary resource closures in order to provide access to open areas that would otherwise be blocked. Corridors should be permitted throughout the seashore during the entire breeding and nesting season including ML-1 portions of SMAs. These corridors would provide valuable access without impairment or damage to protected resources.

Buffers, or closures, are important management practices for species recovery. However, to have long term benefit for the wildlife and the visiting public, buffers must be based on peer-reviewed science. For example, the Piping Plover, a species classified as threatened and not endangered, is given a level of unprecedented protection in Alternative F. A 1,000-meter buffer in all directions represents over 771 acres. The DEIS does not cite any peer-reviewed science in supporting such closure. A more appropriate & effective buffer would be 200 meters.

Birds that are not listed as endangered should not be afforded the level of protection given to ESA (Endangered Species Act) protected species. Instead of 300-meter buffers for these birds, a more appropriate buffer would be 30 meters. Also, all birds in the same ecosystem of the seashore should be counted. This includes all the many birds on the dredge and spoil islands located just yards away and within sight of the seashore.

The National Park Service should consider turtle management practices successfully used in other federal and state areas to achieve nesting success. More proactive measures include relocating nests to more desirable locations, which is routinely and successfully done in other areas.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.

This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.

The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.

* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.

* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I have saved my enire adult life to be able to buy a 4 wheel dive vehicle just so i can tavel from vA to the OBX. I purchased this truck in 2005 and was so happy that i could show this way of life to my chilren as my father did me. Since then as a family we make that trip almost every weekend that the weather is nice.Sometimes we make a day trip and sometimes we camp. Closing the beaches is killing a very special way of life and hurting the economy. It has already been a real hardship on us because after traveling for three hours we are not even sure where we can get on the beach and even if we will be able to get on the beach. I never understood why we needed to close the beaches for the birds and turtles because the whole time we have been going to the beach access at Oregan Inlet there has always been closed sections to preserve these nesting grounds so I don't understand why suddenly we have to close the beaches to do the same thing. And it appears to me that the only beaches that are being closed are the most popular and the ones that draw the most people. This seems more like a punishmet to me than anything.What are we being punished for? Teaching our children to respect the land and enjoy the beauty that has been given them?

Correspondence: Although I am not a resident of the Outer Banks, I visit the CHNSRA a minimum of 25-30 days a year. After reviewing the Draft Environmental Impact Statement, I was confounded by the fact that only 2 paragraphs of the 810 page document addressed the preservation of cultural practices specific to the CHNSRA, i.e. surf fishing for red drum, which happens to be the reason that I choose to visit. I feel that this minute level of explanation underscores my opinion that the National Park Service has undergone a paradigm shift from a position of managing the balance of species conservation vs. access maximization to an elitist position of doling out only bread crumbs of access to OUR national seashore. I think that the last 3 to 5 years has produced an adversarial relationship between the park service and residents/frequent users of the seashore. I wonder if this may be the reason that so little of the DEIS pertained to cultural preservation. With this in mind, please consider the following point.

1. I feel that the restrictions on night time driving are excessive. I feel that you are wasting users, such as myself, as a resource. I spend the entire night on the beach, specifically the beaches of Ocracoke, for a minimum of 30 DAYS A YEAR. I am a responsible ORV user. I follow the rules. I love the dynamics that change and shape the CHNSRA. I would love to take an annual class and be certified on how to recognize and report turtle nesting or bird breeding behavior in order to have more vehicular access to the beach at night. I would love to participate in species management. I would pay several hundred dollars for a permit in addition to having to participate in a training course in order to have more access (specifically night time access). By using the proposed night time driving restrictions laid out in the DEIS, you put me on the sidelines and waste a valuable resource. I have read the data on ORV related turtle loss, and I'm sure that the NPS has also. I know that every turtle egg counts, but why waste a valuable resource for data collection and policing the beach at night when the park service has only limited patrols when so few incidents have occurred over the last 10 years? I guess the NPS feels that it is easier just to tell ORV users that we can't be there and ignore the negative economic impact.

2. I am disappointed in the lack of scientific evidence for the proposed buffer zones under the DEIS. I am especially infuriated by the extreme nature of the buffer zones and closure recommendations for non-endangered species. Where do these numbers come from? What evidence was used to obtain them? I am a clinical pharmacist and all of my medical decision making is based on the best scientific evidence available. If NPS is going to cause the complete economic collapse of OUR Outer Banks and end access to OUR national seashore, where is the smoking gun that necessitates these kinds of measures? Weather and predator related hardship on nesting birds overwhelmingly represents the cause of loss of most nesting birds. I have read the data. Once again, I guess it is easier just to have the elitist mindset that ORV users will just have to take what they can get and tell ORV users that we can't be on the seashore, instead of implementing measures such as travel corridors, for example. As an ORV user, I am willing to participate in training courses or purchase permits to be able to navigate sensitive areas, but I guess NPS isn't even interested in having me involved.

Please stop wasting me as a caring steward of the CHNSRA. Please continue to give me a chance to show how much I love the island of Ocracoke and the greater Outer Banks. Please remember that not all surf fishermen are hot heads from Buxton. Responsible access is not a crime.

Correspondence: My comment, one point of view: The National Park Service preserves unimpaired the natural and cultural resources and values of the national park system for the enjoyment, education, and inspiration of this and future generations. The Park Service cooperates with partners to extend the benefits of natural and cultural resource conservation and outdoor recreation throughout this country and the world. Future generations, so that my children and their children can enjoy the same experiences that I have enjoyed, as following the schools of fish up and down the beach in my vehicle, trying to capture that special moment on camera or rod and reel. There is much joy watching the expressions on a handicap friend who for the first time is able to cast into the surf and catch a big bluefish at the Point where the currents meet creating a spectacular view. There is much beauty walking barefoot in the sand, during the day or on a moonlight night, enjoying your surroundings, watching the wildlife, waves and the minute by minute changes of water and sand. The experience of assisting the commercial fishermen who working there nets and make their living on our water and beaches, or the listening of an Interpreter explaining to my child, the hatching of a turtle as it crawls from the depths of the sand. There was a day when you could cross the Bonner Bridge, make a left, past the Oregon Inlet Coast Guard Station, drive through the campground and drive all the way to Buxton without passing but a few vehicles. Then, Fish and Wildlife, mandated to protect the wildlife, manage the Park Service Land, and close the area to vehicles, a haven for plovers and turtles, Pea Island it is. Today, most everyone owns a four wheel drive vehicle and many want the experience of driving on the beach and enjoying the environment as we have done. There is a definite need to properly manage vehicle use due to the number of visitors. I am in favor of a permit system that would manage the numbers as a compromise. I am in favor of keeping the beaches open year round for vehicles and public access day and night. I would be in favor of the document, "Coalition for Beach Access, Cape Hatteras National Seashore Recreational Area, ORV Access Environmental Impact Position Statement." I can say I have had the privilege to enjoy the open beaches of Cape Hatteras National Seashore for the majority of my lifetime. It is my hope, that my children and their children and future generations are able to share the same experiences.

Correspondence: I do not know if CHNS actually has the option of exercising the "no-action" Alternative A, but I would like to voice support for properly institutionalizing the Interim Protected Species Management Strategy as the best Alternative of all those offered in the ORV EIS document. As a long-time visitor to CHNS, I have felt that the managers of CHNS were doing a good job of balancing species protection and recreational use of the beach prior to the lawsuit filed against CHNS by the Audobon Society & Defenders of Wildlife. The restrictions imposed by the Consent Decree and those in the CHNS preferred Alternative F are a draconian response to ORV management and are not supported by practical facts. For example, I see in the EIS that, for the Southeast Region, Piping Plover breeding pairs increased from 158 to 333 (more than doubled) from 1986 to 2008. That averages an increase of 8 pairs/yr. for the 22 year period. At that rate, the regional goal of 400 breeding pairs would be achieved in just 9 more years. That statistical trend does not suggest a failure of wildlife management or that Alternative F's extreme measures (such as the 1000 meter buffer areas, year-round ORV closure of False Point in Hatteras Inlet, etc.) are necessary. Moreover, the NCWRC has stated that NC listed "species of concern" should not be used as triggers for beach closures. The EIS acknowledges that the Cape Point and the spits at Oregon, Hatteras and Ocracoke inlets are the most preferred and productive places at CHNS for surf fishing; they are, in fact, among the most treasured public fishing places along the southeast coast and access to all of them is necessary to allow for a variety of fishing experiences under different wind and tidal conditions. A balance needs to be achieved between allowing reasonable recreational access to these places and the NPS's legitimate mission to preserve threatened species. Why should these valuable public recreational resources be so severely restricted when there are so many miles of public seashore that are completely closed to ORV use, such as at Pea Island National Wildlife Refuge (PINWR) and at the Core Banks? Unless there are specific scientific studies that show that that a particular species' existence is in jeopardy and that full beach closures like those at PINWR and the Core Banks are effective and necessary for achieving species survival, then a rational case for such restrictive measures at CHNS has not been made. I can certainly live with some compromises that are scientifically demonstrated to be necessary to protect the beach life we treasure. I am a scientist (but no biologist), so perhaps some reasonable limits on night-driving during turtle nesting season are an example. But the Preferred Alternative F is, overall, an unreasonable approach to ORV management and I do not support it. Since CHNS is required to prepare an ORV management plan, please style it as a more balanced approach, more like what CHNS was doing under the Interim Protected Species Management Strategy.
Respectfully submitted, Scott Nelson

Correspondence: I am very concerned about the effects that the proposed beach restrictions would have on the beautiful Outer Banks of North Carolina. The negative economic impact due to fewer visitors and the loss of our ability to enjoy this wonderful national resource will be very significant.

I agree that the Piping Plovers should be protected, but think that the 1,000 meter closure around an unfledged chick brood is excessive and should be reduced to an area that is less restrictive to pedestrian and vehicle access while still providing a margin of safety for the nests. On the U.S. Fish & Wildlife Service's website, the management practice for the Piping Plover in the New England area is to "Install a symbolic fence around plover courtship habitat and at least 50 meters from Plover nests. This will prevent disturbances to nesting adults, protect eggs and provide a safe place for newly hatched chicks".

I would like to suggest that the Park Service develop habitats on the island which are away from the prime fishing spots for breeding areas for the Piping Plover.

I agree that pets should be on 6-foot leashes when on the beach, but do not agree that pets should be banned completely from the beach. I would like to know the rationale for this proposal, as it does not seem like a dog that is being supervised on a 6-foot lease is a threat to the roped-off nesting areas of protected birds or turtles.

Thank you for your time and consideration to these comments on this very important subject.

Very Sincerely,
Richard Grenoble Sharon Grenoble

Correspondence: I strongly disagree with the proposal being supported by the NPS. I do believe that a proper economic impact study should be done focusing only on the towns most effected by the closures (Rodanthe, Waves, Salvo, Avon, Buxton, Frisco, Hatteras and Ocracoke). This will insure the numbers are not affected by including the northern beach towns. I am in favor of pets being allowed all year long. I am in favor of designating certain areas (cape point, hatteras inlet, north and south points of ocracoke, and bodie island spit) as primary fishing areas and therefore being allowed year round 24 hr. orv and pedestrian access to pursue our recreation. If a closure for an endangered bird is present, the use of an orv and pedestrian corridor should be provided to allow us to gain access to our prime spots. I am in favor of orv permits where the permit holder must have proper safety equipment.

Correspondence: Please remember that the public should not be "locked out" from our public resources. Common sense should allow access. The NPS must formulate a plan that is consistent with the legislation establishing Cape Hatteras National Seashore Recreation Area. The enabling legislation for the Recreational Area states, in part, "said area shall be, and is, established, dedicated, and set apart as a national seashore recreational area for the benefit and enjoyment of the people and shall be known as the Cape Hatteras National Seashore Recreational Area". Therefore, it is important to balance resource protection with reasonable access for recreation. Corridors are a vital tool in providing access while managing resources. They provide a small path around temporary resource closures in order to provide access to open areas that would otherwise be blocked. Corridors should be permitted throughout the seashore during the entire breeding and nesting season including ML-1 portions of SMAs. These corridors would provide valuable access without impairment or damage to protected resources.

Correspondence: The NPS must formulate a plan that is consistent with the legislation establishing Cape Hatteras National Seashore Recreation Area. The enabling legislation for the Recreational Area states, in part, "said area shall be, and is, established, dedicated, and set apart as a national seashore recreational area for the benefit and enjoyment of the people and shall be known as the Cape Hatteras National Seashore Recreational Area". Therefore, it is important to balance resource protection with reasonable access for recreation. Vehicle and Pedestrian corridors are a vital tool in providing access while managing resources. They provide a small path around temporary resource closures in order to provide access to open areas that would otherwise be blocked. Corridors should be permitted throughout the seashore during the entire breeding and nesting season including ML-1 portions of SMAs. These corridors would provide valuable access without impairment or damage to protected resources. Within every open area, there has to be some restriction. Buffers, or closures, are important management practices for species recovery. However, to have long term benefit for the wildlife and the visiting public, buffers must be based on peer-reviewed science. For example, the Piping Plover, a species classified as threatened and not endangered, is given a level of unprecedented protection in Alternative F. A 1,000-meter buffer in all directions represents over 771 acres. The DEIS does not cite any peer-reviewed science in supporting such closure. A more appropriate & effective buffer would be 200 meters. I would also like to add that birds, not listed as endangered should not be afforded the level of protection given to ESA (Endangered Species Act) protected species. Instead of 300-meter buffers for these birds, a more appropriate buffer would be say 30-50 meters. Also, all birds in the same ecosystem of the seashore should be counted. This includes all the many birds on the dredge and spoil islands located just yards away and within sight of the seashore. Finally, the National Park Service should consider turtle management practices successfully used in other federal and state areas to achieve nesting success. More proactive measures include relocating nests to more desirable locations, which is routinely and successfully done in other areas. With cooperative efforts on both accounts of the National Park Service, and the users and visitors to the Cape Hatteras National Seashore, man and nature can coexist with no problems. Also, with proper involvement of Land Use and OHV Groups, better education and information could be made more readily available to the users of this area. I would appreciate any and all comments, and welcome the chance of further communications with the National Park Service.

Correspondence: Hello my name is Greg and I live in Salvo, a village within Cape Hatteras National Park. I have a few comments concerning the Alternative F governing plan put forward by the NPS. I do not agree with the NPS view that visitor experience to the park could be affected by conflicts between motorized and non-motorized recreation users. My research has shown to me that in a 10 year history, there has only been one minor incident involving a stuck vehicle and a pedestrian. The driver was not blamed by any parties involved, nor was he charged. I do not agree with NPS policy to refuse to acknowledge that Pea Island NWR is an excellent area for pedestrian only access. The beaches are often very close to the road. In other cases there are visible trails from the side of the road through the brush/grass to the beaches. These beaches are much easier to access, for pedestrians, than the beaches within the NPS, which often have no means of access other than the ramps(no trails) which are subject to closure to all traffic, pedestrian as well as ORV. I do not agree with the NPS view that even with resource closures in place, protected species are still at risk(from pedestrians and ORVs). I have have seen no data to show that any Piping Plover deaths have been attributed to civilian ORVs. I have been informed that 26 of 29 Piping Plover deaths have in fact been at the hands of government officials/volunteers. I do not agree with the NPS view that South-facing villages such as Frisco, Hatteras and Ocracoke should have a shorter Off-season, September 15 to May 15, than other areas. Seasonal visitor statistics are similar in all of the villages. I do agree with the opinion that ORVs have long served as a primary form of access for many portions of the beach in the seashore, and continue to be the most practical means of access and parking for many visitors. The enforcement of pedestrian only accesses discriminates against many visitors. People with physical disabilities, elderly adults, groups with infant/young children, and groups with recreation equipment(surfboards, fishing gear or coolers with food or drinks). Many people who visit the seashore do it as an all day event and rely on their ORVs to transport these items, rather than the multiple 300-500 yard trips across the hot sand. It is also possible that the REMOVAL of ORV access will likely cause much more congestion at choke points such as parking lot areas. ORV access allows people to spread out and allow for less congested areas. I do not agree with the plans to move ramp 2 to 0.5 miles south of Coquina Beach. It is my opinion that this would be an exercise in financial irresponsibility. The money could be better spent to enlarge the parking lot and provide pedestrian and handicapped accessible ramps to the beach.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
As native Floridian, I find the entire idea of motorized vehicles on the beach bizarre. I spent a good portion of my childhood on the beach in the Tampa/St. Petersburg area and the Ft. Myers area. There were no vehicles allowed on the beach, and all the beaches had plenty of people enjoying the sea. ORVs are not needed to enjoy a beach, and I think vehicles should be banned completely from the beach. I have visited Hatteras, and the entire time my sister and I were walking on the beach, trying to enjoy ourselves, we kept feeling as if we were about to be run over. ORV drivers seem to think they own the beach, and the beach belongs to all of us. Why do I have to feel unsafe so they can drive where vehicles really have no place being? Many residents of Hatteras claim that their economy is entirely dependent on people being able to drive on a beach. Has anyone ever studied how many more people would come to Hatteras if they did not feel like they were going to be run over while trying to enjoy the sand? How much do non-ORV users such as birders bring to the local economy?
The ORV use is also placing wildlife in danger. People, birds, turtles, and other wildlife are in constant danger due to ORV use. Animals can get out of the way of a pedestrian, but it is harder for them to get out of the way of a truck. Many of the animals that come to Hatteras are endangered. Since when can the Endangered Species Act be disregarded simply because someone wants to fish from a truck? The wildlife needs to be protected. The National Park Service needs to do its job and protect wildlife. National Parks are supposed to be places where people can enjoy nature and wildlife, not a place where gas guzzling machines destroy wildlife.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only

16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.

* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.

* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: National Park Service, and legislative members of the State of North Carolina, Federal Legislators, local business owners and the fine residents of Hatteras Island. As a Federal tax payer and a tax payer of the State of North Carolina(when Im visiting), I find it a sorrowful act that you want to cut off and close theses beaches where so many people call it home and one of the great vacation lands in these United States of America. Businesses are being closed, vacation homes not being rented, or lost, foreclosed on. The State of North Carolina will and or are losing state tax dollars because of these closings or acts of closure.. We need to find a happy medium between wildlife and human existence on our beaches and environmental areas . Keep buffers alive and nesting areas, closed, vegetation areas safe, but do not close it to the very people that live there, and visit and keep the economy alive and bring it back to prosperous times.. I was once a resident of Kitty Hawk, NC... One of the best experiences I have ever had. Living there was great, and enjoyable time. I have been visiting the Outer Banks since I was 7 years old.. From camping at the Federal Campground, in Salvo, years back to Oregon Inlet,Frisco, Buxton campgrounds.. My children come to this very day, and have grown up vacationing on Hatteras Island. I have surfed every spot on that Island, respected the beaches, trash pickup, Surfriders Foundation, Stayed at the Outer Banks Motel,rented homes from Beach Realty in Rodante, Foodlion Store in Avon, etc. My money spent on local businesses there, keeping the economy alive there as well. It will be a sad day if these beaches are closed to the American public they pay for the very land they want to live on , recreate on,and just plain ole visit.. It will become a vast open area. The people will move, businesses will come to a stand still, go under. Homes and people will vanish.. It will be a sad loss for everyone concerned.. Now I know how our Native Indians must have felt when being pushed from there lands and homes when the white man came to this country.. Hear us , and hear us NOW !!!! No to the closings of our beaches !! Let the public speak, hehar our CRIES !!!! As a tax payer, I pray that this will not happen and I pray for the residents of the State of North Carolina, and these people who love so dear these Outer Banks of Hatteras Island..A history of Ocean,land,wildlife,and hard working tax paying citizens of this country. God bless us all, Scott P. Emerson..Henrico , Va

Correspondence: Dear Superintendent Murray,
 ORV's do not need beautiful wild beaches to ruin. There are plenty of areas that are ruined already. Say an old open pit mine. They do not know the difference.
 As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.
 Please adopt a modified Alternative D of the draft Environmental Impact Statement. ORV's do not belong on wild beaches. There are plenty of pits and old strip mines for them. They do not care wear they ride. They just want noise and excitement. It does not take a wild beach for that.
 1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."
 2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness..."
 Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.
 3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.
 Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
 My personal view is that NO PARK, BEACH or other precious area and its very important ANIMAL LIFE should be subjected to vehicles, least of all noisy ones. Special areas should be reserved for the natural inhabitants and humans who respect land and wildlife.
 This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
 The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
 *Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
 * Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
 * Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. Correspondence:	When I heard that the NPS was considering Off road Vehicles (ORV) for Cape Hatteras National Seashore I really was mystified that you would even consider the idea! My memory of my childhood trip with family there is still vivid to me and very precious. The National Seashore is a treasure and should be treated as such. Careful management of it should include access to pedestrians only and to management of the wildlife there , of which there are many: birds,mammals,plants and sealife of all kinds. Allowing Off road vehicles would without a doubt destroy any efforts in the management of wildlife and destroy the balance of the environment. I urge you to think only of how important it is to maintain the natural state of the Cape Hatteras National Seashore. It is your duty.

Correspondence:	I am a 20 year visitor and 14 year owner of property on hatterus island. I have reviewed the DEiS and I wish to express the position the NPS is suggesting will create economic hardship (to local business, rental property, decline in property values and a decline in property/business tax revenue). I fully support preservation of fragile environment and endangered species, but without a well thought out plan, no one will come to the area and provide the necessary effort and economic support to make a DEIS a success.This plan must balance resource management and the community welfare. I believe that free and open beaches can be maintained if pass through corridors be included in management buffers (reference page xii,xvii,and 468 of DEIS). Buffer zones (pg 121-127) should be set up for endangered birds/species identified by federal designation and be sized based on peer reviewed science. The 1000 yard buffer proposed is not supported by science and literature can support buffer zones that provide are much smaller and would benefit the endangered species and the community welfare. Successful turtle management practices (like nest relocation) in states like Florida are not fully incorporated in the DEIS (pg 125, 392-396). Non endangered birds/species should be valued but not be sited to have buffer zones that create restricted access to beaches. I hope that the NPS can identify that people need access to our wildlife resources to truly appreciate its value and be inclined in to make the investment needed to preserve the resourses. The outer banks community have been the leaders in preserving these resources over the years and they are fully aware that they can not survive if they abuse them. Please take the time to here their pleas and incorporate some input so that future generations will partake and want to preserve in vital resource. Thankyou, Daniel Van Ripper

Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points. 1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations." 2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness...." Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources. 3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals. Over the last few nights my family and myself have been watching the special on all our National State Parks.How wonderful that a few special people saw the beauty that needed to be saved. I pray now, you change your mind and realize how having these off road vehicles will only destroy a much needed habitat for many different wildlife. Because of man, right now in our Gulf we may lose countless wildlife.Like the brown pelicans that nest's at the Bretons National Refuge,where as of Friday the oil spill had reached it's shore line. Then there's the sea turtles and laying their eggs, let's just say no to any off road recreational vehicles. Please keep Cape Hatteras National Seashore protected for the wildlife that so depends and needs it. Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan. Thank you for your time to read my letter.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: The NPS must formulate a plan that is consistent with the legislation establishing Cape Hatteras National Seashore Recreation Area. The enabling legislation for the Recreational Area states, in part, "said area shall be, and is, established, dedicated, and set apart as a national seashore recreational area for the benefit and enjoyment of the people and shall be known as the Cape Hatteras National Seashore Recreational Area". Therefore, it is important to balance resource protection with reasonable access for recreation. Corridors are a vital tool in providing access while managing resources. They provide a small path around temporary resource closures in order to provide access to open areas that would otherwise be blocked. Corridors should be permitted throughout the seashore during the entire breeding and nesting season including ML-1 portions of SMAs. These corridors would provide valuable access without impairment or damage to protected resources. Buffers, or closures, are important management practices for species recovery. However, to have long term benefit for the wildlife and the visiting public, buffers must be based on peer-reviewed science For example, the Piping Plover, a species classified as threatened and not endangered, is given a level of unprecedented protection in Alternative F. A 1,000-meter buffer in all directions represents over 771 acres. The DEIS does not cite any peer-reviewed science in supporting such closure. A more appropriate & effective buffer would be 200 meters. Birds that are not listed as endangered should not be afforded the level of protection given to ESA (Endangered Species Act) protected species. Instead of 300-meter buffers for these birds, a more appropriate buffer would be 30 meters. Also, all birds in the same ecosystem of the seashore should be counted. This includes all the many birds on the dredge and spoil islands located just yards away and within sight of the seashore. The National Park Service should consider turtle management practices successfully used in other federal and state areas to achieve nesting success. More proactive measures include relocating nests to more desirable locations, which is routinely and successfully done in other areas.

 Re: Request for the suspension of ORV usage on Cape Hatteras National Seashore, Comments on the Cape Hatteras National Seashore DEIS.
 Dear Superintendent Murray,
 Thank you for the opportunity to comment on the National Park Service's proposed plan to manage off-road vehicle use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" alternative D if modified to provide greater pedestrian access.
 This alternative plan would allow for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me. According to alternative D, visitors to the seashore would have the maximum amount of predictability regarding areas available for ORV use and vehicle-free areas for pedestrian use. Restrictions would be applied to larger areas over longer periods of time to minimize changes in designated ORV and non-ORV areas over the course of the year. Comparing this alternative to alternative A, which would involve no action, and few restrictions on ORV driving on beaches would have detrimental affects on the landscape and wildlife of this area.
 Below is a discussion of why alternative D would be more suitable for this landscape in regards to the landscape and wildlife, comparative to other alternatives, more specifically, alternative A.
 In the discussion of alternative A, harmful impacts of ORV usage may be long-term major in regards to piping plover and wildlife. Compared to the impacts of alternative D, which are long term negligible to minor, and may actually provide beneficial impacts to that of wildlife and the natural landscape. With regards to visitor use and experience, alternative A only provides long term negligible to minor impacts with the consideration of usage. Alternative D, as far as socioeconomic concerns, would create a greater likely-hood of beneficial adverse impacts for small business. Furthermore, it is long term beneficial, comparative to all other alternatives. With the collection of all of these impacts, alternative D would be more suitable for wildlife, landscape, visitors and small business owners.
 Other alternatives besides alternative A, would also not create the appropriate balance between the users of the seashore and its wildlife. Alternative B, is similar to that of alternative A, which implies no action, therefore further harming wildlife, and would have significant impacts on the landscape. Alternative C would have similar impacts as to that of alternative A and B, therefore not providing the adequate protection of the seashore. Alternative E, though proposed to have maximum management of the area would still allow for ORV usage, and is the most costly of all of the alternatives. With alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of seashore beach, which would create an unfair balance. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, alternative D's approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
 Once again, thank you for the opportunity to provide comments on the Cape Hatteras National Seashore draft environmental impact statement. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balance final plan for all visitors that better protect protects the natural resources of the seashore.

Correspondence: Dear Superintendent Murray, Cape Hatteras National Seashore is a beautiful place for families to come out to enjoy the beach and ocean. I believe that off road vehicals would be a bad idea for this area of beaches. The damages could last for years. I think you should consider the wildlife and vegetations that live there. Thank You.

Correspondence: In the limited time that I have had to read and try to understand the DEIS I have come to the conclusion that I am opposed to the Alternative F that the NPS prefers. The Species management areas are not warranted as are the 1.5 mile floating closures. These areas are designated for birds that are not entitled to federal protection under the Endangered Species act and it is not the intent of the State for them to have this extreme amount of protection. These areas will cause already congested areas to be more congested and thereby decrease the visitor experience. I am in favor of the proposed additional ramps and interduneal road with ocean access as proposed by the coalition for beach access. I would also support the buffer zones proposed by the coalition. These buffers would be flexible in nature and provide for food foraging for the bird and access for the visitor. The 5 year periodic review is inadequate. The shore of Cape Hatteras changes far to quickly for breeding areas and ORV routes to be reviewed only once every five years. An annual review would be the minimum time for review of the plan. Current closures under the consent decree have been a direct cause of the loss of human life. With no visitors on the beach in the areas of the spits, a safety factor for the commercial and recreational boaters has been removed. Problems seen by beachgoers are reported to the US Coast Guard and rescue efforts implemented within minutes instead of hours after the incident. The NPS needs to change the policy on protecting turtle nests. With over 40% of the nests being lost to over wash nests located in those areas should be moved above the flood line. This would protect the nest and allow access for the visitor. Cape Hatteras was established as a national recreational seashore. Service policies may change but the law has not. The proposed alternatives are not in favor of a Recreational Experience they are in favor of wildlife management. The beauty of Cape Hatteras by virtue of being federal land and not open for development will protect the natural landscape now lets protect the Recreational experience afford by the Island and our national park.

Correspondence: Dear Mr. Murray, Superintendent

I am happy to be an American and have the opportunity to express my views. I also want to say that I appreciate your willingness to welcome comments on this issue that has been controversial for several decades.

I disagree with the NPS statement that even with resource closure, protected species are still at risk from pedestrians and ORVs.

I do agree with the NPS statement that ORVs have long served as a primary form of access to many portions of the beaches along the seashore. Many locals and visitors enjoy the unique opportunity to drive on the beaches.

I do support a reasonable closed area for bird nesting and believe that locals and visitors would be respectful and protective of such small areas.

However, the 1,000 meter distance is too large. Second, the enforcement and punishment of trespassers (tire tracks or broken roped off post)of extending restrictions are clearly unfair. NPS needs to monitor and prosecute such individuals rather than punishing everyone in general.

The economic impact of beach closure and closure of Cape Point greatly affects our business economy. Many locals are employed in vacation property management and many homeowners rely upon rental income to support their investments.

Likewise, the restriction of pets accessing the beaches, campgrounds and soundfront is unfair and unnecessary. The majority of pet owners are

responsible individuals.

Finally, in restricted areas, beach access is still needed. A small access path or route could be provided.

I think a reasonable balance to this situation is possible and your attention and fair approach of protecting and not prohibiting is greatly appreciated.

Sincerely,

Stuart Pack Resident of Kill Devil Hills, NC.

Correspondence: ORV access must be maintained as there are no alternates to access the National Seashore. There is not enough parking and beach walk-overs to access the beach, ORVs are the primary means of access. My mother-in-law visits with us every year and has limited mobility. With my ORV she can access and enjoy Cape Hatteras National Seashore (CHNS). CHNS is a national park which provides recreation for people, it is not a wildlife refuge. To the north and south of CHNS are Pea Island and Portsmouth Island, which do provides refuge for wildlife. The size of the buffers for the piping plover are too large and restrictive, there should be a corridor to access the beach that will bypass the plovers. The shut down the entire south and north points of Ocracoke for a plover chick is ridiculous. Do not have fees for ORV use, instead use education and have mandatory training for how to safely operate their ORV within CHNS. I have been safely operating my ORV since 1998 on CHNS and have never been stuck nor struck any person, animal or object. I have faithfully served in the U.S. Army for over 26 years and am a career officer with combat tours in Iraq. During my deployments I count the days until I come home and can visit CHNS with my family. I have the utmost respect for the National Park Service and want to see the right thing being done to make CHNS a place for people to visit and enjoy for generations to come. I visit CHNS about 6 times per year and contribute to the local economy. Please continue to provide access for ORVs.

Correspondence: I understand much work has gone into creating the Alternatives A through F. I have a number of concerns about the Park Service's preferred alternative F. I disagree with the 1000 meter pedestrian/ORV closure in all directions for piping plover unfledged chick brood (p. 121-127). As stated in the Virginian Pilot on May 9,2010, "no scientific reasoning" has been presented "for this management strategy." The impact of this rule could cause closures not just in ORV areas but may close the beach in front of houses. The financial impact of visitors renting ocean front/ocean side houses and being unable to walk out on the beach in front of "their house" would devastate Hatteras Island. I disagree with the 300 meter pedestrian/ORV closure in all directions for any American Oystercatcher nest or brood, as the Oystercatcher is not a federally threatened species (p121-127). Again, the unnecessary closure of beaches and consequent lack of access to the beach and ocean for pedestrians (and ORVs)is not sensible. We own a beach front home in AVON, and if buffer areas are extended -- and used for non federally threatened species it is highly likely the beach would be closed in front of ocean front houses that visitors have rented. I disagree with the Alternative F rule that No pets, including dogs, will be permitted on Cape Hatteras National Seashore lands including the beaches between March 15th and July 31st (p 136). This rule has no benefit for the preservation of birds or turtles. If people are allowed in an area, than a dog on a leash is of no environmental concern. I have heard numerous times from visitors on the island that they come to Hatteras because we are "pet friendly" on the beach. Should this rule be put in place Hatteras Island's spring and summer business will be adversely impacted a. Additionally many year round homeowners have pets and walking on the beach is the only place to exercise dogs. We have very limited sidewalks and no walking trails on Hatteras Island. I agree that the NPS needs to have a viable management plan for OUR park lands. I encourage all involved to take a balanced approach.
Sincerely, Homeowner in Avon, North Carolina Heidi Kuster

Correspondence: As an avid angler on the North Carolina seashore, I am strongly opposed to the National Park Service (NPS) preferred alternative, Alternative F, in the DEIS and urge you to make significant changes to the preferred alternative in order to provide both reasonable resource protection and reasonable public access to public land. Recreational fishing is one of the most enjoyable American pastimes, and Cape Hatteras National Seashore has some of the best surf fishing locations on the east coast ? accessible only by ORV.
Alternative F is the most restrictive management option to date, far exceeding any sense of balance between resource protection and public access and betraying all promises made to the public regarding recreational uses in the seashore. The majority of the provisions included within the preferred alternative far exceed anything proposed by a majority of the Negotiated Rulemaking Committee, including excessively large resource closures (buffers), unnecessary year-round and floating closures, and the lack of access corridors around or through resource closures.
In order to restore balance to the DEIS, I highly recommend that the NPS revisit the proposal put forth to the Negotiated Rulemaking Committee in December of 2009. It provides the necessary protections for wildlife resources while having the support of a majority of the local community.
Without reasonable ORV access, responsible anglers like me, and the local economy that is supported by recreational fishing, suffer greatly. I urge you to provide a better balance between resource protection and recreational uses by incorporating the December 2009 recommendations from the Negotiated Rulemaking Committee into the preferred alternative.
Sincerely,
Colton R. West

Correspondence:	<p>I would suggest that we have 2 marked travel paths only on the beach with a speed limit of 6 mph. Also not take away the old road north of Rodanthe at the S turns for parking as it is needed for surfing parking. It will be increasingly dangerous situation especially in summertime. Also accessibility to the beach for foottraffic not taken away, If one could walk the high tide line in areas closed for bird closure as it would not affect the bird nesting. The closure of the beaches has been too extreme with lack of enforcement or extreme enforcement. Also better signs educating people to the delicate situation of bird nesting with pictures of the birds. President Nixon ordered this in 1974 and I cannot believe it took this long to set a policy. Also marked paths every 1/4 to 1/2 mile with a stairway over the dunes that could be retrieved on the ocean side in event of a storm washaway. Thank you.</p>

Correspondence:	<p>KEEP OUR BEACHES OPEN!!!! why is it that we must share our beaches and possibly loose access to them for these birds, BUT they aren't having to share themselves. obviously they are birds and can't actually be held responsible for their actions, but it seems CRAZY that they have the potential to ruin our entire island's economy! My husband and I are a young couple with a 2 year old. We just bought a house here on the island a few years ago because we've been here for years and love this place, and now we could loose it all because of these BIRDS!!!! Why can't we find a way to live with these birds rather than fight against them and everyone who is a part of trying to take away our beach access because of them??? There has to be a better solution. Our beaches closing will be absolutely detrimental to so many families just like ours who are fighting so hard as it is to keep a roof over our heads in this economic time! We depend on our tourism & this could take a major toll on the entire county. PLEASE, PLEASE, PLEASE find a better way, they are just BIRDS!!!! Do we all mean nothing???</p>

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I only go to the outer banks periodically, but two years ago when I was there and walking on the beach North of Cape Hatteras I was nearly run down by a pickup truck, and struck by a beer bottle thrown by one of the people riding in the back of the truck. IF the park service can't get rid of driving on the beach, which would be the best option, at the very least the park service should try to do a better job warning people to stay off the beach at times when driving is allowed. It is sad the the park seems more friendly to racing pickup trucks than to families. GET THE VEHICLES OFF THE BEACH. There is a perfectly good road along the cape for people to drive on, there is no need to have vehicles on the beach as well.

Correspondence: I do not agree that any part of the beach should be closed to pedestrian traffic should a nest for these such birds be found. It is my understanding that the nests for these birds are found away from the shore in between two dunes away from all pedestrian traffic.
I agree that if such a nest be found (actually found - not an assumption that one could be in that location) that the nest be protected with signs and ropes marking off an area of no more that 100 yards around said nest.At the present time miles of beach access is prohibited just on the assumption that a bird nest could be in that area. Bird nest protection should be handled in the same manner that turtle eggs are protected. The protection of turtle eggs works and the protection of these bird eggs would work if handled in the same such manner.
I do not agree that ORV should be prohibited on ramps 27-30, Hatteras Inlet or Ocracoke Inlet at any time of the year. Many tourist use these ramps to access the beach and these tourist will stop coming to Hatteras Island if they cannot use the beaches. This will be an economic disaster to the Island.

Correspondence:	This is a national park - how can you stop people from going to a national park - our taxes pay for this. My husband has been going down there to fish for over 20 years. The fisherman respect the land and the animals down there. Cant say that for the NPS - they are trapping and killing predators of these birds. Isn't there something called the "Circle of Life"? And why is it these bird lovers get access to the beach but fisherman and any one else can't? The fisherman pay for fishing licenses and for many other things. They really help the economy down there. These bird lovers get free access and dont have to pay for a thing. This is another way for the US Govt and organizations to control other people lives and livelihoods. Never in my life would I have thought that fishing and enjoying myself would be banned from a national park. These birds and wildlife have been there for years and will continue to be there for years - this is just an organization that doesnt like people to fish. Why wasnt these bird lovers in VA a few years ago when it was OK to kill as many of these birds as possible at the HRBT? These parks were set up a long time ago for people to HUNT, FISH, CAMP and Enjoy the outdoors. Please do not take this away from us. There are quite a few people who still enjoy being outdoors and enjoying these activities. Why is the US Govt/ NPS allowing a small group of people to dictate what every one else does?

Correspondence:	I am writing as a property owner in Avon, North Carolina. Please keep the beaches open. Closing them will devastate the local economy, which as you know is almost entirely tourism-based. Additionally, closing the beaches will further depress housing prices which are already off significantly and probably more then the rest of North Carolina and most of the country. Many of the local folks are already struggling to get by. I fear closing the beaches will only make their situation worse. Certainly a reasonable compromise can be achieved.

Correspondence:	I am a resident of North Carolina who enjoys recreational opportunities offered by the Cape Hatteras National Seashore and Recreational Area.Reasonable and safe pedestrian and vehicular access to the beach is essential to participate and enjoy these resources and opportunities. I also support restrictions and conditions necessary to protect the birds, sea turtles, and other biota that are supported by scientific data and can make the Seashore home for part of the year. I believe the favor alternative (#7) advanced by the NPS is more restrictive than necessary to meet the protection of the Seashore. I have read and agreed with the proposal to manage ORV's on the Seashore prepared and submitted for consideration by the Coalition for Beach Access. My position is that the NPS accept this alternative or at least postpone a final decision on the ORV plan pending further review and negotiation on the counterpoints raised by the Coalition for Beach Access.

Correspondence:	I am currently a homeowner on Hatteras Island have been visiting Cape Hatteras National Seashore for over 33 years. I agree that there needs to a					

predictable and fair plan for accessing our beaches. There are several items that need to be addressed that will help provide a balanced and reasonable plan to protect and provide access to our national seashore shores.

1) Large, inflexible buffers (p.121-127). These buffers that are being considered in the DEIS of 1,000 meter buffer in all directions for the piping plover is to large to allow a balance of human use of the seashore as stated in the original "Park Enabling Legislation". The DEIS does not cite any peer-reviewed science in supporting such large closures and these extremely large buffers are not used in other federal and state areas for the piping plover! A more appropriate & effective buffer would be 200 meters

2) Non-endangered species, such as American Oystercatchers, Least Terns and Colonial Water birds are given Pre-Nesting closures and buffers up to 300 meters. Birds that are not listed as endangered should not be afforded the level of protection given to ESA (Endangered Species Act) protected species. Instead of 300 meter buffers for these birds, a more appropriate buffer would be 30 meters

Following is an excerpt from a May 9, 2010 Virginian-Pilot news article by Catherine Kozak: This shows that the "species of concern" was not intended to be used as an additional ESA list.

*State-listed "species of concern," - such as the American oystercatcher - do not require the extensive buffers and beach closures mandated for federally listed species such as the piping plover, said Gordon Myers, the executive director of the North Carolina Wildlife Resources Commission. Myers said that's beyond the intent of the state law: the state designation is supposed to be more of a call to action for a species. The Wildlife Resource Commission, he said, will voice its objections to the use of state "species of concern" lists to trigger ORV management strategies under the federal Endangered Species Act.

3) Corridors are a vital tool in providing access while managing resources. They provide a small path around temporary resource closures in order to provide access to open area that would otherwise be blocked. In alternative F Corridors are only allowed in ML-2 portions of SMA's and are subject to resource closures at any time. In a more reasonable approach Corridors should be permitted throughout the seashore during the entire breeding and nesting season including ML-1 portions of SMA's. These corridors would provide valuable access without impairment or damage to protected resources

4) Turtle Management (Pg.125, 392-396) DEIS claims North Carolina Wildlife Resources Commission turtle guidelines will be followed. The National Park Service should consider turtle management practices successfully used in other federal and state areas to achieve nesting success. More proactive measures include relocating nests to more desirable locations, which is routinely and successfully done in other areas and this would allow better access to beach areas for visitors enjoyment and night driving and fishing.

5) Prohibition of Pets (p136) in the seashore during bird breeding season, including in front of the villages. No pets in public areas, beaches, campgrounds, sound-front, foot trails, park maintained roads from March 15 -July 31 The DEIS does not cite any peer-reviewed science supporting that such a ban on pets would have any positive impact on the breeding birds over the current rules of pets on 6ft leash.

6) Year Round Closures: Hatteras Inlet, North End Ocracoke Island, Ramp 27-Ramp 30 (Salvo) are set to be closed year round to ORV, I am most familiar with the Hatteras inlet area and this area does not have the characteristics of prime habitat for the plover and the other supposed reason for the closure was the need for a pedestrian only area. It would not be economically or environmentally feasible to pave "pole road" and create parking lots in a beautiful and natural setting at the Hatteras Inlet. The need for pedestrian only areas is addressed in adjacent 15 miles of beach on Pea Island, which never gets included in the amount of beach for pedestrian only and is also a wildlife refuge.

7) Economical Impact: the negative economical impact of the "consent decree" has been profound and well documented. Any projected financial losses from these changes will only affect the businesses that are on Hatteras and Ocracoke islands and the impact studies should reflect that and not be spread across the region to lessen the negative financial impact on the villages.

Correspondence: One final comment on the NPS DEIS. After reading the Turtle Management Plan just released by the Coalition for Access group I felt that I must make one more comment. It is becoming painfully obvious to me that the NPS DEIS and their preferred alternative are written solely to limit orv and pedestrian access to the Cape Hatteras beaches, rather than to protect the wildlife that also uses these beaches. I disagree with the DEIS in its entirety and request that the NPS use the draft environmental impact statement and the turtle recovery plan as provided by the Coalition for beach access and that the ORV plan provided by the Coalition be selected as the NPS preferred alternative. Management of the seashore as prescribed in the Consent Decree has not lead to increases in targeted species. Instead, it has lead to economic loss and loss of quality of life to the residents of and visitors to the Cape Hatteras Seashore. It has also lead to extreme visual pollution of these beautiful beaches caused by the uncountable number of signs that have been placed within the Seashore by the NPS over the past 2 years. One of NPS's reasons for being is to maintain the beauty of the lands they protect. They have failed miserably here, causing all of the visual pollution by their own actions. Please help us, the people who live and visit within the Seashore, to return it to what it once was..... a place to be loved and enjoyed by the people of the United States. It was designated by congress to be a National Recreation Area, not a National Wildlife Refuge.

Correspondence: The current orv plan going being voted on will destroy this island.
I am concerned about the following:
1. Not permitting access to the beaches eliminates the possibility of raising our children to respect the environment. This lack of knowledge will create generations of adults that do not respect the environment.
2. For some people, recreation on this island was the only form of relaxation in a work a day world. People will have a substantial source of happiness removed from their lives.
3. Killing predators while physically protecting the pray is playing god. This is wrong. I will personally do work to stop you from killing animals that are simply trying to live their natural lives.
4. Not allowing pets to be on park land is insane. The leash law protects the birds from dogs and should be enforced.
Please listen to these comments as you are beginning to destroy countless lives that depend on beach access.
Andrew Maxwell

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
 This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
 The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
 *Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
 * Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
 * Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
 Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

My wife and I have been vacationing on the outer banks since 1995, and decided to build our dream home, in which we would someday retire. Most of the reason we chose the outer banks, is of course the beaches, and access that we enjoy to those beaches to be able to swim, relax and fish with our family. We also rent out our home, and for the time being, is the only way we can afford to have a home in this beautiful place. We are not rich people who can afford to take a loss on the home if we have to sell it. If these beach restrictions go through as proposed, we will most likely lose most, if not all, of our rental income on the property, and this will have a devastating effect on my families' finances. The Cape Hatteras National Seashore is a "NATIONAL" seashore, set aside for recreation by the federal government, for use by the people of this country. I understand the need to protect wildlife, as I work for the New Jersey Dept. of Environmental Protection. I have never witnessed any person driving on the beach, or walking on the beaches that have destroyed any bird or turtle nest in all my years of coming to the Outer Banks. In fact, I see many more people concerned about the animals on the island and also many more people picking up trash on the beach, than I see people leaving trash. I love to fish, and am really worried that this will be taken away from me if your proposal implemented. Please dont let special interest groups, who have NO personal stake in this situation, take over Cape Hatteras National Seashore. There are so few places left like this that people can come and enjoy..We live in NJ, and we know what it is like to NOT have a place like Cape Hatteras to come to and enjoy. The effects of this plan will be devastating to the island and its residents and visitors alike. I dont understand why the National Park Service would ever allow this to happen to a place so many people come and enjoy? Isnt that the National Park Service's Job? to maintain our nations parks for people to come and enjoy them? What's next? will they close Yellowstone National Park and Yosemite to cars and vistors as well?
 Please help us, and everyone else who loves to come and visit this beautiful place...Sincerely. Tim and Doreen Nuss

Dear Superintendent Murray,
 Please do not approve off road vehicles (ORV) at Cape Hatteras.
 As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.
 1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."
 2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness..."
 Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.
 3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.
 Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

Correspondence: I dont think anyone has the right to stop people from fishing, hunting, camping and enjoying the outdoors. I love going down there and fishing. Why is it that the only place those bird lovers want is where the best fishing is? They have Pea Island - go there and watch the birds. Nothing gets said about that. or close the beaches down where people go and just lay on the beach. They leave trash and all kinds of things. The fisherman leave the beach clean and follow all the rules. They support the economy down there. These parks were set up to fish, hunt, camp and be outdoors. What gives Us Govt / NPS / and organizations a right to stop that? And talk about keeping the sacred animals alive - why is it that NPS and other people are allowed to KILL and

TRAP animals for a few birds? These birds have been there for a VERY LONG time and will continue to be there. The Point last year was covered in water - the tide had come in. Now is those bird lovers going to stop the water from coming in to keep these birds alive? Stop contolling people - Stop telling people what they can and cannot do - Stop taking the Americas past time away.

Correspondence: Comments of the DEIS
James J Higham 4709 Windsong Drive Virginia Beach, VA 23455
To whom it may concern, Below are my comments to the DEIS for the Cape Hatteras National Seashore Recreational Area. I hope you find them substantive and use them for your decision making in the FEIS.
Sincerely,
James J Higham
First of let me begin with the enabling legislation by Congress which established the seashore. In it is stated "Except for certain portions of the area, deemed to be especially adaptable for recreational uses, particularly swimming, boating, sailing, fishing, and other recreational activities of similar nature, which shall be developed for such uses as needed". This area in my opinion is to mean the points and spits contained in CAHA. Also the enabling legislation states "said area is set aside for the benefit and enjoyment of the people". This is how the park should be managed according the enabling legislation as specifically provided for by Congress. In the Organic Act, the last part of it states "unless specifically provided for by Congress" which CAHA is. Therefore recreation is the predominate use of CAHA and should remain so. In my opinion no-action alternative A is the best way to accomplish this based on the enabling legislation. My next comment has to do with the promises made to the residents of CAHA and the visitors by then NPS director Conrad Wirth. Which states "there will always be access to the beach for all people, whether they are local residents or visitors from the outside." I sure wish NPS would have kept this promise. From the enabling legislation and the promises made by the then NPS director, I believe NPS should manage CAHA as a recreational area as was specifically provided for by Congress and should keep the promise to have access to the beach for residents and visitors alike. After all, the enabling legislation is law. Next I would like to talk about the socioeconomic impact to the area. I believe not enough emphasis is placed on this subject in the DEIS. There are no boardwalks, shopping malls, amusement parks and the like contained within CAHA. The beach (for a broad general term) is the draw. Take away the beach and the reason for coming to CAHA ceases to exist. I have seen the economic devastation caused by the Consent Decree, and the preferred Alternative F will inflict much dire economic effects to an already damaged economy. Say what you want about the economy nationwide, but CAHA has largely been unaffected by economic downturns in the nation. But when the Consent Decree took effect in May of 2008 there was a substantial drop in visitation. Many people simply did not come to CAHA because of the beaches being closed. Over the years I have met and befriended many Islanders. I see the devastation caused by the Consent Decree, and the preferred Alternative is surely going to make a bad situation worse. I hope NPS does what is required by NEPA and place a strong emphasis on the socioeconomic impacts that the preferred alternative would create. The places I most like to access are the points and spits of CAHA. As you may know, many of these areas are very far from the nearest parking lot, and would require a substantial walk to the aforementioned areas. It is simply not possible to walk there loaded down with fishing gear, coolers, provisions, fishing rods, chairs, waders, foul weather gear, binoculars, ect. Even those in great physical condition cannot effectively access the area without an ORV. To effectively fish the area an ORV is a requirement, just as those fishing in the ocean use a boat, a surf-fisherman uses an ORV. When fishing the beach, much of the beach is not good fishing, however the points and spits are the areas where fish congregate. Therefore that is where I concentrate my efforts. Those areas among others I have historically accessed by an ORV and have never ran over a bird or turtle. I have the utmost respect for CAHA and the wildlife contained therein. I operate my ORV in a safe, law abiding manner, as do the majority of the users. I am a member of the Outer Banks Preservation Association, and abide by their motto which is "preserve and protect, not prohibit". I also really enjoy using the beach at night. It is one of my favorite things to see the foxes, shooting stars, night skies, the milky way, minks and all of the beauty of the beach at night. I enjoy a nice fire on the beach not to mention the fishing is usually better at night. With the night driving prohibition from May 1 through September 15 I go somewhere where I can drive at night like Assateague Island. I have cut my visitation to CAHA in the spring to zero and now only come down in the fall. I really miss CAHA in the spring and hope NPS adopts no-action alternative A. The science in the DEIS troubles me very much. It speaks about people and ORVs in a very disturbing light. Most of the science states that people and ORVs are a problem, but what it fails to mention is that the effects are if ORVs and people are not managed, but at CAHA they have been managed for some time. Also, the science just shows how detrimental ORVs and people are and does not say how the two can coexist. This is a travesty, as people and wildlife have coexisted at CAHA for a very long time. It does nothing to solve the problem that NPS has created by not managing the habitat, and letting it deteriorate to force the birds out on the beach where disturbance, weather, and predation is a problem. Nothing in the DEIS goes to solve the problem of people and wildlife, and instead would rather just prohibit access, instead of managing the two as it is their mission statement to do. In regards to night driving, I recommend that red tape be mandated for use by people wanting to use ORVs at night. This could mitigate any potential impacts to sea turtles. Not to mention the fact that there have been no studies done to date to qualify or quantify effects on nesting sea turtles at CAHA regarding use of the beach at night. The park and stay option is another idea that could be implemented at CAHA. This would allow night time use, while mitigating potential impacts. Another step the NPS should take is to identify areas of the seashore that is preferred nesting habitat for turtles, or areas that have historically high concentrations of nesting, and prohibit night driving there. Referring to the points and spits, the high value of recreational usage should remain open to nighttime ORV use as a pass thru or a park and stay option with no lantern use, mandating red tape over the headlights, and a suggestion to use as little light as possible. As far as Colonial Waterbirds go, NPS should not have to do pilot studies as it pertains to adaptive management. Had the NPS been managing the habitat all along, the birds could nest away from the beach where forage abundance is greater, potential weather and disturbance impacts are much less and people could access the beach with fewer user conflicts. Why not use habitat manipulation to create habitat at the brackish pond at Cape Point? The birds can be more successful and people can have access to the beach. In regards to much of the potential habitat at CAHA, much of it is overgrown with vegetation. I recommend NPS clear the vegetation and manage the habitat to support these colonies of birds. Another problem I have with the DEIS is the buffer distances used. I understand USFWS protection protocols suggest 1000 meters around Piping Plover chicks, but that distance is too great. The unfledged chicks forage in the same general area, and do not move very much, therefore, if the habitat manipulation were successful at Cape Point, then the beaches could be open and the birds could be more successful. In regards to terns, skimmers, and oystercatchers, why not create more dredge islands in the sound? Clearly the birds are more successful there so why not encourage them to nest there? Also, the least terns appear to be very successful on rooftops, so why can't the NPS create something similar at CAHA? The terns and skimmers would be more successful and people could have access to the beach. In regards to Oystercatchers, the birds have much more success on the dredge islands, so why not encourage them to nest there? Look at the fledgling rates for Green Island, could the NPS duplicate that success in other areas of the seashore at the same time keeping the beaches open? Can NPS do this with all species of birds while at the same time keeping access to the

beaches open? I believe NPS can fulfill this mission best with a modified Interim Management Strategy (IMS). Recommendations for a modified IMS. -Mandate red tape for night-time ORV use during the sea-turtle nesting season -Utilize park and stay option at the point and spits -Use adaptive management very wisely to afford as much access as possible -Mandate an ORV permit with a substantial educational component -Mandate an entrance fee for all users, with an education component for all including non-ORV users, as they are the biggest resource violators. -Use habitat manipulation to create and enhance CWB nesting success -Do a better job with sea turtle nests that are in danger of egg and hatchling loss by moving the nests to areas that will have a better chance of hatching success and to areas of low recreational value. -Put a gate on CAHA and charge an admittance fee for all visitors and exempt residents who reside within the boundaries of CAHA. At time of admittance this is where the educational component can be administered. As pedestrians are the biggest resource violators, this component could be very valuable in the compliance of closures and the cost recovery could be shouldered by the entirety of the user groups instead of just ORV permit holders. -Use wardening as a tool to keep as much access as possible open. -Increase enforcement of the existing laws already on the books to increase compliance. -Increase the amount of interdunal access points and roads. -Increase the amount of access ramps so the areas that are closed for resource protection can be bypassed. -Increase/create bypass routes behind the dunes for safety closures and resource closures especially in proposed SMA. -Do not make both sides of Hatteras Inlet a non-ORV area as the area is of high value to recreation and is "especially adaptable for fishing" and "should be developed for that purpose as needed" as per the enabling legislation. Not only the aforementioned but the fact that the area has not been utilized by Piping Plovers for some time. -I respectfully request that you use the coalition for beach access statement as an addition to the IMS and the suggestions noted above.

In closing, thank you for the chance to submit public comment and I respectfully request a full disclosure of the science to the National Academy of Sciences for a non-biased review.

Correspondence: Following are my suggested improvements to the ORV DEIS.

1. Commercial fishing vehicles have already their own permits (xxx), and given their long history on the ocean beach (19), I believe they should be give corridors through resource closures.(viii,xi) The ramps were originally created for them (20). That commercial fishermen are not given corridors through resource closures is inconsistent with their being allowed through safety closures (xxi) and having more night driving time (xxx). Some might say this is special treatment, and I agree. I disagree with the statement that they are non-essential vehicles (xxx). They provide food for our people. There could at least have been a definition of essential vehicle food given in the DEIS, instead of referring the reader to a piping plover document. This definitely shows that plovers are rated above the descendants of the original people that settled these islands. Even the ESA recognizes that a long history of species coexisting together is evidence that one is no great harm to the other. This is why Alaskan natives are exempt. The piping plover is not even endangered.

2. A buffer with 1,000 meters diameter could cover all private land on Ocracoke Island (121-127). Thus it is not a buffer, but just a more politically correct way of saying "no access".

3. Much was made of the fact that that of US National Seashores only Cape Hatteras has seen a decline in piping plover numbers in recent years (121-127). There has also been an increase in ORV use. Every scientist knows that "correlation does not necessarily imply causation". The Pamlico Sound area is very large and unique in the US. They are many other places immediately outside the seashore that are good bird habitat. This may not be true to such an extent for the other seashores. There should be a study of how this factor might figure into bird counts.

Correspondence: My parents started bringing me, my brother and sister to the Outer Banks when we toddlers, I'm 60 yo now.He'd drive a Willy Jeep from then Norfolk County,VA (now Chesapeake) to the VA Beach oceanfront Sandbridge area, turn right and we wouldn't stop till we got to Nags Head. Spend the night on the beach in a tent and go home on Sunday. If we were on vacation, we'd take the ferry to Hatteras, hit beach and drive to the end. Those times were the best times. We learned many life lessons on those trips. He was at Normandy June 6 1944, Bastion and Hitlers Headquarters in Germany. Why am I telling you this. As an American soldier, he was taught to leave a site as if no one had ever been there. He taught us that lesson every time we visited the Outer Banks. Today,when me and my family leave the beach, it's cleaner than when we found it. You never would know we were there. I have a Jeep and I drive on the beaches. To see the sun come up at Hatteras is like seeing the hand of God. To stop beach access would deny future generations the beauty of Hatteras.My generation has taught our kids to respect our natural resorces..leave it better than you found it. I strongly support the Coalition for Beach Access Position Paper. Thank You for letting me share my comments. Jim Sheppard, Moyock,NC.

Correspondence: Mr. Murry, As a frequent and long time visitor to the nations parks system, especially Cape Hatteras National Seashore I am deeply disturbed at some of the positions the NPS is proposing in the DEIS plan published on March 12 2010. I understand and agree with the NPS duties to protect and preserve our natural resources. My main area of concern is when in the protection of these resources the NPS over steps its bounds, and in the case of the CHNS, completely restricts the public to the point that this wonderful magnificent resource cannot be enjoyed by most citizens who wish to spend time there. My main issues of concern are as follows and I have several questions which I don't think you addressed in the original DEIS plan. 7 I disagree with the restrictions (as proposed in Alternative "F" p. 97-101) of the ORV access between ramps 27 and 30 at the Hatteras Inlet, Ocracoke Inlet, and all other locations in the park. There must be a method to allow pedestrian and ORV access points to these areas without disturbing the natural resources.

7 I disagree with the severe restrictions (as proposed in Alternative "F" p. 104) not allowing night driving in the park. Over the past 40 years I have witnessed and enjoyed hundreds of sunsets and sunrises which cannot be viewed from any other areas in the park with the same majestic experience. These night closures would significantly reduce the time that the many fishermen can enjoy the resources at a time of day (during the PM hours) when the fishing can be the most productive and active. Given the right instruction on how to access these areas I know that all the individuals I have seen over the years could enjoy the park without disturbing the natural resource.

7 I disagree with the prohibition of pedestrian access (as proposed in Alternative "F" p. 121) at the 8 different park locations from March 15 to July 31 each year. These locations have traditionally been available for all to enjoy. The removal of such large tracks of the park limits the overall positive experience that the park has to offer and significantly reduces ones desire to return to the seashore.

7 I disagree with the drastic and large restrictions (as proposed in Alternative "F" p.121-127) put on the public's ability to access certain parts of the beach when a piping plover or American Oystercatcher nest or brood exists in the park. These closures of such large tracts of park lands makes enormous parts of the park non accessible by the public. There must be a common sense compromise which both protects the natural resource and does not prohibit pedestrian and ORV access to some of the most valued parts of the park to visit.

7 I disagree with the NO PET restriction (as proposed in Alternative "F" p. 136) from March 15 to July 31. This restriction must be reconsidered with a more stringent enforcement of the current 6' leash rule, year round. Over the 40 years I have been enjoying CHNS my family and hundreds of park guests I have seen and obeyed the current pet rules with no damage to the natural resource. You must consider that too many individuals, the only important thing in their lives is their pets. These individuals treat their pets as one of their family and would treat the park with the same respect. I disagree with the restriction of public access with their pets in front of the many homes and businesses in the many towns that share, respect, and have

been the primary caretakers of this area even before the NPS was there.

I disagree and take real exception to the NPS analyses of the socio-economic impact of the actions taken in the DEIS and the negative drastic effect it will have on the region and the state of N.C. as stated on p. 270-286 , 561-598. For the NPS to state as they do on p. 383 that the local region will have to "adapt" to the new rules I find insulting to the hardworking people in the region who have nothing but the best interest of the park for their entire lives. I have seen the effects of what some of the types of restrictions imposed over the last couple of years by the Federal Court Consent Decree will do to the local region. The loss of business, jobs, homes, and the noticeable loss of tourism has all been a direct effect to the restrictions on park access. The NPS proposal in the DEIS, Alternative "F" is more restrictive then the Consent Decree and therefore could be more damaging then what's already in place. There are many alternatives used in our society to allow public use to coexist without disturbing our natural resources. Many of these approaches the NPS uses in other parks in the park system. In Alternative "F" of the DEIS plan the NPS is taking the more restrictive approach at the expense of the public use. There is no credible science to back up the NPS plan in Alternative "F" and a less restrictive approach must be taken to allow both public use and resource management of one of the nation's most valuable resource.

Correspondence: National Park Service Service,
 We strongly agree with the position statements and concerns put forth by the Coalition For Beach Access regarding the DEIS as proposed the National Park Service for the Cape Hatteras National Seashore Recreation area. This collage of groups has responded to the proposed DEIS with viable alternatives which provide shared usage and best preserve the Recreation Area in terms of its environmental, social, economic, and cultural needs. We understand and appreciate the efforts of the NPS for providing guardianship of the lands of the citizens of United States but let us not forget the citizens as well as the flora and fauna. We find the exaggerated domain(buffer zone) for the Piping Plover and the Oyster Cracker(not endangered) limits access to the surf zone and is excessive and punitive. We must remember since 1937 when the CHNSRA was formed the locals gave their lands to the NPS with the promise of forever access for commerce(then fishing, now tourism) and recreation. Now that access is being threatened(sound familiar).The economic impact will be devesating, particularly during this current depression/recession. Perhaps, easing the restrictions of the DEIS and adding those as needed is a more prudent plan. As trained biologists, watersports enthusiasts,surf fisherman, Avon homeowners, and wildlife lovers we implore you to listen to reason and reconsider your plans for the Cape Hatteras National Seashore Recreation Area.
 Thank you, Stephen Barclay DMD Lynnanne Barclay RPh

Correspondence: To Whom It May Concern: As a longtime property owner in Avon I feel compelled to address and take issue with the proposed Off-Road vehicle management plan. On pg 201 you state that protected species are at-risk from ORV use. For the record, no Piping Plover deaths have been attributed to ORVs! On pgs.121-127 the proposed buffer zone needs to be adjusted. The 1000 meter distance for the Piping Plover is way too large and is scientifically inadequate. There appears to be no absolute evidence to support this distance and the distance number is arbitrary and relative. I strongly disagree with the closure policies. Human interference has very little effect on the beach ecosystem including success rates of birds and other animals. On pgs 270-281, 561-598 I really disagree with the economic analysis. On a micocosmic scale , my rental income and number of rented weeks has dropped significantly due to the uncertainty of beach access. My situation is not unique. Further restrictions, including pedeatrian use will desroy an already struggling beach economy. In conclusion,it makes no sense to continue to waste so much of the taxpayers money to radically protect a species that is not indigeneous to the area and is not threatened by humans.Do not prohibit man from enjoying what God has given us! Correspondence: Strongly object to the adoption of the proposed ORV management plan.
 Given the economic conditions we are currently in I am objecting to the NEGATIVE impact this proposal will have on the seasonal economy here.. The timing of this project could not come at a worse time and needs to be overhauled and reconsidered if not totally scrapped..
 The waste of taxpayer money has gone far enough on this proposal. Your assesmant of minimal impact is ridiculous .. THINK AGAIN !!!

Correspondence: I disagree with the ORV prohibitions on P 97-101. The privelege of beach driving is integral to the economy and cultural lifestyle of Hatteras Island. The unique makeup of tourism and resident locals requires the beaches to remain a viable means of transpotation to fishing and surfing. No adequate beach access to these remote areas will remain.
 I disagree with the closure limits for Piping Plovers and Oystercatchers on P. 121-127. 1000 meter and 300 meter (respective) closures are overly restrictive, and encourage disobediance due to the overly broad closure diameter. A more thoughtful closure area would leave enough portions of the beach available such that ORV drivers and, more importantly pedestrians, would obey the rules.
 I disagree with the night driving prohibitions on P 104. Night driving is a method to reach the beach fishing areas for early surf fishing and is a method to return from the beach after evening surfing. Typically, the ORV driver associated with morning and evening driving is not the occasional user and is skilled in negotiating closures. Perhaps this can be tempered with a requirement for a beach driving permit, which includes revenue generation for enhanced signage, and education components.
 I disagree with the prohibition of pets on P 136. The cultural impact to visitors and residents will be detrimental to the local economy as well as having a negative impact on the preservation of cultural resources.

I disagree with the statement on P 383 that the restrictions will have negligible impact. At the least, the impact will be moderate, and the cultural resources of Hatteras Island should be further studied. It appears the importance of ORV access is grossly understated in the report. Hatteras Island provides an area where the housing can remain relatively residential, as opposed to large beachfront structures. This is mainly due to preservation of beach access. The typical resident or visitor can access areas by vehicle, eliminating the need for cumbersome, environmentally unfriendly infrastructure (parking lots, beachfront hotels and condos). If this access is limited, it may ultimately result in a much greater environmental impact as large visitor infrastructure is constructed.

Correspondence: We have been traveling to the Outer Banks for 25 years. We have driven on the beaches (where legal) from Corolla to Cape Hatteras. It has been a privilege to use and visit this wonderful area. In those 25 years, we've seen hundreds of people enjoying and respecting their access to the beach. I've never seen anyone damaging the dunes or hurting wildlife. If I would have seen someone - I would have immediately reported them to the authorities. The park management has done an excellent job of monitoring access and protecting the beach environment and the visitors I have witnessed respect the beach and the natural environment.
 Please continue to let people visit the beaches.
 Thank you.

Correspondence: Subject: My comments on the DEIS / Posted by: Frank Folb Sr / 05/10/10

May 11, 2010

Mr. Mike Murray Superintendent Cape Hatteras National Seashore 1401 National Park Drive Manteo, NC 27954

Mr. Murray:

Please accept this letter with my comments on the DEIS for Off Road Management within Cape Hatteras National Seashore, due in your office by May 11, 2010.

#1: I feel that the data contained in the "Potomac protocols" is flawed and should not be used as "best available science". In my comments at the final public comment period during reg-neg, I asked you to please use good, peer-reviewed science in considering buffer/closure distances in the new plan (DEIS). By using the 1000 meter closure/buffer distance in the DEIS I can see that my request was ignored. The Potomac Protocols have NOT been properly peer reviewed, at least not peer-reviewed properly according to USGS peer-review protocols. They are at best opinion, recommendations and conjuncture "peer-reviewed" by many of the same folks who contributed to the document. It's time this document (and the Voegslong study for that matter) were PROPERLY peer-reviewed by INDEPENDENT scientists & experts with no stake in the process IF it's going to be used as "best available" science.

#2: Buffer Distances for Birds are More Restrictive than in Other National Seashores. Piping Plovers: Cape Hatteras National Seashore (CHNS) is on the edge of the territory these birds frequent to nest and winter. CHNS is known for its turbulent weather that accounts for poor survival of Plovers on this seashore. Predators are the primary reason the success rate is poor. NPS has been very ineffective in the management of the nesting areas for many years making them predator friendly and bird unfriendly. Had these areas been maintained or included in the alternatives of management in the future, Oregon Inlet, Cape Point, both spits of Hatteras Inlet and South point of Ocracoke could have been made bird paradises that would have helped the success of nest survival. However, that out of the box NRC suggestion, supported by both access and environmental groups, was listed in the DEIS as being not suitable.

Experts speaking at the NRC meetings stated that the Piping Plover population has been rebounding in most all other locations, but population growth has not happened at CHNS. Vehicles are not shown in science to be the cause of their struggle to flourish in this seashore; storms and predations have been the problem.

Buffers in the Alternatives for piping plover are extreme and unnecessary. With the immense NPS monitoring given to these few nesting birds, much smaller, judgment (risk based) based, flexible buffers could and should be put in place upon hatching to afford chick survival while at the same time allowing reasonable public access. Only on very rare occasions have chicks been observed to travel 1000 meters, and when that has happened they were moving to a food source where they stayed until fledging, thus requiring a much smaller buffer. Several published studies show that on average, chicks move about 200 meters. My comparison to this outlandish 1000 meter buffer is that if you have a food source and a foraging plover on the bow an aircraft carrier (330 yd. long) and the crew and Navy band on the stern singing and playing "Anchors Away," the piping plover chick could care less. And that distance is one third the buffer you want to put in this plan.

AMOYS: AMOYS are on a North Carolina list of concern. By being placed on this list, North Carolina is monitoring and counting birds in a very limited fashion, but doing otherwise nothing to protect them. USFW does no enclosures in Pea Island Wildlife Refuge until an egg is laid. The management procedure is to "approach AMOY until it flushes then back away 15 yards for the closure." No more than this procedure should be used in the NPS area, keeping in mind that this is a recreational area first and a resource area second. If you state that you have only the Endanger Species Act (ESA) to go by for protecting a bird that is only on a list of concern in North Carolina, then either give it no protection or have regulations that are similar to the state procedures.

Colonial Waterbirds: The management procedures should be the same as the AMOY protection.

#3: Threatened and Endangered Sea Turtles: I refer you to the 210 page document being entered into these comments by OBPA, Larry Hardham and Bob Davis (<http://www.obpa-nc.org/turtles/TurtleMgmtProgram.pdf>) for what is the real science of turtles on this seashore. This document should and will be submitted for open, non-biased, scientific review. It holds the facts of turtle management needs on this seashore. The buffers and requirements of the present turtle management program are profoundly flawed and must be addresses. If only the management were similar to that of the USFW buffers and enclosures of Pea Island the alternatives would be different than those presented in the DEIS. We have 70+/- miles of seashore on which turtles nest or make false crawls. In the most turtle active years we have had approximately 210 totals for the year. If you divide the 70 miles into the 210 crawls and nests you will have 3 nests or crawls per mile in the May 1 to September 15 window with no night driving. And we must not forget that much of the beach is closed during this period for village closures and bird closures where the turtles do still nest and crawl. With these statistics, and nowhere in any other data, one cannot find facts or suggestions that vehicles have had large encounters with turtles or have caused deaths of turtles. Nowhere do data indicate or suggest that any nighttime closure is warranted.

Your alternatives want nests moved only for imminent danger to storms, but make no attempt to enhance or preserve recreational opportunities in high use areas in the recreational seashore. You are again misusing resource protection at the expense of recreational needs.

Nest enclosures should be no more than 10x10 and the through to the ocean no more than 18 inches wide. They should be set up in the evening and removed in the morning as done in the USFW Pea Island Refuge. Excessive enclosures are not helping the turtles. They only reduce visitor experiences.

#4: Year Round Closures Year round closures in a dynamic weather related seashore is unacceptable and wrong. If the spits and Cape Point were made to be "bird" friendly and not predator friendly there would be no need for the beach front closures anywhere on the seashore. Poor past management practice should not be accepted in this plan as unfixable. Seasonal village closures, safety closures, the accepted closure of the beach in front of the light house and jetties should be the only closures for those wanting pedestrian only areas. While no one in the access coalition wants year round beach access for vehicle in front of the villages, we do believe that those areas should be open in the off season from Sept. 15 to May 15, as has been the practice until this time. Political closures have been in place in Frisco and Hatteras for several years, essentially privatizing those ocean fronts almost entirely for the owners of those cottages. This is wrong and in my eyes illegal.

#5: Socioeconomic Impact is Incomplete NPS is using incomplete data and analysis to reach economic impact conclusions in the DEIS. Due to a hasty,

under budgeted, and limited data collection and analysis process, there is no completed or peer reviewed economic analysis. This makes the DEIS seriously flawed and an illegal component of the DEIS. I have had to reduce employees and now at a time that I have reached an age when I want to spend less time in my business and more time enjoying old age. The present consent decree has forced me to work most every day and employ less people. Alternative F will provide no relief. The impact has been, and will continue to be, a major loss for my business.

#6: Pets Your preferred alternative has disallowed pets within the entire seashore from March 15 until July 31. We all agree that pets should be on a leash on the beach, but to punish the people who obey the leash law by prohibiting all pets is unacceptable. Nowhere has anyone from NPS checked with the rental agencies in the villages within the seashore to see the amount of increase in the number of "pet friendly" houses over the last few years. This new regulation prohibiting pets, completely unrelated to ORV management, will result in families staying away.

#7: The DEIS is flawed and illegal The NPS 6 alternatives begin with Alternative A ? No Action plan and Alternative B ? No action plan. Both of these plans were the result of actions. Alternative A was the result of the interim plan being put in place and Alternative B was put in place by the consent decree. Because the DEIS should have had a Alternative No Action plan that reflected the regulations being enforced in 2004 that were adopted from the 1978 draft plan and updates through Superintendents compendiums, I contend that the entire DEIS is flawed and illegal.

I respectfully submit that you have no option but to put the "Coalition for Beach Access" position statement in place as the new ORV plan for Cape Hatteras National Seashore. It is the only acceptable and practical management alternative for a recreational area, Cape Hatteras National Seashore, the first in the nation

Sincerely,
Michael M. Stokes

Correspondence:

I have been going to the Outer Banks since 1970. My first trip was a surf fishing expedition that took place in April. I have made that same trip almost every year up until last year. I was unable to access my favorite surf fishing beach so I opted to stay home. I usually rent a house, buy food, go out to breakfast, lunch and dinner, buy gas, charter a boat, buy fishing tackle, buy bait, buy gifts, and buy a licence (which is ridiculous because it is federal water and we all own that). I'm not sure if I'm the only person that feels strongly enough to stay home, but I'll take a wild stab at a guess that I'm not alone??? It's called National Seashore Recreational Area not Wildlife Sanctuary. I'm certainly not opposed to sharing the beach with the birds but I'll be damned if I will give it up to them without a fight. I manufacture fishing lures, (part time), and sales have fallen off in North Carolina. I am a full time teacher and I'm not afraid to explain the situation to students who also travel to North Carolina to vacation!! I realize I'm typing in vain but at least I can read this and feel I have done my part. Sincerely Hugh Schultz

I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access. We ask that any plan that is approved will do the following:

Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.

Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.

Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.?

As a frequent visitor, I support the idea of maintaining open beach access. Dollars already available to support wildlife should be used more wisely to maintain wildlife. Additional dollars can be raised through contributions from visitors like myself. Discontinue beach access and visitation along with home values will drop significantly, thereby reducing the flow of funds available to maintain wildlife. People have rights too. Maintain beach access.

Re: Comment Draft Cape Hatteras National Seashore Off-Road Vehicle Management Plan/Environmental Impact Statement--DEIS

The DEIS describes the NPS preferred alternative in the following fashion:

Alternative F ? Management Based on Advisory Committee Input. Alternative F is the National Park Service Preferred Alternative. The NPS used the Negotiated Rulemaking Advisory Committee's Cape Hatteras National Seashore input to create this action alternative, which is designed to provide visitors to the Seashore with a wide variety of access opportunities for both ORV and pedestrian users.(p. xi)

I do not agree Alternative F that reflects the work of the Advisory Committee.

Stated more specifically, Alternative F is not a committee based proposal and it should not be labeled as such. This statement is based upon the final report from the facilitators. In this report, the facilitators note that the advisory committee failed to come to agreement on any aspect of park management. In fact, the positions held by stakeholders were so diametrically opposed to one another that the facilitators didn't even try to summarize the advisory committee's work. Instead, the facilitators simply transmitted 6 addendums ranging from 20 to nearly 1,500 pages each. In sharp contrast the NPS selects elements from the addendums submitted by the 6 groups and combines the elements in ways the groups never intended. Even more offensive is the fact that the NPS recently denied a request for an extension of the comment period because Alternative F is based upon advisory committee recommendations previously published for public review.

Mike Murray Superintendent Cape Hatteras National Seashore 1401 National Park Drive Manteo, NC 27954
Dear Mr. Murray: First let me say, thank you. I can't imagine how hard this conflict must be on you and those that are close to you. What used to be so simple has become so complicated. What started out as protecting wildlife has become far greater reaching. It is amazing how much those that desire more laws can complicate things that are relatively easy.
MANAGEMENT METHODOLOGY ? Identify criteria to designate ORV use areas and routes. ? Establish ORV management practices and procedures that have the ability to adapt in response to changes in the Seashore's dynamic physical and biological environment. ? Establish a civic engagement component for ORV management. ? Establish procedures for prompt and efficient public notification of beach access status including any temporary ORV use restrictions for such things as ramp maintenance, resource and public safety closures, storm events, etc. ? Build stewardship through public awareness and understanding of NPS resource management and visitor use policies and responsibilities as they pertain to the Seashore and ORV management.
How did we and the hundreds of animal species survive for the past 75 years of beach driving without all these management practices?
Personally I understand the need to protect wildlife (especially those endangered), but I don't understand why most beach access to ORV was shut down for so long last summer especially when I read about so few animals that are being protected. I know you understand animals and how adaptive they are and always will be. I really don't understand why we are using so many resources to change what has been historically acceptable, desirable and manageable. Roping off the turtle nests with a driving lane to one side or the other has been effective all around the world. The birds will nest in areas of lesser human activity, so why not give them set areas of a mile or two every several miles without blocking the main driving accesses. As a home owner just 8 lots from the beach you would think it would be easy for me to get to the beach. I have an 11 month old son and a 2 = year old daughter whom require a lot of stuff. Driving on the beach is the best way for my family to enjoy the Cape Hatteras National Seashore. Furthermore, I am an avid sportsman; I very much enjoy all the activities of a beach lifestyle. It was on the Cape Hatteras National seashore that I caught my first wave, caught my first fish, flew my first kite, and so many other memories. It is the Cape Hatteras National Seashore that I am happy you are here to protect. This is the place I want to teach my children to enjoy all the wonderful gifts God has given us that are free. On many occasions last summer my wife and I packed up our truck with all the usual beach gear loaded our children in and set off to the beach; sometimes we drove and drove and drove and never found an open beach to drive on, to be fair, we did not go all the way to Frisco.
One last thought, conflicting viewpoints are expected on this issue, and as long as they are fairly well balanced (as they have been), I feel that the issue is encouraging people to think more intelligently and deeply about the wildlife and the environment they want to preserve. Residents like I do not want to see any beach closures because it has and will continue to affect the economy. More education and thought go a long way, through this process I think people have become more educated, give them a chance to prove it. We don't need more regulation we need more thoughtful citizens who want to do the right thing.
Thank you for taking the time to read my opinions. I hope you will continue to look for ways to keep all the beach accesses open, the main surfing breaks open and protect the birds and turtles without too many regulations. I also wish you peace with whatever transpires. Sincerely,
Christopher Pierce

Mike Murray, Superintendent Cape Hatteras National Seashore 1401 National Park Drive Manteo, NC 27954
Comments on the Cape Hatteras National Seashore ORV Management Plan DEIS I wish to thank the National Park Service for an opportunity to comment on the Cape Hatteras National Seashore ORV Management Plan DEIS. As a concerned citizen, scientist, retired public administrator and university educator, I feel it is my professional and civic duty to make timely comment on a matter that affects thousands of citizens who wish to visit and have access to the Cape Hatteras National Seashore.
For the record, I have a broad public service, technical, and scientific background. I have in-depth knowledge of environmental sciences, research methods, and review procedures, especially those related to human health. I have basic knowledge of the federal environmental statutes and programs, and many years of firsthand experience with federal environmental policy-making processes. I hold the following degrees: Doctor of Philosophy in Public Health with a specialty in environmental management and protection from the University of North Carolina at Chapel Hill; Master of Science in Management from Duke University's Fuqua School of Business; both Bachelor and Master of Science degrees in Mathematics from Gonzaga University. I am a retired Lieutenant Colonel, Army Engineers and a combat veteran of the Viet Nam War. I have from time to time advised the Chief of Army Engineers and Under Secretary of Defense for Environment on a range of environmental issues, projects, and policies. In my civilian life, I retired from the US Environmental Protection Agency in 1998 after a 27-year career with that agency. For over 22 years, I served as the Deputy Director of the National Center for Environmental Assessment at Research Triangle Park, NC. During my EPA career I had extensive interactions with foreign, state, and local governments; federal environmental agencies and offices; the federal courts; US Congress; universities world-wide; institutions to include the National Academy of Sciences, the World Health Organization, and the North Atlantic Treaty Organization; the major environmental organizations; private industry and trade associations. For more than 20 years, I was either an adjunct or full-time faculty member at the University of North Carolina where I taught environmental science and management courses in the Department of Environmental Sciences and Engineering, the Kenan-Flagler Business School, and Environmental Studies Program.
I wish to state clearly for the public record that I have been for the past four decades and remain today and forever in the future, professionally committed to protection of the environment. I am primarily concerned with environmental conditions that affect the health and well-being of humans and with the conservation of natural resources that are essential components of a healthy environment. Given the ever changing environmental conditions brought about by growing human populations and expanding regional and global economies, effective environmental management is more essential now than ever before, but never at the expense of violating human and Constitutional rights of citizens.
I reside at - - - - - , North Carolina. I can be contacted with regard to these comments at drmikeberry@gmail.com.
Comment 1 There is a clear need for an equitable, balanced, and effective seashore access policy and management plan. Growing national population, seashore visitation, transportation avenues into the Outer Banks region mandates an access management policy?but one which has widespread public support and one that balances the rights and traditions of public use and access to the national seashore with responsible but reasonable resource protection.
As currently structured, Alternative F is not primarily an ORV management plan. It is primarily a public access restriction plan. The plan is biased toward bird and turtle protection, seashore isolation and not to a reasonable extent on public use and visitor access??specifically ORV and pedestrian access.
Responsible environmental management uses sound science and unbiased professional judgment that balances the human needs and rights of people with the needs to manage and sustain natural processes. The preferred proposal, Alternative F, fails to meet these criteria. Alternative F fails to recognize objective science, enabling legislation, citizen rights, historical uses, and past promises of access to their environment.
Promulgation of Alternative F as it is currently structured will be the basis for widespread public dissatisfaction, continued distrust of government, especially the National Park Service, and costly litigation.
Comment 2 As indicated by Alternative F, it is the intention of National Park Service (NPS) to transform a major part of the Cape Hatteras National Seashore Recreational Area?set aside over 70 years ago for use and enjoyment of American citizens?into a wildlife sanctuary, predominantly a national

bird and turtle use area. NPS is using as its justification for this radical transformation and departure from traditional and intended public use, a thirty-five year old executive order directing NPS to formally promulgate an ORV management plan.

Alternative F management plan, with its excessive restrictions and denial of public access, both pedestrian and ORV, is in large part incompatible with the legislative purpose and intent of why the national seashore was established (16USC459 CHNSRA Enabling Legislation):

"said area shall be, and is, established, dedicated, and set apart as a national seashore recreational area for the benefit and enjoyment of the people and shall be known as the Cape Hatteras National Seashore Recreational Area."

Nowhere is it indicated in the DEIS where enabling legislation intends or permits both pedestrian and vehicular access denial for a major part of the year, particularly visitor or vacation season.

Comment 3 NPS Request for public comment appears to be more of a bureaucratic process than a search for substantive decision-making information. By virtue of its massive size, complexity, biased and incomplete explanation of science, and the inability for members of the public to access cited scientific literature and references, and ask questions of government officials responsible for the science and DEIS content, no single citizen can effectively review, understand, and constructively comment or suggest improvement to the DEIS in the 60 day comment period.

It appears by way of emphasis in the discussion in the DEIS that NPS has every intention to promulgate Alternative F in the next year, regardless of past or present public comment. There is virtually no significant reference to the workbooks the public provided in the early stages of the plan development process or to countless constructive comments made by the public during the 15 month Regulation Negotiation Process.

The National Park Service (NPS) should make it known to the public the specific information it seeks so as to make a final, objective decision with regard to an ORV management plan for Cape Hatteras National Sea Shore Recreational Area. Thus far NPS has failed to do so. By not asking for specific information, NPS is simply "going through the motions" superficially, and wasting the public's time.

Comment 4 NPS presents Alternative F as if it were recommended by the recent Regulatory Negotiation process. However, upon close examination Alternative F is found to be a biased and highly restrictive management plan that is in complete opposition to majority recommendations of the recent Regulation Negotiation process. Alternative F strengthens and codifies the denial of public access provisions of the current consent decree. The public access denying provisions of the consent decree, put into effect April 30, 2008, have been extended and transferred to Alternative F. The majority of Regulatory Negotiation Committee stakeholders (19 vs. 5) and numerous public commentators did not recommend an extension of the restrictive provisions of the consent decree as part of a final ORV plan.

Comment 5 If promulgated, Alternative F will significantly change the economy and unique culture of the Outer Banks. The DEIS has failed to properly assess those changes. The Economic Impact Analysis found the DEIS by its own admission is incomplete. This alone is the basis for future litigation challenging the legality of the proposed plan. In addition the Economic analysis is structured in such a manner that it fails to address full costs?direct costs, indirect costs, lost opportunity costs, costs of future liability, and hidden costs.

The Economic Analysis fails to recognize that the national seashore environment is a unique form of capital that serves the local economy, and in turn the health and wellbeing of citizens and families that depend of that economy. Access to the seashore is essential for family business operations on the Outer Banks.

The cost to society and the local communities under the restrictive consent decree has now been extended indefinitely into Alternative F. Economic losses in millions of dollars have occurred to island businesses especially motels, campgrounds, restaurants and tackle shops. The full costs of Alternative F are very much understated in the DEIS. Annual economic losses under the consent decree are already in excess of those estimated by Research Triangle Institute.

Comment 6 The DEIS has failed to inform the public of the extent of expected closures to the most popular recreational sites of the national seashore. Experience with the consent decree closures for the past two years (2008, 2009) provide a clear indication of the extent to which the national seashore will be closed to public access?ORV and pedestrian. In recent court testimony the National Seashore Superintendent indicated the extent of the closures, but nowhere does that data appear in the DEIS. The public should know what to expect when Alternative F is promulgated.

The Bodie Island Spit was closed a total of 136 days in 2009. Cape Point was closed 101 days in 2009. The Hatteras Island Spit was closed 125 days and south Ocracoke was closed 80 days. These are some of the most popular recreational use areas at the national seashore which will not be accessible to the public during late spring and summer months.

Comment 7 Nowhere in the DEIS is it indicated that should listed species populations grow in size through natural population cycles or management programs, the public loses even more access given the way the boundary distance are applied.

Comment 8 Nowhere in the DEIS is it mentioned that protected species populations are growing without the needs of additional restrictions such as those of consent decree and Alternative F.

Published USFWS data suggests that the piping plover is "recovering" well beyond 1986 levels and do not suggest that additional restrictions beyond regional recovery plans are necessary or essential at the Cape Hatteras National Seashore Recreational Area for the continued recovery of the species.

Piping Plover--Atlantic Coast Pairs

Year 1986 1999 2005 2006 2007 Nesting Pairs (est.) 790 1386 1632 1749 1880

<http://www.fws.gov/northeast/pipingplover/index.html>

Comment 9 Data collected and published by NPS in recent suggest that Cape Hatteras National Seashore Interim Management Plan prepared with public input and publically reviewed in 2005, published in the Federal Register was showing every sign of being effective at protecting birds and natural resources. The Interim Management Plan was set aside by the court and replaced by the consent decree and settlement that mandated extensive closures without public comment or review.

The consent decree closures of recent years have been of exorbitantly high cost to the public but have not contributed to an improvement in species production or safety. The consent decree has produced no natural resource benefit over and above the interim plan. The fledge counts were higher under the interim plan than under the consent decree. 7 Piping Plovers fledged in 2008 under the interim plan, 6 in 2009 under the highly restrictive consent decree. 17 American Oyster Catchers (AMOY) fledged in 2008 under the interim plan and 13 in 2009 under the highly access restrictive consent decree, the same management structure now found in Alternative F. Species productivity is decreasing under consent decree and now Alternative F restrictions.

Comment 10 The majority of nests and hatched birds the past two closure seasons under the consent decree were lost to predation, a few to storms, one at the hands of a university researcher trying to band a bird. None has been lost to ORVs or pedestrians accessing the national seashore. The huge closure distances in the consent decree and Alternative F restrictions keep pedestrians and ORVs off the seashore while birds are nesting. At the same time, the extensive closures also provide for the proliferation and increased free movement of predators. In effect, the extensive closures create an ecological trap for birds in large closures that encourage and enhance predation.

Comment 11 When the boundary distances shown on Table 11 are applied to the Alternative F framework, it is evident that the public, ORV and pedestrian, lose access to a vast amount of the seashore for most of the visitor season. Closure boundaries are overly restrictive at CHNSRA and are not used at other NPS properties. There has been no administrative or science based explanation given to the public for these especially restrictive closures that limit public access to the seashore.

NPS has failed to explain specifically why, by way of science justification, 1000 meter boundaries must be established every time a Plover chick is observed, where the literature indicates on average movement under 200 meters. There is no study or science based explanation that justifies an automatic 1000 meter boundary closure every time a plover chick is observed. In fact the public access denial consequences of such management policy for a national seashore set aside for public use is excessive and does not indicate a balance of responsible usage.

If, as the Alternative F regulation dictates, one extends a boundary out 1000m in every direction from a nest, one creates a circle with a boundary circumference of approximately 3.9 miles, and an area of approximately 1.2 square miles or approximately 775 acres. Given that the boundary regulation dictates 775 acres of national seashore be set aside for the exclusive use of a plover chick?during the height of vacation and visitor season, it obviously does not take too many widely distributed plover chicks to shut down a significant portion of Cape Hatters National Seashore Recreational Area especially if the Plover population increases.

Comment 12 Alternative F, as with the consent decree, establishes a policy of denial of access punishment for the general public when intrusions into closure areas occur. Every time there is a closure intrusion the National Park Service, now at its own discretion, extends restrictive boundaries and widens non-access areas. There is no basis in science or environmental management practices that justifies such punitive measures.

Comment 13 Many of the references used to justify Alternative F are those of individuals and activists organizations who have supported litigation that denies public access. The major science references are published by environmental activist organizations and authored by individuals trying to shut

down ORV access to the national seashore: Audubon, Blue Water, Hatteras Island Bird Club, etc. Most of these references have not been reviewed for their accuracy or objectivity and are unsuitable for government decision-making. Many of the references are out dated, biased, contain incomplete and misleading information, and few have ever been reviewed in open forum.

Comment 14 NPS has failed to provide the public with essential items of information, specifically properly reviewed science. The main science references are unsuitable and inappropriate as the basis for a government regulation that restricts public access to the national seashore and has significant negative impacts on the Outer Banks economy.

The 2005 USGS Protocols are indicated by NPS as the primary basis for the highly restrictive boundary distances that restrict public access to the national seashore. The USGS Protocols are cited as being "in press" 5 years after they first appeared on the Park Service website. The 2005 USGS Protocols were challenged two years ago as being in non compliance with USGS Peer Review Policy. At that time the documents were not dated, had no government publication number, and were not published in the open literature or Federal Register and were clearly unsuitable to be a credible scientific basis for government decision-making, especially costly regulation. The documents were sent back to USGS for "review" in 2009, five years after they were first made known to the public.

NPS has indicated a new citation for the USGS Protocols. They are currently referenced on page 660 as: Cohen, J.B., R.M. Erwin, J.B. French Jr., J.L. Marion, and J.M. Meyers In press, Recommendations for Management of Endangered Species at Cape Hatteras National Seashore. U.S. Geological Survey Open-File Report 2009-1262.

NPS uses the USGS protocol recommendations as if they are "best available science." They are not science and have not been shown to be connected with specific scientific studies. The management options presented in the protocols are the policy and management recommendations and opinions of biased and non-reviewed contributors, deemed by USGS to the "experts." Nowhere is a specific science basis (study, data) for a given management option established solely for the Cape Hatteras National Seashore Recreational Area demonstrated.

In a slightly modified introduction to the most recent release of the Protocols, the government official responsible for the document states: "Although no new original research or experimental work was conducted, this synthesis of the existing information was peer reviewed by over 15 experts with familiarity with these species. This report does not establish NPS management protocols but does highlight scientific information on the biology of these species to be considered by NPS managers who make resource management decisions at CAHA."

The new publication was not accessible, peer reviewed, or fully explained by government authority at the time the DEIS was submitted to the public for comment in early March 2010.

The literature reviews found in the USGS Protocols as currently published are significantly out of date. In fact many studies were decades out of date at the time the document was prepared in 2005. They are mainly non-replicated, selective papers and studies. Many citations are over 20 years old and most are not related to the Cape Hatteras National Seashore Recreational Area. The public does not have access to the literature reviewed in this essential report and most of the citations are so insignificant they cannot even be found in a major university library (UNC-CH).

Comment 15 There is an "appearance of impropriety" and "conflict of interest" associated with the primary science basis justification for the Alternative F recommendation.

As noted two years ago, the cited protocols are not reviewed consistent with published USGS peer review policy guidelines (<http://www.usgs.gov/usgs-manual/500/502-3.html>) especially with regard to full disclosures and conflicts of interests. In fact the Protocols were developed and prepared in large part by well known environmental activists who subsequently used them as the basis for law suit against NPS, thus creating a very clear conflict of interest in full view of the federal government.

A review of the public record indicates that USGS commissioned well known environmental activist scientists to selectively review and discuss the science as they choose to represent it, and then formulate and recommend management options and policies. There was no outside questioning and review of their work--paid for by federal tax dollars.

It is clear to those of us who understand the scientific methods and process, objective scientific review, and the internal workings of federal government, that the 2004-2005 cooperative agreement review of the science (undertaken in part by members of the Audubon Society and other activist organizations) is biased and selective, misrepresented, fraught with speculation and opinion, and in many cases based on information that has nothing whatsoever to do with Cape Hatteras National Seashore.

In 2005 the architects of the access denying protocols were acknowledged for their contributions. For nearly three years now we have asked NPS and USGS to identify the "independent outside reviewers" of the USGS Protocols consistent with USGS Peer Review Policy. We are now being informed by USGS through their press office that the "science peer reviewers" are the original contributors and architects of the Protocols (which are not science at all, but policy and management opinions/recommendations that regulate the public and deny public access to the national seashore). We are also being informed by press officials that it is the policy of USGS to not identify outside independent peer reviewers or their comments. This is a violation of the Freedom of Information Act and the Federal Advisory Committee Act.

Some of the original contributors (Cohen and Golder) have used the Protocols to be the basis for litigation and insist on denial of public access to the seashore. A lead author "J.B. Cohen" has previously shown his conflict of interest and activist affiliation when he "J.B. Cohen" signed a sworn affidavit in support of the Consent Decree for SELC (2008) and also signed the recent Audubon letter directed at NPS Officials recommending the highest level of access restriction (2009). Scientists working on behalf of the public cannot turn around and use that same work to sue to public without having the objectivity of their work called into question.

For over 15 months of Regulation Negotiation Process, Golder, other environmental activist members, and the federal government never disclosed participants' roles in the design of the Protocols, but constantly referred to them as being the definitive "best available science" justification for closures. Golder and others now appear as "peer reviewers" of their own work. This is discrediting in and of itself, but what is most disturbing and unethical about this is the fact that this highly biased, pseudo science process, sponsored by the federal government, has denied thousands of citizens access to their national seashore and will continue to do so unless it corrected by NPS, the federal courts, or the congress.

The above is clearly a "apparent conflict of interest" known to NPS and USGS officials and calls into question the credibility of science which in the public policy making process specifically that of denying public access to the national seashore must be "objective" beyond any doubt. Local media have noted this "apparent conflict of interest" and brought it to the attention of NPS and USGS officials who refuse to offer an explanation or response. The best course of action to resolve this matter is to turn the science review and update over the National Academy of Sciences or some other neutral party, to objectively, critically, and comprehensively review all relevant science, disclose the facts and restore some public trust in the scientific process used as the basis for environmental management decisions at Cape Hatteras National Seashore.

Respectfully Submitted

Michael A. Berry ----END QUOTE-----

In closing I would like to state that this quote from Dr. Mike Berry is stated much more eloquently than I could. I support this statement fully and hope the NPS can see the light that this man has shown to NPS. I support no-action Alternative A as amended with my suggestions in my previous comments.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
 This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
 The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
 *Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
 * Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
 * Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
 Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: To Whom It May Concern,
 I absolutely disagree with the proposed Draft Environmental Impact Statement alternative F.
 This proposal will have significant impacts on all small businesses on Hatteras Island as well as tremendous negative impacts to cottage owners due to significant decreases in rental incomes as a result of beach closures!
 The soul reason Hatteras Island has been so popular historically over this last half century is due to the open beach access which allows freedom for people to enjoy fishing, easy access for handicapped visitors, and the enjoyment of families with thier pets.
 This is what makes Hatteras Island so very unique and to take this away from visitors and land owners who have enjoyed this experience over the years will be an extreme injustice to all.
 The lands and oceanfronts extending from the Oregon Inlet bridge to Rodanthe should be more than sufficient for the inhabitants of wild life and their existence not to mention the 10 miles of land from Salvo to Avon.
 Please do not consider this alternative as an option since it will take away the FREEDOM that we all enjoy!!!!

Correspondence: Following are my suggested improvements to the ORV DEIS.
 1. Commercial fishing vehicles have already their own permits (xxx, 325), and given their long history on the ocean beach (19), I believe they should be give corridors through resource closures.(viii,xi) The ramps were originally created for them (20). That commercial fishermen are not given corridors through resource closures is inconsistent with their being allowed through safety closures (xxi) and having more night driving time (xxx). Some might say this is special treatment, and I agree (53). I disagree with the statement that they are non-essential vehicles (xxx). They provide food for our people. There could at least have been a definition of essential vehicle given in the DEIS, instead of referring the reader to a piping plover document. That definitely shows that plovers are rated above the descendants of the original people that settled these islands (325). Even the ESA recognizes that a long history of species coexisting together is evidence that one is no great harm to the other. This is why Alaskan natives are exempt. The piping plover is not even endangered. Moreover, page 327 of the DEIS says:
 "Commercial fish harvesting would have negligible impact on piping plovers because plovers do not feed on any commercially important fish. However, plovers do feed on some of the same prey items of fish species that may be harvested and, as such, harvest of fish may mean greater prey encounters for plovers. In this case, the impact of commercial fishing could result in long-term minor to moderate increases in prey availability that would have a beneficial impact on piping plover foraging."
 This statement is inconsistent with commercial fishermen not being allowed corridors through resource closures.
 2. A buffer with 1,000 meters diameter could cover all private land on Ocracoke Island (121-127). Thus it is not a buffer, but just a more politically correct way of saying "no access".
 3. Much was made of the fact that of that of US National Seashores only Cape Hatteras has seen a decline in piping plover numbers in recent years (121-127). There has also been an increase in ORV use. Every scientist knows that "correlation does not necessarily imply causation". The Pamlico Sound area is very large and unique in the US. They are many other places immediately outside the seashore that are good bird habitat. This may not be true to such an extent for the other seashores. There should be a study of how this factor might figure into bird counts.

Correspondence: Dear Superintendent Murray,
As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.
1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."
2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness...."
Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.
3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals. Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.
***** Thank you very much for taking the time to protect one of America's most beautiful stretches of Atlantic seashore! Sea turtles, nesting shorebirds, and generations to come will be grateful for your action today. Thanks again!
Sincerely,

Correspondence: Important Development
"Species of Concern" clarified by NCWRC's Gordon Myers
For a long time, beach access advocates have urged the National Park Service not to extend protection to non-endangered birds as if they were endangered.
The Park Service has given large buffers to non-endangered birds such as American oystercatchers citing the fact that they appear on a list of North Carolina's "species of concern."
In the Draft Environmental Impact Statement (DEIS), the Park Service's preferred Alternative F would continue to give protection to non-endangered birds. This has drawn a reaction from Gordon Myers, the Executive Director of the North Carolina Wildlife Resources Commission, who claims this practice is beyond the intent of the state of North Carolina.
Following is an excerpt from a May 9, 2010 Virginian-Pilot news article by Catherine Kozak: Numerous shorebirds in Cape Hatteras National Seashore are given higher levels of protection in a proposed off-road vehicle management plan than what the law ever intended the birds to have, a state wildlife official said.
State-listed "species of concern," - such as the American oystercatcher - do not require the extensive buffers and beach closures mandated for federally listed species such as the piping plover, said Gordon Myers, the executive director of the North Carolina Wildlife Resources Commission. Myers said that's beyond the intent of the state law: the state designation is supposed to be more of a call to action for a species.
The Wildlife Resource Commission, he said, will voice its objections to the use of state "species of concern" lists to trigger ORV management strategies under the federal Endangered Species Act.
That is of concern to us because it's apples and oranges," he said. "To treat it as synonymous with threatened and endangered is not congruent."
I strongly agree that this published comment by the NCWRF should be used when writing the final EIS that will manage MY HOME for the next decade.

Correspondence: The consent decree and now the NPS DEIS has undermined my trust in our government and the National Park Service. The DEIS will have dire economic affects to the island and beyond. I understand the need to protect species, but it is only valid to a certain extent. It is hard to make it financially on the island when there is a boom and everyone has money. With the economic downturn and the closing of the beaches this place may no longer be able to keep islanders in their homes. I agree with closures similar to Nags HEad for turtles and birds and free access during the off season. I also understand ORV's needing to be restricted but it is possible to regulate the amount of traffic. People can get a pass to go on the beaches and if they ever violate a law on the beach they can be restricted to driving on the beaches for 3 years. The use of detours and bypasses around the closure is the only way to make this plan work. Please go back to how it was before the consent decree.

 Correspondence: National Park Service Cape Hatteras National Seashore Recreation Area Hatteras, NC
 May, 2010

To whom it may concern; I appreciate the opportunity to comment on the Draft Off-Road Vehicle Management Plan/Environmental Impact Statement (DEIS). As was mentioned in my comments in the public meeting in Buxton 4/26/10, I believe cooperation among all the parties is paramount to achieving the goals desired with these regulations. There is a delicate balance in providing reasonable access to the public for recreational purposes, and protecting resources in such a way to encourage proliferation of species, plants, and beach. I would like to first make a few points about the overall DEIS assessment, then focus on areas where change may occur. The issues on Hatteras Island are unique to any other National Park. Here, the beach is ever more important to all aspects of life. These southern village communities are surrounded by Federal lands and water. ALL activity revolves around the beaches. ALL economics depend upon an active tourist business, beach access, and a well managed beach. To include the economic statistics of northern beach communities as part of the southern beach communities is similar to including the time of the pace horse at the Kentucky Derby as part of the overall race statistics. Our adjoining northern beach community neighbors, Southern Shores, Kitty Hawk, Kill Devil Hills, and Nags Head are completely different economies. In fact, tourists (our main industry) must bypass these northern beach communities in order to get to the southern beaches. The extra half hour to hour and a half drive south makes these northern beaches more of a competitor than a companion to the southern village communities. Full time population differences alone clearly reflect the dichotomy between the southern villages and northern towns. These northern beach towns include Southern Shores (population 2,587 (2008 Dare Co.)), Kitty Hawk (population 3,260 (2008 Dare Co.)), Kill Devil Hills (population 6,642 (2005 Dare Co.)) and Nags Head (population 3,016 (2008 Dare Co.)).

The population of these northern beach communities totals 15,500 people spread across approximately 18 miles.

In comparison, the southern beach villages include Rodanthe (population 203), Waves (population 49 or 50), Salvo (population 339), Avon (population 735), Buxton (population 1,848), Hatteras Village (population 743), and Hyde County's Ocracoke Island (population 769).

The population of these southern beach communities totals 5,456 spread across approximately 65 miles (all population statistics from most recent data and most reputable sources between 2000 census and 2008 Dare County records. Mileage does not include Pea Island Wildlife Refuge nor does it include any water area across Hatteras Inlet).

When one compares revenues from the restaurant, hotel, rental cottage, and retail establishments, the economic dichotomy of these different communities becomes ever more clear. My discussions with a local seafood business owner, two local tackle shop owners, a local campground owner, guests to my rental cottage, and fishermen on the beach, indicate beach closings are confounding (and in some cases aggravating) visitors. Many are deciding not to return until all this is "figured out" (their words). Business owners are telling me they believe business is down between 17% and 38% due solely to beach closings. Many guests have responded "they love the isolation of the southern beaches". They say "if we are forced to smaller, more crowded areas of the beach, why not stop at VA Beach or Nags Head?" All visitors traveling from the north and northwest must find reason to bypass the larger beach communities of Virginia Beach and northern North Carolina to reach our southern beach communities.

Small changes in visitor perceptions about beach access have significant economic impact on southern beach communities.

Generally I agree with the conclusions of the Coalition for Beach Access DEIS Assessment. There are many areas of concern discussed in this assessment, but I will comment on 2 points I believe to be paramount to implementation of successful regulation.

Pedestrian and ORV bypass corridors should be provided thru all SMAs throughout the year.

When closures extend all the way to the water's edge, large areas of recreational beach are blocked from access. This forces the beach visitor to smaller and more densely populated areas of beach ? as mentioned, something the visitor can find in VA Beach or Nags Head. Popular beach spots of Hatteras Inlet, Cape Point (Buxton), and Ocracoke Points, are areas where nesting should not take place to begin with. These popular East Coast fishing areas are most susceptible to flood. Storm flooding accounts for approximately 30% of nesting failures. These areas flood with simply a suitable moon phase, or the slightest properly directed wind. Additionally, bypass corridors will be beneficial in helping keep predators away from nesting birds. Predators account for over 50% of nest failures. Human presence is a deterrent to predator species. Plover have not nested at Hatteras Inlet for years. Dredge Island, not included in any species management statistics, is a mere few hundred yards from Hatteras Inlet and home to many species of birds. As mentioned in my comments at the Buxton public meeting on 4/26/10, most local residents know what to do for needy animals they come upon on the beach. If there is a dangerous situation, or something needing proper equipment, they know to call NPS biologist Michelle Bogardus. I mentioned I have personally called Michelle to help at least half a dozen stranded sea turtles in the past 3 years. I know many other residents have done the same. Without access around closures we are not in position to help. It is inevitable that NPS will at some point in the future be short on resources to monitor/manage the beach. Locals become ever more important in preserving nature and our natural resources at times like this.

Bypass corridors will go a LONG WAY in appeasing tension developed by local residents and visitors in this debate. No one will be completely happy with the resulting regulation. Both sides will have issues with whatever is in the final document. From the standpoint of local residents and visitors though, both will be more able to accept the consequences of regulation if access around closures is provided.

Suggestion: NPS personnel, or trained volunteers, could monitor corridors in closure areas where there are active endangered species nests. Volunteer programs have been very successful in the past. Programs can be established/expanded to monitor existing nests/hatchlings. This is an excellent opportunity for a public/private partnership. This is also an ideal educational opportunity. An education program designed to train NPS staff and volunteer monitors to "train the public" would serve the public need and protect species. I would note visitors are always inquisitive about what is going on. They and their children can learn valuable species management lessons with this opportunity. I believe local residents would be happy to develop an educational program together with NPS staff. I believe local residents would welcome the opportunity to staff volunteers and maintain an education program on the beach.

Buffer size is also an important aspect of the regulations currently under consideration.

Our National Parks allow humans to experience the natural beauty of sensitive environments on a grand scale. Proper management practices help in preserving and encouraging sensitive species development within that environment. Protective buffers, as part of that management strategy, should be adequate to serve their intended purpose. The USGS Patuxent Wildlife Research Center developed an unbiased analysis specifically related to this issue. In that analysis adequate buffer sizes for protection of threatened and endangered species and species of special concern at Cape Hatteras National Seashore were established. The LARGEST recommended buffer size in that study was 200 meters. A smaller buffer size, supported by a Biological Opinion from the US Fish and Wildlife Service, details a 375 foot radius, or approximately 10 acres, as sufficient distance for protection from sight and noise disturbance for certain raptors. (USDI. 2004. Appendix 1 from: Biological opinion and letter of concurrence for effects to bald eagles, marbled murrelets, northern spotted owls, bull trout. Olympic National Forest. Lacey, Washington, August 2003, revised September 2004). Earlier scientific studies have been performed in a series of habitat suitability index (HIS) models published by the U.S. Fish and Wildlife Service for a variety of wildlife species, including birds, mammals, reptiles, and amphibians (e.g., Raleigh, 1982; McMahon, 1983; Sousa and Farmer, 1983; Raleigh et al., 1984; Schroeder, 1984). These studies demonstrated a need for buffer widths UP TO 106.7 meters, depending on the particular resource needs of individual species. I support the Coalition for Beach Access position of moving the buffer with the brood as it relocates toward reliable food sources.

In summary, buffers sizes up to 200 meters in width, with access corridors around these buffers, satisfies the objectives of National Park Service recreational access AND meets reasonable scientifically recommended MAXIMUM buffer size to protect species.

I believe reasonable regulation, containing corridor bypasses and 200 meter movable buffers, will go a long way in obtaining cooperation and participation from local residents. Although I believe these regulations can't help but decrease visitation to Cape Hatteras National Seashore, inclusion of bypass corridors and reasonable buffer size will have less of an effect on the local economy of the southern villages than more stringent regulation. I encourage the National Park Service to look hard at the SCIENCE, the statistics, and the effect of these actions on the local economy, in determining their final regulations.

As much as I would like to see cooperation of all the parties in this action, and as much as I believe cooperation is the best way to meet the objectives we all want to attain, it has been made apparent at the public hearings that no matter what the final regulations contain, National Audubon and Defenders of Wildlife will challenge these regulations in court. The federal judge responsible for forcing this action to where it is today has tipped the scales of justice out of balance. Developing reasonable policy based upon science and long established objectives of the National Park Service will go a long way in substantiating the policy in any appeal of a court decision.

Thank You For This Opportunity To Comment, Darr Barshis Hatteras, NC Resident

Correspondence:	<p>Dear Superintendent Murray,</p> <p>As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.</p> <p>1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."</p> <p>2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness...." Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.</p> <p>3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.</p> <p>Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan. As a child of North Carolina, I hope that my own children will be able to enjoy our beautiful unspoiled coast. Please reevaluate your position on ORV to better protect our fragile outer banks and its biodiversity.</p> <p>Thank you, -jen jelllicorse</p>

Correspondence:	<p>Mr Murray</p> <p>After reading and understanding what I could of this in the very short allotted time frame it is easy to see that the best interest of all peoples involved has not been met. Creating a document such as this takes much thought and preparation. It was not done until the parties that should have drawn it up were put into a position that they were required to do so. This is not only an Off Road Vehicle management ruling as stated but it will stand for all peoples doing all things on and in Cape Hatteras Seashore. A simple walk on the beach will also be governed. Even when the beach as stated in your paper was used for transportation in the beginning there was still recreation by the inhabitants of the island. To anyone who enjoys Cape Hatteras National Seashore this document is as profound as the Bill of Rights or The Constitution. With those words I ask of you to go back and find a solution that truly carries the interest of all peoples involved. As it stands now I do not support it. Thank you for your time and hearing one small voice Sir.</p> <p>Sincerely Dale W. Stump</p>

Correspondence:	<p>I disapprove of the National Park Service draft regulations for the off road vehicle management. As one of the groups representing Outer Banks visitors has stated, we should "Protect, not prohibit."</p> <p>My husband and I own a vacation cottage, and our rentals are dependent on people who have historically visited the Outer Banks to walk, fish, and drive on limited areas of the beach. The drastic limitations proposed will cause them to go elsewhere, cutting off revenue to N.C.</p> <p>People who love the beach also love wildlife. They don't need to be banned from access as much as they need to be educated through signage and limited closures. Please do not approve this proposed regulation that will cause much wider buffer zones than are necessary and make it unpredictable whether there will be any access to huge areas of beach.</p> <p>Protect the breeding and nesting areas during the appropriate weeks -- not for entire months. Scale back the number of meters of restricted area to what is used in other sites around the country.</p> <p>Habitat management can be less restrictive if carefully monitored. Human actions have little influence on the success rate of breeding birds and turtles when compared to that of nature itself, and humans will respect signs alerting them to wildlife nesting areas.</p> <p>The beaches of the Outer Banks are a cultural resource. Families and fishermen have been coming here for generations to enjoy our oceanfront. Birds have always adapted to our presence and they will continue to do so. We should be able to walk our pets on leashes. We should be able to know that when we come, there will be ORV access, if not in a restricted area, then in a nearby one. Even when there is wildlife nesting, the beach itself should be open to walkers.</p> <p>Finally, do not punish the southern beaches more than the northern ones. That makes no sense.</p>

Correspondence: ORV's and SUV's destroy the beach, make it dangerous to walk on the beach, and clutter the beach with pollution, noise, and traffic. The more you can provide parking away from the shoreline and walkways to the beach areas the better. I do not go nor take my family to beaches where vehicles are permitted. I think this plan is a good compromise. I visit Cape Hatteras every year and wish for it to remain as natural as possible. Thank you for trying to protect our greatest natural resources.

Correspondence: I own several businesses based in Buxton, NC - a bakery, a construction business, a vacation rental home, and a charter fishing business. All of my businesses have been adversely affected by the Consent Decree and beach closures. My bakery is down 30%, my construction business (vacation rental homes) is down 90%, my vacation rental home is down 20%, and my charter fishing business is down 75%. Consequently I no longer have work for dozens of locals who used to work for me. While some of this is due to the poor economy, a significant portion of it is due to the NPS beach closures. This EIS and the proposed beach closures will cause even greater harm to my businesses will likely cause some of them to go out of business completely. People don't want to come to Hatteras Island if they can't walk, swim, play, and fish on the beaches. Your EIS and proposed management plans do not adequately account for the massive negative economic impact they will have. Your EIS and the supporting documents, studies, etc., provide no evidence that beach closures are necessary for the protection of birds or turtles. To do so would require proof of bird and turtle kills by beach-goers on a grand scale at Hatteras Island, and you have provided no evidence of this. It is not sufficient to imply, without proof, that human presence on Hatters beaches might or could cause some imagined or conceptual harm to burds or turtles. Your EIS and proposed closures are deficient in that they do not provide for shared use of NPS beaches for recreational and conservation purposes - conservation can and should be achieved with shared human access and protective measures around bird and turtle nesting areas. There is no historical or demonstrated future need for complete, unshared beach closures. The desires of radical, so-called environmental groups to close Hatteras Island beaches and their threats of law suits should not be the basis for NPS management proposals or actions. Only true, demonstrated needs on the part of wildlife and the humans who share NPS beaches should be taken into account when formulating NPS management proposals and actions. NPS should vigorously fight and defend itself against the punitive threats and actions of the radical groups. NPS should develop an ORV and beach use plan that provides for shared human access to all beaches at all times of the year, with adequate and balanced protections for human access, birds, and turtles. It can and should be done. Just because the radicals want complete closures and one-sided solutions doesn't mean the NPS should give it to them. We will fight such efforts because they are neither right nor fair. Those of us who have chosen to live on or visit and enjoy the natural beauties of Hatteras Island do so because we love it. We do all we can to protect its beaches and wildlife. It is not appropriate to deny us the traditional access we have always enjoyed and were promised would not be compromised when we sold, granted, and otherwise conveyed our lands to NPS. The history of the Cape Hatteras National Recreational Seashore has well shown that human access to the beaches was guaranteed as part of the land conveyance and NPS should not break that promise. NPS should work with residents, user groups, and environmental groups to develop shared access management plans that respect that promise while providing reasonable protection for wildlife. It can be done and NPS should not give in to pressures and arbitrary timetables to do otherwise. If it takes longer to accomplish than provided for by the Consent Decree or other timetables, then use your legal staff, the judicial system, the legislative system (elected officials), and the news media to get the time concessions needed to come up with a balanced management plan. NPS will rightfully get fights from both sides if it's management plan is not balanced and fair. Right now NPS is leaning far too much towards the radical closure side of the issue. Thanks for your time.

Correspondence: I have traveled to Cape Hatteras Nat'l Seashore on an annual basis - both on and off season - since I was a child. ORV use has always been a part of our family outings. The NPS must formulate a plan that is consistent with the legislation establishing Cape Hatteras National Seashore Recreation Area. The enabling legislation for the Recreational Area states, in part, "said area shall be, and is, established, dedicated, and set apart as a national seashore recreational area for the benefit and enjoyment of the people and shall be known as the Cape Hatteras National Seashore Recreational Area". Therefore, it is important to balance resource protection with reasonable access for recreation. Corridors are a vital tool in providing access while managing resources. They provide a small path around temporary resource closures in order to provide access to open areas that would otherwise be blocked. Corridors should be permitted throughout the seashore during the entire breeding and nesting season including ML-1 portions of SMAs. These corridors would provide valuable access without impairment or damage to protected resources. Buffers, or closures, are important management practices for species recovery. However, to have long term benefit for the wildlife and the visiting public, buffers must be based on peer-reviewed science For example, the Piping Plover, a species classified as threatened and not endangered, is given a

level of unprecedented protection in Alternative F. A 1,000-meter buffer in all directions represents over 771 acres. The DEIS does not cite any peer-reviewed science in supporting such closure. A more appropriate & effective buffer would be 200 meters. Birds that are not listed as endangered should not be afforded the level of protection given to ESA (Endangered Species Act) protected species. Instead of 300-meter buffers for these birds, a more appropriate buffer would be 30 meters. Also, all birds in the same ecosystem of the seashore should be counted. This includes all the many birds on the dredge and spoil islands located just yards away and within sight of the seashore. The National Park Service should consider turtle management practices successfully used in other federal and state areas to achieve nesting success. More proactive measures include relocating nests to more desirable locations, which is routinely and successfully done in other areas.

Superintendent Michael Murray Cape Hatteras National Seashore 1401 National Park Drive Manteo, North Carolina 27954

Re: Comments on the Cape Hatteras National Seashore Off Road Vehicle Management Plan / Draft Environmental Impact Statement

Dear Mr. Murray:

The National Parks Conservation Association, Natural Resources Defense Council, and The Wilderness Society are grateful for this opportunity to comment on this Off Road Vehicle Management Plan/Draft Environmental Impact Statement (DEIS). The Cape Hatteras National Seashore (CAHA) is a nationally significant resource for and to all Americans. It represents one of the last vestiges of open, wild, and undeveloped beaches on the eastern seacoast of the United States and provides protected habitats for rare, threatened, and endangered wildlife.

In reviewing the DEIS, we find that all of the alternatives presented in the draft privilege off-road vehicle use (ORV) over and above all other visitor uses and experiences. Overall, this approach is unbalanced and fails to conserve and protect the natural resources, wildlife and qualities that make CAHA a nationally significant resource.

We agree that the "environmentally preferable" Alternative D would cause the least environmental impact of the alternatives presented in the DEIS.

Under this alternative, we have several concerns about year-round vehicular traffic and how it impacts other visitors and wildlife. As a consequence, we are willing to support a modified Alternative D that includes and recognizes the following points.

Wilderness

The CAHA authorizing legislation states, "Except for certain portions of the area, deemed to be especially adaptable for recreational use, particularly swimming, boating, sailing, fishing, and other recreational activities of similar nature, which shall be developed for such uses as needed, the said areas shall be permanently reserved as a primitive wilderness?(DEIS, p. 46)."

This language indicates the intent to manage CAHA as a primitive wilderness with some exceptions. Unfortunately, this document is the first attempt by the agency to identify areas for one particular recreational use ? off-road vehicles. The wilderness term carries management implications that are not addressed in the DEIS and that are not compatible with recreational ORV use. Consequently, CAHA should be using wilderness policy principles in its management of recreational off-road vehicles as per the enabling legislation and 2006 Management Policies --these wilderness policy principles should be spelled out in the FEIS.

Congress enacted the Wilderness Act on September 3, 1964. The Act designated over 9 million acres of wilderness within the nation's national forests, administered by the Department of Agriculture. For the lands administered by the Department of the Interior within the National Park System, Congress required the Secretary to "review every roadless area of five thousand contiguous acres or more?and? report to the President his recommendation as to the suitability or unsuitability of each such area?for preservation as wilderness. The President shall advise the President of the Senate and the Speaker of the House of Representative of his recommendation with respect to the designation as wilderness of each such area?on which review has been completed, together with a map thereof and a definition of its boundaries." Congress directed that the Secretary complete this review by September 3, 1974.

For parks in existence on September 3, 1964, the ten years after 1964 saw Presidents Johnson, Nixon and Ford transmit to Congress many wilderness recommendations. There are a number of parks that were in existence on the date of enactment of the Wilderness Act for which the NPS has never fulfilled the Congressional mandate to "review every roadless area of five thousand contiguous acres or more?and? report to the President his recommendation as to the suitability or unsuitability of each such area?for preservation as wilderness." CAHA is one of these areas.

It is tragic that NPS has been so institutionally unresponsive to Congressional wilderness review mandates. CAHA provides an example where, if this mandate had been fulfilled at any time since 1964, many of the user conflicts that are currently wracking the Seashore may have been avoided. It is also clearly evident, that any comprehensive attempt to establish an ORV management plan, should have been preceded, informed, and bounded by a wilderness suitability study. It is our position that it is absolutely essential that NPS protect the pedestrian visitor experience through environmentally appropriate access to primitive wilderness. As a consequence, we urge the National Park Service to execute and produce the wilderness suitability study for CAHA that is now 35 years overdue (see Management Policies 2006, Ch. 6).

Wildlife

The National Park Service cannot abrogate its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect wildlife and the habitat on which it depends. The Final Environmental Impact Statement (FEIS) must clearly assert NPS authority to adaptively manage the wildlife resources including increasing management protections as necessary in response to information produced by monitoring and analysis to achieve desired future conditions and species recovery goals.

In the analysis of the specific wildlife conservation and management implications of the DEIS, we concur with the comments submitted by Audubon North Carolina, National Audubon Society, Defenders of Wildlife, and Southern Environmental Law Center, with the following additional comments. First, with regard to desired future conditions (species recovery goals) we believe that NPS is choosing long-term targets, and possibly short-term targets that are too low. For piping plover (DEIS, p. 8), the long term target is 30 breeding pairs. However, the footnote indicates that CAHA could potentially support 30-60 pairs, and actual population growth at other sites has exceeded the projections. Consequently, if CAHA could potentially support more than 60 breeding pairs, the long term target should be at least 60 breeding pairs.

Second, in the section on "Issues and Impact Topics" (DEIS, p. 29), it states that "Nesting sea turtles at the Seashore include the loggerhead, green, and leatherback turtles." However, when desired future conditions are discussed (DEIS, p. 8), loggerheads are the only species for which short-term and long-term targets are stated. Again, the long-term loggerhead target is set low at 115 nests, when the footnote states the 50 year projection as being 201 nests. If there is a scientifically based 50 year projection, then why is a lower number being chosen for a long-term target? What is the basis for this choice?

Also, the DEIS needs to include projections and targets for green and leatherback turtles. "From 2000 to 2009, there was an annual average of four green turtle nests at the Seashore, with a peak of nine nests in 2005 (DEIS, p.216)." Nesting by leatherback turtles at the seashore was first documented in 1998 and there have been six known nests since 2000 (DEIS, p.216). These very low numbers cannot be an excuse for not setting recovery projections and targets. In fact, just the opposite is the case, the lower the numbers the more important the projections and targets become.

Alternative Transportation Systems for Federal Public Lands

In 2005, the SAFETEA-LU legislation established a new program called the Alternative Transportation in Parks and Public Lands program, changed in 2008 to the Paul S. Sarbanes Transit in the Parks program. Administered by the Federal Transit Administration in partnership with the Department of the Interior and the Forest Service, the program funds capital and planning expenses for alternative transportation systems in national parks and public lands. The goals of the program are to conserve natural, historical, and cultural resources; reduce congestion and pollution; improve visitor mobility and accessibility; enhance visitor experience; and ensure access to all, including persons with disabilities.

Programs, resources, and expertise now exist that CAHA can access and could employ to answer the questions: Are there feasible alternatives to recreational ORV use in getting visitors on and off the beach including those with fishing equipment? Specifically, NPS should be contemplating whether some sort of environmentally sensitive mass transit system could accomplish the objective of getting people efficiently on and off the beach while reducing the number of vehicles and vehicle trips. If such a study is too complex for the FEIS, then the FEIS should assert and spell out that such

a study is needed, will follow the FEIS, and that NPS will adaptively adjust its management in light of an alternative transportation study. Moreover, such a study should be complementary to the wilderness suitability study, previously discussed, to distinguish precisely between those areas where mass transport of visitors is suitable and those where it is not (i.e. wilderness).

Management Policies 2006

The "objectives in taking action" (DEIS, pp. 2-3), "desired future conditions" (DEIS, p. 7), and management policies discussion (DEIS, p. 44) are all missing significant requirements under the 2006 Management Policies. We request that NPS expand the "desired future conditions" section beyond species management and include goals from the management policies on least impacting vehicles and motorized equipment (Management Policies 2006, 8.2.3; 8.2.3.1; 6.4.3.3), noise (Management Policies 2006, 4.9), appropriate uses (Management Policies 2006, 8.1.1), and wilderness (Management Policies 2006, Ch. 6). These policies are essential guideposts for determining whether a recreational use is appropriate and causing unacceptable impacts in National Park System units. In addition, we believe they are critical for determining whether or not the agency is upholding its management duties under the Organic Act. We would urge the agency to develop a set of desired future conditions for 1) motorized equipment 2) noise 3) appropriate use and 4) wilderness.

In conclusion, we are in complete accord with Audubon North Carolina, National Audubon Society, Defenders of Wildlife, and Southern Environmental Law Center on the following point.

The regulation to govern off-road vehicle use on the beaches of Cape Hatteras National Seashore will be the most important action by the National Park Service in the history of Cape Hatteras National Seashore. The regulation will determine the future of the Seashore. It will determine the future for North Carolina's beach-nesting shore and waterbird populations, the health of migrating and wintering shorebird populations, North Carolina's sea turtle populations, and the fate of other natural resources. Equally important, it will determine the quality of the Seashore experience for more than 2.25 million visitors annually and it will shape public sentiment toward the National Park Service as the stewards of the most significant natural landmarks of the United States.

We are thankful for the opportunity to provide these comments. We appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. And we look forward to an FEIS that addresses and incorporates our concerns.

Sincerely,

Chris Watson, Program Manager National Parks Conservation Association
Charles Clusen, Director, National Parks Project Natural Resources Defense Council
Leslie Jones, General Counsel The Wilderness Society

Name: Russell, Gregory L
Received: May,11,2010 00:00:00
Correspondence Type: Web Form
Correspondence: Date: May 11, 2010 To: National Park Service From: Gregory L. Russell Subject: DEIS Off-Road Vehicle Management Plan Comments My comments concern the DEIS of the Off-Road Vehicle Management Plan prepared by the National Park Service (NPS) for the Cape Hatteras National Seashore Recreation Area.
1) Page 201: I disagree with the NPS statement: Even with resource closures in place, protected species are still at risk [from pedestrians and ORVs]. No Piping Plover deaths have been attributed to ORVs. ORV violations continue to decrease as signage and education improve. Pedestrian violations are much more significant than ORV violations. It seems to me that any transgressions into protected area are the result of lack of NPS manpower and enforcement than the public purposely and willfully violating out of bounds areas. 2) Page xxiv: I question the statement of as per the DEIS: Carrying capacity would be a peak use limit determined for all areas based on the linear feet of beachfront. If you close off huge sections of the beach, you force more people into smaller areas, potentially resulting in more resource impairment and diminished visitor experience.
3) Page six and page 23: I am against having two different closures rules pertaining to the North facing beaches (North side) and the South facing beaches (South side) as per the grid outlined in Alternative F. I disagree with the NPS proposal to close the beaches in villages of Frisco, Hatteras and Ocracoke Villages to ORV access longer than the traditional May 15 to September 15 period for the Northern beaches, even though seasonal visitor statistics are similar for all villages. Please, make them the same: May 15 -> September 15. 4) Page 1: I agree with your statement ORVs have long served as a primary form of access for many portions of the beach in the seashore, and continue to be the most practical means of access and parking for many visitors.
However, pedestrian only areas discriminate against individuals with limited mobility due to age or physical impairments, families with small children, and those wishing to engage in activities requiring recreational equipment (boogie boards, beach umbrellas, beach chairs, coolers, fishing rods and tackle, etc) 5) Page 53: I disagree with the special use permit proposed guidelines. It is impractical to allow the transportation of disabled visitors to the village beaches and then require the vehicle to be returned to the street or parking area. This necessitates the disabled person to have a driver to drop him (or her) off, then drive to a parking area, then trudge a long distance to the site of the drop off, then trudge the long distance through the sand back to get the vehicle. Suppose the handicap person wants to go to the beach, is capable of driving himself, yet cannot find another person to go with him? Does he now not go to the beach? This rule creates unnecessary hardships and risks in the event of an emergency as well. 6) Page 121 127. I strongly disagree with the buffers as presented. We must allow for pass-thru corridors. The beach is linear with the ocean buffering on one side and the dune line on the other. For example - If you pinch off access on one side of a 4 mile linear beach and pinch off access on the other side of the 4 mile section of beach with no corridor, then you effectively have closed off all 4 miles of the beach because you CANT get there. The proposed bird buffers are too large, blocking access to the interior sections from the two buffered ends. I propose ORV pass-thru only corridors and to use breeding / nesting buffer distances to establish ORV pass through only corridors to ensure beach access in a way that does not hinder resource protection. I believe pass through corridors should be maintained for pedestrians and ORVs in all areas of the Cape Hatteras National Seashore Recreational Area throughout the entire breeding and nesting season. Corridors are vital to providing access in a way that does not hinder resource protection. Piping Plover unfledged chicks buffer should move with the brood as it relocates to reliable food source, not expanded. The 1,000 meter distance for the piping plover is way too large and not based upon peer reviewed science. A more rational distance would be 200 meters per other sites in the nation for the piping plover. Ample scientific evidence and precedent exists to support a 200 meter buffer. Buffers for other species, including American Oystercatchers, Least Terns and Colonial Waterbirds must also be changed. An effective 30 meter buffer should be established for these species rather than the 300 meter closure outlined in the DEIS. NON-ENDANGERED BIRDS should not have same protection as if endangered. Not allowing ORV access is paramount to denying the public access to these beaches. 7) Page 468: I disagree with the limitations imposed on pedestrian and ORVs. Corridors or bypasses should be provided thru, around or below high tide line in all SMAs during entire breeding season to maintain access. 8) Page 124: I strongly disagree with the NPS slant of providing for over protection of resource management over that of the public's right to access the beaches. Pro-active initiatives include: Vegetation Management, Habitat Management, Enhanced Predator Management, Colonial Water bird social attraction, Piping Plover check fledge rate, Piping plover chick buffer distance, and pass-through buffers during the incubation period. Opportunities to implement less restrictive closures as a result of the above initiatives should be considered more frequently than the 5-year periodic review process identified in the DEIS. 9) I disagree with the NPS Resource Management Pedestrian / ORV Closure Policies. These policies address the least significant factors affecting nest survival with little chance to have more than negligible impact. For example: the AMOY Nest Failures are predominately due to non-human events. Using your own stats, the mammalian predation is 54%, Storm / Lunar Tides: 29%, Nest Abandonment: 6%, Avian Predation: 5%, and Ghost Crab Predation: 3%. So what is the percentage due to human interference: just 3%! Its insignificant, yet the NPS wants to ban humans when their actions provide very little influence on the success rate of breeding birds and turtles.
10) I disagree with the stats of breeding plovers and the other birds in the Park when the NPS does not adequately consider locations neighboring the Recreational Area that are part of the same ecosystem, namely dredge and spoil island that are located just yards away and within sight of the seashore. These birds are part of the same ecosystem and should be included. Those spoil islands, developed by man from dredging the waterways in the Pamlico Sound for channel upkeep are slammed full of birds. The reason why so many birds? NO PREDATORS. SO, birds are not as stupid as one might think. You have to count these birds and incorporate them in the stats when the NPS is talking about any so called decline in breeding pairs in the National

Park. 11) Page 1: I do not think the DEIS responsibly addresses the cultural resource issues. The very purpose of the DEIS as set forth in the National Environmental Policy Act (NEPA) is to protect and preserve natural and cultural resources in the federal decision making process. In the DEIS, the statement protect and preserve natural and cultural resources appears in the first sentence of the first page of the plan, in the Purpose of the Plan section, and numerous times thereafter. Yet, the 810 page document devotes only two paragraphs to analysis of cultural resource issues.

12) Pages 270-281; 561-598: I strongly disagree with your economic analysis of the impact of the DEIS. The region of influence (ROI) incorporates the Northern Beach communities, including Kill Devil Hills, Kitty Hawk, Southern Shores and Duck. These areas are almost completely disconnected from ORV use and access issues relating to the Seashore. Inclusion of the Northern Beaches in analysis significantly dilutes estimates of economic impact on the 8 Seashore Villages. Analysis of economic impact to the Seashore Villages appears to be significantly down played. Emphasis in DEIS is on the ROI-wide or county-wide level impacts. Nowhere is it clearly addressed that the overwhelming majority of negative impacts will be felt by small businesses in the Seashore Villages rather than by overall economic interests within the greater ROI. On page xlvi, Alternative F is characterized as having a negligible to moderate adverse impact on small businesses. I strongly disagree with this statement. I believe the negligible to moderate projection is inaccurate and relies on economic surveys that has not yet been published. Furthermore, this material is not expected to be added to the DEIS until after the public comment period has ended. Based upon the economic harm we have already experienced under the consent decree, Dare County projects the economic impact of Alternative F to be substantial. Beach closures have already had a devastating and unfair impact on many Dare County Businesses, causing foreclosures, bankruptcies, lay-offs, cutbacks, expensive refinancing, and depleted college funds and savings accounts. Even businesses whose revenue has stayed level or showed a modest increase have accomplished this at a costly price. Many have had to cut back employee hours, forego much-needed capital improvements, and sacrifice profits. Pages 270-286, 561-598: The socio-economic data and analyses are incomplete and erroneous and result in an understatement of the effect the restrictions will have upon the Island, the region and the state of NC. The US Park Services answer: Businesses will have to adapt to the new rules. (p.383) The negative economic impacts of the decree ARE KNOWN, so to say that the added restrictions would have negligible to moderate impact is indefensible. 13) Overall Visitor Counts - Overall visitor counts appear to include visitors to Fort Raleigh National Historic Site and the Wright Brothers National Memorial. A large percentage of these visitors vacation in the Northern Beaches communities and recreate on the non-federal beaches outside of the Seashore. Visitors who patronize the Fort Raleigh National Historic Site and the Wright Brothers National Memorial but do not visit the actual seashore areas need to be factored out. Maintenance of Future Access to Cape Point and South Point Ocracoke: All socioeconomic analyses related to Alternative F are predicated on the assumption that access corridors will remain open for at least an appreciable portion of the visitor high season. Under Alternative F, the access corridors will be subject to Resource Closures based on buffers similar or identical to the Consent Decree. Unless some predictability of access to Cape Point and South Point Ocracoke can be assured, economic analyses predicated on assumption of access are fundamentally flawed. Why would a group of surf fishermen want to come to Hatteras Island to surf fish if they are not sure they can access the prime fishing grounds at Cape Point? The answer is they won't come. If they don't come, they don't rent vacation homes and spend their money on Hatteras and Ocracoke Islands. The definition of the Region of Influence (ROI), faulty data on economic activity generated by specific type recreational activity, incomplete visitation/business survey data, inflated overall Seashore visitor counts pertaining to beach use, and flawed key assumptions concerning the maintenance of access under Alternative F, all lead to inaccurate conclusions in the socioeconomic analyses. Specifically, these inaccuracies can be seen as understating the negative socio-economic impact of the Seashore Villages. Further, this negative impact will be absorbed almost entirely by Small Businesses. Neither of these important aspects of the management alternatives are adequately presented in the DEIS. 14) Page 136: I strongly disagree with your pet restriction proposals. The prohibition of pets in the Seashore during bird breeding season including in front of the villages. = No Pets in public areas beaches, campgrounds, soundfront, foot trails, park maintained roads -from March 15 July 31.

15) Pages 125; 392 396: SEA TURTLES. I disagree with the stats and procedures proposed. I think endangered sea turtles would benefit from management practices now in use at other federal seashores that are more proactive in efforts to achieve nesting success. This includes relocating nests to more desirable locations as is done in other state and federally controlled areas. The Cape Hatteras National Seashore Recreational Area is on the northernmost fringe of turtle nesting locations for the southeast, accounting for about 1% of all turtle nests. Proposed buffer areas are not needed for protection of the turtles and amount to overprotection. 16) Pages 97- 101. I strongly disagree with proposals in this section saying that ORVs will be prohibited year round between ramps 27 and 30, at Hatteras Inlet (Hatteras Spit), Ocracoke Inlet (North Ocracoke Spit) and various other locations. Not allowing ORV access is paramount to denying the public access to these beaches. They are located miles from the nearest parking or paved road area and too far to access on foot. As a matter of course, there has been no breeding of piping plover or other endangered species at the Hatteras Island Inlet (spit) area in the past 6 years. 17) Page 104: I disagree with the proposed night time driving closures. Per your proposals, night driving will be prohibited between May 1 and November 15th, forcing visitors off of the beaches early in the evening and preventing sunrise surf fishermen access in the morning. I propose a more moderate night time ban if one is needed, perhaps from June 1 September 15 with times being 1 hour after sunset and 1 hour before sunrise to allow beach goers to gather their stuff and exit the beach area. Certainly more proactive measures such as relocating nests prone to weather and ocean events would dramatically increase the nesting success rates. 18) Page 121: I disagree with the proposed beach closings, including pedestrian access from March 15 until July 31 in 8 different beach locations which have traditionally been available. Please leave these areas open to beach walkers, shell collectors and those that want to access the beaches in these areas. Conclusion: Please, incorporate access corridors through any SMA so we can get to the open beach beyond. Incorporate the birds into the count that nest on the spoil islands. Base your buffer zones on peer reviewed science and scale them back to more reasonable distances as discussed. It is neither logical nor reasonable to spend so much time, money and energy to overprotect a bird (Piping Plover) in the Cape Hatteras National Seashore that is on the southernmost fringe area of its breeding ground. That goes for the loggerhead turtle that is in its northernmost breeding area. Lets scale back the buffer zones. You can always increase at a later date. The USFS is leaning way over the line on over protection and not enough on the publics right to enjoy the beaches of the National Seashore. The proper balance is not achieved in the propose DEIS and needs to be modified so that the proper balance of reasonable resource protection and access to the beaches of the National Park is achieved. I could sum it up by saying Protect, not Prohibit. Thank you and sincerely yours, Greg Russell

Correspondence: The NPS must formulate a plan that is consistent with the legislation establishing Cape Hatteras National Seashore Recreation Area. The enabling legislation for the Recreational Area states, in part, "said area shall be, and is, established, dedicated, and set apart as a national seashore recreational area for the benefit and enjoyment of the people and shall be known as the Cape Hatteras National Seashore Recreational Area". Therefore, it is important to balance resource protection with reasonable access for recreation. Corridors are a vital tool in providing access while managing resources. They provide a small path around temporary resource closures in order to provide access to open areas that would otherwise be blocked. Corridors should be permitted throughout the seashore during the entire breeding and nesting season including ML-1 portions of SMAs. These corridors would provide valuable access without impairment or damage to protected resources. Buffers, or closures, are important management practices for species recovery. However, to have long term benefit for the wildlife and the visiting public, buffers must be based on peer-reviewed science. For example, the Piping Plover, a species classified as threatened and not endangered, is given a level of unprecedented protection in Alternative F. A 1,000-meter buffer in all directions represents over 771 acres. The DEIS does not cite any peer-reviewed science in supporting such closure. A more appropriate & effective buffer would be 200 meters. Birds that are not listed as endangered should not be afforded the level of protection given to ESA (Endangered Species Act) protected species. Instead of 300-meter buffers for these birds, a more appropriate buffer would be 30 meters. Also, all birds in the same ecosystem of the seashore should be counted. This includes all the many birds on the dredge and spoil islands located just yards away and within sight of the seashore. The National Park Service should consider turtle management practices successfully used in other federal and state areas to achieve nesting success. More proactive measures include relocating nests to more desirable locations, which is routinely and successfully done in other areas.

Correspondence: Hatteras Island is a special place for many people. Residents and tourists alike. Like many I have a business on the island, Avon to be specific. My wife and I have owned The Froggy Dog Restaurant for the past 15 years. Over the last two years I have had the opportunity to meet and chat with people from all over the United States and many countries. Most do not understand how an organization can close so much of the beaches for the protection of birds that are not endangered. Many have said they will not return because they are denied access. These are young families that can't walk to the beach because they can't carry all that is necessary for a fun family day. How are disabled people suppose to enjoy the beaches when they can't get there? The buffers established for the protection of certain birds is far to extreme and has put Hatteras Island on the endangered list. There are families that can't hang on much longer. Their way of life has been severely compromised. I ask that you listen to the Governor, Senators and all who have written letters in support of beach access and not the organizations that do not live, vacation or work here.

Correspondence: I have followed the beach access issues closely, written my elected representatives, and advocated to friends the need to keep the beaches open as in the past, both preserving the local economy and fulfilling the promises made to the locals and to all citizens of this country when the Cape Hatteras Recreational Area was established. Instead of uniting all the Park users behind the conservation of all Park wildlife, including the endangered piping plover, present policies have divided the Park users and denied traditional users full traditional use of the Park. Outside special interests, having unlimited funding, have trampled over the rights of all traditional users. I urge you to return to the policies of the previous interim plan, then finalize a permanent plan that protects all the animals using the Park, including the humans. Thanks, JIM

Correspondence: Thank You for taking the time to read my comments, i will be simple, the DEIS was the hardest thing ever to read and lawyers have made too much money twisting science in one direction. We love traveling the sounds by boat showing my grandson all the wonderful wild life and birds along the sound shore and dredge islands, wow, how plentiful. The impact on Turtles and birds from storms & erosion is sad to see. BUT it is easier to blame a car and driver than GOD.Replenish the beaches with sand and ALL thrive. ROUTES - Alt.F. too MANY restrictions - I DISAGREE WITH NPS- Why is Bodie Island and Ocracoke so restricted and Pea Island Not included as the top pedestrian beach? I have never seen or heard of a plover hit by a ORV. CLOSURES DUE TO BIRDS - ML1& ML2 Buffers too big/restrictive-I DISAGREE NPS CLOSURES DUE TO TURTLES - Love those little guys, Why not use more hatchling proactive relocation and watch teams. I DISAGREE WITH NPS. Why does the NPS FAIL to stand up for the Cultural and Historical Value that open access to nature teaches our children and instills in our visitors giving them that GREAT feeling on each return to CAPE HATTERAS NATIONAL SEASHORE RECREATIONAL AREA. NOT A HOW DID THIS HAPPEN TO US. I DO AGGREE WITH PERMITS, DAY PASSES AND FEE'S TO PAY FOR THE EDUCATION AND INFORMATION REGARDING ORV BEACH TRAVEL. NOT KILLING FOXES AND RACOONS. THANK YOU SO MUCH, Please use all science and information so we don't have the GLOBAL WARMING DEBACAL in our back yard.

Correspondence: Dear Superintendent Murray,
As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.
1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."
2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness..." Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.
3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.
Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

Correspondence: Mr Murray
Having lived on this wonderful island since 1985 and calling it home has been a slice of the pleasures of life. Prior to that it was a vacation destination since 1972. Parties are about to put a paper into action that will change all lives here forever. The parts of the document that I was able to read through seem to possibly have much room for error. The wording can be massaged to have multiple meanings. All people who enjoy this island have an equal stand in this document and all should be covered equally. Balance is hard to find but it does exist somehow and must be met. The people put their trust in the actions and words of others and hope that they strive to give their absolute best in all things. This document will restrict all people who come to enjoy the island, the surfer, kite flyer, kite boarder, fisherperson and any and all people, not just Off Road Vehicles. As it is titled the document is misleading in those words. I cannot support this ruling as it exists at this point. I ask as but one person with the voice of many do this as it should be, with all parties involved taken into account. Thank you for your consideration in this.
Sincerely
Sharon P. Stump

Correspondence: As a full time resident of Frisco, NC. and a frequent user of "OUR" park lands, I would like to comment on the DEIS assessment for vehicle and pedestrian access.
As a professional wildlife and sports photographer, I applaud the idea of protecting our precious threatened wildlife species and open spaces. It is one of the reasons I live here. The NPS has done a great job of protecting and educating all those who visit. My son plans to join the NPS when he graduates college. I cherish the wildlife here, and fully believe in protecting endangered species. I get it.
However, I am deeply concerned about the changes in restrictions proposed for these areas based on extremely questionable science. I have no problem closing off more space to ORV access, but lets be reasonable about keeping easily patrolled corridors open to the public to access some of the popular fishing and recreational areas like Cape Point, and the inlets. The impact of closing these areas down will carry enormous implications for the local economy and the visitor experience we depend on, while having negligible effect on the threatened species you intend to protect.
Our economy is already on shaky ground due to recent national fiscal events. Most businesses are barely making it. These restrictions will be the final straw. Thousands of hard working families that have lived here for generations will be forced out, Real estate values will most likely plummet. You will single handedly ruin these precious island lives based on unproven theories.
1. Please explain, why there has never been a public list of reported incidents to back up the assumptions made by the NPS regarding endangered species and their nests. As far as the public is informed, on record, only one incident has been reported, and no charges were brought against or for the individuals involved.
2. Why does the NPS not include Pea Island as critical habitat, when listing protected areas and the need for more restrictions?
3. As there have been NO reported Piping Plover deaths attributed to ORVs, and the new signage now in place has contributed to a decrease in other ORV violations, why not continue along these lines?
4. Why are the new 1000m buffers more excessive than other comparable park service land? There are more NPS personnel than there are plovers.
5. Why can't the buffers allow for patrolled corridors to allow ORV and pedestrian access?
6. Why is the NPS spending so much time and resource trying to manage on one of the least impacting threats to these endangered species? Clearly Mammalian predators, weather, nest abandonment and crab predators far exceed the threat of humans.
Cape Hatteras sea shore is one of the nations great resources for people to enjoy the outdoors. Fishing, water sports, family activities away from the chaos of everyday life and jobs has made this a popular destination for many decades. The NPS has always been a positive part of this experience through education, preservation of the great monuments, and management. This visitor experience has maintained the livelihoods of thousands of local residents and their families.
Please consider the impact these reckless changes will have on this precious place based on extremely questionable data.
thank you,
Lane duPont

Correspondence: Sirs - I know you have received many comments on the Cape Hatteras Draft ORV Management Plan, so I will keep mine short. I disagree with this plan to close access points and further limit access, both vehicular and pedestrian. While I have been following this debate for some time, I simply have not seen definitive data indicating that these proposals will further protect the wildlife on our beaches it is intended to. I do believe however that it will result in severely limiting access to these beautiful areas without providing substantial benefits. Please reconsider this proposal.
Thank you.

Correspondence: Any attempt by the federal government, environmental groups or any other "special interest" groups to close or restrict ORV from the Cape Hatteras National Seashore would impact the lives and financial support to the people of Hatteras Island. And that's the problem, plain and simple. These folks rely on people like me who have been fishing on the island for the last 37 years. Many folks like me who fish their have a respect for nature and in no way would damage, destroy or even trash a place we love so much. Over the years I have bought my children and grandchildren to Hatteras Island because of its beauty and peacefulness. Where else can children have a place to enjoy where they can learn to swim, fish, surf and have a cookout on the beach with family. Over the years I have got to know many fine folks who love their island and are the probably the best stewards in keeping the island safe, clean and protected for all who visit there including the wildlife.
I've heard of some of the claims made by special interest groups who come across as wanting to good for the environment. What I can't understand is why they are so hell bend on closing or restricting ORV on Hatteras Island because of a few who break the rules. In using that same logic we should close all highways from vehicular traffic because of a few speeders and drunk drivers. It makes no sense unless they, special interest, has some other hidden agenda.
As an outdoors man, fisherman, old surfer and a friend to the people of Hatteras Island I only ask that any plan in protecting wildlife on the Island should not restrict the use of ORV to where lives of the people of Hatteras Island is damaged. If you look close you will see that those folks are endangered also or didn't you realize that.

Correspondence: I am against the ORV plan as it is written. I believe that the beaches that are in front of the Frisco and Hatteras villages should remain closed ORV use. This is an issue of pedestrian safety in highly used areas of the beach. Moreover, the park service does not have the man power to enforce the speed

limit on the beach. If the park service can not monitor the mixed use of those beaches than they should remain closed to ORVs.

Correspondence: The NPS must formulate a plan that is consistent with the legislation establishing Cape Hatteras National Seashore Recreation Area. The enabling legislation for the Recreational Area states, in part, "said area shall be, and is, established, dedicated, and set apart as a national seashore recreational area for the benefit and enjoyment of the people and shall be known as the Cape Hatteras National Seashore Recreational Area". Therefore, it is important to balance resource protection with reasonable access for recreation.
Corridors are a vital tool in providing access while managing resources. They provide a small path around temporary resource closures in order to provide access to open areas that would otherwise be blocked. Corridors should be permitted throughout the seashore during the entire breeding and nesting season including ML-1 portions of SMAs. These corridors would provide valuable access without impairment or damage to protected resources. Buffers, or closures, are important management practices for species recovery. However, to have long term benefit for the wildlife and the visiting public, buffers must be based on peer-reviewed science. For example, the Piping Plover, a species classified as threatened and not endangered, is given a level of unprecedented protection in Alternative F. A 1,000-meter buffer in all directions represents over 771 acres. The DEIS does not cite any peer-reviewed science in supporting such closure. A more appropriate & effective buffer would be 200 meters.
Birds that are not listed as endangered should not be afforded the level of protection given to ESA (Endangered Species Act) protected species. Instead of 300-meter buffers for these birds, a more appropriate buffer would be 30 meters. Also, all birds in the same ecosystem of the seashore should be counted. This includes all the many birds on the dredge and spoil islands located just yards away and within sight of the seashore.

Correspondence: Dear NPS,
As a local of Hatteras Island, I know and have experienced first hand the economic distress beach closures cause. This Island has been home to my immediate family and other relatives for at least a hundred years, and if the beaches continue to close and the tourism continues to decrease, my family will no longer be able to survive financially on Hatteras Island, our home. One day I aspire to be able to bring my children to Hatteras Island to show them where they come from, and as of right now those chances are slim. As an employee of the restaurant business I encounter many people; natives, tourist, life-long visitors etc. who voice their concern for the lively hood of Hatteras Island, and they have every right to. This Island is a haven for many people, not just locals. Statistically North Carolina has a decently high unemployment rate, if the beaches continue to close, causing business to shutdown or cut back on hired help, then the unemployment rate will only continue to rise. As a student at the University of North Carolina Wilmington, I depend on the summer tourism to finance my education, and as a result of these beach closures, the tourism has decreased, making it more difficult for me to personally finance my education. I am only one of many students from the Outer Banks experiencing this. For the past few years gradually the areas of land closed off to public access have gotten larger and have remained "roped off" for longer periods of time to protect Piping Plovers. Why are we protecting a bird that is not native to Hatteras Island? I As long as these animals are not intentionally being injured, killed, or their nests destroyed, the process of their endangerment is a direct result of their incompetence as animals. It happens, has the National Park Service ever heard of Natural Selection? Why would the government risk the well being of thousands of residents to protect one species of bird? I beg of you to re-examine this situation and find a "happy" medium that will benefit all, not just some animal.
Sincerely,
Amber N. McDowell

Correspondence: Access to beaches is a continuing activity that spans the entire history of the Outer Banks. From before the creation of a paved road, the only access through the islands was the beach.
Before the island was a national park, access was everywhere. The preservation of the island as a national park was to continue access, not limit it. Forbidding access will put you in direct contradiction to the purpose of these national parks.
There are many other barrier islands south of OBX that provide uninhabited and undisturbed areas.
Today, the island's economy is directly driven by tourism. Tourists come to the Outer Banks for what is has today. Driving on the beaches is a necessary component to a vibrant economy. Restricting or eliminating beach driving will have a detrimental effect on the livelihoods of thousands of individuals as well as destroying a vacation spot for millions.
The solution to this problem is simple: Park Rangers patrol the beach regularly. They can cordon-off areas that are being used when there is evidence of egg-laying of turtles.
Provide for severe fines for littering, speeding, or hazardous driving.
Finally, if you look at the numbers of beach drivers, the numbers are relatively consistent. Growth on the island is metered by the fact that there is only so much buildable land, and economic concerns there limit excessive growth as well. The amount of driving on the beaches isn't growing. In fact, over the years I have come to see less driving than ever.
Do not remove driving. Its our heritage.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife.
I look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: My family and I have been spending entire summers in this area for the past two years. This issue has become important to us as we share the outdoor experience of the outerbanks on a daily basis from early June to end of August each year. We are responsible people who respect the boundaries imposed on us during our stay, yet very disappointed at the hindrance to our experience because of your restrictions. Now we are to expect FURTHER

restriction? This is unacceptable to me. 1. Penalize those who break the law, not further restrict those who obey it like me who just want to enjoy the outdoors. 2. EDUCATE people so they do not break the law through ignorance. 3. Allow ORV and pedestrian access. It is too restrictive for those obeying the law. Much of the summer I am unable to drive on the beach to areas we want to fish and it is over 2 mile walk with equipment which is not reasonable. Law abiding people will respect the species you are protecting. 4. Elderly and handicapped access to beach areas are needed by vehicle. It seems so easy to me that this is the answer and I am surprised at the clouded nature of your decree. It seems it is contradictory and confusing in nature on purpose almost so that the average person is not able to decipher it. By nature, those who routinely recreate in the outdoors and choose this type of environment for their home respect it and care for it. Again, penalize those who do not respect and break the law. Educate those who may be visiting and do not know the restrictions. Allow access to beach areas for recreation while preserving the protected species.

Correspondence: As a new resident of Rodanthe, I was drawn to this area mainly for the access to beaches on both the ocean and sound of Cape Hatteras. I believe that open access for fishing, kiting, dogs and vehicles can be managed successfully, taking into account the special habitat of the area. If access is rigorously restricted, the quality of life for residents and visitors alike will be negatively impacted. The economy of the area will suffer as visitors vote with their feet and take their vacation dollars elsewhere.
From what I have observed both as a resident and a visitor is that most users of the natural resources have a vested interest in maintaining the quality of the beaches and supporting the habitat. If you have spent any time on the beaches in Massachusetts, you'll understand how limiting privately held beaches are - Cape Hatteras shouldn't become like that in effect by closing most of the beaches to the public.

Correspondence: My family enjoyed vacations on the outer banks for 12 consecutive years until we were faced with beach closures. The great surf fishing accessible via orv is our main draw. I believe that orv traffic is more productive to the nesting birds by keeping them pushed higher up on the dunes instead of low nest that are washed away during a storm surge. As for the turtles which have an extremely high mortality rate from natural predation, why not encourage local college students as a class project to incubate turtle eggs and return them to the sea free from being consumed by raccoons, foxes, gulls etc. the bottom line is we can coexist with wildlife but we can't exist if the authorities make decisions that are destructive to our economies.

Correspondence: I was just informed of this being voted on last night. Not living in the area, some of this doesn't get to me quick, but I was so distrubed of this vote, I needed to voice my outrage. My husband and I have been going to these great beaches for over 10 years. I have only observed the fisherman and pet owners repecting the beaches. All of this simply does not make sense to me.
The communities rely on the fishermen and tourism (with pets) to make a living, you are killing them!
Beacause I am a pet owner as well as a fisherman, not having the ability to take my vacation in this fine area breaks my heart. Please re-consider, you are punishing the very people that care for these beaches and wildlife.
Sincerely,
Debbie Franco

Correspondence: My comments concern the DEIS of the Off-Road Vehicle Management Plan prepared by the National Park Service (NPS) for the Cape Hatteras National Seashore Recreation Area.
1) Page 201: I disagree with the NPS statement: "Even with resource closures in place, protected species are still at risk [from pedestrians and ORVs]." No Piping Plover deaths have been attributed to ORVs. ORV violations continue to decrease as signage and education improve. Pedestrian violations are much more significant than ORV violations. It seems to me that any transgressions into protected area are the result of lack of NPS manpower and enforcement than the public purposely and willfully violating out of bounds areas.
2) Page xxiv: I question the statement of as per the DEIS: "Carrying capacity would be a 'peak use limit' determined for all areas based on the linear feet of beachfront?" If you close off huge sections of the beach, you force more people into smaller areas, potentially resulting in more resource impairment and diminished visitor experience.
3) Page xix and page 23: I am against having two different closures rules pertaining to the North facing beaches (North side) and the South facing beaches (South side) as per the grid outlined in Alternative "F". I disagree with the NPS proposal to close the beaches in villages of Frisco, Hatteras and Ocracoke Villages to ORV access longer than the traditional May 15 to September 15 period for the Northern beaches, even though seasonal visitor statistics are similar for all villages. Please, make them the same: May 15 -> September 15.
4) Page 1: I agree with your statement "ORVs have long served as a primary form of access for many portions of the beach in the seashore, and continue to be the most practical means of access and parking for many visitors."
However, pedestrian only areas discriminate against individuals with limited mobility due to age or physical impairments, families with small children, and those wishing to engage in activities requiring recreational equipment (boogie boards, beach umbrellas, beach chairs, coolers, fishing rods and tackle, etc)
5) Page 53: I disagree with the special use permit proposed guidelines. It is impractical to allow the transportation of disabled visitors to the village beaches and then require the vehicle to be returned to the street or parking area. This necessitates the disabled person to have a driver to drop him (or her) off, then drive to a parking area, then trudge a long distance to the site of the drop off, then trudge the long distance through the sand back to get the vehicle.
Suppose the handicap person wants to go to the beach, is capable of driving himself, yet cannot find another person to go with him? Does he now not go to the beach? This rule creates unnecessary hardships and risks in the event of an emergency as well.

6) Page 121 ? 127. I strongly disagree with the buffers as presented. We must allow for pass-thru corridors. The beach is linear with the ocean buffering on one side and the dune line on the other. For example - If you pinch off access on one side of a 4 mile linear beach and pinch off access on the other side of the 4 mile section of beach with no corridor, then you effectively have closed off all 4 miles of the beach because you CAN'T get there. The proposed bird buffers are too large, blocking access to the interior sections from the two "buffered" ends.

I propose ORV pass-thru only corridors and to use breeding / nesting buffer distances to establish ORV pass through only corridors to ensure beach access in a way that does not hinder resource protection. I believe pass through corridors should be maintained for pedestrians and ORVs in all areas of the Cape Hatteras National Seashore Recreational Area throughout the entire breeding and nesting season. Corridors are vital to providing access in a way that does not hinder resource protection.

Piping Plover unfledged chicks buffer should move with the brood as it relocates to reliable food source, not expanded.

The 1,000 meter distance for the piping plover is way too large and not based upon peer reviewed science. A more rational distance would be 200 meters per other sites in the nation for the piping plover. Ample scientific evidence and precedent exists to support a 200 meter buffer.

Buffers for other species, including American Oystercatchers, Least Terns and Colonial Waterbirds must also be changed. An effective 30 meter buffer should be established for these species rather than the 300 meter closure outlined in the DEIS.

NON-ENDANGERED BIRDS should not have same protection as if endangered. Not allowing ORV access is paramount to denying the public access to these beaches.

7) Page 468: I disagree with the limitations imposed on pedestrian and ORVs. Corridors or bypasses should be provided thru, around or below high tide line in all SMAs during entire breeding season to maintain access.

8) Page 124: I strongly disagree with the NPS slant of providing for over protection of resource management over that of the public's right to access the beaches. Pro-active initiatives include: Vegetation Management, Habitat Management, Enhanced Predator Management, Colonial Water bird social attraction, Piping Plover check fledge rate, Piping plover chick buffer distance, and pass-through buffers during the incubation period. Opportunities to implement less restrictive closures as a result of the above initiatives should be considered more frequently than the 5-year periodic review process identified in the DEIS.

9) I disagree with the NPS Resource Management Pedestrian / ORV Closure Policies. These policies address the least significant factors affecting nest survival with little chance to have more than negligible impact. For example: the AMOY Nest Failures are predominately due to non-human events. Using your own stats, the mammalian predation is 54%, Storm / Lunar Tides: 29%, Nest Abandonment: 6%, Avian Predation: 5%, and Ghost Crab Predation: 3%,

So what is the percentage due to human interference: just 3%! It's insignificant, yet the NPS wants to ban humans when their actions provide very little influence on the success rate of breeding birds and turtles.

10) I disagree with the stats of breeding plovers and the other birds in the Park when the NPS does not adequately consider locations neighboring the Recreational Area that are part of the same ecosystem, namely dredge and spoil island that are located just yards away and within sight of the seashore. These birds are part of the same ecosystem and should be included.

Those spoil islands, developed by man from dredging the waterways in the Pamlico Sound for channel upkeep are slammed full of birds. The reason why so many birds? NO PREDATORS. SO, birds are not as stupid as one might think. You have to count these birds and incorporate them in the stats when the NPS is talking about any so called decline in breeding pairs in the National Park.

11) Page 1: I do not think the DEIS responsibly addresses the cultural resource issues. The very purpose of the DEIS as set forth in the National Environmental Policy Act (NEPA) is to protect and preserve natural and cultural resources in the federal decision making process. In the DEIS, the statement "protect and preserve natural and cultural resources" appears in the first sentence of the first page of the plan, in the Purpose of the Plan section, and numerous times thereafter. Yet, the 810 page document devotes only two paragraphs to analysis of cultural resource issues.

12) Pages 270-281; 561-598: I strongly disagree with your economic analysis of the impact of the DEIS. The region of influence (ROI) incorporates the Northern Beach communities, including Kill Devil Hills, Kitty Hawk, Southern Shores and Duck. These areas are almost completely disconnected from ORV use and access issues relating to the Seashore. ? Inclusion of the Northern Beaches in analysis significantly dilutes estimates of economic impact on the 8 Seashore Villages ? Analysis of economic impact to the Seashore Villages appears to be significantly down played. Emphasis in DEIS is on the ROI-wide or county-wide level impacts. ? Nowhere is it clearly addressed that the overwhelming majority of negative impacts will be felt by small businesses in the Seashore Villages rather than by overall economic interests within the greater ROI.

On page xlvi, Alternative F is characterized as having a "negligible to moderate" adverse impact on small businesses. I strongly disagree with this statement.

I believe the negligible to moderate projection is inaccurate and relies on economic surveys that has not yet been published. Furthermore, this material is not expected to be added to the DEIS until after the public comment period has ended.

Based upon the economic harm we have already experienced under the consent decree, Dare County projects the economic impact of Alternative F to be substantial.

Beach closures have already had a devastating and unfair impact on many Dare County Businesses, causing foreclosures, bankruptcies, lay-offs, cutbacks, expensive refinancing, and depleted college funds and savings accounts.

Pages 270-286, 561-598: The socio-economic data and analyses are incomplete and erroneous and result in an understatement of the effect the restrictions will have upon the Island, the region and the state of NC. The US Park Services answer: Businesses will have to "adapt" to the new rules. (p.383) The negative economic impacts of the decree ARE KNOWN, so to say that the added restrictions would have negligible to moderate impact is indefensible.

13) Overall Visitor Counts - Overall visitor counts appear to include visitors to Fort Raleigh National Historic Site and the Wright Brothers National Memorial. A large percentage of these visitors vacation in the Northern Beaches communities and recreate on the non-federal beaches outside of the Seashore. Visitors who patronize the Fort Raleigh National Historic Site and the Wright Brothers National Memorial but do not visit the actual seashore areas need to be factored out.

Maintenance of Future Access to Cape Point and South Point Ocracoke: All socioeconomic analyses related to Alternative F are predicated on the assumption that access corridors will remain open for at least an appreciable portion of the visitor high season. Under Alternative F, the access corridors will be subject to Resource Closures based on buffers similar or identical to the Consent Decree. Unless some predictability of access to Cape Point and South Point Ocracoke can be assured, economic analyses predicated on assumption of access are fundamentally flawed.

Why would a group of surf fisherman want to come to Hatteras Island to surf fish if they are not sure they can access the prime fishing grounds at Cape Point? The answer is they won't come. If they don't come, they don't rent vacation homes and spend their money on Hatteras and Ocracoke Islands.

The definition of the Region of Influence (ROI), faulty data on economic activity generated by specific type recreational activity, incomplete visitation/business survey data, inflated overall Seashore visitor counts pertaining to beach use, and flawed key assumptions concerning the maintenance of access under Alternative F, all lead to inaccurate conclusions in the socioeconomic analyses. Specifically, these inaccuracies can be seen as understating the negative socio-economic impact of the Seashore Villages. Further, this negative impact will be absorbed almost entirely by Small Businesses. Neither of these important aspects of the management alternatives are adequately presented in the DEIS.

14) Page 136: I strongly disagree with your pet restriction proposals. The "?prohibition of pets in the Seashore during bird breeding season including in front of the villages." = No Pets in public areas ?beaches, campgrounds, soundfront, foot trails, park maintained roads -from March 15 ?July 31.

15) Pages 125; 392 ? 396: SEA TURTLES. I disagree with the stats and procedures proposed. I think endangered sea turtles would benefit from management practices now in use at other federal seashores that are more proactive in efforts to achieve nesting success. This includes relocating nests to more desirable locations as is done in other state and federally controlled areas.

The Cape Hatteras National Seashore Recreational Area is on the northernmost fringe of turtle nesting locations for the southeast, accounting for about 1% of all turtle nests. Proposed buffer areas are not needed for protection of the turtles and amount to overprotection.

16) Pages 97- 101. I strongly disagree with proposals in this section saying that ORVs will be prohibited year round between ramps 27 and 30, at Hatteras Inlet (Hatteras Spit), Ocracoke Inlet (North Ocracoke Spit) and various other locations.

Not allowing ORV access is paramount to denying the public access to these beaches. They are located miles from the nearest parking or paved road area and too far to access on foot. As a matter of course, there has been no breeding of piping plover or other endangered species at the Hatteras Island Inlet (spit) area in the past 6 years.

17) Page 104: I disagree with the proposed night time driving closures. Per your proposals, night driving will be prohibited between May 1 and November 15th, forcing visitors off of the beaches early in the evening and preventing sunrise surf fishermen access in the morning. I propose a more moderate night time ban if one is needed, perhaps from June 1 ? September 15 with times being 1 hour after sunset and 1 hour before sunrise to allow beach goers to gather their stuff and exit the beach area.

Certainly more proactive measures such as relocating nests prone to weather and ocean events would dramatically increase the nesting success rates.

18) Page 121: I disagree with the proposed beach closings, including pedestrian access from March 15 until July 31 in 8 different beach locations which have traditionally been available. Please leave these areas open to beach walkers, shell collectors and those that want to access the beaches in these areas.

Conclusion:

Please, incorporate access corridors through any SMA so we can get to the open beach beyond. Incorporate the birds into the count that nest on the spoil islands. Base your buffer zones on peer reviewed science and scale them back to more reasonable distances as discussed.

It is neither logical nor reasonable to spend so much time, money and energy to overprotect a bird (Piping Plover) in the Cape Hatteras National Seashore that is on the southernmost fringe area of its breeding ground. That goes for the loggerhead turtle that is in its northernmost breeding area.

Let's scale back the buffer zones. You can always increase at a later date.

The USPS is leaning way over the line on over protection and not enough on the public's right to enjoy the beaches of the National Seashore. The proper balance is not achieved in the propose DEIS and needs to be modified so that the proper balance of reasonable resource protection and access to the beaches of the National Park is achieved. I could sum it up by saying "Protect, not Prohibit."

Debra Edwards Scott P O Box 354 Avon NC 27915

Correspondence: Following please find my comments on the DEIS for the Cape Hatteras National Seashore draft ORV plan.

1. The document does a good job of selecting no-action alternatives. In a complex situation such as this with a long history of various levels of management and ORV control it is difficult to establish a no-action baseline to serve as a comparison point for the considered alternatives.

2a. The document contains significant shortcomings in its consideration of the negative impacts of the increased restrictions on pets in the Seashore. For example, on page xviii of the Executive Summary, the Table addressing impacts to the "Visitor Use and Experience " makes no mention of the negative impacts to the visitor experience of not allowing visitors to bring leashed pets for significant portions of the main tourist season.

In the order of 30% to 40% of the rental houses in the Villages are "pet houses" and a very cursory inspection of the housing areas or the beaches would find that a significant number of visitors consider the ability to bring their pet as a positive part of their Seashore visit experience. Under the proposed action this positive experience would not be possible for many people for much of the tourist season, a fact totally ignored in the impacts analysis.

2b. The economic analysis also ignores the negative impacts of the pet restrictions. Much of the economic analysis is based on recent business surveys of the impacts of the Court ordered beach restrictions. However, the court order DID NOT include any pet restrictions and therefore the impacts of the proposed pet restrictions would NOT be evident in those surveys. The analysis did not make any attempt to look at the number of rental "pet houses" in the Villages and analyze the negative economic impacts if those visitors, faced with having to leave their pets at home, concluded that one of the significant attractions of the Hatteras Seashore had been eliminated and then decided to vacation somewhere else.

2c. The rationale for the pet restrictions is totally lacking in scientific evidence and logical rigor. Firstly, it appears to have been pulled out of the air with no scientific basis. None of the studies cited in Appendix A identified leashed pets as even a minor factor in destruction of shorebird nests. Over and over, study after study, and I will use as just one example Patterson 1991 on page A-5, found that 90% of losses were due to predation by wild species.

Secondly, the ban lacks any logical basis. Nowhere in the DEIS is it explained how a leashed pet poses a risk to a shorebird nest. To the contrary, if you stationed a leashed pet every 100 yards along the beach, it is more likely that they would deter and scare away the mammalian predators that are the main cause of nesting failures.

3. I strongly disagree with the NPS statement on Page 201: "Even with resource closures in place, protected species are still at risk [from pedestrians and ORVs]." This is a statement without any basis in fact. No Piping Plover deaths have been attributed to ORVs. ORV violations continue to decrease as signage and education improve. Pedestrian violations are much more significant than ORV violations. It seems to me that any transgressions into protected area are the result of lack of NPS manpower and enforcement than the public purposely and willfully violating out of bounds areas.

4. The 1,000 meter distance for the piping plover is way too large and not based upon peer-reviewed science. Ample scientific evidence and precedent exists to support a 200-meter buffer per other sites in the nation for the piping plover.

Buffers for other species, including American Oystercatchers, Least Terns and Colonial Waterbirds must also be changed. An effective 30 meter buffer should be established for these species rather than the 300 meter closure outlined in the DEIS.

5a. I disagree with the decision to "ignore" Pea Island as if it does not exist. NEPA specifically proscribes agencies from "segmenting" actions to avoid having to address impacts that occur from their cumulative actions. While not exactly "segmenting," the decision to exclude Pea Island from the development of protective measures for shorebirds and turtles violates that principle in that it segments, contiguous identical ecosystems and ignores their cumulative effects on shorebirds, turtles and ORV users. There are already significant sections of the Outer Banks (Pea Island and no mention was even made of Portsmouth Island) that are ORV free. Pretending that they don't exist is both poor science and dubious logic. And yes, I understand that Pea Island is under the management of FWS, a different agency than the NPS, but is it that difficult for the two agencies to coordinate and cooperate on something that is apparently so important as shorebird protection?

5b. Also please explain also how Pea Island can be in the ROI for economic analyses but not included when it comes to ecological analyses.

6a. I disagree with your decision to include the upper beach areas in the ROI (Pages 270-281; 561-598). The region of influence (ROI) incorporates the Northern Beach communities, including Kill Devil Hills, Kitty Hawk, Southern Shores and Duck. These areas are almost completely disconnected from ORV use and access issues relating to the Seashore. By your own data, for example, the upper beach areas have a density of 500 to 1000 people per square mile while areas below the Bonner Bridge have only less than 250. There are also significant differences in per capita income (being much less below the Bonner Bridge), which will exacerbate the negative economic impacts on the Village areas.

? Inclusion of the Northern Beaches in analysis significantly dilutes estimates of economic impact on the 8 Seashore Villages ? Analysis of economic impact to the Seashore Villages appears to be significantly down played. Emphasis in DEIS is on the ROI-wide or countywide level impacts. ? Nowhere is it clearly addressed that the overwhelming majority of negative impacts will be felt by small businesses in the Seashore Villages rather than by overall economic interests within the greater ROI. On page xlvi, Alternative F is characterized as having a "negligible to moderate" adverse impact on small businesses. I strongly disagree with this statement. 6b. The DEIS also refers to some, as yet unpublished additional economic data. You realize, of course, that if you release this data, you will have to re-open the DEIS for additional comments or release a supplemental DEIS and re-open the public comment period.

7. Overall Visitor Counts - Overall visitor counts appear to include visitors to Fort Raleigh National Historic Site and the Wright Brothers National Memorial. A large percentage of these visitors vacation in the Northern Beaches communities and recreate on the non-federal beaches outside of the Seashore. Visitors who patronize the Fort Raleigh National Historic Site and the Wright Brothers National Memorial but do not visit the actual seashore areas need to be factored out.

8a. The decisions on ORV restrictions are not supported by the science cited in the DEIS nor the obvious facts or investigations available.

The literature review in Appendix A is inconclusive, at best, in supporting ORV restrictions as a way of increasing shorebird breeding success. For example, the following quotes are taken directly from that Appendix:

? "no difference in mean productivity of Plover nesting was observed among the levels of ORV use" (page A-4)

? "ORV use was directly investigated in this study?the primary cause of nest failure on barrier islands was mammalian predation" (page A-5)

? "the study (Patterson, 1991) found that predators accounted for most of the known nest losses (91%) with only one nest lost due to direct human

destruction and no evidence that suggested recreational disturbance was a factor in productivity" (page A-5)

? Even the Park service data do not support ORV damage as a significant cause of nest failure. Nest Failures are predominately due to non-human events. Using your own statistics, the mammalian predation is 54%, Storm / Lunar Tides: 29%, Nest Abandonment: 6%, Avian Predation: 5%, and Ghost Crab Predation: 3%. So human interference accounts for only 3%. Yet the Park Service wants to ban humans to solve the problem.

Please explain how in the face of this science, that ORV restrictions seem to be the approach of choice to increase shorebird breeding success.

8b. Also please explain how one cannot conclude, that given this data, there will be very little improvement in shorebird breeding success after five years of implementation and that the next five years will only result in MORE beach closures as opposed to an admission that this plan did not work.

8c. Why did the Park Service not use the very excellent "lab" that is at their disposal to directly study the impacts of various levels of human access to shorebird habitat on breeding success? Portsmouth Island has no ORV use and essentially no pedestrian use, Pea Island has no ORV use but relatively easy pedestrian access, and Hatteras Island has both ORV and pedestrian access. What are the relative shorebird breeding success rates on these three places? Is there a difference? Or is the limiting factor the fact that Hatteras is at the very far extreme southern edge of the breeding range of the Piping Plover (Peterson, Field Guide to the Birds, Ease of the Rockies, 1990)?

9. The "action" alternatives do not meet NEPA standards. NEPA requires that agencies look at a range of alternatives and that is sorely lacking in this document.

I realize that this document is a DEIS for an ORV Management Plan. But a cursory look at the history of the issue and this document, and simply counting the pages in the DEIS dedicated to certain subjects leads to the conclusion that this document is just as much about shorebird protection, and that is a reasonable and admirable goal. However, the action alternatives, C though F are all only about varying the degrees of ORV restrictions to satisfy the goals of shorebird (and turtle) protection. It has obviously been assumed from the beginning that the Park Service will expend their resources on finding shorebird nests and blocking off areas of the beaches. This is not a RANGE of alternatives; it is really just a set of sub-alternatives that vary the degree of beach closure.

Where are the alternatives that consider other methods of expending valuable and limited Park Service resources to promote shorebird nesting success? For example, as cited elsewhere in my comments and also in the DEIS, trash is claimed to be a big factor in attracting mammalian predators that are again cited as being the major factor in nesting failures. What if the Park Service drove the beaches twice per day and picked up trash and worked with the Villages to increase security of trash containers and better control access to trash of raccoons, etc. - would this approach have more beneficial impacts on shorebird survival than an alternative of beach closures?

What about alternatives that expend the resources on mammalian predator control?

Again, the Park Service has limited resources to spend on both ORV management AND shorebird protection ? the DEIS needs to identify and address a RANGE of alternatives to meet these goals. You can't just respond that all alternatives include mammalian predator control; there needs to be a real alternative that directs more resources toward this approach and less towards beach closure as well as other alternatives.

To reiterate ? NEPA requires a real range of alternatives to achieve agency goals, not just some straw men and then some simple variations on one basic solution and the document is seriously flawed in this respect.

10. The analyses assume (page 319) that recreational users create trash that attracts mammalian predators. I strongly disagree with this assumption. This assumption appears to be based on one cited study (USFWS, 1996a). I do not have access to the Administrative Record to review this study and determine if it is really relevant (e.g., was it performed in a low density area like outer banks beaches or a high density park site) however no effort was made to collect actual data that would have been very easy to collect. How much trash is actually generated in various areas of the Seashore by different users? After more than 20 years of driving the beaches of the outer banks, it is my observation that ORV users leave essentially no trash on the beach. I have never seen an ORV drive away from trash left on the beach, especially organic matter that would attract a mammal scavenger. Virtually all of the trash found on Hatteras beaches has washed up from the sea. Although, I have seen multiple occurrences of raccoons and opossums scavenging trash out of containers in the Villages. So there may be trash that is serving as a supplemental food source for mammalian predators but it is not nearly so simple as the assumption that seems to drive much of the decision making process. And some very easy and inexpensive surveys would have contradicted that assumption and allowed the Park Service to reach a sound scientific and logically defensible solution.

Major analyses in the DEIS are based on an erroneous assumption about the sources and locations of trash which is cited as the main attractant for the predators who are also the primary cause of breeding failures.

Correspondence:	I have been vacationing in the Outer Banks since the early 1970's. The Cape Hatteras NP has some of the most pristine and ecologically valuable beach stretches in our country. To allow vehicular traffic on these beaches would be one of the poorest management decisions ever made by NPS. The federal government system of parks has a responsibility to protect the biodiversity and ecological structure within their boundaries for future generations. As our climate changes, population and development explode- particularly near the coastline, our shorelines and the flora and fauna living there are increasingly threatened. NPS does not have direct decision making power over all of the threats in our coastal zone, but you do have the power to limit direct damage through vehicular traffic on your beaches. There are many other stretches of beach where people who feel the overwhelming desire to drive on a beach may do so. The piping plovers, nesting sea turtles, and other plants and animals trying to survive within your relatively narrow boundaries don't have as many options for survival. Survival should outweigh recreational enjoyment in every instance. Thank you for allowing me to provide comments on this plan.

Correspondence:	After reading the entire DEIS, and seeing that F is the proposed alternative, I must disagree. There is no guarantee that future ORV access will ever be constructed along with additional pedestrian access. There is no mention of a budgeting line item to include such work. Also the 1000 meter buffer required seems quite large and almost arbitrary. I can find no other protection scheme similar to this for a species of concern. Something in the order of 100 to 300 yards would more reasonable and similar to current practices around the country. We vacation to this area to fish and stargaze. Remote areas far from city lights and the noises of the city are important for these activities. The size and weight of the equipment needed require vehicle transport. Included in our vacation activities is bringing my elderly mother who has been coming to the Outer Banks area for several dozen years and can no longer walk onto the beach. We have already had our vacation experience diminished in 2009 because the location we rent is out of business presumably due to the lack of tourism associated with limited beach access. For this summer we are already finding it hard to make reservations on Ocracoke because so many places are closed or booked because other places are closed. I believe a more practical approach is required for this matter of limiting access to the beach. Statistics can be shown to prove any point you desire - often telling the truth, but not the whole truth. My family and I request you not limit beach access at all allowing corridors around protected species. Please consider how your decision will actually impact those that pay your salary. Subject: DEIS Off-Road Vehicle Management Plan Comments

My comments concern the DEIS of the Off-Road Vehicle Management Plan prepared by the National Park Service (NPS) for the Cape Hatteras National Seashore Recreation Area.

1) Page 201: I disagree with the NPS statement: "Even with resource closures in place, protected species are still at risk [from pedestrians and ORVs]." No Piping Plover deaths have been attributed to ORVs. ORV violations continue to decrease as signage and education improve. Pedestrian violations are much more significant than ORV violations. It seems to me that any transgressions into protected area are the result of lack of NPS manpower and enforcement than the public purposely and willfully violating out of bounds areas.

2) Page xxiv: I question the statement of as per the DEIS: "Carrying capacity would be a 'peak use limit' determined for all areas based on the linear feet of beachfront?" If you close off huge sections of the beach, you force more people into smaller areas, potentially resulting in more resource impairment and diminished visitor experience.

3) Page xix and page 23: I am against having two different closures rules pertaining to the North facing beaches (North side) and the South facing beaches (South side) as per the grid outlined in Alternative "F". I disagree with the NPS proposal to close the beaches in villages of Frisco, Hatteras and Ocracoke Villages to ORV access longer than the traditional May 15 to September 15 period for the Northern beaches, even though seasonal visitor statistics are similar for all villages. Please, make them the same: May 15 -> September 15.

4) Page 1: I agree with your statement "ORVs have long served as a primary form of access for many portions of the beach in the seashore, and continue to be the most practical means of access and parking for many visitors."

However, pedestrian only areas discriminate against individuals with limited mobility due to age or physical impairments, families with small children, and those wishing to engage in activities requiring recreational equipment (boogie boards, beach umbrellas, beach chairs, coolers, fishing rods and tackle, etc)

5) Page 53: I disagree with the special use permit proposed guidelines. It is impractical to allow the transportation of disabled visitors to the village beaches and then require the vehicle to be returned to the street or parking area. This necessitates the disabled person to have a driver to drop him (or her) off, then drive to a parking area, then trudge a long distance to the site of the drop off, then trudge the long distance through the sand back to get the vehicle.

What if the handicapped person wants to go to the beach, is capable of driving himself, yet cannot find another person to go with him? Does he now not go to the beach? This rule creates unnecessary hardships and risks in the event of an emergency as well.

6) Page 121 ? 127. I strongly disagree with the buffers as presented. We must allow for pass-thru corridors. The beach is linear with the ocean buffering on one side and the dune line on the other. For example - If you close off access on one side of a 4 mile linear beach and close off access on the other side of the 4 mile section of beach with no corridor, then you effectively have closed off all 4 miles of the beach because you CAN'T get there. The proposed bird buffers are way too large, blocking access to the interior sections from the two "buffered" ends.

I propose ORV pass-thru only corridors and to use breeding / nesting buffer distances to establish ORV pass through only corridors to ensure beach access in a way that does not hinder resource protection. I believe pass through corridors should be maintained for pedestrians and ORVs in all areas of the Cape Hatteras National Seashore Recreational Area throughout the entire breeding and nesting season. Corridors are vital to providing access in a way that does not hinder resource protection.

Piping Plover unfledged chicks buffer should move with the brood as it relocates to reliable food source, not expanded.

The 1,000 meter distance for the piping plover is way too large and not based upon peer reviewed science. A more rational distance would be 200 meters per other sites in the nation for the piping plover. More than ample scientific evidence and precedent exists to support a 200 meter buffer.

Buffers for other species, including American Oystercatchers, Least Terns and Colonial Waterbirds must also be changed. An effective 30 meter buffer should be established for these species rather than the 300 meter closure outlined in the DEIS.

NON-ENDANGERED BIRDS should not have same protection as if endangered. Not allowing ORV access is paramount to denying the public access to these beaches.

7) Page 468: I disagree with the limitations imposed on pedestrian and ORVs. Corridors or bypasses should be provided thru, around or below high tide line in all SMAs during entire breeding season to maintain access.

8) Page 124: I strongly disagree with the NPS slant of providing for over protection of resource management over that of the public's right to access the beaches. Pro-active initiatives include: Vegetation Management, Habitat Management, Enhanced Predator Management, Colonial Water bird social attraction, Piping Plover check fledge rate, Piping plover chick buffer distance, and pass-through buffers during the incubation period. Opportunities to implement less restrictive closures as a result of the above initiatives should be considered more frequently than the 5-year periodic review process identified in the DEIS.

9) I disagree with the NPS Resource Management Pedestrian / ORV Closure Policies. These policies address the least significant factors affecting nest survival with little chance to have more than negligible impact. For example: the AMOY Nest Failures are predominately due to non-human events. Using your own stats, the mammalian predation is 54%, Storm / Lunar Tides: 29%, Nest Abandonment: 6%, Avian Predation: 5%, and Ghost Crab Predation: 3%,

The percentage due to human interference is only just 3%! It's insignificant, yet the NPS wants to ban humans when their actions provide very little influence on the success rate of breeding birds and turtles.

10) I disagree with the stats of breeding plovers and the other birds in the Park when the NPS does not adequately consider locations neighboring the Recreational Area that are part of the same ecosystem, namely dredge and spoil island that are located just yards away and within sight of the seashore. These birds are part of the same ecosystem and should be included.

Those spoil islands, developed by man from dredging the waterways in the Pamlico Sound for channel upkeep are slammed full of birds. The reason why so many birds? NO PREDATORS. SO, birds are not as stupid as one might think. You have to count these birds and incorporate them in the stats when the NPS is talking about any so called decline in breeding pairs in the National Park.

11) Page 1: I do not think the DEIS responsibly addresses the cultural resource issues. The very purpose of the DEIS as set forth in the National Environmental Policy Act (NEPA) is to protect and preserve natural and cultural resources in the federal decision making process. In the DEIS, the statement "protect and preserve natural and cultural resources" appears in the first sentence of the first page of the plan, in the Purpose of the Plan section, and numerous times thereafter. Yet, the 810 page document devotes only two paragraphs to analysis of cultural resource issues.

12) Pages 270-281; 561-598: I strongly disagree with your economic analysis of the impact of the DEIS. The region of influence (ROI) incorporates the Northern Beach communities, including Kill Devil Hills, Kitty Hawk, Southern Shores and Duck. These areas are almost completely disconnected from ORV use and access issues relating to the Seashore.

? Inclusion of the Northern Beaches in analysis significantly dilutes estimates of economic impact on the 8 Seashore Villages

? Analysis of economic impact to the Seashore Villages appears to be significantly down played. Emphasis in DEIS is on the ROI-wide or county-wide level impacts.

? Nowhere is it clearly addressed that the overwhelming majority of negative impacts will be felt by small businesses in the Seashore Villages rather than by overall economic interests within the greater ROI.

On page xlviii, Alternative F is characterized as having a "negligible to moderate" adverse impact on small businesses. I strongly disagree with this statement.

I believe the negligible to moderate projection is inaccurate and relies on economic surveys that has not yet been published. Furthermore, this material is not expected to be added to the DEIS until after the public comment period has ended.

Based upon the economic harm we have already experienced under the consent decree, Dare County projects the economic impact of Alternative F to be substantial.

Beach closures have already had a devastating and unfair impact on many Dare County Businesses, causing foreclosures, bankruptcies, lay-offs, cutbacks, expensive refinancing, and depleted college funds and savings accounts.

Even businesses whose revenue has stayed level or showed a modest increase have accomplished this at a costly price. Many have had to cut back employee hours, forego much-needed capital improvements, and sacrifice profits.

The current proposal will absolutely devastate the local economy.

Pages 270-286, 561-598: The socio-economic data and analyses are incomplete and erroneous and result in an understatement of the effect the restrictions will have upon the Island, the region and the state of NC. The US Park Services answer: Businesses will have to "adapt" to the new rules. (p.383) The negative economic impacts of the decree ARE KNOWN, so to say that the added restrictions would have negligible to moderate impact is indefensible.

13) Overall Visitor Counts - Overall visitor counts appear to include visitors to Fort Raleigh National Historic Site and the Wright Brothers National Memorial. A large percentage of these visitors vacation in the Northern Beaches communities and recreate on the non-federal beaches outside of the Seashore. Visitors who patronize the Fort Raleigh National Historic Site and the Wright Brothers National Memorial but do not visit the actual seashore areas need to be factored out.

Maintenance of Future Access to Cape Point and South Point Ocracoke: All socioeconomic analyses related to Alternative F are predicated on the assumption that access corridors will remain open for at least an appreciable portion of the visitor high season. Under Alternative F, the access corridors will be subject to Resource Closures based on buffers similar or identical to the Consent Decree. Unless some predictability of access to Cape Point and South Point Ocracoke can be assured, economic analyses predicated on assumption of access are fundamentally flawed.

Why would a group of surf fisherman want to come to Hatteras Island to surf fish if they are not sure they can access the prime fishing grounds at Cape Point? The answer is they won't come. If they don't come, they don't rent vacation homes and spend their money on Hatteras and Ocracoke Islands. The definition of the Region of Influence (ROI), faulty data on economic activity generated by specific type recreational activity, incomplete visitation/business survey data, inflated overall Seashore visitor counts pertaining to beach use, and flawed key assumptions concerning the maintenance of access under Alternative F, all lead to inaccurate conclusions in the socioeconomic analyses. Specifically, these inaccuracies can be seen as understating the negative socio-economic impact of the Seashore Villages. Further, this negative impact will be absorbed almost entirely by Small Businesses. Neither of these important aspects of the management alternatives are adequately presented in the DEIS.

14) Page 136: I strongly disagree with your pet restriction proposals. The "prohibition of pets in the Seashore during bird breeding season including in front of the villages." = No Pets in public areas ?beaches, campgrounds, soundfront, foot trails, park maintained roads -from March 15 ?July 31. The ban on pets to July 31 will seriously hurt the rental of my vacation home. I propose allowing pets on 6 foot leashes year-round in all areas open to pedestrians or ORVs. This would seem to be a very reasonable compromise.

15) Pages 125; 392 ? 396: SEA TURTLES. I disagree with the statistics and procedures proposed. I think endangered sea turtles would benefit from management practices now in use at other federal seashores that are more proactive in efforts to achieve nesting success. This includes relocating nests to more desirable locations as is done in other state and federally controlled areas.

The Cape Hatteras National Seashore Recreational Area is on the northernmost fringe of turtle nesting locations for the southeast, accounting for about 1% of all turtle nests. Proposed buffer areas are not needed for protection of the turtles and amount to overprotection.

16) Pages 97- 101. I strongly disagree with proposals in this section saying that ORVs will be prohibited year round between ramps 27 and 30, at Hatteras Inlet (Hatteras Spit), Ocracoke Inlet (North Ocracoke Spit) and various other locations.

Not allowing ORV access is paramount to denying the public access to these beaches. They are located miles from the nearest parking or paved road area and too far to access on foot. As a matter of course, there has been no breeding of piping plover or other endangered species at the Hatteras Island Inlet (spit) area in the past 6 years.

17) Page 104: I disagree with the proposed night time driving closures. Per your proposals, night driving will be prohibited between May 1 and November 15th, forcing visitors off of the beaches early in the evening and preventing sunrise surf fishermen access in the morning. I propose a more moderate night time ban if one is needed, perhaps from June 1 ? September 15 with times being 1 hour after sunset and 1 hour before sunrise to allow beach goers to gather their stuff and exit the beach area.

Certainly more proactive measures such as relocating nests prone to weather and ocean events would dramatically increase the nesting success rates.

18) Page 121: I disagree with the proposed beach closings, including pedestrian access from March 15 until July 31 in 8 different beach locations which have traditionally been available. Please leave these areas open to beach walkers, shell collectors and those that want to access the beaches in these areas.

Conclusion:

Please, incorporate access corridors through any SMA so we can get to the open beach beyond. Incorporate the birds into the count that nest on the spoil islands. Base your buffer zones on peer reviewed science and scale them back to more reasonable distances as discussed.

It is neither logical nor reasonable to spend so much time, money and energy to overprotect a bird (Piping Plover) in the Cape Hatteras National Seashore that is on the southernmost fringe area of its breeding ground. That goes for the loggerhead turtle that is in its northernmost breeding area. Let's scale back the buffer zones. You can always increase at a later date.

The USPS is leaning way over the line on over protection and not enough on the public's right to enjoy the beaches of the National Seashore. The proper balance is not achieved in the propose DEIS and needs to be modified so that the proper balance of reasonable resource protection and access to the beaches of the National Park is achieved. I could sum it up by saying "Protect, not Prohibit."

Thank you,

Keith A. Cunningham Kinnakeet Shores Homeowner

Correspondence: We love driving on the beach at OBX. We have been doing it for years and really feel it adds to the trip. For those renters in Avon who do not have direct beach access, it is more convenient for them to put their beach items in their car and drive over. It's a perk to going to the beach for them, just knowing they don't have to carry floats, chairs, umbrellas, toys, kites, coolers, etc. For those who surf fish - who wants to lug all their equipment out to the beach? Fishing poles, tackle, bait, coolers, chairs, etc. Not being able to drive on the beach would be a deterrent to those who do not have the luxury of renting beachfront. The ramps are already closed when the birds are laying their eggs...why limit that even more?

Supt. Murray
Please accept this letter as my comments on the ORV DEIS before you at this time.
After reviewing the NPS DEIS, I must disagree with any of the six alternatives within the document.
I have however, reviewed the 77 page Coalition for Beach Access Position Statement signed by several groups that were a part of the negotiated rule making process and it by far succeeds in furnishing the best visitor experience while maintaining the needs of protecting the fragile resources.
Please consider all aspects of this alternative and put people back into the management of Cape Hatteras National Seashore.
Sincerely Purvis E. Thomas Jr.
Durham, NC

Correspondence: Dear Superintendent Murray,

I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.

- 1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."
- 2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness...." Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.
- 3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.

Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

Correspondence: I own commercial and rental property on Hatteras Island for over 35 years. The impact of the beach access restrictions in addition to the state of the current economic downturn will prove to have a catastrophic impact on the businesses and residents of Hatteras Island. Over these years I have found that the visitors who choose to vacation here do so because of their respect for the beauty and the natural environment of the area. The locals have proved to be honorable keepers of their environmental surroundings and should be commended for being trusted protectors of the habitat. It is appalling that a handful of protestors can have such a negative impact on 'we the people' enjoying this God-given land. The impact this will have on local businesses and the NC economy will be devastating. This will be a very sad day for Hatteras Island if the environmentalists get their way.

Correspondence: Regarding the off road vehicle rules for Cape Hatteras National Park I wish to register my strong objection to allowing vehicles on our beaches. The beach has become just another road because we allow vehicles on them. If people want to fish than they can walk and carry their gear just as people have always done. Vehicles on the beach are dirty ,spilling oil and gas, encouraging trash , the noise and exhaust fumes destroy the beach experience. The beach is for the public and should be for ALL the people yet special interest groups make this beach unsafe for families, for children playing and for those of us who go to the beach to escape the noise of our cities. As a Psychologist I often recommend to patients to spend time at the beach as a means of stress reduction, lowering blood pressure and improving well being. This peace is destroyed by cars and trucks driving past. I cannot hear the birds or the waves from the traffic on the beach. Please get the vehicles back on the pavement and off OUR beaches. Correspondence: I disagree with the size of the buffers proposed on pages 121 to 127 of the document, and with the inflexibility of the closures. I suggest a maximum of 250 meters or less for all buffers, with "pass through only" corridors to provide ORV and pedestrian access at all times. These pass through corridors work well at the Cape Lookout seashore at South Core Banks.
 I disagree with the decision by NPS to not thoroughly consider the benefit to wildlife of the spoil and dredge islands near the CHNSRA (page 124.) These areas should be considered.
 I strongly agree with the continued prohibition of camping on the beaches.
 I disagree with the complete prohibition of pets during the bird nesting times, especially in front of the villages. (Page 136.) Pets should be permitted on the beach and other areas during these times if kept on a short leash of 6 to 12 feet.
 I disagree with the extent of the restrictions on the Species Management Areas (SMAs) on page 468. The ML1 alternative is far too restrictive. ORV passthrough corridors and pedestrian bypasses should be provided during all of the breeding and nesting season to provide continuing access at all times.
 Thank you for your hard work on this difficult document!

Correspondence: I can empathize with those who wish to preserve our beaches. What needs to be considered, however, is how well we will be able to preserve our beaches when there is an economic crisis. Cape Hatteras survives because it has beautiful beaches and is very family-oriented for vacationers. If we have no beach access, we have no vacationers who support those who pay the taxes. With fewer taxes due to homes sold or foreclosed and businesses closing, the Park Services employee payroll will be decreased. The solution is not to close the beaches, but to educate the public on how to respect and preserve what they pay to enjoy. Implementing very strict laws and penalties would deter those who disrespect the coastal habitat. Asking the public to become involved and reporting those they see breaking the law would promote ownership to the majority who respect the environment and the law. This would also be an investment for our future. It will educate our children and adults so man will learn how to live with nature without destroying it. It will become a normal way of life, which is the ultimate goal.

Correspondence: It is a tragic, tragic thing to me that ORVs should be allowed on Cape Hatteras beaches at all. We live in an era of burgeoning human population, of infatuation with self-serving entertainment, and of growing autism toward the natural world. Sea turtles are ancient creatures of a vast world outside man. Their nesting is arduous and they deserve complete protection from our cluelessness. Canoeing halfway down the Florida coast on a long Everglades trip, I encountered one as we crossed a white-capped bay. It was an electrifying experience I would hope and pray my grandchildren might experience for themselves. Moreover, our shorebirds are in decline, migration becomes more difficult every year due to loss of habitat, and these birds too deserve a place to rest and rejuvenate. Please limit to the greatest extent possible vehicle access to Cape Hatteras beaches. I was born in a different era, when national lands actually provided refuge to the beleaguered wildlife that desperately needed them. Please keep the national park aspect alive in Cape Hatteras National Seashore.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
 This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
 The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
 *Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
 * Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
 * Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
 Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: Mr. Mike Murray, Supt. Cape Hatteras National Seashore 1401 National Park Drive Manteo, NC 27954
 Supt. Murray:
 Please accept this letter as my comment on the ORV DEIS before you at this time.
 Review of the NPS DEIS document provokes disagreement with the six alternatives appearing there among many concerned Hatteras Island aficionados, myself included.
 That said, the 77 page Coalition for Beach Access position Statement, a document signed by several groups involved in the negotiated rule-making process, successfully provides alternatives for quality visitor experiences, simultaneously protecting fragile natural resources.
 Please consider all aspects of these alternatives, enabling those directly involved back into the management of Cape Hatteras National Seashore, as opposed to those who've never experienced the numerous pleasures of the Hatteras experience. Thank you for your consideration.

Sincerely,
Diana Dreyer

Correspondence:

Dear Sir: My family and I have been coming to the Cape Hatteras shore line for over twenty years now. We normally stay in Ocracoke or Hatteras village. We started coming to this area to enjoying the recreational sport of surf fishing. We do not like standing on a pier or riding in a boat, and appreciate the combination of being able to fish while the kids play in the sand or along the edge of the water (more so when they were younger). We have seen significant changes in beach access especially in the last few years. These closures have dramatically limited large areas of the best fishing areas - at the ends, or points, along the islands. There have always been areas that are off limits and it would seem to me that if you allowed the access that has always been that the birds are smart enough to stay away from vehicles and have their nests in a nonactive area. By closing the beaches you give the birds, both endangered and non-endangered, the ability/opportunity to continue to expand their nesting grounds. At what point will the entire coast be closed to people so the birds can enjoy it? I do not think the birds should take precedent over the people of our state, and the visitors from other states, that come here to enjoy our coastline. In addition. I think that limiting the amount of closures protects the way of life for the residents of the area that count on the income from the visitors. Lastly, after reading some of the Impact Statement I must comment on how ridiculous it is to consider non-threatened and federally listed species in the same light. Obviously, if these birds were not in abundance they would also be on in the federal list, and to treat them as the same does not make any sense at all. In closing, all I can say is that I think the beaches and natural resources of North Carolina are for the enjoyment of their residents. I believe there are enough dunes and nonactive areas already set aside for the wildlife that the closures of key fishing areas should not be allowed. Again, at what point does/would it stop? I appreciate your acknowledgment of my concerns. Sincerely, Christine Eubank

Correspondence:

My comments concern the DEIS of the Off-Road Vehicle Management Plan prepared by the National Park Service (NPS) for the Cape Hatteras National Seashore Recreation Area.

1) Page 201: I disagree with the NPS statement: "Even with resource closures in place, protected species are still at risk [from pedestrians and ORVs]." No Piping Plover deaths have been attributed to ORVs. ORV violations continue to decrease as signage and education improve. Pedestrian violations are much more significant than ORV violations. It seems to me that any transgressions into protected area are the result of lack of NPS manpower and enforcement than the public purposely and willfully violating out of bounds areas.

2) Page xxiv: I question the statement of as per the DEIS: "Carrying capacity would be a 'peak use limit' determined for all areas based on the linear feet of beachfront?" If you close off huge sections of the beach, you force more people into smaller areas, potentially resulting in more resource impairment and diminished visitor experience.

3) Page xix and page 23: I am against having two different closures rules pertaining to the North facing beaches (North side) and the South facing beaches (South side) as per the grid outlined in Alternative "F". I disagree with the NPS proposal to close the beaches in villages of Frisco, Hatteras and Ocracoke Villages to ORV access longer than the traditional May 15 to September 15 period for the Northern beaches, even though seasonal visitor statistics are similar for all villages. Please, make them the same: May 15 -> September 15.

4) Page 1: I agree with your statement "ORVs have long served as a primary form of access for many portions of the beach in the seashore, and continue to be the most practical means of access and parking for many visitors."

However, pedestrian only areas discriminate against individuals with limited mobility due to age or physical impairments, families with small children, and those wishing to engage in activities requiring recreational equipment (boogie boards, beach umbrellas, beach chairs, coolers, fishing rods and tackle, etc)

5) Page 53: I disagree with the special use permit proposed guidelines. It is impractical to allow the transportation of disabled visitors to the village beaches and then require the vehicle to be returned to the street or parking area. This necessitates the disabled person to have a driver to drop him (or her) off, then drive to a parking area, then trudge a long distance to the site of the drop off, then trudge the long distance through the sand back to get the vehicle.

Suppose the handicap person wants to go to the beach, is capable of driving himself, yet cannot find another person to go with him? Does he now not go to the beach? This rule creates unnecessary hardships and risks in the event of an emergency as well.

6) Page 121 ? 127. I strongly disagree with the buffers as presented. We must allow for pass-thru corridors. The beach is linear with the ocean buffering on one side and the dune line on the other. For example - If you pinch off access on one side of a 4 mile linear beach and pinch off access on the other side of the 4 mile section of beach with no corridor, then you effectively have closed off all 4 miles of the beach because you CAN'T get there. The proposed bird buffers are too large, blocking access to the interior sections from the two "buffered" ends.

I propose ORV pass-thru only corridors and to use breeding / nesting buffer distances to establish ORV pass through only corridors to ensure beach access in a way that does not hinder resource protection. I believe pass through corridors should be maintained for pedestrians and ORVs in all areas of the Cape Hatteras National Seashore Recreation Area throughout the entire breeding and nesting season. Corridors are vital to providing access in a way that does not hinder resource protection.

Piping Plover unfledged chicks buffer should move with the brood as it relocates to reliable food source, not expanded.

The 1,000 meter distance for the piping plover is way too large and not based upon peer reviewed science. A more rational distance would be 200 meters per other sites in the nation for the piping plover. Ample scientific evidence and precedent exists to support a 200 meter buffer.

Buffers for other species, including American Oystercatchers, Least Terns and Colonial Waterbirds must also be changed. An effective 30 meter buffer should be established for these species rather than the 300 meter closure outlined in the DEIS.

NON-ENDANGERED BIRDS should not have same protection as if endangered. Not allowing ORV access is paramount to denying the public access to these beaches.

7) Page 468: I disagree with the limitations imposed on pedestrian and ORVs. Corridors or bypasses should be provided thru, around or below high tide line in all SMAs during entire breeding season to maintain access.

8) Page 124: I strongly disagree with the NPS slant of providing for over protection of resource management over that of the public's right to access the beaches. Pro-active initiatives include: Vegetation Management, Habitat Management, Enhanced Predator Management, Colonial Water bird social attraction, Piping Plover check fledged rate, Piping plover chick buffer distance, and pass-through buffers during the incubation period. Opportunities to implement less restrictive closures as a result of the above initiatives should be considered more frequently than the 5-year periodic review process identified in the DEIS.

9) I disagree with the NPS Resource Management Pedestrian / ORV Closure Policies. These policies address the least significant factors affecting nest survival with little chance to have more than negligible impact. For example: the AMOY Nest Failures are predominately due to non-human events. Using your own stats, the mammalian predation is 54%, Storm / Lunar Tides: 29%, Nest Abandonment: 6%, Avian Predation: 5%, and Ghost Crab Predation: 3%,

So what is the percentage due to human interference: just 3%! It's insignificant, yet the NPS wants to ban humans when their actions provide very little influence on the success rate of breeding birds and turtles.

10) I disagree with the stats of breeding plovers and the other birds in the Park when the NPS does not adequately consider locations neighboring the Recreation Area that are part of the same ecosystem, namely dredge and spoil island that are located just yards away and within sight of the seashore. These birds are part of the same ecosystem and should be included.

Those spoil islands, developed by man from dredging the waterways in the Pamlico Sound for channel upkeep are slammed full of birds. The reason why so many birds? NO PREDATORS. SO, birds are not as stupid as one might think. You have to count these birds and incorporate them in the stats when the NPS is talking about any so called decline in breeding pairs in the National Park.

11) Page 1: I do not think the DEIS responsibly addresses the cultural resource issues. The very purpose of the DEIS as set forth in the National Environmental Policy Act (NEPA) is to protect and preserve natural and cultural resources in the federal decision making process. In the DEIS, the statement "protect and preserve natural and cultural resources" appears in the first sentence of the first page of the plan, in the Purpose of the Plan

section, and numerous times thereafter. Yet, the 810 page document devotes only two paragraphs to analysis of cultural resource issues.

12) Pages 270-281; 561-598: I strongly disagree with your economic analysis of the impact of the DEIS. The region of influence (ROI) incorporates the Northern Beach communities, including Kill Devil Hills, Kitty Hawk, Southern Shores and Duck. These areas are almost completely disconnected from ORV use and access issues relating to the Seashore. ? Inclusion of the Northern Beaches in analysis significantly dilutes estimates of economic impact on the 8 Seashore Villages

? Analysis of economic impact to the Seashore Villages appears to be significantly down played. Emphasis in DEIS is on the ROI-wide or county-wide level impacts.

? Nowhere is it clearly addressed that the overwhelming majority of negative impacts will be felt by small businesses in the Seashore Villages rather than by overall economic interests within the greater ROI.

On page xlvi, Alternative F is characterized as having a "negligible to moderate" adverse impact on small businesses. I strongly disagree with this statement.

I believe the negligible to moderate projection is inaccurate and relies on economic surveys that has not yet been published. Furthermore, this material is not expected to be added to the DEIS until after the public comment period has ended.

Based upon the economic harm we have already experienced under the consent decree, Dare County projects the economic impact of Alternative F to be substantial.

Beach closures have already had a devastating and unfair impact on many Dare County Businesses, causing foreclosures, bankruptcies, lay-offs, cutbacks, expensive refinancing, and depleted college funds and savings accounts.

Pages 270-286, 561-598: The socio-economic data and analyses are incomplete and erroneous and result in an understatement of the effect the restrictions will have upon the Island, the region and the state of NC. The US Park Services answer: Businesses will have to "adapt" to the new rules. (p.383) The negative economic impacts of the decree ARE KNOWN, so to say that the added restrictions would have negligible to moderate impact is indefensible.

13) Overall Visitor Counts - Overall visitor counts appear to include visitors to Fort Raleigh National Historic Site and the Wright Brothers National Memorial. A large percentage of these visitors vacation in the Northern Beaches communities and recreate on the non-federal beaches outside of the Seashore. Visitors who patronize the Fort Raleigh National Historic Site and the Wright Brothers National Memorial but do not visit the actual seashore areas need to be factored out.

Maintenance of Future Access to Cape Point and South Point Ocracoke: All socioeconomic analyses related to Alternative F are predicated on the assumption that access corridors will remain open for at least an appreciable portion of the visitor high season. Under Alternative F, the access corridors will be subject to Resource Closures based on buffers similar or identical to the Consent Decree. Unless some predictability of access to Cape Point and South Point Ocracoke can be assured, economic analyses predicated on assumption of access are fundamentally flawed.

Why would a group of surf fisherman want to come to Hatteras Island to surf fish if they are not sure they can access the prime fishing grounds at Cape Point? The answer is they won't come. If they don't come, they don't rent vacation homes and spend their money on Hatteras and Ocracoke Islands.

The definition of the Region of Influence (ROI), faulty data on economic activity generated by specific type recreational activity, incomplete visitation/business survey data, inflated overall Seashore visitor counts pertaining to beach use, and flawed key assumptions concerning the maintenance of access under Alternative F, all lead to inaccurate conclusions in the socioeconomic analyses. Specifically, these inaccuracies can be seen as understating the negative socio-economic impact of the Seashore Villages. Further, this negative impact will be absorbed almost entirely by Small Businesses. Neither of these important aspects of the management alternatives are adequately presented in the DEIS.

14) Page 136: I strongly disagree with your pet restriction proposals. The "?prohibition of pets in the Seashore during bird breeding season including in front of the villages." = No Pets in public areas ?beaches, campgrounds, soundfront, foot trails, park maintained roads -from March 15 ?July 31.

The ban on pets to July 31 will seriously hurt the rentals of my vacation home as our pet home encompasses about 30% of our rentals. I propose allowing pets on 6 foot leashes year-round in all areas open to pedestrians or ORVs. 15) Pages 125; 392 ? 396: SEA TURTLES. I disagree with the stats and procedures proposed. I think endangered sea turtles would benefit from management practices now in use at other federal seashores that are more proactive in efforts to achieve nesting success. This includes relocating nests to more desirable locations as is done in other state and federally controlled areas.

The Cape Hatteras National Seashore Recreational Area is on the northernmost fringe of turtle nesting locations for the southeast, accounting for about 1% of all turtle nests. Proposed buffer areas are not needed for protection of the turtles and amount to overprotection.

16) Pages 97- 101. I strongly disagree with proposals in this section saying that ORVs will be prohibited year round between ramps 27 and 30, at Hatteras Inlet (Hatteras Spit), Ocracoke Inlet (North Ocracoke Spit) and various other locations.

Not allowing ORV access is paramount to denying the public access to these beaches. They are located miles from the nearest parking or paved road area and too far to access on foot. As a matter of course, there has been no breeding of piping plover or other endangered species at the Hatteras Island Inlet (spit) area in the past 6 years.

17) Page 104: I disagree with the proposed night time driving closures. Per your proposals, night driving will be prohibited between May 1 and November 15th, forcing visitors off of the beaches early in the evening and preventing sunrise surf fishermen access in the morning. I propose a more moderate night time ban if one is needed, perhaps from June 1 ? September 15 with times being 1 hour after sunset and 1 hour before sunrise to allow beach goers to gather their stuff and exit the beach area.

Certainly more proactive measures such as relocating nests prone to weather and ocean events would dramatically increase the nesting success rates.

18) Page 121: I disagree with the proposed beach closings, including pedestrian access from March 15 until July 31 in 8 different beach locations which have traditionally been available. Please leave these areas open to beach walkers, shell collectors and those that want to access the beaches in these areas.

Conclusion:

Please, incorporate access corridors through any SMA so we can get to the open beach beyond. Incorporate the birds into the count that nest on the spoil islands. Base your buffer zones on peer reviewed science and scale them back to more reasonable distances as discussed.

It is neither logical nor reasonable to spend so much time, money and energy to overprotect a bird (Piping Plover) in the Cape Hatteras National Seashore that is on the southernmost fringe area of its breeding ground. That goes for the loggerhead turtle that is in its northernmost breeding area.

Let's scale back the buffer zones. You can always increase at a later date.

The USPS is leaning way over the line on over protection and not enough on the public's right to enjoy the beaches of the National Seashore. The proper balance is not achieved in the propose DEIS and needs to be modified so that the proper balance of reasonable resource protection and access to the beaches of the National Park is achieved. I could sum it up by saying "Protect, not Prohibit."

Thank you, Stephanie Cunningham

Correspondence: TO WHOM IT MAY CONCERN:

We fully and completely "DISAGREE" with the approach being taken by the NPS on the Off Road Vehicle Management Plan. We are both Senior Citizens who own a small home here in Rodanthe. We purchased our home here that takes us 3 days to drive here to enjoy. Part of the reason that we did such, was because of the beauty and freedoms allowed here. These freedoms and rights should not be so severely restricted that individuals rights are forgotten about.

We do not personally drive on the beach, even though we sully approve and respect the rights to so such. We live right on the beach, and we have met more kind and respectful people who do such when coming here to fish and enjoy the habitat that is here. They do not come to destroy the beauty and animals that are here. By imposing the plan F that the NPS is thinking of imposing, would take away the rights and privlges that everyone has appreciated and enjoyed.

It is beyond our comprehension as to the limits suggested by the NPS that you would like to institute. Why must these limits preclude and severely limit the individuals rights to beach activity through ORV useage, and individual access?

We feel that the NPS MUST address to a greater satisfaction, the preservation of the cultural resources and required by the National Environmental Policy Act.

In a time when this country of America is being driven further and further into a severe economic recession/depression, why on earth would the NPS not consider the economic impact this Plan F would have? Being a banker and Bank Chief Executive Officer for over 40 years, I fully and completely can see from your plan that it will severely impact the economic and social impact of this plan. The answer given by the US Park Service of "business will have to adapt to the new rules" is foolish and an example of how government sometimes is not realistic and insensitive to the public's best interests. Doesn't government care if individuals lose work and individual business concerns go broke?

TO CONCLUDE, AGAIN WE DISAGREE WITH THE IMPLEMENTATION OF THIS AND ANY OTHER PLAN THAT TAKES HUNDREDS AND HUNDREDS OF PAGES TO STATE IT'S IRECTIVE, THEREBY HIDING AND COVERING OVER THE REAL DESIRE OF THE DOCUMENT. PLEASE DO NOT TAKE AWAY INDIVIDUAL FREEDOMS AND RIGHTS BY LESISLATING THE DESIRE OF THE FEW AND ABUSING AND SESTROYING THE RIGHTS OF THE MANY WHOM IT WILL AFFECT.

THANY YOU FOR YOUR TIME, AND WE SINCERELY HOPE THAT THIS RESPONSE WILL NOT BE PIGEN HOLLED, AND THAT WE ARE JUST AS IMPORTANT AND SOME OF THOSE ORGANIZATIOSN THAT ARE PRESSING FOR OUR RIGHTS TO BE TAKEN AWAY.
William and Sallye Astle

Correspondence: DEIS Off-Road Vehicle Management Plan
 We have enjoyed Cape Hatteras for over 25 years and have purchased a rental home in 1991 to have a place where the family can go to vacation. Part of being able to afford the second home can only be accomplished through renting the house out 6 months out of the year. Part of the rentals come from the windsurfers and kite boarders, but the other portion is from the fisherman that come for the fishing tournaments. Closing off the beaches is detrimental to the local economy. If we lose anymore rentals, we will have to sell the house as we cannot afford it. We keep a book in the house for the guests to write up their weeks stay and there are plenty of entries discussing the driving on the beach for day trips and picnic events. There are plenty more discussing the fishing and convenience of driving on the beach and having everything needed available in the trucks verses having to go back to the house to get it. Like previously stated, we have been going to the island for over 25 years, and we have seen the nesting grounds blocked off for the birds and the turtles and that is part of the island charm and environmental consciousness that we love. We as a family feel that there has to be a give and take through compromise involved inorder to make this decision. I have seen some statistics, and I am concerned that if the beaches get closed, there will be a more detrimental impact to the economy of the island then there would be coming from a compromise to keep the beaches open.
Thank you for taking the time to consider the Taylor family views and concerns.

Correspondence: Superintendent Murray:
 I am writing in opposition to the ORV DEIS. I completely disagree with the excessive measures that would be taken should Alternative F be instated in the Cape Hatteras National Seashore, and I urge you to come to a compromise with the requests of the Coalition for Beach Access.
 The ORV routes designated in Alternative F are discriminatory against numerous visitors and residents of Dare County. Those individuals who are handicapped or elderly will have restricted access to some of the most pristine areas of the seashore. Walking long distances in the sand is not an option for individuals in such conditions. Families with small children and fishermen with their daily supplies will also be adversely affected by the restrictions on ORV routes.
 I disagree with total restriction of Species Management Areas. I ask that there be a bypass of these areas that runs either around or below the high tide line. This is the only way to ensure that beach access is maintained.
 I also believe that the turtle closures are extreme. I oppose the around the clock closure from nest to surfline and the size of the turtle closure buffers. I agree with the Coalition for Beach Access in their request to have the buffers run from nest to surfline from one hour before sunset until dawn. To have this area closed during the day when turtles will not be hatching is unnecessary. I also strongly disagree with the size of the buffers and feel that they should only surround the turtle nest during the daylight hours. The National Park Service has an established Turtle Night Nest Watch Program which has proved to be effective in the past.
 The regulations of pets in the seashore as stated in Alternative F are extremely excessive. I support the idea that pets should be required to stay on a leash at all times while in the park. Alternative F calls for prohibition of pets on beaches, campgrounds, soundside areas, foot trails, and all park maintained roads. This is again discriminatory against a set of our seashores visitors. Pet owners will feel greatly alienated when visiting the park.
 The ORV DEIS is severe and will greatly affect the visitor's experience to the Cape Hatteras National Seashore as well as the livelihood and culture of the residents of Dare County. I ask that you reject the proposed DEIS and consider the requests of the Coalition for Beach Access.
 Sincerely,
 Rebecca Conner Salyers Conner's Supermarket

Correspondence: I do not believe that there should be any off-road recreational vehicles in any public park or space devoted to nature conservation. The idea of people on quads ripping up beaches and parks to the detriment of the landscape and the ability of others to enjoy nature is absurd. The pollution, noise and destruction inherent in the use of off-road vehicles should make this a non-issue. Is this country in a race to destroy the environment and use up all the fossil fuels we can possibly burn as quickly as possible? The availability of joy-rides to the few is of no value to the public or the environment whatsoever.

Correspondence: The area around the Cape Hatteras light is fragile...hence the reason they had to move the light. I think motorized vehicles should not be permitted on the shore.

Correspondence: On behalf of Southland Trade Corporation an employer of over 100 in Currituck County NC along the busy HWY 168 corridor leading to and from the Outer Banks, we are opposed to further restriction, closures, penalties, on off road vehicle use on the Cape Hatteras National Seashore. As a small business welcoming the Outer Banks visitors each year we can certainly sympathize with our Dare County neighbors and businesses in this fight against the strong arm of the environmentalists. These businesses depend on and thrive off of the visitors to the Hatteras seashore, its beauty, and pristine condition, but also its accessibility. It is the accessibility, that if further restricted, will continue to negatively impact the small businesses and its employees that support families off the attraction to the seashore and its surroundings. Make no doubt about it. There is an economic handicap with restriction to vehicles on the seashore. It already has already been a misfortunate decision. In business, decisions are based on facts and figures. We suggest that comparative data be released or studied on the Currituck Refuge area on the Northern beaches of the Outer Banks where driving is unregulated and further consider the impact that this has on the wildlife in question and if driving does indeed continue to be regulated, it be to the satisfaction of both parties involved.

Correspondence: I own two rental houses in Avon and am very worried about the impact of this project on the well-being of the vacation industry on hatteras island, and the restrictions set forth to keep humans off the beaches, and enjoying the natural parks on the island. Cutting off access to the beaches would be unfair to those of us who have invested heavily in the area. Please, incorporate access corridors through any SMA so we can get to the open beach beyond. Incorporate the birds into the count that nest on the spoil islands. Base your buffer zones on peer reviewed science and scale them back to more reasonable distances as discussed. It is neither logical nor reasonable to spend so much time, money and energy to overprotect a bird (Piping Plover) in the Cape Hatteras National Seashore that is on the southernmost fringe area of its breeding ground. That goes for the loggerhead turtle that is in its northernmost breeding area. Let's scale back the buffer zones. You can always increase at a later date. The USPS is leaning way over the line on over protection and not enough on the public's right to enjoy the beaches of the National Seashore. The proper balance is not achieved in the propose DEIS and needs to be modified so that the proper balance of reasonable resource protection and access to the beaches of the National Park is achieved. I could sum it up by saying "Protect, not Prohibit." Thank you, David & Nancy Plotsky Vacation Homeowners Specifically: Page 201: I have been told that Piping Plover deaths have not been attributed to ORVs. ORV violations continue to decrease as signage and education improve. Pedestrian violations are much more significant than ORV violations. Page xxiv: "Carrying capacity would be a 'peak use limit' determined for all areas based on the linear feet of beachfront?" If you close off huge sections of the beach, you force more people into smaller areas, potentially resulting in more resource impairment and certainly diminished visitor and homeowner experience. Page 53: I disagree with the special use permit proposed guidelines. It is impractical to allow the transportation of disabled visitors to the village beaches and then require the vehicle to be returned to the street or parking area. This necessitates the disabled person to have a driver to drop him (or her) off, then drive to a parking area, then trudge a long distance to the site of the drop off, then trudge the long distance through the sand back to get the vehicle. Page 121 ? 127. I strongly disagree with the buffers as presented. We must allow for pass-thru corridors. The beach is linear with the ocean buffering on one side and the dune line on the other. For example - If you pinch off access on one side of a 4 mile linear beach and pinch off access on the other side of the 4 mile section of beach with no corridor, then you effectively have closed off all 4 miles of the beach because you CAN'T get there. The proposed bird buffers are too large, blocking access to the interior sections from the two "buffered" ends. I believe pass through corridors should be maintained for pedestrians and ORVs in all areas of the Cape Hatteras National Seashore Recreational Area throughout the entire breeding and nesting season. Corridors are vital to providing access in a way that does not hinder resource protection. Piping Plover unfledged chicks buffer should move with the brood as it relocates to reliable food source, not expanded. The 1,000 meter distance for the piping plover is way too large and not based upon peer reviewed science. A more rational distance would be 200 meters per other sites in the nation for the piping plover. Ample scientific evidence and precedent exists to support a 200 meter buffer. Buffers for other species, including American Oystercatchers, Least Terns and Colonial Waterbirds must also be changed. An effective 30 meter buffer should be established for these species rather than the 300 meter closure outlined in the DEIS. NON-ENDANGERED BIRDS should not have same protection as if endangered. Not allowing ORV access is paramount to denying the public access to these beaches. Page 468: I disagree with the limitations imposed on pedestrian and ORVs. Corridors or bypasses should be provided thru, around or below high tide line in all SMAs during entire breeding season to maintain access. Page 124: I strongly disagree with the NPS slant of providing for over protection of resource management over that of the public's right to access the beaches. Pro-active initiatives include: Vegetation Management, Habitat Management, Enhanced Predator Management, Colonial Water bird social attraction, Piping Plover check fledge rate, Piping plover chick buffer distance, and pass-through buffers during the incubation period. Opportunities to implement less restrictive closures as a result of the above initiatives should be considered more frequently than the 5-year periodic review process identified in the DEIS. I disagree with the NPS Resource Management Pedestrian / ORV Closure Policies. These policies address the least significant factors affecting nest survival with little chance to have more than negligible impact. For example: the AMOY Nest Failures are predominately due to non-human events. Using your own stats, the mammalian predation is 54%, Storm / Lunar Tides: 29%, Nest Abandonment: 6%, Avian Predation: 5%, and Ghost Crab Predation: 3%, So what is the percentage due to human interference: just 3%! It's insignificant, yet the NPS wants to ban humans when their actions provide very little influence on the success rate of breeding birds and turtles. Page 1: I do not think the DEIS responsibly addresses the cultural resource issues. The very purpose of the DEIS as set forth in the National Environmental Policy Act (NEPA) is to protect and preserve natural and cultural resources in the federal decision making process. In the DEIS, the statement "protect and preserve natural and cultural resources" appears in the first sentence of the first page of the plan, in the Purpose of the Plan section, and numerous times thereafter. Yet, the 810 page document devotes only two paragraphs to analysis of cultural resource issues. pages 270-281; 561-598: I strongly disagree with your economic analysis of the impact of the DEIS. The region of influence (ROI) incorporates the Northern Beach communities, including Kill Devil Hills, Kitty Hawk, Southern Shores and Duck. These areas are almost completely disconnected from ORV use and access issues relating to the Seashore. ? Inclusion of the Northern Beaches in analysis significantly dilutes estimates of economic impact on the 8 Seashore Villages ? Analysis of economic impact to the Seashore Villages appears to be significantly down played. Emphasis in DEIS is on the ROI-wide or county-wide level impacts. ? Nowhere is it clearly addressed that the overwhelming majority of negative impacts will be felt by small businesses in the Seashore Villages rather than by overall economic interests within the greater ROI.

On page xlvi, Alternative F is characterized as having a "negligible to moderate" adverse impact on small businesses. I strongly disagree with this statement.

I believe the negligible to moderate projection is inaccurate and relies on economic surveys that has not yet been published. Furthermore, this material is not expected to be added to the DEIS until after the public comment period has ended.

Based upon the economic harm we have already experienced under the consent decree, Dare County projects the economic impact of Alternative F to be substantial.

Beach closures have already had a devastating and unfair impact on many Dare County Businesses, causing foreclosures, bankruptcies, lay-offs, cutbacks, expensive refinancing, and depleted college funds and savings accounts.

Even businesses whose revenue has stayed level or showed a modest increase have accomplished this at a costly price. Many have had to cut back employee hours, forego much-needed capital improvements, and sacrifice profits. That is certainly the case with Hatteras Realty.

Pages 270-286, 561-598: The socio-economic data and analyses are incomplete and erroneous and result in an understatement of the effect the restrictions will have upon the Island, the region and the state of NC. The US Park Services answer: Businesses will have to "adapt" to the new rules. (p.383) The negative economic impacts of the decree ARE KNOWN, so to say that the added restrictions would have negligible to moderate impact is indefensible.

Overall Visitor Counts - Overall visitor counts appear to include visitors to Fort Raleigh National Historic Site and the Wright Brothers National Memorial. A large percentage of these visitors vacation in the Northern Beaches communities and recreate on the non-federal beaches outside of the Seashore. Visitors who patronize the Fort Raleigh National Historic Site and the Wright Brothers National Memorial but do not visit the actual seashore areas need to be factored out.

Maintenance of Future Access to Cape Point and South Point Ocracoke: All socioeconomic analyses related to Alternative F are predicated on the assumption that access corridors will remain open for at least an appreciable portion of the visitor high season. Under Alternative F, the access corridors will be subject to Resource Closures based on buffers similar or identical to the Consent Decree. Unless some predictability of access to Cape Point and South Point Ocracoke can be assured, economic analyses predicated on assumption of access are fundamentally flawed.
