Correspondence: After reviewing the NPS DEIS I must disagree with any of the six alternatives within the document. I have however, reviewed the 77-page Coalition for Beach Access Position Statement signed by several groups that were a part of the negotiated rulemaking process, and it by far succeeds in furnishing the best visitor experience while maintaining the needs of protecting the fragile resources. I strongly support this Coalition option as the best alternative to date.

Michael B. Murray Superintendent, Cape Hatteras National Seashore National Park Service 1401 National Park Drive Manteo, North Carolina 27954
Subject: Comments on Cape Hatteras National Seashore Off Road Vehicle Management Plan and Draft Environmental Impact Statement
Dear Superintendent Murray:
This provides the comments of the U. S. Fish and Wildlife Service (USFWS) on the Draft Environmental Impact Statement (DEIS) for the Cape Hatteras National Seashore Off-Road Vehicle (ORV) Management Plan, dated February 2010. At the conclusion of the decision-making process mandated by the National Environmental Policy Act (NEPA), the alternative selected for implementation will become the ORV management plan, which will guide the management and control of ORVs at Cape Hatteras National Seashore (CAHA) for the next 10 to 15 years. The management plan will also form the basis for a special regulation to manage ORV use within CAHA. These comments are provided for NPS use in meeting your requirements under NEPA. Our agencies are currently in consultation pursuant to Section 7 of the Endangered Species Act, and specific comments and determinations regarding the effects of the proposed action on federally listed species will be provided through that process.
The USFWS has actively worked with the National Park Service (NPS) and other stakeholders regarding this issue for many years. We have provided technical assistance to the NPS regarding management of federal trust fish and wildlife resources, and have rendered biological opinions and incidental take statements regarding the Interim Strategy and Consent Decree, which have been used by NPS to guide management of ORV use at CAHA over the past few years. We also participated in the Negotiated Rule-making process convened by the NPS. At the conclusion of that process, we provided a detailed set of recommendations to the NPS (through the Consensus Building Institute via a memorandum dated March 27, 2009) for your use in developing the proposed ORV Management Plan. We have used our March 27, 2009, recommendations as the basis for the following comments.
The main thrust of our March 27, 2009, recommendations was to encourage the NPS to set goals and implement management actions for the fish and wildlife resources of CAHA that would ensure that CAHA is truly contributing to the recovery of federally listed species and the long term conservation of other priority federal trust resources. We continue to believe these steps are necessary to ensure that the natural resources of CAHA are not impaired. We also encouraged the NPS to pursue those goals through a robust adaptive management strategy that would ensure that the best science and continuous learning were fully integrated in the management process.
With respect to goals, we note that the DEIS describes a set of desired future conditions (i.e., target population levels) for beach-nest birds, sea turtles, and sea beach amaranth. We find that the desired future conditions for the federally listed species (nesting piping plovers, nesting sea turtles and sea beach amaranth) parallel recovery criteria described in the recovery plans for these species, and we support them. The desired future conditions for American Oystercatcher also appear reasonable. While we support the desired population growth rates for colonial waterbirds, we note that the baseline population levels for these species were drawn from a period during which populations of these species at CAHA were historically low. As such, the 10 and 20 year population targets described in the desired future conditions are likely lower than what could be supported at CAHA with sustained management. We anticipate that with continued implementation of management actions such as those described in Alternative F, populations of these species could easily exceed the desired future conditions as currently defined. We encourage the NPS to take another look at the historic data set to determine a more appropriate baseline, or prepare to re-calibrate the desired future conditions for these species at the first 5-year review period to reflect population levels that more closely reflect the likely ability of CAHA to support these species.
Our March 27, 2009, recommendations also emphasized the importance of modeling to the effective application of adaptive management. While the DEIS describes a number of research questions that the NPS would like to pursue as the ORV Management Plan is implemented, it does not articulate a desire on the part of NPS to develop and use species-habitat models as tools to inform management. As we have previously stated, models are important tools and essential components of an adaptive management framework. They would enable you to make better predictions about the effects of management actions relative to your desired future conditions, and would help focus research and monitoring efforts for maximum effectiveness. We continue to encourage the NPS to commit resources to the development of models for priority species, and we continue to offer our assistance toward that end.
Notwithstanding our above recommendations to strengthen the adaptive management component of the ORV Management Plan, we broadly support the identification of Alternative F as the preferred alternative. It largely embraces our March 27, 2009, recommendations and constitutes a baseline management program that is generally well grounded in our current understanding of the needs of these trust species. It also does include an adaptive component that will allow adjustment of management actions over time, based on improved knowledge and progress toward established goals. We support the ORV routes as described, the Species Management Areas and Management Levels. The buffer distances described for the protection of nesting birds and unfledged chicks reflect our current understanding of the biological needs of these species. Measures to protect nesting sea turtles are generally appropriate, including the restrictions on night driving and the nest relocation provisions. However, there are some specific issues regarding sea turtle management that we would like to explore further with you through the consultation process. They include lighting issues, fires on the beach, and the timing of beach closures relative to sunrise and sunset. We will provide further information regarding these issues under separate cover. We appreciate the opportunity to provide these comments. If you have any questions, please contact me at (919) 856-4520 extension 11, or via email at Pete_Benjamin@fws.gov.
Sincerely,
Pete Benjamin Field Supervisor

Correspondence Type: Web Form
Correspondence: My comments concern the DEIS of the Off-Road Vehicle Management Plan prepared by the National Park Service (NPS) for the Cape Hatteras National Seashore Recreation Area.
1) Page 201: I disagree with the NPS statement: "Even with resource closures in place, protected species are still at risk [from pedestrians and ORVs]." No Piping Plover deaths have been attributed to ORVs. ORV violations continue to decrease as signage and education improve. Pedestrian violations are much more significant than ORV violations. It seems to me that any transgressions into protected area are the result of lack of NPS manpower and enforcement than the public purposely and willfully violating out of bounds areas.
2) Page xxiv: I question the statement of as per the DEIS: "Carrying capacity would be a 'peak use limit' determined for all areas based on the linear feet of beachfront?" If you close off huge sections of the beach, you force more people into smaller areas, potentially resulting in more resource impairment and diminished visitor experience.
3) Page xix and page 23: I am against having two different closures rules pertaining to the North facing beaches (North side) and the South facing beaches (South side) as per the grid outlined in Alternative "F". I disagree with the NPS proposal to close the beaches in villages of Frisco, Hatteras and Ocracoke Villages to ORV access longer than the traditional May 15 to September 15 period for the Northern beaches, even though seasonal visitor

statistics are similar for all villages. Please, make them the same: May 15 -> September 15.

4) Page 1: I agree with your statement "ORVs have long served as a primary form of access for many portions of the beach in the seashore, and continue to be the most practical means of access and parking for many visitors."

However, pedestrian only areas discriminate against individuals with limited mobility due to age or physical impairments, families with small children, and those wishing to engage in activities requiring recreational equipment (boogie boards, beach umbrellas, beach chairs, coolers, fishing rods and tackle, etc)

5) Page 53: I disagree with the special use permit proposed guidelines. It is impractical to allow the transportation of disabled visitors to the village beaches and then require the vehicle to be returned to the street or parking area. This necessitates the disabled person to have a driver to drop him (or her) off, then drive to a parking area, then trudge a long distance to the site of the drop off, then trudge the long distance through the sand back to get the vehicle.

Suppose the handicap person wants to go to the beach, is capable of driving himself, yet cannot find another person to go with him? Does he now not go to the beach? This rule creates unnecessary hardships and risks in the event of an emergency as well.

6) Page 121 ? 127. I strongly disagree with the buffers as presented. We must allow for pass-thru corridors. The beach is linear with the ocean buffering on one side and the dune line on the other. For example - If you pinch off access on one side of a 4 mile linear beach and pinch off access on the other side of the 4 mile section of beach with no corridor, then you effectively have closed off all 4 miles of the beach because you CAN'T get there. The proposed bird buffers are too large, blocking access to the interior sections from the two "buffered" ends.

I propose ORV pass-thru only corridors and to use breeding / nesting buffer distances to establish ORV pass through only corridors to ensure beach access in a way that does not hinder resource protection. I believe pass through corridors should be maintained for pedestrians and ORVs in all areas of the Cape Hatteras National Seashore Recreational Area throughout the entire breeding and nesting season. Corridors are vital to providing access in a way that does not hinder resource protection.

Piping Plover unfledged chicks buffer should move with the brood as it relocates to reliable food source, not expanded.

The 1,000 meter distance for the piping plover is way too large and not based upon peer reviewed science. A more rational distance would be 200 meters per other sites in the nation for the piping plover. Ample scientific evidence and precedent exists to support a 200 meter buffer.

Buffers for other species, including American Oystercatchers, Least Terns and Colonial Waterbirds must also be changed. An effective 30 meter buffer should be established for these species rather than the 300 meter closure outlined in the DEIS.

NON-ENDANGERED BIRDS should not have same protection as if endangered. Not allowing ORV access is paramount to denying the public access to these beaches.

7) Page 468: I disagree with the limitations imposed on pedestrian and ORVs. Corridors or bypasses should be provided thru, around or below high tide line in all SMAs during entire breeding season to maintain access.

8) Page 124: I strongly disagree with the NPS slant of providing for over protection of resource management over that of the public's right to access the beaches. Pro-active initiatives include: Vegetation Management, Habitat Management, Enhanced Predator Management, Colonial Water bird social attraction, Piping Plover check fledge rate, Piping plover chick buffer distance, and pass-through buffers during the incubation period. Opportunities to implement less restrictive closures as a result of the above initiatives should be considered more frequently than the 5-year periodic review process identified in the DEIS.

9) I disagree with the NPS Resource Management Pedestrian / ORV Closure Policies. These policies address the least significant factors affecting nest survival with little chance to have more than negligible impact. For example: the AMOY Nest Failures are predominately due to non-human events. Using your own stats, the mammalian predation is 54%, Storm / Lunar Tides: 29%, Nest Abandonment: 6%, Avian Predation: 5%, and Ghost Crab Predation: 3%,

So what is the percentage due to human interference: just 3%! It's insignificant, yet the NPS wants to ban humans when their actions provide very little influence on the success rate of breeding birds and turtles.

10) I disagree with the stats of breeding plovers and the other birds in the Park when the NPS does not adequately consider locations neighboring the Recreational Area that are part of the same ecosystem, namely dredge and spoil island that are located just yards away and within sight of the seashore. These birds are part of the same ecosystem and should be included.

Those spoil islands, developed by man from dredging the waterways in the Pamlico Sound for channel upkeep are slammed full of birds. The reason why so many birds? NO PREDATORS. SO, birds are not as stupid as one might think. You have to count these birds and incorporate them in the stats when the NPS is talking about any so called decline in breeding pairs in the National Park.

11) Page 1: I do not think the DEIS responsibly addresses the cultural resource issues. The very purpose of the DEIS as set forth in the National Environmental Policy Act (NEPA) is to protect and preserve natural and cultural resources in the federal decision making process. In the DEIS, the statement "protect and preserve natural and cultural resources" appears in the first sentence of the first page of the plan, in the Purpose of the Plan section, and numerous times thereafter. Yet, the 810 page document devotes only two paragraphs to analysis of cultural resource issues

12) Pages 270-281; 561-598: I strongly disagree with your economic analysis of the impact of the DEIS. The region of influence (ROI) incorporates the Northern Beach communities, including Kill Devil Hills, Kitty Hawk, Southern Shores and Duck. These areas are almost completely disconnected from ORV use and access issues relating to the Seashore. ? Inclusion of the Northern Beaches in analysis significantly dilutes estimates of economic impact on the 8 Seashore Villages

? Analysis of economic impact to the Seashore Villages appears to be significantly down played. Emphasis in DEIS is on the ROI-wide or county-wide level impacts.

? Nowhere is it clearly addressed that the overwhelming majority of negative impacts will be felt by small businesses in the Seashore Villages rather than by overall economic interests within the greater ROI.

On page xlvi, Alternative F is characterized as having a "negligible to moderate" adverse impact on small businesses. I strongly disagree with this statement.

I believe the negligible to moderate projection is inaccurate and relies on economic surveys that has not yet been published. Furthermore, this material is not expected to be added to the DEIS until after the public comment period has ended.

Based upon the economic harm we have already experienced under the consent decree, Dare County projects the economic impact of Alternative F to be substantial.

Beach closures have already had a devastating and unfair impact on many Dare County Businesses, causing foreclosures, bankruptcies, lay-offs, cutbacks, expensive refinancing, and depleted college funds and savings accounts.

Pages 270-286, 561-598: The socio-economic data and analyses are incomplete and erroneous and result in an understatement of the effect the restrictions will have upon the Island, the region and the state of NC. The US Park Services answer: Businesses will have to "adapt" to the new rules.

(p.383) The negative economic impacts of the decree ARE KNOWN, so to say that the added restrictions would have negligible to moderate impact is indefensible.

13) Overall Visitor Counts - Overall visitor counts appear to include visitors to Fort Raleigh National Historic Site and the Wright Brothers National Memorial. A large percentage of these visitors vacation in the Northern Beaches communities and recreate on the non-federal beaches outside of the Seashore. Visitors who patronize the Fort Raleigh National Historic Site and the Wright Brothers National Memorial but do not visit the actual seashore areas need to be factored out.

Maintenance of Future Access to Cape Point and South Point Ocracoke: All socioeconomic analyses related to Alternative F are predicated on the assumption that access corridors will remain open for at least an appreciable portion of the visitor high season. Under Alternative F, the access corridors will be subject to Resource Closures based on buffers similar or identical to the Consent Decree. Unless some predictability of access to Cape Point and South Point Ocracoke can be assured, economic analyses predicated on assumption of access are fundamentally flawed.

Why would a group of surf fisherman want to come to Hatteras Island to surf fish if they are not sure they can access the prime fishing grounds at Cape Point? The answer is they won't come. If they don't come, they don't rent vacation homes and spend their money on Hatteras and Ocracoke Islands.

The definition of the Region of Influence (ROI), faulty data on economic activity generated by specific type recreational activity, incomplete visitation/business survey data, inflated overall Seashore visitor counts pertaining to beach use, and flawed key assumptions concerning the maintenance of access under Alternative F, all lead to inaccurate conclusions in the socioeconomic analyses. Specifically, these inaccuracies can be seen as

understating the negative socio-economic impact of the Seashore Villages. Further, this negative impact will be absorbed almost entirely by Small Businesses. Neither of these important aspects of the management alternatives are adequately presented in the DEIS.

14) Page 136: I strongly disagree with your pet restriction proposals. The "prohibition of pets in the Seashore during bird breeding season including in front of the villages." = No Pets in public areas ?beaches, campgrounds, soundfront, foot trails, park maintained roads -from March 15 ?July 31.

15) Pages 125; 392 ? 396: SEA TURTLES. I disagree with the stats and procedures proposed. I think endangered sea turtles would benefit from management practices now in use at other federal seashores that are more proactive in efforts to achieve nesting success. This includes relocating nests to more desirable locations as is done in other state and federally controlled areas.

The Cape Hatteras National Seashore Recreational Area is on the northernmost fringe of turtle nesting locations for the southeast, accounting for about 1% of all turtle nests. Proposed buffer areas are not needed for protection of the turtles and amount to overprotection.

16) Pages 97- 101. I strongly disagree with proposals in this section saying that ORVs will be prohibited year round between ramps 27 and 30, at Hatteras Inlet (Hatteras Spit), Ocracoke Inlet (North Ocracoke Spit) and various other locations.

Not allowing ORV access is paramount to denying the public access to these beaches. They are located miles from the nearest parking or paved road area and too far to access on foot. As a matter of course, there has been no breeding of piping plover or other endangered species at the Hatteras Island Inlet (spit) area in the past 6 years.

17) Page 104: I disagree with the proposed night time driving closures. Per your proposals, night driving will be prohibited between May 1 and November 15th, forcing visitors off of the beaches early in the evening and preventing sunrise surf fishermen access in the morning. I propose a more moderate night time ban if one is needed, perhaps from June 1 ? September 15 with times being 1 hour after sunset and 1 hour before sunrise to allow beach goers to gather their stuff and exit the beach area.

Certainly more proactive measures such as relocating nests prone to weather and ocean events would dramatically increase the nesting success rates.

18) Page 121: I disagree with the proposed beach closings, including pedestrian access from March 15 until July 31 in 8 different beach locations which have traditionally been available. Please leave these areas open to beach walkers, shell collectors and those that want to access the beaches in these areas.

Conclusion:

Please, incorporate access corridors through any SMA so we can get to the open beach beyond. Incorporate the birds into the count that nest on the spoil islands. Base your buffer zones on peer reviewed science and scale them back to more reasonable distances as discussed.

It is neither logical nor reasonable to spend so much time, money and energy to overprotect a bird (Piping Plover) in the Cape Hatteras National Seashore that is on the southernmost fringe area of its breeding ground. That goes for the loggerhead turtle that is in its northernmost breeding area.

Let's scale back the buffer zones. You can always increase at a later date.

The USPS is leaning way over the line on over protection and not enough on the public's right to enjoy the beaches of the National Seashore. The proper balance is not achieved in the propose DEIS and needs to be modified so that the proper balance of reasonable resource protection and access to the beaches of the National Park is achieved. I could sum it up by saying "Protect, not Prohibit."

Thank you,

Carol Dawson

Subject: DEIS Off-Road Vehicle Management Plan Comments

My comments concern the DEIS of the Off-Road Vehicle Management Plan prepared by the National Park Service (NPS) for the Cape Hatteras National Seashore Recreation Area.

1) Page 201: I disagree with the NPS statement: "Even with resource closures in place, protected species are still at risk [from pedestrians and ORVs]." No Piping Plover deaths have been attributed to ORVs. ORV violations continue to decrease as signage and education improve. Pedestrian violations are much more significant than ORV violations. It seems to me that any transgressions into protected area are the result of lack of NPS manpower and enforcement than the public purposely and willfully violating out of bounds areas.

2) Page xxiv: I question the statement of as per the DEIS: "Carrying capacity would be a 'peak use limit' determined for all areas based on the linear feet of beachfront?" If you close off huge sections of the beach, you force more people into smaller areas, potentially resulting in more resource impairment and diminished visitor experience.

3) Page xix and page 23: I am against having two different closures rules pertaining to the North facing beaches (North side) and the South facing beaches (South side) as per the grid outlined in Alternative "F". I disagree with the NPS proposal to close the beaches in villages of Frisco, Hatteras and Ocracoke Villages to ORV access longer than the traditional May 15 to September 15 period for the Northern beaches, even though seasonal visitor statistics are similar for all villages. Please, make them the same: May 15 -> September 15.

4) Page 1: I agree with your statement "ORVs have long served as a primary form of access for many portions of the beach in the seashore, and continue to be the most practical means of access and parking for many visitors."

However, pedestrian only areas discriminate against individuals with limited mobility due to age or physical impairments, families with small children, and those wishing to engage in activities requiring recreational equipment (boogie boards, beach umbrellas, beach chairs, coolers, fishing rods and tackle, etc)

5) Page 53: I disagree with the special use permit proposed guidelines. It is impractical to allow the transportation of disabled visitors to the village beaches and then require the vehicle to be returned to the street or parking area. This necessitates the disabled person to have a driver to drop him (or her) off, then drive to a parking area, then trudge a long distance to the site of the drop off, then trudge the long distance through the sand back to get the vehicle.

Suppose the handicap person wants to go to the beach, is capable of driving himself, yet cannot find another person to go with him? Does he now not go to the beach? This rule creates unnecessary hardships and risks in the event of an emergency as well.

6) Page 121 ? 127. I strongly disagree with the buffers as presented. We must allow for pass-thru corridors. The beach is linear with the ocean buffering on one side and the dune line on the other. For example - If you pinch off access on one side of a 4 mile linear beach and pinch off access on the other side of the 4 mile section of beach with no corridor, then you effectively have closed off all 4 miles of the beach because you CAN'T get there. The proposed bird buffers are too large, blocking access to the interior sections from the two "buffered" ends.

I propose ORV pass-thru only corridors and to use breeding / nesting buffer distances to establish ORV pass through only corridors to ensure beach access in a way that does not hinder resource protection. I believe pass through corridors should be maintained for pedestrians and ORVs in all areas of the Cape Hatteras National Seashore Recreational Area throughout the entire breeding and nesting season. Corridors are vital to providing access in a way that does not hinder resource protection.

Piping Plover unfledged chicks buffer should move with the brood as it relocates to reliable food source, not expanded.

The 1,000 meter distance for the piping plover is way too large and not based upon peer reviewed science. A more rational distance would be 200 meters per other sites in the nation for the piping plover. Ample scientific evidence and precedent exists to support a 200 meter buffer.

Buffers for other species, including American Oystercatchers, Least Terns and Colonial

Waterbirds must also be changed. An effective 30 meter buffer should be established for these species rather than the 300 meter closure outlined in the DEIS.

NON-ENDANGERED BIRDS should not have same protection as if endangered. Not allowing ORV access is paramount to denying the public access to these beaches.

7) Page 468: I disagree with the limitations imposed on pedestrian and ORVs. Corridors or bypasses should be provided thru, around or below high tide line in all SMAs during entire breeding season to maintain access.

8) Page 124: I strongly disagree with the NPS slant of providing for over protection of resource management over that of the public's right to access the beaches. Pro-active initiatives include: Vegetation Management, Habitat Management, Enhanced Predator Management, Colonial Water bird social attraction, Piping Plover check fledge rate, Piping plover chick buffer distance, and pass-through buffers during the incubation period. Opportunities to implement less restrictive closures as a result of the above initiatives should be considered more frequently than the 5-year periodic review process identified in the DEIS.

9) I disagree with the NPS Resource Management Pedestrian / ORV Closure Policies. These policies address the least significant factors affecting nest survival with little chance to have more than negligible impact. For example: the AMOY Nest Failures are predominately due to non-human events. Using your own stats, the mammalian predation is 54%, Storm / Lunar Tides: 29%, Nest Abandonment: 6%, Avian Predation: 5%, and Ghost Crab Predation: 3%.

So what is the percentage due to human interference: just 3%! It's insignificant, yet the NPS wants to ban humans when their actions provide very little influence on the success rate of breeding birds and turtles.

10) I disagree with the stats of breeding plovers and the other birds in the Park when the NPS does not adequately consider locations neighboring the Recreational Area that are part of the same ecosystem, namely dredge and spoil island that are located just yards away and within sight of the seashore. These birds are part of the same ecosystem and should be included.

Those spoil islands, developed by man from dredging the waterways in the Pamlico Sound for channel upkeep are slammed full of birds. The reason why so many birds? NO PREDATORS. SO, birds are not as stupid as one might think. You have to count these birds and incorporate them in the stats when the NPS is talking about any so called decline in breeding pairs in the National Park.

11) Page 1: I do not think the DEIS responsibly addresses the cultural resource issues. The very purpose of the DEIS as set forth in the National Environmental Policy Act (NEPA) is to protect and preserve natural and cultural resources in the federal decision making process. In the DEIS, the statement "protect and preserve natural and cultural resources" appears in the first sentence of the first page of the plan, in the Purpose of the Plan section, and numerous times thereafter. 12) Pages 270-281; 561-598: I strongly disagree with your economic analysis of the impact of the DEIS. The region of influence (ROI) incorporates the Northern Beach communities, including Kill Devil Hills, Kitty Hawk, Southern Shores and Duck. These areas are almost completely disconnected from ORV use and access issues relating to the Seashore.

? Inclusion of the Northern Beaches in analysis significantly dilutes estimates of economic impact on the 8 Seashore Villages

? Analysis of economic impact to the Seashore Villages appears to be significantly down played. Emphasis in DEIS is on the ROI-wide or county-wide level impacts.

? Nowhere is it clearly addressed that the overwhelming majority of negative impacts will be felt by small businesses in the Seashore Villages rather than by overall economic interests within the greater ROI.

On page xlvi, Alternative F is characterized as having a "negligible to moderate" adverse impact on small businesses. I strongly disagree with this statement.

I believe the negligible to moderate projection is inaccurate and relies on economic surveys that has not yet been published. Furthermore, this material is not expected to be added to the DEIS until after the public comment period has ended.

Based upon the economic harm we have already experienced under the consent decree, Dare County projects the economic impact of Alternative F to be substantial.

Beach closures have already had a devastating and unfair impact on many Dare County Businesses, causing foreclosures, bankruptcies, lay-offs, cutbacks, expensive refinancing, and depleted college funds and savings accounts.

Pages 270-286, 561-598: The socio-economic data and analyses are incomplete and erroneous and result in an understatement of the effect the restrictions will have upon the Island, the region and the state of NC. The US Park Services answer: Businesses will have to "adapt" to the new rules. (p.383) The negative economic impacts of the decree ARE KNOWN, so to say that the added restrictions would have negligible to moderate impact is indefensible.

13) Overall Visitor Counts - Overall visitor counts appear to include visitors to Fort Raleigh National Historic Site and the Wright Brothers National Memorial. A large percentage of these visitors vacation in the Northern Beaches communities and recreate on the non-federal beaches outside of the Seashore. Visitors who patronize the Fort Raleigh National Historic Site and the Wright Brothers National Memorial but do not visit the actual seashore areas need to be factored out.

Maintenance of Future Access to Cape Point and South Point Ocracoke: All socioeconomic analyses related to Alternative F are predicated on the assumption that access corridors will remain open for at least an appreciable portion of the visitor high season. Under Alternative F, the access corridors will be subject to Resource Closures based on buffers similar or identical to the Consent Decree. Unless some predictability of access to Cape Point and South Point Ocracoke can be assured, economic analyses predicated on assumption of access are fundamentally flawed.

Why would a group of surf fishermen want to come to Hatteras Island to surf fish if they are not sure they can access the prime fishing grounds at Cape Point? The answer is they won't come. If they don't come, they don't rent vacation homes and spend their money on Hatteras and Ocracoke Islands.

The definition of the Region of Influence (ROI), faulty data on economic activity generated by specific type recreational activity, incomplete visitation/business survey data, inflated overall Seashore visitor counts pertaining to beach use, and flawed key assumptions concerning the maintenance of access under Alternative F, all lead to inaccurate conclusions in the socioeconomic analyses. Specifically, these inaccuracies can be seen as understating the negative socio-economic impact of the Seashore Villages. Further, this negative impact will be absorbed almost entirely by Small Businesses. Neither of these important aspects of the management alternatives are adequately presented in the DEIS.

14) Page 136: I strongly disagree with your pet restriction proposals. The "prohibition of pets in the Seashore during bird breeding season including in front of the villages." = No Pets in public areas ?beaches, campgrounds, soundfront, foot trails, park maintained roads -from March 15 ?July 31.

15) Pages 125; 392 ? 396: SEA TURTLES. I disagree with the stats and procedures proposed. I think endangered sea turtles would benefit from management practices now in use at other federal seashores that are more proactive in efforts to achieve nesting success. This includes relocating nests to more desirable locations as is done in other state and federally controlled areas.

The Cape Hatteras National Seashore Recreational Area is on the northernmost fringe of turtle nesting locations for the southeast, accounting for about 1% of all turtle nests. Proposed buffer areas are not needed for protection of the turtles and amount to overprotection.

16) Pages 97- 101. I strongly disagree with proposals in this section saying that ORVs will be prohibited year round between ramps 27 and 30, at Hatteras Inlet (Hatteras Spit), Ocracoke Inlet (North Ocracoke Spit) and various other locations.

Not allowing ORV access is paramount to denying the public access to these beaches. They are located miles from the nearest parking or paved road area and too far to access on foot. As a matter of course, there has been no breeding of piping plover or other endangered species at the Hatteras Island Inlet (spit) area in the past 6 years.

17) Page 104: I disagree with the proposed night time driving closures. Per your proposals, night driving will be prohibited between May 1 and November 15th, forcing visitors off of the beaches early in the evening and preventing sunrise surf fishermen access in the morning. I propose a more moderate night time ban if one is needed, perhaps from June 1 ? September 15 with times being 1 hour after sunset and 1 hour before sunrise to allow beach goers to gather their stuff and exit the beach area.

Certainly more proactive measures such as relocating nests prone to weather and ocean events would dramatically increase the nesting success rates.

18) Page 121: I disagree with the proposed beach closings, including pedestrian access from March 15 until July 31 in 8 different beach locations which have traditionally been available. Please leave these areas open to beach walkers, shell collectors and those that want to access the beaches in these areas.

Conclusion:

Please, incorporate access corridors through any SMA so we can get to the open beach beyond. Incorporate the birds into the count that nest on the spoil islands. Base your buffer zones on peer reviewed science and scale them back to more reasonable distances as discussed.

It is neither logical nor reasonable to spend so much time, money and energy to overprotect a bird (Piping Plover) in the Cape Hatteras National Seashore that is on the southernmost fringe area of its breeding ground. That goes for the loggerhead turtle that is in its northernmost breeding area.

Let's scale back the buffer zones. You can always increase at a later date.

The USPS is leaning way over the line on over protection and not enough on the public's right to enjoy the beaches of the National Seashore. The proper balance is not achieved in the propose DEIS and needs to be modified so that the proper balance of reasonable resource protection and access to the beaches of the National Park is achieved. I could sum it up by saying "Protect, not Prohibit."

Thank you,

Pat and Christina Lynch

On behalf of the Recreational Fishing Alliance I submit the following partial comments. The 60 day comment period was not enough time for RFA to analyze the document and make comment for the tens of thousands of members. To expect the public to digest and make informed comment on an 800 plus page document written in this manner is no reasonable.

I was a member of the CAHA Negotiated Rulemaking Advisory Committee and represented RFA throughout that process. 60 days was not enough time for me to analyze the document. It is even more difficult for those that are not educated on the subject.

On behalf of the RFA I submit the following comments

ORV Routes, Use Areas & Corridors (DEIS page xviii) ORV Use Areas ? I agree with Alternative C ORV Corridors ? I agree with Alternative C. I specifically do not agree that Alternative F was the language agreed to by the Advisory committee. Village, Campground and Day Use Area Beaches (DEIS page xix) Village Beaches ? I agree with Alternative C ORV Access ? For Oceanside I agree with Alternative C ? For Sound side I agree with Alternative F Interdunal Roads (DEIS page xx) Interdunal Roads ? I agree with Alternative C Interdunal Roads-Bodie Island District ? The DEIS is missing a required alternative in this section. There was an interdunal road that historically ran most of the way behind the primary dune between Ramp 1 and Oregon Inlet. I would like this historic road designated an ORV area and then only used as a bypass to maintain ORV access and avoid conflict with wildlife during nesting season and other sensitive times of year. Interdunal Road-Hatteras Island District ? I agree with Alternative F Interdunal Road-Ocracoke Island District ? I agree with Alternative F ORV Safety Closures (DEIS page xxi) ORV Safety Closures ? I agree with Alternative F Pedestrian Safety (DEIS page xxii) Pedestrian Safety ? I agree with Alternative A Administrative ORV Closures ? I agree with Alternative C. This "other" class of closures is confusing and will leave open issues of credibility and political influence for years to come. Temporary Emergency ORV Closure ? I agree with alternative C Permits (DEIS page xxiii) Permit Requirements ? I agree with Alternative C that an ORV permit should be required Permit Distribution ? I agree with Alternative C that permits should be available at permit issuing stations and online. Permit Issuance Requirements ? I agree with Alternative C that ORV owners must complete an education program either in person or on line and sign for their permits as described. Permit Types ? I agree with Alternative F that there should be both weekly (7 day) & annual (12 Month) permits that include a night driving component. Permit Number Limits ? I agree with alternative C that there should be no limit on ORV permits. ? I agree with the first bullet point exception of Alternative E that it is only common sense that there will be limits established for "park and stay" and SCV camping. Permit Fees ? I agree with Alternative F that that the permit fee would be based on a cost recovery program and that the fee for weekly ORV permits would be less than annual permits. Permits, Beach Parking & Vehicle Carrying Capacity (DEIS page xxiii) Permit Form (DEIS page xxiv) ? I agree with Alternative C that the ORV Permit would be affixed to vehicle in a manner approved by NPS. Permit Revocation (DEIS page xxiv) ? I agree that an ORV permit may be revoked for violations of regulations etc. Beach Parking (DEIS page xxiv) ? I agree with Alternative A that parking within routes should be allowed in any configuration as long as parked vehicles do not obstruct traffic. Vehicle Carrying Capacity (DEIS page xxiv) ? I disagree with all proposed Alternatives. ? I disagree that Alternative F represents the position of even close to a majority opinion of the Advisory Committee. ? I agree with Alternative C ORV Characteristics (DEIS page xxv) ORV Characteristic Requirements ? I agree with Alternative E Equipment Requirements ? I agree with Alternative C Tire Pressure ? I agree with Alternative C ORV Characteristics (DEIS page xxvi) Speed Limit ? I agree with Alternative C Essential Vehicles ? I agree with Alternative A Non ORV Areas ? I am unable to understand the Alternatives. I feel village areas must be designated ORV Areas and restricted by season. All other areas could then be treated as Alternative C Resource Education ? I agree with Alternative F ORV Characteristics (DEIS page xxv11) Temporary ORV Use ? I agree with Alternative C Parking Areas for Non ORV Use ? I agree with Alternative C Alternative Transportation ? I agree with Alternative A. I believe commercial transportation takes away from the remote and natural experience of the park. Bus service on state roads to the parking lots is acceptable but commercial boat or beach shuttle service would ruin my experience. ORV Characteristics (DEIS page xxv111) Camping and Nighttime Beach Use ? I agree with Alternative C. National Seashores are protected in some ways so that development and preservation of the natural beach experience is preserved. National Seashores are one of the few remaining places where self contained vehicle camping can responsibly be conducted. There is a culture and national past time that pre dates the Teddy Roosevelt years of popularizing this activity. I support the off season use of the campgrounds as a way to preserve this experience. Beach Fires ? I agree with Alternative A ORV Characteristics (DEIS page xxix) Pets ? I agree with Alternative F Horses ? I agree with Alternative A. Horses should be considered the same as a ORV. Science clearly state horses are more threatening to wildlife than and ORV. ORV Characteristics (DEIS page xxv) Commercial Fishing Vehicles ? I agree with Alternative B Periodic Review ? I agree with Alternative C Staffing & Management Measures ? I agree with Alternative E. Because of the very significant ties to the local economy and the importance of this area to members of the recreational fishing community, I feel it is justified to have a high staff budget in order to have the resources available to manage CAHA for coexistence of wild life and ORV Breeding Season Measures (DEIS page xxxi) Breeding Season Measures ? I can not comment on the alternatives as they are far too confusing in the manner that they are presented. I do not see an alternative based on Appendix G of the ESA. ? My suggestion for protection of breeding habitat during breeding season is to duplicate the methods used in the Cape Cod National Seashore. This is the most successful breeding area for PIPL and to not consider the exact methods used there seems wrong Non Breeding Season ? I can not comment on the alternatives as they are far too confusing in the manner that they are presented. I do not see an alternative based on Appendix G of the ESA. ? My suggestion for protection of breeding habitat during non breeding season is to duplicate the methods used in the Cape Cod National Seashore. This is the most successful breeding area for PIPL and to not consider the exact methods used there seems wrong Vegetation ? I agree with Alternative C

Once again, it is unfortunate the RFA did not have enough time to make a complete comment.

Correspondence:

We advocate the continuation of the Cape Hatteras National Seashore as a recreational area to be maintained for the non-destructive pleasure and use of the citizens and legal guests of the USA.

We also advocate the brief and finite closures of discrete (i.e. non-continuous) portions of beach and dunes for the nesting of endangered animals (e.g. birds and turtles).

We also advocate the closure to ORV the beaches that have been degraded by storm activities - until the beaches have been restored either naturally or mechanically.

We also advocate the closure to mechanical watercraft (e.g. Skidoo's) the waters adjacent to Cape Hatteras National Seashore.

We also advocate the protection of wetland areas in and around the Cape Hatteras National Seashore - because it is known that such illegal activities have routinely occurred - without consequence to the perpetrators - to allow for development.

We also advocate the hiring of additional personnel by the Parks service to patrol and document any and all restrictions promulgated - not just "birders" to look for piping plovers. The approach must be well-rounded and encourage discussion and cooperation with the visitors to this beautiful recreation area.

Thank you.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.

This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.

The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

- *Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
- * Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
- * Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: Dear Superintendent Murray,
As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. I understand that you are considering allowing Off Road Vehicles extended privileges for use of the Seashore. Furthermore, it is my understanding that all of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors.
Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Off Road Vehicles are loads of fun for the people who are driving them, not so much for those in the vicinity where they are being driven. They are noisy, they tear up the earth and do loads of damage to the areas where they are permitted. To even consider that their broad and unchecked use is about to get the ok for the Cape Hatteras National Seashore is disturbing.
Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
I personally worked in parks for seven years and I do understand the need for a mixture of uses for parklands, but please push forward the "environmentally preferred" Alternative D to the plan. These protections are important.

Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only

16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.

* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. Superintendent Murray, please protect this beautiful and vital area during a time when animals are getting short shrift around this overpopulated world, a world overpopulated with our selfish species.

This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.

I am not familiar with the situation at Cape Hatteras but am aware that ORV enthusiasts everywhere are inclined to overlook the interests of wildlife. Appropriate regulations therefore should be adopted and enforced.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.

This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.

The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.

* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.

* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
 In May 2005, my husband and I stayed a week at Cape Hatteras. We noticed that at an access point to the beach, the left side was roped off for wildlife protection and the right side allowed cars to drive on the sand. All the birds were clustered in the fenced area, with very few encountered on the part that was open to vehicles.
 Being from northwestern California, we are very familiar with the problems that plovers have successfully reproducing on beaches that allow vehicle access. Of course, our species is the Western Snowy Plover, while Cape Hatteras has Piping Plover, but the issues are the same. Letting vehicles drive on the beach not only directly affects reproduction by crushing plover eggs or chicks, it also flushes birds off the nests. Garbage thrown from vehicles attracts corvids, raccoons, or other predators to the area, raising the chance that they will find and eat eggs or chicks.
 Beach driving, especially during nesting season, is just not compatible with protecting threatened species, and that should be one of the highest responsibilities of the National Park Service. Do not allow entities like the Blue Ribbon Coalition to dictate how our public lands are managed. To watch birds was a major reason that we came all the way from California to visit the Outer Banks.
 Thank you for considering my comments.

 The Public has many places to go, wildlife have fewer and fewer each year. Please save areas for the critters...they have no say in this! This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.

To the above form letter provided by the wonderful National Audubon Society I would like to add: PLEASE LET US LEARN TO PRIORITIZE THE BIOSPHERE -- LET US PRESERVE AND PROTECT LANDSCAPES AND SEASCAPES AND ALL OF THEIR NON-HUMAN INHABITANTS. THEY DESPERATELY NEED PROTECTION AGAINST UNBRIDLED HUMAN GREED AND CRUELTY. THE PLANTS, THE TREES, THE ANIMALS OF ALL TYPES ARE THE BEAUTY OF THIS PLANET; HUMANITY IS THE NATURAL WORLD'S UNDOING.

This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me. We have more than enough vehicles on our roads, we don't need them on our beaches much less A National Park. Several National Parks have or are considering eliminating free auto access on roads in the parks because we are loving them to death. We need to keep them wild for our children and my grandchildren.

The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.

I have been coming to the Cape Hatteras National Seashore since 1950. I grew up with parents and friends who went there as often as possible to surf fish. Then as a young adult I became an avid birder and came to the seashore to fish and to bird.

I support limiting the access to the beach by vehicles during critical nesting periods.

Sincerely, Paula Wright 405 Monticello Dr Wilson NC 27893

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.

This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.

The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.

* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.

* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones. As we have seen the increase in habitat loss and degradation, we need to improve our responses as responsible beings and return and protect habitat for the animals, birds, and sea creatures that need it.

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.

* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.

* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.

This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.

The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

 I am a North Carolina native and someone who values our native wildlife and our national parks system. I believe that it is possible for wildlife and recreation to coexist at Cape Hatteras, but we must have a management plan that protects the voiceless in this issue: the birds and sea turtles that make our beaches such vital places. This is our responsibility as stewards of our national parks.
 This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
 The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.

If you don't preserve the beauty of this beach, which includes the dunes and ALL the wildlife, then you won't have any tourists here anyway. If people would have been respectful of this from the beginning none of this would have ever happened. This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.

The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

In light of the environmental issues in the Gulf which are a result of the oil rig explosion, it is especially important that we protect wildlife elsewhere. Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: Dear Superintendent Murray, I would like to encourage you to read the position statement put out by the OBPA. It is only 77 pages and much easier to read than the "beast," the 810 page DEIS. In my opinion, it is more responsive to the needs of all parties and sectors involved. I believe that reasonable protection is available without the prohibition of access. This is not an ORV issue though the SELC tries to parade it as such. I would have sent you a copy of the OBPA position statement but I feel that you already have it. I have been self-employed here on Hatteras Island for 11 seasons. The consent decree has changed my art business in so many ways. I no longer have business in springtime. May I suggest that instead of using useless economic models that incorporate the northern beaches, why not use real data that came from 2 full years of business conducted under the consent decree. Those are REAL numbers. The consent decree took a huge chunk out of my business and the businesses around me. Alternative F is even more stringent which makes it easy to predict that business will get even worse. The Park Service will get a better picture by using real Hatteras data than trying to lump the northern beaches into the equation. I pray that you have a heart in this situation. The American public has already had 2 large, unreasonable and hard-to-read documents thrust on them in recent time - one was the stimulus package and the other is the health care package. Please, Americans need government to hear us and understand our concerns. Please, Mr. Murray, don't sign our death warrant. I don't say this to be mean but to emphasize that the DEIS is that critical to those of us who call Hatteras our home.

Correspondence: Hello, my name is Lee Cannady. I currently live away from the Outer Banks, however, I spent the last five years of my life living and working in Cape Hatteras, NC. I was a professional sport fishing mate in Hatteras for five years.
The life blood of the economy on the Outer Banks is beach access for pedestrians and off-road vehicles. I can't emphasize the importance of how valuable a public beach access is on the Outer Banks. For instance, there are no shopping malls, amusement parks, night clubs/nightlife, or golf courses for vacationers to have as sources of entertainment. The economy of Hatteras Island is 100% based on beach access. If you close the beaches or limit access in any way, you will have a catastrophic effect on the local economy. Good, God-loving, tax-paying American citizens will suffer, lose their businesses, and be forced to move to a new location. THE CLOSING OF BEACHES ON HATTERAS ISLAND WILL TURN CAPE HATTERAS INTO A GHOST TOWN!
In regards to the DEIS, none of the plans are really economically feasible. Plan F is absolutely the WORST, and without a doubt will destroy the economy.
I do agree that a management plan be created, implemented, and enforced. I could type thousands of words explaining how I feel, however, I think a management plan based on the agenda of the OBPA would be fair to all.
The beaches need to have year-round access, especially to Buxton Point. If you are a Muslim, you have to go to Mecca once in your lifetime, if you are a surf fisherman, you have to fish Buxton Point. Night driving and camp fires need to be permitted on the beaches. The stacking or double parking of vehicles need to be permitted in areas of popular fishing spots.
Obviously, this goes without saying, that indigenous species of fauna and flora need to be managed, protected, and preserved. However, organizations such as the Audubon society are exaggerating Man's impact to the population of plovers on Hatteras Island. They are doing this to push their own agenda. 95% of the people in this organization have never even visited Hatteras Island! They have NO clue what is really going on. They invasion rednecks and monster four-wheel drive trucks jumping and racing over the sand dunes, destroying baby birds. This is not what happens. Responsible people with off-road vehicles drive over designated access ramps to the area of beach, just above the high tide line down to the low tide line. No one goes into the dunes, you can't even walk in the dunes. If members of the Audubon society would come and visit Hatteras Island, they would realize this. It is not Man's responsible use of the beaches on Hatteras Island that is causing the decreasing number of piping plovers. The dinosaurs all went extinct before Man ever existed on this Earth. Since the beginning of time, species have come and gone.
I could go on, but I think I have communicated my point.
Sincerely,
Lee and Lindsey Cannady 919-696-8918

Correspondence: Mike Murray, Superintendent
 Cape Hatteras National Seashore Recreational Area
 1401 National Park Drive
 Manteo, NC 27954

Dear Superintendent Murray,

Please accept this letter as my comment on the ORV DEIS before you at this time.

After reviewing the National Park Service DEIS I must disagree with any of the six alternatives within the document.

I have, however, reviewed the 77 page Coalition for Beach Access Position Statement signed by several groups that were a part of the negotiated rule making process and it by far succeeds in furnishing the best visitor experience while maintaining the needs of protecting the fragile resources.

Please consider all aspects of this alternative and put people back into the management of Cape Hatteras National Seashore.

Although our permanent residence is in Virginia, we also have a home in Rodanthe, NC. in which we like to vacation. When we vacation we like to include our dog. We respect and love the natural environment of the Outer Banks, and wish to continue to enjoy all that it offers.

Thank You, Bob Gruendl 113 Crescent Drive Williamsburg, Va 23188

Correspondence: I am 15 years old and I have spent every summer and Easter down in Avon at my grandma's beach house. We go every year as soon as school lets out with all 21 cousins, as well as all the aunts for "Mom's week". It is always the highlight of my summer to spend time on the beach with my family. We also go down just as an immediate family later in the summer to relax. Even when we go down during my spring break for Easter when it is too cold for bathing suits or swimming, I always love being able to sit on the beach or on the pier right near the house and watch the waves or look for shells. Please don't take this away from me and all the other beach-goers at the Avon pier for a plover. It is ridiculous that you would close down the beach just because one ranger claimed they saw a bird. A bird which, I might add, is not even endangered, it is only on the watch list. The Avon pier is the outer reaches of their natural habitat, so how do you know that they are living there if you see one, and not just stopping on the way to their real home? Are you really going to sacrifice all the local shops and businesses that people have made their lives on for years with for a tiny bird? You've already taken away the Point and virtually every other major fishing area near Avon. Frankly, I think it is more than a coincidence that everywhere the fishermen go, someone suddenly sees a plover. Why don't you just shut down the entire Outerbanks while you're at it? Then you can really have your way and no people will be allowed to enjoy any of the beautiful area. I think this entire situation is ridiculous, and I hope you seriously take the opinions of the people writing in into consideration, because you will find that you are alone in your want to shut down the beaches for a tiny bird. DONT CHOOSE A BIRD OVER THE PEOPLE.

Correspondence: Dear Sirs, I do agree that limiting predators of endangered species should be permitted, but that clearing vegetation allows the endangered birds more nesting areas and helps eliminate the areas for predators to multiply. I disagree with the enlarged buffer areas for nesting as this is overkill and does not promote the nesting of endangered species. (the Wildlife Commission has made a statement to this fact) I disagree with NPS on the use of the various uninhabited islands. The uninhabited islands would be great for nesting of the endangered species because of the lack of predators and the isolation of the islands in Pamlico Sound. I agree that the tampering of nests should be allowed by authorized personnel, to promote and protect the nests as this would help increase their population. This is done with such nests as alligators and other species and has only great effects! I agree that parking should be allowed in the south point wetlands if we are not allowed to use orvs to access these areas. I think a better plan can be used to allow orv travel.

Correspondence: The "...prohibition of pets in the Seashore during bird breeding season..." is of grave concern to me. If there is a ban, meaning No pets in the public areas- beaches, campgrounds, sound front, foot trails, park maintained roads - from March 15 through July 31, I will NOT be returning to the area. My dogs are part of my family and are on leash. Four Couples travel together, renting for Ocean Front Houses for 7 to 10 days each year. Next year will be our 5th year. However, we will be canceling our reservation if this ban takes place. It is true that we only spent about \$8,500 in May, but I do believe the economic impact will be devastating to the area. Think of the birds, the turtles and the PEOPLE involved in this decision.

According to your own statistics, only 3% of the problem is caused human interference. Yes, that % is significant, but the cats running around the area may account for half of that number.

Sea Turtles have had their nests relocated in other states with great success.

A balanced approach must include people, economics and wild life. Presently, I believe you are going in the wrong direction which will have a GREAT price tag now and a greater one in years to come.

Correspondence: It is a well known fact that the Piping Plover is at the southern most extent of its breeding range at the Hatteras Seashore (see the Peterson Field Guide to Birds).

Please explain the rationale for the extensive disruptive measures being taken to protect nesting Plovers when the Audubon society's own web page (see: <http://www.audubon.org/news/pressroom/bacc/pdfs/Birds%20and%20Climate%20Report.pdf>)

report on the effects of global warming concluded that 46% of shore bird species had moved northward in just the previous year.

Based on this Audubon Society data, it is highly likely that within the first five year period Piping Plovers will have abandoned the outer banks regardless of any human efforts to protect them.

Correspondence:	<p>The Park Service has a proud history. However the handling of the issues related to the closing of the beaches in Cape Hatteras have been short sighted and gravely unfair to the local population of "PEOPLE" and visitors to the Outer Banks.</p> <p>Preserve natural resources yes, but not close beaches that have historically been open and free. It truly is a disgrace, considering that there are plenty of spaces for this non endangered bird to breed.</p> <p>The Park Service has not upheld its original agreement with the local people who sold the land. It is not too late to get back on track. Someone with a brain at the Park Service should give it a try. Shame on you if you don't. Shame. Shame. So short sighted especially in today's economy.</p> <p>I remember when the Park Service people were respected and liked. I never hear anything positive anymore about the Park Service when visiting the Hatteras area, just that the Service passes out tickets and acts draconian. All this because the service failed to create a Master Plan for the Beaches, allowing themselves to be sued. Perhaps the service is OK with being sued, so the beaches could be closed.</p> <p>It is true that the beaches can't be turned into a parking lot, but be a bit more giving in finding middle ground. Remember it is the Peoples Beach, not yours. Why not start working more with the businesses and original families in Hatteras instead of having a private agenda with the Audubon. The locals love nature "too" and have a love and respect for the island that goes back centuries.</p> <p>Good Luck to all involved.</p>

Correspondence:	<p>I do not see an analysis of the likely impacts of climate change. What is the affect of warmer coastal temperatures on the nesting range of the shore birds? Would the change in climate affect not only nesting but feeding habitat? Since Hatteras Island is the most southern point of the piping plover's nesting range would the continued increase in coastal temperatures, associated with climate change, naturally drive the nesting areas further north? If so the plan would be meaningless and obsolete. A study by the Audubon society has noted that significant numbers (46%) of shorebirds have been moving north as a result of global warming. I refer you to: http://www.audubon.org/news/pressroom/bacc/pdfs/Birds%20and%20Climate%20Report.pdf</p>

Correspondence:	<p>My comments concern the DEIS of the Off-Road Vehicle Management Plan prepared by the National Park Service (NPS) for the Cape Hatteras National Seashore Recreation Area. Page 1: I agree with your statement "ORVs have long served as a primary form of access for many portions of the beach in the seashore, and continue to be the most practical means of access and parking for many visitors."</p> <p>Pedestrian only areas discriminate against individuals with limited mobility due to age or physical impairments, families with small children, and those wishing to engage in activities requiring recreational equipment (boogie boards, beach umbrellas, beach chairs, coolers, fishing rods and tackle, etc). However, I think it woefully wrong headed to deny pedestrian access to our beaches. Page 1: I agree with your statement "ORVs have long served as a primary form of access for many portions of the beach in the seashore, and continue to be the most practical means of access and parking for many visitors."</p> <p>However, pedestrian only areas discriminate against individuals with limited mobility due to age or physical impairments, families with small children, and those wishing to engage in activities requiring recreational equipment (boogie boards, beach umbrellas, beach chairs, coolers, fishing rods and tackle, etc)) Page 121 ? 127. I strongly disagree with the huge buffers as presented. We must allow for pass-thru corridors. The beach is linear with the ocean buffering on one side and the dune line on the other. For example - If you pinch off access on one side of a 4 mile linear beach and pinch off access on the other side of the 4 mile section of beach with no corridor, then you effectively have closed off all 4 miles of the beach because you CAN'T get there. The proposed bird buffers are too large, blocking access to the interior sections from the two "buffered" ends.</p> <p>I propose ORV pass-thru only corridors and to use breeding / nesting buffer distances to establish ORV pass through only corridors to ensure beach access in a way that does not hinder resource protection. I believe pass through corridors should be maintained for pedestrians and ORVs in all areas of the Cape Hatteras National Seashore Recreational Area throughout the entire breeding and nesting season. Corridors are vital to providing access in a way that does not hinder resource protection.</p> <p>Piping Plover unfledged chicks buffer should move with the brood as it relocates to reliable food source, not expanded.</p> <p>The 1,000 meter distance for the piping plover is way too large and not based upon peer reviewed science. A more rational distance would be 200 meters per other sites in the nation for the piping plover. Ample scientific evidence and precedent exists to support a 200 meter buffer.</p> <p>Buffers for other species, including American Oystercatchers, Least Terns and Colonial Waterbirds must also be changed. An effective 30 meter buffer should be established for these species rather than the 300 meter closure outlined in the DEIS.</p> <p>NON-ENDANGERED BIRDS should not have same protection as if endangered. Not allowing ORV access is paramount to denying the public access to these beaches.</p> <p>7) Page 468: I disagree with the limitations imposed on pedestrian and ORVs. Corridors or bypasses should be provided thru, around or below high tide line in all SMAs during entire breeding season to maintain access.</p> <p>8) Page 124: I strongly disagree with the NPS slant of providing for over protection of resource management over that of the public's right to access the beaches. Pro-active initiatives include: Vegetation Management, Habitat Management, Enhanced Predator Management, Colonial Water bird social attraction, Piping Plover check fledge rate, Piping plover chick buffer distance, and pass-through buffers during the incubation period. Opportunities to implement less restrictive closures as a result of the above initiatives should be considered more frequently than the 5-year periodic review process identified in the DEIS.</p> <p>9) I disagree with the NPS Resource Management Pedestrian / ORV Closure Policies. These policies address the least significant factors affecting nest survival with little chance to have more than negligible impact. For example: the AMOY Nest Failures are predominately due to non-human events. Using your own stats, the mammalian predation is 54%, Storm / Lunar Tides: 29%, Nest Abandonment: 6%, Avian Predation: 5%, and Ghost Crab</p>					

Predation: 3%,
Conclusion:

Please, incorporate access corridors through any SMA so we can get to the open beach beyond. Incorporate the birds into the count that nest on the spoil islands. Base your buffer zones on peer reviewed science and scale them back to more reasonable distances as discussed.

I am hugely in favor of protecting the environment and making the hard choices to protect our natural resources. I agree that the park should be a more hospitable environment for all species that depend upon its resources. I pity the poor (Piping Plover) in the Cape Hatteras National Seashore that is on the southernmost fringe area of its breeding ground. That goes for the loggerhead turtle that is in its northernmost breeding area. Let's scale back the buffer zones. You can always increase at a later date. The public who visits our Cape Hatteras Seashore have not always understood how to protect the resources. The fishermen who work here have not always welcomed protection of the resource & they have watched while doctors and lawyers have sold fish on their docks. I have seen abhorrent abuses of our resources in the park and in the private sector. We have about 8 trillion gallons of oil maybe headed our way. Let's save some of our resources for the big issues. And work a little harder at improving the habitat both inside and outside the park. If USPS leans way over the line on over protection and not enough on the public's right to enjoy the beaches of the National Seashore. The proper balance is an elusive goal and it seems rather foolish to have to search a map on the internet before going to the beach?! Let's make the DEIS clear and accessible and we will find proper balance of reasonable resource protection and access to the beaches of the National Park are restored so that all of us thrive. Thank you, Vicky Barris P.O. 273 Buxton, NC 27920

Correspondence: We have not read the multi-hundred page documents concerning beach access in the Cape Hatteras National Seashore. However, from what we have read or heard in the media, it appears that a vocal minority are trying to impose their wills on the majority of us who love and/or depend on access to these beaches for our livelihood. We hope that somewhere between the 'howling extremes' on either side a solution can be found that will give reasonable protection to the wildlife AND allow vehicle and pedestrian access to the beaches. After all, the National Seashore belongs to all of us, not just to the birds and the Southern Environmental Law Council. We write as concerned Citizens of the United States, who have enjoyed this Seashore for forty-plus years and who now own property adjoining the Park in Hatteras Village. Daniel and Rita Seale

Correspondence: Per article in the Virginian Pilot May 9,2010 "Numerous shorebirds in Cape Hatteras National Seashore are given higher levels of protection in a proposed off road vehicle management plan than what the law ever intended the birds to have, a state wildlife official said." "State listed species of concern, such as the American Oystercatcher do not require the extensive buffers and beach closures mandated for federally listed species such as the Piping Plover, said Gordon Meyers, the executive director of the North Carolina Wildlife Resources Commission". Meyers said that's beyond the intent of the state law; the state designation is suppose to be more of a call to action for a species. This seems to show me that the NPS plan was devised with little regard to existing regulations--Why would they do that? It pretty much creates some doubt regarding other sections and "facts" that are in alternative F-- I find this disturbing--This is too important an issue to be decided with faulty information. Thank You, Neil Swartz Avon NC

Correspondence: DEIS, dated March 2010, Comments
 1. I disagree with the distances of 1000 meters for the Piping Plover, a distance of 300 meters for the American Oyster Catcher (AMOY) and Wilson's Petrel, and a distance of 300 meters for the collective species of Colonial Waterbirds when the nests contain unfledged chicks. I think all distances stated in the DEIS need to be reevaluated and supported by science, not a special interest group's "spin" in support of their position. No other Seashore has implemented such radical closures using these distances, and these distances are not supported by scientific findings. Only the Piping Plover is listed as Endangered, and listing other bird species is counter to the Executive Order that requires ORV plans on Federal Lands. The Cape Hatteras National Seashore Recreational Area (CHNSRA) was created in the mid 1900s to provide a National Seashore environment for recreational purposes of the citizens and foreign visitors to the United States. The current DEIS plan for closure distances above indicate an attempt to completely close the beaches to human uses. Furthermore, it closes Bodie Island Spit, Cape Hatteras Point, Hatteras Spit (south end of Hatteras Island), North End of Ocracoke (Hatteras Inlet), and the South Point / Inlet of Ocracoke Island to ORV and Pedestrian (including pets) activity to these high value areas. These areas are prime fishing, shelling, swimming, surfing, and other water sports for thousands of people on a daily basis during the periods of time identified to be closed. That is, the prime Visitor season that the local economy depends upon to make its year's profits. Buffers in the Alternatives for piping plover are extreme and unnecessary. With the immense NPS monitoring given to these few nesting birds, much smaller, judgment based, flexible buffers could and should be put in place upon hatching to afford chick survival while at the same time allowing reasonable public access. Only on very rare occasions have chicks been observed to travel 1000 meters, and when that has happened they were moving to a food source where they stayed until fledging, thus requiring a much smaller buffer. Several published studies show that on average, chicks move about 200 meters. There has been no scientific evidence submitted during the Regulation - Negotiation (Reg-Neg) process discussions held over the last few years. It seems to me that the real goal of the environmental groups is to close the beaches altogether. The Federal Government guaranteed that these beaches are being established for the purposes of open beaches for residents and visitors alike. This DEIS Plan negates that promise, and has far reaching

consequences.

Reducing these closures to 200 meters and 100 meters seems adequate for the protection of the bird populations in these areas. Whenever these distances reach the high tide line, a corridor should be established allowing ORV access to the Spits and Inlets identified above.

2: I disagree that the bird population numbers are not included in the areas of the villages, the dredge islands around the inlets, and other sand bars along the Pamlico Sound shoreline. This is irresponsible for not providing a true and complete picture of the bird population / reproductive rates of the bird populations. This technique skews the numbers when presented as a percentage of the population or total numbers of the species' population.

3: Economic Impacts to Hatteras and Ocracoke Island businesses are excessive compared to the benefits and the high cost of implementing and enforcing these rules and regulations. Businesses have reported 25% cash flow losses, Dare County tax collections are down significantly, unemployment has soared, and the bird population remains relatively unchanged in the areas where the birds are being counted. I rent my property in Avon during the Visitor season. Last year, I had to drop the weekly rental charges by 20%, and still had a 15% drop in occupancy. I can not imagine the losses incurred by long time, established, successful businesses; and I am referring to everything from motels/cottages, restaurants, tackle shops, grocery stores, gas stations, etc., to art and craft shops, specialty shops, etc.

4: Negotiated Rulemaking Committee (NRC) Recommendations: In the interview stage to select members of the Negotiated Rulemaking Committee (NRC), the public was assured that the National Park Service (NPS) would give us a level playing field. The public and the interviewees were assured that the members would be able to think out of the box, to make adjustments to the interim plan, possibly finding solutions that would make the final ORV plan even less stringent than the interim plan.

As an Avon Property owner and interested audience of the Negotiated Rulemaking Committee that addressed this problem, I am astounded and disappointed in the direction the NPS took the alternatives shown in the DEIS. I am particularly disturbed by statements and comments that many of the parts of the NPS preferred Alternative F came from the Negotiated Rulemaking Committee. When three committee members who agreed in advance not to litigate, they brought suit against the NPS that resulted in the highly restrictive Consent Decree. Many of the members of this Committee on the access side wanted to terminate our good faith participation at that time, but were advised and encouraged by their support groups to not be quitters and stay the course, which they did. Some of the members of the panel were given legal advice during the law suit and signed on to the consent decree to avoid the judge shutting the entire beach until the new plan was in place which has been several years in the making counting the Interim Plan that was in effect at the time of the formation of the Reg-Neg committee.

Some members of the access group on the NRC went well beyond reasonable negotiation in a last ditch alternative that was an attempt to test if the environmental side was trying to come close to negotiating. However, even with NPS, USFW, and all state agencies on board with the last ditch, test proposal, the environmental groups would come to no consensus?they refused to negotiate, as they did from the very beginning of the 15 month process. I would never have agreed to several items in that plan including the buffer distances of up to 1000 meters and the closing of Ramp 27-30 year round. The Coalition for Beach Access has put together a very effective and factual based plan that will work well to protect the resources of the seashore.

5: Buffer Distances for Birds are More Restrictive than in Other National Seashores:

Piping Plovers: Cape Hatteras National Seashore (CHNS) is on the edge of the territory these birds frequent to nest and winter. CHNS is known for its turbulent weather that accounts for poor survival of Plovers on this seashore. Predators are the primary reason the success rate is poor. NPS has been very ineffective in the management of the nesting areas for many years making them predator friendly and bird unfriendly. Had these areas been maintained or included in the alternatives of management in the future, Oregon Inlet, Cape Point, both spits of Hatteras Inlet and South point of Ocracoke could have been made bird paradises that would have helped the success of nest survival. However, that out of the box NRC suggestion, supported by both access and environmental groups, was listed in the DEIS as being not suitable.

Experts speaking at the NRC meetings stated that the Piping Plover population has been rebounding in most all other locations, but population growth has not happened at CHNS. Vehicles are not shown in science to be the cause of their struggle to flourish in this seashore; storms and predations have been the problem. The culling (killing) of the predators that do not pose a threat to humans, their property, or stock will not resolve the problem. In fact, I am appalled that this course of action was even taken by the NPS. Modifying the habitat is a much more suitable solution. Mother Nature will just fill the void if animals are removed, that is a self regulating fact of nature.

AMOYS: AMOYS are on a North Carolina list of concern. By being placed on this list, North Carolina is monitoring and counting birds in a very limited fashion, but doing otherwise nothing to protect them. USFW does not provide enclosures in Pea Island Wildlife Refuge until an egg is laid. The management procedure is to "approach AMOY until it flushes then back away 15 yards for the closure." No more than this procedure should be used in the NPS area, keeping in mind that this is a recreational area first and a resource area second. If you state that you have only the Endanger Species Act (ESA) to go by for protecting a bird that is only on a list of concern in North Carolina, then either give it no protection or have regulations that are similar to the state procedures.

Colonial Waterbirds: The management procedures should be the same as the AMOY protection, if any protection is warranted.

6: Threatened and Endangered Sea Turtles: I refer you to the 210 page document being entered into these comments by OBPA, Larry Hardham and Bob Davis (<http://www.obpa-nc.org/turtles/TurtleMgmtProgram.pdf>) for what is the real science of turtles on this seashore. This document should and will be submitted for open, non-biased, scientific review. It holds the facts of turtle management needs on this seashore. The buffers and requirements of the present turtle management program are profoundly flawed and must be addresses. If only the management were similar to that of the USFW buffers and enclosures of Pea Island the alternatives would be different than those presented in the DEIS. We have 70+/- miles of seashore on which turtles nest or make false crawls. In the most turtle active years we have had approximately 210 totals for the year. If you divide the 70 miles into the 210 crawls and nests you will have 3 nests or crawls per mile in the May 1to September 15 window with no night driving. And we must not forget that much of the beach is closed during this period for village closures and bird closures where the turtles do still nest and crawl. With these statistics, and nowhere in any other data, one cannot find facts or suggestions that vehicles have had large encounters with turtles or have caused deaths of turtles. Nowhere does the data indicate or suggest that any nighttime closure is warranted.

Your alternatives want nests moved only for imminent danger to storms, but make no attempt to enhance or preserve recreational opportunities in high use areas in the recreational seashore. You are again misusing resource protection at the expense of recreational needs.

Nest enclosures should be no more than 10x10 and the exit to the ocean no more than 18 inches wide. They should be set up in the evening and removed in the morning as done in the USFW Pea Island Refuge. Which begs the question: Why is it different in the DEIS than what is done on Pea Island?

Excessive enclosures are not helping the turtles. They only reduce visitor experiences.

7: Year Round Closures: Year round closures in a dynamic weather related seashore is unacceptable and wrong. If the spits and Cape Point were made to be "bird" friendly and not predator friendly there would be no need for the beach front closures anywhere on the seashore. Poor past management practice should not be accepted in this plan as unfixable. Seasonal village closures, safety closures, the accepted closure of the beach in front of the light house and jetties should be the only closures for those wanting pedestrian only areas. While no one in the access coalition wants year round beach access for vehicle in front of the villages, I do believe that those areas should be open in the off season from Sept. 15 to May 15, as has been the practice until this time. Political closures have been in place in Frisco and Hatteras for several years, essentially privatizing those ocean fronts almost entirely for the owners of those cottages. This is wrong and in my eyes illegal. One reason for the establishment of the CHNSRA was to prevent the privatizing of the beach in front of beachfront property that is seen so often in the Northeast and Middle United States.

8: Socioeconomic Impact is Incomplete: NPS is using incomplete data and analysis to reach economic impact conclusions in the DEIS. Due to a hasty, underfunded, and limited (if any) data collection and analysis process, there is no completed and peer reviewed economic analysis. This makes the DEIS seriously flawed and an illegal, if not missing, component of the DEIS. The Cost / Benefit ratio needs to be determined and balanced against the intent and survival of the residents and visitors to the CHNSRA and its designated purposes (by the Federal Government in the 1930s and again in the 1950s).

9: Pets: Your preferred alternative has disallowed pets within the entire seashore from March 15 until July 31. This is unbelievable, and offers proof that this document is being unduly influenced by special interest groups. We all know that dogs will catch birds, but they are on a leash, and most people comply with that rule. We all agree that pets should be on a leash on the beach, but to punish the people who obey the leash law by prohibiting all pets is unacceptable. Nowhere has anyone from NPS checked with the rental agencies in the villages within the seashore to see the amount of increase in the number of "pet friendly" houses over the last few years. This new regulation prohibiting pets, completely unrelated to ORV management, will result in families staying away.

10: The DEIS is Flawed and Illegal: The NPS 6 alternatives begin with Alternative A ? No Action plan and Alternative B ? No action plan. Both of these plans were the result of actions. Alternative A was the result of the interim plan being put in place and Alternative B was put in place by the

consent decree. The DEIS should have had an Alternative No Action plan that reflected the regulations being enforced in 2004. These plans were adopted from the 1978 draft plan with updates through the Superintendent's compendiums. I contend that the entire DEIS is flawed and illegal.

Correspondence: My husband and I found the Outer Banks in 1983 and have been coming to Hatteras every year 2 -3 times a summer since that time even buying our own property in order to become a small part of the community. Our extended family has also enjoyed not only the beaches but the community and fellowship of the island and the respect and caring this community has given to us.
It seems that there should be some alternative to entirely closing the shoreline to human and animal usage except those which the Audubon Society deem to somehow be on a higher plain than the welfare of the residents of the villages of Hatteras Island and the revenue that the tourists bring to these communities. I do not say they are of no importance, they are but it would seem that with the brain power that these huge agencies have they could come up with a feasible way to merge both the community and the wildlife and make it a win/win situation. If beach driving is to be limited, so be it. If dogs need to be leashed and monitored so be it. If you need to limit the areas to be fished and walked that is understandable but NO is a stab in the heart to those whose livelihoods and mere existence depends on the working of the economy of the Outer Banks.
I would surly hate to think that the Federal Government would take the right to enjoy our United States shorelines to its people and give the rights to offshore gas drilling instead which if you may have noticed will probably effect more wildlife than any dog or person walking on a beach. My dismay is that this tragedy will cause you to stand even firmer in your resolve to execute this huge and wordy legislation without thought to these communities and people. They are worth saving too.

Correspondence: Dear Mr. Murray,
Thank you for the chance to comment on the upcoming ORV management plan. My name is Liz Hamilton. I've recently moved here from Virginia Beach, leaving my job at Morgan Stanley, and taking a new job here in the village of Waves at REAL Watersports. I am an active kite-boarder, surfer, sailor, wake-boarder, and stand up paddle-boarder. I value access to our beaches so that I can practice all of these sports on a daily basis. For me, my main concern deals with open access to the water, both through my friends ORV or by myself by foot. Our main ocean access for the Tri-Village area is Ramp 23, and this was just closed for the majority of the summer season.
In reading the DEIS and also watching the Reg Neg meetings on TV, a topic that repeatedly came up was: why aren't birds counted on the Pamlico Sound Dredge Islands and in Pea Island Wildlife Refuge? It has been proven that conditions for bird nesting and reproduction have become unfavorable at Cape Point and many other areas due to vegetation growing and taking over the majority of the land's surface. Ironically, this vegetation has grown at the same time ORV's have been accessing Cape Point. The spread of this vegetation has caused the birds to seek out other foraging and nesting areas, namely the dredge islands listed above. Throughout the Reg Neg process, pro-access speakers clearly showed the biggest threat to the birds as being storm and tidal over wash as well as predation. Now, because a Least Tern has decided to land near Ramp 23, the main access for the three villages that we live in has been closed for the summer season. These villages were not developed to exist without a public ORV access to the beach and we are already seeing decreased visitor satisfaction as well as visitor/resident conflict due to the ramp closure.
My final question is regarding the buffers listed on pages 121-130 in the DEIS. If these birds require such substantial buffered distances between themselves and ORVs, why are Least Terns returning to Ramp 23 when it is the most trafficked ramp in a 30 mile stretch of coastline? This same question would apply as to why Piping Plovers have been spotted nesting on the roof of the Nags Head mall. Throughout the Reg Neg process, the pro access committee looked for a way to have a win-win result where both human and environmental access issues were addressed. I feel that this plan only addresses the environmental issues. Furthermore, after following the process and reading this book, I do not feel these issues are substantiated by proven peer review science.
I'd like to thank you again for the opportunity to make a comment on the ORV management plan. For further comments or questions, please feel free to reach me at the following address: Ehami004@odu.edu
Sincerely,
Elizabeth W. Hamilton

Correspondence: Closing the beaches of Hatteras Island to off road vehicles not only effects seasonal tourists, it effects the local economy, and the local people who live on the Hatteras Island.
As a year round resident of Hatteras Island I feel it is very important to keep our beaches open. I feel that our tourist industry could be deeply effected by beach closures. Many times, my husband and I go to sit on the beach through out the year. During the summer months there are many other four wheel drive vehicles on the beach. Some of those vehicles are local, but many are from out of state. One of the things that attracts tourists to Hatteras Island is the fact that people are permitted to drive on the beach. They not only drive on the beach for enjoyment, but they also drive on the beach to find favorite fishing spots and favorite places to sit on the beach. It is very nice to be able to pull up to the oceans edge, take the beach chairs out of the trunk and have a picnic, or unload the fishing tackle and see if you can get a fish to nibble. I could not imagine Hatteras Island with out this special feature. Not being able to access the beach in this way could encourage tourists to vacation elsewhere.
Beach closures which would effect the tourist industry could also effect local economy. Both my husband and I work what we would consider, good local jobs. Unfortunately, it does not provide enough for our family of four to live on. I need to supplement my full time income with part time work. I clean cottages during the summer and I also make wedding cakes for paying customers who are usually from out of state. The beach closures affect on the local economy, would have a huge impact. Local people would not have cottages to clean, the grocery stores would have significantly less customers to sell too, the cottage owners would not get their rental fees which could in turn cause foreclosures on summer homes. Personally, I would not be able to afford my bills. I would not be able to continue to pay the college tuition for my son, or for the braces my daughter has in her mouth. Not only would closing the beaches to off road vehicles effect the tourist industry, and the local economy, it would effect local people as well. For generation after generation, local islanders have been fishing from the beaches of Hatteras Island. They have made their livings by beach hauling and launching dories from the beach. In order to fish in this manner, the fishermen need to be able to drive on the beach to launch their boats. If you take away that right, you take away a piece of Hatteras Island History.
I realize that beach closure to off road vehicles is in the name of preservation of endangered species. But there must be a happy medium. I have seen the number of bird sightings on the NPS website. I find it difficult to believe that we are going to close down miles of beach, effect the tourist industry,

effect the local Hatteras Island Economy, and effect the local people for less then a dozen bird nest sightings. I hope that you will consider these points in your final decision. Sincerely, Donna L. Tokazowski Hatteras N.C.

There are many people who like to use loud motors to perform what they want to do. If people want to be on the beach or in the woods, they should not use motors because we have wild animals and birds and environmental loving people there. Many people like me suffer from Hyperacusis (allergy to loud noises, when I'm walking in a park and a loud motor comes by, I get upset, not only my ears but I lose my balance, I think maybe it affects our wild animals also. Tell people using them to switch to horses, they are so much better and now they are all wearing diapers so there is no reason not to allow horses everywhere!!! Rita Sammons

Correspondence:

Date: May 11, 2010 To: National Park Service From: Glenn Moser, Owner of vacation rental home in Avon, NC Subject: DEIS Off-Road Vehicle Management Plan Comments My comments concern the DEIS of the Off-Road Vehicle Management Plan prepared by the National Park Service (NPS) for the Cape Hatteras National Seashore Recreation Area.

1) Page 201: I disagree with the NPS statement: "Even with resource closures in place, protected species are still at risk [from pedestrians and ORVs]." No Piping Plover deaths have been attributed to ORVs. ORV violations continue to decrease as signage and education improve. Pedestrian violations are much more significant than ORV violations. It seems to me that any transgressions into protected area are the result of lack of NPS manpower and enforcement than the public purposely and willfully violating out of bounds areas. 2) Page xxiv: I question the statement of as per the DEIS: "Carrying capacity would be a 'peak use limit' determined for all areas based on the linear feet of beachfront?" If you close off huge sections of the beach, you force more people into smaller areas, potentially resulting in more resource impairment and diminished visitor experience. 3) Page six and page 23: I am against having two different closures rules pertaining to the North facing beaches (North side) and the South facing beaches (South side) as per the grid outlined in Alternative "F". I disagree with the NPS proposal to close the beaches in villages of Frisco, Hatteras and Ocracoke Villages to ORV access longer than the traditional May 15 to September 15 period for the Northern beaches, even though seasonal visitor statistics are similar for all villages. Please, make them the same: May 15 -> September 15. 4) Page 1: I agree with your statement "ORVs have long served as a primary form of access for many portions of the beach in the seashore, and continue to be the most practical means of access and parking for many visitors."

However, pedestrian only areas discriminate against individuals with limited mobility due to age or physical impairments, families with small children, and those wishing to engage in activities requiring recreational equipment (boogie boards, beach umbrellas, beach chairs, coolers, fishing rods and tackle, etc) 5) Page 53: I disagree with the special use permit proposed guidelines. It is impractical to allow the transportation of disabled visitors to the village beaches and then require the vehicle to be returned to the street or parking area. This necessitates the disabled person to have a driver to drop him (or her) off, then drive to a parking area, then trudge a long distance to the site of the drop off, then trudge the long distance through the sand back to get the vehicle. Suppose the handicap person wants to go to the beach, is capable of driving himself, yet cannot find another person to go with him? Does he now not go to the beach? This rule creates unnecessary hardships and risks in the event of an emergency as well. 6) Page 121 ? 127. I strongly disagree with the buffers as presented. We must allow for pass-thru corridors. The beach is linear with the ocean buffering on one side and the dune line on the other. For example - If you pinch off access on one side of a 4 mile linear beach and pinch off access on the other side of the 4 mile section of beach with no corridor, then you effectively have closed off all 4 miles of the beach because you CAN'T get there. The proposed bird buffers are too large, blocking access to the interior sections from the two "buffered" ends. I propose ORV pass-thru only corridors and to use breeding / nesting buffer distances to establish ORV pass through only corridors to ensure beach access in a way that does not hinder resource protection. I believe pass through corridors should be maintained for pedestrians and ORVs in all areas of the Cape Hatteras National Seashore Recreational Area throughout the entire breeding and nesting season. Corridors are vital to providing access in a way that does not hinder resource protection. Piping Plover unfledged chicks buffer should move with the brood as it relocates to reliable food source, not expanded. The 1,000 meter distance for the piping plover is way too large and not based upon peer reviewed science. A more rational distance would be 200 meters per other sites in the nation for the piping plover. Ample scientific evidence and precedent exists to support a 200 meter buffer. Buffers for other species, including American Oystercatchers, Least Terns and Colonial Waterbirds must also be changed. An effective 30 meter buffer should be established for these species rather than the 300 meter closure outlined in the DEIS. NON-ENDANGERED BIRDS should not have same protection as if endangered. Not allowing ORV access is paramount to denying the public access to these beaches. 7) Page 468: I disagree with the limitations imposed on pedestrian and ORVs. Corridors or bypasses should be provided thru, around or below high tide line in all SMAs during entire breeding season to maintain access. 8) Page 124: I strongly disagree with the NPS slant of providing for over protection of resource management over that of the public's right to access the beaches. Pro-active initiatives include: Vegetation Management, Habitat Management, Enhanced Predator Management, Colonial Water bird social attraction, Piping Plover check fledge rate, Piping plover chick buffer distance, and pass-through buffers during the incubation period. Opportunities to implement less restrictive closures as a result of the above initiatives should be considered more frequently than the 5-year periodic review process identified in the DEIS. 9) I disagree with the NPS Resource Management Pedestrian / ORV Closure Policies. These policies address the least significant factors affecting nest survival with little chance to have more than negligible impact. For example: the AMOY Nest Failures are predominately due to non-human events. Using your own stats, the mammalian predation is 54%, Storm / Lunar Tides: 29%, Nest Abandonment: 6%, Avian Predation: 5%, and Ghost Crab Predation: 3%. So what is the percentage due to human interference: just 3%! It's insignificant, yet the NPS wants to ban humans when their actions provide very little influence on the success rate of breeding birds and turtles.

10) I disagree with the stats of breeding plovers and the other birds in the Park when the NPS does not adequately consider locations neighboring the Recreational Area that are part of the same ecosystem, namely dredge and spoil island that are located just yards away and within sight of the seashore. These birds are part of the same ecosystem and should be included. Those spoil islands, developed by man from dredging the waterways in the Pamlico Sound for channel upkeep are slammed full of birds. The reason why so many birds? NO PREDATORS. SO, birds are not as stupid as one might think. You have to count these birds and incorporate them in the stats when the NPS is talking about any so called decline in breeding pairs in the National Park. 11) Page 1: I do not think the DEIS responsibly addresses the cultural resource issues. The very purpose of the DEIS as set forth in the National Environmental Policy Act (NEPA) is to protect and preserve natural and cultural resources in the federal decision making process. In the DEIS, the statement "protect and preserve natural and cultural resources" appears in the first sentence of the first page of the plan, in the Purpose of the Plan section, and numerous times thereafter. Yet, the 810 page document devotes only two paragraphs to analysis of cultural resource issues. 12) Pages 270-281; 561-598: I strongly disagree with your economic analysis of the impact of the DEIS. The region of influence (ROI) incorporates the Northern Beach communities, including Kill Devil Hills, Kitty Hawk, Southern Shores and Duck. These areas are almost completely disconnected from ORV use and access issues relating to the Seashore. ? Inclusion of the Northern Beaches in analysis significantly dilutes estimates of economic impact on the 8 Seashore Villages ? Analysis of economic impact to the Seashore Villages appears to be significantly down played. Emphasis in DEIS is on the ROI-wide or county-wide level impacts. ? Nowhere is it clearly addressed that the overwhelming majority of negative impacts will be felt by small businesses in the Seashore Villages rather than by overall economic interests within the greater ROI. On page xlvi. Alternative F is characterized as having a "negligible to moderate" adverse impact on small businesses. I strongly disagree with this statement. I believe the negligible to moderate projection is inaccurate and relies on economic surveys that has not yet been published. Furthermore, this material is not expected to be added to the DEIS until after the public comment period has ended. Based upon the economic harm we have already experienced under the consent decree, Dare County projects the economic impact of Alternative F to be substantial. Beach closures have already had a devastating and unfair impact on many Dare County Businesses, causing foreclosures, bankruptcies, lay-offs, cutbacks, expensive refinancing, and depleted college funds and savings accounts.

Pages 270-286, 561-598: The socio-economic data and analyses are incomplete and erroneous and result in an understatement of the effect the restrictions will have upon the Island, the region and the state of NC. The US Park Services answer: Businesses will have to "adapt" to the new rules. (p.383) The negative economic impacts of the decree ARE KNOWN, so to say that the added restrictions would have negligible to moderate impact is indefensible. 13) Overall Visitor Counts - Overall visitor counts appear to include visitors to Fort Raleigh National Historic Site and the Wright Brothers National Memorial. A large percentage of these visitors vacation in the Northern Beaches communities and recreate on the non-federal beaches outside of the Seashore. Visitors who patronize the Fort Raleigh National Historic Site and the Wright Brothers National Memorial but do not visit the actual seashore areas need to be factored out. Maintenance of Future Access to Cape Point and South Point Ocracoke: All socioeconomic analyses related to Alternative F are predicated on the assumption that access corridors will remain open for at least an appreciable portion of the visitor high season. Under Alternative F, the access corridors will be subject to Resource Closures based on buffers similar or identical to the Consent Decree. Unless some predictability of access to Cape Point and South Point Ocracoke can be assured, economic analyses predicated on assumption of access are fundamentally flawed. Why would a group of surf fishermen want to come to Hatteras Island to surf fish if they are not sure they can access the prime fishing grounds at Cape Point? The answer is they won't come. If they don't come, they don't rent vacation homes and spend their money on Hatteras and Ocracoke Islands. The definition of the Region of Influence (ROI), faulty data on economic activity generated by specific type recreational activity, incomplete visitation/business survey data, inflated overall Seashore visitor counts pertaining to beach use, and flawed key assumptions concerning the maintenance of access under Alternative F, all lead to inaccurate conclusions in the socioeconomic analyses. Specifically, these inaccuracies can be seen as understating the negative socio-economic impact of the Seashore Villages. Further, this negative impact will be absorbed almost entirely by Small Businesses. Neither of these important aspects of the management alternatives are adequately presented in the DEIS. 14) Page 136: I strongly disagree with your pet restriction proposals. The "prohibition of pets in the Seashore during bird breeding season including in front of the villages." = No Pets in public areas ?beaches, campgrounds, soundfront, foot trails, park maintained roads -from March 15 ?July 31. 15) Pages 125; 392 ? 396: SEA TURTLES. I disagree with the stats and procedures proposed. I think endangered sea turtles would benefit from management practices now in use at other federal seashores that are more proactive in efforts to achieve nesting success. This includes relocating nests to more desirable locations as is done in other state and federally controlled areas. The Cape Hatteras National Seashore Recreational Area is on the northernmost fringe of turtle nesting locations for the southeast, accounting for about 1% of all turtle nests. Proposed buffer areas are not needed for protection of the turtles and amount to overprotection. 16) Pages 97- 101. I strongly disagree with proposals in this section saying that ORVs will be prohibited year round between ramps 27 and 30, at Hatteras Inlet (Hatteras Spit), Ocracoke Inlet (North Ocracoke Spit) and various other locations. Not allowing ORV access is paramount to denying the public access to these beaches. They are located miles from the nearest parking or paved road area and too far to access on foot. As a matter of course, there has been no breeding of piping plover or other endangered species at the Hatteras Island Inlet (spit) area in the past 6 years. 17) Page 104: I disagree with the proposed night time driving closures. Per your proposals, night driving will be prohibited between May 1 and November 15th, forcing visitors off of the beaches early in the evening and preventing sunrise surf fishermen access in the morning. I propose a more moderate night time ban if one is needed, perhaps from June 1 ? September 15 with times being 1 hour after sunset and 1 hour before sunrise to allow beach goers to gather their stuff and exit the beach area. Certainly more proactive measures such as relocating nests prone to weather and ocean events would dramatically increase the nesting success rates. 18) Page 121: I disagree with the proposed beach closings, including pedestrian access from March 15 until July 31 in 8 different beach locations which have traditionally been available. Please leave these areas open to beach walkers, shell collectors and those that want to access the beaches in these areas. Conclusion: Please, incorporate access corridors through any SMA so we can get to the open beach beyond. Incorporate the birds into the count that nest on the spoil islands. Base your buffer zones on peer reviewed science and scale them back to more reasonable distances as discussed. It is neither logical nor reasonable to spend so much time, money and energy to overprotect a bird (Piping Plover) in the Cape Hatteras National Seashore that is on the southernmost fringe area of its breeding ground. That goes for the loggerhead turtle that is in its northernmost breeding area. Let's scale back the buffer zones. You can always increase at a later date. The USPS is leaning way over the line on over protection and not enough on the public's right to enjoy the beaches of the National Seashore. The proper balance is not achieved in the propose DEIS and needs to be modified so that the proper balance of reasonable resource protection and access to the beaches of the National Park is achieved. I could sum it up by saying "Protect, not Prohibit." Thank you,
Glenn A. Moser Owner, 41924 Ocean View Drive Avon, NC 27915

Correspondence: I have lived on Hatteras Island my whole life. Never have I seen such ridiculous actions taken to protect birds over humans. Shutting down the beach to save a few birds, which are located all up and down the east coast, will end up killing the economy that is on Hatteras Island. I believe in Darwin's theory of "survival of the fittest". It is how nature has survived for thousands of years. If these birds, turtles, and other animals cannot survive in their local environments, then it is there time to go. I am not one to hate on animals and believe that humans and animals can co-exist together. But I do not understand why the government is willing to allow a bird to shut down an economy and lives of thousands of residents on Hatteras Island. I plan to spend my life here on the island and I want my children to have the same experiences growing up on the beach as I did. To take away the lives that we have built amazes me. The government claims to care about the people and to do whatever it takes to protect us in wars and against other threats, but this same government will not protect the livelihood of those living on Hatteras Island. To let a group of birds slowly damage our economy and slowly push humans off of Hatteras shows that the government does not care for its people. The residents of Hatteras Island have worked very hard to build our economy and to keep our beaches clean and open so that guests from all over may come and enjoy what our island has to offer. With out these people coming to the Island, our economy will die, forcing all locals to loose their homes, properties, businesses and finally force us to move away from the one place we call home. And all for a group of birds. If our government cares so deeply for it's people, then the government should help us keep our livelihood and our homes that we have spent so much time, money, and effort to build. I am appalled by our government and there lack of action to help aid us. Our whole country is in a declining economy and instead of helping us; the government is helping to destroy what is left of our economy on Hatteras. Because of beach closures, no one is going to want to come to a beach where they are not allow to step foot on. If there are no tourists coming, where do we get our money? There will be no one to come to our restaurants, docks, vacation homes, and local shops. How will we make our money? How will we, the locals of Hatteras, be able to survive in a place that is based on a tourist economy, with out any tourists? I surly hope that if our beaches are all shut down, that our so called government is going to help aid the locals of Hatteras Island in finding jobs, pay for our homes and businesses, and find us new living arrangements once we are forced to move away from the island. I really hope that I do no live to see the day when Hatteras Island becomes a deserted island because a group of birds has pushed every last human being off of it.

Correspondence: I am a motel business owner in Buxton. The business is 57 years old managed by three different generations. The beach closures have damaged my business by about 30%. It seems every one wants to measure business by occupancy tax revenue. Those figures are not true year to year comparison with the increased supply/growth we have experienced on this Island. Two years of closures have changed our busy seasons to late summer and fall the spring and early summer have taken a hit. The economic impact has been severe for my business and I believe you have over looked that. I disagree with even having the American Oyster Catcher protected we can build habitat on the sound islands where they can nest. I disagree with the 1000 meter protection for the piping plover. There is plenty of area the inlet spits and cape point that could be managed/cultivated to accommodate this species for nesting. You the landowner NPS has to be proactive. Access to these traditional areas is a must for our economic survival. I disagree with the night driving ban why would you not follow the closure date. Is it about birds or is it just another way of restricting the American public from using what there former government bought as a national recreational area? I disagree with the lack of respect due to our cultural resources of the area. If we can move our national landmark one has to assume cultural impact is not important to NPS. In summary you need to consider trying to manage your

resources I believe it is one of your charges, not restrict like you are doing. Sitting doing nothing is just like our American government letting a handful of lawyers make your decisions. Alternate F is not a good choice.

Correspondence:	<p>I am an advocate of the outdoors and nature. I understand that the processes of mankind has made an impact on our natural environment. Personally, it is a tragedy for the taxpayers who go to the Cape Hatteras National Seashore and enjoy it the right way have to be punished because a certain group wants to feel worthy.</p> <p>I am a true believer in the fact that extinction of any species is saddening. If these birds are so endangered, why is there a group that wants to keep the fisherman away? It seems to me they would be trying to capture the birds and try sending them to a zoo to reproduce. The very nature of the outer banks is an everchanging environment. As barrier island's they constantly change due to rip tides, hurricanes, and normal tidal cycles. Is the park service going to stop mother nature after they get the fishermen taken out of the picture?</p> <p>I guess once more the American Sportsman is the evil to all things living. However, annually I purchase a Federal Duck Stamp, I am a member of Delta Waterfowl, I have held a lifetime hunting and fishing liscence since 1995 for the state of North Carolina. My wife is a lifetime liscence holder as well as my 3 year old daughter, who's liscences were purchased since her birth. I think my family's obvious commitment to the resources of this state should show that not all sportsmen are bad. We visit Ocracoke Island every chance we get (at least once annually). It gives my wife and I a chance to show our daughter the traditions of this great state and not worry about her playing on the beach and getting ran over. If you as a public official take these rights from us, it will be a great tragedy to my family and future generations to come.</p>

Correspondence:	<p>I strongly disagree with the DEIS Plan F. The PIPL is not increasing in number on Cape Hatteras.The closures and restrictions are not working. according to your own Resource Management report: percent of fledged PIPL chicks: 1998-68% 199950% 2003-50% 2005-100% then the consent decree goes into effect- guess what? 2008-23% fledge rate 07=.67 08=.64 09 =.67 07 before the consent decree and 09 are the same, while 08 is actually less. If the restrictive closures were working, which they are not, or if the PIPLs survival were increasing due to the lack of human presence or beach driving, we would not have these decreases. I propose a return to the interim plan.</p>

Correspondence:	<p>Mr. Mike Murray, First of all let me thank you for all the hard work that you are putting in on this subject. These must be trying times for you. I'm not going to bash any groups that are trying to close down the Cape Hatteras National Seashore. I understand how important it is to protect our wildlife. My</p>						

life revolves around each and every animal and where they live where ever I may be. I hunt and fish for recreation and food. What I don't understand about all of this is why this area has to be partially or completely closed for the preservation of wildlife. It seems to me that if people were allowed to be lets say within a couple of hundred of yards of the animals that are being protected it would probably cut down on the predator mortality and vandalism that may occur. There are people out there that would call in if they see someone or something harming these animals. I for one are among them. The people that reside, work, and have business in this area do not want to see any harm to come to these animals. They rely on them to survive. Take my family for instance. We try to visit Cape Hatteras Seashore at least twice a year if not more to fish and see the wildlife. I grew up visiting this area with my parents starting in the early 70's. My parents have been visiting here for over 60 years. I'm afraid that if the beaches close that many people will stop visiting the seashore and the people in this area will suffer greatly. Please consider all of this when it comes time to make a decision about this beautiful area.

Thank You, James Jarman NCBBA #13578

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
 Actually I would prefer the elimination of ORV's. My experience with the drivers of ORV's is that "rules are made to be broken". In general, I have seen little respect by this group for nature or the property of others.
 If that can not be managed, they I would support the initiatives of the Audubon Society.
 Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

 I am disgusted with this plan. I live in Va and have visited Cape Hatteras for 47 years. One of my family's favorite activities is to drive out Ramp 49 and enjoy the beauty of the beach. We are not destroying any nesting areas or interfering with said nesting areas.
 You need to remember how this will affect the economy of the area.
 STOP manipulating the data to fit your agenda.
 Liz Vannicola

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
 This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
 The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
 *Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
 * Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
 * Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
 Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.
 I have lived on Cape Hatteras for almost 23 years. In those years I have seen symptomatic entitlement and greed win out over the sense that we share the earth with other life that is as important as our own in the greatest sense. We as a people tend to have a myopic view instead of holding to now as a blueprint for the future. We, in the end, Have and will continue to endanger lives in the name of fun or recreation. I love the beach, I love driving on the beach, but I would be more than willing to give that up to preserve the species I drive and walk to see. I am most willing to share my world with all creatures and want my earth to be filled with the beauty of nature and not metal, gas guzzling ,beasts.

Correspondence: I disagree with NPS management plan on the grounds that lack of any real science that the long standing ORV management plan affected nesting animals in a negative manner. I also disagree with the NPS management plan on the grounds that there is a need for excessive buffer zones for birds that aren't considered endangered. The buffer zones that are proposed are excessive and do not prove to be of any greater benefit to the wildlife. The evidence which has already been collected during the current implemented DEIS has proven these statements.

Correspondence: I disagree with the ruling of no night beach driving. Humans can help deter the predators from raiding the nests of endangered species. I disagree with the studies that understate the impact of limiting access of the beaches to orv and human traffic. The majority of visitors to Cape Hatteras National Seashore Recreational Area come to drive on the hard to access areas of the beach for fishing and recreation. In limiting the use of orv's on our beaches also discriminates against handicapped persons who can only access the beaches by orv's. The summer is a great time to spend time on the beach with many sunbathers and fishermen, but the majority of the off seasons are filled by fishermen. If you curtail the use of the beaches by orv's you will basically destroy the economy of the Island. I disagree with the limiting of pets during bird breeding season. I agree with the strict enforcement of leash laws and stiff fines for violators. There are probably such a low number of instances where pets destroyed nests that it would be wrong to limit all pets during these times. I disagree with the associations who want to dictate to the people what the masses can do. Their statistics are biased and presented to only show their side and should not be relied solely upon. These groups only represent their interests and not the interests of the people. Please use common sense in the rules you set forth in the use and protection of our beaches. Sincerely Grayson Collins

Correspondence: I am a fisherman and environmental scientist from Mount Airy, MD. I travel to the North Carolina beaches 6-8 times a year. While there I enjoy fishing and relaxing on the beach. My wife and family also love the beach. I am an owner of an over-sand vehicle and I gladly pay for a permit for Assateague Island National Seashore in Maryland. I would also pay for a permit for the right to access beaches North Carolina beaches especially those near Cape Point, Hatteras Inlet and Ocracoke Island.

Although the Draft Environmental Impact Study is very long and detailed, I have taken as much time as I can to read through it. I would like to offer the following comments and hope for their consideration in the development of the final plan.

- I believe that the comment period for the DEIS has been poorly timed and will result in the submission of fewer comments. Many beach users may not even be aware of the development of this plan. An open comment period through the summer when people are using the beaches, both pedestrian and OSV users, would provide more useful information on proper restrictions on access and the impacts of those restrictions on visitors.

- As a member of the North Carolina Beach Buggy Association, I have read through the organization's stance and I agree with the detailed comments put forth by the Coalition for Beach Access.

- I believe that decreasing the amount of beach available to OSV users will have a negative economic impact on Hatteras and Ocracoke islands.

- I believe that adding new access ramps as described in the plan will allow access to more of the beach for OSV users and will minimize the negative impact of resource closures on the experience of visitors and disturbances to wildlife within the closures.

- I believe that intradunal roads will increase the amount of beach available to OSV users and will further minimize the negative impact on of resource closures on the experience of visitors. However I believe that intradunal roads should be exempt from buffers for nesting because dunes represent a barrier which is both impassable to unfledged chicks and sufficient to prevent disturbance to wildlife.

- I believe that protection of endangered species should be of the utmost importance in the development of this plan, but I believe that much of the science, such as the implementation of 1000 meter buffers for unfledged plovers, is excessive or unsound.

- I believe that responsible beach driving by OSV users is best ensured by a permitting process with stiff penalties for misuse of the beach or damage to resource closures, but arbitrary expansions for violations of enclosures only hurts those who respect the beach. Violators will continue to break laws and ruin the experience of others unless there is vigilant enforcement of the laws.

- I believe that suitable habitat such as spoil islands which are not part of the Seashore proper should be incorporated into the overall management plan for the protection of wildlife in the seashore. Success by shorebirds in habitats just outside the National Seashore should be recognized by the NPS not discounted.

- I believe that a 1000 meter buffer for unfledged plover chicks is overly excessive. This barrier exceeds any which I have seen recommended on any other Seashore. The only place I have been able to find mention of the 1000 meter buffer is in the Consent Decree, which should be learned from and adapted in the construction of the final plan, but not used as a template.

- I believe that the economic impacts on the villages within the seashore on Hatteras and Ocracoke Island will be severe and are understated in the DEIS. Northern beaches not governed by the NPS on Bodie Island will represent a more desirable alternative to the visitor who would normally chose southern beaches like Rodanthe or Frisco. While the overall impact on the "Region of Influence" may be minimal impacts to small businesses in Waves, Buxton, and Hatteras will be extreme.

Thank you very much for taking the time to review my comments. CJ Schleicher

Correspondence: I have lived on Hatteras Island all of my 66 years. I can even remember when one had to drive the beach to access the villages on the Island. I would like to have the opportunity to continue having access to my beloved beaches and share it with the many visitors that visit this Island. Therefore, I disagree with all of the six alternatives.

I do however agree with the 77 page Coalition for Beach Access Position Statement signed by several groups that were apart of the negotiated rule making process. It succeeds in furnishing the best visitor experience and maintains the needs of protecting the fragile resources.

I asked you to please consider all aspects of this alternative.

Correspondence: On May 1, 2010, the boat Tide Runner capsized in Hatteras Inlet with six (6) passengers (including the Captain). The passengers were in 59 degree water for over 3 hours.

Hatteras Island Spit (north side of the Inlet) and the North Spit of Ocracoke Island (south side of the Inlet) was closed to ORVs and pedestrians. No one could see the capsizing of Tide Runner from the point of the beach closures.

The Charter fleet does not return to port until approximately 4 PM.

One man drowned. Three (3) were able to cling to the Tide Runner. Two (2) others were swept off the boat by the wave action and current. These two (2) individuals were later found drifting and picked up by one of the returning charter boats. The young boy was exhibiting signs of hypothermia.

I can not help but wonder if the beaches had been open to ORVs and Pedestrians, that the accident would have been seen and help called for immediately, not found by happenstance hours later. One life would most likely have been saved, and several others would not have been put at risk.

Therefore for Safety purposes, please do not close beach access for some birds.

You can read the story at www.islandfreepress.org/local_news_page.

Correspondence: I am an Outer Banks resident that opposes all beach driving. Studies show that vehicular traffic is the largest contributor to water pollution in our state. I am not aware of any studies on the impact of off road vehicles to our beaches and waters. Therefore, I believe all beach driving should be banned until it is scientifically proven not to harm the environment. Given that it is not politically feasible to ban all beach driving, I support Option E in the draft ORV Management Plan. Please act to protect our environment from the harm caused by ORV driving on our beaches.

Mr. Mike Murray, Superintendent Cape Hatteras National Seashore 1401 National Park Drive Manteo, NC 27954
RE: National Park Service DEIS Off-Road Vehicle Management Plan Comments
Dear Mr. Murray:
Thank you for the opportunity to comment on the NPS DEIS Management Plan currently under consideration. A visitor to this area since the early '70's, I have been a resident of Dare County for over 22 years. I have owned a business in Duck for over 20 years which employs up to 300 people during the summer. My concern is that Alternative F restrictions on beach access will have on the enjoyment of beaches by the citizens of the United States. Adequate pedestrian corridors should be maintained. On page xlvi, Alternative F is stated to have a "negligible to moderate" adverse impact on small businesses. This statement glosses over the facts that have already presented themselves ? businesses have struggled to keep open in this uncertain climate of immediate and unpredictable changes to beach access. Pages 270-286, 561-598: The socio-economic data and analyses are incomplete, resulting in an understatement of the effect the restrictions will have on Hatteras Island, Dare County and the state of North Carolina. Stating that businesses will have to "adapt: to the new rules (p.383) is making the assumption that no harm will be done to businesses. The uncertainty that has been brought about by ever-changing access points has resulted in an unraveling of the economic stability of this area. The effect on small businesses is not adequately addressed in the DEIS. With regard to turtle nesting areas, NPS should relocated turtle nests to a safe area and before any storms can destroy the nests. The existing turtle guidelines do not do enough to protect the turtles ? they should use alternatives such as nest relocation, captive rearing and hatcheries to improve the success of the nests. Page 121. I disagree with the proposed beach closings, including pedestrian access from March 15th through July 31st in 8 beach locations which have traditionally been available. Beach access for pedestrians should be allowed. Human influence on the success of the bird populations has been negligible. Education and cohabitation rather than prohibition would serve us all. I thank you for the opportunity to give you a few brief comments on this complex issue. Thank you for your time and the time that has been spent on this very critical issue. I hope that you will reconsider the study data used, use peer to peer scientific review of the study data, and allow citizens to use the National Sea Shore as it was intended. "I call this ocean front a national park, or a national seashore, or a state park or anything you please?I say that the people have a right to a fair share of it." Secretary of the Interior Harold Ickes, 1938 From: Creation and Establishment of Cape Hatteras National Seashore The Great Depression through Mission 66 August 1977 Cameron Binkley, Southeast Regional Office Cultural Resource Division, National Park Service Sincerely, Monica Thibodeau Owner, Carolina Designs Realty, Inc.

Correspondence: I would like to ask you to extend the comment period to give more time to study the 800+ page papers. It leaves question on what you base your science on the amount of room required for the protection of the birds in question, the overall process taken to this point with the committee when members are negotiating in good faith when those same members are part of a law suit against the NPS. The whole process is looking bad for the NPS and gives you a bad image. When land is given to the NPS with a promise (which is a contract) that this closing of access would never happen, then that is a problem in America. My history tells me that is why we are here. Of the people, by the people, and for the people. The NPS needs to re-think the whole picture and not be contradicting themselves in there actions. Killing one animal to protect another? Taking land under a promise and then breaking that promise. Looks to much like a land grab rather than trying to protect a bird that is not treated by man or vehicles. Thank you ahead for your consideration to this request.

Correspondence: Dear Superintendent Murray,

First off, thank you for giving the public the opportunity to comment on the new law that will possibly pass to allow ORVs onto Cape Hatteras. As a teenager in America, I understand that many people will not count my voice as much, but I hope that you will possibly consider my opinion. I have been visiting Cape Hatteras for as long as I can remember and would love to see the beaches preserved for many more years to come, but with ORVs that might not be possible. There are so many natural phenomenons and miracles that occur on these beaches and it would be a shame and a disrespect to nature to see these hindered. Cape Hatteras has a very unique feel to it and I believe that along with the destruction of nature, that aura will also deplete. Please reconsider your decision to pass this law and understand how many lives you will be putting in danger with the passing of the law. Cape Hatteras is a very special place, and I believe that it should be kept as pristine as possible. Thank you for your time.

Sincerely,
Lia Rosa Brunetti

May 11, 2010

Mike Murray, Superintendent Cape Hatteras National Seashore 1401 National Park Drive Manteo NC 27954 Sent via internet to Dear Mr. Murray:

I am hereby commenting on the DEIS Off-Road Vehicle Management Plan draft dated March 2010.

1. Executive Summary, page i, paragraph 1: I disagree with the naming of the area. Please change it to the Cape Hatteras National Seashore Recreational Area as defined in Title 16, Chapter 1, subchapter LXIII, dated June 29, 1940.
2. Elsewhere in the document, where the area is referred to as "Cape Hatteras Seashore", please change it to "Cape Hatteras National Seashore Recreational Area". (I will refer to it as Cape Hatteras National Seashore Recreational Area or CHNSRA from here on.)
3. Page 1. Purpose of the Plan. I disagree that the plan sufficiently addresses the charge to protect and preserve cultural resources. The glossary includes "cultural practices" as part of the definition of cultural resources.
Driving on the beach plays a large part in the culture practices of the local residents and visitors who have traditionally accessed the beaches via ORV for gatherings of families and friends and for surfing, picnicking, bathing, fishing and other beach activities. ORV access to a majority of the shoreline is an integral part of the island culture and should be considered more fully in the plan. When the park was established, netters were assured they would always have access. I and my friends have a cultural practice of fishing for drum from the surf line at Cape Point alongside people who have been doing the same for generations.
4. Page 1. Purpose of the Plan. I agree with the statement: "ORVs have long served as a primary form of access for many portions of the beach in the Seashore, and continue to be the most practical available means of access and parking for many visitors." However, designating pedestrian only or having different buffers for ORV and pedestrian access discriminate against individuals with limited mobility, families with small children, and those who use heavy or bulky recreational equipment (fishing equipment, surf boards, picnic equipment, kite boarding equipment, etc.). The enabling legislation established the area for the enjoyment and benefit of the people. Banning any class of people from access to the shoreline goes against the enabling legislation. It is disingenuous to "permit" the enjoyment of the resource while making it impractical to bring the necessary implements. Last year I fished alongside a couple, the wife catching and releasing 2 large drum while sitting in the front seat of their truck. He would cast for her since she had problems with her legs and could not walk or get about. And she had the biggest smile and greatest feelings for being out and enjoying the Recreational Area.
5. Page 1. Purpose of the Plan. I agree with the statements: "These habitats are also home to numerous other protected species, as well as other wildlife. The NPS is required to conserve and protect all of these species, as well as the other resources and values of the Seashore." However, the plan does not allow for conservation and protection of all species. According to the 2009 Annual Piping Plover report, the NPS trapped and removed 464 animals including 25 red fox, 1 gray fox, 152 racoons, 102 opossum and 105 opossum kits, 10 nutria, 3 coyote and 1 mink. The report did not detail what was done with these animals. Since other animals were taken to shelters or released, I assume these were killed. The plan does not address how these animals will be conserved and protected.
6. Page 2. I agree that the plan should provide protection for threatened, endangered, and other protected species. I disagree that North Carolina species of concern and non-endangered species should be given the same protection as endangered species. This is not intended by the ruling legislation and is effectively a re-writing of the law, which is overstepping the authority of the NPS.
7. Page 7. I disagree that the plan should be reviewed only at five year intervals. It should be reviewed annually and as social, economic and environmental changes may occur. What would happen if changes were made to the threatened and endangered species lists? What if the economic assumptions are incorrect and there is a large increase in unemployment, foreclosures, and bankruptcies? That has to be considered in the plan. The economic impact of restrictions to access must be weighed against the actual benefit to the endangered species. 3-4 fledged chicks per year of a 1,300 bird population does not pass the common sense test as equitable against the impact on humans' livelihoods and enjoyment of the Recreational Area.
8. Page 8. I disagree with targets for piping plover. Statistics show that the number of mating pairs of piping plovers is closely associated with severe weather en route to and from their wintering grounds in the southern U. S., particularly Florida. Having a target that has not been met during the last 17 years is unrealistic, given the association with factors that are beyond the control of the NPS. Page 186 of the DEIS lists that there were 331 breeding pairs of piping plover in DE, MD, VA and NC in 2008. The 11 counted in the CHNSRA account for a tiny 3.32%.
9. Page 16. I disagree that ORV driving is a "recreational activity" except in Toyota commercials. It is, as it has been historically, a means of getting from one place to another on the beach with the requisite gear. It is a means of getting from the road to the shoreline. No one that I know drives on the beach just to drive on the beach. And all are environmentally conscious, leaving the beach cleaner than they found it.
10. Page 31. I agree that local businesses are concerned with limiting ORV access to the shorelines. It has been well-documented by local businesses that their income decreases significantly when closures are in effect. Please include rental home owners in the "small business category." My husband and I own one oceanfront rental cottage in Buxton and one sound front rental cottage in Frisco. The 2010 oceanfront income is down by 7% and our sound front income is down by 18% from 2009. Oceanfront renters are less affected by ORV closures (especially ocean fronts in Buxton which have pedestrian access to prime fishing spots) than sound front renters who rely on ORVs to access the beach. People have written in our guest book and emailed me that they were very unhappy with the beach closures. They are also disturbed by the animosity caused by NPS callous methods and biased enforcement and assumptions about who the violators of bird closures are.
11. Pages 97 to 101. I strongly disagree with proposals that would prohibit ORVs year round at various places including but not limited to the area between ramps 27 and 30, Hatteras Inlet on Hatteras Island and Ocracoke Island, and Ocracoke Inlet.
These areas are the best fishing and family fun beaches in the National Seashore Recreational Area and are primarily inaccessible by foot. They are key areas of "cultural practices" of family outings and spectacular fishing. Closing them year round is unnecessary for the protection of any threatened or endangered species. For example, the NPS 2009 Piping Plover Report, page 17, showed no piping plover observations at Hatteras Island Spit between August 2008 and March 2009, less than ten sightings in August 2008 at Cape Point and none over the next seven months, and zero to ten sightings per month at northeast Ocracoke Island. There have been no breeding piping plover or other endangered species at Hatteras Island Inlet spit in six years. There has been no evidence of killed piping plover chicks due to ORV usage. Keeping these areas accessible by ORV is necessary for the survival of the residents and home owners of Hatteras and Ocracoke Islands. Furthermore, I personally believe the birds are not as bothered by ORVs or people as presumed. I have first hand observations of small shore birds doing their mating dances right between trucks. They are oblivious and may even feel safer close to people and their vehicles as there are no predators there.

12. Page 104. I disagree with the proposed night time driving restrictions. I agree there should be a ban on ORV night driving during turtle mating season and at times they are likely to be mating. Please limit the restrictions to mating season (more like June 1 to September 15) and when it is dark outside (more like after sunset to one hour before sunrise). Furthermore, I support the moving of turtle nests to areas that are not subject to wash over. This would serve two purposes: increased survival of the species and increased public access to the beaches.
13. Page 108, alternative D. I disagree that ORV parking should be limited to one deep. Driver discretion should be used as to not obstruct the flow of vehicles.
14. Page 108, Carrying Capacity. I disagree. There should be no carrying capacity restrictions. The cost of enforcing these would outweigh any environmental benefit. Do you propose that if the capacity is reached that there would be a waiting line to access the beach? Think about it? People would keep their ORV engines running sitting inside their ORVs with the air conditioning on, children would be climbing on the dunes, etc.
15. Page 110. I disagree with the proposed speed limit. I feel it should be 10 mph. If this is to protect Piping Plover chicks, almost the only ones documented harmed or run over were by NPS trucks inside protected areas.
16. Page 113. I disagree with the proposed ban of pets in the CHNSRA during bird breeding season. I propose dogs be allowed on six-foot leashes at all times in all areas. Dogs on six-foot leashes pose no threat to any species of any kind.
17. Page 127: Closures and buffers. I disagree with the proposed buffers. I support ORV pass-through corridors in all areas of the National Seashore Recreational area, except in front of the village ocean front homes. When one section of beach is closed (for example, north of Billie Mitchell Field) and another is closed (for example, south of Cape Point), although a relatively small area is officially closed, the effect is closure of miles of beach. Pass-through corridors near the high tide line will have no impact on endangered or threatened species. The buffers for unfledged piping plover chicks should be moved as the chicks move. A buffer of 1,000 meters is uncalled for and could be as small as 200 meters, according to research. Buffers for other birds listed in the proposal should be reduced to 30 meters, which is an adequate distance, supported by research. From my own observations, when birds foraging at the water line are approached, by a pedestrian or fisherman or ORV, they fly only some 20 yards away. They don't fly 1,000 yards to be rid of any "fear." So even 200 meters would be excessive as a buffer.
18. Page 130. Protect cultural resources? I disagree that plans C through F protect the cultural practices of the island people. As stated on page 1 of this letter, cultural practices are defined as being part of the "cultural resources". The plans put a much higher emphasis on birds and wildlife than human access to the beaches of the Cape Hatteras National Seashore Recreational Area. This is not a wilderness area. The 1938 charter that established the area did so for the enjoyment of the people for recreational purposes. It is interesting the times the park was established in are similar to our times now, when it is threatened to be taken away capriciously.
19. In general: ORV and pedestrian access to the shoreline is an insignificant factor in the survival of the piping plover on Hatteras and Ocracoke Islands, as detailed in the NPS 2009 Piping Plover report. When the death rate due to tropical storms and late season hurricanes during PPL southern migration is factored in, ORV and pedestrian traffic in the Cape Hatteras National Seashore Recreational Area is not even an issue. Several years ago the Army Core of Engineers flooded the Missouri River to raise the river level so a barge with \$300,000 of pet food could navigate upstream. In the process some 35 Piping Plover nests were flooded and destroyed. What hypocrisy in the government. Right there 10 or 15 years of OBX efforts were lost.
20. In general: The NPS captures bird, turtle and amaranth statistics only in the park. They do not include bird counts in other locations such as the dredge and spoil islands that are breeding grounds for thousands and thousands of birds. In 2009 NPS counted six fledged chicks and between 1992 and 2009 counted an average of 4.9 per year. It is likely there are many more fledging on the remote dredge and spoil islands and on Pea Island because there are no predators (i.e., foxes, raccoons, etc.). When calculating survival of a species, one must consider the entire mating area. And, related to that statement, the eleven piping plover chicks that fledged in 2008 represented just 3.32% of those counted in Delaware, Maryland, Virginia and North Carolina.
21. Page 143: Visitor use experience impact. ORV users in the areas under management comprise the vast majority people visiting the ORV access area, since most of the areas are inaccessible except by ORV. Creating a plan that has the cumulative impact that is "long term moderate to major and adverse to ORV users" is unacceptable. The assumption that it would be long term beneficial for non-ORV users is irrelevant since they comprise a minute percent of the population in areas accessible by ORV only.
22. Page 270 to 281 and more. The towns north of the CHNSRA should not be included in the ROI for economic analysis. As stated, the villages of Ocracoke, Hatteras, Frisco, Buxton, Avon, Salvo, Waves, and Rodanthe would be most affected by the proposed actions because they are located within the Seashore. The economic impact of beach closures has not been adequately addressed. Please carefully read comments from local business owners about the impact to their businesses and those from Dare County and North Carolina officials. I urge the NPS to do complete, unbiased research on the real economic impact of their alternatives on the CHNSRA residents and home owners. In addition to the impact on local businesses, please consider the adverse economic impact to rental house owners. This year's decrease of 18% on our sound front rental income is causing us severe harm. Our expenses remain about the same, regardless of our rental income. Just look at the number of houses for sale and the number of foreclosures. ORV driving restrictions are hurting everyone. Stating statistics for North Carolina or Dare County and making assumptions about the economy or demography of villages in the CHNSRA is erroneous.
23. Page 362. Economic impact. To estimate that the economic impact of plan F on income to sporting goods businesses and to other businesses in the "Seashore villages" would be 0% to -10% must be based on flawed research. Please conduct a complete survey of businesses in the villages and include their revenues for July of each year. That would allow you to calculate the impact of the recent closures. The 0% to -10% figure doesn't meet the first test of valid research which is, "Does it make sense?" The research done by RTI was not completely reported in the DEIS. Reference was made to "Even businesses that reported no decrease or an increase in revenue in 2008 under the consent decree were concerned about the long-term impacts of the alternatives, even alternatives similar to the consent decree." But no where did the DEIS quote statistics from those businesses that said income was down.
24. Page 570. No where is there mention of the economic impact on non-resident rental home owners. These people, including my husband and myself, should be considered as "small business owners", too. Furthermore, these investments were our "retirement plan" but now everything we worked for will be lost due to the inability to make mortgage payments. Our later years will suddenly not be what we dreamed about and worked for all this time.
25. Page 570. I am happy to see that additional data are being collected. I have not heard about the publication of the 12-month study which was expected to be completed in early 2010. I urge you to re-open the comment time after the new research has been published.
- Sincerely,
George Henrik Suhr

Correspondence: Mike Murray, Superintendent Cape Hatteras National Seashore Recreational Area 1401 National Park Drive Manteo, NC 27954 Dear Superintendent Murray, Please accept this letter as my comment on the ORV DEIS before you at this time. After reviewing the National Park Service DEIS I must disagree with any of the six alternatives within the document. I have; however, reviewed the 77 page Coalition for Beach Access Position Statement signed by several groups that were a part of the negotiated rule making process and it by far succeeds in furnishing the best visitor experience while maintaining the needs of protecting the fragile resources. Respecting and protecting Animals is important, but are animals really more important than people? Any of your six alternatives will quite possibly destroy THOUSANDS of PEOPLES lives by killing local jobs, decreasing home values which will further destroy the local economy that is supported by visitors to our precious seashore. We want to protect the wildlife and HUMAN LIFE! PLEASE, DO NOT DESTROY MY FAMILY! Please consider all aspects of this alternative and put people back into the management of Cape Hatteras National Seashore. Respectfully, Mark Bruce Home Owner

Correspondence:	I have been coming to the Outer Banks of North Carolina since c.1954. My wife of 45 years first came here on our honeymoon. We have considered it a wonderful place in which we as a family could enjoy our family and commune with nature. All three of our sons and their families have enjoyed it here. We now learn that the National Park Service, in order to protect one species of birds and sea turtles will not allow fishermen and vehicles on the beach at prime fishing places to protect the Piping Plover and sea turtles. I am all for protecting threatened wildlife from improper human molestation but this can easily be done with a minimum of restricted land. The proposed (and even the current) restrictions are totally unnecessary. A killdeer, a kin of the piping plover, nests on gravel driveways sometimes. In Pennsylvania, we protect them by roping off a c. 2 foot radius circle around its nest. This is completely adequate. I understand that if a piping plover nested in the dunes in front of the beach house where we stay that we would not be able to get on the beach anywhere near our rental. This is a totally unnecessary restriction and a ridiculous imposition on me and my family as decent taxpaying citizens. I also now understand that it is proposed that my pet lab will not be allowed on National Park Service Land. I consider that to be absurd. Dog owners of course need to properly train their pets and keep them in check. I am an Eagle Scout as is my 95 year old dad and all three of my sons. We have heretofore held protecting the environment to be important and the National Park Service to be highly respected. It appears that the National Park Service is in dire danger of being controlled by people who have lost their common sense. The life style of the Outer Banks people is being destroyed and their economy is being destroyed also. The National Park Service itself will be the biggest loser...It will lose the respect of many of us who have heretofore been your biggest fans. It is obvious that 98 of the 100 Senators come from states which do not need to care about the Outer Banks...The cards are indeed stacked against the Outer Banks and their people...I can only hope that the underdog philosophy which once made this country great will some how prevail and that common sense will reign again in The National Park Service. Sincerely, LeRoy S Maxwell Jr

Correspondence:	Page 136: I agree with Alternate F regarding the ban on pets between March 15st and July 31st. Unfortunately people do not obey the current rules. As I walked the beach yesterday, I saw no piping plovers, but dogs not leashed. I have yet to any NPS ranger address this issue. Page 201: I disagree with the NPS statement: "Even with resource closures in place, protected species are still at risk [from pedestrians and ORVs]." No Piping Plover deaths have been attributed to ORVs. ORV violations continue to decrease as signage and education improve. Pedestrian violations are much more significant than ORV violations. It seems to me that any transgressions into protected area are the result of lack of NPS manpower and enforcement than the public purposely and willfully violating out of bounds areas.

Correspondence:	Dear Superintendent Murray orvdeis I am writing to object to the beach closures at Cape Hatteras National Seashore, in North Carolina (ORV DEIS). Understanding the delicate balance in nature of people living with the wildlife at the beach, another alternative has to be found besides closing the beaches. Our family visits the Outer Banks quite frequently and we, as well as many others respect the nature and the people whose lively-hood depends on visitors to the Outer Banks. Every aspect of life will be affected from real estate to fishing, stores and restaurants, visitors alike. Close the beaches and you will send Hatteras Island in to a deep depression which the state of North Carolina will have to deal with for years to come. Nature and wildlife is important, but together, let's try to figure out a better alternative. I have been overwhelmed by the amount of pages with information contained and have tried my best to understand them. Bottom line, I object to the closure of Hatteras Island and parts of Ocracoke, NC.  RE: Public Comments on the Draft Environmental Impact Statement (DEIS)
 I am a longtime resident of Dare County North Carolina. My family and I are users of the Cape Hatteras National Seashore Recreational Area and have always enjoyed the seashore in a way that also protects the environment and its resources. I support the comments that have been made by North Carolina Senator Marc Basnight and Representative Tim Spear. I further endorse the comments and analysis provided by the Dare County Board of Commissioners and the Coalition for Beach Access. Alternative F needs the following changes: ? Provide corridors throughout all areas of the seashore ? Establish reasonable buffers based on peer-reviewed science. 1,000 meter buffers are not justified. I support a more reasonable buffer of 200 meters. ? Do not protect non-endangered birds with the same level of protection as if they were endangered. ? Use more proactive management practices to improve sea turtle hatchings. This should include more nest relocation.
 Respectfully submitted,
 Stephen Taylor

Correspondence: I have visited the Cape Hatteras National Seashore Recreation Area for over 30 years. My children and wife have joined me in enjoying the wonderful beaches, the swimming and the fishing over this time. The many firsts we have experienced include large red drum caught, swimming in the ocean, watching a sunrise and sunset over water on the same day from the same spot and countless other experiences. I hope someday my grandchildren can experience the same things.
 However, the National Park Service has made some of those experiences very difficult. The 800+ page DEIS plan for ORV management is very disappointing. While it is massive in size it misses the mark in being responsive to visitors to CHNSRA. The CHNSRA was originally established as a seashore recreation area for the citizens of the United States and visitors from around the world. Every option presented in the DEIS seeks not to extend and enhance the access to this wonderful national recreation area but instead seeks to limit access by visitors in ORVs and pedestrians. The DEIS claims to solve several non-problems like visitor conflicts (never seen any), damage to turtle nesting (only one incident where less than a handful of turtle eggs and hatchlings were injured representing a fraction of one percent of the mortality), protect shore bird nesting (better than Pea Island Wildlife Sanctuary where no ORVs) and on and on.
 Not only has the NPS published this huge DEIS but they never once held a public information meeting to explain the document or the science behind the decisions made in the various options. The document consistently proposes huge "buffers" around various wildlife that is totally unnecessary and not required by law. This is done without peer reviewed science to substantiate the "buffers" used and is not consistent with other national parks and wildlife areas. It is appalling that the NPS would suggest in several of the options that areas of a national recreation area be close to all human activity on the seashore.
 Since it would be impossible to comment on all 800+ pages of the DEIS, I will focus on the "NPS Preferred Option F". The NPS proposes huge and unnecessary "buffers" around piping plover nests and hatched chicks. There is no evidence whatsoever that indicates up to 1000 meters buffer is needed for a hatched chick the size of a sparrow. Nor does the NPS suggest any solution to these piping plover "buffers" blocking vast areas of the seashore to any human activity. Beyond the discussion of piping plover "buffers", the NPS has proposed large "buffers" around birds that have no legal protection status and often nest in close proximity to significant human activity like shopping centers and Highway 12.
 The very large majority of mortality to both birds and endangered turtles occurs not from human activity but from natural predators and weather events. The NPS and the USFWS have killed hundreds of "predators" of birds and turtles to little avail. There is in fact little difference in the breeding success of birds and turtles from the 1978 de facto ORV plan versus the very restrictive Consent Decree plan. Those years when breeding and hatching were poor were a result of weather events with no im[pact from ORVs or pedestrian activity.
 The NPS preferred "Option F" fails to suggest plans to assure turtle nests are properly relocated above possible tidal events. This is a simple procedure done along the Atlantic Coast to assure healthy hatching of the eggs. ORVs have had a negligible effect on turtle nests and in fact many ORV users have assisted in identifying and protecting turtle nests. Again, natural predators like herring gulls and ghost crabs account for many lost nests and hatchlings not human activity. Nor is there any scientific evidence that night driving on the CHNSRA beaches has had any negative effect on false crawls or hatchling escapement to the ocean. In fact, the false crawls on CHNSRA are often better than those experienced on the Pea Island Wildlife Refuge where no ORVs are allowed.
 The "Option F" fails to recognize that there has been significant migration of bird populations to dredge and spoil islands behind Bodie Island, Pea Island, Hatteras Island and Ocracoke Island. These islands are in many cases a few hundred yards from the barrier islands and afford superior breeding locations to the seashore because there are few natural predators with protection from severe weather events.
 I cannot comment on the economic analysis done in the DEIS except to say the various businesses on Hatteras Island and Ocracoke Island indicate significant down turns in their business since the consent decree was enforced with many either out of business or for sale due to lack of patronage. In conclusion, I disagree with the many options presented in the DEIS since they fail to be responsive to the wishes of the vast majority of visitors to CHNSRA. These wishes are to have extensive access to the seashore not restricted access. The options presented will severely negatively impact the visitor experience particularly those who wish to enjoy the beach in the peak season of summertime. The NPS has failed to recognize CHNSRA as a recreation area for everyone to have access to the beach. The NPS suggests that "Option F" provides 52 miles of "open beach" but conveniently ignores the fact that nesting birds with huge "buffers" can virtually close miles and miles of "open" beach because there is no access route. This has happened consistently in the last 5 years. Nor has the DEIS even addressed sound side access in CHNSRA to any large degree. It is sad that our NPS would publish such a huge document that is so unresponsive to the desires of the people of North Carolina, those who so faithfully participated in the reg - neg

process and the rest of Americans.

Correspondence:	<p>Dear Superintendent Murray,</p> <p>As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.</p> <ol style="list-style-type: none"> 1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations." 2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness...." Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources. 3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals. <p>Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.</p>

Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.</p> <p>This alternative plan would provide more oppourtunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.</p> <p>The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:</p> <ul style="list-style-type: none"> *Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park. * Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be 						

0012712

consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.

* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
I agree strongly with all the sentiments expressed below. As someone who lives in NJ, I have seen what development has done to our coastline. You are so lucky to still have large stretches of undeveloped barrier islands and beaches and you should protect them for the jewel they are!
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: Thank you for the opportunity to comment on the Cape Hatteras National Seashore Off-Road Vehicle Negotiated Rulemaking and Management Plan/EIS.
Please protect the rare birds and sea turtles for which Cape Hatteras is famous and ensure equal access for people who choose to visit the Seashore on foot. There are plenty of places with roads for driving, but not enough places for those who wish to walk and for wildlife to be protected from vehicles and the damage they inflict upon the land. Please ensure that unregulated ORV use will end here.
Thank you, Dawn Serra Missoula, MT

Correspondence: My family and I enjoy the ability to drive on the beaches of NC. We also know there should be some restrictions to access to protect wildlife and such. However access should be allowed. I would suggest that the vehicles being allowed on MUST be in good repair and not leaking fluids. If a vehicle is found to be leaking or contaminating the beach, there should be heavy fines by Law Enforcement. Being able to drive on and use our beaches should be a right and privilege. 40% usage seems fair to me. Please consider keeping the access to the beaches open and just make stricter vehicle requirements and fine for violations.
Thank you, Kurt A. Henderson

Mike Murray Superintendent Cape Hatteras National Seashore 1401 National Park Drive Manteo, NC, 27954
Dear Mr. Murray: As owners of a rental house property in Avon, NC, I have some serious issues with the Off-Road Vehicle Management Plan prepared by the National Park Service (NPS) for the Cape Hatteras National Seashore Recreation Area. My comments on the proposed plan are as follows. X Page 201: I disagree with the NPS statement: "Even with resource closures in place, protected species are still at risk [from pedestrians and ORVs]." No Piping Plover deaths have been attributed to ORVs. ORV violations continue to decrease as signage and education improve. Pedestrian violations are much more significant than ORV violations. It appears that transgressions into protected area are more the result of lack of NPS manpower and

enforcement, not the public purposely and willfully violating out of bounds areas.

X Page xxiv: I question the statement of as per the DEIS: "Carrying capacity would be a 'peak use limit' determined for all areas based on the linear feet of beachfront?" Your proposal basically reduces the beach square footage available for beach users, potentially leading to more wear and tear on open beaches as well as turning the Hatteras beach experience into something more resembling the overcrowded beach experiences of Northern beaches such as Virginia Beach or Ocean City.

X Page xix and page 23: I am against having two different closures rules pertaining to the North facing beaches (North side) and the South facing beaches (South side) as per the grid outlined in Alternative "F". I disagree with the NPS proposal to close the beaches in villages of Frisco, Hatteras and Ocracoke Villages to ORV access longer than the traditional May 15 to September 15 period for the Northern beaches, even though seasonal visitor statistics are similar for all villages. Please, make them the same: May 15 -> September 15.

X Page 121 ? 127. I strongly disagree with the buffers as presented. We must allow for pass-thru corridors. The beach is linear with the ocean buffering on one side and the dune line on the other. For example - If you pinch off access on one side of a 4 mile linear beach and pinch off access on the other side of the 4 mile section of beach with no corridor, then you effectively have closed off all 4 miles of the beach because you CAN NOT get there. The proposed bird buffers are too large, blocking access to the interior sections from the two "buffered" ends. I propose ORV pass-thru only corridors and to use breeding / nesting buffer distances to establish ORV pass through only corridors to ensure beach access in a way that does not hinder resource protection. I believe pass through corridors should be maintained for pedestrians and ORVs in all areas of the Cape Hatteras National Seashore Recreational Area throughout the entire breeding and nesting season. Corridors are vital to providing access in a way that does not hinder resource protection. Piping Plover unfledged chicks buffer should move with the brood as it relocates to reliable food source, not expanded. The proposal makes at best an extremely weak scientific case for the need for 1,000 meter distances for the piping plover. It appears to be based on "best guess" science, which isn't science at all. A more rational distance, with precedent at other locations in the nation, would be 200 meters for the piping plover. Ample scientific evidence and precedent exists to support a 200 meter buffer. Buffers for other species, including American Oystercatchers, Least Terns and Colonial Waterbirds must also be changed. An effective 30 meter buffer should be established for these species rather than the 300 meter closure outlined in the DEIS. Non-endangered birds should not have same protection as if endangered. Not allowing ORV access is paramount to denying the public access to these beaches.

X Page 468: I disagree with the limitations imposed on pedestrian and ORVs. Corridors or bypasses should be provided thru, around or below high tide line in all SMAs during entire breeding season to maintain access.

X Page 124: I strongly disagree with the NPS slant of favoring over protection of resource management over the public's right to access the beaches. Pro-active initiatives include: Vegetation Management, Habitat Management, Enhanced Predator Management, Colonial Water bird social attraction, Piping Plover check fledge rate, Piping plover chick buffer distance, and pass-through buffers during the incubation period. Opportunities to implement less restrictive closures as a result of the above initiatives should be considered MORE FREQUENTLY than the 5-year periodic review process identified in the DEIS.

X I disagree with the NPS Resource Management Pedestrian / ORV Closure Policies. These policies address the least significant factors affecting nest survival with little chance to have more than negligible impact. For example: the AMOY Nest Failures are predominately due to non-human events. Using your own stats, the mammalian predation is 54%, Storm / Lunar Tides: 29%, Nest Abandonment: 6%, Avian Predation: 5%, and Ghost Crab Predation: 3%. The percentage due to human interference is a mere 3%. This is insignificant, yet the NPS wants to ban humans when their actions provide very little influence on the success rate of breeding birds and turtles. This smacks of environmentalists running loose with the facts and pushing their own agenda.

X I disagree with the stats of breeding plovers and the other birds in the Park when the NPS does not adequately consider locations neighboring the Recreational Area that are part of the same ecosystem, namely dredge and spoil islands that are located just yards away and within sight of the seashore. These birds are part of the same ecosystem and should be included. Those spoil islands, developed by man from dredging the waterways in the Pamlico Sound for channel upkeep are full of birds. The reason why so many birds? NO predators. These birds should be counted and incorporated in the stats when the NPS addresses the "decline in breeding pairs" in the National Park. The ORV Management plan is supposed to be an objective document. It becomes less so when the NPS statisticians ignore applicable statistics in their analyses. It lends the appearance of the NPS pushing its own agenda.

X Pages 270-281; 561-598: I totally disagree with your flawed economic analysis of the impact of the DEIS. The region of influence (ROI) incorporates the Northern Beach communities, including Kill Devil Hills, Kitty Hawk, Southern Shores and Duck. These areas are almost completely disconnected from ORV use and access issues relating to the Seashore. Inclusion of the Northern Beaches in analysis significantly dilutes estimates of economic impact on the 8 Seashore Villages. Analysis of economic impact to the Seashore Villages appears to be significantly down played. Emphasis in DEIS is on the ROI-wide or county-wide level impacts. Nowhere is it clearly addressed that the overwhelming majority of negative impacts will be felt by small businesses in the Seashore Villages rather than by overall economic interests within the greater ROI.

X On page xlvi, Alternative F is characterized as having a "negligible to moderate" adverse impact on small businesses. I strongly disagree with this statement. I believe the negligible to moderate projection is inaccurate. It relies on economic surveys that have yet to be published. Furthermore, this material is not expected to be added to the DEIS until after the public comment period has ended. This does not appear to be an innocent scheduling issue but more of a premeditated attempt to ram through the preferred NPS plan prior to providing the public the option to access all the pertinent facts. Again, the NPS is supposed to be impartial, not pushing an agenda. Based upon the economic harm we have already experienced under the consent decree, Dare County projects the economic impact of Alternative F to be substantial. Beach closures have already had a devastating and unfair impact on many Dare County Businesses, causing foreclosures, bankruptcies, lay-offs, cutbacks, expensive refinancing, and impacted vacation rentals. Pages 270-286, 561-598: The socio-economic data and analyses are incomplete and erroneous and result in an understatement of the effect the restrictions will have upon the Island, the region and the state of NC. The US Park Services answer: Businesses will have to "adapt" to the new rules. (p.383) The negative economic impacts of the decree ARE KNOWN, so to say that the added restrictions would have negligible to moderate impact is indefensible. Overall Visitor Counts - Overall visitor counts appear to include visitors to Fort Raleigh National Historic Site and the Wright Brothers National Memorial. A large percentage of these visitors vacation in the Northern Beaches communities and recreate on the non-federal beaches outside of the Seashore. Visitors who patronize the Fort Raleigh National Historic Site and the Wright Brothers National Memorial but do not visit the actual seashore areas need to be factored out. Again, don't pick and choose the statistics to match what you want your conclusions to be. The definition of the Region of Influence (ROI), faulty data on economic activity generated by specific type recreational activity, incomplete visitation/business survey data, inflated overall Seashore visitor counts pertaining to beach use, and flawed key assumptions concerning the maintenance of access under Alternative F, all lead to inaccurate conclusions in the socioeconomic analyses. Specifically, these inaccuracies can be seen as understating the negative socio-economic impact of the Seashore Villages. Further, this negative impact will be absorbed almost entirely by Small Businesses. Neither of these important aspects of the management alternatives are adequately presented in the DEIS.

X Pages 125; 392 ? 396: SEA TURTLES. I disagree with the stats and procedures proposed. I think endangered sea turtles would benefit from management practices now in use at other federal seashores that are more proactive in efforts to achieve nesting success. This includes relocating nests to more desirable locations as is done in other state and federally controlled areas. The Cape Hatteras National Seashore Recreational Area is on the northernmost fringe of turtle nesting locations for the southeast, accounting for about 1% of all turtle nests. Proposed buffer areas are not needed for protection of the turtles and amount to overprotection.

X Pages 97- 101. I strongly disagree with proposals in this section saying that ORVs will be prohibited year round between ramps 27 and 30, at Hatteras Inlet (Hatteras Spit), Ocracoke Inlet (North Ocracoke Spit) and various other locations. Not allowing ORV access is paramount to denying the public access to these beaches. They are located miles from the nearest parking or paved road area and too far to access on foot. As a matter of course, there has been no breeding of piping plover or other endangered species at the Hatteras Island Inlet (spit) area in the past 6 years.

X Page 104: I disagree with the proposed night time driving closures. Per your proposals, night driving will be prohibited between May 1 and November 15th, forcing visitors off of the beaches early in the evening and preventing sunrise surf fishermen access in the morning. I propose a more moderate night time ban if one is needed, perhaps from June 1 ? September 15 with times being 1 hour after sunset and 1 hour before sunrise to allow beach goers to gather their stuff and exit the beach area. Certainly more proactive measures such as relocating nests prone to weather and ocean events would dramatically increase the nesting success rates.

X Page 121: I disagree with the proposed beach closings, including pedestrian access from March 15 until July 31 in 8 different beach locations which have traditionally been available. Please leave these areas open to beach walkers, shell collectors and those that want to access the beaches in these

areas.

In summary, please incorporate access corridors through any SMA so we can get to the open beach beyond. Incorporate the birds that nest on the spoil islands into the count. Base buffer zone recommendations on peer reviewed science and scale said zones back to more reasonable (and defensible) distances. It is neither logical nor reasonable to spend so much time, money and energy to overprotect a bird (Piping Plover) in the Cape Hatteras National Seashore that is on the southernmost fringe area of its breeding ground. That goes for the loggerhead turtle that is in its northernmost breeding area. Let's scale back the buffer zones. You can always increase at a later date. The USPS proposal appears to be driven by an agenda?return the beaches to wildlife with little regard for human use of the beach. The USPS is leaning way over the line on over protection and not enough on the public's right to enjoy the beaches of the National Seashore. The proper balance is not achieved in the propose DEIS and needs to be modified so the balance of reasonable resource protection and access to the beaches of the National Park is achieved. Thank you,
Steven Hussmann

Correspondence: I would like to start off thanking you for listing to me a tax paying, voting, community volunteer and citizen of the Cape Hatteras National Sea Shore. I have a few but strong complaints regarding the proposed NPS DEIS. Limited Pedestrian Access (p.468) Pedestrian corridors or bypasses should be provided thru, around or below the high tide line in all SMAs during entire breeding season to maintain access. Large, Inflexible Buffers (p.468, 121-127) 1000m is NOT ok. Buffers should move with the brood as it relocates to reliable food source, not expanded. Pet / Horses Restrictions (p.136) These are not OK. Pets should be allowed in the Villages and adjacent beaches year round. Official Studies and numbers should be provided to evaluate the effectiveness of current and future closures. Currently there is no peer reviewed scientific studies that back the current data used in the creation of this plan, and that going forward with anything that restricts any access should be validated by multiple sources.

Correspondence: Dear Mr. Murray ?
Thank you for this opportunity to comment on the Draft Cape Hatteras National Seashore (CHNS) Beach Off-Road Vehicle (ORV) Beach Access Plan/Environmental Impact Statement (DEIS). As a long time environmental activist in North Carolina as well as an avid beach enthusiast and surf fisherman, I urge you to carefully consider my comments. The management strategies adopted in the Final EIS will have implications for both resource management and the visitor experience at CHNS for decades to come.
Under your leadership, the DEIS represents an earnest attempt to balance ORV use, pedestrian access, and resource management under a difficult and divisive negotiating climate exacerbated by a lawsuit which resulted in recent CHNS management per conditions outlined in the so-called "consent decree". In general, it appears that NPS has deferred to the consent decree as the basis for many of the management strategies recommended in Alternative F (the NPS Preferred Alternative) in the DEIS. I believe that this reliance on the consent decree, while well-intentioned, is inappropriate. The EIS/ORV Access Plan represents an unprecedented opportunity for NPS to manage CHNS more intelligently, and more adaptively and responsively, in a way which maximizes both resource management and enhanced visitor accessibility. Additionally, NPS has an obligation to manage CHNS based on sound and defensible science. Unfortunately, several of the management strategies recommended in the DEIS are not scientifically defensible and, while NPS has made commendable efforts toward adaptive management of ORV access on CHNS, other opportunities have been missed. My numbered comments below address these shortcomings of the DEIS and provide recommendations for improvement.
1. Unwarranted closures and buffers for species that are not federally-listed as endangered or threatened. American oystercatchers, Wilson's plover, and colonial waterbird species are afforded pre-nesting closures and buffers of up to 300 meters in NPS Preferred Alternative F of the DEIS. While these species are not federally-listed as endangered or threatened, they may be state-listed by the North Carolina Wildlife Resources Commission (NC WRC) as "species of concern". The executive director of the NC WRC recently expressed the state's objections to the use of its "species of concern" designation to trigger ORV management strategies under the federal Endangered Species Act, as currently reflected in the DEIS (<http://hamptonroads.com/2010/05/orv-plan-gives-too-much-space-some-species-critics-argue>). A "species of concern" designation is not intended to trigger active management measures and surely not the excessively large closures recommended. The referenced species are designated as "Least Concern" by the International Union for Conservation of Nature (the designation corresponding to the lowest risk of extinction; for reference, humans are also an IUCN species of Least Concern). Considering the abundance of these species, as indicated by their conservation status, pre-nesting buffers are not warranted and should not be in the preferred alternative. Additionally, temporary closures, if provided, should be no greater than 30 meters and include ORV corridors around them.
2. Excessive closures for threatened piping plover. Unprecedented large, inflexible buffers of up to 1000 meters are afforded unfledged piping plover chicks under NPS Preferred Alternative F of the DEIS. As presented in the DEIS, 1000 meter buffer distances are not scientifically supportable and should be reduced to no more than 200 meters. Additionally, the buffers for unfledged piping plover chicks buffer should move with the brood as it relocates to reliable food source, not expanded.
3. Unjustified permanent closures. The beaches adjacent to Hatteras Inlet on both Hatteras and Ocracoke Islands as well as the beach between Ramp 27-Ramp 30 in Salvo are proposed for permanent ORV closure under NPS Preferred Alternative F of the DEIS. The implied need for these permanent closures is arbitrary and not scientifically supportable. Rather, closures should be based on species monitoring during the breeding season. From a resource management standpoint, the Hatteras Inlet closures fail to recognize the shorebird habitat provided by dredge/spoil islands behind the inlet and in the adjacent sound. Likewise, the Ramp 27-Ramp 30 closure fails to recognize both the resource benefits and pedestrian visitor opportunities provided by the approximately 15 miles of ORV-free beach just a few miles north at Pea Island National Wildlife Refuge (PINWR). Habitat and visitor access management scenarios for the proposed Ramp 27-30 closure (as well as the proposed floating closure in this area) and the ocean beaches in PINWR are nearly identical, emphasizing that new beach closures between Salvo and Avon in CHNS are not necessary.
4. Unwarranted prohibition of pets in CHNS during bird breeding season. The prohibition of pets in CHNS between March 15 and July 31 is severe and unwarranted and likely to result in serious economic consequences for Hatteras and Ocracoke Islands, consequences that do not appear to have been considered in the socioeconomic analysis presented in the DEIS. Properly leashed pets should continue to be allowed in CHNS (with the exception of closed areas) during the breeding season.
5. Insufficient use of corridors through resource closures. Corridors are only allowed in Management Level 2 (ML2) portions of Species Management Areas (SMAs) and are subject to resource closures at any time under NPS Preferred Alternative F of the DEIS. Corridors are a vital adaptive management tool for providing access while protecting resources and should be used to the extent possible in NPS' Preferred Alternative. Corridors should be permitted throughout the seashore during the entire breeding and nesting season including Management Level 1 (ML1) portions of SMAs, even if they are only "pass-through" corridors.
6. Insufficient socioeconomic analysis. The baseline socioeconomic analysis does not recognize the de facto plan that was in place in the years leading up to the "interim plan", unofficial only because of bureaucratic failures. The DEIS should have an No Action Alternative that reflects the regulations being enforced in 2004 that were adopted from the 1978 draft plan with updates through superintendents' compendiums. The cumulative impact of the NPS' Preferred Alternative F policies on the visitor experience and the regional economy should be assessed relative to this pre-interim plan baseline. Additionally, the region of influence (ROI) used for the socioeconomic analysis is inappropriately broad. In particular, visitors to the northern beaches (Nag's Head north) are not as reliant on the CHNS beaches affected by the DEIS, and should not be included in the ROI. The ROI should only include seashore villages adjacent to CHNS, from South Nag's Head down through Ocracoke Village.

Thank you for your consideration of my comments on this critically important Draft Cape Hatteras National Seashore (CHNS) Beach Off-Road Vehicle (ORV) Beach Access Plan/Environmental Impact Statement (DEIS). I look forward to an improved Final EIS that incorporates the concerns expressed above.

Sincerely, Victor A. D'Amato

Correspondence:	Re the DEIS - Why are the terms of the consent decree the strating point for this document ? Why isn't the Interim Plan considered as a starting point? I disagree with the need to close Hatteras Inlet, the Northern end of Okracoke Island and the area from ramp 27-30 in Salvo. American Oystercatcher - Why is a non-endangered species allocated such large closures ? NPS does not include locations adjacent to Cape Hatteras National Recreational Seashore such as Pea Island Wildlife Refuge when determining non-ORV accessible areas ? Pea Island provides pedestrian (p. 124)only access as well as habitat for protected species. The dredge islands adjacent to Hatteras Island also provide relatively predator free habitat for birds. NPS does not relocate turtle eggs regardless of the continual failure rate experienced presently. Other areas have greater success with relocation. (p. 86-87, 396-397). Why does the NPS remove predators instead of removing the NPS created habitat that harbors predator? I strongly disagree with the prohibition of pets (p. 136) from the recreational areas of this park. Why doesn't the NPS publish a list of incidents that occured between motorizd and non-motorized recreational users? IF such list exists. (p VI) Why doesn't the NPS publish a list of Piping Plover deaths attributable to ORV use? (p.210) TO improve Resource Protection and Visitor access the NPS should

Correspondence:	Mike Murray, Superintendent Cape Hatteras National Seashore Recreational Area 1401 National Park Drive Manteo, NC 27954 Dear Superintendent Murray, Please accept this letter as my comment on the ORV DEIS before you at this time. I have been coming to the Outer Banks since 1958 and have been a property owner in Frisco, NC since 1986. I have reviewed the National Park Service DEIS and I do not agree with any of the six alternatives contained in the document. I have read and agree with the positions taken by the Dare County Board of Commissioners in their DEIS Position Statement. I have also reviewed the 77 page Coalition for Beach Access Position Statement signed by several groups that were a part of the negotiated rule making process and it by far succeeds in furnishing the best visitor experience while still protecting the fragile resources. Please consider all aspects of this alternative and use generally accepted science to guide you in establishing restrictions on access to Cape Hatteras National Seashore. Stephen Munson 531 King Charles Circle Summerville, SC 29485 stephenmunson@bellsouth.net (843)871-2235

Correspondence:	I would like to respond to the Cape Hatteras National Seashore Recreational Area DEIS. I strongly disagree with many parts of the NPS preferred option F in the 810 page DEIS. I believe thst a more rational balanced resource protection plan should be implemented, that would provide more resonable access for recreational purposes. Listed below are my comments on four of the issues: 1. Closures are so extreme under plan F, (pgs xii,xvii,468) as to render most of the recreational areas non-accesable. I believe that all closure areas should have at least one access corridor, whether it be on the ocean side or sand side, that would allow pedestrian and vehicular access to recreational areas that would otherwise be inaccessible due to closures on either side of them. 2. The proposed management buffer zones for the Piping Plover unfledged chicks (1000 meters in all directions or 770 acres)is so extreme that it borders on the absurd. (pgs 121-127) Giving 300 meters or about 250 acrea buffer zones for Oystercatchers, Least Terns and Colonial Waterbirds, when they are not threatened or endangered, is arbitrary and unsubstantiated by any science. Unthreatened birds should not be warranted this protection. The buffer zones should also be monitored throughout the breeding season to ensure that the area is infact a nesting ground and warrants protection. If it is not an active nesting area it should be reopened the public. Additionally, all bird monitoring and bird counts should encompass all of the ecosystem.					

The dredge islands are part of the parks ecosystem and should be included in all studies and monitoring. Since no predators exist on the islands, and if I was a bird, that's where I would nest.

3) Turtle management practices (pgs 125, 392-396) should take into account the very high nest loss in the park (46% in 11 yrs) Since only 1% of the turtle nests in the southeastern US are found in North Carolina and approximately one nest per 1.7 miles of park, it would seem more logical and essential for lower nest loss and subsequently higher turtle survival rates, that nest relocation is the answer. An even stronger argument is made for relocation of turtle nest when one realizes that relocation is a standard practice at Pea Island National Wildlife Refuge which is on Hatteras Island. Relocation would thus free up more beach for recreational purposes. The NPS DEIS should look at and take into account the Florida Fish and Wildlife Conservation Commissions handling of turtle nests, since their beaches have 91% of all turtle nest in the southeastern US. They do not have buffer zones around nest. Some beaches permit off road vehicle traffic and allow beach goers to recreate within feet of the nests. They have found that successful hatch and recovery depends on solutions to real problems-loss of nests due to high tides from weather events, failure to relocate nest, and predation, not human activity.

4. The DEIS devotes only 2 paragraphs in the 810 page document to the economic consequences of the preferred alternative F.(pg xllviii) The economy on Hatteras Island is based on tourism and the beach draws the tourists. Their is nothing else that employs the residents. To describe the impact of this alternative as have negligible to moderate impact on the Island economy is a gross understatement The consent decree and its closures have already severely hurt the Island. This plan with its buffers, closures and restrictions would be devastating. Two paragraphs in the DEIS does not satisfy the socioeconomic analysis required by the law. Where are the economic surveys that are required in this DEIS?

In closing I would like to say that I believe in a rational approach to environmental issues. The creatures of the park are entitled reasonable space. But Cape Hatteras National Recreational Area should be devoted to citizens enjoying, relishing, and recreating on an open unencumbered beach, devoid of massive development or unrealistic restrictions. It is ironic that NPS's alternative F is substantially more restrictive to people than Pea Island National Wildlife Refuge which is the wildlife refuge on Hatteras Island. This makes no sense to me!

Thank You for your time and allowing me to comment.

Correspondence: Dear Sirs:
I am sincerely glad you are requesting input on a subject which effects so many of the people of this state. I know there needs to be balance between use of the park and protection of the habit. However, I feel that a park which the public can not use has a limited useful life because people will stop funding it and in the long run both the park and the people lose. If people are required to walk across the dunes more damage will be caused to the habit than allowing vehicle access to certain areas. A wise decision is required to reach a good compromise. I enjoy driving on the beach and have limited ability to walk a great distance to reach the ocean at the park. I have great hope a good compromise can be reached on this subject.

Correspondence: I am writing as a concerned native of Eastern NC. Closing these beaches is a statement to the local people that the NC legislature has once again put others goals and economies ahead of theirs once again. These beaches are a very large part of the valued culture of eastern North Carolinians. I wont elaborate on the economic aspect of the lost dollars for tourism, that should be obvious by now. Once again, there has been underhanded methods of keeping local people from voicing there opinions. If not the red tape all over the proposals that is IMPOSSIBLE to navigate or understand just what is outlined, you have the media. Please answer one question. Has there been a single article or news report on television that tells you how or where you should go to voice your opinion. Sure the local outlets have made an attempt but just do an internet search on the comment deadline and I challenge you to find JUST ONE article that tells you where to submit your comments and opinions. Its nearly impossible for relocated locals as myself to voice my opinion. Not to mention, most articles only say the beaches are closed to driving....sounds like no big deal right? Funny they fail to mention just what is being proposed, no human body whatsoever can enjoy the beach wether it is walking or driving. In conclusion, I will sat that closing these beaches is a slap in the face to the local people of eastern NC that says our governing bodies do not care about our well being. I guess if we are not in Raleigh or Chapel Hill, we dont matter.

Correspondence: DEIS Management, Having had the opportunity to have and hold the entire 800 page monstrosity of an impact statement,my hat is off to all that contributed to this effort.It had to have been a lot of work. I want to see the most stringent controls placed on ORV use in the Park not because I'm anti ORV per say,but because I want to see the Resource protected in accordance with the enabling legislation that created this entity in the first place. Id like to believe that in 50 or 100 years,or 5 for that matter, a person could come to this park and have a symbolence of a wild beach experience,complete with the plants and animals that belong here.So if I have to choose one of your alternatives,it would be Alternative D. Thanks for the opportunity to comment. Spencer Gregory Avon, NC

Correspondence: My comments concern the DEIS of the Off-Road Vehicle Management Plan prepared by the National Park Service (NPS) for the Cape Hatteras National Seashore Recreation Area.
1) Page 201: I disagree with the NPS statement: "Even with resource closures in place, protected species are still at risk [from pedestrians and ORVs]." No Piping Plover deaths have been attributed to ORVs. ORV violations continue to decrease as signage and education improve. Pedestrian violations are much more significant than ORV violations. It seems to me that any transgressions into protected area are the result of lack of NPS manpower and enforcement than the public purposely and willfully violating out of bounds areas.
2) Page xxiv: I question the statement of as per the DEIS: "Carrying capacity would be a 'peak use limit' determined for all areas based on the linear feet of beachfront?" If you close off huge sections of the beach, you force more people into smaller areas, potentially resulting in more resource impairment and diminished visitor experience.
3) Page xix and page 23: I am against having two different closures rules pertaining to the North facing beaches (North side) and the South facing beaches (South side) as per the grid outlined in Alternative "F". I disagree with the NPS proposal to close the beaches in villages of Frisco, Hatteras and Ocracoke Villages to ORV access longer than the traditional May 15 to September 15 period for the Northern beaches, even though seasonal visitor statistics are similar for all villages. Please, make them the same: May 15 -> September 15.
4) Page 1: I agree with your statement "ORVs have long served as a primary form of access for many portions of the beach in the seashore, and continue to be the most practical means of access and parking for many visitors."
However, pedestrian only areas discriminate against individuals with limited mobility due to age or physical impairments, families with small children, and those wishing to engage in activities requiring recreational equipment (boogie boards, beach umbrellas, beach chairs, coolers, fishing rods and

tackle, etc)

5) Page 53: I disagree with the special use permit proposed guidelines. It is impractical to allow the transportation of disabled visitors to the village beaches and then require the vehicle to be returned to the street or parking area. This necessitates the disabled person to have a driver to drop him (or her) off, then drive to a parking area, then trudge a long distance to the site of the drop off, then trudge the long distance through the sand back to get the vehicle.

Suppose the handicapped person wants to go to the beach, is capable of driving himself, yet cannot find another person to go with him? Does he now not go to the beach? This rule creates unnecessary hardships and risks in the event of an emergency as well.

6) Page 121 ? 127. I strongly disagree with the buffers as presented. We must allow for pass-thru corridors. The beach is linear with the ocean buffering on one side and the dune line on the other. For example - If you pinch off access on one side of a 4 mile linear beach and pinch off access on the other side of the 4 mile section of beach with no corridor, then you effectively have closed off all 4 miles of the beach because you CAN'T get there. The proposed bird buffers are too large, blocking access to the interior sections from the two "buffered" ends.

I propose ORV pass-thru only corridors and to use breeding / nesting buffer distances to establish ORV pass through only corridors to ensure beach access in a way that does not hinder resource protection. I believe pass through corridors should be maintained for pedestrians and ORVs in all areas of the Cape Hatteras National Seashore Recreational Area throughout the entire breeding and nesting season. Corridors are vital to providing access in a way that does not hinder resource protection.

Piping Plover unfledged chicks buffer should move with the brood as it relocates to reliable food source, not expanded.

The 1,000 meter distance for the piping plover is way too large and not based upon peer reviewed science. A more rational distance would be 200 meters per other sites in the nation for the piping plover. Ample scientific evidence and precedent exists to support a 200 meter buffer.

Buffers for other species, including American Oystercatchers, Least Terns and Colonial

Waterbirds must also be changed. An effective 30 meter buffer should be established for these species rather than the 300 meter closure outlined in the DEIS.

NON-ENDANGERED BIRDS should not have same protection as if endangered. Not allowing ORV access is paramount to denying the public access to these beaches.

7) Page 468: I disagree with the limitations imposed on pedestrian and ORVs. Corridors or bypasses should be provided thru, around or below high tide line in all SMAs during entire breeding season to maintain access.

8) Page 124: I strongly disagree with the NPS slant of providing for over protection of resource management over that of the public's right to access the beaches. Pro-active initiatives include: Vegetation Management, Habitat Management, Enhanced Predator Management, Colonial Water bird social attraction, Piping Plover check fledge rate, Piping plover chick buffer distance, and pass-through buffers during the incubation period. Opportunities to implement less restrictive closures as a result of the above initiatives should be considered more frequently than the 5-year periodic review process identified in the DEIS.

9) I disagree with the NPS Resource Management Pedestrian / ORV Closure Policies. These policies address the least significant factors affecting nest survival with little chance to have more than negligible impact. For example: the AMOY Nest Failures are predominately due to non-human events.

Using your own stats, the mammalian predation is 54%, Storm / Lunar Tides: 29%, Nest Abandonment: 6%, Avian Predation: 5%, and Ghost Crab Predation: 3%,

So what is the percentage due to human interference: just 3%! It's insignificant, yet the NPS wants to ban humans when their actions provide very little influence on the success rate of breeding birds and turtles.

10) I disagree with the stats of breeding plovers and the other birds in the Park when the NPS does not adequately consider locations neighboring the Recreational Area that are part of the same ecosystem, namely dredge and spoil island that are located just yards away and within sight of the seashore. These birds are part of the same ecosystem and should be included.

Those spoil islands, developed by man from dredging the waterways in the Pamlico Sound for channel upkeep are slammed full of birds. The reason why so many birds? NO PREDATORS. SO, birds are not as stupid as one might think. You have to count these birds and incorporate them in the stats when the NPS is talking about any so called decline in breeding pairs in the National Park.

11) Page 1: I do not think the DEIS responsibly addresses the cultural resource issues. The very purpose of the DEIS as set forth in the National Environmental Policy Act (NEPA) is to protect and preserve natural and cultural resources in the federal decision making process. In the DEIS, the statement "protect and preserve natural and cultural resources" appears in the first sentence of the first page of the plan, in the Purpose of the Plan section, and numerous times thereafter. Yet, the 810 page document devotes only two paragraphs to analysis of cultural resource issues.

As a lifelong resident of Hatteras Island, we of the Hatteras Island community have always gotten together on the south beach on Sunday to enjoy the beach with our cookouts, gatherings, surf bathing, horse shoes and foot races, fishing, and surfing. Now the DEIS is proposing closing off most of the south beach during the summer which is the traditional period we local people use the beach. The continuation of this traditional pattern of land use is central to maintaining the historic identity of our island communities.

12) Pages 270-281; 561-598: I strongly disagree with your economic analysis of the impact of the DEIS. The region of influence (ROI) incorporates the Northern Beach communities, including Kill Devil Hills, Kitty Hawk, Southern Shores and Duck. These areas are almost completely disconnected from ORV use and access issues relating to the Seashore.

? Inclusion of the Northern Beaches in analysis significantly dilutes estimates of economic impact on the 8 Seashore Villages

? Analysis of economic impact to the Seashore Villages appears to be significantly down played. Emphasis in DEIS is on the ROI-wide or county-wide level impacts.

? Nowhere is it clearly addressed that the overwhelming majority of negative impacts will be felt by small businesses in the Seashore Villages rather than by overall economic interests within the greater ROI.

On page xlvi, Alternative F is characterized as having a "negligible to moderate" adverse impact on small businesses. I strongly disagree with this statement.

I believe the negligible to moderate projection is inaccurate and relies on economic surveys that has not yet been published. Furthermore, this material is not expected to be added to the DEIS until after the public comment period has ended.

Based upon the economic harm we have already experienced under the consent decree, Dare County projects the economic impact of Alternative F to be substantial.

Beach closures have already had a devastating and unfair impact on many Dare County Businesses, causing foreclosures, bankruptcies, lay-offs, cutbacks, expensive refinancing, and depleted college funds and savings accounts.

Even businesses whose revenue has stayed level or showed a modest increase have accomplished this at a costly price. Many have had to cut back employee hours, forego much-needed capital improvements, and sacrifice profits. That is certainly the case with Hatteras Realty.

Pages 270-286, 561-598: The socio-economic data and analyses are incomplete and erroneous and result in an understatement of the effect the restrictions will have upon the Island, the region and the state of NC. The US Park Services answer: Businesses will have to "adapt" to the new rules. (p.383) The negative economic impacts of the decree ARE KNOWN, so to say that the added restrictions would have negligible to moderate impact is indefensible.

13) Overall Visitor Counts - Overall visitor counts appear to include visitors to Fort Raleigh National Historic Site and the Wright Brothers National Memorial. A large percentage of these visitors vacation in the Northern Beaches communities and recreate on the non-federal beaches outside of the Seashore. Visitors who patronize the Fort Raleigh National Historic Site and the Wright Brothers National Memorial but do not visit the actual seashore areas need to be factored out.

Maintenance of Future Access to Cape Point and South Point Ocracoke: All socioeconomic analyses related to Alternative F are predicated on the assumption that access corridors will remain open for at least an appreciable portion of the visitor high season. Under Alternative F, the access corridors will be subject to Resource Closures based on buffers similar or identical to the Consent Decree. Unless some predictability of access to Cape Point and South Point Ocracoke can be assured, economic analyses predicated on assumption of access are fundamentally flawed.

Why would a group of surf fisherman want to come to Hatteras Island to surf fish if they are not sure they can access the prime fishing grounds at Cape Point? The answer is they won't come. If they don't come, they don't rent vacation homes and spend their money on Hatteras and Ocracoke Islands.

The definition of the Region of Influence (ROI), faulty data on economic activity generated by specific type recreational activity, incomplete

visitation/business survey data, inflated overall Seashore visitor counts pertaining to beach use, and flawed key assumptions concerning the maintenance of access under Alternative F, all lead to inaccurate conclusions in the socioeconomic analyses. Specifically, these inaccuracies can be seen as understating the negative socio-economic impact of the Seashore Villages. Further, this negative impact will be absorbed almost entirely by Small Businesses. Neither of these important aspects of the management alternatives are adequately presented in the DEIS.

14) Page 136: I strongly disagree with your pet restriction proposals. The "prohibition of pets in the Seashore during bird breeding season including in front of the villages." = No Pets in public areas ?beaches, campgrounds, soundfront, foot trails, park maintained roads -from March 15 ?July 31. Hatteras Realty books approximately 13,000 rental weeks for a total of 91,000 rental nights housing approximately 700,000 visitors. The ban on pets to July 31 will seriously hurt the rentals of my vacation homes as our pet homes encompass about 30% of our rentals. I propose allowing pets on 6 foot leashes year-round in all areas open to pedestrians or ORVs.

15) Pages 125; 392 ? 396: SEA TURTLES. I disagree with the stats and procedures proposed. I think endangered sea turtles would benefit from management practices now in use at other federal seashores that are more proactive in efforts to achieve nesting success. This includes relocating nests to more desirable locations as is done in other state and federally controlled areas.

The Cape Hatteras National Seashore Recreational Area is on the northernmost fringe of turtle nesting locations for the southeast, accounting for about 1% of all turtle nests. Proposed buffer areas are not needed for protection of the turtles and amount to overprotection.

16) Pages 97- 101. I strongly disagree with proposals in this section saying that ORVs will be prohibited year round between ramps 27 and 30, at Hatteras Inlet (Hatteras Spit), Ocracoke Inlet (North Ocracoke Spit) and various other locations.

Not allowing ORV access is paramount to denying the public access to these beaches. They are located miles from the nearest parking or paved road area and too far to access on foot. As a matter of course, there has been no breeding of piping plover or other endangered species at the Hatteras Island Inlet (spit) area in the past 6 years.

17) Page 104: I disagree with the proposed night time driving closures. Per your proposals, night driving will be prohibited between May 1 and November 15th, forcing visitors off of the beaches early in the evening and preventing sunrise surf fishermen access in the morning. I propose a more moderate night time ban if one is needed, perhaps from June 1 ? September 15 with times being 1 hour after sunset and 1 hour before sunrise to allow beach goers to gather their stuff and exit the beach area.

Certainly more proactive measures such as relocating nests prone to weather and ocean events would dramatically increase the nesting success rates.

18) Page 121: I disagree with the proposed beach closings, including pedestrian access from March 15 until July 31 in 8 different beach locations which have traditionally been available. Please leave these areas open to beach walkers, shell collectors and those that want to access the beaches in these areas.

Conclusion:

Please, incorporate access corridors through any SMA so we can get to the open beach beyond. Incorporate the birds into the count that nest on the spoil islands. Base your buffer zones on peer reviewed science and scale them back to more reasonable distances as discussed.

It is neither logical nor reasonable to spend so much time, money and energy to overprotect a bird (Piping Plover) in the Cape Hatteras National Seashore that is on the southernmost fringe area of its breeding ground. That goes for the loggerhead turtle that is in its northernmost breeding area. Let's scale back the buffer zones. You can always increase at a later date.

The USPS is leaning way over the line on over protection and not enough on the public's right to enjoy the beaches of the National Seashore. The proper balance is not achieved in the propose DEIS and needs to be modified so that the proper balance of reasonable resource protection and access to the beaches of the National Park is achieved. I could sum it up by saying "Protect, not Prohibit."

Thank you,

A large percentage of these visitors vacation in the Northern Beaches communities and recreate on the non-federal beaches outside of the Seashore. Visitors who patronize the Fort Raleigh National Historic Site and the Wright Brothers National Memorial but do not visit the actual seashore areas need to be factored out.
Maintenance of Future Access to Cape Point and South Point Ocracoke: All socioeconomic analyses related to Alternative F are predicated on the assumption that access corridors will remain open for at least an appreciable portion of the visitor high season. Under Alternative F, the access corridors will be subject to Resource Closures based on buffers similar or identical to the Consent Decree. Unless some predictability of access to Cape Point and South Point Ocracoke can be assured, economic analyses predicated on assumption of access are fundamentally flawed.
Why would a group of surf fisherman want to come to Hatteras Island to surf fish if they are not sure they can access the prime fishing grounds at Cape Point? The answer is they won't come. If they don't come, they don't rent vacation homes and spend their money on Hatteras and Ocracoke Islands.
The definition of the Region of Influence (ROI), faulty data on economic activity generated by specific type recreational activity, incomplete visitation/business survey data, inflated overall Seashore visitor counts pertaining to beach use, and flawed key assumptions concerning the maintenance of access under Alternative F, all lead to inaccurate conclusions in the socioeconomic analyses. Specifically, these inaccuracies can be seen as understating the negative socio-economic impact of the Seashore Villages. Further, this negative impact will be absorbed almost entirely by Small Businesses. Neither of these important aspects of the management alternatives are adequately presented in the DEIS.
- 14) Page 136: I strongly disagree with your pet restriction proposals. The "prohibition of pets in the Seashore during bird breeding season including in front of the villages." = No Pets in public areas ?beaches, campgrounds, soundfront, foot trails, park maintained roads -from March 15 ?July 31.
Hatteras Realty books approximately 13,000 rental weeks for a total of 91,000 rental nights housing approximately 700,000 visitors. The ban on pets to July 31 will seriously hurt the rentals of my vacation homes as our pet homes encompass about 30% of our rentals. I propose allowing pets on 6 foot leashes year-round in all areas open to pedestrians or ORVs.
- 15) Pages 125; 392 ? 396: SEA TURTLES. I disagree with the stats and procedures proposed. I think endangered sea turtles would benefit from management practices now in use at other federal seashores that are more proactive in efforts to achieve nesting success. This includes relocating nests to more desirable locations as is done in other state and federally controlled areas.
The Cape Hatteras National Seashore Recreational Area is on the northernmost fringe of turtle nesting locations for the southeast, accounting for about 1% of all turtle nests. Proposed buffer areas are not needed for protection of the turtles and amount to overprotection.
- 16) Pages 97- 101. I strongly disagree with proposals in this section saying that ORVs will be prohibited year round between ramps 27 and 30, at Hatteras Inlet (Hatteras Spit), Ocracoke Inlet (North Ocracoke Spit) and various other locations.
Not allowing ORV access is paramount to denying the public access to these beaches. They are located miles from the nearest parking or paved road area and too far to access on foot. As a matter of course, there has been no breeding of piping plover or other endangered species at the Hatteras Island Inlet (spit) area in the past 6 years.
- 17) Page 104: I disagree with the proposed night time driving closures. Per your proposals, night driving will be prohibited between May 1 and November 15th, forcing visitors off of the beaches early in the evening and preventing sunrise surf fishermen access in the morning. I propose a more moderate night time ban if one is needed, perhaps from June 1 ? September 15 with times being 1 hour after sunset and 1 hour before sunrise to allow beach goers to gather their stuff and exit the beach area.

Certainly more proactive measures such as relocating nests prone to weather and ocean events would dramatically increase the nesting success rates.
18) Page 121: I disagree with the proposed beach closings, including pedestrian access from March 15 until July 31 in 8 different beach locations which have traditionally been available. Please leave these areas open to beach walkers, shell collectors and those that want to access the beaches in these areas.

Conclusion:

Please, incorporate access corridors through any SMA so we can get to the open beach beyond. Incorporate the birds into the count that nest on the spoil islands. Base your buffer zones on peer reviewed science and scale them back to more reasonable distances as discussed.

It is neither logical nor reasonable to spend so much time, money and energy to overprotect a bird (Piping Plover) in the Cape Hatteras National Seashore that is on the southernmost fringe area of its breeding ground. That goes for the loggerhead turtle that is in its northernmost breeding area.

Let's scale back the buffer zones. You can always increase at a later date.

The USPS is leaning way over the line on over protection and not enough on the public's right to enjoy the beaches of the National Seashore. The proper balance is not achieved in the propose DEIS and needs to be modified so that the proper balance of reasonable resource protection and access to the beaches of the National Park is achieved. I could sum it up by saying "Protect, not Prohibit."

Thank you,

Correspondence: Deeply attached to the experience of the Outer Banks beaches, Ocracoke in particular, my family and I have made a 1000 mile trip here each year for decades. While very concerned about how beach access restrictions might affect our ability to continue this, I must support reasonable efforts to manage access to preserve the essentials of this environment. In that light, I have been quite amazed while following much of the heated commentary at the typical lack of distinction between effects of vehicular and of pedestrian access. On a busy day down at the south point of Ocracoke it's kind of a cross between the New Jersey Turnpike and a crammed parking lot - hardly a very preserved environment or habitat. I can imagine how the poor creatures feel when I'm afraid to sit down on the beach for fear of getting run down (can't tell you how many times I've had to jump up!). Also, it would seem that the park service might arrange a flexible, designedly low impact system of foot trails through the dunes and by protected areas so that people could get to usable stretches of beach. Accommodating vehicles is really a rather different challenge. The Park Service might also run some sort of jitney service, especially for the handicapped or infirm, requiring a much smaller number of vehicles than now storms the place and passing over a much smaller footprint of terrain. This would also allow people to haul stuff (fisherman can also pull large wheeled carts such as I've seen in use on occasion though, heaven forbid, that would require them to get out of their vehicles and actually move their legs). I realize that restricting vehicular access in any significant way may affect the economies of the local communities. However, I note that the current level of such use was not always so, in my decades long experience; and therefore it could be always be again the way it was. Our mistake perhaps was to let something grow out of control when we shouldn't have in the first place. Surely we have to be able to change things as needed, and we must have the fortitude to do so. Otherwise any unwise development or practice would automatically get cast in (grandfathering) concrete, just by the dead weight of its current existence. As temporarily painful as it may be, intelligently controlled access will be better in the long run. ACCOMMODATE BUT CONTROL ACCESS!

Correspondence: Response to the DEIS Statement,
I visit the Outer Banks of North Carolina probably about 12-15x a year. I grew up enjoying the beaches of Avon yearly with my family since age 3. Now that Im older I visit friends of Hatteras monthly if not several times a month. Hatteras Island holds a special place in my heart and even much so that I have Hatteras/Ocracoke Island tattooed down the right side of my back. I believe actions should be taken to protect the wildlife of Hatteras and Ocracoke Island. My impression of some of the buffer zones were that they far exceeded the size of what would be required for them to effectively protect the nestings etc..
Also, if some alternative routes could be opened so that closures would not completely shut down areas to ORVs and pedestrians. The quick and easy fix is to just shut everything down. But is that always the best method to the best solution? I believe that a common sense, reasonable approach to ORV Management that will protect public access and natural resources without impairment to either can be found.
I am for protecting the wildlife of Hatteras and Ocracoke Island. I am fine with closures that are truthfully helping and protecting certain species. But these closures have been far too extreme. I think there needs to be a balance. It might be more work/money to come to this balance and I'd even be fine with a permit that must be purchased before driving on the beach if the money was going towards the preservation of the animals and or new routes and keeping the beaches and the ramps maintained and open. I make yearly contributions to the Seaworld/Busch Gardens Conservation Fund eventhough i question whether these are the groups that are trying to take away my freedoms. But we need to come to common sense, realistic solutions that has both sides negotiating and not litigating. Thank you for taking the time to read this.

Correspondence: With regard to "Alternative F" (NPS Preferred Alternative):
-- I disagree that ORVs be prohibited year round between ramps 27 and 30, at Hatteras Inlet, at Ocracoke Inlet and various other locations (p.97-101). Doing so would result in severely impairing the visitor experience and the local economy.
-- I disagree that night driving be prohibited between May 1 and November 15, forcing visitors off the beaches early in the evening and preventing sunrise surf fishermen access in the morning (p.104). This would limit fisherman from being able to fish at "prime" times, and severely curtail the attraction that draws so many fisherman to Hatteras Island.
-- I disagree that pedestrian access will be prohibited from March 15 until July 31 in 8 different beach locations that have traditionally been available (p.121). Doing so would result in severely impairing the visitor experience and the local economy.
-- I disagree with the 1000 meter pedestrian/ORV closure in all directions around any piping plover unfledged chick brood, and that this closure may occur anywhere in the park, including beach directly in front of vacation homes (p.121-127). This buffer is excessive, and similar closures under the existing consent decree have been proven ineffective regardless.
-- I disagree with the 300 meter pedestrian/ORV closure in all directions around any American Oystercatcher nest or brood (p. 121-127). The American Oystercatcher is not even an endangered species. The NCWRC has gone on record as stating that this measure, as well as others, exceeds the protective measures ever intended by the NC state law.
-- I disagree with prohibiting pets (even when leashed) from Cape Hatteras National Seashore, including beaches, between March 15 and July 31 (p.136). This, and other such measures, would severely limit the intended legal use of these public lands since so designated by President FDR, and has become a recreational/cultural tradition for visitors/residents alike.
I understand and agree with the need to preserve our wildlife and natural resources, but a common sense approach that also preserves our cultural resources and the right to use them is paramount. There is little or no consideration for the latter in Alternative F, even though required by the National Environmental Policy Act.
It is also quite obvious that the data and analysis in this study related to the negative socioeconomic impact is incomplete, understated and erroneous.

Unless such data is accurate and considered in good faith, decisions will be made that completely devastate the economy on Hatteras and Ocracoke Islands whose small businesses, unemployment numbers and real estate market are already in a desperate state of affairs.

I am writing as a concerned native of Eastern NC. Closing these beaches is a statement to the local people that the NC legislature has once again put others goals and economies ahead of theirs once again. These beaches are a very large part of the valued culture of eastern North Carolinians. I wont elaborate on the economic aspect of the lost dollars for tourism, that should be obvious by now. Once again, there has been underhanded methods of keeping local people from voicing there opinions. If not the red tape all over the proposals that is IMPOSSIBLE to navigate or understand just what is outlined, you have the media. Please answer one question. Has there been a single article or news report on television that tells you how or where you should go to voice your opinion. Sure the local outlets have made an attempt but just do an internet search on the comment deadline and I challenge you to find JUST ONE article that tells you where to submit your comments and opinions. Its nearly impossible for relocated locals as myself to voice my opinion. Not to mention, most articles only say the beaches are closed to driving....sounds like no big deal right? Funny they fail to mention just what is being proposed, no human body whatsoever can enjoy the beach wether it is walking or driving. In conclusion, I will sat that closing these beaches is a slap in the face to the local people of eastern NC that says our governing bodies do not care about our well being. I guess if we are not in Raleigh or Chapel Hill, we dont matter.

Correspondence: Re the DEIS -

Why are the terms of the consent decree the strating point for this document ? Why isn't the Interim Plan considered as a starting point?
I disagree with the need to close Hatteras Inlet, the Northern end of Okracoke Island and the area from ramp 27-30 in Salvo.
American Oystercatcher - Why is a non-endangered species allocated such large closures ?
NPS does not include locations adjacent to Cape Hatteras National Recreational Seashore such as Pea Island Wildlife Refuge when determining non-ORV accessible areas ? Pea Island provides pedestrian (p. 124)only access as well as habitat for protected species. The dredge islands adjacent to Hatteras Island also provide relatively predator free habitat for birds.
NPS does not relocate turtle eggs regardless of the continual failure rate experienced presently. Other areas have greater success with relocation. (p. 86-87, 396-397).
Why does the NPS remove predators instead of removing the NPS created habitat that harbors predator?
I strongly disagree with the prohibition of pets (p. 136) from the recreational areas of this park.
Why doesn't the NPS publish a list of incidents that occured between motorizd and non-motorized recreational users? IF such list exists. (p VI)
Why doesn't the NPS publish a list of Piping Plover deaths attributable to ORV use? (p.210)
TO improve Resource Protection and Visitor access the NPS should perform pro-active : Vegetation Management Habitat Management Enhanced Predator Management There is no provision for pass-through buffers at the foot of the dunes in these plans.
The plan should be reviewed on a 2 year basis, not on a 5 year basis.
NPS fails to address the issues that are far more detrimental to turtle recovery than ORV use, namely weather and Predation. (p.125,219,87)
In a massive 800 plus page document, the NPS only devotes two paragraphs to the cultural importance of beach access/Surf Zone to this area. (p. 15.18.83.260)
The Socioeconomic data is flawed. The Region of Influence should not include the beaches north of Hatteras Island. These ares are not under the control of the NPS and do not experience the excessive access restrictions that Hatteras Island residents and visitors do. There is poor visitation data, poor use data and no economic data from 2009, the first year of the consent decree.
Lastly, why are residents of Hatteras Island referred to as 'visitors' to the Cape Hatteras National Recreational Seashore? The NPS and the residents are neighbors. NPS needs to be a good neighbor and learn to co-exist with people who trusted the NPS with their land. Cape Hatteras National Resreational Seashore is unique in that people live and work within th park boundaries. They are as important as park visitors and certainly as inportant as birds. Respectfully submitted - Stewart Nelson, Haddonfield NJ and Buxton NC. Please try to treat the residents with respect as well.

To all concerned, I have been following the bureaucratic progression of this problem for some time now and it's apparent the problem is the bureaucratic progression. To be swayed by a few exercising liberal left wing ideals that hold very little merit is unfounded.Enough on the stump! We all love nature for what it is and hold Cape Hatteras to the highest regard. That being said,PLAN A is the lessor of evil for those who cherish the time spent there and the memories made within the boundaries of the park. Remember, the park is owned by the people of this nation, not some private enterprise, and the Park Service works for us, paid by our taxes from lifetimes of work. Any plan that stifles free enterprise in the area should not be adopted. The socio-economic issues need to be considered as well considering the present conditions. It's always about the money!It makes the world go round.. Just remember one word..... BALANCE.... It's required by everything to function including people and nature. Thanks, Bob

Correspondence: Dear Superintendent Murray,

As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.

- 1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."
- 2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses..., the said area shall be permanently reserved as a primitive wilderness...." Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the

pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.

3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.

Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

Correspondence: Thank you for the opportunity to express my comments. I am opposed to the Park Services' recommendation on alternative F. I attended the public meeting held in Raleigh, NC on 28 April 2010. The discussion was interesting, but I couldn't help but notice the tone of the meeting from most of the speakers; look at the economic impact to the tourism industry, beach folks are as good as they come, they help keep the area clean and respect it (I know there are some bad apples, have you ridden on the Blue Ridge Parkway lately?, litter) there is no data available that suggest shorebirds have been negatively impacted over the last several decades, and the best comment of all (I thought it was funny, but too the point) "I haven't seen a piping plover yet that pays taxes" Think about that for a minute. I am saying this as the devils' advocate....what does it matter that a shorebird becomes extinct? Does this bird cure cancer? Is the evolution of man or animal going to change if it were to leave this area or worse become extinct? I would venture to say no. Another example, the other day I was riding down the road, I had to avoid several turtles in the road (probably box or snapping turtles) Should we ban driving on roads during the time that turtles (and butterflies, for that matter) seem to be most prevalent?
I was asked to leave ramp 23 in Salvo this past weekend (07 May 10) it was an absolute fiasco. There was a scrape observed early in the day, by afternoon the ramp was closed! The park service officer did say that the beach may be closed north of the ramp. He later found us about 1.5 miles south of the ramp. He stopped to say the ramp was closed and that we would have to exit from ramp 27. Problem was tide was coming in fast. He thought high tide was 6pm, he was wrong. I had already checked my tide chart and knew that high tide would be approx. 4pm. He alerted us at 3:30PM (approx) that we had to leave, actually exit on ramp 27. The access between these ramps is tricky, very narrow beach. Well what I thought would happen did. A truck was stuck. Park service had to help pull him out, meanwhile the water was lapping at the tires. There was no concern for people (or vehicles)It was handled very poorly as far as I am concerned. There isn't a bird on earth as important as a human.
Let me end by saying that I truly believe that there is a middle ground that can be reached. More access to areas for ORV and foot traffic, more sound access!!!! If the outcome is that birds and turtles have to be protected with barriers, just be reasonable, please!

Correspondence: I will never forget going to Florida (Daytona Beach) back in the 50s. I hated everything about that place. I was less than 10 years of age. The beach was like a Los Angeles freeway. Cars parked all over the place stuck in the sand with high tide giving them a salt bath and washing the filth from the cars into the ocean; not to mention constantly worrying about being run over as drinking was also popular and the drivers were often the drinkers.
You see, we spent our weekends at Salter Path. That was when there was a little one lane graveled tar road from Atlantic Beach and just a sandy path from there down to the end of the island. Beach Buggies (rusted out old cars without hoods, trunk cover, doors and usually having had the top permanently removed) were what the people at Salter Path used to get around. There were only two cottages for the mainlanders. The remainder of the people lived out there. We rarely saw those buggies on the beach and never had to worry about them at all. Aside from the language problems (islanders vs mainlanders) it was a natural wonderland at that time.
When I returned to NC in 85 having left for Vietnam in 68; I was shocked at what had happened to our coast. I had lived 10 years in Southern California and 6 years in Colorado and seen first hand what over population did to the environment. I had seen how the laws favored materialism and were rarely concerned about the wildlife and the environment. I took a drive along the beach roads from North Myrtle Beach to Virginia Beach before returning to my original and new home town of Raleigh, NC. When I saw beach access for vehicles; it was like a nightmare come true. NEVER, EVER did I think this would happen here. My Dad had been surf fishing the Outer Banks very frequently during my youth. They drove down there and pitched tents that they carried from their vehicles on the road to the beach. NO, That is not too much to ask NOW! We may need parking (both by reservation as well as first come, first served [metered]) somewhere and public transportation (for a fee) to areas (with a fee) with public beach access to regulated fishing areas. Those willing to walk or bike to the beach should be free to do so ;) No vehicles on the beaches! More regulations for areas known to harbor wildlife. More regulations regarding litter (including fishing line and nets).
I returned to NC because I wanted the simple little world I left behind in 68. I found something far different. The two room house in Kure Beach where my girlfriend, her brother, Mother and Dad lived was converted into a skyscraper condominium complex as was the rest of the little Mayberry by the sea.
I rarely go to the ocean anymore. I find it too disturbing to do so; but, I still have strong feelings about saving what remains for North Carolinians of the future. PLEASE, PLEASE help us conserve and save what remains of natural NC wherever it remains ;)

Correspondence: COMMENTS ON ALTERNATIVE F (NPS PREFERRED ALTERNATIVE)
Re: Economic Impact
I strongly disagree with the economic information. I am a commercial crabber and fisherman and own my own business. The information used in the DEIS was not actual information supplied by Hatteras Island businesses. My personal business has suffered due to the decrease in tourism based on the beach closures. It is a "fact" that this decrease is due to the beach closures and not the economy. In communicating by email to some of my former customers from around the east coast and other parts of the country, they have told me that the reason they did not buy any seafood from me during the past two years has not been because of the national economy but because they have not visited Hatteras Island and have since gone elsewhere because of the fear of arriving here only to find that their favorite fishing and swimming areas on the beach were closed.
GENERAL COMMENTS

Failure on the part of the NPS - I believe that the NPS has not done their part in keeping the beaches open. They have failed to clear vegetation at Cape Point ponds to create more favorable Piping Plover habitat. They have failed to relocate turtle nests. They have failed in using "facts" when putting together the DEIS and instead used "best science available".
Please don't fail us again by implementing the DEIS. Please come up with a more common sense induced document. Thank you.

Correspondence: COMMENTS ON ALTERATIVE F (NPS PREFERRED ALTERNATIVE)
Re: Economic Impact
I disagree with the findings on the economic impact because they did not use actual Hatteras Island economic information. We are self-employed and can verify through our tax documents that we have had a decrease in the number of customers due to the beach closures. We have personally asked our customers whether or not this decrease was because of the economy and the answer was "no". Our customers were not returning to Hatteras Island because of the beach closures.
GENERAL COMMENTS
I do not feel that the DEIS was put together with much compromise. The Consent Decree that we have been living with for two years is bad enough, but Alternative F is even worse than the Consent Decree. How did that happen? Please use a more common sense approach when you read the public comments and be more understanding of both sides and come up with a fairer document. Thank you.

Correspondence: Please accept my brief letter and comments on the DEIS for off road vehicle management within "Cape Hatteras National Seashore Recreational Area" as it was originally designated.
First, this goes way beyond ORV management. This flawed document attempts to manage vehicles, pedestrians, pets, other animals that call this island home. Predatory animals are being slaughtered to protect a few nests. There is nothing in it to give handicapped people access to this park. The socioeconomic impact will be even more devastating to the people of this island then the consent decree has already been. There are NO Walmarts or Home Depots or Mcdonalds or any other BIG corporations on this island to fight this DEIS. That is part of the beauty of this island but the small Mom and Pop local businesses are dieing a slow death. We live in a terrible economy and this thing will destroy the economy of this island.
I have read many very eloquent and informative letters written by people whose families have lived on and loved and protected this island for generations. Their families were promised many things by the government back when this park was developed and now these promises are being taken back. I must go on record as saying I do not any part of this DEIS and feel strongly feel that the "Coalition for Beach Access" position statement should be put in place as the new plan for Cape Hatteras National Seashore Recreational Area as this is the only practice management alternative for this and any "recreational area".
Thank You Sincerely
Eugene Brooks

Correspondence: I am in favor of strict limitations to ORV use of the Cape Hatteras National Seashore. I believe this is Alternative D in the Management pLAN, THE MOST ENVIRONMENTALLY FRIENDLY. ORV use is a hazard to existing Flora and Fauna and a danger to pedestrians. I do not believe ORV's should be totally prohibited but should be carefully controlled with environmental concerns as the top priority.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to

me.

The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.

* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.

* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. This reminds me of a similar issue that arose more than a decade ago on a California Central Coast beach located in southern San Luis Obispo County in which important seasonal restrictions on ORV use important to wildlife nesting activities were implemented. Of all the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access. This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

Ideally, the plan would ban ORVs from all areas within the Seashore. Wildlife make nondestructive use of the area, while OrVs are extremely destructive. Biodiversity is declining world-wide, while irresponsible behaviors and decisions are expanding exponentially.

I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.

This alternative plan would provide more opportunity for all the rest of us non-ORV uses of the beaches and result in less disturbance of wildlife. The extraordinary ecosystem with its beautiful landscapes and native plants and animals, many of them rare, are what make the Cape special. ORV riding may be fun for some people, but it ruins any environment it's in

The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

- *Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife.  Dear Superintendent Murray,
 I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
 Using ORVs in an environmentally sensitive area has always been a mystery to me. People who do so are fouling their own nests, in a sense, because these beautiful areas and the animals who breed in them belong to all of us. I am an active user of national parks, from Teton National Park to Cape Hatteras. The Tetons have their own natural protection in that there's no way to get ORVs up the narrow, winding, switchback mountain trails and the animals are disturbed only by two-footed visitors (well, and maybe some horse riding groups). But the seashore can't protect itself, and we must. I am an active member of the National Audubon Society and the Nature Conservancy, working to protect natural habitat without totally shutting it down for some other uses.
 Should you not enact Alternative D, I think the following principles should underpin the park's formulation of its final plan.
 *Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
 * Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
 * Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
 Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore. It's kind of a last chance, isn't it?

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
 This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
 The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
 *Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. Each year I and my family go to Hatteras Island and spend a week there. The abundance of wildlife and non crowded beaches are a major reason why we return each year.
While I do believe vehicles should be allowed on the beach, I believe their needs to be a confined area with strict regulation. Unfortunately not everyone who visits Hatteras has the same appreciation for nature and the recognition of the delicate balance that must be maintained there.

Please consider the potentially detrimental impact on wildlife when making your decisions. People have plenty of places for recreation but the birds and turtles have to breed here!

This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.

The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:

*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.

* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.

* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.

Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: Mr. Mike Murray,
The NPS must formulate a plan that is consistent with the legislation establishing Cape Hatteras National Seashore Recreation Area. The enabling legislation for the Recreational Area states, in part, "said area shall be, and is, established, dedicated, and set apart as a national seashore recreational area for the benefit and enjoyment of the people and shall be known as the Cape Hatteras National Seashore Recreational Area". Therefore, it is important to balance resource protection with reasonable access for recreation.
Corridors are a vital tool in providing access while managing resources. They provide a small path around temporary resource closures in order to provide access to open areas that would otherwise be blocked. Corridors should be permitted throughout the seashore during the entire breeding and nesting season including ML-1 portions of SMAs. These corridors would provide valuable access without impairment or damage to protected resources. Buffers, or closures, are important management practices for species recovery. However, to have long term benefit for the wildlife and the visiting public, buffers must be based on peer-reviewed science For example, the Piping Plover, a species classified as threatened and not endangered, is given a level of unprecedented protection in Alternative F. A 1,000-meter buffer in all directions represents over 771 acres. The DEIS does not cite any peer-reviewed science in supporting such closure. A more appropriate & effective buffer would be 200 meters.
Birds that are not listed as endangered should not be afforded the level of protection given to ESA (Endangered Species Act) protected species. Instead of 300-meter buffers for these birds, a more appropriate buffer would be 30 meters. Also, all birds in the same ecosystem of the seashore should be counted. This includes all the many birds on the dredge and spoil islands located just yards away and within sight of the seashore.
The National Park Service should consider turtle management practices successfully used in other federal and state areas to achieve nesting success. More proactive measures include relocating nests to more desirable locations, which is routinely and successfully done in other areas.
Please answer back on these suggestions as to why these are not inclusive in the DEIS report.
Thank you, Karen Wheless

Correspondence: To NPS: I completely agree with the comments of Stuart Couch which are attached below. The proposed rules are well beyond what is necessary to protect the Piping Plover and Sea turtles. In addition these rules will have a tremendous impact on the investments of homeowner and business owners who have relied on the rules which have generally been enforced over the past 40 to 50 years. These rules will have a tremendous negative financial impact on virtually everyone who does business or owns property on Hatteras Island.
To: National Park Service
From:
Subject: DEIS Off-Road Vehicle Management Plan Comments

My comments concern the DEIS of the Off-Road Vehicle Management Plan prepared by the National Park Service (NPS) for the Cape Hatteras National Seashore Recreation Area.

1) Page 201: I disagree with the NPS statement: "Even with resource closures in place, protected species are still at risk [from pedestrians and ORVs]." No Piping Plover deaths have been attributed to ORVs. ORV violations continue to decrease as signage and education improve. Pedestrian violations are much more significant than ORV violations. It seems to me that any transgressions into protected area are the result of lack of NPS manpower and enforcement than the public purposely and willfully violating out of bounds areas.

2) Page xxiv: I question the statement of as per the DEIS: "Carrying capacity would be a 'peak use limit' determined for all areas based on the linear feet of beachfront?" If you close off huge sections of the beach, you force more people into smaller areas, potentially resulting in more resource impairment and diminished visitor experience.

3) Page xix and page 23: I am against having two different closures rules pertaining to the North facing beaches (North side) and the South facing beaches (South side) as per the grid outlined in Alternative "F". I disagree with the NPS proposal to close the beaches in villages of Frisco, Hatteras and Ocracoke Villages to ORV access longer than the traditional May 15 to September 15 period for the Northern beaches, even though seasonal visitor statistics are similar for all villages. Please, make them the same: May 15 -> September 15.

4) Page 1: I agree with your statement "ORVs have long served as a primary form of access for many portions of the beach in the seashore, and continue to be the most practical means of access and parking for many visitors."

However, pedestrian only areas discriminate against individuals with limited mobility due to age or physical impairments, families with small children, and those wishing to engage in activities requiring recreational equipment (boogie boards, beach umbrellas, beach chairs, coolers, fishing rods and tackle, etc)

5) Page 53: I disagree with the special use permit proposed guidelines. It is impractical to allow the transportation of disabled visitors to the village beaches and then require the vehicle to be returned to the street or parking area. This necessitates the disabled person to have a driver to drop him (or her) off, then drive to a parking area, then trudge a long distance to the site of the drop off, then trudge the long distance through the sand back to get the vehicle.

Suppose the handicap person wants to go to the beach, is capable of driving himself, yet cannot find another person to go with him? Does he now not go to the beach? This rule creates unnecessary hardships and risks in the event of an emergency as well.

6) Page 121 ? 127. I strongly disagree with the buffers as presented. We must allow for pass-thru corridors. The beach is linear with the ocean buffering on one side and the dune line on the other. For example - If you pinch off access on one side of a 4 mile linear beach and pinch off access on the other side of the 4 mile section of beach with no corridor, then you effectively have closed off all 4 miles of the beach because you CAN'T get there. The proposed bird buffers are too large, blocking access to the interior sections from the two "buffered" ends.

I propose ORV pass-thru only corridors and to use breeding / nesting buffer distances to establish ORV pass through only corridors to ensure beach access in a way that does not hinder resource protection. I believe pass through corridors should be maintained for pedestrians and ORVs in all areas of the Cape Hatteras National Seashore Recreation Area throughout the entire breeding and nesting season. Corridors are vital to providing access in a way that does not hinder resource protection.

Piping Plover unfledged chicks buffer should move with the brood as it relocates to reliable food source, not expanded.

The 1,000 meter distance for the piping plover is way too large and not based upon peer reviewed science. A more rational distance would be 200 meters per other sites in the nation for the piping plover. Ample scientific evidence and precedent exists to support a 200 meter buffer.

Buffers for other species, including American Oystercatchers, Least Terns and Colonial

Waterbirds must also be changed. An effective 30 meter buffer should be established for these species rather than the 300 meter closure outlined in the DEIS.

NON-ENDANGERED BIRDS should not have same protection as if endangered. Not allowing ORV access is paramount to denying the public access to these beaches.

7) Page 468: I disagree with the limitations imposed on pedestrian and ORVs. Corridors or bypasses should be provided thru, around or below high tide line in all SMAs during entire breeding season to maintain access.

8) Page 124: I strongly disagree with the NPS slant of providing for over protection of resource management over that of the public's right to access the beaches. Pro-active initiatives include: Vegetation Management, Habitat Management, Enhanced Predator Management, Colonial Water bird social attraction, Piping Plover check fledge rate, Piping plover chick buffer distance, and pass-through buffers during the incubation period. Opportunities to implement less restrictive closures as a result of the above initiatives should be considered more frequently than the 5-year periodic review process identified in the DEIS.

9) I disagree with the NPS Resource Management Pedestrian / ORV Closure Policies. These policies address the least significant factors affecting nest survival with little chance to have more than negligible impact. For example: the AMOY Nest Failures are predominately due to non-human events.

Using your own stats, the mammalian predation is 54%, Storm / Lunar Tides: 29%, Nest Abandonment: 6%, Avian Predation: 5%, and Ghost Crab Predation: 3%.

So what is the percentage due to human interference: just 3%! It's insignificant, yet the NPS wants to ban humans when their actions provide very little influence on the success rate of breeding birds and turtles.

10) I disagree with the stats of breeding plovers and the other birds in the Park when the NPS does not adequately consider locations neighboring the Recreational Area that are part of the same ecosystem, namely dredge and spoil island that are located just yards away and within sight of the seashore. These birds are part of the same ecosystem and should be included.

Those spoil islands, developed by man from dredging the waterways in the Pamlico Sound for channel upkeep are slammed full of birds. The reason why so many birds? NO PREDATORS. SO, birds are not as stupid as one might think. You have to count these birds and incorporate them in the stats when the NPS is talking about any so called decline in breeding pairs in the National Park.

11) Page 1: I do not think the DEIS responsibly addresses the cultural resource issues. The very purpose of the DEIS as set forth in the National Environmental Policy Act (NEPA) is to protect and preserve natural and cultural resources in the federal decision making process. In the DEIS, the statement "protect and preserve natural and cultural resources" appears in the first sentence of the first page of the plan, in the Purpose of the Plan section, and numerous times thereafter. Yet, the 810 page document devotes only two paragraphs to analysis of cultural resource issues.

As a lifelong resident of Hatteras Island, we of the Hatteras Island community have always gotten together on the south beach on Sunday to enjoy the beach with our cookouts, gatherings, surf bathing, horse shoes and foot races, fishing, and surfing. Now the DEIS is proposing closing off most of the south beach during the summer which is the traditional period we local people use the beach. The continuation of this traditional pattern of land use is central to maintaining the historic identity of our island communities.

12) Pages 270-281; 561-598: I strongly disagree with your economic analysis of the impact of the DEIS. The region of influence (ROI) incorporates the Northern Beach communities, including Kill Devil Hills, Kitty Hawk, Southern Shores and Duck. These areas are almost completely disconnected from ORV use and access issues relating to the Seashore.

? Inclusion of the Northern Beaches in analysis significantly dilutes estimates of economic impact on the 8 Seashore Villages

? Analysis of economic impact to the Seashore Villages appears to be significantly down played. Emphasis in DEIS is on the ROI-wide or county-wide level impacts.

? Nowhere is it clearly addressed that the overwhelming majority of negative impacts will be felt by small businesses in the Seashore Villages rather than by overall economic interests within the greater ROI.

On page xlvi, Alternative F is characterized as having a "negligible to moderate" adverse impact on small businesses. I strongly disagree with this statement.

I believe the negligible to moderate projection is inaccurate and relies on economic surveys that has not yet been published. Furthermore, this material is not expected to be added to the DEIS until after the public comment period has ended.

Based upon the economic harm we have already experienced under the consent decree, Dare County projects the economic impact of Alternative F to be substantial.

Beach closures have already had a devastating and unfair impact on many Dare County Businesses, causing foreclosures, bankruptcies, lay-offs, cutbacks, expensive refinancing, and depleted college funds and savings accounts.

Even businesses whose revenue has stayed level or showed a modest increase have accomplished this at a costly price. Many have had to cut back employee hours, forego much-needed capital improvements, and sacrifice profits. That is certainly the case with Hatteras Realty. Pages 270-286, 561-598: The socio-economic data and analyses are incomplete and erroneous and result in an understatement of the effect the restrictions will have upon the Island, the region and the state of NC. The US Park Services answer: Businesses will have to "adapt" to the new rules. (p.383) The negative economic impacts of the decree ARE KNOWN, so to say that the added restrictions would have negligible to moderate impact is indefensible.

13) Overall Visitor Counts - Overall visitor counts appear to include visitors to Fort Raleigh National Historic Site and the Wright Brothers National Memorial. A large percentage of these visitors vacation in the Northern Beaches communities and recreate on the non-federal beaches outside of the Seashore. Visitors who patronize the Fort Raleigh National Historic Site and the Wright Brothers National Memorial but do not visit the actual seashore areas need to be factored out.

Maintenance of Future Access to Cape Point and South Point Ocracoke: All socioeconomic analyses related to Alternative F are predicated on the assumption that access corridors will remain open for at least an appreciable portion of the visitor high season. Under Alternative F, the access corridors will be subject to Resource Closures based on buffers similar or identical to the Consent Decree. Unless some predictability of access to Cape Point and South Point Ocracoke can be assured, economic analyses predicated on assumption of access are fundamentally flawed.

Why would a group of surf fishermen want to come to Hatteras Island to surf fish if they are not sure they can access the prime fishing grounds at Cape Point? The answer is they won't come. If they don't come, they don't rent vacation homes and spend their money on Hatteras and Ocracoke Islands.

The definition of the Region of Influence (ROI), faulty data on economic activity generated by specific type recreational activity, incomplete visitation/business survey data, inflated overall Seashore visitor counts pertaining to beach use, and flawed key assumptions concerning the maintenance of access under Alternative F, all lead to inaccurate conclusions in the socioeconomic analyses. Specifically, these inaccuracies can be seen as understating the negative socio-economic impact of the Seashore Villages. Further, this negative impact will be absorbed almost entirely by Small Businesses. Neither of these important aspects of the management alternatives are adequately presented in the DEIS.

14) Page 136: I strongly disagree with your pet restriction proposals. The "prohibition of pets in the Seashore during bird breeding season including in front of the villages." = No Pets in public areas ?beaches, campgrounds, soundfront, foot trails, park maintained roads -from March 15 ?July 31.

Hatteras Realty books approximately 13,000 rental weeks for a total of 91,000 rental nights housing approximately 700,000 visitors. The ban on pets to July 31 will seriously hurt the rentals of my vacation homes as our pet homes encompass about 30% of our rentals. I propose allowing pets on 6 foot leashes year-round in all areas open to pedestrians or ORVs.

15) Pages 125; 392 ? 396: SEA TURTLES. I disagree with the stats and procedures proposed. I think endangered sea turtles would benefit from management practices now in use at other federal seashores that are more proactive in efforts to achieve nesting success. This includes relocating nests to more desirable locations as is done in other state and federally controlled areas.

The Cape Hatteras National Seashore Recreational Area is on the northernmost fringe of turtle nesting locations for the southeast, accounting for about 1% of all turtle nests. Proposed buffer areas are not needed for protection of the turtles and amount to overprotection.

16) Pages 97- 101. I strongly disagree with proposals in this section saying that ORVs will be prohibited year round between ramps 27 and 30, at Hatteras Inlet (Hatteras Spit), Ocracoke Inlet (North Ocracoke Spit) and various other locations.

Not allowing ORV access is paramount to denying the public access to these beaches. They are located miles from the nearest parking or paved road area and too far to access on foot. As a matter of course, there has been no breeding of piping plover or other endangered species at the Hatteras Island Inlet (spit) area in the past 6 years.

17) Page 104: I disagree with the proposed night time driving closures. Per your proposals, night driving will be prohibited between May 1 and November 15th, forcing visitors off of the beaches early in the evening and preventing sunrise surf fishermen access in the morning. I propose a more moderate night time ban if one is needed, perhaps from June 1 ? September 15 with times being 1 hour after sunset and 1 hour before sunrise to allow beach goers to gather their stuff and exit the beach area.

Certainly more proactive measures such as relocating nests prone to weather and ocean events would dramatically increase the nesting success rates.

18) Page 121: I disagree with the proposed beach closings, including pedestrian access from March 15 until July 31 in 8 different beach locations which have traditionally been available. Please leave these areas open to beach walkers, shell collectors and those that want to access the beaches in these areas.

Conclusion:

Please, incorporate access corridors through any SMA so we can get to the open beach beyond. Incorporate the birds into the count that nest on the spoil islands. Base your buffer zones on peer reviewed science and scale them back to more reasonable distances as discussed.

It is neither logical nor reasonable to spend so much time, money and energy to overprotect a bird (Piping Plover) in the Cape Hatteras National Seashore that is on the southernmost fringe area of its breeding ground. That goes for the loggerhead turtle that is in its northernmost breeding area. Let's scale back the buffer zones. You can always increase at a later date.

The USPS is leaning way over the line on over protection and not enough on the public's right to enjoy the beaches of the National Seashore. The proper balance is not achieved in the propose DEIS and needs to be modified so that the proper balance of reasonable resource protection and access to the beaches of the National Park is achieved. I could sum it up by saying "Protect, not Prohibit."

Thank you, Jay du Von

Correspondence Type: Web Form

Correspondence: Dear Superintendent Murray,

I have pasted a form letter, which I totally agree with below. However, I also want to say that we should be preserving the place, not the public uses.

ATV's can be ridden in any type of terrain and on private land. We are not preserving land for ATV use. We are preserving land because it is unique and endangered. While I am a strong promoter of cultural and natural tourism, I also don't believe we should degrade the resource to attain these recreational and economic benefits. Thank you for considering my viewpoint.

As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.

1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."

2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness..." Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.

3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals. Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing

an improved final ORV management plan.

***** Thank you very much for taking the time to protect one of America's most beautiful stretches of Atlantic seashore! Sea turtles, nesting shorebirds, and generations to come will be grateful for your action today. Thanks again!

Sincerely,
John Wilson

Correspondence: How about a test simplified to driving on the beach in general, that takes in the wildlife's needs, the conditions of sand and tides,etc. Only those who pass and only those who care enough to pass gain legal access. Also when a area has reached the too many vehicles for one spot maximum, access is denied until some one leaves. Maybe possible to make it like a fishing license for additional revenue stream to pay for the oversight,etc. etc.

Correspondence: Wow, I'm sorry I heard about this to late for a well presented comment, but here goes.
I believe that off-road vehicles have no business in the NATIONAL PARK lands.
We have decided to protect and preserve these natural areas, including floral and fauna by placing them in the NATIONAL PARK SERVICE, or at least I thought that was what it's all about.
Anyone who would consider something like this has never seen the results when orv's track across land and has no concept of how detrimental they are to any environment. Look at an ORV track or private land that allows them to enjoy riding there. They are no different than On Road Vehicles in impact to plants, animals, and natural terrain. They are not natural or non-infringing on the terrain, flora, or fauna. I have to ask 'Who would give any credibility to an attempt to argue otherwise?'
It is only common sense that allowing off-road vehicles to travel on protected area causes it to no longer be protected. As someone who has enjoyed the tranquility of many, but not yet all, of the National Park lands, I know that allowing ORV's to operate in any park land would destroy the likely-hood that now, or in the future, anyone would be able to experience an unmolested environment.
In closing, a decision to allow orv's is directly opposed to the purpose of the National Park System and a detrimental change to the system.
For what it is worth, Thanks, LC

Correspondence: To Whom It May Concern:
I have vacationed on the Outer Banks of North Carolina from Corova to Ocracoke over the past 15 plus years. I have brought my children and now grandchildren to the OBX for an experience like no other. Being able to use our SUV for our beach explorations has been essential. Along with this freedom of movement we have also been very careful not to damage or compromise any plant, bird, or animal we've had the pleasure to see in their natural environment. I will tell you that I am not a scientist nor claim to be one. I have reviewed the draft Environmental Impact Statement (DEIS). I have supplemented my reading trying to understand both points of view here. I define it as those who want NO human presense on the OBX and those who have lived here for generations. In addition you can not ignore the effect the recent Conscent Decree has had on the economics and residents of the areas impacted.
In this regard, I offer my humble viewpoints:
Comment 1- To Be Closed Year Round: Hatteras Inlet, North End Ocracoke Island, Ramp 27-Ramp 30 (Salvo). The DEIS never fully addressed the economic impacts on the local economies of the effected villages by creating and enforcing these restrictions. These should be studied in more detail.
Comment 2- Why do non-endangered or non threatened species like Oystercatchers get so much area closed for them? They are being used for closing more area every year! For a long time, beach access advocates have urged the National Park Service not to extend protection to non-endangered birds as if they were endangered. The Park Service has given large buffers to non-endangered birds such as American oystercatchers citing the fact that they appear on a list of North Carolina's "species of concern." In the Draft Environmental Impact Statement (DEIS), the Park Service's preferred Alternative F would continue to give protection to non-endangered birds. This has drawn a reaction from Gordon Myers, the Executive Director of the North Carolina Wildlife Resources Commission, who claims this practice is beyond the intent of the state of North Carolina Comment 3- Large, inflexible buffers (p.121-127) Up to 1000 meters for piping plovers!
Numerous shorebirds in Cape Hatteras National Seashore are given higher levels of protection in a proposed off-road vehicle management plan than what the law ever intended the birds to have, a state wildlife official said. I did not read anywhere in the DEIS how it was determined that 1,000 meters would be the "gold standard" for piping plover needs. My understanding is that the piping plovers actually increased in numbers prior to the initiation of the boundries mandated in the current Conscent Decree. Comment 4- The NPS does not adequately consider locations neighboring the Recreational Area that are part of the same ecosystem. This includes dredge and spoil islands that have less predator presence. (p124)
Comment 5- The DEIS indicates that the NPS will NOT adopt more proactive techniques used at other east coast locations to encourage turtle nesting success-WHY? (p392-396) If all parties are sincere in what they desire how could this important aspect be virtually ingnored?
Comment 6- Why is it OK to tamper with nature in some instances but not others? In the DEIS the NPS indicates that it is perfectly fine to set aside areas of beach to "extirpated" sea beach amaranth, but not OK to clear vegetation at Cape Point ponds to create more favorable piping plover habitat (outside of the prime ORV corridor). Can't this be included in an overall solution?
Comment 7- Why does the NPS feel that it is OK to relocate Turtle nests when storms are imminent, but not before. (Coincidentally the high-risk nests are in prime ORV corridors) Would'nt the relocation of some of these nest sites be a better solution to all concerned instead of a "bad weather" strategy? In this respect the nests would be moved anyway.
Comment 8- The DEIS states that there will be a "...Prohibition of PETS in the seashore during bird breeding season, including in front of the villages."(p136)= No pets in public areas-beaches, campgrounds, sound-front, foot trails, park maintained roads from March 15 -July 31. As all concerned are aware all of the beach communities on the OBX as well as the NPS have leash regulations to control pet activity. Since all pets are to be controlled at all times while visiting the beaches why is a prohibition needed? All we need do is to enforce laws and regulations already on the books.
Comment 9- I found this to be most perplexing. In the DEIS the NPS infers that it is OK to kill predators as it is assumed they are the greatest risk to birds and turtles. However, it is not acceptable to drive on the beach at night when we would all agree that human activity in these areas would be the greatest deterrent to predators, as well as a low risk to turtles and birds.
Comment 10- Nowhere in the DEIS is it clearly addressed that the OVERWHELMING majority of negative impacts will be felt by the small businesses in the seashore villages rather than by overall economic interests within the region of influence(ROI). In many instances the shop and business owners have lived and worked here for decades and in many cases generations. I would think that they would be the biggest boosters for maintaining the ecosystem. Without this balance with nature these folks could not survive because their livelihoods depend on it. Their stewardship of these areas for all these years can not, and should not, be ingnored.
I'm sure there are other concerns that other more learned and interested parties have addressed. I can only ask that whatever solution eventually becomes the final one, is fair to all the stakeholders.

Thank you for your consideration of my comments on this important issue.
Sincerely,
Edward J. O'Brien, Jr.

Correspondence:	Please do not allow vehicles on the beach. There are many species of wildlife that depend on the area/habitat for breeding. Protecting wildlife from extinction should be much more important than allowing lazy, drunk fishermen to catch a few fish. Why can't they walk to the beach if they want to fish ?? There are plenty of other places these people can go fishing - while endangered birds and sea turtles (among others) are running out of safe and suitable habitat. Please do not cave to the fishing and tourism lobbies - our valuable yet vanishing wildlife need this protection. Thank you -

Correspondence:	To put it simply ... This Land is My Land.. This Land is Your Land... This Land was made for You & Me.... The buffers are too big..... the closures are too many.... Do take into consideration the economic impact it will have on the people of Hatteras Island.... Heritage is at stake here... There are already enough laws to protect our land... we do not need any more.... Do not close this beach to the people.... This is the people's land... Listen to the people who live here.. not people who sue in court to change things... This is my land... and I want it open and free... Listen to the people!! Thank you for listening..

Correspondence:	Mr. Mike Murray, Supt. Cape Hatteras National Seashore Manteo, NC 27954 Mr. Murray: As a dedicated visitor to the Cape Hatteras National Seashore, I appreciate the opportunity to comment on the Cape Hatteras National Seashore Recreational Area Off-Road Vehicle Management Plan Draft Environmental Statement. The alternative that appears to make the most sense for all stake holders is Alternative C. I am disturbed by the fact that the NPS preferred alternative is alternative F due to the fact that the economic impact facts were not properly investigated "...low end of estimated range rather than the high end..." and the negative environmental impacts were unfairly inflated: *addition of species not on the endangered list *failing to include dredge spoil islands bird populations figures * requiring 1000 meter buffers in all directions for unfledged piping plove chicks. The generations of residents and visitors to this area are a part of the ecosystem. The current mind set that humans are somehow not part of nature and the natural evolution of the planet is misguided and arrogant. The citizen users of the park system must abide by fairly reached guidelines established to give the endangered species a chance to make their comeback. Those who violate the guidelines should be prosecuted to the fullest extent allowed by law. The majority of visitors and residents should not be penalized by the irresponsible actions of the few. That appears to be the agenda of the NPS in favoring the Alternative F. I urge the NPS to re-evaluate the alternative preference selected and support alternative C so that all parties can have beneficial use of the resource. Sincerely, Matthew T. Peterson

Correspondence:	Dear Superintendent Murray, As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points. 1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations." 2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness...." Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources. 3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals. Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan. 4)I visit my daughter in Buxton, NC 3 times a year. I know the local people do not want ORV traffic. ***** Thank you very much for taking the time to protect one of America's most beautiful stretches of Atlantic seashore! Sea turtles, nesting shorebirds, and generations to come will be grateful for your action today. Thanks again! Sincerely, Jeannitte Hays

Correspondence: I grew up mostly in North Carolina, with a few years growing up along the coasts of Virginia and South Carolina. Every summer was spent at the beaches at the Outer Banks or at my grandmother's in Norfolk. The beaches and ocean were clean and unspoiled. It wasn't until I moved to Austin, Texas to attend grad school that I learned beach driving was permitted. The damage to the beach and Gulf were apparent: no dunes or grass, dirty beaches, ruts, dirty water (also in part due to oil wells off shore), no sand crabs or variety of bird life.

It is bad enough that huge hotels and condos are built on the shoreline, destroying a natural ecosystem and the environmental defenses against storms and hurricanes (not to mention the public view). Virginia Beach and Myrtle Beach are examples of the ugliness of once pristine and beautiful beaches. I am strongly against driving on the beach. We have to protect the delicate ecosystem and life that depends on an unspoiled shoreline. The arguments for it are purely selfish.

Teddy Roosevelt is spinning in his grave. He must be in China by now. Whether it's off-shore oil drilling, strip mining or driving on the beach - to name a few, do humans expect the earth to continue to support their existence?

Please respect nature and our relationship to it. Ban vehicles from driving on the beach.

Thank you, Amanda Harding

Correspondence: May 11, 2010 To Whom it May Concern: We have been visiting the Ocracoke Island for approximately twenty years and for the last ten have owned property on the island. We have always considered the island as sacred in the splendor and bounty of its beauty and wildlife and have always gone out of our way to protect the island and our property. Therefore, I am somewhat taken aback by the coalition wanting to close the beach access in order to protect the environment. First, I would want to know more of their agenda. Specifically, what studies have been done concerning the island, their conclusions, and that the study was made by scientifically by an unbiased party. Frankly, I can't be certain that this is not just a power play and an abuse of power. Hard to go against them?.they are trying to save the wildlife and planet at any cost! I have seen how the migrating and nesting turtles are treated in Florida. Half the beach isn't roped off and occasionally the nest may be moved to help nature alone. On Ocracoke large areas are roped off which is probably unnecessary. Study what is being done elsewhere and learn. As far as the birds which species are we trying to protect? Are any of them endangered? I have never seen a bird nest on the beach front. Therefore, it would seem practical to me to provide a "corridor" where necessary; the corridor would provide access plus protect nests. I believe that the parties behind this could be sued for abuse of power. I question if they have the rights to close the beach. If the beach gets closed then the tourists will go elsewhere. The businesses will go out of business. Some commercial fishing probably will remain. Under those conditions will the island lose its Federal Mandate as a public area? I believe originally that the beach was to serve the public plus be a preserve for the wildlife. By closing the beach the public will go elsewhere?.thereby violating the premise that is should be for the public as well as the wildlife! Tom Crall

Correspondence: As an avid angler on the North Carolina seashore, I am strongly opposed to the National Park Service (NPS) preferred alternative, Alternative F, in the DEIS and urge you to make significant changes to the preferred alternative in order to provide both reasonable resource protection and reasonable public access to public land. Recreational fishing is one of the most enjoyable American pastimes, and Cape Hatteras National Seashore has some of the best surf fishing locations on the east coast ? accessible only by ORV.

Alternative F is the most restrictive management option to date, far exceeding any sense of balance between resource protection and public access and betraying all promises made to the public regarding recreational uses in the seashore. The majority of the provisions included within the preferred alternative far exceed anything proposed by a majority of the Negotiated Rulemaking Committee, including excessively large resource closures (buffers), unnecessary year-round and floating closures, and the lack of access corridors around or through resource closures.

In order to restore balance to the DEIS, I highly recommend that the NPS revisit the proposal put forth to the Negotiated Rulemaking Committee in December of 2009. It provides the necessary protections for wildlife resources while having the support of a majority of the local community. Without reasonable ORV access, responsible anglers like me, and the local economy that is supported by recreational fishing, suffer greatly. I urge you to provide a better balance between resource protection and recreational uses by incorporating the December 2009 recommendations from the Negotiated Rulemaking Committee into the preferred alternative.

Correspondence: As a taxpaying US Citizen, frequent visitor to Cape Hatteras Naitonal Seashore for over 20 years, and a non-resident propety owner on Hatteras Island for over 10 years, I have some comments on the NPS ORV Management Plan released 4/13/2010. I suport the non-active "Alternative A" Management Plan as outlined in the DEIS, which factors in the 2007 FONSI, the CHNS Interim Protected Species Management Strategy/Environmental Assessment, the Superintendent's Compendium of 2007, the 1978 Draft Interim ORV Management Plan, and the Superintendent's Order #7. I feel that "alternative A" comes closest to the dual intentions of maintaining the public's right to access to our National Recreational Seashore's public beaches while responsibly managing our Park's resources.

I recognize that since the establishment of the CHNS Recreational Area over 50 years ago, increases in the visitorship of the park as well as the populations (year round and seasonal) of the adjacent villages of Hatteras Island has impacted park resources. I do not agree, however, that drastic changes in management policy as compared to those in place before 2008 are needed to protect those resources. For example, in the case of the Piping Plover, statistics published by the NPS in the DEIS show that nesting pairs increased 200% from 2002-07. under the previous management plans (p.187). In 2008, the number of pairs noted jumped from 6 to 11, due in part to increased success of the previous years' broods. Yet in 2009, the pairs number dropped to 9 (approx 20% loss). How does this fact support the effectiveness of the increased restrictions imposed by the Consent Decree? It does not make sense to me that these greatly increased protected areas have a positive impact on the brood success when the vast majority of the chick mortalities are due to other forces of nature, such as predation, storms, etc. I argue that the ML1 procedures in RSM areas (p.468) are TOO RESTRICTIVE to ORV access; therefore, pedestrian and ORV corridors should be provided in ALL SMA's during the entire breeding season, as provided prior to 2008.

I further argue that the NPS should aggressively pursue the Adaptive Management Initiative identified on p. 124 of DEIS to improve both resource management and visitor access. The success of these adaptive management initiatives should be evaluated more frequently than the 5 year periodic review process identified in the DEIS to allow for less restricted access if resource protection improves, i.e. evaluated yearly (alt F). The proposed NPS closure policies will have little impact on chick survival.

Concerning sea turtle nesting issues relating to night driving of ORV's or pedestrian access, I argue that the restrictions proposed by the NPS in the DEIS (p.125) are excessive as compared to what the statistics of ORV/pedestrian disturbance in CHNS indicate; i.e. major adverse events have not occurred (p.377). The NPS should adopt techniques used in other turtle-nesting localities, including nest relocation in highly visited areas of the seashore. The Nightly Turtle Nest Watch Program should ensure that nests are identified and, if located in heavy use areas, relocated to safer locations or to hatcheries, as the practice in many other turtle-nesting locations.

My strongest opposition to the NPS DEIS concerns the lack of consideration and sensitivity to the cultural, historical, and economic impacts on our citizens who live, work and recreate in the adjacent communities of CHNS. This is in clear contradiction to the National Environmental Policy Act, in

which agencies are charged with protecting and preserving both natural and cultural resources in the federal decision making process. The NPS is appearing to ignore its own guidelines of traditional cultural property designations as valued by the long term residents of the local communities. The DEIS identifies ORV access as historical in nature (p.83), historical commercial fishing (p.18), and recreational fishing (pgs 15, 260) as well as general recreational activities (p. 259). Yet the NPS, in favoring "Alternative F", seems to be ignoring these vital historical and cultural activities on Hatteras Island. Businesses have already been severely affected by the consent decree yet the NPS position on economic impact is that local businesses will adapt to policy changes (p. 383). Our rental property has seen a 25% down turn from renters who are not returning due to the closures.

In closing I would add that I have faith that the NPS will read these comments in an open-minded manner. Compromise can be reached with regard to the HUMAN ASPECTS of the issues I have described. The delicate resources that exist within the CHNS can be managed in the manner in which the seashore was established- as a National Park for the enjoyment and recreational opportunities it provides to our citizens.

Thank you for your consideration of these comments.

Respectfully your, Diane and John Mayhew

Correspondence: As a small business owner in Virginia Beach, VA and a homeowner in Frisco, NC, I am extremely concerned about the impact of this proposed DEIS on the small business owners that survive on the tourist business that comes to the Island to access the beaches! No where in the DEIS is there any mention of how greatly this proposal would affect and bankrupt the economy and small business owners. This island is made up almost exclusively of small business owners. Therefore my assumption is this proposal long term effect is to drive off the local population and make the island exclusively a nature preserve.
The Ecosystem on the Island has sustained itself prior to all these closings. The solution is to be reasonable. No one wants to kill or destroy nature wildlife or habitat. In my 30 + years going to the Island I have never seen anyone intentionally harming wildlife.
Let's be reasonable to all parties!!!

Correspondence: While I am not much of an online person -- the importance of this selection of an alternative is so critical to the livelihood of Hatteras Island I am compelled to respond.
I am deeply concerned about the Park Service's preference for Alternative F. Alternative F appears filled with superfluous control measures which have no basis or any scientific support. I hate to suggest, but it does appear to be the alternative which may be cost effective for the park service but financially detrimental to all of Hatteras Island. There is no logical reasoning for a number of the control measures in Alternative F. So to be clear: I disagree with the 1000 meter pedestrian/ORV closure in all directions for piping plover unfledged chick brood (p. 121-127). As I read in the Virginian Pilot on May 9,2010, "no scientific reasoning" has been presented "for this management strategy." The impact of this rule could cause closures not just in ORV areas but may close the beach in front of houses. The financial impact of visitors renting ocean front/ocean side houses and being unable to walk out on the beach in front of "their house" would kill Hatteras Island rentals -- our lifeblood (as well as for North Carolina taxable income). I disagree with the 300 meter pedestrian/ORV closure in all directions for any American Oystercatcher nest or brood, as the Oystercatcher is not a federally threatened species (p121-127). Again, the unnecessary closure of beaches and consequent lack of access to the beach and ocean for pedestrians (and ORVs) is not sensible. I live in north Avon. Last year the beach was closed directly in front of our house due to Least Tern nesting. As we are the farthest north set of houses we could walk slightly south and still get to the beach, but if buffer areas are extended -- and used for non federally threatened species it is highly likely the beach would be closed in front of ocean front houses that visitors have rented.
I disagree with the Alternative F rule that No pets, including dogs, will be permitted on Cape Hatteras National Seashore lands including the beaches between March 15th and July 31st (p 136). This rule has no benefit for the preservation of birds or turtles. If people are allowed in an area, than a dog on a leash is of no environmental concern. I have heard numerous times from visitors on the island that they come to Hatteras because we are "pet friendly" on the beach. We own an Ocean front home that allows pets. In the spring every week of rental is with visitors with pets. Should this rule be put in place Hatteras Island's spring and summer business will be adversely impacted as individuals will find somewhere else to vacation. Additionally many homeowners have pets and walking on the beach is the only place we have to exercise our dogs. We have very limited sidewalks and no walking trails on Hatteras Island.
I have been living on Hatteras Island for 15 years. I am a building contractor and am struggling to make it through the economic crisis. If these measures go through, I will undoubtedly be forced to foreclose on a number of properties and move off the island. We simply cannot "work through" another hit to the lifeblood of what Hatteras is, beautiful beaches with open access while preserving the beauty.
May those reading this be clear that the option presented in Alternative F are not well-founded, researched or explainable. I truly cannot see how not allowing pets in areas people are allowed makes any sense at all (as well as buffers that again are not based on any scientific reasoning.)
I appreciate the opportunity to comment. Hatteras Island is an amazing and special place. If you are reading this and have not visited, please come--you will then understand.
Kind regards
Les Weaver, Jr.

Correspondence: I have been a regular visitor to Cape Hatteras since 1963. I have been a full time resident of the Outer Banks since 1980. I have always supported the ideals of conservation and largely support the efforts of the environmental movement. Over the years, I have enjoyed many of the activities that the seashore offers: hiking on the beach and in the maritime forest, fishing, kayaking, camping and watching the birds and other wildlife.
Recently, I have spent a lot of time learning about the Park's history, following the proceedings of Reg Neg meetings, attending public hearings, and understanding the resource and access issues.
While I support the National Park Service's mission to preserve park resources in a reasonable manner, the DEIS falls far short of supporting important recreation activities within the Park at Cape Point and at the spits at Oregon, Hatteras and Ocracoke Inlets.
Cape Hatteras is world renown for its surf fishing. In fact, there is no other spot in the world where a surf caster can catch large numbers of trophy sized red drum (channel bass) from the surf. The issue I have with DEIS and the consent decree is that the beaches are closed to all access during the peak fishing seasons due to unreasonable buffers for nesting shore birds and the unwillingness of the Park Service to occasionally move a turtle nest when that nest is blocking a critically important recreational area such as Cape Point and the spits.
Last year, in April and May of 2009, I caught 25 large red drum at Cape Point. Some of the fish were in the 40 to 50 pound range and twenty-three of these drum were over 40 inches in length, the minimum length to be judge "Exceptionally Meritorious" by the State of North Carolina and eligible for their citation.
My experience catching these fish under the Consent Decree in spring of 2008 and 2009 always involved wading around at least one and often two American Oyster Catcher resource closures at low tide. My fishing seasons would eventually end when the Piping Plover chicks fledged and the unreasonable 1000 meter buffer closed the beaches to all access. For most of the fishing season, the total walk to the point was a half mile each way

until 10:00 PM at which time I would have to move my truck and park at the dumpsters at Ramp 44 or in the parking area at Ramp 43. At either location, the walk is one mile each way.

The importance of this letter is to explain my experience accessing the Seashore under these conditions and to make a few common sense suggestions for improvement to the DEIS.

In 2008 and 2009 I waded around the AMOY enclosures about 25 times during the daytime. While wading around the enclosures, I was always looking for the AMOY and I got the impression that they must spend most of their time on the dune side of the enclosure rather than the ocean side of the enclosure where I was wading. On only one occasion did I see an AMOY near the water and he was at least fifty feet from the water and he did not seem to notice me wading by. In the mornings, I frequently see the Park Service's ATV's drive around the AMOY enclosures and on one occasion I saw a Park Service Jeep drive around the AMOY enclosure. So it is pretty obvious that some kind of reasonable access is possible around the AMOY enclosures.

My first suggestion is that since wading around the AMOY enclosure does not disturb the birds and since the Park Service's ATV's don't disturb the birds even though they travel closer to the birds than I do wading, I would like to be able to walk around the enclosures where the Park Service runs their ATV's. Making me wade around the enclosures lugging heavy equipment is unreasonable.

The size of the resource enclosures are unreasonably large, especially the 1000 meter buffer for the Piping Plover. If an ORV corridor is not possible through the Plover enclosure, then at the very least, a pedestrian corridor should also be established for access to Cape Point.

I think that walking up to a half mile down the beach carrying equipment is reasonable, but walking a mile each way is unreasonable. And wading around the enclosures is the real burden.

From 10:00 PM until 6:00 AM to access Cape Point I have to park at Ramp 43 or 44 and walk the mile down the beach to the point. This could be improved by a special permit that would allow us to park on the beach all night. This permit could include a fee for enforcement, a requirement for resource education, and an agreement not to camp on the beach, move our vehicles or shine bright lights.

During the periods when night time driving on the beach is prohibited, the DEIS should include provisions for night time parking near the beach at the end of the access ramps on the beach side of the dunes. Night time parking should also be allowed in certain areas along the sand roads that run behind the dunes at Cape Point and at the spits. Parking near the beach at the end of the access ramps has no negative impact on resource protection, but would greatly enhance user experience and reduce a burdensome walking requirement.

I would also suggest that the Park Service consider cutting a permanent pedestrian path from Cape Point to the parking areas at Ramps 43 and 44, and the campground. This path could be cut through the brush between the west side of the sand dunes and the east side of the pond at Cape Point. This path would have no negative impact on the Park's resources. The path would provide reliable year round access to Cape Point when all other access is lost during times of resource and safety closures. This access would be safer than wading around the enclosures at night and could prove useful for resource observation, predator management and park enforcement.

I agree that in most cases, turtle nests should not be moved, but the DEIS should allow for exceptions such as when the nests are obviously going to be washed away by storms and where the nest blocks access to critically important recreational areas such as Cape Point and the spits.

Last year, I observed a loose dog running around the AMOY enclosures and so I do support the DEIS's ban on pets on the beach from March 15 to July 31. And when dogs and horses are allowed on the beach, their owners should be required to clean up after them. Last week I parked at Cape Point after a group of horses had passed through and I found that the pile of horse manure left behind negatively affected my visual enjoyment of the beach.

Although opening the park at 6:00 to ORV's is reasonable in the early spring, by late spring a 5:00 opening time would be more appropriate.

Finally, since none of the villages within the Seashore offer public parking or public access within the villages the DEIS restricted ORV access in front of the villages effectively privatizes large portions of the National Park Service's beaches for the benefit of the wealthy beach home owners and their tenants and shuts the public out of these beaches. A reasonable exchange for the Park Service restricting ORV access within the villages would be for the villages to agree to provide public parking along the shoulders of the roads and allowing the public to use the existing private beach easements.

The United States has a great National Park system. And since the days of John Muir and Theodore Roosevelt, the greatest supporters of the National Parks have been the users of the Parks. The disturbing trend of gradually shutting users out of the parks and effectively turning the Parks into wildlife preserves is causing the Park Service to lose its public support. Thank you for considering my comments.

Correspondence: I oppose the DEIS because the objectives on page iii are fatally flawed. Two additional objectives must be added:

1. Recreational Access Is A Priority 2. Conservation Measures Will Be Based On Honest Science and Common Sense

Unless these objectives are stated and met, large stretches of beach will be closed every year to protect a handful of marginal nesting sites at a cost of over \$3,000,000 per year.

*** The economy and culture of the Outer Banks will be diminished. *** Little or no benefit will derive to the birds and turtles. *** The only beneficiaries will be rich, urban environmentalists.

I suggest a plan that incorporates the following:

A Commitment To Conrad Wirth's 1952 Promise - "There will always be access to the beach for all people, whether they are local residents or visitors from the outside."

Shorebird Habitat Restoration ? Recreate the overwash ecosystem that dominated the Outer Banks before the CCC dunes. The interior and south beach of Cape Point and the sound side of Hatteras Spit are the most obvious sites. Get rid of the vegetation and let the ocean do its job. Maintain ORV and pedestrian access adjacent to the surf.

Continued Turtle Patrols ? Turtle patrols have been 100% effective for decades. Nothing needs to be changed.

Common Sense ORV Management Policies ? (1) Enforce vehicle carrying capacities on busy weekends. (2) Delegate beach traffic enforcement (speeding, reckless driving, drunk driving and traffic courts) to Dare County. Let Dare County decide how to pay for it.

Correspondence: I am a fifty year old avid outdoors man, I have been going to the point at Buxton twice a year since I was sixteen, that is, until I was denied access to the best place on earth. I started taking my twenty year old son there when he was six and exposed him to a gift of nature that I have found no where else. I had hoped that I could take my five year old grandson, next year and show him a place like no other, but I am afraid that might not happen. I have always respected the boundaries that were set to protect the dunes and the wildlife and have never seen anyone, other than park service personnel inside those areas. I can not believe the overkill and ridiculous boundaries that are being imposed upon us to supposedly to protect a species of bird, that is not even on a protected species list. I have been told that an Oystercatcher will build it's nest in the gravel on the side of the highway, What next, CLOSE RT 12,I hope not , but that would not surprise me, with the complete lack of common sense that has been exercised so far. I had always thought that the taxes I pay would go to helping maintain the parks and keep them open for the enjoyment of everyone, WRONG AGAIN. It would seem to the average person that the Audubon Society and the other special interest groups, have the judge that is making these one side rulings in their back pocket. OPEN THE BEACHES and let us continue the tradition of caring for the nature that brings us so much joy, We can take care of those that abuse what we love.

Correspondence: Mike Murray, Superintendent
Cape Hatteras National Seashore Recreational Area
1401 National Park Drive
Manteo, NC 27954
Dear Superintendent Murray,
Please accept this letter as my comment on the ORV DEIS before you at this time.
After reviewing the National Park Service DEIS I must disagree with any of the six alternatives within the document.
I have; however, reviewed the 77 page Coalition for Beach Access Position Statement signed by several groups that were a part of the negotiated rule making process and it by far succeeds in furnishing the best visitor experience while maintaining the needs of protecting the fragile resources.
Please consider all aspects of this alternative and put people back into the management of Cape Hatteras National Seashore.
Truly Concerned Home Owner: Daniel J. Woods

Correspondence: Please accept this letter as my comments on the ORV DEIS before you at this time. After reviewing the NPS DEIS I must disagree with any of the six alternatives within the document. The DEIS management alternatives have little to do with developing a responsible off road vehicle management plan. The alternatives map out a plan to exclude humans from the Cape Hatteras National Seashore and Recreation Area. Unless my feet are now classified as off road vehicles, this document is wat off base.
A 1000 meter buffer zone for common shore bird nests ia absolutely absurd. This buffer zone allows a bird nest a circle that cannot be entered by humans that is over a mile across! We do not afford this type of easment to any other animal. We do not provide this much of a buffer zone to the president! It makes no sense what so ever to place the buffer zone around the nests of oyster catchers and terns let alone the misguided plovers that are attempting to nest outside of their natural range.
Another thing that really bothers me is the way the National Park Service is slaughtering mamalian wildlife under the guise of protecting endangered birds. THE BIRDS ARE NOT ENDANGERED! The fact that the park service is deciding which wildlife can live and which species should be irradiated disgusts me.
I have reviewed the 77 page Coalition for Beach Access Statement signed by several groups that were a part of the negotiated rule making process (another travesty) and it by far succeeds in furnishing the best visitor experience while maintaining the needs of protecting the fragile resources. Please consider all aspects of this alternative and put actual people, not lawyers, back into the management of Cape Hatteras National Seashore.

Correspondence: On the issue of corridors through the seashore, I fully agree with this initiative throughout the breeding and nesting season so that the threatened wildlife will be protected during those times while not restricting large parcels of land from the both the local and visiting public. The corridors would provide valuable access and ample protection to the natural resources in the area. On the issue of restrictive species management areas, I disagree with eliminating pedestrian and ORV access during the entire breeding season. I also disagree with the extent to which the buffer zones are spelled out. A buffer zone of 30m-50m for all but unfledged chicks should be adequate, and a buffer of 200m for unfledged chicks would be adequate. I agree with pro-active adaptive management on a cycle more frequent than a 5-year periodic review process. I also agree with enhanced predatory management, recognizing that the feral cat and fox population causes much more damage to the bird and turtle fledglings than pedestrian and ORV usage in the nesting areas. I agree with a Turtle Night Nest Watch program as opposed to around the clock closures. I also agree with a closure area of 10 square meters as opposed to the suggested 105m wide closure area. I also agree with using hatcheries, nest relocations and captive rearing to increase the success rate of turtle nesting. The Cape Hatteras National seashore has an historical identity tied to the activities that are considered for restrictions or elimination altogether. Continuing the pattern of land use enjoyed by generations of locals and visitors alike is central to maintaining this identity. I have read through the DEIS and noted more than a few erroneous conclusions meantioned that present a very lopsided argument instead of complete user data and analyses. Incorporating areas to the north that are not part of the seashore area being restricted produces a fallacy in that the number of visitors to the north beaches generally don't travel to the Cape Hatteras seashore during their visit. If it were true that those north beach visitors were venturing to the south beaches and ORV areas, the local merchants would be seeing much less of an economic impact than they currently face. If anything, the beach closures for the 2009 season adversely affected the Hatteras economy because the true visitor count to the Cape was markedly lower in number. Small businesses run by the generational descendants of the seashore area will be driven out of their way of life if the seashore closures continue to discourage visitors to the area that want to enjoy ORV and pedestrian usage of the seashore beaches. I disagree with counting visitors to the Wright Memorial and Fort Raleigh National historic site because those areas are completely unrelated to the Cape Hatteras seashore. Those visitor counts need to also be factored out of the DEIS findings. Thank you for your time and consideration, Charles M. Ware

Correspondence: I am privileged to have used the Cape Hatteras National Seashore and consider it a treasure. As such, I protect the shore and beach trying to use it

without damaging the park or it's wildlife.

I think that a reasonable solution can be reached that allows the public to use the park and the wildlife can be protected.

Please consider a solution that allows vehicles and pedestrians in an access area next to the high tide line and protected areas for the birds and turtles.

This solution can protect and at the same time allow use in a controlled manner.

Thank you, John W Tucker,Jr West End, NC

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
Please PUT NATURE FIRST! Recreation should be consistent with protecting nature.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
Please support habitat that is crucial to wildlife. Available habitat is disappearing due to new construction and now the oil spill in the gulf. These threats make undisturbed nesting ground even more important.
The following principles should guide the park's final plan:
*Provide access for wildlife and for pedestrian visitors. With obesity threatening the nation, opportunities to enjoy walking are a valuable national resource.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should be a priority, and recreational use should be consistent with this protection. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers should be increased if necessary to protect breeding birds and sea turtles.

Correspondence: Dear Superintendent Murray,
 As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.

- 1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."
- 2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness...." Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.
- 3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.

Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

Correspondence: I love a pristine beach. I spent many wonderful summers camping on Ocracoke with my family. We camped on Hatteras a few times, but even 30 years ago, Hatteras had too many vehicles for me. We went instead to the Core Banks and Cape Lookout. My preference would be to allow NO beach driving. Instead have parking areas and foot access. It is crucially important to protect wildlife habitat. For example, sea turtles are hatched on the beach, then return 30 years later to the same spot to lay their eggs. What if that spot is no longer there? If we protect the beaches by limiting access now, we can always increase the access later. If we allow a lot of access now and degrade the beaches, we can never go back to a pristine beach.

Correspondence: Comment 1 As currently structured, Alternative F is not primarily an ORV management plan. It is primarily a public access restriction plan. The plan is biased toward bird and turtle protection, seashore isolation and not to a reasonable extent on public use and visitor access?specifically ORV and pedestrian access. Responsible environmental management uses sound science and unbiased professional judgment that balances the human needs and rights of people with the needs to manage and sustain natural processes. The preferred proposal, Alternative F, fails to meet these criteria. Alternative F fails to recognize objective science, enabling legislation, citizen rights, historical uses, and past promises of access to their environment. Promulgation of Alternative F as it is currently structured will be the basis for widespread public dissatisfaction, continued distrust of government, especially the National Park Service, and costly litigation.

 Mike Murray Superintendent Cape Hatteras National Seashore 1401 National Park Drive Manteo, NC 27954 252-473-2111 x 148 Re: DRAFT CAPE HATTERAS NATIONAL SEASHORE OFF-ROAD VEHICLE MANAGEMENT PLAN /ENVIRONMENTAL IMPACT STATEMENT
 Dear Mr. Murray,
 I am writing to comment on the draft Cape Hatteras National Seashore off-road vehicle management plan/environmental impact statement, released for comment on 12 March 2010. My first reaction would be to not allow ORV use in these areas at all. The fact is that there are several federally recognized threatened and endangered species, including the piping plover and the Seabeach amaranth that the NPS is required to conserve and protect in accordance with the Endangered Species Act of 1973. There are also several species of special concern recognized by the state as well, as needing special protection and consideration. Wetlands and estuaries are sensitive ecosystems that can be disturbed quite easily by human traffic and use, adding

ORVs to the mix only increases the chances of destroying these necessary ecosystems for breeding populations and the services that these ecosystems provide. This national seashore is a barrier to much of the Atlantic Oceans fury, protecting the coastal areas of the state of North Carolina from erosion, flooding, and other weathering factors. It is important that the community understand that this seashore is not just a recreational site that provides for an economy to the 11 surrounding villages, but that the seashore is a barrier to a host of environmental factors that could impact the villages near and around the seashore. With that being said, the DEIS also demonstrates a necessity for ORV use at the Cape Hatteras National Seashore. It is important that if ORVs are to be used to grant access to all that the seashore has to offer the community and public that a management plan be drafted and implemented, and I applaud the NPS for their efforts to this difficult task.

After reviewing all the alternatives in the DEIS, I would have to agree with the NPS preferred alternative, Alternative F. In my opinion it is the most agreeable of all the alternative actions that satisfies the requirements of the national seashore as a place of recreation for the public and as a breeding ground for many key species to the ecosystem. The buffer provisions are important for breeding shorebirds and the 4.5 month restriction on ORV use allows for shorebirds to have optimal conditions for the breeding season. As stated in the DEIS history and background of the current situation, the increased use of ORVs in the 1990s has shown a decrease in the amount of nesting shorebirds in the Cape Hatteras National Seashore area. This would suggest that noise from the vehicles is disturbing these birds from their regular nesting grounds. Might I suggest that with ORV utilization as transportation to grant access to those who otherwise could not access these areas that special noise reducing devices be required.

Night restrictions are more than necessary as well. Most recreation uses for the Cape Hatteras National Seashore are day activities; therefore, only day use of ORVs should be required. Another good point to alternative F is that it would establish a carrying capacity of ORVs, this is good start to restricting the total amount of ORVs that can be utilized on park property. This would meet the objective of minimizing the harm to physical resources of the seashore; however, by allowing large areas of beach to be accessed and used for ORV recreational use, could further disturb and degrade the seashore. It is my opinion that the use of ORVs be restricted solely to providing access for recreational uses such as fishing, swimming, birding, etc. Allowing ORVs to be driven on the beach can erode soils more quickly, disturbing the dune system that is restricted to ORV use to begin with. If attempting to minimize impact and protect the dune system that protects the rest of the barrier islands, then no use on open beach areas should be implemented. I suggest a revision in this nature be more in compliance with alternative E.

Alternative F, meets the requirements of adaptability with changing conditions of the seashore and also in providing the public with timely notification of closures of ORV use sites due to weather or other issues. It is the most adaptable, giving the most alternatives to access to the public. I am in support of Alternative F, with the exception of large areas of open beach access to ORVs and maybe adding a noise reducing device to ORVs. In my studies at the University of Missouri in environmental science: land use, I have come to realize that land, if available, will be utilized by human beings. It is important to consider the appropriate uses of the land with regards to land productivity and its capability for certain uses. One thing the NPS might want to ask itself is has all the alternatives been considered? Was there proper consideration of a soil survey and have all low impact development alternatives been considered. It is impossible to mitigate all the problems associated with ORV use and the seashore ecosystem, but with proper management they can be minimized and the ecosystem can thrive for the protection of the coast and for enjoyment by the public. The purpose of the NPS is conserving these systems for the enjoyment of future generations; therefore, it might be prudent to have more educational components for the community and public to fully understand the decisions of the NPS for the Cape Hatteras National Seashore.

One last thought, as I have conducted my research behind this issue, it has been apparent to me that one concern of the public and surrounding communities is the effects of restrictions to the local economy. I may have missed it, but could not find a complete economic impact study. My question would be what percentage of people currently utilize ORVs to gain access to the many sites and facilities of the seashore? Also of concern is are areas restricted to ORV use, many say the vegetation has overgrown and become unsuitable for nesting, what is being done to manage areas where vegetation has overgrown? If restriction areas are to be designated by nesting sites and wetland sensitive areas, wouldn't it be prudent to manage vegetation in these areas to create safe havens for birds, rather than hiding places for predators? This is just one area where it seems the DEIS fails; there lacks a sense of consistency in goals and reasons for regulation.

This DEIS addresses many complex issues involving land use and management for the Cape Hatteras National Seashore. The public should be assured that their economic concerns are fully addressed in the final management plan, but they should also be educated to the full reason behind some restrictions to certain areas and no restriction to others. I feel that this issue can not be fully resolved until a full economic impact study can be conducted and analyzed, as well as a more precise and consistent goal for regulation is established. For this reason I urge the NPS to revisit the DEIS and revise alternative F to include a few of my suggestions. Then reopen public comment with revisions made.

Sincerely,

Denean Brady 36 Albany Drive Columbia, MO 65201 E-mail: dbpfb@mail.missouri.edu

Correspondence: Dear Superintendent Murray,
As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.
1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."
2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness..." Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.
3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.
Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan. There are not many beaches remaining that have not been spoiled by the pollution, noise and unpleasantness that comes with the ORVs. Please allow Cape Hatteras to remain as it is.

Correspondence: Mike Murray, Superintendent Cape Hatteras National Seashore 1401 National Park Drive Manteo, NC 27954
Mr. Murray below please find my comments with regard to CHNS Recreational Area Off-Road Vehicle Management Plan DEIS, specifically the Alternative F portion.
Before I make comments I would like to express my concern over the insulting minimum amount of time given to read and digest the 800+ document, formulate feedback and compile and transmit back comments for review. A document with such outreaching community, cultural and economic impact that took many man-hours on your part to develop and is given such a small public comment period does not evoke the partnership required to effectively implement a successful protection plan for all interests!
Specific area of comment:
Corridors-
P(xii, xvii, 468)Corridors should be provided and permitted though out the seashore during the entire breeding and nesting season including ML-1 and SMA's.
Page 201: I disagree with the NPS statement: "Even with resource closures in place, protected species are still at risk [from pedestrians and ORVs]." No Piping Plover deaths have been attributed to ORVs. ORV violations continue to decrease as signage and education improve. Pedestrian violations are much more significant than ORV violations.
Page xxiv: I question the statement of as per the DEIS: "Carrying capacity would be a 'peak use limit' determined for all areas based on the linear feet of beachfront?" If you close off huge sections of the beach, you force more people into smaller areas, potentially resulting in more resource impairment and diminished visitor experience.
Page xix and page 23: I am against having two different closures rules pertaining to the North facing beaches (North side) and the South facing beaches (South side) as per the grid outlined in Alternative "F". I disagree with the NPS proposal to close the beaches in villages of Frisco, Hatteras and Ocracoke Villages to ORV access longer than the traditional May 15 to September 15 period for the Northern beaches, even though seasonal visitor statistics are similar for all villages. Please, make them the same: May 15 -> September 15.
Page 1: I agree with your statement "ORVs have long served as a primary form of access for many portions of the beach in the seashore, and continue to be the most practical means of access and parking for many visitors."
However, pedestrian only areas discriminate against individuals with limited mobility due to age or physical impairments, families with small children, and those wishing to engage in activities requiring recreational equipment (boogie boards, beach umbrellas, beach chairs, coolers, fishing rods and tackle, etc)
Page 121 ? 127. I strongly disagree with the buffers as presented. We must allow for pass-thru corridors. The beach is linear with the ocean buffering on one side and the dune line on the other. For example - If you pinch off access on one side of a 4 mile linear beach and pinch off access on the other side of the 4 mile section of beach with no corridor, then you effectively have closed off all 4 miles of the beach because you CAN'T get there. The proposed bird buffers are too large, blocking access to the interior sections from the two "buffered" ends.
I propose ORV pass-thru only corridors and to use breeding / nesting buffer distances to establish ORV pass through only corridors to ensure beach access in a way that does not hinder resource protection. I believe pass through corridors should be maintained for pedestrians and ORVs in all areas of the Cape Hatteras National Seashore Recreational Area throughout the entire breeding and nesting season. Corridors are vital to providing access in a way that does not hinder resource protection.
Page 468: I disagree with the limitations imposed on pedestrian and ORVs. Corridors or bypasses should be provided thru, around or below high tide line in all SMAs during entire breeding season to maintain access
BIRD BUFFERS AND CLOSURES
P 121-127 Bird closure for birds other then those listed in the endangered species.
Non Endangered species such as the American Oyster, Least Terns and Colonial Water Birds are given Pre-Nesting closures and buffers (up to 300m) that are associated with those on Endangered Species Act. These birds are not under the ESA and therefore should have reduced buffer zone in the 30M range.
P 121-127 Bird closure buffers- I disagree with the buffers set.
Bird closure buffers need to be based upon reviewed science. Buffers associated with unfledged chicks are too restrictive and not based upon any provided scientific data and are much larger than that required by the species recovery plan. In addition, the buffer zones should move with the brood as it relocates instead of expansion.
The 1,000 meter distance for the piping plover is too large and not based upon peer reviewed science. A more rational distance would be 200 meters per other sites in the nation for the piping plover. Ample scientific evidence and precedent exists to support a 200 meter buffer.
I disagree with the stats of breeding plovers and the other birds in the Park. NPS does not consider other nearby locations in their data reports. Dredge and spoil island bird activity is not included. For example the black skimmers can be seen on both Pea Island and Coro Island in vast numbers yet the data used by NPS suggest otherwise. These birds are part of the same ecosystem and should be included.
Pages 125; 392 ? 396: SEA TURTLES. I disagree with the stats and procedures proposed. I think endangered sea turtles would benefit from management practices now in use at other federal seashores that are more proactive in efforts to achieve nesting success. This includes relocating nests to more desirable locations as is done in other state and federally controlled areas in addition to volunteer programs for hatch periods.
As recent as May 05, 2010 a documented attempt for Sea Turtle Management for Cape Hatteras Seashore Recreation Area was written by Larry Hardham and Bob Davis. I agree with the approach taken and hope the NPS will read and review this document and consider this approach to Sea Turtle protection. The Cape Hatteras National Seashore Recreational Area is on the northernmost fringe of turtle nesting locations for the southeast, accounting for about 1% of all turtle nests. Proposed buffer areas are not needed for protection of the turtles and amount to overprotection.
Other Areas of concern:
Maintenance of Future Access to Cape Point and South Point Ocracoke: All socioeconomic analyses related to Alternative F are predicated on the assumption that access corridors will remain open for at least an appreciable portion of the visitor high season. Under Alternative F, the access corridors will be subject to Resource Closures based on buffers similar or identical to the Consent Decree. Unless some predictability of access to Cape Point and South Point Ocracoke can be assured, economic analyses predicated on assumption of access are fundamentally flawed.
The definition of the Region of Influence (ROI), faulty data on economic activity generated by specific type recreational activity, incomplete visitation/business survey data, inflated overall Seashore visitor counts pertaining to beach use, and flawed key assumptions concerning the maintenance of access under Alternative F, all lead to inaccurate conclusions in the socioeconomic analyses. Specifically, these inaccuracies can be seen as understating the negative socio-economic impact of the Seashore Villages. Further, this negative impact will be absorbed almost entirely by Small Businesses. Neither of these important aspects of the management alternatives are adequately presented in the DEIS.
Pages 97- 101. I strongly disagree with proposals in this section saying that ORVs will be prohibited year round between ramps 27 and 30, at Hatteras Inlet (Hatteras Spit), Ocracoke Inlet (North Ocracoke Spit) and various other locations.
Not allowing ORV access is paramount to denying the public access to these beaches. They are located miles from the nearest parking or paved road

area and too far to access on foot. As a matter of course, there has been no breeding of piping plover or other endangered species at the Hatteras Island Inlet (spit) area in the past 6 years.

Page 104: I disagree with the proposed night time driving closures. Per your proposals, night driving will be prohibited between May 1 and November 15th, forcing visitors off of the beaches early in the evening and preventing sunrise surf fishermen access in the morning. I propose a more moderate night time ban if one is needed, perhaps from June 1 ? September 15 with times being 1 hour after sunset and 1 hour before sunrise to allow beach goers to gather their stuff and exit the beach area.

Certainly more proactive measures such as relocating nests prone to weather and ocean events would dramatically increase the nesting success rates.

Page 121: I disagree with the proposed beach closings, including pedestrian access from March 15 until July 31 in 8 different beach locations which have traditionally been available. Please leave these areas open to beach walkers, shell collectors and those that want to access the beaches in these areas.

Page 136: I strongly disagree with your pet restriction proposals. The "prohibition of pets in the Seashore during bird breeding season including in front of the villages." = No Pets in public areas ?beaches, campgrounds, soundfront, foot trails, park maintained roads -from March 15 ?July 31.

Page 124: I strongly disagree with the NPS slant of providing for over protection of resource management over that of the public's right to access the beaches. Pro-active initiatives include: Vegetation Management, Habitat Management, Enhanced Predator Management, Colonial Water bird social attraction, Piping Plover check fledge rate, Piping plover chick buffer distance, and pass-through buffers during the incubation period. Opportunities to implement less restrictive closures as a result of the above initiatives should be considered more frequently than the 5-year periodic review process identified in the DEIS.

I disagree with the NPS Resource Management Pedestrian / ORV Closure Policies. These policies address the least significant factors affecting nest survival with little chance to have more than negligible impact. For example: the AMOY Nest Failures are predominately due to non-human events. Using your own stats, the mammalian predation is 54%, Storm / Lunar Tides: 29%, Nest Abandonment: 6%, Avian Predation: 5%, and Ghost Crab Predation: 3%,

Human interaction has very little influence on the success rate of breeding birds and turtles yet actions imposed by NPS on human access is the most severe.

Page 1: I do not think the DEIS responsibly addresses the cultural resource issues. The very purpose of the DEIS as set forth in the National Environmental Policy Act (NEPA) is to protect and preserve natural and cultural resources in the federal decision making process. In the DEIS, the statement "protect and preserve natural and cultural resources" appears in the first sentence of the first page of the plan, in the Purpose of the Plan section, and numerous times thereafter. Yet, the 810 page document devotes only two paragraphs to analysis of cultural resource issues. Pages 270-281; 561-598: I strongly disagree with your economic analysis of the impact of the DEIS. The region of influence (ROI) incorporates the Northern Beach communities, including Kill Devil Hills, Kitty Hawk, Southern Shores and Duck. These areas are almost completely disconnected from ORV use and access issues relating to the Seashore. ? Inclusion of the Northern Beaches in analysis significantly dilutes estimates of economic impact on the 8 Seashore Villages

? Analysis of economic impact to the Seashore Villages appears to be significantly down played. Emphasis in DEIS is on the ROI-wide or county-wide level impacts.

? Nowhere is it clearly addressed that the overwhelming majority of negative impacts will be felt by small businesses in the Seashore Villages rather than by overall economic interests within the greater ROI.

On page xlvi, Alternative F is characterized as having a "negligible to moderate" adverse impact on small businesses. I strongly disagree with this statement.

I believe the negligible to moderate projection is inaccurate and relies on economic surveys that has not yet been published. Furthermore, this material is not expected to be added to the DEIS until after the public comment period has ended.

Based upon the economic harm we have already experienced under the consent decree, Dare County projects the economic impact of Alternative F to be substantial.

Beach closures have already had a devastating and unfair impact on many Dare County Businesses, causing foreclosures, bankruptcies, lay-offs, cutbacks, expensive refinancing, and depleted college funds and savings accounts.

Pages 270-286, 561-598: The socio-economic data and analyses are incomplete and erroneous and result in an understatement of the effect the restrictions will have upon the Island, the region and the state of NC. The US Park Services answer: Businesses will have to "adapt" to the new rules. (p.383) The negative economic impacts of the decree ARE KNOWN, so to say that the added restrictions would have negligible to moderate impact is indefensible.

Overall Visitor Counts - Overall visitor counts appear to include visitors to Fort Raleigh National Historic Site and the Wright Brothers National Memorial. A large percentage of these visitors vacation in the Northern Beaches communities and recreate on the non-federal beaches outside of the Seashore. Visitors who patronize the Fort Raleigh National Historic Site and the Wright Brothers National Memorial but do not visit the actual seashore areas need to be factored out.

Background:

My family and I began visiting Hatteras Island over 30 years ago. We visit from 7-10 times a year with family and friends. The majority of our quality family time has been spent exploring the bounty of recreational activities and unique settings afforded through ORV access on Hatteras. My children over the years have gained an enormous appreciation for the land, wildlife and culture associated with the Hatteras through ORV access to many different beaches, inlets, etc. We love and respect the Island, it is our second home.

I now own a home in Frisco where I will move permanently for retirement. I live in Maryland but yet travel 6-7 hours so many times a year seeking this unique environment. There are many places much closer but none like Hatteras. If it were not for ORV beach access we would sell our home and not return.

I have seen the changes over the years in the restriction in public access. Most I have supported and abided by to preserve the natural setting, endangered species, safety, wildlife, etc. We too want to protect this natural treasure. We do our part to educate new visitors and assist the NPS in keeping a watchful eye on this ever changing island environment. In most recent years however, I feel the access restriction have gone above and beyond acceptable. It seems apparent that special interest groups are forcing the Island restrictions towards those of a Wildlife Refuge instead of the recreational area it was intended to be. Please help us by considering my comments and input and help protect and preserve the cultural experience of the Cape Hatteras National Seashore Recreation Area.

Regards, Anne Wheeler, Sykesville, MD / Frisco, NC

Correspondence: ORV access to the Cape Hatteras National Seashore and Recreation area needs to be unrestricted and unlimited year round. It is not a wildlife refuge and should not be treated as such. Birds that are being protected are not on the endangered list and therefore the current restrictions are not called for. There has not been any scientific evidence that supports the current regulations. When the seashore was established the residents of the area willingly gave up their land with the promise that beach access would always be allowed. Many residents are currently losing money with the way beach access has been limited. Please allow the beaches to remain open and free. Thank you.

Correspondence: Michael B. Murray, Superintendent: Cape Hatteras National Seashore Recreational Area

May 2, 2010

Dear Mr. Murray,

I am writing to express my disappointment and rejection of the various provisions set forth within the Draft Environmental Impact Statement (DEIS) that was prepared by your agency, The National Park Service (NPS or the Service) in an effort to promulgate a rule for Off Road Vehicle (ORV) access to the Recreational Area here at Cape Hatteras as required by Executive Order 11644 (Nixon 1972).

Having reviewed the contents of the DEIS, I find that the Service has ignored the traditional uses and values associated with the Seashore in direct conflict with NPS policy and congressional mandate.

I find that the proposals for wildlife management and protection are excessive and have been proposed with the use of little sound, peer reviewed science as is required by the National Environmental Policy Act (NEPA).

The Service has failed to provide a properly studied and vetted Economic Impact Statement also required by NEPA.

The Service has failed to account for diminished visitor experience that will occur if any of these provisions are enacted, particularly alternatives D and F. I find that all of the proposed alternatives include provisions that will produce negative visitor experience.

I also find that most of the proposals contained within the DEIS are in direct conflict with existing Congressional legislation mandating policy and practice to be followed by NPS specifically at Cape Hatteras National Seashore Recreational Area, in addition to being in direct conflict with various published management policies of the Service itself.

As the Service has announced that proposed Alternative F of the DEIS is the policy that NPS would prefer to enact, my focus will, of course, follow this proposal as even sixty days is not enough time to prepare meaningful and informative comment on the remaining five alternatives presented by the Service.

Before I begin my discourse about NPS preferred Alternative F, I would like to address the lack of a suitable public comment period.

The National Park Service took approximately 38 years from the issuance of the aforementioned E.O. 11644 to draft a proposal for a final ORV management plan. At 810 pages in length, this often contradictory document is, and has been, difficult for even the most knowledgeable members of the public to understand and formulate comment. For those members of the public without comprehensive understanding of the various and sundry issues related to access, wildlife management, and the future of the Seashore, a sixty day comment period is simply not enough time. This is especially true since at no point has the Service made any attempt at educating the public about the contents and ramifications of the proposed alternatives. By virtue of the fact that the as of yet incomplete economic impact study has not been proffered for public scrutiny, I believe that public comment should be extended until at least sixty days after the DEIS has been completed. Proposed extension has been requested numerous times by elected federal and state representatives, our community leaders and the public at large. If the Service is genuine in its appeal for comment as is required within a NEPA process, then NPS needs to respect the request for additional time and provide for such.

It is with great dismay that I notice the title of the DEIS utilizes the term Cape Hatteras National Seashore. I would be remiss were I not to remind the Service that the true and proper name of this area is Cape Hatteras National Seashore Recreational Area as mandated by Congress within 16USC459 which states: (in part) "said area shall be, and is, established, dedicated, and set apart as a national seashore recreational area for the benefit and enjoyment of the people and shall be known as the Cape Hatteras National Seashore Recreational Area." Though the Service chose to drop the full name during the 1970's as it was considered cumbersome, all but the most mundane of documents are still supposed to carry the full title.

When Congress began to formulate the legislation that created the nation's first National Seashore, and as these bills were signed into law, nowhere was included anything that resembles NPS preferred Alternative (F). (Hereafter referred to as Alt. (F).) This proposal by the Service will have the effect of changing the stated mission of the Seashore and severely impact the economy of the Islands that comprise the bulk of this area and Dare and Hyde Counties as a whole.

It was the stated goal of Congress to establish an area for the people to come where they would be able to pursue recreational activities on these beaches and away from developed areas as debate began about the creation of this Seashore. When their eyes fell upon this area, they found a place steeped deep in history, tradition, and miles of pristine beach that had remained relatively free of development as it is so remote. Though Congress provided a dual mandate to NPS at the Seashore, it is recreation, not the protection of flora and fauna that is consistently mentioned within the relevant portions of the Organic Act (16USC459), although this too, is an important function of the Service.

What's clear is that at Cape Hatteras National Seashore Recreational Area, Congress established an area wherein recreation was to be the dominant activity. This same legislative body determined that the Service was to develop this area for such uses as needed by the public. 16USC459 Sec.4 states: (in part) "Except for certain portions of the area, deemed to be especially adaptable for recreational uses, particularly swimming, boating, sailing, fishing, and other recreational activities of similar nature, which shall be developed for such uses as needed" (emphasis added). This is in direct conflict with proposed and preferred Alt. (F) as introduced by NPS which will effectively un-develop important areas of the Seashore. Here Congress tells NPS that as the people come to the Seashore to recreate, NPS is to develop the area to accommodate the recreational needs of the visitor. This is not a hint, it's not asking NPS to consider making the area accessible. No, it states quite plainly "which shall be developed for such uses as needed"

Had Congress intended that the area become a wildlife refuge, the provision included within the enabling legislation discussing any "lands and waters now or hereafter included in any migratory-bird refuge" found in 16USC459 Sec.5 would not have been included as part of this legislation. The NPS preferred Alt. (F), by permanently shutting down vast areas of the seashore under the auspices of protecting wildlife, will effectively transform the Seashore into a "preserve" status without actually calling it so. And as such, violates the intent of Congress and its legal dictates relevant to this area, and published NPS management policy.

Further evidence of the intent of Congress to develop an area for recreational purpose can be discovered within 16USC459 Sec.3. Here Congress guarantees the right of the legal residents of the Islands the right to make a living by fishing "subject to such rules and regulations as the said Secretary may deem necessary in order to protect the area for recreational use as provided for in this Act." (emphasis added). This provision resulted in the creation of an area of the Seashore that was set aside specifically for the "protection and enhancement of recreational sports-fishing". 36CFR7.58.21.b. (6) (in part) ? Specifically identifies boundaries "A zone is established for the protection and enhancement of recreational sport-fishing commencing at Beach Access Ramp No. 22 and continuing south and west along the ocean shore, including Cape Point (Cape Hatteras), to Beach Access Ramp No. 30. Within this zone commercial fishing, as specified in the Act of August 17, 1937 (50 Stat. 669), is permitted." Of note is that with the Beach Access Ramp number re-designation that has occurred since this statute was enacted, the aforementioned Ramp 30 is now designated as Beach Access Ramp No. 45.

Enacting NPS preferred Alt. (F) will result in the closure of the majority of the above mentioned area without scientific justification or the ability to show that ORV and pedestrian use of the Seashore has caused harm sufficient to warrant the drastic measures outlined within the preferred proposal.

As I have mentioned numerous times before, it is not just federal law that conflicts with preferred Alt. (F) but a collection of Service policy indicates that NPS is attempting to stray from its mission as a division of the Department of the Interior. In example, the following is extracted from NPS policy. NATIONAL PARK SERVICE ADMINISTRATIVE POLICIES for the Recreation Areas of the National Park System FEDERAL EXECUTIVE BRANCH POLICY GOVERNING THE SELECTION, ESTABLISHMENT, AND ADMINISTRATION OF NATIONAL RECREATION AREAS BY THE RECREATION ADVISORY COUNCIL Circular No. 1, March 26, 1963 (in part)

The system of National Recreation Areas should:

1. "Provide for Federal investment in outdoor recreation that is more clearly responsive to recreation demand than other investments that are based primarily upon considerations of preserving unique natural or historical resources, the need to develop and conserve public lands and forests, or the requirements of major water resource development undertakings;"

PRIMARY CRITERIA FOR SELECTION OF NATIONAL RECREATION AREAS

6. "Within National Recreation Areas, outdoor recreation shall be recognized as the dominant or primary resource management purpose. If additional natural resource utilization is carried on, such additional use shall be compatible with fulfilling the recreation mission, and none will be carried on that is significantly detrimental to it." (emphasis added)

SECONDARY CRITERIA FOR SELECTION OF NATIONAL RECREATION AREAS

3. "National Recreation Areas may include within their boundaries scenic, historic, scientific, scarce or disappearing resources, provided the objectives of their preservation and enjoyment can be achieved on a basis compatible with the recreation mission." (emphasis added)

5. "Whenever possible, National Recreation Areas should be selected, developed, and managed to provide maximum compatibility with the recreation potential of adjacent rural areas in private ownership."

Furthermore, considering that the intent of Congress was to create an area within which the public could pursue ventures, "particularly swimming, boating, sailing, fishing, and other recreational activities of similar nature" (16USC459 Sec.4), the following NPS published policy must also be considered when management considerations are being developed for application within the bounds of the Seashore.

NPS Management Policies 2006 handbook, Introduction; "Hierarchy of Authorities" (in part) - "It is especially important that superintendents and other park staff review their park's enabling legislation to determine whether it contains explicit guidance that would prevail over Service-wide policy."

NPS Management Policies 2006 handbook, Para 1.4.4 (in part) ? "The impairment of park resources and values may not be allowed by the Service unless directly and specifically provided for by legislation or by the proclamation establishing the park. The relevant legislation or proclamation must provide explicitly (not by implication or inference) for the activity, in terms that keep the Service from having the authority to manage the activity so as to avoid the impairment."(emphasis added)

NPS Management Policies 2006 handbook, Para 8.1 (in part) ? "The 1970 National Park System General Authorities Act, as amended in 1978, prohibits the Service from allowing any activities that would cause derogation of the values and purposes for which the parks have been established (except as directly and specifically provided by Congress)"(emphasis added)

Clearly, even at this point, those that read this letter must agree that proposed Alt. (F) is in direct conflict with the above mentioned statutes and published policy. The derogation of the above described intended mission of the Seashore suggested within Alt. (F) infringes upon the guaranteed right of the legal residents of Hatteras and Ocracoke Islands to make a living by fishing. 16USC459 Sec.3 clearly provides: (in part) "That the legal residents of the villages referred to in section 1 of this Act shall have the right to earn a livelihood by fishing within the boundaries to be designated by the Secretary of the Interior, subject to such rules and regulations as the said Secretary may deem necessary in order to protect the area for recreational use as provided for in this Act."

Neglected within Alt. (F) are measures to insure that this right, bestowed by Congress, is respected. The law does not indicate that this is a privilege that can be arbitrarily waived by NPS; but must be treated as what it truly is, a right guaranteed by Congress that is as important and legally defensible as is the freedom of speech asserted by Congress within the Bill Of Rights. In order for a fisherman to make a living by fishing, his nets must be set where the fish are likely to be found. As the structure of the beaches at Cape Hatteras National Seashore Recreational Area change daily, so do the locations of the targeted fish. The closures proposed by NPS preferred Alt. (F) will prevent the exercise of this right as provided by Congress and is, as such, a violation of federal law.

I would choose to close this section of my comment with yet one more reminder to the Service of their responsibilities as directed by Congress, the only body of our government with the authority to write law and dispose of public property as provided by the Constitution Of the United States. 16USC459 1a-1 (in part)" Congress further reaffirms, declares, and directs that the promotion and regulation of the various areas of the National Park System . . . shall be consistent with and founded in the purpose established by section 1 of this title to the common benefit of all the people of the United States. The authorization of activities shall be construed and the protection, management, and administration of these areas shall be conducted in light of the high public value and integrity of the National Park System and shall not be exercised in derogation of the values and purposes for which these various areas have been established, except as may have been or shall be directly and specifically provided by Congress." (emphasis added)

I submit that the Service has no authority to alter the mission of this Seashore from a recreational area as provided within 16USC459 CHNSRA (in part) ".said area shall be, and is, established, dedicated, and set apart as a national seashore recreational area for the benefit and enjoyment of the people and shall be known as the Cape Hatteras National Seashore Recreational Area..", (emphasis added) as NPS has no Congressional authorization to do so and as such, NPS preferred Alt. (F) carries the potential to be, and will be if enacted, in violation of federal law.

Remember, Congress clearly stated that the mission of this Seashore was for recreational purpose and specifically stated that it was to be developed for such use as needed.

In examining Alt. (F), I am struck with the similarities proposed by NPS with the conditions set forth within the current "consent decree". It appears that ALT. (F) is no more than thinly veiled attempt at making a much more restrictive version of the consent decree become codified federal regulation.

As a service, NPS must balance between the traditional and historic uses of the seashore, the rights of the public, and sound resource management. The public has been imbued with law enacted by Congress, the promises made by the government through NPS Director Conrad Wirth to the people of the Outer Banks, and deep tradition and traditional cultural use patterns that NPS is required to respect and protect. NPS preferred Alt. (F) as proposed, fails to do this. National environmental policy dictates that NPS must make sound, science based management choice while ensuring that the pendulum does not sway too far to one side when attempting to strike a balance between access and resource management. Currently, the members of the public including the residents of Hatteras and Ocracoke Islands, as well as the citizenry of both Dare and Hyde Counties are experiencing the economic effect of the pendulum swinging well far to the protection side as a result of the consent decree. No where within the DEIS is a substantive study detailing the effects of this decree upon the economies that are dependent upon beach access to survive. Considering that NPS preferred ALT. (F) is considerably more restrictive than the current court sanctioned NPS management policy, the devastation to the local economy at present will pale in comparison to what will occur if proposed Alt. (F) is enacted. Already, the economic impact of the consent decree far outweighs the projected impact of Alt.(F) as stated within the DEIS. And within the DEIS, the Service admits that the Economic Impact Study is incomplete and as such calls into question the legitimacy and legal defensibility of this document as a whole.

The NPS preferred Alt. (F) buffer distances are largely based upon USGS protocols which have to have been properly peer reviewed even by USGS standards. In some cases the cited studies were in fact "peer reviewed" by the authors themselves in direct conflict with USGS peer review regulation. In many cases these so called studies had nothing to do with the Seashore at all. When examining these documents, the names Walker Golder and J.B. Cohen arise, and yet both of these individuals have actively participated in efforts within the Negotiated Rulemaking process and in the case of Golder, the lawsuit that promulgated the consent decree, to close the seashore for recreational use.

These protocols have yet to be shown as emanating from specific scientific, peer reviewed study and in fact by the governments own admission, "This report does not establish NPS management protocols but does highlight scientific information on the biology of these species to be considered by NPS managers who make resource management decisions at CAHA." As such, NPS preferred Alt. (F) is considerably flawed.

Of particular note and dismay, are the buffer distances and duration of closures as stipulated within Alt. (F) as they are excessive and not based upon sound peer reviewed science. The Service seeks, within Alt. (F), to provide a mechanism wherein species listed in the State of North Carolina as "species of concern" are given protections normally only directed at federally listed endangered or threatened species. Recently, the North Carolina Wildlife Resource Commission objected to this proposal contained within Alt. (F). Gordon Myers, executive director of the commission stated "State-listed "species of concern," - such as the American oystercatcher - do not require the extensive buffers and beach closures mandated for federally listed species such as the piping plover." And, "To treat it as synonymous with threatened and endangered is not congruent".

The proposed closures in respect to Piping Plovers are excessive. Nowhere does sound peer reviewed science exist that suggests that a 1000 meter closure around a plover chick is warranted. These proposed buffers have been effectively field tested during the last two nesting seasons here at the Seashore and yet plover numbers have declined. Never in the history of the Seashore can a plover death be attributed to either an ORV or pedestrian. The restriction on pets within the Seashore as proposed by Alt. (F) is well beyond excessive and not only will it induce negative visitor experience it will result in further economic loss to this community. Again, there is no sound peer reviewed science that will support the theory that even if a dog is on an NPS mandated six foot leash, it will disturb a piping plover or American Oystercatcher nesting a mile away. As such, this portion of the rule should be discarded as junk science.

Furthermore, NPS, in calculating both wildlife counts and pedestrian only access at the Seashore, needs include bird, turtle, and available pedestrian only access in the area known as Pea Island National Wildlife Refuge. (PINWR) This refuge was created by Executive Order a year after the enabling legislation that created the Seashore was passed into law. 16USC459 Sec. 5 states: (in part) "Notwithstanding any other provisions of this act, lands and waters now or hereafter included in any migratory-bird refuge under the Jurisdiction of the Secretary of Agriculture, within the boundaries of the national seashore, as designated by the Secretary of the Interior under section 1 hereof, shall continue as such refuge under the jurisdiction of the Secretary of Agriculture for the protection of migratory birds, but such lands and waters shall be a part of the aforesaid national seashore and shall be administered by the National Park Service for recreational uses not inconsistent with the purposes of such refuge and under such rules and regulations as the Secretaries of the Interior and Agriculture may jointly approve." Even within the 2006 Interim Management Strategy for PINWR as filed into the federal register, USFWS admits that PINWR is only an "overlay" of the Seashore. NPS has refused to recognize this in spite of clear and concise federal mandate.

Turtle management as proposed within Alt. (F) will, in all likelihood, result in a documented and stable, nearly 40% loss in viable nests. It is ironic that

within PINWR, though still within the Seashore, an entirely different set of protocols are observed with a much higher nest success rate. Turtle management at CHNSRA needs be proactive. Our beaches change daily, though in some cases are seasonally predictable in form. When turtles nest in high risk areas, we as a community attempt to inform NPS that a given nest needs relocating. We have usually been ignored only to see the Service plow the nest into the sea because it was collectively deceased. The Service has a long history of ignoring local knowledge which is in conflict with its own policy. In spite of this rejection of local knowledge and in spite of years of night driving on the beaches of CHNSRA, the Seashore still presents a better false crawl ratio than that USFWS expects from a totally undisturbed beach.

It is imperative that NPS consider all of the factors that make up what Cape Hatteras National Seashore is to the visitor as well as the residents of the islands that comprise the bulk of the Seashore. Impact to the economy as well as visitor experience are as much, if not more, a part of the NPS mission as directed by Congress. It is imperative that NPS recognizes the traditional cultural aspects and values that the results of any decision made by the Service might inflict upon residents and visitors alike. Of no small consequence is the rule of law as established by the Congress; which NPS seems wont to ignore.

With all of the above considered in detail, and with a sufficient review on NPS preferred Alt. (F), and the remaining portions of the DEIS, I find the entire document to be flawed and in all likelihood, illegal in nature.

The most sensible approach to Seashore management will incorporate a balance between nature and access. NPS preferred Alt. (F) fails to do this. The most sensible approach to date has been proffered by the Coalition for Beach Access within the position statement published at: <http://www.obpa-nc.org/position/statement.pdf> I strongly agree that this is the most practicable approach to satisfying the consistent recreational mandates directed by Congress to NPS while at the same time ensuring adequate protection of wildlife and providing access to these beaches, "which shall be developed for such uses as needed", by the public as directed by federal law.

Furthermore, I recommend that NPS turtle management policy be amended to reflect local knowledge and experience. This requirement can easily be met at the Seashore by adopting the proposed policies recommended by Larry Hardham and Robert Davis as these individuals have more collective knowledge of sea turtle nesting at CHNSRA than probably any employee of the Service or NCWRC. Their approach is adaptive and sound. Similar approach has been shown to be highly successful. It must be remembered, its not the number of nests that ultimately count but the number of hatchlings that make it to the sea. Their work can be found at: <http://www.obpa-nc.org/turtles/TurtleMgmtProgram.pdf>

I hope that the service will come to its senses and recognize the law relevant to the Seashore, the traditional cultural values, traditional uses, and will recognize the extraordinarily devastating impact that proposed Alt. (F) will have on the already fragile economy that suffers immeasurably as a result of just the consent decree.

Correspondence: Sixty days was not a sufficient period for public comment. The DEIS is more than 800 Pages! Most of the people (my opinion) who have concerns and wish to comment work for a living and could not read, understand, and make intelligent comments in that time frame. Your invitation for public comment lacks sincerity and speaks volumes as to your true intent.

Correspondence: We have recently discovered the joy's that the barrier islands provide's its visitors and I must say I would drive 10 hours to get there with no hesitation. The major reason's why are the friendliness provided us by the local community and with out a doubt the beach access that we enjoyed so very much. I understand the need for reserve's for species to flourish and also for needs of endangered species. While we were there we NEVER saw anyone acting in a way that would endanger wildlife, I saw no irresponsible drivers or people littering or someone acting in anyway that damaged the dunes or areas that were already listed as bird sanctuaries/ reserves. It was my impression that everyone respected the land and took care of it accordingly. People were leaving marked areas well enough alone as there was enough space provided for the birds and visitors to the beach's. I even noticed people brought 5 gallon buckets and small portable tents to use as bathrooms while on the beach, we will do the same next month when we are there again. We made it a point to pick up as much trash from the beaches we walked on to do our part as responsible stewards of the environment. We enjoyed driving on the beach so very much it is one reason I say we would drive 10+ hours to get there. I would think if beach access were closed, I would definately NOT come to the Outer Banks for my vacation. I know in the 7 day's we were there, we spent close to \$600.00 in the local economy (not including rent). I think a third of that was spent on fishing gear, bait and all that allowed us to enjoy the beaches. I say do not close the beach access as the economy for local communities has no choice but to suffer. I don't know how many visitors come to Cape Hatteras to enjoy the beaches but I do know I'm not driving 10 hours if the beaches are restricted or worse closed to access and that is money I will be spending elsewhere. We will be there in one month and I hope all is well at the Cape Hatteras National Seashore.
Thank You for allowing me to submit this statement John Burch & Becky Steber
1) the wildlife Resource Commission, he said, will voice its objections to the use of state "species of concern" lists to trigger ORV management strategies under the federal Endangered Species Act.
3) Corridors are a vital tool in providing access while managing resources. They provide a small path around temporary resource closures in order to provide access to open area that would otherwise be blocked. In alternative F Corridors are only allowed in ML-2 portions of SMA's and are subject to resource closures at any time. In a more reasonable approach Corridors should be permitted throughout the seashore during the entire breeding and nesting season including ML-1 portions of SMA's. These corridors would provide valuable access without impairment or damage to protected resources
4)) Large, inflexible buffers (p.121-127). These buffers that are being considered in the DEIS of 1,000 meter buffer in all directions for the piping plover is to large to allow a balance of human use of the seashore as stated in the original "Park Enabling Legislation". The DEIS does not cite any peer-reviewed science in supporting such large closures and these extremely large buffers are not used in other federal and state areas for the piping plover! A more appropriate & effective buffer would be 200 meters
2) Non-endangered species, such as American Oystercatchers, Least Terns and Colonial Water birds are given Pre-Nesting closures and buffers up to 300 meters. Birds that are not listed as endangered should not be afforded the level of protection given to ESA (Endangered Species Act) protected species. Instead of 300 meter buffers for these birds, a more appropriate buffer would be 30 meters
Following is an excerpt from a May 9, 2010 Virginian-Pilot news article by Catherine Kozak: This shows that the "species of concern" was not intended to be used as an additional ESA list.
*State-listed "species of concern," - such as the American oystercatcher - do not require the extensive buffers and beach closures mandated for federally listed species such as the piping plover, said Gordon Myers, the executive director of the North Carolina Wildlife Resources Commission.
Myers said that's beyond the intent of the state law: the state designation is supposed to be more of a call to action for a species.
Turtle Management (Pg.125, 392-396) DEIS claims North Carolina Wildlife Resources Commission turtle guidelines will be followed. The National Park Service should consider turtle management practices successfully used in other federal and state areas to achieve nesting success. More proactive

measures include relocating nests to more desirable locations, which is routinely and successfully done in other areas and this would allow better access to beach areas for visitors enjoyment and night driving and fishing.

5) Prohibition of Pets (p136) in the seashore during bird breeding season, including in front of the villages. No pets in public areas, beaches, campgrounds, sound-front, foot trails, park maintained roads from March 15 -July 31 The DEIS does not cite any peer-reviewed science supporting that such a ban on pets would have any positive impact on the breeding birds over the current rules of pets on 6ft leash.

6) Year Round Closures: Hatteras Inlet, North End Ocracoke Island, Ramp 27-Ramp 30 (Salvo) are set to be closed year round to ORV, I am most familiar with the Hatteras inlet area and this area does not have the characteristics of prime habitat for the plover and the other supposed reason for the closure was the need for a pedestrian only area. It would not be economically or environmentally feasible to pave "pole road" and create parking lots in a beautiful and natural setting at the Hatteras Inlet. The need for pedestrian only areas is addressed in adjacent 15 miles of beach on Pea Island, which never gets included in the amount of beach for pedestrian only and is also a wildlife refuge.

7) Economical Impact: the negative economical impact of the "consent decree" has been profound and well documented. Any projected financial losses from these changes will only affect the businesses that are on Hatteras and Ocracoke islands and the impact studies should reflect that and not be spread across the region to lessen the negative financial impact on the villages.

The following are points in the current DEIS that where I strongly disagree:

1)Corridors should be permitted throughout the seashore during the entire breeding and nesting season including ML-1 and SMA's. These corridors would provide valuable access without impairment or damage to protected resources. 2)Buffers. or closures, are important practices for species RECOVERY. However, to have long term benefit for the wildlife and the visiting public, buffers must be based on PEER REVIEWED SCIENCE.The Piping Plover is given a level of unprecedented protection in Alt.F The DEIS does not cite any PEER REVIEWED SCIENCE in supporting a 1000 meter buffer in all directions to support a closure of over 700 acres. A more appropriate buffer would be less than half of that. 3)American Oystercatchers, Least Terns and Colonial Waterbirds are NON ENDANGERED SPECIES and are given pre-nesting closures and buffers up to 300 meters. The more appropriate buffer for these NON ENDANGERED SPECIES should be 30 meters.Many of these birds are located on the dredge and spoil islands just yards away and within sight of the seashore. 4)The NPS should consider turtle management practices successfully used in other federal and state areas to acheive nesting success. More proactive measures include relocating nests to more desirable locations, which is routinely and successfully done in other areas.

In closing, during the 40 years I have been travelling to the Outer Banks, I have and I have never seen any sportsmen or anglers kill or maim any birds or turtles while driving on the beach.We love the beauty of the seashore, and would never "cut our nose off to spite our face" by damaging the environment and its inhabitants. The measures being taken by the DEIS are Draconian, and the seashore should be as intended by Congress, a NATIONAL RECREATIONAL SEASHORE.

Sincerely, Perry K LaGrange

I am a 30 year resident of Hatteras Island and have managed my own business for 26 years here. I have considered myself an environmentalist all my life but find your support for alternative F to be way beyond the realm of resonable. Closing over 750 acres of beach and dunes for one unfledged piping plover chick is offensive to the citizens and visitors to Hatteras Island [p.121-127 of the DEIS] Closing the beach to dogs from March to end of July would kill our economy during those months. People travel with their pets and will certainly go where the beaches are prt friendly. [p.136]

Comment 1 As indicated by Alternative F, it is the intention of National Park Service (NPS) to transform a major part of the Cape Hatteras National Seashore Recreational Area?set aside over 70 years ago for use and enjoyment of American citizens??into a wildlife sanctuary, predominantly a national bird and turtle use area. NPS is using as its justification for this radical transformation and departure from traditional and intended public use, a thirty-five year old executive order directing NPS to formally promulgate an ORV management plan.

Alternative F management plan, with its excessive restrictions and denial of public access, both pedestrian and ORV, is in large part incompatible with the legislative purpose and intent of why the national seashore was established (16USC459 CHNSRA Enabling Legislation):

"said area shall be, and is, established, dedicated, and set apart as a national seashore recreational area for the benefit and enjoyment of the people and shall be known as the Cape Hatteras National Seashore Recreational Area."

Nowhere is it indicated in the DEIS where enabling legislation intends or permits both pedestrian and vehicular access denial for a major part of the year, particularly visitor or vacation season.

This comment is on the Draft ORV Management Plan/EIS (DORVMP/EIS) for Cape Hatteras National Seashore and is focused on the proposed discrimination against motorcyclists.

I enjoy both surf fishing and motorcycle riding. For years I have been able to combine these two activities on the beaches of the Outer Banks. I usually make several trips a year to the Outer Banks where I enjoy taking my fishing rod on the bike and looking for a spot to fish along the beach. I have spent thousands of dollars on motorcycles that can safely and effectively travel on both the road and the sand; street legal vehicles that adhere to all applicable standards of the federal and state governments. This allows me to travel efficiently from a central base at either a motel or campground.

Whether riding on the beach or the road, I abide by the regulations. My motorcycles make less noise than many heavier vehicles. My motorcycles return better than 50 miles per gallon and I am frequently carrying a passenger. I do not ride on the dunes or the wrack line and am quite capable of traveling safely through any sand conditions that I have encountered on the Outer Banks. I create a tire track on the beach that is less than 7 inches wide. In other words, the motorcycles allow me to travel efficiently and produce less impact than driving my truck while abiding by the same regulations as 4-wheeled vehicles.

My understanding of the DORVMP/EIS is that unless either of the "no action" options (A or B) is choosen, motorcycles will be prohibited on the beach. I urge you to continue to apply the same rules to motorcycles that you currently apply to all other street legal vehicles, allowing the same beach access. Please do not discriminate against people who choose to use motorcycles for regular conveyance. Please amend options C,D,E, and F so that all street legal vehicles are treated in an equitable manner.

In addition, I ask that you not burden the motorcyclist with needless equipment requirements. A jack is not necessary on a motorcycle.

Correspondence: My husband introduced me to the true beauty of nature and what it has to offer. I have a NC lifetime hunting and fishing license because I love nature. I am an avid fisher and hunter when we're not caring for our three year old daughter who incidentally has her lifetime hunting and fishing license as well. I want to do my part to help protect what I so enjoy. However, it seems that things have gone to an extreme and the wrong group is being punished. Who really pays for prohibiting access? I guarantee you it will be the law abiding citizens. The people who are not following the rules and regulations will continue to go where they shouldn't be going. There is no other place where my shoulders drop and I feel hope like when I step on Ocracoke Island. I want to be able to share that experience with my daughter and teach her that she can catch just as big a fish if not bigger than her daddy and me. What do I tell her next time? "I'm sorry sweetie but our public officials decided that a special interest group's ideals were more important than ours." We care about the turtles and birds but this earth is our to share, that is why national parks were created. This is a true shame. It's a disappointment dear sir or madaam but I'm sure your mind is already made up and our comments are a mere formality before placing the final stamp on your decision. I would challenge you to look beyond your "politics" and the true issue at hand. There is a time and place for everything and I assure you whatever your ultimate decision is the problem will remain.

Correspondence: NPS Request for public comment appears to be more of a bureaucratic process than a search for substantive decision-making information. By virtue of its massive size, complexity, biased and incomplete explanation of science, and the inability for members of the public to access cited scientific literature and references, and ask questions of government officials responsible for the science and DEIS content, no single citizen can effectively review, understand, and constructively comment or suggest improvement to the DEIS in the 60 day comment period. It appears by way of emphasis in the discussion in the DEIS that NPS has every intention to promulgate Alternative F in the next year, regardless of past or present public comment. There is virtually no significant reference to the workbooks the public provided in the early stages of the plan development process or to countless constructive comments made by the public during the 15 month Regulation Negotiation Process. The National Park Service (NPS) should make it known to the public the specific information it seeks so as to make a final, objective decision with regard to an ORV management plan for Cape Hatteras National Sea Shore Recreational Area. Thus far NPS has failed to do so. By not asking for specific information, NPS is simply "going through the motions" superficially, and wasting the public's time.

Correspondence: I am 60 years old. I grew up in Richmond, VA and we vacationed on Hatteras Island every summer while I was growing up. We spent every day on the beach. We enjoyed seeing all the birds, fish and other wildlife. I have, for my entire life, held deep respect for every living thing. I moved to Hatteras Island in 1999. A lifes dream! My brother and sister always give me grief on how I did it and they could not. I have seen birds nesting and turtles on the beach and continue to marvel at how they seem to enjoy this wonderful island as much as I do. I enjoy driving out on the beach on a weekend, after a fast paced work week, and setting up my chair with the Sunday paper, my rod in the sand spike, enjoying the sandpipers and seagulls. I am always aware of the fragile environment I live in. I count my blessing every day on how fortunate I am to live in one of the world's most beautiful spots. This is a NATIONAL Park and every person in the world should continue to be allowed access. To even think that my grandchildren would be denied form viewing this miracle that I live, brings tears to my eyes. God designed the landscape to show his miracle and no man should be allowed to play God and take this away from me, my family and the hundreds of thousands of people who come here every year. The people coming here are not coming to hurt the wildlife, they are coming here to honor and respect what nature has held dear for hundreds of years. PLEASE do not take my access to this natural wonder away from me,PLEASE let my grandchildren's children come to know the blessing I have been given.

Correspondence: Mike Murray, Superintendent Cape Hatteras National Seashore Recreational Area 1401 National Park Drive Manteo, NC 27954
Dear Superintendent Murray,
Please accept this letter as our comment on the ORV DEIS before you at this time.
After reviewing the National Park Service DEIS we must disagree with any of the six alternatives within the document.
We have; however, reviewed the 77 page Coalition for Beach Access Position Statement signed by several groups that were a part of the negotiated rule

making process and it by far succeeds in furnishing the best visitor experience while maintaining the needs of protecting the fragile resources. Please consider all aspects of this alternative and put people back into the management of Cape Hatteras National Seashore. Lea and Ilan Lewkowksi

Correspondence: Sir,
My wife and I own a North Carolina house so we are North Carolina stakeholders who want a beautiful island that our children and family members can enjoy.
I believe in a balanced approach to allowing citizens to enjoy the beach, but in addition protecting the natural beautiful and the wildlife of Hatteras Island.
Please keep the beach open so that families and their pet dogs (as well) can enjoy the wonderful feeling of the fresh ocean breeze. We all need a break from the big cities and the serene sense that feels at the ocean.
We rent our house to renters who often bring dogs to the ocean. Many have told me the dogs are their companions and are part of their family. They are exceptionally respectful of our house and the property.
Also I support the upholding of the laws and the punishment of those found guilty.
Finally, I am a member of the local Audubon Society. I support the outdoors and want the National Parks to be kept open for the use of the citizens. However, I do not agree with the local Audubon position which seems to be too one sided. The Point should be available to fisherman, visitors and the wildlife. We see birds eating fish that the fisherman catch and leave bait for the birds. We have walked to the Point and we have carefully driven our Jeep to the Point as well, being sensitive and respectful of the breeding grounds. Both people and wildlife can share the point. The keep I've learned is the notion of a balance of diverse opinions.
Please endorse a strategy where the beach and its beauty can be open and shared in a balanced and reasonable manner for people, wildlife and the long term life of such a beautiful environment.
Thank you,
Tom Kraly

Correspondence: My wishes for the future of the Cape Hatteras National recreational Seashore is for this park to be managed as it was intended, and promised to the people of Hatteras Island. Decisions regarding management of all aspects of the park should be based upon GOOD SCIENTIFIC REASONING. The existing consent decree and everything associated with it have been nothing less than political blackmail. Opinions from non-science based origin have no place in management of our parks. Show the people some fact based decisions without fear from overshadowing, behind the scenes influences. This park was intended to be USED by the people of this land for not only recreation, but for educational opportunities of the importance of conservation of all resources. How do you learn the importance of such a wonderful resource without first learning to appreciate what it has to offer us? Good management begins and ends with good decisions. Thank you for your consideration of these comments.

Correspondence: For many years the Cape Hatteras National Seashore has been the vacation spot for many generations of families because of what the island offers. The natural beauty, the nature, the recreational fishing, driving on the beach (pg 97-101), walking dogs on the beach (pg 136), long walks/runs on the beach (pg 121), water sports, seafood and the friendliness of the island's residents. Hatteras has everything vacationers want that's why everyone loves it and has been returning with new generations!
We all want to preserve our beaches and protect natural resources but do not want to prohibit pedestrian and ORV access.
Some residents on the island are still suffering loss from Hurricane Isabel in 2004. Since the implementation of the decree in 2008, businesses have been suffering with decline in business up to 40%; some have even closed. Since last year, there has been a tremendous increase in the number of residents on Hatteras Island who are dependent on assistance from the Cape Hatteras ER Assistance Program and Food Pantry.
In regard to the quote from the US Park Service "Businesses will have to adapt to the new rules" (pg 383)...We find this totally in humane and thoughtless for those who live and earn their living on the island mainly during tourist season for many many years.
We totally disagree with the validity of the economic impact analysis which is included in the Draft Environmental Impact Statement for proposed new rules for access to the Cape Hatteras National Seashore. The analysis doesn't adequately convey the economic impact of the proposed Alternative F. In addition it fails to address any of the alternatives listed in the DEIS. The data is misleading, incomplete, and the so called "facts" are without sound basis. The area is very unique as it has limited transportation infrastructure and is removed from large populations. This in turn translates into a higher cost of living which isn't mentioned at all in the DEIS. It appears that the authors of the economic impact analysis lack familiarity with the area.
Here are a few of the problems with the economic impact analysis:
1) Page 595, table 80. This table isn't logical and it appears to lessen the actual impact by including all portions of Dare and Hyde counties. The footnote is also very troubling as it is quite obvious that the impact will be substantially higher than 54 percent in the seashore villages.
2) Page 566 in the DEIS states "To provide information for the economic analysis, a survey was conducted by RTI, International of selected categories of potentially affected businesses. The results of this survey are currently being analyzed and will be addressed in the final plan/EIS." Page 571 also notes that data is still being analyzed and will allow future analysis of the economic impact. How are we supposed to comment on something that does not yet exist?
3) There is a list of federal rules, policies, etc. that the DEIS must comply with as stated in the beginning of the DEIS. Missing from this list is compliance with the Regulatory Flexibility Act which requires "federal agencies to consider the effects of their regulatory actions on small businesses and other small entities and to minimize any undue disproportionate burden." The economic impact analysis in this document does not comply with the Regulatory Flexibility Act and therefore should not be certified.
4) Page 568 uses "visitation" statistics reported annually by the National Park Service. These statistics are based on traffic counts, the amount of which is then multiplied by a formula. There is no way to know the passenger count of the vehicles or whether they are even a visitor. In addition many events such as storm damage warrant high numbers of construction vehicles. There is no valid way to count visitors on the seashore and the only gauge of impacts is factual data such as unemployment and the increases/decreases in government aid, in given localities.

5) There is no appropriation of funds in the NPS budget through 2011 for the statements made on page 56, 80, 81, 593, or 598. Each of these statements would require funding so they shouldn't be used to imply that they will minimize economic impacts. The unpredictability of each budgetary cycle after 2011 would make it difficult to quantify any economic impact of the improvements (pg 56, 80, 81, 593, 598) given the likelihood they will be implemented over an unknown time period and are likely to be subject to modifications which will be dependent on future budget constraints. To allow those statements in the DEIS or to use them as a basis to predict, determine, or minimize economic impact could raise questions about compliance with the Antideficiency Act described on Page 40.

Other issues of concern with the DEIS:

6) Page 58. "Beach access points and boardwalks compliant with the American with Disabilities Act requirements would be provided at Coquina Beach, the Frisco Boathouse, the Ocracoke Pony Pen and the Ocracoke day use area. Beach wheelchairs could be checked out at each district on a first-come, first-served basis." These statements are questionable since there is no appropriation of funds in the NPS budget through 2011 similar to issues previously cited in issue # 5 above. If the projects are removed from the alternative chosen, it then raises questions about compliance with the Architectural Barriers Act of 1968 and the Americans with Disabilities Act of 1990. There have been a large number of commenters at recent public hearings expressing concerns about those with disabilities and others who have an inability to walk long distances and wouldn't be able to enjoy the beach and fish.

7) CORRIDORS - Corridors are vital to providing access in a way that does not hinder resource protection. Pass through corridors should be maintained for pedestrians and ORV's in all areas of Cape Hatteras National Seashore Recreational Area throughout the entire breeding and nesting season.

8) MANAGEMENT BUFFERS - We disagree with DEIS pgs 121-127. These extreme buffers must be modified to reduce the minimum 1,000 meter buffer in all directions required in Alternate F for unfledges Piping Plovers chicks to a 200 meter buffer in all directions which is supported by ample scientific evidence. We also suggest that NPS provide peer-reviewed science that justifies a 1,000 meter closure in all directions. We disagree with the 300 meter buffer for American Oystercatchers, Least Terns and Colonial Waterbirds. An effective 30 meter buffer should be established.

9) NON-ENDANGERED BIRDS - We disagree with management buffers DEIS pgs 121-127. These should be modified to allow pre-nesting closures for ONLY endangered or threatened species. This important modification would result in establishing pre-nesting closures exclusively for the Piping Plover, the only threatened bird species in the seashore. It is a known fact that Colonial Waterbirds do not return to the exact same place for nesting each year, establishing pre-nesting closures for these birds is both unpredictable and very unnecessary. American Oystercatchers are not endangers and threatened and should not be included in closures.

10) TURTLE MANAGEMENT - We totally disagree with DEIS pgs 125, 392 and 396 and think they should be modified to allow nest relocation as a tool for species recovery. By not supporting nest relocation, the Cape Hatteras National Seashore Recreational Area has lost over 46% of the nests laid in the last 11 years. It is known fact that only 1.0% of turtles nest on The Cape Hatteras National Seashore Recreational Area and the weather and predators represent the greatest threat to sea turtles.

Beach closures have already had a devastating and unfair impact on the residents and businesses in Dare County. These are very hard working people and it is so unfair and inaccurate for the NPS to simply write off these people and describe their pain under Alternate F as "negligible to moderate".

We have reviewed the 77-page Coalition for Beach Access Position Statement signed by several groups that were a part of the negotiated rulemaking process, and it by far succeeds in furnishing the best visitor experience while maintaining the needs of protecting the fragile resources.

Please consider all aspects of this alternative and put people back into the management of Cape Hatteras National Seashore

Sincerely, Kevin and Debbie Feese Avon, NC Homeowners (42127 Pheasant Circle)

Correspondence: Mike Murray, Superintendent Cape Hatteras National Seashore Recreation Area 1401 National Park Drive Manteo, NC 27954
Dear Superintendent Murray,
Please accept this letter as my comment on the ORV DEIS before you at this time.
After reviewing the National Park Service DEIS I must strongly disagree with any of the six alternatives within the document.
I have however, reviewed the 77 page Coalition for Beach Access Position Statement signed by several groups that were a part of the negotiated rule making process and it by far succeeds in furnishing the best visitor and residential experience while maintaining the needs of protecting our beautiful and fragile resources.
Please consider all aspects of this alternative and put people back into the management of Cape Hatteras National Seashore.
Yours Sincerely,
Richard H Dement 2623 Alvey Drive Haymarket, Va. 20169

Correspondence: That we have reached this point is both laughable and sad at the same time. Simply stated it is a designated recreational area. This designation was made by the Congress of the United States of America, not a federal judge.
As I'm restricted to 35,000 characters and you have surely been inundated with facts, figures, and official statements, I will pass on the cut and paste. Instead I will merely try to voice my own observations and experiences.
For thirty seven years I have had the great opportunity to visit Hatteras. I use the term opportunity instead of vacation due in fact that Hatteras is no mere vacation. The people of Hatteras Island have, over the years, opened their homes and their hearts to myself and my family. Through them I gained a deep appreciation for the culture and the island itself. From the proud commercial fishermen to the bag boys at Burris Red and White they poses a quiet stoicism so very rare in our country today. The sad part is that the casual visitor to the island is so self absorbed that they do not notice what is truly the greatest treasure Hatteras has to offer. These people have stood strong in the face of war, hurricanes, nor-easters, declining fish stocks, high taxation, and economic recessions. That they are now under a tremendous threat from their own government is truly ludicrous. Yes, I freely use the term threat, as that is what it is. Do not think for a second that their current economy has not been greatly affected by the beach closures.
I don't care what the counting compiled in Nags Head tried so feebly to demonstrate. Nags Head, really? Why not just stand on highway 64 and count. Since the closures went into effect there has been a notable decline in visitors to the Recreational area. Note that these are the people that come and stay for a week or more at a time, not the travelers merely passing through headed to Ocracoke and beyond. How do I know this is truly occurring when the official counting states otherwise? Simple, my family is among the many that have curtailed their visits. Understand that we have not stopped coming completely but the closures have cost the village of Hatteras over \$2800 a year in just lodging alone and that's just one family. Off hand, I can think of at least four other families that have curtailed or even eliminated their visits to the island. If you care to talk to them I would be glad to provide their contact information.
Another indicator is the reduce amount of traffic on the little bits of beach open to orv use. I've heard it categorized as "door to door trucks". True, it is "door to door" sometimes but common sense dictates that it takes less matter to fill a smaller area. If the pre-closure areas were still available to those same number of vehicles it would seem virtually deserted.
Care to gain some first hand experience? Spend a day in any of the local tackle shops. Yes you will see some foot traffic but not like it use to be. As one of my friends finally confided in me, and I quote, "Man, believe it or not it's the boaters that are keeping us barely hanging on." This is the same tackle shop that had been showing an average revenue increase of eighteen to twenty percent yearly, and that was driven primarily by the beach users. When you leave the tackle shop go to any of the restaurants and ask the owners how business is holding up. Visit Rocco's in Hatteras Village specifically, as this was the restaurant I was in negotiations to buy before this mess came to pass. After reviewing the books it was no longer viable much less profitable to continue with the deal.

On to the actual utilization of the RECREATIONAL area. I have been driving on the Hatteras beaches for twenty one years. In those twenty one years I have never driven on the dunes, never driven in designated closed areas, nor violated a bird enclosure. In the thirty seven years I've been on the beach I can only recall three instances where I have witnessed any of the above mentioned activities. These three instances where people driving on the dunes. When these activities were stopped by beach users, not NPS personnel, the common explanation to all three were " That's what they show in the commercials, I didn't know." The beach users constantly educate and monitor the resource.

Not only do we monitor and educate we protect our beaches and wildlife from environmental issues. Not the lawyer contrived issues, the real issues. See any lawyers out clearing storm debris, discarded commercial fishing nets, bags of ranch flavored Doritos from the beach? Nope, and you never will. The orv users have hauled untold tons of trash and debris from the Hatteras beaches, the Doritos were a bonus though as they tasted great!

I have a picture of myself at age fifteen, using a pair of finger nail clippers the cut a sand piper free of an old commercial net that it had become completely entangled in. I happened to be riding on the tail gate of my grandfather's pickup truck when we passed the pile of net and driftwood and was able to spot the entangled bird from my position. We quickly stopped and carefully freed the sand piper, even providing fresh water and shade until it was able to regain it's strength. Probably broke a "LAW" or two by rendering aid but it was the right thing to do. It was the HATTERAS thing to do as taught to me by the great people of the island. The same people the federal government seems too timid to do the right thing by and defend.

Funny how a loose knit community of user groups have been brave enough to stand up to DOW, SELC, Audubon, even U S Fish and Wildlife, to fight for whats right while the NPS rolls over. The truth is never hard to defend, only lies and manipulations take a dog and pony show to hide.

Open and free access to the CAPE HATTERAS RECREATIONAL SEASHORE, plain and simple.

Correspondence:	I enjoy taking my friends and family out of the beach in my 4 wheel drive SUV. I always do so under the careful intent of tread lightly and I believe everyone else on the committee does as well. Its one of the few things that attracts us to the beaches as well as the fishing. I for one do clean up my mess and any trash that is on the beach left behind by some others. I do appreciate the ability to have access to the beautiful beaches of Hatteras Island and many other accesses along the barrier islands. I am one voice of many asking to keep the beach accesses open for all future generations to enjoy. Stuart Lyons

Correspondence:	I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access. As a native North Carolinian (since 1952) I URGE YOU TO ADOPT alternative plan to provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are of ultimate importance to me. The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D: *Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park. * Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles. * Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones. Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore. In particular THANK YOU - from a fisherman who is willing to actually WALK down to the beach.

Correspondence:	<p>While I generally consider myself a "tree hugger", I'd like to see some moderation of the proposed policies on beach closures on Hatteras Island. As I understand it, the Piping Plover population is already making a comeback. By some calculations, only 3% of the damage to the population has been caused by man's presence on the beaches, and that has been with much less drastic beach closures than are currently proposed.</p> <p>There are a number of dredge islands and uninhabited barrier islands (e.g., Portsmouth Island), where the birds could nest. I don't know the specifics of their return nesting habits, but if they find an ideal, say, four-mile stretch of closed beaches to nest, and return to the same area in subsequent years, is this area not likely to increase in size? How much of the beach could ultimately be closed?</p> <p>I think that the potential economic impact of beach closures on small businesses is being underestimated. I own two rental cottages on Hatteras Island, which represent what I thought was a rational "retirement plan" at the time that I bought them. These are "small businesses". Sustained loss of even a couple weeks of rentals over a period of a few years is likely to result in the bank foreclosure of these two homes, and quite possibly my primary residence in Virginia. I ask you to consider the effects of beach closures on literally thousands of small business owners like me.</p> <p>Thank you for your consideration.</p>

Correspondence:	<p>I'm a hunter, fisherman and conservationist. I have a 4 year Computer Science degree from NC State and a 2 year Robotics degree from Wake Technical College. I'm very sorry to see the way the National Park Service seems to have become a preservation organization which seems to be driven by the various preservation special interest groups which seem to be calling the shots for how the Parks and natural areas in America are managed. This ORV plan seems to be just another example of the Park Service catering to the preservation special interest groups. It's unfortunate that with all the areas which are already off limits to people for the nesting of birds and turtles the Park Service feels it must take away even more areas from people. If this is the best the NPS can do than at this point I will contact my elected representative to see if something can be done through that avenue. I hope after the comments the NPS receives they will come back with a more realistic plan to preserve beach access for people.</p>

Correspondence:	<p>For me the national parks are a respite from the noise and stress of modern life. Walking in quiet woods or along a pristine shore line is a wonderful experience, one that we must preserve for generations on! We don't need cars, etc in our national parks! If people need to be in their cars there are countless places where they can go. Please let's keep our parks quiet and peaceful and free of noise, pollution,etc</p>

Correspondence:	<p>I support retaining ORV usage to the greatest extent possible under the federal regulations. The balance between the preservation of habitat and human/vehicular activity must be equally weighted in favor of responsible human activity.</p> <p>On balance, a single hurricane will do more damage to the environment in a single day than 100 years of ORV usage might do. Hurricane damage will be no worse as a result of responsible ORV uses. However, a coastal tradition of ORV use at Hatteras provides a link to our natural resources, and an important amenity for the local tourism industry.</p> <p>PLEASE PRESERVE ORV RIGHTS AT HATTERAS NATIONAL SEASHORE TO THE GREATEST EXTENT POSSIBLE. THANK YOU.</p> <p>Bill Parr Cape Charles, Va 23310 a lifelong Hatteras visitor</p>

Correspondence:	<p>My husband & I fear for the future of Hatteras Island. We are avid animal & wildlife lovers but fear that the overly extreme protection measures that are being suggested will do more harm to the people & economy of this island than we could ever do to any bird. We have had a business here for almost 15 years and we have seen many businesses and rental homes erected over the years. The people who built & invested in those businesses and homes did so with the understanding that those who use them would have access to the beaches and all the park amenities. That's what they come here for. We have always heard that the Island was deeded to the Park Service by the ancestors who lived here on the condition that it would be available for "recreational use". What kind of recreation would there be if you can't even get to the beach? How would Dare County & North Carolina make up for the loss of revenues if no one came to a beach they couldn't use? People would go elsewhere for vacation. We are all for the issuance of permits. There are a few people who have abused their privileges when they visit the beaches. They make it bad for all the rest who respect and take care of them. Please don't penalize everyone for the ignorance of a minority. Perhaps the cost & requirements for permits would deter & discourage some of the abuse. This island has to be big enough so that both man & birds can co-exist somehow. After all, the people who live here are probably more indigenous to Hatteras Island than the plover ever was. Don't they have any rights??!!</p>

Correspondence Type:	Web Form					
Correspondence:	<p>Date: May 11, 2010 To: National Park Service From: Constance Moser, Owner of vacation rental home in Avon, NC Subject: DEIS Off-Road Vehicle Management Plan Comments My comments concern the DEIS of the Off-Road Vehicle Management Plan prepared by the National Park Service (NPS) for the Cape Hatteras National Seashore Recreation Area.</p> <p>1) Page 201: I disagree with the NPS statement: "Even with resource closures in place, protected species are still at risk [from pedestrians and ORVs]." No Piping Plover deaths have been attributed to ORVs. ORV violations continue to decrease as signage and education improve. Pedestrian violations are much more significant than ORV violations. It seems to me that any transgressions into protected area are the result of lack of NPS manpower and enforcement than the public purposely and willfully violating out of bounds areas. 2) Page xxiv: I question the statement of as per the DEIS: "Carrying capacity would be a 'peak use limit' determined for all areas based on the linear feet of beachfront?" If you close off huge sections of the beach, you force more people into smaller areas, potentially resulting in more resource impairment and diminished visitor experience.</p> <p>3) Page xix and page 23: I am against having two different closures rules pertaining to the North facing beaches (North side) and the South facing</p>					

beaches (South side) as per the grid outlined in Alternative "F". I disagree with the NPS proposal to close the beaches in villages of Frisco, Hatteras and Ocracoke Villages to ORV access longer than the traditional May 15 to September 15 period for the Northern beaches, even though seasonal visitor statistics are similar for all villages. Please, make them the same: May 15 -> September 15. 4) Page 1: I agree with your statement "ORVs have long served as a primary form of access for many portions of the beach in the seashore, and continue to be the most practical means of access and parking for many visitors."

However, pedestrian only areas discriminate against individuals with limited mobility due to age or physical impairments, families with small children, and those wishing to engage in activities requiring recreational equipment (boogie boards, beach umbrellas, beach chairs, coolers, fishing rods and tackle, etc) 5) Page 53: I disagree with the special use permit proposed guidelines. It is impractical to allow the transportation of disabled visitors to the village beaches and then require the vehicle to be returned to the street or parking area. This necessitates the disabled person to have a driver to drop him (or her) off, then drive to a parking area, then trudge a long distance to the site of the drop off, then trudge the long distance through the sand back to get the vehicle. Suppose the handicap person wants to go to the beach, is capable of driving himself, yet cannot find another person to go with him? Does he now not go to the beach? This rule creates unnecessary hardships and risks in the event of an emergency as well. 6) Page 121 ? 127. I strongly disagree with the buffers as presented. We must allow for pass-thru corridors. The beach is linear with the ocean buffering on one side and the dune line on the other. For example - If you pinch off access on one side of a 4 mile linear beach and pinch off access on the other side of the 4 mile section of beach with no corridor, then you effectively have closed off all 4 miles of the beach because you CAN'T get there. The proposed bird buffers are too large, blocking access to the interior sections from the two "buffered" ends. I propose ORV pass-thru only corridors and to use breeding / nesting buffer distances to establish ORV pass through only corridors to ensure beach access in a way that does not hinder resource protection. I believe pass through corridors should be maintained for pedestrians and ORVs in all areas of the Cape Hatteras National Seashore Recreational Area throughout the entire breeding and nesting season. Corridors are vital to providing access in a way that does not hinder resource protection. Piping Plover unfledged chicks buffer should move with the brood as it relocates to reliable food source, not expanded. The 1,000 meter distance for the piping plover is way too large and not based upon peer reviewed science. A more rational distance would be 200 meters per other sites in the nation for the piping plover. Ample scientific evidence and precedent exists to support a 200 meter buffer. Buffers for other species, including American Oystercatchers, Least Terns and Colonial Waterbirds must also be changed. An effective 30 meter buffer should be established for these species rather than the 300 meter closure outlined in the DEIS. NON-ENDANGERED BIRDS should not have same protection as if endangered. Not allowing ORV access is paramount to denying the public access to these beaches. 7) Page 468: I disagree with the limitations imposed on pedestrian and ORVs. Corridors or bypasses should be provided thru, around or below high tide line in all SMAs during entire breeding season to maintain access. 8) Page 124: I strongly disagree with the NPS slant of providing for over protection of resource management over that of the public's right to access the beaches. Pro-active initiatives include: Vegetation Management, Habitat Management, Enhanced Predator Management, Colonial Water bird social attraction, Piping Plover check fledge rate, Piping plover chick buffer distance, and pass-through buffers during the incubation period. Opportunities to implement less restrictive closures as a result of the above initiatives should be considered more frequently than the 5-year periodic review process identified in the DEIS. 9) I disagree with the NPS Resource Management Pedestrian / ORV Closure Policies. These policies address the least significant factors affecting nest survival with little chance to have more than negligible impact. For example: the AMOY Nest Failures are predominately due to non-human events. Using your own stats, the mammalian predation is 54%, Storm / Lunar Tides: 29%, Nest Abandonment: 6%, Avian Predation: 5%, and Ghost Crab Predation: 3%, So what is the percentage due to human interference: just 3%! It's insignificant, yet the NPS wants to ban humans when their actions provide very little influence on the success rate of breeding birds and turtles.

10) I disagree with the stats of breeding plovers and the other birds in the Park when the NPS does not adequately consider locations neighboring the Recreational Area that are part of the same ecosystem, namely dredge and spoil island that are located just yards away and within sight of the seashore. These birds are part of the same ecosystem and should be included. Those spoil islands, developed by man from dredging the waterways in the Pamlico Sound for channel upkeep are slammed full of birds. The reason why so many birds? NO PREDATORS. SO, birds are not as stupid as one might think. You have to count these birds and incorporate them in the stats when the NPS is talking about any so called decline in breeding pairs in the National Park. 11) Page 1: I do not think the DEIS responsibly addresses the cultural resource issues. The very purpose of the DEIS as set forth in the National Environmental Policy Act (NEPA) is to protect and preserve natural and cultural resources in the federal decision making process. In the DEIS, the statement "protect and preserve natural and cultural resources" appears in the first sentence of the first page of the plan, in the Purpose of the Plan section, and numerous times thereafter. Yet, the 810 page document devotes only two paragraphs to analysis of cultural resource issues. 12) Pages 270-281; 561-598: I strongly disagree with your economic analysis of the impact of the DEIS. The region of influence (ROI) incorporates the Northern Beach communities, including Kill Devil Hills, Kitty Hawk, Southern Shores and Duck. These areas are almost completely disconnected from ORV use and access issues relating to the Seashore. ? Inclusion of the Northern Beaches in analysis significantly dilutes estimates of economic impact on the 8 Seashore Villages ? Analysis of economic impact to the Seashore Villages appears to be significantly down played. Emphasis in DEIS is on the ROI-wide or county-wide level impacts. ? Nowhere is it clearly addressed that the overwhelming majority of negative impacts will be felt by small businesses in the Seashore Villages rather than by overall economic interests within the greater ROI. On page xlvi, Alternative F is characterized as having a "negligible to moderate" adverse impact on small businesses. I strongly disagree with this statement. I believe the negligible to moderate projection is inaccurate and relies on economic surveys that has not yet been published. Furthermore, this material is not expected to be added to the DEIS until after the public comment period has ended. Based upon the economic harm we have already experienced under the consent decree, Dare County projects the economic impact of Alternative F to be substantial. Beach closures have already had a devastating and unfair impact on many Dare County Businesses, causing foreclosures, bankruptcies, lay-offs, cutbacks, expensive refinancing, and depleted college funds and savings accounts. Pages 270-286, 561-598: The socio-economic data and analyses are incomplete and erroneous and result in an understatement of the effect the restrictions will have upon the Island, the region and the state of NC. The US Park Services answer: Businesses will have to "adapt" to the new rules. (p.383) The negative economic impacts of the decree ARE KNOWN, so to say that the added restrictions would have negligible to moderate impact is indefensible. 13) Overall Visitor Counts - Overall visitor counts appear to include visitors to Fort Raleigh National Historic Site and the Wright Brothers National Memorial. A large percentage of these visitors vacation in the Northern Beaches communities and recreate on the non-federal beaches outside of the Seashore. Visitors who patronize the Fort Raleigh National Historic Site and the Wright Brothers National Memorial but do not visit the actual seashore areas need to be factored out. Maintenance of Future Access to Cape Point and South Point Ocracoke: All socioeconomic analyses related to Alternative F are predicated on the assumption that access corridors will remain open for at least an appreciable portion of the visitor high season. Under Alternative F, the access corridors will be subject to Resource Closures based on buffers similar or identical to the Consent Decree. Unless some predictability of access to Cape Point and South Point Ocracoke can be assured, economic analyses predicated on assumption of access are fundamentally flawed. Why would a group of surf fisherman want to come to Hatteras Island to surf fish if they are not sure they can access the prime fishing grounds at Cape Point? The answer is they won't come. If they don't come, they don't rent vacation homes and spend their money on Hatteras and Ocracoke Islands. The definition of the Region of Influence (ROI), faulty data on economic activity generated by specific type recreational activity, incomplete visitation/business survey data, inflated overall Seashore visitor counts pertaining to beach use, and flawed key assumptions concerning the maintenance of access under Alternative F, all lead to inaccurate conclusions in the socioeconomic analyses. Specifically, these inaccuracies can be seen as understating the negative socio-economic impact of the Seashore Villages. Further, this negative impact will be absorbed almost entirely by Small Businesses. Neither of these important aspects of the management alternatives are adequately presented in the DEIS. 14) Page 136: I strongly disagree with your pet restriction proposals. The "prohibition of pets in the Seashore during bird breeding season including in front of the villages." = No Pets in public areas ?beaches, campgrounds, soundfront, foot trails, park maintained roads -from March 15 ?July 31. 15) Pages 125; 392 ? 396: SEA TURTLES. I disagree with the stats and procedures proposed. I think endangered sea turtles would benefit from management practices now in use at other federal seashores that are more proactive in efforts to achieve nesting success. This includes relocating nests to more desirable locations as is done in other state and federally controlled areas. The Cape Hatteras National Seashore Recreational Area is on the northernmost fringe of turtle nesting locations for the southeast, accounting for about 1% of all turtle nests. Proposed buffer areas are not needed for protection of the turtles and amount to overprotection. 16) Pages 97- 101. I strongly disagree with proposals in this section saying that ORVs will be prohibited year round between ramps 27 and 30, at Hatteras Inlet (Hatteras Spit), Ocracoke Inlet (North Ocracoke Spit) and various other locations. Not allowing ORV access is paramount to denying the public access to these beaches. They are located miles from the nearest parking or paved road area and too far to access on foot. As a matter of course, there has been no breeding of piping plover or other endangered species at the Hatteras Island Inlet (spit) area in the past 6 years. 17) Page 104: I disagree with the proposed night time driving closures. Per your proposals, night driving will be prohibited between May 1 and November 15th,

forcing visitors off of the beaches early in the evening and preventing sunrise surf fishermen access in the morning. I propose a more moderate night time ban if one is needed, perhaps from June 1 ? September 15 with times being 1 hour after sunset and 1 hour before sunrise to allow beach goers to gather their stuff and exit the beach area. Certainly more proactive measures such as relocating nests prone to weather and ocean events would dramatically increase the nesting success rates. 18) Page 121: I disagree with the proposed beach closings, including pedestrian access from March 15 until July 31 in 8 different beach locations which have traditionally been available. Please leave these areas open to beach walkers, shell collectors and those that want to access the beaches in these areas. Conclusion: Please, incorporate access corridors through any SMA so we can get to the open beach beyond. Incorporate the birds into the count that nest on the spoil islands. Base your buffer zones on peer reviewed science and scale them back to more reasonable distances as discussed. It is neither logical nor reasonable to spend so much time, money and energy to overprotect a bird (Piping Plover) in the Cape Hatteras National Seashore that is on the southernmost fringe area of its breeding ground. That goes for the loggerhead turtle that is in its northernmost breeding area. Let's scale back the buffer zones. You can always increase at a later date. The USFS is leaning way over the line on over protection and not enough on the public's right to enjoy the beaches of the National Seashore. The proper balance is not achieved in the propose DEIS and needs to be modified so that the proper balance of reasonable resource protection and access to the beaches of the National Park is achieved. I could sum it up by saying "Protect, not Prohibit." Thank you,
Constance E. Moser Owner, 41924 Ocean View Drive Avon, NC 27915

Correspondence:	Closures due to birds: page 124 I disagree with the theory that human events have been more harmful to birds than other factors such as storms, tides, predatory animals or birds. In my experience (13 years) walking on the beach or driving on the beach have not notice anyone harming birds and in fact have called the proper channels whenever we have seen birds in need of assistance because of ill health or other reasons.

Correspondence:	In this scary world of terrorism, war, oil spills, environmental devastation and economic hardship I recently came to the conclusion that the true local enemy is the indifference and insouciance of the National Park Service. Have you no regard for the economic suffering of the people of the Outer Banks? Would you decimate the human population of Hatteras Island in an attempt to save a species that is not even on the endangered list? Would you weild power so pointlessly and ruthlessly just because you can? I question the true agenda of the NPS. When the land was turned over to the NPS it was with the good faith and understanding that people would have access to their "national park". The semantic bullying of the last few years has left the people who have trusted the stewardship of the NPS reeling in disbelief. Humans do not destroy the habitat of the terns and plovers: nor easters, hurricanes and predators do. This is our home. We have always taken care of it and we always will. Can you honestly say that the economic impact of the beach closures is really not an issue? Just who are you listening to? A compromise is within your reach. Stop treating us like children who destroy everything they touch and start treating us like adults who can and will honor nature and the natural order of things.

Correspondence:	I have been a resident of Hatteras Island for almost 20 years. I do not agree with everything in the Draft Environmental Impact Statement for the Cape hatteras National Seashore Recreation Area. It is very difficult to sift through the many many pages of the DEIS, but I do fear that the beaches of this most amazing National Seashore will be taken from the citizens who love it so dearly - and those who have not had the opportunity to visit yet. Please make changes on pages xii, xvii, and 468 of the DEIS to allow corridors for pedestrian and some off road vehicle use on the beaches in all areas of the Cape Hatteras National Seashore Recreation Area throughout the entire breeding and nesting season. Closing the beach to pedestrians is too radical. Pedestrians and fishermen can stay away from the protected nesting areas by walking and shelling below the high tide line. Please modify the 1,000 meter buffer (DEIS pages 121 to 127) in all directions for unfledged Piping Plover chicks to a more appropriate and yet effective 200 meter buffer. Protect the birds, but continue to allow citizens to walk along the beach. The management buffers described in pages 121 to 127 of the DEIS should be modified to allow pre-nesting closures for only endangered or threatened species. This important modification would result in establishing pre-nesting closures exclusively for the Piping Plover, the only threatened bird secies in the seashore. Please modify the turtle management practices outlined on DEIS pages 125, and 392 to 396 to allow nest relocation as a tool for species recovery. I believe implementing turtle management practices successfully used in other federal and state areas will achieve better turtle nesting success. The bottom line is - please do not deny me and the rest of the visitors to this special national treasure, the Cape Hatteras National Seashore, from enjoying this special, special place. Please do not take away many of the beaches and the traditions of fishing and enjoying this seashore that belongs to the citizens of this country. Let us all work together to continue to responsibly care for the birds, turtles and wildlife which can be achieved with some modifications to the current DEIS. Sincerley, Rita Dwight

Correspondence: Dear Mr. Murray,
I have been fortunate to have visited the beaches of this fine nation from Maine to Cape Cod to Nantucket to New Jersey to Hatteras south through Georgia to Key West and through parts of the Gulf states. I have spent time on the beaches of the Nles de la Madeleine in Quebec where the Piping Plover nests in numbers successfully.
These trips involved fishing, ORV use at times, shelling, birding and simply enjoying the beach as many have done for generations. I have watched the film at the Cape Cod National Seashore that I believe you helped institute as a requirement for obtaining a beach driving permit. I am indeed a blessed individual to have had these opportunities to experience nature in this way.
I have spent parts of the last 29 years visiting the Outer Banks of North Carolina in all seasons. I normally spend 4-6 weeks annually on these beaches and have found them to be some of the most beautiful and valuable on the Atlantic coast of North America.
What I have seen in the last few years as a result of the Consent Decree agreement has angered me deeply. Without almost any scientific verification, you, Judge Boyle and the NPS have agreed to allow outside forces to manipulate the laws to prohibit the use of these beaches that have been historically used by local residence for various recreational and commercial (fishing, shelling, surfing etc.)uses for generations. In 800 hundred pages these historic uses are hardly mentioned and that is just wrong.
The lack of a large amount of concrete scientific evidence in the report leads me to believe that justice has not been done in this report and I suspect that outside pressure has come to bear on Federal employees to submit to the lawyers that represent these outside environmental groups.
I do not know you personally but I have been told by those that do that you are an honorable man. The next generations of "bankers" will be directly effected by the inevitable outcome of the this access issue. I ask you to do the right thing and to push for a reasonable access plan that will provide protection for all endangered species which may well soon include man on the Outer Banks of North Carolina if a reasonable compromise is not found on the issue of access.
Respectfully,
Lee Haller

Correspondence: Mike Murray, Superintendent
Cape Hatteras National Seashore Recreational Area
1401 National Park Drive
Manteo, NC 27954
Dear Superintendent Murray,
Please accept this letter as my comment on the ORV DEIS before you at this time.
After reviewing the National Park Service DEIS I must disagree with any of the six alternatives within the document.
I have; however, reviewed the 77 page Coalition for Beach Access Position Statement signed by several groups that were a part of the negotiated rule making process and it by far succeeds in furnishing the best visitor experience while maintaining the needs of protecting the fragile resources.
Please consider all aspects of this alternative and put people back into the management of Cape Hatteras National Seashore.
Lisa McHaney Corbett

Correspondence: I am glad to be an American and to have the ability to submit my thoughts and feelings in areas where the government will impact my way of life, both personally and financially through my job. My comments concern the DEIS of the Off-Road Vehicle Management Plan prepared by the National Park Service for the Cape Hatteras National Seashore Recreation Area. Page 1: I agree with the statement "ORVs have long served as a primary form of access for many portions of the beach in the seashore, and continue to be the most practical means of access and parking for many visitors."
But if many of these areas are eliminated and pedestrian only areas become the norm this will discriminate against individuals with limited mobility due to age or physical impairments, families with small children, and sports enthusiasts who require recreational equipment such as boogie boards, beach umbrellas, beach chairs, coolers, fishing rods and tackle, etc.
Page 53: I disagree with the proposed guidelines for special use permits. It is impractical and unsafe to allow the transportation of disabled visitors to the village beaches and then require the vehicle to be returned to the street or parking area. This necessitates the disabled person to have a driver to drop him (or her) off, for that person to then drive to a parking area, then for them to hike the long distance back to the site of the drop off, then hike back to get the vehicle.
If the handicap person wants to go to the beach, is capable of driving himself, but does not have a driver does this mean they can't go? Or, if the rule is followed and the driver does all the required hiking back and forth, does this mean that the disabled person is left unattended for long periods with the risk of needing a quick departure due to a medical situation arising? This rule creates unnecessary hardships and risks in the event of an emergency.
Page 136: I strongly disagree with your pet restriction proposals. Pets have and always will be a part of a family and there are many responsible pet owners who wish to travel with their pets. The "prohibition of pets in the Seashore during bird breeding season including in front of the villages." This would mean NO PETS in public areas which would include beaches, campgrounds, soundfront locations, foot trails, park maintained roads -from March 15 ?July 31 which is when most families come to Hatteras Island to vacation.
Page 121 ? 127. I strongly disagree with the proposed buffers. Pass through corridors should be provided. The beach is linear; the ocean buffers on one side and the dune line on the other. If you close off access on one side of a 3 mile linear beach and close off access on the other side of the 3 mile section of beach with no corridor, then you effectively have closed off all 3 miles of the beach because you CAN'T get there. The proposed buffers for the birds are too large and thus will block access to the interior sections from the two "buffered" ends.
Instead, I would suggest ORV pass-through corridors and to use the bird buffer distances to establish ORV pass through only corridors to ensure beach access in a way that does not hinder resource protection. I believe pass through corridors should be maintained for both pedestrians and ORVs in all areas of the Cape Hatteras National Seashore Recreational Area throughout the entire breeding and nesting season. These corridors are essential to providing access in a way that does not hinder resource protection.
The 1,000 meter distance for the piping plover is too large. Why wouldn't you use a more rational distance of 200 meters as do other sites in the nation for the piping plover. Ample scientific evidence and precedent exists to support a 200 meter buffer.

0012759

Buffers for other species, including American Oystercatchers, Least Terns and Colonial Waterbirds must also be changed. An effective 30 meter buffer should be established for these species rather than the 300 meter closure outlined in the DEIS.

Not allowing ORV access is paramount to denying the public access to these beaches.

I have lived and worked on Hatteras Island since 1991 and have enjoyed the many things that the National Seashore have to offer. I have watched my children grow up building sandcastles, digging for sand crabs and learning to cast a surf rod at the point. I hope that these are not just my memories, but will also be the memories of my grandchildren and their grandchildren.

The NPS is leaning so strongly towards over protection and not giving enough consideration to the public's right to enjoy the beaches of the National Seashore. The proper balance is not achieved in the proposed DEIS and needs to be modified so that the proper balance of reasonable resource protection and access to the beaches of the National Park is achieved. I could sum it up by saying "Protect, not Prohibit."

Correspondence: I will keep this simple. What about the name does not say it all? As seems to fit all government agencies now, you change the name to suit your taste. The name of the park is Cape Hatteras National Seashore Recreational Area. Don't see any where in that name about bird sanctuary, restricted access or animal sanctuary. If it was to be such, it would have been named from the beginning. No breeding bird needs 800 acres for reproductive process or they would have been extinct 40 years ago. The people who are swinging the big clubs in this have no vested interest in living or most likely even visiting our beautiful islands. Please let common sense rule in these activities. Thank you. Correspondence: The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."
When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness...."
Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.
The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.
Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

Correspondence: We recently purchased a house in Salvo with the expectation to rent it out during the summer season. We are able to do this because of the many wonderful businesses on Hatteras Island that support the rental community. Beach closure would have a negative impact not only on our investment but on all the other families that have invested in Hatteras Island. Without renters and rental income, many of the businesses on Hatteras Island will fold. We are in tough economic times and additional beach closures/restrictions will further damage the local economy. In addition, tax revenues from the wealthiest county in North Carolina will dwindle.
As we understand it, the beach closures are designed to protect the habitat of the piping plover. We believe that the current plan would enable the piping plover to thrive whilst allowing people to enjoy the beach area. Other states have constructed barriers to protect nesting turtles and birds and have done so successfully without actually having to close a beach. With proper education, we can all enjoy the beach together, humans and animals alike. We disagree with the aggressive beach closures that are proposed in this document.

Correspondence: I wish to protect endangered animals (even if they aren't native from here but pushed here by New Jersey land developers) however the draconian measures taken to date have been ludicrous. Where are the experts that support buffers larger than the island is wide? By crowding people into ever shrinking areas beach damage will become a self fulfilling prophecy. With 23 closed last summer and no decent break at any other open areas except a very limited area at 27 (even to foot traffic) there were inevitable conflicts between various recreational flavors (kites, windsurfers and surf fishermen). The biggest advantage that Hatteras has is the ability to spread out. Crowd people together and it's a recipe for failure.

Correspondence: Page 18, xi - Alternative F Out of all of the Alternatives, this would be the least disruptive to Hatteras Island, but still not acceptable. People on Hatteras Island are highly affected by tourists who want to come to Hatteras Island to enjoy the beautiful island by relaxing on the beach, walking and driving on the beach, fishing on the beach, playing with their children and families and enjoying family cookouts and games, watching the sunrises and sunsets, collecting shells, educating their children on the birds, fish, tides, etc. People are not going to spend the money that they have worked so hard for throughout the year to come to an area that is so restrictive that they are not able to do any of the above. Most of the people who live on Hatteras Island have retired here, some on limited incomes, others have lived here all of their lives who have to work several jobs in order to maintain a standard of living. Without access to our beaches, the economy of the people who own businesses and people who live here will be severely affected financially.

Correspondence: Having vacationed on the Cape Hatteras National Seashore and Recreational Area (CHNS&RA) for the past 40 years and owning property there for fourteen years, this Beach Access and Off Road Vehicle Access is an extremely important issue for us, our children and grandchildren. Since CHNS&RA came into existence in 1937, the National Park Service (NPS) has always promised the people of this area access to the beaches for their families and vehicles. Pea Island Wildlife Refuge which is approximately 13 miles in length was set aside decades ago for wildlife which I am sure includes birds. The rules being proposed are so extreme that they will change the original intention of providing human beings and vehicles free access on the beaches to no access at all or only in certain specific cases and at unknown times. The result will be that miles of some of the finest fishing and walking beach in the nation would be closed to the public despite little qualified scientific evidence to support the decision. The main subject of the decree (Piping Plover) is not an endangered species. The areas being restricted are consistently washed over during normal storms making them unstable and unsuitable for nesting. (The reason there are so few nesting in these areas.) I am pro-environment and understand there may be circumstances when nesting birds require protection. However, this is not the case on CHNS&RA. The flawed process by which the six alternatives in the NPS DEIS document were put forward, and to which I disagree whole heartedly, would result in unwarranted recreational restrictions and local economic hardship. I have reviewed the 77 page Coalition for Beach Access Position Statement (CBAPS) signed by several groups that were a part of the negotiated rule making process and furnishes the best experience for those using the seashore and recreational area at Cape Hatteras while protecting the fragile resources. My wife and I ask that you consider all aspects of this alternative and reinstate the primary purpose of CHNS&RA for humans. We thank you for your consideration.

Correspondence: May 11, 2010 Dear Mr. Murray, My name is Brittainy Forman. I am originally from Colorado with a background in Investment Banking. I moved here in 2003 and have been in full time residence in Buxton, NC since. The reason I moved here is for year round ocean and sound access to practice the watersports of Kiteboarding, Surfing, Standup paddle boarding, Sailing, Fishing and general beach enjoyment. Thank you for the opportunity to make public comment on the draft ORV Management Plan. I would like to focus my comment on the economic impacts of restricted ORV and pedestrian access to the water. On page 383 of the draft ORV Management Plan, it states that the restrictions would have a negligible to moderate impact on Hatteras Islands economy. I strongly disagree with this reason for the following reasons:
1. For the past 10 years, Cape Hatteras and Hatteras Island has become the top International destination for the sport of Kiteboarding with over 500,000 participants worldwide. Recognizing Cape Hatteras as their #1 travel destination.
2. Kiteboarders, Surfers, Standup Paddle Boarders and Fishermen recognize Cape Hatteras their favorite destination due to favorable conditions for their sport and nearly unlimited access to the waters to practice their sports.
3. Many of the islands businesses have developed over the past 70 years to support and enrich the National Park experience surrounding these sports. 4.

The above mentioned sports value the previously experienced access levels and will either reduce or eliminate their Cape Hatteras travel plans based on your proposed access restrictions.

5. My current position as the CFO of REAL Watersports, Inc. which has chosen the Village of Waves as their International Head Quarters. Over the past ten seasons, the company has grown from 2 employees to over 75 employees. Each year, we teach on average over 6,000 new students who bring an estimated \$3,000 per person to the Island's economy, totaling \$18 Million annually*. It is estimated that our events throughout each year draw and additional \$36 Million annually. Before REAL Watersports began as a business, one of the current employees was a full time resident in Cape Hatteras. This means that 74 people moved from outside locations both nationally and internationally to pursue their lifelong dream in the Water sports industry. With over \$54 Million dollars in revenue and 150 employees (REAL plus other Watersport Businesses) livelihoods pending on the outcome of this plan, how is it possible that this can be characterized as a negligible to moderate impact?

I would like to thank you again for making public comment on the draft of the ORV Management plan. I can be reached at the following for additional comment. Brittainy Forman PO BOX 476 Waves, NC 27982 brittainy@onebox.com 252.987.6011

Sincerely, Brittainy Forman *Statistics documents in Outside Magazine and Kiteboarding Magazine.

Correspondence: Dear Mr. Murray
I would like to thank you for this opportunity to give my feedback on the draft of the ORV management plan.
I would like to focus my comments on maintaining a positive national park visitor experience. I was a resident of Michigan and had moved here to have access the beaches to enjoy surfing, kiteboarding, stand up paddle boarding and fishing. Myself a resident of the village of Waves and a year around user of ramp 23 and many other access points. The proposed plans troubles me as ramp 23 was closed for the summer of 2009 and recently again for 2010. This location and many others are a part of my daily experience in the park. Within the villages of Rodanthe, Waves, and Salvo there is limited public access points and this would limit myself and other enthusiasts' access to the beaches. This leaves visitors and residents in conflict as the beaches are limited by parking and access on private property. It became clear to me that the three villages and the future economic health is dependant on open access to the beaches for visitors to the park.
The Cape Hatteras National Recreation Area was created in 1940. Over 70 years ago the villages were designated as the visitors host and an economy grew around that focus. Charging this over 70 years later will be detrimental to this plan. How is that 70 years later the government can change their mind on this decision?
I would like to thank you again for the opportunity to talk with you on the daft of the ORV management plan. I can be reached at the following for future comments.

Correspondence: I would like to express my concerns with the current proposal and amount of time provided to review and make comments. The comment period should have remained opened longer. With that stated, the comments I do have are as follows: 1) Closing of the Ocracoke North & South ends, as well as the Hatteras point do not offer sanatory for wildlife, as many times these areas go under water and are subject to significant changes with each storm. These areas should remain open with closures only near any nests that may be found. 2) Over all closures of the beach and the limiations on night driving truly will hurt the economy for this area. Families, water sport enthusiast, and fisherman travel to this area to for all it has to offer. By removing the opportunity to use this area - folks will not have a need to come there. No tourist - no money for local business, no fishing permits, and etc. 3) It would be nice if the "bird lovers" could share the beach and not offer such stringent and overwhelming lack of consideration for others. I feel the NPS is being bullied and succumbing to these groups. 4) I feel the NPS should take control of the situation and remember that this area was to be a public beach with access by vehicle and it should remain that way.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: Closures due to Turtles, p. 125
ORV and other recreational use would have long-term major adverse impacts on sea turtles....
I disagree since Nesting females have not been kills, nests lost due to human activity has not occurred frequently.
Purpose of DEIS set forth by NEPA - I agree that that cultural traditions of the long term residents of the community are considered.
Closures due to Birds: p. 121-127: I disagree, buffers use breeding/nesting buffer distances to establish ORV pass through only corridors to ensure beach access is always maintained. Piping Plover unfledge chicks buffer should move with the brood as it relocates to reliable food source, not expanded.

Correspondence: With due respect, I disagree with several key points of this ORV Plan for the Cape Hatteras Seashore and, specifically, Ocracoke Island. First and foremost, Ocracoke is unique to this Recreational Area. We are the only island where the residents sold or donated all of the privately owned seashore- Sound and Oceanside, to the National Park Service. This was done under the expressed promise by the Park Service and the Department of Interior that the sale or donation of the properties would in no way compromise our quality or way of life. Consequently, the beach is our only recreational area. We have no parks or athletic fields for our children. The Park Service owns all properties outside of our small village. North and South Points are where we take our children to learn to swim or to have enough area for a pick up soccer game. They are also the areas that are safe for our young children to swim due to the strong tides and rip currents on the beachside. Permanent closure of North Point and seasonal closure of South Point with no corridor access seriously affects our community and our quality of life.
Secondly, defining buffers for endangered species far and above those established in other areas such as the National Seashores in Virginia, Cape Cod, Delaware, etc., without any documented and supportive science is punitive to our communities. Inclusion of non-endangered species also goes far

beyond purpose and definition outlined in the Charter for this Recreational Area as does the practice of trapping and killing natural predators which have just as much right to this Preserve. Daily, we see how nature is much smarter than we can be as we see the bird populations increase on the dredge islands as we cross on the ferry or are in the Sound with our families- they know where they are safe and where there are no predators. Yet these animals are not counted in the Plan. Is this not exactly what brought back the Brown Pelican?

Thirdly, as a business owner on Ocracoke Island, the Study of Economic Impact in no way represents the demographic of our community and is seriously flawed. I also find it curious that I own the 2nd largest Hotel on the Island, am one of the larger employers, yet I was never contacted for input to this very important segment. I would have been more than happy to provide hard figures and specific comment as to the impact, which has been negative to date and will be astronomical if the plan is enacted as outlined.

In closing, My family provided over 150 acres to the Seashore including such important areas as Quork Hammock, Loop Shack Hill and the area from the campground to South Point Road (ramp 72). And did so gladly- believing the Department of Interior that these properties would form a recreational area improving our quality of life. Ocracoke has had a close working relationship with the Park Service from the very inception of this Recreational Area. We all also want responsible ORV access that is defined and based on documented and supportable scientific evidence that also follows the very charter and definition of a National Park designated for Recreational Use. I do not believe this current plan does.

Respectfully,
Stanley L. Stevens

Correspondence: Mike Murray, Superintendent Cape Hatteras National Seashore Recreational Area 1401 National Park Drive Manteo, NC 27954 Dear Superintendent Murray, I am writing you today to make formal comments on the Cape Hatteras National Seashore Recreational Area Off-Road Vehicle Management Plan Draft Environmental Impact Statement, specifically Alternative F, created by the National Park Service with input from the negotiated rulemaking advisory Committee. I wish to thank the National Park Service for an opportunity to comment on the Cape Hatteras National Seashore ORV Management Plan DEIS. I have been a practicing Doctor of Veterinary Medicine for the past 51 years and have spent my life looking after the welfare of animals. I have been a frequent visitor to the Cape Hatteras National Seashore Recreational Area for the past 54 years and a property owner and part time resident of the seashore village of Frisco for the past 20 years. My daughter is married into an established Island family whose genealogy can be traced back in Hatteras history for over 3 centuries. My five grandsons and one great grandchild are residents and their individual family incomes are dependent on the Island's economy.

The selected alternative "F" is not acceptable. It is not primarily an ORV management plan, rather a public access restriction plan. The Cape Hatteras National Seashore Recreational Area was established by the Congress of the United States to preserve a substantial area of coastal shoreline for public recreation. Please show me where and how Congress changed this objective?

The proposed plan is biased toward bird and turtle protection; seashore isolation with little or no attention to public use and visitor access ? specifically ORV and pedestrian access. The Congressional mandate was and still is public use alongside resource management. Human beings are part of the Seashore ecosystem.

Comment #1:
Why will the Cape Hatteras National Seashore Recreational Area not take more proactive measures to increase the success of hatching sea turtles as is done in other turtle nesting areas throughout the world?
Other areas throughout the world:
a.) Dig the nests and relocate them to a secure area b.) Use incubators with great success to ensure optimal hatching rates c.) Release hatchlings into the water beyond the surf zone eliminating one of the most hazardous steps in the survival of young turtle hatchlings

Comment 2:
It is my understanding that the Piping Plover prefers open sand beach areas with limited vegetation. It would make sense that areas of limited vegetation would benefit the species by not harboring predators that would harm the Plover eggs and young. Lou Browning, a wildlife rehabilitation specialist for Frisco made very astute and informed comments for record in the public meeting held in Buxton, North Carolina as to the lack of proper vegetative management on the seashore by the National Park Service in regards to the nesting areas. I am fully in support of his comments and action plan.

Comment 3: Birds listed as North Carolina species of concern should not be given protected status under the Endangered Species Act. It is my understanding that both the Chairman and Executive Director of the North Carolina Wildlife Resources Commission have informed you that these unnecessary protections were never the intent of the Commission's participation in this process, nor a requested outcome. They also have stated that other species of concern are not given ESA status on other federal lands. Pre-nesting closures should be exclusively for the piping plover; the only federally listed threatened bird species. Also, non-ESA listed birds should not have buffers of 300 meters. The following is an excerpt from a May 9, 2010 Virginian-Pilot news article by Catherine Kozak: Numerous shorebirds in Cape Hatteras National Seashore are given higher levels of protection in a proposed off-road vehicle management plan than what the law ever intended the birds to have, a state wildlife official said. State-listed "species of concern," - such as the American oystercatcher - do not require the extensive buffers and beach closures mandated for federally listed species such as the piping plover, said Gordon Myers, the executive director of the North Carolina Wildlife Resources Commission. Myers said that's beyond the intent of the state law: the state designation is supposed to be more of a call to action for a species. The Wildlife Resource Commission, he said, will voice its objections to the use of state "species of concern" lists to trigger ORV management strategies under the federal Endangered Species Act. That is of concern to us because it's apples and oranges," he said. "To treat it as synonymous with threatened and endangered is not congruent."

Comment 3: Nowhere in the DEIS is it mentioned that protected species populations are growing without the needs of additional restrictions such as those of consent decree and Alternative F.

Published USFWS data suggests that the piping plover is "recovering" well beyond 1986 levels and do not suggest that additional restrictions beyond regional recovery plans are necessary or essential at the Cape Hatteras National Seashore Recreational Area for the continued recovery of the species.

Piping Plover--Atlantic Coast Pairs
Year 1986 1999 2005 2006 2007 Nesting Pairs (est.) 790 1386 1632 1749 1880
<http://www.fws.gov/northeast/pipingplover/index.html> **Comment 4:** A 1,000-meter buffer in all directions of an unfledged piping plover chick represents 771 acres of closed beach. This seems a bit arbitrary and capricious when managing a species. I have yet to read any scientific reasoning behind this management strategy. It is my understanding that in Assateague Island National Seashore the buffer is 300 meters. Why is the 1,000 meter buffer being proposed for CHNSRA? Why is one National Seashore being treated so differently than others when we are at the extreme southernmost extremity of the nesting area? A much smaller buffer would be just as effective for the survival of a piping plover chick without the extreme penalization of the residents and visitors of Hatteras Island.

Comment 5: In the past during a closure, the NPS and our State government were able to work with you and your staff to create corridors around resource closures. These alternative paths are indispensable to the continued movement of pedestrians and vehicles. Also, the corridors allow visitors to access an open area that may be sandwiched between two closed areas. These corridors have limited negative impacts to the protected species, but they are crucial to providing access during closure periods. I stand with Dare County and our North Carolina state government in requesting that corridors be maintained for pedestrians and vehicles in all areas of the Cape Hatteras National Seashore Recreational Area throughout the entire breeding and nesting season.

Comment 6: It appears as if the preferred alternative prohibits pets in the Seashore during bird breeding season including in front of the villages. This means no pets in public areas ?beaches, campgrounds, sound front, foot trails, and park maintained roads from March 15 ?July 31. If this is a correct interpretation, I am totally opposed. I support the previous leash law (all pets must be on a leash 6 feet or less in length).

Comment 7:
The economic analysis found in the DEIS is fatally flawed. By your own admission it is incomplete, but your actions taken now will have serious adverse effects on the people and businesses of Hatteras and Ocracoke Islands for years to come. You are using economic figures covering Dare County in it's entirety and are assuming that these figures apply to Hatteras and Ocracoke. Your actions (ie. Beach restrictions) do not affect the use of the

beaches of Northern Dare County, but severely affect Hatteras and Ocracoke islands.

To allow this plan to go forward without a good solid well thought out Economic Impact Analysis can only be described as criminal negligence!
 Comment 8: Alternative F will significantly change the economy and unique culture of the Outer Banks. The DEIS has failed to properly assess those changes. The Economic Impact Analysis found the DEIS by its own admission is incomplete. How can I comment on an incomplete document? The Economic analysis is structured in such a manner that it fails to address full costs?direct costs, indirect costs, lost opportunity costs, costs of future liability, and hidden costs.

The Economic Analysis fails to recognize that the national seashore environment is a unique form of capital that serves the local economy, and in turn the health and well being of citizens and families that depend of that economy. Access to the seashore is essential for family business operations on the Outer Banks.

The cost to society and the local communities under the restrictive consent decree has now been extended indefinitely into Alternative F. Economic losses in millions of dollars have occurred to island businesses especially motels, campgrounds, restaurants and tackle shops. The full costs of Alternative F are very much understated in the DEIS. Annual economic losses under the consent decree are already in excess of those estimated by Research Triangle Institute. It is my understanding that the Outer Banks Chamber of Commerce, on behalf of its more than 1,000 members with businesses in Dare, Hyde and Currituck counties, has gone on record as vehemently disagreeing with the validity of the economic impact analysis included in the Draft Environmental Impact Statement for proposed new rules for access to the Cape Hatteras National Seashore. This group of professional business owners states unequivocally states "Not only does the analysis not adequately convey the economic impact of the proposed Alternative F, it fails to address any of the alternatives listed in the DEIS. The data is incomplete, misleading and the statements of what are supposed to be facts are without sound basis." Comment 9: If I understand the document correctly, it would appear as if the DEIS proposes to close the beaches at Hatteras Inlet, both the South Tip of Hatteras Island and the North tip of Ocracoke Island permanently and year-round. Aside from the fact that such a closure would forever alter the traditional uses of these areas, such a closure has already and will impact the public safety of mariners traversing the inlet. On Saturday, May 1st 2010, an inshore charter boat overturned in Hatteras Inlet. There were 6 occupants of the boat, all family members, 3 children and 3 adults. The captain was a professional charter captain. They spent 4 hours in the water awaiting rescue. They could have been seen from the beach, had it been open but instead had to wait until the offshore charter fleet was returning in late day for any hopes of being rescued. One of the group died as a result.

Comment 10:

I will be 75 years of age this Summer my wife is 79. We have always loved and enjoyed Cape Hatteras, the Village of Buxton is where we spent our honeymoon. The only realistic way we can continue to enjoy this major pleasure in our lives is by ORV access. The natural, eternal beauty and the solitude of the beach has enabled us to find the peace that has allowed us to work through the loss of many close family members. To us, the Cape Hatteras Seashore is almost the memorial where we pay tribute to the memories of our loved ones.

Comment 11:

After reviewing the National Park Service DEIS we must disagree with any of the six alternatives within the document. I have, however, fully reviewed the 77 page Coalition for Beach Access Position Statement signed by several groups that were a part of the negotiated rule making process and it by far succeeds in furnishing the best visitor experience while maintaining the needs of protecting the fragile resources. Finally, as a citizen of the United States of America, I am appalled and outraged that my comments as a citizen on the DEIS are given the same weight as a non-United States Citizen. Sincerely, Thomas Todd DVM Salisbury, MD and Frisco, NC

Correspondence: Mike Murray, Superintendent Cape Hatteras National Seashore Recreational Area 1401 National Park Drive Manteo, NC 27954 Dear Superintendent Murray, Please accept this letter as my comment on the ORV DEIS before you at this time. After reviewing the National Park Service DEIS I must disagree with any of the six alternatives within the document. I have; however, reviewed the 77 page Coalition for Beach Access Position Statement signed by several groups that were a part of the negotiated rule making process and it by far succeeds in furnishing the best visitor experience while maintaining the needs of protecting the fragile resources. Please consider all aspects of this alternative and put people back into the management of Cape Hatteras National Seashore. This issue is important to both visitors and residents. People and birds have coexisted for many years and it is not reasonable to demand total segregation. this is not only an economic problem, but a personal freedom issue as well. Please recommend that the environmentalists do not dictate what should happen in a national park. Thank you

Correspondence: Page 201- I disagree,in closure areas plovers are not at risk from ORV,s and pedestrians
 Page 24- closing more beaches crams recreational beach goers into smaller areas doing more damage to the enviornment and will curtail vacationers from comming to the Outer Banks.
 page 19 & 23- All beaches, north and south need to have the same closure dates and times May 15 to Sept 15.
 Page 1- I agree ORV's have been the main access means yo most of Hatteras Island beaches for over 70 plus years. Closure of any of these areas limits access to only healthy and younger persons
 Page 53- I disagree with the special use permit persons such as myself find it impossible for my wife to drop me off thenpark the car and walk back, this is a great hardship to us and our family.
 page 121-127- I strongly disagree with all of this,Closing 3-4 miles of beach without access through the buffers closes the beach.Pass through corridors can be defined while also protecting the resorce. Hatteras Island plover chicks do not require a 1000 meter perimeter, the national standard of 200 meters should apply. The Plover buffer zone should move with the chicks and not just expanded Non endangered birds should not have the same protection as endangered birds.A 30 meter buffer is sufficient.
 page 468I disagree with the limitationsimposed on ORV,S and pedestrians, corridors should be provided through, around or below the high tide linein all SMSs during the entire breeding season to maintain access
 Page 124- I strongly disagree with the NPS idea of providing for over protection of resource management over the publics right to access the beaches for recreation purposes. Proactive initiatives include: vegetation management, habatit management, enhanced predator management, colonial water bird social attraction, plover chick fledge rateplover chick buffer distance, and pass thru buffers during the incubation period.Opportunities to implement less restrictive clousures as a result of the above initiatives should be considered more frequently than the 5 year periodic reviewprocess identified in the DEIS.
 I disagree with NPS resorce management pedestrian/ORVclosure policies. These policies address the least significant factors affecting nest

survival with little chance to have more than negligible impact. Example the AMOY nest failure are predominately due to non human events. These are the stats, predation from mammals 54%, storm tides 29%, nest abandonment 6%, Avian 5%, ghost crab 3%. That leaves 3% by human interference, its insignificant, yet the NPS wants to ban humans when their actions provides very little influence on the success rate of breeding birds and turtles. I disagree with the stats of breeding plovers and other birds in the park when NPS does not adequately consider other locations bordering the recreational area that are part of the same ecosystem namely dredge and spoil islands just yards from the seashore, are part of the same ecosystem and should be included. these islands, developed by man while dredging the sound are packed full of nesting birds where they are safe from predators. Page 270-281;561-598- I strongly disagree with your economic analysis of the impact of the DEIS, the northern beaches north of Hatteras Island should not be included in the economic analysis since they suffer no financial loss from beach closures on Hatteras Island. (My rental house in Avon has dropped from 25-30 rentals per year to 15- 20. This has drastically reduced our retirement income)

Page xlvi - I disagree the alternative F as having little to moderate impact on small business when in reality it is having a disaster affect on small business. As in the DEIS small businesses will have to adapt to the new rules will be difficult if you are no longer in business because of the new rules Overall visitor counts should not be skewed by including counts from non Hatteras Island National historic sites

Cape Point and Ocracoke south beach must remain open for the majority of the high season, since this is when the majority of recreational fisherman and vacationers are here, they need access. If there is no access they will not come.

Page 125:392-396- Sea Turtles, I strongly disagree with the stats and restrictions imposed. Proactive relocation of the nest , as is currently done in other State and Federal controlled area would be more beneficial to the success of the turtles survival.

Pages 97-101- I strongly disagree with proposals in this section closing these areas year round between ramps 27-30, Hatteras inlet (spit) and North Ocracoke inlet and other areas. This in effect closes these areas to recreational access since it offers no parking locations within reasonable distances. Also there have been no documented plover nest in the past 6 years. NORTH CAROLINA IS THE SOUTHERN MOST NESTING RANGE OF THE PIPING PLOVER COMPRISING ONLY 3% OF THE TOTAL POPULATION

Page 121- I disagree with the proposed beach closings, including pedestrian access from March 15 until July 31 in 8 different beach locations which have traditionally been available, please leave these beaches open for beach walkers, shell collectors, and those who want to access those areas of the beach.

CONCLUSION Please, incorporate access corridor through any SMA so we can to the open beach beyond. Incorporate the birds that nest on the spoil islands in your count. It is not reasonable or logical to spend so much time and money and energy to overprotect the piping Plover that is on the southern most fringe area of its breeding area on Hatteras Island, and that also goes for the loggerhead turtle which is on its Northern most breeding area. The USFS is leaning way over the line on over protection and not enough on the public's right to enjoy the beaches of the National seashore. The proper balance is not achieved in the proposed DEIS and needs to be modified so that proper balance of reasonable resource protection and public access to the National seashore is achieved. PROTECT NOT PROHIBIT IS THE WAY

Thank You

Correspondence Type:	Web Form						
Correspondence:	My comments concern the DEIS of the Off-Road Vehicle Management Plan prepared by the National Park Service (NPS) for the Cape Hatteras National Seashore Recreation Area.						

1) Page 201: I disagree with the NPS statement: "Even with resource closures in place, protected species are still at risk [from pedestrians and ORVs]." No Piping Plover deaths have been attributed to ORVs. ORV violations continue to decrease as signage and education improve. Pedestrian violations are much more significant than ORV violations. It seems to me that any transgressions into protected area are the result of lack of NPS manpower and enforcement than the public purposely and willfully violating out of bounds areas. 2) Page xxiv: I question the statement of as per the DEIS: "Carrying capacity would be a 'peak use limit' determined for all areas based on the linear feet of beachfront?" If you close off huge sections of the beach, you force more people into smaller areas, potentially resulting in more resource impairment and diminished visitor experience.

3) Page xix and page 23: I am against having two different closure rules pertaining to the North facing beaches (North side) and the South facing beaches (South side) as per the grid outlined in Alternative "F". I disagree with the NPS proposal to close the beaches in villages of Frisco, Hatteras and Ocracoke Villages to ORV access longer than the traditional May 15 to September 15 period for the Northern beaches, even though seasonal visitor statistics are similar for all villages. Please, make them the same: May 15 -> September 15. 4) Page 1: I agree with your statement "ORVs have long served as a primary form of access for many portions of the beach in the seashore, and continue to be the most practical means of access and parking for many visitors."

However, pedestrian only areas discriminate against individuals with limited mobility due to age or physical impairments, families with small children, and those wishing to engage in activities requiring recreational equipment (boogie boards, beach umbrellas, beach chairs, coolers, fishing rods and tackle, etc) 5) Page 53: I disagree with the special use permit proposed guidelines. It is impractical to allow the transportation of disabled visitors to the village beaches and then require the vehicle to be returned to the street or parking area. This necessitates the disabled person to have a driver to drop him (or her) off, then drive to a parking area, then trudge a long distance to the site of the drop off, then trudge the long distance through the sand back to get the vehicle. Suppose the handicap person wants to go to the beach, is capable of driving himself, yet cannot find another person to go with him? Does he now not go to the beach? This rule creates unnecessary hardships and risks in the event of an emergency as well. 6) Page 121 ? 127. I strongly disagree with the buffers as presented. We must allow for pass-thru corridors. The beach is linear with the ocean buffering on one side and the dune line on the other. For example - If you pinch off access on one side of a 4 mile linear beach and pinch off access on the other side of the 4 mile section of beach with no corridor, then you effectively have closed off all 4 miles of the beach because you CAN "T get there. The proposed bird buffer areas are too large, blocking access to the interior sections from the two "buffered" ends. I propose ORV pass-thru only corridors and to use breeding / nesting buffer distances to establish ORV pass through only corridors to ensure beach access in a way that does not hinder resource protection. I believe pass through corridors should be maintained for pedestrians and ORVs in all areas of the Cape Hatteras National Seashore Recreational Area throughout the entire breeding and nesting season. Corridors are vital to providing access in a way that does not hinder resource protection. Piping Plover unfledged chicks buffer should move with the brood as it relocates to reliable food source, not expanded. The 1,000 meter distance for the piping plover is way too large and not based upon peer reviewed science. A more rational distance would be 100 - 150 meters per other sites in the nation for the piping plover. Ample scientific evidence and precedent exists to support a 100-150 meter buffer.

Last year piping plover nested in the right-of-way of US 12 within 50-75 feet of traffic traveling at 60 mph and they were perfectly fine and safe! Buffers for other species, including American Oystercatchers, Least Terns and Colonial Waterbirds must also be changed. An effective 30 meter buffer should be established for these species rather than the 300 meter closure outlined in the DEIS. NON-ENDANGERED BIRDS should not have same protection as if endangered. Not allowing ORV access is paramount to denying the public access to these beaches. 7) Page 468: I disagree with the limitations imposed on pedestrian and ORVs. Corridors or bypasses should be provided thru, around or below high tide line in all SMAs during entire breeding season to maintain access. 8) Page 124: I strongly disagree with the NPS slant of providing for over protection of resource management over that of the public's right to access the beaches. Pro-active initiatives include: Vegetation Management, Habitat Management, Enhanced Predator Management, Colonial Water bird social attraction, Piping Plover check fledged rate, Piping plover chick buffer distance, and pass-through buffers during the incubation period. Opportunities to implement less restrictive closures as a result of the above initiatives should be considered more frequently than the 5-year periodic review process identified in the DEIS. 9) I disagree with the NPS Resource Management Pedestrian / ORV Closure Policies. These policies address the least significant factors affecting nest survival with little chance to have more than negligible impact. For example: the AMOY Nest Failures are predominately due to non-human events. Using your own stats, the mammalian predation is 54%, Storm / Lunar Tides: 29%, Nest Abandonment: 6%, Avian Predation: 5%, and Ghost Crab Predation: 3%, So what is the percentage due to human interference: just 3%! It's insignificant, yet the NPS wants to ban humans when their actions provide very little influence on the success rate of breeding birds and turtles. 10) I disagree with the stats of breeding plovers and the other birds in the Park when the NPS does not adequately consider locations neighboring the Recreational Area that are part of the same ecosystem, namely dredge and spoil island that are located just yards away and within sight of the seashore.

These birds are part of the same ecosystem and should be included. Those spoil islands, developed by man from dredging the waterways in the Pamlico Sound for channel upkeep are slammed full of birds. The reason why so many birds? NO PREDATORS. SO, birds are not as stupid as one might think. You have to count these birds and incorporate them in the stats when the NPS is talking about any so called decline in breeding pairs in the National Park. 11) Page 1: I do not think the DEIS responsibly addresses the cultural resource issues. The very purpose of the DEIS as set forth in the National Environmental Policy Act (NEPA) is to protect and preserve natural and cultural resources in the federal decision making process. In the DEIS, the statement "protect and preserve natural and cultural resources" appears in the first sentence of the first page of the plan, in the Purpose of the Plan section, and numerous times thereafter. Yet, the 810 page document devotes only two paragraphs to analysis of cultural resource issues. As a lifelong resident of Hatteras Island, we of the Hatteras Island community have always gotten together on the south beach on Sunday to enjoy the beach with our cookouts, gatherings, surf bathing, horse shoes and foot races, fishing, and surfing. Now the DEIS is proposing closing off most of the south beach during the summer which is the traditional period we local people use the beach. The continuation of this traditional pattern of land use is central to maintaining the historic identity of our island communities. 12) Pages 270-281; 561-598: I strongly disagree with your economic analysis of the impact of the DEIS. The region of influence (ROI) incorporates the Northern Beach communities, including Kill Devil Hills, Kitty Hawk, Southern Shores and Duck. These areas are almost completely disconnected from ORV use and access issues relating to the Seashore. ? Inclusion of the Northern Beaches in analysis significantly dilutes estimates of economic impact on the 8 Seashore Villages ? Analysis of economic impact to the Seashore Villages appears to be significantly down played. Emphasis in DEIS is on the ROI-wide or county-wide level impacts. ? Nowhere is it clearly addressed that the overwhelming majority of negative impacts will be felt by small businesses in the Seashore Villages rather than by overall economic interests within the greater ROI. On page xviii, Alternative F is characterized as having a "negligible to moderate" adverse impact on small businesses. I strongly disagree with this statement. I believe the negligible to moderate projection is inaccurate and relies on economic surveys that has not yet been published. Furthermore, this material is not expected to be added to the DEIS until after the public comment period has ended. Based upon the economic harm we have already experienced under the consent decree, Dare County projects the economic impact of Alternative F to be substantial. Beach closures have already had a devastating and unfair impact on many Dare County Businesses, causing foreclosures, bankruptcies, lay-offs, cutbacks, expensive refinancing, and depleted college funds and savings accounts. Even businesses whose revenue has stayed level or showed a modest increase have accomplished this at a costly price. Many have had to cut back employee hours, forego much-needed capital improvements, and sacrifice profits. That is certainly the case with Hatteras Realty. Pages 270-286, 561-598: The socio-economic data and analyses are incomplete and erroneous and result in an understatement of the effect the restrictions will have upon the Island, the region and the state of NC. The US Park Services answer: Businesses will have to "adapt" to the new rules. (p.383) The negative economic impacts of the decree ARE KNOWN, so to say that the added restrictions would have negligible to moderate impact is indefensible. 13) Overall Visitor Counts - Overall visitor counts appear to include visitors to Fort Raleigh National Historic Site and the Wright Brothers National Memorial. A large percentage of these visitors vacation in the Northern Beaches communities and recreate on the non-federal beaches outside of the Seashore. Visitors who patronize the Fort Raleigh National Historic Site and the Wright Brothers National Memorial but do not visit the actual seashore areas need to be factored out. Maintenance of Future Access to Cape Point and South Point Ocracoke: All socioeconomic analyses related to Alternative F are predicated on the assumption that access corridors will remain open for at least an appreciable portion of the visitor high season. Under Alternative F, the access corridors will be subject to Resource Closures based on buffers similar or identical to the Consent Decree. Unless some predictability of access to Cape Point and South Point Ocracoke can be assured, economic analyses predicated on assumption of access are fundamentally flawed. Why would a group of surf fishermen want to come to Hatteras Island to surf fish if they are not sure they can access the prime fishing grounds at Cape Point? The answer is they won't come. If they don't come, they don't rent vacation homes and spend their money on Hatteras and Ocracoke Islands. The definition of the Region of Influence (ROI), faulty data on economic activity generated by specific type recreational activity, incomplete visitation/business survey data, inflated overall Seashore visitor counts pertaining to beach use, and flawed key assumptions concerning the maintenance of access under Alternative F, all lead to inaccurate conclusions in the socioeconomic analyses. Specifically, these inaccuracies can be seen as understating the negative socio-economic impact of the Seashore Villages. Further, this negative impact will be absorbed almost entirely by Small Businesses. Neither of these important aspects of the management alternatives are adequately presented in the DEIS. 15) Pages 125; 392 ? 396: SEA TURTLES. I disagree with the stats and procedures proposed. I think endangered sea turtles would benefit from management practices now in use at other federal seashores that are more proactive in efforts to achieve nesting success. This includes relocating nests to more desirable locations as is done in other state and federally controlled areas. The Cape Hatteras National Seashore Recreational Area is on the northernmost fringe of turtle nesting locations for the southeast, accounting for about 1% of all turtle nests. Proposed buffer areas are not needed for protection of the turtles and amount to overprotection. 16) Pages 97- 101. I strongly disagree with proposals in this section saying that ORVs will be prohibited year round between ramps 27 and 30, at Hatteras Inlet (Hatteras Spit), Ocracoke Inlet (North Ocracoke Spit) and various other locations. Not allowing ORV access is paramount to denying the public access to these beaches. They are located miles from the nearest parking or paved road area and too far to access on foot. As a matter of course, there has been no breeding of piping plover or other endangered species at the Hatteras Island Inlet (spit) area in the past 6 years. 17) Page 104: I disagree with the proposed night time driving closures. Per your proposals, night driving will be prohibited between May 1 and November 15th, forcing visitors off of the beaches early in the evening and preventing sunrise surf fishermen access in the morning. I propose a more moderate night time ban if one is needed, perhaps from June 1 ? September 15 with times being 1 hour after sunset and 1 hour before sunrise to allow beach goers to gather their stuff and exit the beach area. Certainly more proactive measures such as relocating nests prone to weather and ocean events would dramatically increase the nesting success rates. 18) Page 121: I disagree with the proposed beach closings, including pedestrian access from March 15 until July 31 in 8 different beach locations which have traditionally been available. Please leave these areas open to beach walkers, shell collectors and those that want to access the beaches in these areas. Conclusion: Please, incorporate access corridors through any SMA so we can get to the open beach beyond. Incorporate the birds into the count that nest on the spoil islands. Base your buffer zones on peer reviewed science and scale them back to more reasonable distances as discussed. It is neither logical nor reasonable to spend so much time, money and energy to overprotect a bird (Piping Plover) in the Cape Hatteras National Seashore that is on the southernmost fringe area of its breeding ground. That goes for the loggerhead turtle that is in its northernmost breeding area. Let's scale back the buffer zones. You can always increase at a later date. The USPS is leaning way over the line on over protection and not enough on the public's right to enjoy the beaches of the National Seashore. A context sensitive solution that finds a balance between all users of the beach and national park is not achieved in the proposed DEIS and needs to be modified so that the proper balance of reasonable resource protection and access to the beaches of the National Park is achieved. I could sum it up by saying "Protect, not Prohibit." Thank you, Jon Obenberger

Congress set aside a recreatioal area[thus the name Cape Hatteras National Seashore Recreational Area] for the use and enjoyment for the AMERICAN people long before many of us were born. Why is it that a few people feel they can take away from many of us something that our elected officials gave us? As a man and woman nearing retirement and not able to move around like we use to we,our family,have long enjoyed the beaches of Hatteras Island and the fact that we can drive on them has made alot more enjoyable and easier especially when my mother and father want to take a trip out on the beach. Not long ago we had four generations out on the beach ages from their 80's to 4 again the fact that we could drive out to our favorite spot made so much more enjoyable. Last year I had a hard time explaining to our 3 year old grandchild why the Park Ranger told us to leave the beach he was closing it! Our family does not live on Hatteras Island nor do we own property there WE vacation there,WE spend our hard earned money there,WE enjoy it there, something that has been in our little heritage for as long as I can remember. We respect the beach,it's rules,it's cleanliness,it's bird's,it's fellow users,it's Rangers always have and instill into our children and grandchildren. I HOPE and PRAY that our family can enjoy what we have enjoyed for many more years to come. It will be a very sad day in AMERICA when a very small precentage of people take away from the rest of us what CONGRESS gave to people of this country to enjoy! PLEASE leave Cape Hatteras National Seashore Recreational Area to the PEOPLE as CONGRESS intended it to be. THANK YOU for your time

Correspondence: My comments concern the DEIS of the Off-Road Vehicle Management Plan prepared by the National Park Service (NPS) for the Cape Hatteras National Seashore Recreation Area.

1) Page 201: I disagree with the NPS statement: "Even with resource closures in place, protected species are still at risk [from pedestrians and ORVs]." No Piping Plover deaths have been attributed to ORVs. ORV violations continue to decrease as signage and education improve. Pedestrian violations are much more significant than ORV violations. It seems to me that any transgressions into protected area are the result of lack of NPS manpower and enforcement than the public purposely and willfully violating out of bounds areas. 2) Page xxiv: I question the statement of as per the DEIS: "Carrying capacity would be a 'peak use limit' determined for all areas based on the linear feet of beachfront?" If you close off huge sections of the beach, you force more people into smaller areas, potentially resulting in more resource impairment and diminished visitor experience.

3) Page xix and page 23: I am against having two different closures rules pertaining to the North facing beaches (North side) and the South facing beaches (South side) as per the grid outlined in Alternative "F". I disagree with the NPS proposal to close the beaches in villages of Frisco, Hatteras and Ocracoke Villages to ORV access longer than the traditional May 15 to September 15 period for the Northern beaches, even though seasonal visitor statistics are similar for all villages. Please, make them the same: May 15 -> September 15. 4) Page 1: I agree with your statement "ORVs have long served as a primary form of access for many portions of the beach in the seashore, and continue to be the most practical means of access and parking for many visitors."

However, pedestrian only areas discriminate against individuals with limited mobility due to age or physical impairments, families with small children, and those wishing to engage in activities requiring recreational equipment (boogie boards, beach umbrellas, beach chairs, coolers, fishing rods and tackle, etc) 5) Page 53: I disagree with the special use permit proposed guidelines. It is impractical to allow the transportation of disabled visitors to the village beaches and then require the vehicle to be returned to the street or parking area. This necessitates the disabled person to have a driver to drop him (or her) off, then drive to a parking area, then trudge a long distance to the site of the drop off, then trudge the long distance through the sand back to get the vehicle. Suppose the handicap person wants to go to the beach, is capable of driving himself, yet cannot find another person to go with him? Does he now not go to the beach? This rule creates unnecessary hardships and risks in the event of an emergency as well. 6) Page 121 ? 127. I strongly disagree with the buffers as presented. We must allow for pass-thru corridors. The beach is linear with the ocean buffering on one side and the dune line on the other. For example - If you pinch off access on one side of a 4 mile linear beach and pinch off access on the other side of the 4 mile section of beach with no corridor, then you effectively have closed off all 4 miles of the beach because you CAN'T get there. The proposed bird buffers are too large, blocking access to the interior sections from the two "buffered" ends. I propose ORV pass-thru only corridors and to use breeding / nesting buffer distances to establish ORV pass through only corridors to ensure beach access in a way that does not hinder resource protection. I believe pass through corridors should be maintained for pedestrians and ORVs in all areas of the Cape Hatteras National Seashore Recreation Area throughout the entire breeding and nesting season. Corridors are vital to providing access in a way that does not hinder resource protection. Piping Plover unfledged chicks buffer should move with the brood as it relocates to reliable food source, not expanded. Correspondence: Dear Superintendent Murray, Please accept this letter as my comment on the ORV DEIS before you at this time. After reviewing the National Park Service DEIS I must disagree with any of the six alternatives within the document. I have reviewed the 77 page Coalition for Beach Access Position Statement signed by several groups that were a part of the negotiated rule making process and it by far succeeds in furnishing the best visitor experience while maintaining the needs of protecting the fragile resources. Please consider all aspects of this alternative and put people back into the management of Cape Hatteras National Seashore. Sincerely, Rodney B. Auwarter

Correspondence: Mike Murray, Superintendent Cape Hatteras National Seashore Recreational Area 1401 National Park Drive Manteo, NC 27954 Dear Superintendent Murray,
Please accept this letter as my comment on the ORV DEIS before you at this time. I have been a frequent visitor to the Cape Hatteras Nation Seashore Recreational Area for the past 54 years and a property owner and part time resident of the seashore village of Frisco for the past 20 years. My husband and I were married in 1960 and spent our honeymoon in Buxton, North Carolina on the Seashore. I raised my three daughters to respect and honor the Seasore and the National Park Service. My daughter Anne Marie was a seasonal employee of the National Park Service for 6 years. My daughter Beth, is married into an established Island family whose genealogy can be traced back in Hatteras history for over 3 centuries. My five grandsons and one great grandchild are residents and their individual family incomes are dependent on the Island's economy. My husband and I have a vested interest in protecting the future of Hatteras Island as a whole; our property, our friends?.the people who live here, access to the seashore and the beaches, the natural surroundings, wildlife, sea life, and all that makes this island special.
After reviewing the National Park Service DEIS I must disagree with any of the six alternatives within the document. I have, however, reviewed the 77 page Coalition for Beach Access Position Statement signed by several groups that were a part of the negotiated rule making process and it by far succeeds in furnishing the best visitor experience while maintaining the needs of protecting the fragile resources. I believe that a reasonable and realistic approach into the management of CHNSRA will allow adequate protection of wildlife while maintaining a balance and necessary access to our beaches and seashore. As a visitor and part time resident I have benn both a host of this beautiful island and a welcome visitor. It has been my belief and experience that together we all share an interest and an obligation in preserving and protecting access to this land and the seashore for our families now. In turn, generations to come will be able to enjoy all that the Cape Hatteras National Seashore Recreational Area has to offer, both now and in the future.
Please consider all aspects of this alternative and put people back into the management of Cape Hatteras National Seashore Recreational Area (CHNSRA).
Thank you for your consideration of this very important issue.
Respectfully,
Mary Jane Todd, Salisbury, Maryland.

Correspondence: Socioeconimc Analysis:
(pages 270 - 281, 561 - 698)
I disagree that the Northern Beaches should be included in this analysis as they are not connected or affected by the impacts on the economy.
I disagree with the analyses used in surveys conducted as they were not done in 2009 and those visitors may have been unaware of the impacts on the Island and the research.
I disagree that the survey and analysis compiled understates the econmic impact on the Island.
Pet/Horses Restrictions - p. 136: I disagree that pets should be restricted from the beaches. Pets are on leashes and controlled by their owners. I can say that all of the people who come to visit here plan their trips (sometimes a year or two ahead) for enjoyment and conservation. They are very concerned about the Island since most of them come here year after year to enjoy the beauty and to bring along their pets. If people cannot bring their pets to the Island or the residents cannot walk their dog on the beach, there would be an extreme drop in visitation with an extreme impact on the local economy here. People who own horses and ride on the beach are very aware of their surroundings and guid their horses. They should be allowed on the beach.

Correspondence: I disagree with your prohibition of leashed dogs and pedestrians, neither one has anything to do with beach driving. The status of a dog in most of the families who include them is usually high. Many times they take the place of lost loved ones or grown children. To exclude them is unreasonable. For God's sake, even New Jersey has dog beaches where they are permitted to be off the leash. The only reason I can see for a new prohibition of leashed dogs is just pure meanness on the part of the NPS. I have used the word prohibition with purpose. It took over 100 years for a small group of people to turn prohibition into law. The majority did not want it. That amendment created crime where there had been none, millions were spent on enforcement, jobs were lost and otherwise good people became criminals. It took 13 years for common sense to prevail and repeal the Volstead Act. Nothing was gained, much was lost. Those who do not learn the lessons of history are destined to repeat its mistakes.

Correspondence: I have read the ORV management plan/environmental impact study and would agree with the NPS that Plan F would limit ORV and pedestrian traffic during sensitive breeding periods and allow for ORV and pedestrian traffic for longer periods than the other plans A-E. Plan F appears to be a good compromise. I have personally enjoyed 50 years of outer banks experiences from camping as a toddler and being eaten by swarms of mosquitos to proposing to my wife on the tailgate of my ORV watching the sun come up. The Outer Banks is such a great natural resource and it has taught me to be an environmentalist through access.

Correspondence: As an avid angler on the North Carolina seashore, I am strongly opposed to the National Park Service (NPS) preferred alternative, Alternative F, in the DEIS and urge you to make significant changes to the preferred alternative in order to provide both reasonable resource protection and reasonable public access to public land. Recreational fishing is one of the most enjoyable American pastimes, and Cape Hatteras National Seashore has some of the best surf fishing locations on the east coast ? accessible only by ORV.
Alternative F is the most restrictive management option to date, far exceeding any sense of balance between resource protection and public access and betraying all promises made to the public regarding recreational uses in the seashore. The majority of the provisions included within the preferred alternative far exceed anything proposed by a majority of the Negotiated Rulemaking Committee, including excessively large resource closures (buffers), unnecessary year-round and floating closures, and the lack of access corridors around or through resource closures.
In order to restore balance to the DEIS, I highly recommend that the NPS revisit the proposal put forth to the Negotiated Rulemaking Committee in

0012770

December of 2009. It provides the necessary protections for wildlife resources while having the support of a majority of the local community. Without reasonable ORV access, responsible anglers like me, and the local economy that is supported by recreational fishing, suffer greatly. I urge you to provide a better balance between resource protection and recreational uses by incorporating the December 2009 recommendations from the Negotiated Rulemaking Committee into the preferred alternative.

Correspondence:	Please return to the old plan that kept beaches open for recreation with unnecessary closures. I remember when people coexisted with nature that is what I loved about Hatteras Island before I moved here. I watched as small closures became permanent closures and the areas that I frequented with my young children are now lost to the next generation of humans. The birds will not nest there as the natural (and unnatural) vegetations has overgrown the area. The closures are not a result of science and do nothing to preserve nature. The economic impact on the Island is disturbing especially since the land was given to the Government for recreation. File these comments as you wish but understand that my family supports FREE AND OPEN ACCESS TO OUR BEACHES.

our park is unreasonable, economically detrimental and will change the footprints of our local history forever. CHNS offers a unique combination of profound surfing opportunities that cannot be found anywhere else in our world, in addition, beach access is "the" not "a" reason that we have towns, communities and livelihoods built on the island. Without twenty four hour access to the beaches, Hatteras Island will suffer immeasurable consequences. The question we continue to ask ourselves is, when did a bird or any animal have more rights than people. I have fished recreationally and professionally for most of my life on the Outer Banks and depend on tourism, it is difficult for me to imagine that I and the people of our communities will be dictated by the well being of birds, turtles, seashore animals ect. considering how advanced we've become and the abilities offered to protect these animals without interfering with our way of life and those around the world who share alike . Scientifically, we are capable of finding innovative ways to save animals not at the cost of our communities. This is an unnecessary and foolish act of extreme environmental recklessness, seemingly cult - like behavior and unfortunately this has gone this far. We should act responsibly towards conservation, as we understand that if we dont care for nature and its resources it will not care for us. Environmental special interest groups should not manage our paychecks or our resources to live the "American Dream".

Correspondence: General Comment:
I disagree with most of the findings in the DEIS concerning bird and turtle disturbances, driving on the beach, walking on the beach, and allowing pets and Horses on the Beach.
I have lived here since the 1970s owning several businesses and raising a family. We have always respected the beaches and have been environmnetally conscientious. It has been a wonderful place to raise my daughters.
If further restrictions are put on the beach as stated in the impact statement, they will severely affect the many people who live here and who own businesses.

Correspondence: The Cape Hatteras National Seashore is designated as a recreational use area. Wildlife, including birds that are NOT on the endangered list what so ever, do not hold legal representation. Closing of the seashore on Hatteras island will be detremental to almost everyone who lives there. And you will be held accountable for the loss of not only jobs and livelihood, but land, businesses and and years of lineage on the outer banks.

Correspondence: The NPS must formulate a plan that is consistent with the legislation establishing Cape Hatteras National Seashore Recreation Area. The enabling legislation for the Recreational Area states, in part, "said area shall be, and is, established, dedicated, and set apart as a national seashore recreational area for the benefit and enjoyment of the people and shall be known as the Cape Hatteras National Seashore Recreational Area". Therefore, it is important to balance resource protection with reasonable access for recreation.

0012772

Corridors are a vital tool in providing access while managing resources. They provide a small path around temporary resource closures in order to provide access to open areas that would otherwise be blocked. Corridors should be permitted throughout the seashore during the entire breeding and nesting season including ML-1 portions of SMAs. These corridors would provide valuable access without impairment or damage to protected resources. Buffers, or closures, are important management practices for species recovery. However, to have long term benefit for the wildlife and the visiting public, buffers must be based on peer-reviewed science. For example, the Piping Plover, a species classified as threatened and not endangered, is given a level of unprecedented protection in Alternative F. A 1,000-meter buffer in all directions represents over 771 acres. The DEIS does not cite any peer-reviewed science in supporting such closure. A more appropriate & effective buffer would be 200 meters. Birds that are not listed as endangered should not be afforded the level of protection given to ESA (Endangered Species Act) protected species. Instead of 300-meter buffers for these birds, a more appropriate buffer would be 30 meters. Also, all birds in the same ecosystem of the seashore should be counted. This includes all the many birds on the dredge and spoil islands located just yards away and within sight of the seashore. The National Park Service should consider turtle management practices successfully used in other federal and state areas to achieve nesting success. More proactive measures include relocating nests to more desirable locations, which is routinely and successfully done in other areas. Thanks for taking the time to read my comments.

Correspondence: I strongly disagree with all of the proposed alternatives, especially the preferred Alternative F. The most fair and reasonable solution is to revert back to the interim management plan that was in place before the court-ordered fiasco began. The interim plan represented a workable and effective solution that came out of fair and due process by participants acting in good faith. This last attempt to reach a workable plan has been anything but fair and reasonable given the agenda and efforts of many of the participants, many of whom have no interest in the fairness of the process or the well being of the residents of Hatteras Island or its hundreds of thousands of visitors each year. The Park Service should just simply complete the job they failed to do many years ago by finalizing the previous interim plan. Had they done so at the time when they should have, all of this would have been avoided. The residents and visitors to Hatteras Island should not have to pay the price for the Park Service's failure to do their job properly when the interim plan was first created.
If you are unwilling to correct your past misdeed, then at least establish a plan that is better balanced with respect to pedestrian and ORV use. I reference here all the flaws and lack of accurate and objective science that has been well documented regarding the current proposals. As additional comment: 1> 1000 foot perimeters are excessive and unreasonably restrictive 2> Protecting species not on the Endangered Species List in this way is overstepping your authority and adding to the undue burden caused by the closures. 3> It is wrong that you will try to forcibly create a safe environment for the special birds by removing or killing thousands of their natural predators and blocking off 1000 meters while not being willing to relocate turtle nests to avoid closures, particularly when relocation will often save them from natural perils as well. How does this make sense? I have personally witnessed successful hatches of sea turtle nests on Topsail Beach that had been relocated and roped off in about a 20 foot diameter safe zone. It was a great experience as a visitor and perfectly safe for the turtles as well, real proof it can be done more reasonably than you are proposing. 4> I do not understand how there can be such complete disregard for the economic impact of the proposed alternatives on the residents of Hatteras Island, Dare County and the state. The Park Service took over management of the island many years ago with a commitment to the people that they would always have access for their recreation and livelihood. Now you are turning your back on them without even considering the true impact because of outside interests who's livelihoods have no stake in this and many of whom have never even visited the island and likely never will.
I implore you to step out from under all the trees of special interest and look at the whole forest. I think you have lost sight of practical reason. Finalize and file the previous interim plan that had long been in place and lets put the ugliness of the past few years behind us.
Thank you for listening and giving consideration to my comments. I hope you will make the right decision for all of us.
God Bless!

Correspondence: Pages 97- 101. I strongly disagree with proposals in this section saying that ORVs will be prohibited year round between ramps 27 and 30, at Hatteras Inlet (Hatteras Spit), Ocracoke Inlet (North Ocracoke Spit) and various other locations. Not allowing ORV access is paramount to denying the public access to these beaches. They are located miles from the nearest parking or paved road area and too far to access on foot. As a matter of course, there has been no breeding of piping plover or other endangered species at the Hatteras Island Inlet (spit) area in the past 6 years.

Correspondence: Superintendent, Cape Hatteras National Seashore Recreational Area:

It is a real travesty when another SIG (Special Interest Group) can deprive so many hardworking people their rights established by congress. In this case Congress established Cape Hatteras National Seashore Recreational Area for the people to enjoy. If the SIGs prevail the beach access will be restricted causing more business and homes to go into foreclosure resulting in less tax revenue for Federal, State and Local government.

Vacationers who visit our little place of peace and relaxation on earth have already had fireworks banned and are now forced to buy a fishing license to cast their line into the ocean in hopes of catching a memory. Now Beach Access restriction and not allowing mans best friend to tag along.

Here is another recent example of a SIG bullying our local leaders. Watching the local government meetings on television. It was an outrage when I saw the leaders in one of our communities forced to stop having a prayer before their meetings. It was decided the community would not be able to spend the taxpayer's money to fight a lawsuit when there are so many other expenses needing attention. I am not a very religious person, but I do believe in the power of prayer. It can help when making the difficult decisions our leaders face.

I do have faith there are still people with good judgment and common sense in this world. It is very difficult to watch as the SIGs suppress them. The SIGs have companies, organizations and people sending them money when the donators do not have all the facts. Please do not let this happen in this case. Allow the vacationers and the fine people who call this area home to continue to enjoy the beaches without restrictions.

Reading different articles on the Piping Plovers it seems the use of "enclosures" is an effective way of notifying people where the birds are nesting and keeping the predators away. If one of the nests are found in a heavy traffic area and it is in emanate danger; move it as in the case of a Hurricane. No need to close the beach and grant the bird so much real estate. Post signs within a reasonable limit of the nests so everyone with binoculars can observe natures beauty if they like. If someone is caught doing intentional harm to any of the wildlife on our beaches they should be prosecuted. The majority of the visitors and residents would never do anything to harm the wild life. Please keep this in perspective when expanding the area after someone runs over a sign. It was probably a vacationer who felt that was his or her way to protest, not knowing the repercussions. Also I believe that the birds have plenty of land and resources for their nesting in our beautiful habitat known as Pea Island. So why close all of the humans beaches also for them when they even have their own Beach.

It sure would be interesting to see what our founding fathers, past leaders and Veterans who fought for the people's rights would be thinking about this. The world and our human rights have been going to the birds since 9-11, please do the right thing and don't allow the masses to be bullied by the SIGs. God Bless America! And may you enjoy peaceful walks on her beaches with your best friend or be awestruck by the awesome beauty of the sun rising next to your fishing pole. Stay real and don't allow the SIGs to bully you.

Correspondence:

After watching this for the past years I feel as though we are being pushed out by an undermanned NPS and they are using birds that are not endangered to do so. An example is here from Hampton roads newspaper.

By Catherine Kozak The Virginian-Pilot) May 9, 2010 Numerous shorebirds in Cape Hatteras National Seashore are given higher levels of protection in a proposed off-road vehicle management plan than what the law ever intended the birds to have, a state wildlife official said.

State-listed "species of concern," - such as the American oystercatcher - do not require the extensive buffers and beach closures mandated for federally listed species such as the piping plover, said Gordon Myers, the executive director of the North Carolina Wildlife Resources Commission.

Myers said that's beyond the intent of the state law; the state designation is supposed to be more of a call to action for a species.

The Wildlife Resource Commission, he said, will voice its objections to the use of state "species of concern" lists to trigger ORV management strategies under the federal Endangered Species Act.

"That is of concern to us because it's apples and oranges," he said. "To treat it as synonymous with threatened and endangered is not congruent."

The piping plover is the only seashore bird species protected under the act.

In a letter about the 810- page draft plan sent to park Superintendent Mike Murray on Tuesday, state Sen. Pro Tempore Marc Basnight of Manteo and state Rep. Timothy Spear of Creswell also questioned the 1,000-meter buffers required in all directions around an unfledged piping plover chick.

"We have yet to read any scientific reasoning behind this management strategy," the legislators wrote, adding that a more reasonable buffer would be 200 meters.

The National Audubon Society and the Defenders of Wildlife are involved in a court-sanctioned consent decree that will regulate beach driving until the final management plan goes into effect next year.

In a March statement, the groups supported an alternative that would close more beach to ORVs, while improving access for pedestrians.

"The Park Service's preferred alternative allows driving on 52 of the 68 miles of the seashore, and that doesn't strike us as a balanced response," said Jason Rylander, attorney for Defenders of Wildlife.

The groups have not submitted their comments, he said on Friday.

Rylander said the Park Service has many competing mandates that require protection of the species, including the Migratory Bird Treaty Act.

"It's not just an endangered species issue," he said.

Of all the proposals in the document, the size of the buffers has been a top complaint from beach-driving proponents. The resource closures can be so large that, in some cases, they may block access to open beach for not only ORVs but also for beachcombers, surfers, horseback riders, anglers and swimmers.

Basnight and Spear support Dare County's request to establish corridors around closures so public access to open beaches can be maintained, and to decrease buffers for non threatened species from 300 meters to 30 meters.

Resources commission director Myers said the Park Service has always looked at numerous factors in determining its resource protection needs, including state lists. But until the draft plan stated - on page 419 - that the agency was managing state-listed species similarly to federally listed species, its policy had never been in black and white, he said. Catherine Kozak This along with the poor science used to establish the boundaries set aside for these no-endangered birds. These boundaries combined with the short term and long term target numbers are ridiculous. The fact that one pair of birds gets more protection than the president of the united states is hilarious and unfounded in peer reviewed science.

I also wanted to state that the NPS is supposed to use the whole name of te park in official documents b government mandate (Cape Hatteras National Seashore Recreational Area). This leads me to also say that the NPS is incorrect in stating that the name was only in reference to Hunting and bears no meaning to this situation. What is the truth is that Cape Hatteras National Seashore Recreational Area was originally intended to be a recreational area with Pea Island being a Refuge for wildlife. If you look into what it takes to be a recreational area you will see that Cape Hatteras National Seashore Recreational Area fits the bill perfectly.

People have only seen Piping Plovers on this island for 30 years or so and yet when we wanted the NPS to consider using an ORV to Access Recreation in Cape Hatteras National Seashore Recreational Area we were told that 50 years does not make a case for this. These birds as far as anyone knows did not exist before the first sighting 30 years ago. The Concent Decree that was signed by all parties did not include the full name for the seashore and therefore should not be included into the management and this also goes for the DEIS.

I want to make clear to all who read this that 99% of the people who drive on the beaches of Cape Hatteras do so to get to the recreation and not to recreate. By eliminating the ability to drive out on the beach now eliminates a need for me to bring my children down to Cape Hatteras National Seashore Recreational Area. This is due to the fact that at a moment's notice access to the entire seashore can be shut down if any one of a dozen NON-ENDANGERED birds were to show breeding behavior at all access points. Basically with roughly 119,000 meters of beach open to access it would only take 119 plover nests and the NPS has basically shut down any reason to visit the seashore as there would be nothing to do or see except the inside of the rental house you paid thousands of dollars for.

The economic studies are screwy also as they include areas not affected by the beach closures in Nagshead and kittyhawk. They also fail to mention the tax increase that skews the numbers.

Originally the park wanted to prevent any and all development in the areas of Okracoke, Buxton, and Hatteras villages. Well that is an example we cannot get all of what you want. Another example of the everwise NPS is that they once considered Nagsheads preventing ORV's on the beach as forshit!!! Lets see is this what we can expect from the future managing of the seashore? Broken Promises! We the access groups look forward to

0012774

working with the NPS in the protection of the NON-ENDANGERED species of Cape Hatteras. Or we can just Sue like the Environmentalist did to get our way.

SAVE OUR RIGHT TO ACCESS THE NATIONAL PARK SYSTEM WE BOTH PAY FOR AND ENJOY.

Correspondence:	Protecting wildlife should be the number one goal of the National Seashore. There are lots of places in North Carolina where people can fish and enjoy the beach. There are very few wild places left along our coast where species may thrive away from the influences of people and their vehicles. It is vital that we maintain this refuge in as pristine a state as possible to preserve the wildlife that is unique to and dependent upon our Outer Banks. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan- are minimums and should be increased if necessary to protect breeding birds and sea turtles. My son's Cub Scout den is currently studying wild bird flyways and migratory patterns. It's obvious to ten year old's how important our Seashore is to migrating birds. Not only should the plan incorporate standards to maintain the levels of all bird and turtle populations that depend on the area, the plan should have specific and measurable goals to increase those population to something close to historical levels. I'd really hate to have to explain to my grandchildren that the turtles and the birds that my children have been fortunate enough to see aren't around any more because some people decided taking SUVs out on empty beaches was more important than protecting the natural heritage that God has blessed our state with. I'd like to be able to tell them to thank you for your foresight in making sure that the National Seashore they enjoy is even better than the one we enjoy today.

Correspondence:	I would like to submit that the last "plan", if it can be called that , was a failure due to the variables with-in the plan itself. The new plan should respect the right of all people to use the beach access areas. The right of the people against the use of ORV's on the beach is no more sacrosanct than those to whom the right to drive on the beach is undeniably cherished. Furthermore, total beach closure for the extremely limited use of a nesting bird is a nonetheless totally bird-brained solution. The nests aren't in the the tidal zone that is accessable to both ORV's and humans during most of the day. That the nesting birds should be "protected" is arguable, given the predators and natural calamities inherent in the areas they chose to make their nests. That being said, they COULD, and probably should, be afforded some protection during some of the more challenging periods of their nesting cycles. Total beach closure not to be considered as one of these options. There are avenues of passage outside of the nesting areas for both ORV's and humans that would have zero impact on the nesting birds. The new plan should give avenues of passage for both ORV's and humans, in a well defined, and easily indentified corridor. A distance of 50-75 ft, 2 or 3 truck lengths, 1/2 the distance from the water to the dune or some other easily identified measurement from the mean water mark would provide an adequate buffer for the nesting birds, yet allow all citizens unfettered access to the beach they have every right to enjoy.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
I have worked in areas where ORV's are allowed and I believe that ORV users need strict regulations in order to protect wildlife, particularly in delicate habitats.
I agree with the list of information below and I hope that you will take this message hardily. The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Correspondence:	Mike Murray, I'm writing you in regard to the DEIS plan. I can't fathom how anyone in their right mind would agree to this. It is excessive for a few birds and turtles. There is NO need for the large area of closures. I can get closer to the President of the United States than a plover. Not that I want to get near to either one! I think things are heading to the extreme and we the people of Hatteras Island are going to become extinct! I love this place and the folks that visit us love it because it's unique. There's no other place like it! It has the best surf fishing and surfing around. For most it's a tradition,a family tradition! Families, with their dogs, come here to drive on the beach, surf or fish, cookout have a bonfire and enjoy the stars! They can't do that with the plan you may put forth. NO DOGS! Dogs are a part of the family, if they aren't welcomed on our beaches, the people will not come. NO BONFIRES! Again, bonfires are a time of friendship & family-time. It's a time for storytelling and learning and enjoying one's company. There won't be any of that either in your new plan. We need a place people can come and enjoy. Get away from the busy world as we know it. I'm afraid if the plan goes through, no one will want to come to Hatteras Island and enjoy our Park! People will loose their business, jobs, homes, etc...It's happening now, it will just get worse. Don't let the extremists win..Don't loose the FAMILY TRADITIONS! Thank You, Kristie Brown

Correspondence:	As a property owner on Hatteras Island I object to the proposed ORV Management Plan because it does not provide proper access to the beaches. Many homeowners, including myself are already struggling to hang onto their rental property. Without renter access to the beaches and the right to bring their dogs onto the beach, I expect I will lose so much rental income that I will lose my two houses there. Please do not adopt any of these plans.

Correspondence:	Thank you for allowing me the opportunity to comment on the Draft Cape Hatteras National Seashore Off-Road Vehicle Management Plan / Environmental Impact Statement (DEIS). I am a resident of Hatteras Island and reside in the village of Avon. Although I am not a native to the island, my husband, his mother, and two brothers have lived here since 1966. Since that time, their spouses, children, and grandchildren now call Cape Hatteras home. I fell in love with Cape Hatteras National Seashore Recreational Area the first time I saw it ? in the years since I have learned how deeply intertwined both the lives and livelihoods of the residents are to the preservation and access to this Recreational Area. It is my understanding that of the six Alternative Plans considered in the DEIS, Alternative "F" is the preferred option of the National Park Service. I would like to express my support for either of the two no-action Alternatives ? A or B in lieu of the more restrictive Alternative F. I disagree with the recommendation to prohibit pedestrian access from March 15 through July 31 in 8 beach locations (p.121). Whatever brings visitors to our island, be it fishing, swimming, shelling, bird /wildlife watching, or a variety of water sports that draws vacationers to our shores ? limiting their beach access will directly impact the desirability of the Cape Hatteras National Seashore and Recreational Area as a vacation destination. I disagree with the recommendation to restrict pets (including dogs on leashes) on Cape Hatteras National Seashore public lands for the period between March 15 and July 31 (p.136). This covers the island's peak vacation season ? and in addition to residents, many of our visitors like to bring their pets with them on their beach vacations. This restriction may prompt families with pets to choose an alternative vacation location ? again, having a significant impact on not only the vacation rental industry that is so vital to our island, but the many restaurants and small businesses that rely on tourism dollars throughout the year ? particularly during "peak season" (which is impacted by this restriction.) I disagree with the stated socio-economic impact (p.270-286, 561-598) and believe that it is an inaccurate reflection of the devastating impact this						

preferred Alternative would have on the economy, lives, and livelihood of not only the residents of Hatteras Island, but Dare County, and the state of North Carolina as a whole. Our County makes a substantial financial contribution to the state of North Carolina through tax dollars. Loss of tax revenue through decreased property values, lost tourism dollars, and businesses in Dare County would create a ripple effect that will be felt across the entire state.

I agree with and understand the need for reasonable and responsible management and restrictions. However, I believe the regulations and restrictions set forth in Alternative "F" go beyond what is necessary to preserve and protect the Cape Hatteras National Seashore and Recreational Area. I am fully aware of the necessary balance between nature and man. I hope that my husband and I, our children, and grandchildren will be allowed to continue to enjoy this beautiful island as it was originally set aside ? while working to preserve and protect the environment under a less restrictive Alternative. Thank you for allowing me to comment on this vital issue.

Stephanie Bowers Avon, North Carolina

Correspondence:	Over a number of decades my wife and I have enjoyed surf fishing and other recreational activities along the Outer Banks. We also enjoy travel in general, as well as nature and wildlife. During our 39 years of marriage we have observed a general decline in people's respect for authority and for one another. Alongside this trend we have also seen a rising willingness of some to deplete our resources, and this has resulted in serious damage to our environment. While we recognize and respect the long history of people's access to coastal areas, we also recognize an alarming sense of entitlement among many people to have and to do whatever they want, regardless of the effects of their actions. Because of these things, we believe that Alternative D is the best means to assure that nesting species along our coast be protected. We believe that in the absence of permanent restrictions for the greatest period of the year, many people will seek to shrink the periods and areas of protection by advocating this result, as well as by actively disregarding the restrictions.

Correspondence:	I moved to NC 22 years ago. My daughter was a student @ UNCW and we fell in love with the beaches in NC. I was and still am a still AVID surf fisherman and the opportunity to fish the NC beaches was and still is a great opportunity. Matter of fact am leaving tomorrow for a week @ Ocracoke fishing with 2 buddies. I cannot imagine NOT having access to these pristine beaches. I for one can say that I ALWAYS leave the beach with more things than when I entered. I am dismayed that these beaches are not going to be available to my grandchildren and theirs as well in the future.				

0012779

I believe that the majority of people who use these beaches are true "keepers of the beach" and will continue to be.
DO NOT close access to these beaches as they are really loved by all the people who regularly use them and take care of them.
Steve Morrison

Correspondence: As an avid angler on the North Carolina seashore, I am strongly opposed to the National Park Service (NPS) preferred alternative, Alternative F, in the DEIS and urge you to make significant changes to the preferred alternative in order to provide both reasonable resource protection and reasonable public access to public land. Recreational fishing is one of the most enjoyable American pastimes, and Cape Hatteras National Seashore has some of the best surf fishing locations on the east coast ? accessible only by ORV.
Alternative F is the most restrictive management option to date, far exceeding any sense of balance between resource protection and public access and betraying all promises made to the public regarding recreational uses in the seashore. The majority of the provisions included within the preferred alternative far exceed anything proposed by a majority of the Negotiated Rulemaking Committee, including excessively large resource closures (buffers), unnecessary year-round and floating closures, and the lack of access corridors around or through resource closures.
In order to restore balance to the DEIS, I highly recommend that the NPS revisit the proposal put forth to the Negotiated Rulemaking Committee in December of 2009. It provides the necessary protections for wildlife resources while having the support of a majority of the local community. Without reasonable ORV access, responsible anglers like me, and the local economy that is supported by recreational fishing, suffer greatly. I urge you to provide a better balance between resource protection and recreational uses by incorporating the December 2009 recommendations from the Negotiated Rulemaking Committee into the preferred alternative.

Correspondence: I have not read the entire proposal, has I have just learned about this possibility. I will be going back to read the proposal in it's entirety. As far as banning street legal motorcycles from the beaches in question would be a bias violation of the law. If the committee wants to protect the natural resources, like I imagine they do, banning a vehicle with a small foot print and that generally ride in the ruts of other vehicles or the wet sand, I feel that the committee should reevaluate what they are proposing.
If the concern is for the safety of those visiting, I can only say that what I have seen as the biggest violators of safety, are the 4 wheel vehicles that are driving in excessive speeds between the shore line and the guests enjoying the beach.
I enjoy the beach every time that I go and am hoping I can still take my street legal, dual sport motorcycle, as well as my money.
I understand that there are those who ride motorcycles in an unsafe manner, and for those, I apologize from the rest of the motorcycling communities. The majority of the responsible motorcyclist should not have to suffer for the irresponsible actions of the few that make it hard for the rest of us.
With the highest regards,
Tyler Holmes Raleigh, NC

Correspondence: I am sad that what has become a tradition of recreation for my family is coming to an end. I have spent my leisure time and raised my two sons surf fishing at the inlets and the cape point of Hatteras national recreational saeside park. It is more than a sport, it is an obsession. I hope the science and reasons behind taking away a way of life for my family are sound, but I have severe rational doubts. The pleasure and fun I have had fishing at these excellent fishing spots is impossible to measure. The good times and shared stories of these adventures with family and friends are soon to end and I must find something else in life to fill the void no longer being able to have these experiences will leave in my life. I do not understand the reasoning behind these decisions, but must pay the price of them. I am filled with loss and regrets. It is a sad time for myself and my family. May you find the strength to do the right thing and preserve access to these wonderful places for the future.

Richard Friend

Correspondence:	<p>Dear Superintendent Murray,</p> <p>Please accept this letter as my comment on the ORV DEIS before you at this time.</p> <p>After trying to review the 800+ page National Park Service DEIS I must disagree with any of the six alternatives within the document. This is the strictest management of the beach ever and I'm pretty disgusted at how this plan is just bypassing the historic lifestyle and culture of the National Seashore and the totally does not care about the economic issues it will create for the area. I'm 32 years old. My wife and dog went to the beach 22 days in less than 3 months for drum fishing. We drive from Winchester VA and stay on the beach for 4-5 day stents, camping at local campgrounds. We spend an easy \$500 a trip not including gas. This is spent at all the local tackle shops, food stores, hotels, convenience stores, groceries, etc? We stay on the beach most of the night fishing for big drum and we have met some of the best people in the world. Fishing brings out the best in people and we plan on retiring in Hatteras Village when we are ready. We are in the stages of family planning and honestly, it makes me want to cry when I think that my son or daughter will never experience the culture, people, attitude and wilderness that I've come to love with every ounce of my blood. This whole debate is not about the birds. It is about clearing out the beaches of trucks. Why would you go along w/ this? There is all of Pea Island which is a preserve and tons of barrier islands that house massive flocks of birds. For some reason this land is being taken away from the standard American person w/ standard American dreams. I've had enough. Honestly, you want to take away bringing our dog on the beach!? You have gone too far. I have, however, reviewed the 77 page Coalition for Beach Access Position Statement signed by several groups that were a part of the negotiated rule making process and it by far succeeds in furnishing the best visitor experience while maintaining the needs of protecting the fragile resources. Please consider all aspects of this alternative and put people back into the management of Cape Hatteras National Seashore.</p>

Correspondence: My comments concern the DEIS of the Off-Road Vehicle Management Plan prepared by the National Park Service (NPS) for the Cape Hatteras National Seashore Recreation Area.

- 1) Page 201: I disagree with the NPS statement: "Even with resource closures in place, protected species are still at risk [from pedestrians and ORVs]." No Piping Plover deaths have been attributed to ORVs. ORV violations continue to decrease as signage and education improve. Pedestrian violations are much more significant than ORV violations. It seems to me that any transgressions into protected area are the result of lack of NPS manpower and enforcement than the public purposely and willfully violating out of bounds areas.
- 2) Page xxiv: I question the statement of as per the DEIS: "Carrying capacity would be a 'peak use limit' determined for all areas based on the linear feet of beachfront?" If you close off huge sections of the beach, you force more people into smaller areas, potentially resulting in more resource impairment and diminished visitor experience.
- 3) Page xix and page 23: I am against having two different closures rules pertaining to the North facing beaches (North side) and the South facing beaches (South side) as per the grid outlined in Alternative "F". I disagree with the NPS proposal to close the beaches in villages of Frisco, Hatteras and Ocracoke Villages to ORV access longer than the traditional May 15 to September 15 period for the Northern beaches, even though seasonal visitor statistics are similar for all villages. Please, make them the same: May 15 -> September 15.
- 4) Page 1: I agree with your statement "ORVs have long served as a primary form of access for many portions of the beach in the seashore, and continue to be the most practical means of access and parking for many visitors."
However, pedestrian only areas discriminate against individuals with limited mobility due to age or physical impairments, families with small children, and those wishing to engage in activities requiring recreational equipment (boogie boards, beach umbrellas, beach chairs, coolers, fishing rods and tackle, etc)
- 5) Page 53: I disagree with the special use permit proposed guidelines. It is impractical to allow the transportation of disabled visitors to the village beaches and then require the vehicle to be returned to the street or parking area. This necessitates the disabled person to have a driver to drop him (or her) off, then drive to a parking area, then trudge a long distance to the site of the drop off, then trudge the long distance through the sand back to get the vehicle.
Suppose the handicap person wants to go to the beach, is capable of driving himself, yet cannot find another person to go with him? Does he now not go to the beach? This rule creates unnecessary hardships and risks in the event of an emergency as well.
- 6) Page 121 ? 127. I strongly disagree with the buffers as presented. We must allow for pass-thru corridors. The beach is linear with the ocean buffering on one side and the dune line on the other. For example - If you pinch off access on one side of a 4 mile linear beach and pinch off access on the other side of the 4 mile section of beach with no corridor, then you effectively have closed off all 4 miles of the beach because you CAN'T get there. The proposed bird buffers are too large, blocking access to the interior sections from the two "buffered" ends.
I propose ORV pass-thru only corridors and to use breeding / nesting buffer distances to establish ORV pass through only corridors to ensure beach access in a way that does not hinder resource protection. I believe pass through corridors should be maintained for pedestrians and ORVs in all areas of the Cape Hatteras National Seashore Recreational Area throughout the entire breeding and nesting season. Corridors are vital to providing access in a way that does not hinder resource protection.
Piping Plover unfledged chicks buffer should move with the brood as it relocates to reliable food source, not expanded.
The 1,000 meter distance for the piping plover is way too large and not based upon peer reviewed science. A more rational distance would be 200 meters per other sites in the nation for the piping plover. Ample scientific evidence and precedent exists to support a 200 meter buffer.
Buffers for other species, including American Oystercatchers, Least Terns and Colonial Waterbirds must also be changed. An effective 30 meter buffer should be established for these species rather than the 300 meter closure outlined in the DEIS.
NON-ENDANGERED BIRDS should not have same protection as if endangered. Not allowing ORV access is paramount to denying the public access to these beaches.
- 7) Page 468: I disagree with the limitations imposed on pedestrian and ORVs. Corridors or bypasses should be provided thru, around or below high tide line in all SMAs during entire breeding season to maintain access.
- 8) Page 124: I strongly disagree with the NPS slant of providing for over protection of resource management over that of the public's right to access the beaches. Pro-active initiatives include: Vegetation Management, Habitat Management, Enhanced Predator Management, Colonial Water bird social attraction, Piping Plover check fledge rate, Piping plover chick buffer distance, and pass-through buffers during the incubation period. Opportunities to implement less restrictive closures as a result of the above initiatives should be considered more frequently than the 5-year periodic review process identified in the DEIS.
- 9) I disagree with the NPS Resource Management Pedestrian / ORV Closure Policies. These policies address the least significant factors affecting nest survival with little chance to have more than negligible impact. For example: the AMOY Nest Failures are predominately due to non-human events. Using your own stats, the mammalian predation is 54%, Storm / Lunar Tides: 29%, Nest Abandonment: 6%, Avian Predation: 5%, and Ghost Crab Predation: 3%,
So what is the percentage due to human interference: just 3%! It's insignificant, yet the NPS wants to ban humans when their actions provide very little influence on the success rate of breeding birds and turtles.
- 10) I disagree with the stats of breeding plovers and the other birds in the Park when the NPS does not adequately consider locations neighboring the Recreational Area that are part of the same ecosystem, namely dredge and spoil island that are located just yards away and within sight of the seashore. These birds are part of the same ecosystem and should be included.
Those spoil islands, developed by man from dredging the waterways in the Pamlico Sound for channel upkeep are slammed full of birds. The reason why so many birds? NO PREDATORS. SO, birds are not as stupid as one might think. You have to count these birds and incorporate them in the stats when the NPS is talking about any so called decline in breeding pairs in the National Park.
- 11) Page 1: I do not think the DEIS responsibly addresses the cultural resource issues. The very purpose of the DEIS as set forth in the National Environmental Policy Act (NEPA) is to protect and preserve natural and cultural resources in the federal decision making process. In the DEIS, the statement "protect and preserve natural and cultural resources" appears in the first sentence of the first page of the plan, in the Purpose of the Plan section, and numerous times thereafter. Yet, the 810 page document devotes only two paragraphs to analysis of cultural resource issues.
- 12) Pages 270-281; 561-598: I strongly disagree with your economic analysis of the impact of the DEIS. The region of influence (ROI) incorporates the Northern Beach communities, including Kill Devil Hills, Kitty Hawk, Southern Shores and Duck. These areas are almost completely disconnected from ORV use and access issues relating to the Seashore. ? Inclusion of the Northern Beaches in analysis significantly dilutes estimates of economic impact on the 8 Seashore Villages
? Analysis of economic impact to the Seashore Villages appears to be significantly down played. Emphasis in DEIS is on the ROI-wide or county-wide level impacts.
? Nowhere is it clearly addressed that the overwhelming majority of negative impacts will be felt by small businesses in the Seashore Villages rather than by overall economic interests within the greater ROI.
On page xlvi, Alternative F is characterized as having a "negligible to moderate" adverse impact on small businesses. I strongly disagree with this statement.
I believe the negligible to moderate projection is inaccurate and relies on economic surveys that has not yet been published. Furthermore, this material is not expected to be added to the DEIS until after the public comment period has ended.
Based upon the economic harm we have already experienced under the consent decree, Dare County projects the economic impact of Alternative F to be substantial.
Beach closures have already had a devastating and unfair impact on many Dare County Businesses, causing foreclosures, bankruptcies, lay-offs, cutbacks, expensive refinancing, and depleted college funds and savings accounts.
Pages 270-286, 561-598: The socio-economic data and analyses are incomplete and erroneous and result in an understatement of the effect the restrictions will have upon the Island, the region and the state of NC. The US Park Services answer: Businesses will have to "adapt" to the new rules. (p.383) The negative economic impacts of the decree ARE KNOWN, so to say that the added restrictions would have negligible to moderate impact is indefensible.
- 13) Overall Visitor Counts - Overall visitor counts appear to include visitors to Fort Raleigh National Historic Site and the Wright Brothers National Memorial. A large percentage of these visitors vacation in the Northern Beaches communities and recreate on the non-federal beaches outside of the Seashore. Visitors who patronize the Fort Raleigh National Historic Site and the Wright Brothers National Memorial but do not visit the actual seashore

areas need to be factored out.

Maintenance of Future Access to Cape Point and South Point Ocracoke: All socioeconomic analyses related to Alternative F are predicated on the assumption that access corridors will remain open for at least an appreciable portion of the visitor high season. Under Alternative F, the access corridors will be subject to Resource Closures based on buffers similar or identical to the Consent Decree. Unless some predictability of access to Cape Point and South Point Ocracoke can be assured, economic analyses predicated on assumption of access are fundamentally flawed.

Why would a group of surf fisherman want to come to Hatteras Island to surf fish if they are not sure they can access the prime fishing grounds at Cape Point? The answer is they won't come. If they don't come, they don't rent vacation homes and spend their money on Hatteras and Ocracoke Islands.

The definition of the Region of Influence (ROI), faulty data on economic activity generated by specific type recreational activity, incomplete visitation/business survey data, inflated overall Seashore visitor counts pertaining to beach use, and flawed key assumptions concerning the maintenance of access under Alternative F, all lead to inaccurate conclusions in the socioeconomic analyses. Specifically, these inaccuracies can be seen as understating the negative socio-economic impact of the Seashore Villages. Further, this negative impact will be absorbed almost entirely by Small Businesses. Neither of these important aspects of the management alternatives are adequately presented in the DEIS.

14) Page 136: I strongly disagree with your pet restriction proposals. The "prohibition of pets in the Seashore during bird breeding season including in front of the villages." = No Pets in public areas ?beaches, campgrounds, soundfront, foot trails, park maintained roads -from March 15 ?July 31.

15) Pages 125; 392 ? 396; SEA TURTLES. I disagree with the stats and procedures proposed. I think endangered sea turtles would benefit from management practices now in use at other federal seashores that are more proactive in efforts to achieve nesting success. This includes relocating nests to more desirable locations as is done in other state and federally controlled areas.

The Cape Hatteras National Seashore Recreational Area is on the northernmost fringe of turtle nesting locations for the southeast, accounting for about 1% of all turtle nests. Proposed buffer areas are not needed for protection of the turtles and amount to overprotection.

16) Pages 97- 101. I strongly disagree with proposals in this section saying that ORVs will be prohibited year round between ramps 27 and 30, at Hatteras Inlet (Hatteras Spit), Ocracoke Inlet (North Ocracoke Spit) and various other locations.

Not allowing ORV access is paramount to denying the public access to these beaches. They are located miles from the nearest parking or paved road area and too far to access on foot. As a matter of course, there has been no breeding of piping plover or other endangered species at the Hatteras Island Inlet (spit) area in the past 6 years.

17) Page 104: I disagree with the proposed night time driving closures. Per your proposals, night driving will be prohibited between May 1 and November 15th, forcing visitors off of the beaches early in the evening and preventing sunrise surf fishermen access in the morning. I propose a more moderate night time ban if one is needed, perhaps from June 1 ? September 15 with times being 1 hour after sunset and 1 hour before sunrise to allow beach goers to gather their stuff and exit the beach area.

Certainly more proactive measures such as relocating nests prone to weather and ocean events would dramatically increase the nesting success rates.

18) Page 121: I disagree with the proposed beach closings, including pedestrian access from March 15 until July 31 in 8 different beach locations which have traditionally been available. Please leave these areas open to beach walkers, shell collectors and those that want to access the beaches in these areas.

Conclusion:

Please, incorporate access corridors through any SMA so we can get to the open beach beyond. Incorporate the birds into the count that nest on the spoil islands. Base your buffer zones on peer reviewed science and scale them back to more reasonable distances as discussed.

It is neither logical nor reasonable to spend so much time, money and energy to overprotect a bird (Piping Plover) in the Cape Hatteras National Seashore that is on the southernmost fringe area of its breeding ground. That goes for the loggerhead turtle that is in its northernmost breeding area. Let's scale back the buffer zones. You can always increase at a later date.

The USPS is leaning way over the line on over protection and not enough on the public's right to enjoy the beaches of the National Seashore. The proper balance is not achieved in the propose DEIS and needs to be modified so that the proper balance of reasonable resource protection and access to the beaches of the National Park is achieved. I could sum it up by saying "Protect, not Prohibit."

Thank you, Micheal Howeton

Correspondence: As an avid angler on the North Carolina seashore, I am strongly opposed to the National Park Service (NPS) preferred alternative, Alternative F, in the DEIS and urge you to make significant changes to the preferred alternative in order to provide both reasonable resource protection and reasonable public access to public land. Recreational fishing is one of the most enjoyable American pastimes, and Cape Hatteras National Seashore has some of the best surf fishing locations on the east coast ? accessible only by ORV.
Alternative F is the most restrictive management option to date, far exceeding any sense of balance between resource protection and public access and betraying all promises made to the public regarding recreational uses in the seashore. The majority of the provisions included within the preferred alternative far exceed anything proposed by a majority of the Negotiated Rulemaking Committee, including excessively large resource closures (buffers), unnecessary year-round and floating closures, and the lack of access corridors around or through resource closures.
In order to restore balance to the DEIS, I highly recommend that the NPS revisit the proposal put forth to the Negotiated Rulemaking Committee in December of 2009. It provides the necessary protections for wildlife resources while having the support of a majority of the local community. Without reasonable ORV access, responsible anglers like me, and the local economy that is supported by recreational fishing, suffer greatly. I urge you to provide a better balance between resource protection and recreational uses by incorporating the December 2009 recommendations from the Negotiated Rulemaking Committee into the preferred alternative.

Correspondence: My comments concern the DEIS of the Off-Road Vehicle Management Plan prepared by the National Park Service (NPS) for the Cape Hatteras National Seashore Recreation Area.

1) Page 201: I disagree with the NPS statement: "Even with resource closures in place, protected species are still at risk [from pedestrians and ORVs]." No Piping Plover deaths have been attributed to ORVs. ORV violations continue to decrease as signage and education improve. Pedestrian violations are much more significant than ORV violations. It seems to me that any transgressions into protected area are the result of lack of NPS manpower and enforcement than the public purposely and willfully violating out of bounds areas.

2) Page xxiv: I question the statement of as per the DEIS: "Carrying capacity would be a 'peak use limit' determined for all areas based on the linear feet of beachfront?" If you close off huge sections of the beach, you force more people into smaller areas, potentially resulting in more resource impairment and diminished visitor experience.

3) Page xix and page 23: I am against having two different closures rules pertaining to the North facing beaches (North side) and the South facing beaches (South side) as per the grid outlined in Alternative "F". I disagree with the NPS proposal to close the beaches in villages of Frisco, Hatteras and Ocracoke Villages to ORV access longer than the traditional May 15 to September 15 period for the Northern beaches, even though seasonal visitor statistics are similar for all villages. Please, make them the same: May 15 -> September 15.

4) Page 1: I agree with your statement "ORVs have long served as a primary form of access for many portions of the beach in the seashore, and continue to be the most practical means of access and parking for many visitors."

However, pedestrian only areas discriminate against individuals with limited mobility due to age or physical impairments, families with small children, and those wishing to engage in activities requiring recreational equipment (boogie boards, beach umbrellas, beach chairs, coolers, fishing rods and tackle, etc)

5) Page 53: I disagree with the special use permit proposed guidelines. It is impractical to allow the transportation of disabled visitors to the village beaches and then require the vehicle to be returned to the street or parking area. This necessitates the disabled person to have a driver to drop him (or her) off, then drive to a parking area, then trudge a long distance to the site of the drop off, then trudge the long distance through the sand back to get the vehicle.

Suppose the handicap person wants to go to the beach, is capable of driving himself, yet cannot find another person to go with him? Does he now not go to the beach? This rule creates unnecessary hardships and risks in the event of an emergency as well.

6) Page 121 ? 127. I strongly disagree with the buffers as presented. We must allow for pass-thru corridors. The beach is linear with the ocean buffering on one side and the dune line on the other. For example - If you pinch off access on one side of a 4 mile linear beach and pinch off access on the other side of the 4 mile section of beach with no corridor, then you effectively have closed off all 4 miles of the beach because you CAN'T get there. The proposed bird buffers are too large, blocking access to the interior sections from the two "buffered" ends.

I propose ORV pass-thru only corridors and to use breeding / nesting buffer distances to establish ORV pass through only corridors to ensure beach access in a way that does not hinder resource protection. I believe pass through corridors should be maintained for pedestrians and ORVs in all areas of the Cape Hatteras National Seashore Recreation Area throughout the entire breeding and nesting season. Corridors are vital to providing access in a way that does not hinder resource protection.

Piping Plover unfledged chicks buffer should move with the brood as it relocates to reliable food source, not expanded.

The 1,000 meter distance for the piping plover is way too large and not based upon peer reviewed science. A more rational distance would be 200 meters per other sites in the nation for the piping plover. Ample scientific evidence and precedent exists to support a 200 meter buffer.

Buffers for other species, including American Oystercatchers, Least Terns and Colonial Waterbirds must also be changed. An effective 30 meter buffer should be established for these species rather than the 300 meter closure outlined in the DEIS.

NON-ENDANGERED BIRDS should not have same protection as if endangered. Not allowing ORV access is paramount to denying the public access to these beaches.

7) Page 468: I disagree with the limitations imposed on pedestrian and ORVs. Corridors or bypasses should be provided thru, around or below high tide line in all SMAs during entire breeding season to maintain access.

8) Page 124: I strongly disagree with the NPS slant of providing for over protection of resource management over that of the public's right to access the beaches. Pro-active initiatives include: Vegetation Management, Habitat Management, Enhanced Predator Management, Colonial Water bird social attraction, Piping Plover check fledge rate, Piping plover chick buffer distance, and pass-through buffers during the incubation period. Opportunities to implement less restrictive closures as a result of the above initiatives should be considered more frequently than the 5-year periodic review process identified in the DEIS.

9) I disagree with the NPS Resource Management Pedestrian / ORV Closure Policies. These policies address the least significant factors affecting nest survival with little chance to have more than negligible impact. For example: the AMOY Nest Failures are predominately due to non-human events. Using your own stats, the mammalian predation is 54%, Storm / Lunar Tides: 29%, Nest Abandonment: 6%, Avian Predation: 5%, and Ghost Crab Predation: 3%,

So what is the percentage due to human interference: just 3%! It's insignificant, yet the NPS wants to ban humans when their actions provide very little influence on the success rate of breeding birds and turtles.

10) I disagree with the stats of breeding plovers and the other birds in the Park when the NPS does not adequately consider locations neighboring the Recreational Area that are part of the same ecosystem, namely dredge and spoil island that are located just yards away and within sight of the seashore. These birds are part of the same ecosystem and should be included.

Those spoil islands, developed by man from dredging the waterways in the Pamlico Sound for channel upkeep are slammed full of birds. The reason why so many birds? NO PREDATORS. SO, birds are not as stupid as one might think. You have to count these birds and incorporate them in the stats when the NPS is talking about any so called decline in breeding pairs in the National Park.

11) Page 1: I do not think the DEIS responsibly addresses the cultural resource issues. The very purpose of the DEIS as set forth in the National Environmental Policy Act (NEPA) is to protect and preserve natural and cultural resources in the federal decision making process. In the DEIS, the statement "protect and preserve natural and cultural resources" appears in the first sentence of the first page of the plan, in the Purpose of the Plan section, and numerous times thereafter. Yet, the 810 page document devotes only two paragraphs to analysis of cultural resource issues.

12) Pages 270-281; 561-598: I strongly disagree with your economic analysis of the impact of the DEIS. The region of influence (ROI) incorporates the Northern Beach communities, including Kill Devil Hills, Kitty Hawk, Southern Shores and Duck. These areas are almost completely disconnected from ORV use and access issues relating to the Seashore. ? Inclusion of the Northern Beaches in analysis significantly dilutes estimates of economic impact on the 8 Seashore Villages

? Analysis of economic impact to the Seashore Villages appears to be significantly down played. Emphasis in DEIS is on the ROI-wide or county-wide level impacts.

? Nowhere is it clearly addressed that the overwhelming majority of negative impacts will be felt by small businesses in the Seashore Villages rather than by overall economic interests within the greater ROI.

On page xlvi, Alternative F is characterized as having a "negligible to moderate" adverse impact on small businesses. I strongly disagree with this statement.

I believe the negligible to moderate projection is inaccurate and relies on economic surveys that has not yet been published. Furthermore, this material is not expected to be added to the DEIS until after the public comment period has ended.

Based upon the economic harm we have already experienced under the consent decree, Dare County projects the economic impact of Alternative F to be substantial.

Beach closures have already had a devastating and unfair impact on many Dare County Businesses, causing foreclosures, bankruptcies, lay-offs, cutbacks, expensive refinancing, and depleted college funds and savings accounts.

Pages 270-286, 561-598: The socio-economic data and analyses are incomplete and erroneous and result in an understatement of the effect the restrictions will have upon the Island, the region and the state of NC. The US Park Services answer: Businesses will have to "adapt" to the new rules.

(p.383) The negative economic impacts of the decree ARE KNOWN, so to say that the added restrictions would have negligible to moderate impact is

indefensible.

13) Overall Visitor Counts - Overall visitor counts appear to include visitors to Fort Raleigh National Historic Site and the Wright Brothers National Memorial. A large percentage of these visitors vacation in the Northern Beaches communities and recreate on the non-federal beaches outside of the Seashore. Visitors who patronize the Fort Raleigh National Historic Site and the Wright Brothers National Memorial but do not visit the actual seashore areas need to be factored out.

SO, birds are not as stupid as one might think. You have to count these birds and incorporate them in the stats when the NPS is talking about any so called decline in breeding pairs in the National Park.

11) Page 1: I do not think the DEIS responsibly addresses the cultural resource issues. The very purpose of the DEIS as set forth in the National Environmental Policy Act (NEPA) is to protect and preserve natural and cultural resources in the federal decision making process. In the DEIS, the statement "protect and preserve natural and cultural resources" appears in the first sentence of the first page of the plan, in the Purpose of the Plan section, and numerous times thereafter. Yet, the 810 page document devotes only two paragraphs to analysis of cultural resource issues.

12) Pages 270-281; 561-598: I strongly disagree with your economic analysis of the impact of the DEIS. The region of influence (ROI) incorporates the Northern Beach communities, including Kill Devil Hills, Kitty Hawk, Southern Shores and Duck. These areas are almost completely disconnected from ORV use and access issues relating to the Seashore. ? Inclusion of the Northern Beaches in analysis significantly dilutes estimates of economic impact on the 8 Seashore Villages

? Analysis of economic impact to the Seashore Villages appears to be significantly down played. Emphasis in DEIS is on the ROI-wide or county-wide level impacts.

? Nowhere is it clearly addressed that the overwhelming majority of negative impacts will be felt by small businesses in the Seashore Villages rather than by overall economic interests within the greater ROI.

On page xlvi, Alternative F is characterized as having a "negligible to moderate" adverse impact on small businesses. I strongly disagree with this statement.

I believe the negligible to moderate projection is inaccurate and relies on economic surveys that has not yet been published. Furthermore, this material is not expected to be added to the DEIS until after the public comment period has ended.

Based upon the economic harm we have already experienced under the consent decree, Dare County projects the economic impact of Alternative F to be substantial.

Beach closures have already had a devastating and unfair impact on many Dare County Businesses, causing foreclosures, bankruptcies, lay-offs, cutbacks, expensive refinancing, and depleted college funds and savings accounts.

Pages 270-286, 561-598: The socio-economic data and analyses are incomplete and erroneous and result in an understatement of the effect the restrictions will have upon the Island, the region and the state of NC. The US Park Services answer: Businesses will have to "adapt" to the new rules.

(p.383) The negative economic impacts of the decree ARE KNOWN, so to say that the added restrictions would have negligible to moderate impact is indefensible.

13) Overall Visitor Counts - Overall visitor counts appear to include visitors to Fort Raleigh National Historic Site and the Wright Brothers National Memorial. A large percentage of these visitors vacation in the Northern Beaches communities and recreate on the non-federal beaches outside of the Seashore. Visitors who patronize the Fort Raleigh National Historic Site and the Wright Brothers National Memorial but do not visit the actual seashore areas need to be factored out.

Maintenance of Future Access to Cape Point and South Point Ocracoke: All socioeconomic analyses related to Alternative F are predicated on the assumption that access corridors will remain open for at least an appreciable portion of the visitor high season. Under Alternative F, the access corridors will be subject to Resource Closures based on buffers similar or identical to the Consent Decree. Unless some predictability of access to Cape Point and South Point Ocracoke can be assured, economic analyses predicated on assumption of access are fundamentally flawed.

Why would a group of surf fishermen want to come to Hatteras Island to surf fish if they are not sure they can access the prime fishing grounds at Cape Point? The answer is they won't come. If they don't come, they don't rent vacation homes and spend their money on Hatteras and Ocracoke Islands. The definition of the Region of Influence (ROI), faulty data on economic activity generated by specific type recreational activity, incomplete visitation/business survey data, inflated overall Seashore visitor counts pertaining to beach use, and flawed key assumptions concerning the maintenance of access under Alternative F, all lead to inaccurate conclusions in the socioeconomic analyses. Specifically, these inaccuracies can be seen as understating the negative socio-economic impact of the Seashore Villages. Further, this negative impact will be absorbed almost entirely by Small Businesses. Neither of these important aspects of the management alternatives are adequately presented in the DEIS.

14) Page 136: I strongly disagree with your pet restriction proposals. The "prohibition of pets in the Seashore during bird breeding season including in front of the villages." = No Pets in public areas ?beaches, campgrounds, soundfront, foot trails, park maintained roads -from March 15 ?July 31.

15) Pages 125; 392 ? 396: SEA TURTLES. I disagree with the stats and procedures proposed. I think endangered sea turtles would benefit from management practices now in use at other federal seashores that are more proactive in efforts to achieve nesting success. This includes relocating nests to more desirable locations as is done in other state and federally controlled areas.

The Cape Hatteras National Seashore Recreational Area is on the northernmost fringe of turtle nesting locations for the southeast, accounting for about 1% of all turtle nests. Proposed buffer areas are not needed for protection of the turtles and amount to overprotection.

16) Pages 97- 101. I strongly disagree with proposals in this section saying that ORVs will be prohibited year round between ramps 27 and 30, at Hatteras Inlet (Hatteras Spit), Ocracoke Inlet (North Ocracoke Spit) and various other locations.

Not allowing ORV access is paramount to denying the public access to these beaches. They are located miles from the nearest parking or paved road area and too far to access on foot. As a matter of course, there has been no breeding of piping plover or other endangered species at the Hatteras Island Inlet (spit) area in the past 6 years.

17) Page 104: I disagree with the proposed night time driving closures. Per your proposals, night driving will be prohibited between May 1 and November 15th, forcing visitors off of the beaches early in the evening and preventing sunrise surf fishermen access in the morning. I propose a more moderate night time ban if one is needed, perhaps from June 1 ? September 15 with times being 1 hour after sunset and 1 hour before sunrise to allow beach goers to gather their stuff and exit the beach area.

Certainly more proactive measures such as relocating nests prone to weather and ocean events would dramatically increase the nesting success rates.

18) Page 121: I disagree with the proposed beach closings, including pedestrian access from March 15 until July 31 in 8 different beach locations which have traditionally been available. Please leave these areas open to beach walkers, shell collectors and those that want to access the beaches in these areas.

Conclusion:

Please, incorporate access corridors through any SMA so we can get to the open beach beyond. Incorporate the birds into the count that nest on the spoil islands. Base your buffer zones on peer reviewed science and scale them back to more reasonable distances as discussed.

It is neither logical nor reasonable to spend so much time, money and energy to overprotect a bird (Piping Plover) in the Cape Hatteras National Seashore that is on the southernmost fringe area of its breeding ground. That goes for the loggerhead turtle that is in its northernmost breeding area.

Let's scale back the buffer zones. You can always increase at a later date.

The USPS is leaning way over the line on over protection and not enough on the public's right to enjoy the beaches of the National Seashore. The proper balance is not achieved in the propose DEIS and needs to be modified so that the proper balance of reasonable resource protection and access to the beaches of the National Park is achieved. I could sum it up by saying "Protect, not Prohibit."

Thank you, cory ramsey

Correspondence: As an avid angler on the North Carolina seashore, I am strongly opposed to the National Park Service (NPS) preferred alternative, Alternative F, in the DEIS and urge you to make significant changes to the preferred alternative in order to provide both reasonable resource protection and reasonable public access to public land. Recreational fishing is one of the most enjoyable American pastimes, and Cape Hatteras National Seashore has some of the best surf fishing locations on the east coast ? accessible only by ORV.
Alternative F is the most restrictive management option to date, far exceeding any sense of balance between resource protection and public access and betraying all promises made to the public regarding recreational uses in the seashore. The majority of the provisions included within the preferred alternative far exceed anything proposed by a majority of the Negotiated Rulemaking Committee, including excessively large resource closures (buffers), unnecessary year-round and floating closures, and the lack of access corridors around or through resource closures.
In order to restore balance to the DEIS, I highly recommend that the NPS revisit the proposal put forth to the Negotiated Rulemaking Committee in December of 2009. It provides the necessary protections for wildlife resources while having the support of a majority of the local community. Without reasonable ORV access, responsible anglers like me, and the local economy that is supported by recreational fishing, suffer greatly. I urge you to provide a better balance between resource protection and recreational uses by incorporating the December 2009 recommendations from the Negotiated Rulemaking Committee into the preferred alternative.

Correspondence: Superintendent, Cape Hatteras National Seashore Recreational Area:
 It is a real travesty when another SIG (Special Interest Group) can deprive so many hardworking people their rights established by congress. In this case Congress established Cape Hatteras National Seashore Recreational Area for the people to enjoy. If the SIGs prevail the beach access will be restricted causing more business and homes to go into foreclosure resulting in less tax revenue for Federal, State and Local government.
 Vacationers who visit our little place of peace and relaxation on earth have already had fireworks banned and are now forced to buy a fishing license to cast their line into the ocean in hopes of catching a memory. Now Beach Access restriction and not allowing mans best friend to tag along.
 Here is another recent example of a SIG bullying our local leaders. Watching the local government meetings on television. It was an outrage when I saw the leaders in one of our communities forced to stop having a prayer before their meetings. It was decided the community would not be able to spend the taxpayer's money to fight a lawsuit when there are so many other expenses needing attention. I am not a very religious person, but I do believe in the power of prayer. It can help when making the difficult decisions our leaders face.
 I do have faith there are still people with good judgment and common sense in this world. It is very difficult to watch as the SIGs suppress them. The SIGs have companies, organizations and people sending them money when the donators do not have all the facts. Please do not let this happen in this case. Allow the vacationers and the fine people who call this area home to continue to enjoy the beaches without restrictions.
 Reading different articles on the Piping Plovers it seems the use of "enclosures" is an effective way of notifying people where the birds are nesting and keeping the predators away. If one of the nests are found in a heavy traffic area and it is in emanate danger; move it as in the case of a Hurricane. No need to close the beach and grant the bird so much real estate. Post signs within a reasonable limit of the nests so everyone with binoculars can observe natures beauty if they like. If someone is caught doing intentional harm to any of the wildlife on our beaches they should be prosecuted. The majority of the visitors and residents would never do anything to harm the wild life. Please keep this in perspective when expanding the area after someone runs over a sign. It was probably a vacationer who felt that was his or her way to protest, not knowing the repercussions. Also I believe that the birds have plenty of land and resources for their nesting in our beautiful habitat known as Pea Island. So why close all of the humans beaches also for them when they even have their own Beach.
 It sure would be interesting to see what our founding fathers, past leaders and Veterans who fought for the people's rights would be thinking about this. The world and our human rights have been going to the birds since 9-11, please do the right thing and don't allow the masses to be bullied by the SIGs. God Bless America! And may you enjoy peaceful walks on her beaches with your best friend or be awestruck by the awesome beauty of the sun rising next to your fishing pole. Stay real and don't allow the SIGs to bully you.

Correspondence: As a retired Va Tech Lecturer I spent 27 years reviewing research and find this document so flawed that I must come the the following conclusion. For the record, I would prefer the adoption of the Coalition for Beach Access Statement in lieu of any of the Draft EIS plans.
 I agree with Dr. Mike Berry's Comment that;
 "Responsible environmental management uses sound science and unbiased professional judgment that balances the human needs and rights of people with the needs to manage and sustain natural processes. The preferred proposal, Alternative F, fails to meet these criteria. Alternative F fails to recognize objective science, enabling legislation, citizen rights, historical uses, and past promises of access to their environment."

Correspondence: Ocracoke Civic and Business doesn't agree with what is proposed in Alt. F as that it has not used proven science and doesn't take into account the socio-economic issues that are required. Alt. F will bring an end to both the spring and fall beach fishing therefore putting an even greater strain on our

already stressed economy. The areas that are proposed to be closed and their dates is unjustified and will have no measurable benefit to the birds and turtles it is supposed to protect.

North Point of Ocracoke will be closed down completely to ORV's year round except .25 miles north and south of Ramp 59. Pg. 100 Alt F "new interdunal rd. established parallel to the beach extending from ramp 59 for .3 mile NE toward inlet, with parking at the terminus." Where is there room here for a road to be located? Also it states parking but doesn't say how many spots and what type of lot, there is no room for this either. This area contains a lot of wetlands, why destroy them when there is enough room for both birds, people and orv's to coexist. Why close down the North end of Ocracoke when there haven't been Piping Plover nests there? Pg. 200 chart states that not one Piping Plover nest since there was 1 in 1996 and only 4 chicks fledged in the last 18 years. Those numbers do not justify closing down one of our points to ORV's for the next approx. 15 years. The North Point of Ocracoke is currently growing and there is enough room for both birds, people and ORV's to use this valuable area. This area is both very important fishing, shelling, swimming, bird watching and family area to both Ocracoke and Hatteras islands. Many people staying in Hatteras get up early to catch the ferry and come to an uncrowded beach that they can enjoy.

Pg. 100 new ramps 62 to ramp 64 open to ORV's. This area has been closed for a safety closure for the past 25-30 years or more now under this plan NPS wants to open it up. Why is this? So it will look good on paper for NPS when they know that it won't be open or do they want to put the visiting public on an unsafe beach and close down area that have traditionally been open. I feel that yes if NPS is going to close down all of these areas we do need more open but why close them down if there is no need.

Pg. 100 ".5 mile SW of ramp 68 to 1.2 miles NE of ramp 70" has dates for ORV route Nov. 1st to Mar. 14th. These dates do not allow for any spring and fall fishing. Closing the beach from Mar. 15 to Oct. 31 would cause an economic hardship on the Ocracoke community as a whole. Most businesses open around the middle of March and close the 1st of November, fishermen sustain these businesses until there is enough other traffic from school being out for family vacations. This area is also a long way from the road and parking making it extremely difficult for fishermen, elderly people and families to be able to use this area without the benefit of an ORV. The dates of May 15th to Sept 14 non-ORV area would allow more use of this area while people are visiting here specifically to fish without affecting the wildlife.

Pg. 101 "1.2 miles NE of Ramp 70 to .5 mile NE of ramp 70" the dates for ORV area are Nov. 1st to Mar. 30, these dates also have the sme affect on the island economics as the paragraph above. The dates should also be changed to non-ORV area May 15th to Sept 14th. These shoulder months are crucial to the economic survival of our island and without them we will not be able to survive.

Pg 101 states ".5 mile SW of ramp 72 to inlet" is "3 miles" it is not 3 miles and has been grossly overstated. This area what is called South Point of Ocracoke is the most important fishing area on our whole beach. For NPS to make such an error in measure is hard to believe. The actual distance to South Point is 1.3 miles. How could NPS miss this by 1.7 miles. Pg. 101 states "there would be 1.0 mile of "floating" ocean shoreline area for nonbreeding shorebirds. Area would be bypassed via the ORV corridor on the upper beach during nonbreeding season." With only 1.3 miles of beach there is no room for a "floating" area. What happens when part of the South Point washes away like it has in the past? Does it then close off South Point? There are to many unknowns to such an important area to close it off. 95% of this area is already closed in breeding season and over 75% is closed in non-breeding season this is to both ORV's and pedestrians, is this not enough? Pg. 124 states "if resource protection staff determines that any single activity or collection of activities is negatively impacting shorebird use of specific location they NPS may implement additional restrictions on compatible activities." This area is extremely impt. to fishermen, shellers, families, etc. so if the fish are really biting in this 1.0 mile closure and there are a lot of fishermen will it be closed off. We cannot take this chance and this 1.0 mile "floating" area should be removed from Alt. F. There is enough room for both people, ORV's and bird to share.

The buffers used if Alt. F are far to excessive and are not based on sound science. 1000 meter buffer for an unfledged Piping Plover chick is equally to over 700 acres, this is unjust and unfair. American Oystercatchers are being treated as endangered eventhough they are not. Their buffer are closing off our beach when it is not required. Night driving should be allowed with a permit. Turtles have not been impacted by an educated public.

Our village is surrounded by Cape Hatteras National Seashore Recreational Area and everything that NPS does affects us that live in Ocracoke Village. We all have to work together to coexist on this ever changing island, withput an ORV plan that allows access to both our points and our beaches we will cease to exist

Allowing cars to drive on a beach is a bad idea for a number of reasons, but the first in my mind is that beaches are a great place for families to enjoy nature. When cars are present, however, it can easily become an unsafe environment for children. If the state of North Carolina intends to continue to attract tourists to their beaches they should consider the implications of those beaches becoming unsafe for families.

Correspondence:

Dear Sirs, I live on Cape Hatteras Island. I disagree with plan F of the Draft Environmental Impact statement. The off road management plan doesn't take into consideration the impact of shutting off the beaches to the people who live here. People have lived mostly in harmony with nature here for thousands of years. People vacation here to be closer to nature. I feel there should be an economic impact study to the off road plan. This park was established as a National Seashore Recreational area. People come here to walk, fish and drive on the beach. I also do not believe the buffer zones around a piping plover nest need to be as big as the Park Service has established. I do not believe people would intentially harm a bird nest. I think there can be corridors around these nests. There have never been any piping plover nests at Hatteras Point or Ocracokes northern end and yet the document calls for these beaches to be closed. The piping plover is not native to this area. The science that plan F comes from is flawed. Please do not listen to people that do not live here. This is a beautiful place. It will be destroyed by mans audacity to think they are in charge of where a bird will mate and nest. The Park Service is killing racoons, possums, muskrats, cats, and fox to try to protect a bird nest. Who will speak up for these animals? Please allow us to go back to the drawing board on this subject. The Park Service was doing a fine job in 2007 of roping off areas around bird and turtle nests and allowing ORV to go around them to historically favorite fishing spots. In the "Off Road Plan" there is no mention of the history or culture of the people who are native here. I feel that the plan should consider them.

Thank you for your time.
Angela Lofty

Correspondence: I am an avid surf fisherman and beach lover who enjoys recreational opportunities offered by the Cape Hatteras National Seashore and Recreational Area. I have been visiting this wonderful place since 1968. In the last decade my wife, our dogs and I have come down from Connecticut two to three times a year for week long vacations.
 Creating this Recreational Area was one of the greatest acts of the US Congress. People from all economic levels are able to enjoy this national treasure. The resource is enjoyed by people of all economic levels. From locals and day trippers to tourists and owners staying in accommodations ranging from tents to luxury mansions everyone is able to access this type of resource which would be private, commercial or a designated a wildlife refuge by now in other coastal areas.
 Reasonable and safe pedestrian and vehicular access to the beach is essential to participate and enjoy these resources and opportunities. I also support restrictions and conditions necessary to protect the birds, sea turtles, and other biota that are supported by scientific data and can make the Seashore home for part of the year. I believe the favored alternative (f) advanced by the NPS is more restrictive than necessary to meet protection of the Seashore. As a long term ORV user at CHNSRA I have observed and experienced the impacts and consequences of ORV management. From a long term beach users perspective, NPS did a decent job operating with the Interim Plan but by when the Consent Decree came into effect focus was lost on what the purpose of this Recreational Area is and why it was created. The Species Management Area concept is wrong. It is not the responsibility of the NPS to provide habitat beyond endangered species (Piping Plover and Sea Turtles). Attempting to manage the Seashore for birds listed by North Carolina as species of concern (Atlantic Skimmers etc.) is beyond the role of the NPS. If the NPS wants to get involved in bird species management it can be done by grooming inshore areas near Cape Point for bird habitat. This could be done similar to Pea Island. Closing these areas to the people and pets is a violation of the concept and purpose that created the CHNSRA.
 I have read and agree with the proposal to manage ORV's on the Seashore prepared and submitted for consideration by the Coalition for Beach Access. My position is that the NPS accept this alternative or at least postpone a final decision on the ORV Plan pending further review and negotiation on the counter points raised by the Coalition for Beach Access." Sincerely, John E Chamberlain Jr

Correspondence: My comments concern the DEIS of the Off-Road Vehicle Management Plan prepared by the National Park Service (NPS) for the Cape Hatteras National Seashore Recreation Area.
 1) Page 201: I disagree with the NPS statement: "Even with resource closures in place, protected species are still at risk [from pedestrians and ORVs]." No Piping Plover deaths have been attributed to ORVs. ORV violations continue to decrease as signage and education improve. Pedestrian violations are much more significant than ORV violations. It seems to me that any transgressions into protected area are the result of lack of NPS manpower and enforcement than the public purposely and willfully violating out of bounds areas.
 2) Page xxiv: I question the statement of as per the DEIS: "Carrying capacity would be a 'peak use limit' determined for all areas based on the linear feet of beachfront?" If you close off huge sections of the beach, you force more people into smaller areas, potentially resulting in more resource impairment and diminished visitor experience.
 3) Page xix and page 23: I am against having two different closures rules pertaining to the North facing beaches (North side) and the South facing beaches (South side) as per the grid outlined in Alternative "F". I disagree with the NPS proposal to close the beaches in villages of Frisco, Hatteras and Ocracoke Villages to ORV access longer than the traditional May 15 to September 15 period for the Northern beaches, even though seasonal visitor statistics are similar for all villages. Please, make them the same: May 15 -> September 15.
 4) Page 1: I agree with your statement "ORVs have long served as a primary form of access for many portions of the beach in the seashore, and continue to be the most practical means of access and parking for many visitors."
 However, pedestrian only areas discriminate against individuals with limited mobility due to age or physical impairments, families with small children, and those wishing to engage in activities requiring recreational equipment (boogie boards, beach umbrellas, beach chairs, coolers, fishing rods and tackle, etc)
 5) Page 53: I disagree with the special use permit proposed guidelines. It is impractical to allow the transportation of disabled visitors to the village beaches and then require the vehicle to be returned to the street or parking area. This necessitates the disabled person to have a driver to drop him (or her) off, then drive to a parking area, then trudge a long distance to the site of the drop off, then trudge the long distance through the sand back to get the vehicle.
 Suppose the handicap person wants to go to the beach, is capable of driving himself, yet cannot find another person to go with him? Does he now not go to the beach? This rule creates unnecessary hardships and risks in the event of an emergency as well.
 6) Page 121 ? 127. I strongly disagree with the buffers as presented. We must allow for pass-thru corridors. The beach is linear with the ocean buffering on one side and the dune line on the other. For example - If you pinch off access on one side of a 4 mile linear beach and pinch off access on the other side of the 4 mile section of beach with no corridor, then you effectively have closed off all 4 miles of the beach because you CAN'T get there. The proposed bird buffers are too large, blocking access to the interior sections from the two "buffered" ends.
 I propose ORV pass-thru only corridors and to use breeding / nesting buffer distances to establish ORV pass through only corridors to ensure beach access in a way that does not hinder resource protection. I believe pass through corridors should be maintained for pedestrians and ORVs in all areas of the Cape Hatteras National Seashore Recreational Area throughout the entire breeding and nesting season. Corridors are vital to providing access in a way that does not hinder resource protection.
 Piping Plover unfledged chicks buffer should move with the brood as it relocates to reliable food source, not expanded.
 The 1,000 meter distance for the piping plover is way too large and not based upon peer reviewed science. A more rational distance would be 200 meters per other sites in the nation for the piping plover. Ample scientific evidence and precedent exists to support a 200 meter buffer.
 Buffers for other species, including American Oystercatchers, Least Terns and Colonial Waterbirds must also be changed. An effective 30 meter buffer should be established for these species rather than the 300 meter closure outlined in the DEIS.
 NON-ENDANGERED BIRDS should not have same protection as if endangered. Not allowing ORV access is paramount to denying the public access to these beaches.
 7) Page 468: I disagree with the limitations imposed on pedestrian and ORVs. Corridors or bypasses should be provided thru, around or below high tide line in all SMAs during entire breeding season to maintain access.
 8) Page 124: I strongly disagree with the NPS slant of providing for over protection of resource management over that of the public's right to access the beaches. Pro-active initiatives include: Vegetation Management, Habitat Management, Enhanced Predator Management, Colonial Water bird social attraction, Piping Plover check fledge rate, Piping plover chick buffer distance, and pass-through buffers during the incubation period. Opportunities to implement less restrictive closures as a result of the above initiatives should be considered more frequently than the 5-year periodic review process identified in the DEIS.
 9) I disagree with the NPS Resource Management Pedestrian / ORV Closure Policies. These policies address the least significant factors affecting nest survival with little chance to have more than negligible impact. For example: the AMOY Nest Failures are predominately due to non-human events. Using your own stats, the mammalian predation is 54%, Storm / Lunar Tides: 29%, Nest Abandonment: 6%, Avian Predation: 5%, and Ghost Crab Predation: 3%,
 So what is the percentage due to human interference: just 3%! It's insignificant, yet the NPS wants to ban humans when their actions provide very little influence on the success rate of breeding birds and turtles.
 10) I disagree with the stats of breeding plovers and the other birds in the Park when the NPS does not adequately consider locations neighboring the

Recreational Area that are part of the same ecosystem, namely dredge and spoil island that are located just yards away and within sight of the seashore. These birds are part of the same ecosystem and should be included.

Those spoil islands, developed by man from dredging the waterways in the Pamlico Sound for channel upkeep are slammed full of birds. The reason why so many birds? NO PREDATORS. SO, birds are not as stupid as one might think. You have to count these birds and incorporate them in the stats when the NPS is talking about any so called decline in breeding pairs in the National Park.

11) Page 1: I do not think the DEIS responsibly addresses the cultural resource issues. The very purpose of the DEIS as set forth in the National Environmental Policy Act (NEPA) is to protect and preserve natural and cultural resources in the federal decision making process. In the DEIS, the statement "protect and preserve natural and cultural resources" appears in the first sentence of the first page of the plan, in the Purpose of the Plan section, and numerous times thereafter. Yet, the 810 page document devotes only two paragraphs to analysis of cultural resource issues.

12) Pages 270-281; 561-598: I strongly disagree with your economic analysis of the impact of the DEIS. The region of influence (ROI) incorporates the Northern Beach communities, including Kill Devil Hills, Kitty Hawk, Southern Shores and Duck. These areas are almost completely disconnected from ORV use and access issues relating to the Seashore. ? Inclusion of the Northern Beaches in analysis significantly dilutes estimates of economic impact on the 8 Seashore Villages

? Analysis of economic impact to the Seashore Villages appears to be significantly down played. Emphasis in DEIS is on the ROI-wide or county-wide level impacts.

? Nowhere is it clearly addressed that the overwhelming majority of negative impacts will be felt by small businesses in the Seashore Villages rather than by overall economic interests within the greater ROI.

On page xlvi, Alternative F is characterized as having a "negligible to moderate" adverse impact on small businesses. I strongly disagree with this statement.

I believe the negligible to moderate projection is inaccurate and relies on economic surveys that has not yet been published. Furthermore, this material is not expected to be added to the DEIS until after the public comment period has ended.

Based upon the economic harm we have already experienced under the consent decree, Dare County projects the economic impact of Alternative F to be substantial.

Beach closures have already had a devastating and unfair impact on many Dare County Businesses, causing foreclosures, bankruptcies, lay-offs, cutbacks, expensive refinancing, and depleted college funds and savings accounts.

Pages 270-286, 561-598: The socio-economic data and analyses are incomplete and erroneous and result in an understatement of the effect the restrictions will have upon the Island, the region and the state of NC. The US Park Services answer: Businesses will have to "adapt" to the new rules. (p.383) The negative economic impacts of the decree ARE KNOWN, so to say that the added restrictions would have negligible to moderate impact is indefensible.

13) Overall Visitor Counts - Overall visitor counts appear to include visitors to Fort Raleigh National Historic Site and the Wright Brothers National Memorial. A large percentage of these visitors vacation in the Northern Beaches communities and recreate on the non-federal beaches outside of the Seashore. Visitors who patronize the Fort Raleigh National Historic Site and the Wright Brothers National Memorial but do not visit the actual seashore areas need to be factored out.

Maintenance of Future Access to Cape Point and South Point Ocracoke: All socioeconomic analyses related to Alternative F are predicated on the assumption that access corridors will remain open for at least an appreciable portion of the visitor high season. Under Alternative F, the access corridors will be subject to Resource Closures based on buffers similar or identical to the Consent Decree. Unless some predictability of access to Cape Point and South Point Ocracoke can be assured, economic analyses predicated on assumption of access are fundamentally flawed.

Why would a group of surf fisherman want to come to Hatteras Island to surf fish if they are not sure they can access the prime fishing grounds at Cape Point? The answer is they won't come. If they don't come, they don't rent vacation homes and spend their money on Hatteras and Ocracoke Islands. The definition of the Region of Influence (ROI), faulty data on economic activity generated by specific type recreational activity, incomplete visitation/business survey data, inflated overall Seashore visitor counts pertaining to beach use, and flawed key assumptions concerning the maintenance of access under Alternative F, all lead to inaccurate conclusions in the socioeconomic analyses. Specifically, these inaccuracies can be seen as understating the negative socio-economic impact of the Seashore Villages. Further, this negative impact will be absorbed almost entirely by Small Businesses. Neither of these important aspects of the management alternatives are adequately presented in the DEIS.

14) Page 136: I strongly disagree with your pet restriction proposals. The "prohibition of pets in the Seashore during bird breeding season including in front of the villages." = No Pets in public areas ?beaches, campgrounds, soundfront, foot trails, park maintained roads -from March 15 ?July 31.

15) Pages 125; 392 ? 396: SEA TURTLES. I disagree with the stats and procedures proposed. I think endangered sea turtles would benefit from management practices now in use at other federal seashores that are more proactive in efforts to achieve nesting success. This includes relocating nests to more desirable locations as is done in other state and federally controlled areas.

The Cape Hatteras National Seashore Recreational Area is on the northernmost fringe of turtle nesting locations for the southeast, accounting for about 1% of all turtle nests. Proposed buffer areas are not needed for protection of the turtles and amount to overprotection.

16) Pages 97- 101. I strongly disagree with proposals in this section saying that ORVs will be prohibited year round between ramps 27 and 30, at Hatteras Inlet (Hatteras Spit), Ocracoke Inlet (North Ocracoke Spit) and various other locations.

Not allowing ORV access is paramount to denying the public access to these beaches. They are located miles from the nearest parking or paved road area and too far to access on foot. As a matter of course, there has been no breeding of piping plover or other endangered species at the Hatteras Island Inlet (spit) area in the past 6 years.

17) Page 104: I disagree with the proposed night time driving closures. Per your proposals, night driving will be prohibited between May 1 and November 15th, forcing visitors off of the beaches early in the evening and preventing sunrise surf fishermen access in the morning. I propose a more moderate night time ban if one is needed, perhaps from June 1 ? September 15 with times being 1 hour after sunset and 1 hour before sunrise to allow beach goers to gather their stuff and exit the beach area.

Certainly more proactive measures such as relocating nests prone to weather and ocean events would dramatically increase the nesting success rates.

18) Page 121: I disagree with the proposed beach closings, including pedestrian access from March 15 until July 31 in 8 different beach locations which have traditionally been available. Please leave these areas open to beach walkers, shell collectors and those that want to access the beaches in these areas.

Conclusion:

Please, incorporate access corridors through any SMA so we can get to the open beach beyond. Incorporate the birds into the count that nest on the spoil islands. Base your buffer zones on peer reviewed science and scale them back to more reasonable distances as discussed.

It is neither logical nor reasonable to spend so much time, money and energy to overprotect a bird (Piping Plover) in the Cape Hatteras National Seashore that is on the southernmost fringe area of its breeding ground. That goes for the loggerhead turtle that is in its northernmost breeding area. Let's scale back the buffer zones. You can always increase at a later date.

The USPS is leaning way over the line on over protection and not enough on the public's right to enjoy the beaches of the National Seashore. The proper balance is not achieved in the propose DEIS and needs to be modified so that the proper balance of reasonable resource protection and access to the beaches of the National Park is achieved. I could sum it up by saying "Protect, not Prohibit."

Thank you,

Good Evening, I am speaking in opposition of all options presented by the National Park Service and DEIS. While my wife and I have spent many wonderful summers basking in the sunlight and enjoying nature, there are some inherent inconsistencies in findings to support these newly formed laws. It is unfortunate that the view of the Outer Banks cannot not be larger to understand that lobbyist and activist are using their weak stature to create a

domino effect for future findings in their favor. I do not speak to say the beaches have been mismanaged or I have found the Park Rangers unsatisfactory, but that they are overwhelmed by the litigation and strength of the environmentalist's push. A simple opinion does not carry much clout so please see excerpts from experts in the field of study that is in question.

To begin the research, it is evident that Piping Plovers can succeed limitations. "Our observations and evidence indicate that adult Piping Plovers are capable of moving eggs and establishing nests at new sites during incubation. Furthermore, our results suggest that Piping Plovers evaluate their reproductive investment under potential threat of nest loss and may be capable of acting prospectively (moving nests prior to inundation) and reactively (regathering eggs after inundation) to avoid nest failure." - Mark T. Wiltermuth, Michael J. Anteau, Mark H. Sherfy, and Terry L. Shaffer. (2009) Nest Movement by Piping Plovers in Response to Changing Habitat Conditions. The Condor.

Further research shows that the issue in Piping Plover populations does not lie on the Atlantic Coast. "Complete population estimates for widely distributed species are rarely possible. However, for the third time in 10 years, an International Piping Plover (*Charadrius melodus*) Breeding and Winter Census was conducted throughout the species range in 2001. Nearly 1,400 participants from 32 U.S. states and Puerto Rico; 9 Canadian provinces; St. Pierre and Miquelon, France; Cuba; and the Bahamas visited 2,244 sites covering 11,836 km of shoreline habitat. During the winter census, 2,389 piping plovers were observed at 33.5% of potentially occupied sites (n = 352). Of these, 56.8% had ?10 birds present. The breeding census recorded 5,945 adults at 777 of 1,892 sites surveyed. More than 80% of sites with piping plovers present had ?10 birds. Results indicated an 8.4% increase from 1991 but only a 0.2% increase since 1996. Regional trends suggest that since 1991, number of breeding birds increased on the Atlantic Coast by 78% (2,920 birds; 12.4% increase since 1996) and by 80% in the Great Lakes (72 birds; 50% increase since 1996). However, plovers declined 15% (2,953 birds; 10% decline since 1996) in Prairie Canada/U.S. northern Great Plains. Subregional trends since 1991 reflect a 32.4% decline in Prairie Canada (972 birds; 42.4% decline since 1996), a 2.5% decline in the U.S. northern Great Plains (1,981 birds; 24% increase since 1996), 5.5% decline in eastern Canada (481 birds; 14% increase since 1996), although a 66.2% increase on the U.S. Atlantic Coast (2,430 birds; 12% since 1996). While numbers were down in much of the U.S. northern Great Plains since 1996, an increase (460%, 1,048 birds; 67.7% increase since 1991) was detected on the Missouri River. Results from 3 complete species census efforts provide essential data for conservation planning and assessment and illustrate the utility of global censuses for species of concern" - SUSAN M. HAIG, CHERON L. FERLAND, FRANCESCA J. CUTHBERT, JACK DINGLEDINE, J. PAUL GOOSSEN, ANNE HECHT, and NELL McPHILLIPS (2005) A COMPLETE SPECIES CENSUS AND EVIDENCE FOR REGIONAL DECLINES IN PIPING PLOVERS. The Journal of Wildlife Management.

It seems from this information that diverse perspectives were not taken into account while creating this solution, moreover the experts in the field of study were not consulted on the creation of this work. A larger question is, "Why does the park service think it will help the population instead of hurt it or grow it past capacity for the region?". One example is the overpopulation of deer in Virginia, specifically southside and southeastern Virginia. The research even supports that human solutions often yield no positive results. "...current sites used by breeding plovers are protected, and reasons for the decline in recent years are difficult to elucidate." - Abby N. Powell and Francesca J. Cuthbert (1992). Habitat and Reproductive Success of Piping Plovers Nesting on Great Lakes Islands. Wilson Ornithological Society.

Consider alternatives, understand the need for empirical, un-bias research. All current options are unsuitable for coexistence without first fully implementing the interim plan set forth in 2005 for period replicable to initiation (1990's identify, implement plan 2005, revise plan 2020).

Correspondence: I am 65 years old and have been coming to the Outer Banks for 60 years. In the 1950's my family arrived here by wooden bridge from the mainland and the only way to Hatteras Island was by ferry. There was no bypass, only the beach road. Six years ago, I retired and moved here to make my permanent home on Roanoke Island. I've seen a lot of changes over the years and have witnessed devastating hurricanes and northeasters. I've also seen outsiders wreak havoc from time to time. But I've yet to witness something as unnecessary and mismanaged as the consent decree and its aftermath. I'm still stunned that so few could change a way of life for so many. I had slim but some hope that the negotiated process would bring some common sense to the issue. What I see is the continued use of bad statistics on bird counts. I am an avid fisherman and have been since I could walk. I have fished most of these islands over the years whether by foot or by boat. You do not take into account the bird counts on Pea Island or on the dredge islands or on the many islands in Oregon Inlet. You have not done sufficient study of the economic impact already suffered or on our heads for the future as a result of your proposals. You have not taken into account that piping plovers are opportunistic nesters and have been found nesting in parking lots and 300 miles inland on river banks. You are protecting species that are not even endangered. You have taken into account the effect of hurricanes, northeasters and other natural events on bird populations and habitat. You have assume that man is wildlife's worst enemy when it is nearly always other wildlife and the forces of nature. You have enacted ridiculous ever expanding dimensions for closure areas. (If two teenagers can manage to conceive in the back of a 57 Chevy, why does a pair of plovers required three football fields?) You have failed to take into account all the other wildlife refuges in our area ?. and there are many. The Outer Banks are world renowned for surf fishing. Since I was a young child, families came to the beach to fish and enjoy the beach. Many of us would pile into our old trucks and spend the whole week on the beach down at the point because that was the only vacation we could afford. We bought our supplies locally not at some big box retailer. You will find no greater respecter of wildlife than someone who has actually spent lots of time in nature ? a fisherman. He understands that nature is harsh. He understands about survival of the fittest. He knows that he is small in the scheme of things. My best friend is now 75. His wife is 76. For decades we enjoyed fishing on the surf at Oregon Inlet or at the Point at Hatteras. Now they are feeble and barely able to walk. Still we pile them into the vehicle, take the chairs and park ourselves near the water's edge for a few hours of surf fishing. There is no better medicine in the world. How are they supposed to see and smell the water? How are they supposed to fish when you implement your plans? You are discriminating against a culture, a people, an economy and a whole way of life that has been here for decades. I have no problem with requiring permits for beach driving. A little education wouldn't be a bad thing particularly among the younger set. But to stop an entire way of life over birds is just against the principles of our freedom and flies in the face of the purpose of the Park Service and the entire reasons for establishing the Cape Hatteras area. Please go back to the drawing board and return Cape Hatteras National Recreational Seashore to the people? as it was originally intended.

Correspondence: DEIS Comments I am opposed to Alternative F, the NPS preferred alternative. The NPS has chosen the most restrictive possible buffers and regulations. These are more restrictive than any other national park. There is no basis in science or protocol for the selected alternative. Because of the consent decree the NPS will not be able to accurately estimate the economic impact on island villages. Without understanding the economic impact you should not implement a plan that will decimate small businesses. This is a bad plan and should not be implemented. What can be done to improve the plan. 1. Realistic buffers that adapt to behavior of the birds and geography of the nesting location. 2. Access corridors to spits and points year round. 3. Night Driving Restrictions based on when and where turtles nest not arbitrary dates. The night driving restrictions start on may 1st. Last year the first turtle nest was may 22nd. 4. Leave both sides of Hatteras inlet open for orv access. Comments on individual items in the document. The very first page of this document says: "Improved access, increased population, and the popularity of the sport utility vehicle have resulted in a dramatic increase in vehicle use on Seashore beaches. There has also been a decline in most beach nesting bird populations on the Seashore since the 1990s." This implies a cause and effect. Page 265 "Although there are some data from various sources about the number of vehicles on the beach, none of the sources have the scope or reliability to provide a robust annual estimate of vehicles on the beach." Comment:First you say there has been a dramatic increase in vehicles on the beach now you say you do not have enough information to make an estimate, much less actual counts of users by date or location. Page 563 "Unfortunately, the data on visitation, especially broken down by different types of Seashore visitors, are not complete enough to provide reliable estimates of baseline visitation." Comment:So not only do you not know how many vehicles where on the beach and where, you also do not know why 2.1 million visitors are visiting the park. Yet you can project that that "Small businesses would experience long-term negligible to moderate adverse impacts." Page xlviix Comment:It would be one thing if we were talking about a single site, but the park is 90 miles long, crosses two inlets, and multiple villages. I would bet a large percentage of people never cross the bonner bridge, and huge percentage of the 2.2 million never set foot on the beach south of the bonner bride. The preferred alternative is not substantially different from Consent Decree. You do not have baseline data on visitation before the consent decree. There is no way for NPS to do a realistic economic analysis of the impacts of the implementation of the preferred alternative. That is an extreme disservice to the people of hatteras and ocracoke island We know from the report that shorebird numbers declined from 1996 to 2003. The document suggest, despite the fact they have no data to support it, that an increase in ORV use on the beach is the cause. What else happened between 1996 and 2003? 96 14 TS Fran, Bertha 98 9 TS Bonnie 99 6 TS Floyd 02 2 2 TS 03 2 Isabel Comment:The science behind this document is: (Haig and Oring, 1988). A Review and Synthesis of the Scientific Information Related to the Biology and Management of Species of Special Concern at Cape Hatteras National Seashore, North Carolina by USGS According to that document: "Flooding due to tides or weather may alter habitat enough to render it unsuitable for nesting. This may lead to territory abandonment within or among breeding seasons. " Comment:The DEIS requires 1000 meter buffers, or 1.25 miles of beach closed for Plovers. The FWS protocol for the recovery of grizzly bears only requires 500 meter buffers. "No published accounts exist of breeding piping plovers in North Carolina from 1902 to 1960, when a pair was found on Ocracoke Island (Golder, 1985) Comment:Historically there have been no Piping Plovers in NC. They started appearing the 1980`s reaching a high in 1989 and have been in some state of decline since. The DEIS has a long term goal of 30 breeding pairs which is 2X the largest number ever recorded. Imagine 30 Breeding Pairs with 1.25 mile closures for each, you do the math! Comment:American Oyster Catchers and Least Terns The Scientist say they 200 meter buffers for successful breeding and fledging. Last Year Oystercatchers nested 40 feet from Hwy 12 in the 55mph zone. In 2007 some of the largest colonies of least terns in NC were on the roofs of shopping centers. My favorite line of the entire document: However, piping plovers may be more sensitive to disturbance in the Atlantic Coast southern recovery unit, as evidenced by longer flush distances in response to disturbance sources at Assateague. Island National Seashore (Loegering 1992). So you are saying Southern Plovers may be more sensitive than Northern Plovers. If this is the case maybe we should find out if sweet tea and banana pudding will help improve breeding and fledging. All of these buffers come from the USGS protocols in the A Review and Synthesis of the Scientific Information Related to the Biology and Management of Species of Special Concern at Cape Hatteras National Seashore, North Carolina by USGS Comment:This is being used as the best available science. I question does this document even qualify to be considered as science in the NEPA process? Has it been correctly peer reviewed? USGS protocols say Peer reviews must include at least two qualified scientists who have no stake in the outcome of the review, who are not associated with the work being performed, and who are without conflict of interest. Comment:I do not see any reference to who peer reviewed the document. It appears the references in the document are either very old or from a small group of USGS employees at the Patuxent Wildlife Research Center, NPS and Audobon employees. It appears that this is a small insular group with frequent collaboration. This document does not indicate the qualifications of persons cited, so it is not clear if they are all trained scientist. There are also writers in document who have a clear conflict of interest. At least 10 references to Walker Golder. Representative of the Audobon Society who has filed suit to have these protocols implemented. An NPS Employee whose husband participated in the Negotiated Rulemaking process and consistently voted with the environmental organization seeking to close the beaches. 47 References to Marcia Lyons. These conflicts of interest were not disclosed in the document as required. According to the document:"This report does not establish NPS management protocols but does highlight scientific information on the biology of these species to be considered by NPS managers who make resource management decisions at CAHA." Why then does Alternative F, the preferred NPS solution use the maximum buffers highlighted in this document. I could not find any justification anywhere in the document for permanently closing both side of Hatteras inlet? Have you ever ridden the ferry to Ocracoke in a storm? Northern Ocracoke and Hatteras inlet are two of the least hospitable places you could possibly be. Any species that is going to rely on habitat on either side of hatty inlet is not long for this world. The document references Frisco Pier as a fishing destination, Frisco Pier has been closed for two years is virtually condemned now. It is disingenuous to suggest it is a fishing destination. The Eena Project. Is a campaign to educate people about the dangers of rip currents started by a family that lost a member swimming on the obx. Multiple people die every year in the surf on hatteras island. If I was a parent I would not let my kids in the water. This plan closes the safest place to swim, the hook at cape point for most of the year. Executive Summary page viii "Fishing Facilities. Fishing piers are located in Frisco, Avon and Rodanthe on Hatteras Island, and a marina is located at Oregon Inlet on Bodie Island. These would continue to be available to the public." The Frisco Pier has not been open in several years and is in a severe state of disrepair. The nearest public fishing access is in Avon 13.5 miles north. Executive Summary page xi-xii "Alternative F ? Management Based on Advisory Committee Input. Alternative F is the National Park Service Preferred

Alternative. The NPS used the Negotiated Rulemaking Advisory Committee's input to create this action alternative, which is designed to provide visitors to the Seashore with a wide variety of access opportunities for both ORV and pedestrian users."

Comment: The negotiated rule making process ended with no consensus. A NC State Study found issues with the process. Specifically the selection of stakeholders, the quality of the mediation, and the quality of the science used. It also indicated that NPS did not define the repercussions of breaking the ground rules. This allowed stakeholders to sue the NPS and violate the spirit of negotiated rule making and still participate in the process.

http://www4.ncsu.edu/~mnpeters/411511/FW411511_Class_Presentation.pdf

Chapter One Page 7-8 Defines Defines Desired Future Conditions terms as: "Short-term means 10 years (or two 5-year periodic review cycles) after implementation of plan."

Comment: Due to the dynamic nature of the seashore this is to long to go between reviews. For example in the last 2 years Hatteras Inlet has suffered extensive erosion to the benefit of Ocracoke. The NPS should evaluate the conditions of the final plan every 3 years at a minimum.

Table 1 Desired Future Conditions for Piping Plovers Page 8 Are the future conditions realistic? According to the USGS A Review and Synthesis of the Scientific Information Related to the Biology and Management of Species of Special Concern at Cape Hatteras National Seashore, North Carolina <http://pubs.usgs.gov/of/2009/1262/pdf/ofr2009-1262.pdf> Page 12 "No published accounts exist of breeding piping plovers in North Carolina from 1902 to 1960, when a pair was found on Ocracoke Island (Golder, 1985). Four nests and one brood were discovered within the boundaries of Cape Hatteras National Seashore (CAHA) (fig. 1-1) in 1984 incidental to monitoring of other species, and 5 chicks were known to have fledged that year (Golder, 1985). Nine pairs were counted in 1986, again incidentally (Golder, 1986), and 10 pairs were discovered in 1987 in specific surveys for the plover (Cooper, 1990). The plover population reached a high of 15 pairs in 1989 and varied between 11 and 14 pairs until 1996, after which a sharp decline began. The population reached a low of 2 breeding pairs in 2002 and 2003 with only 3 breeding pairs reported in 2004 (fig. 1-2, Lyons, 2001; Lyons, 2002; Lyons, 2003; Lyons, 2004; M. Lyons, National Park Service, written commun., 2004), and 2 in 2005."

Comments: Historically the park has supported few if any Piping Plovers. Breeding pairs of plovers spend a small part of their life in the park. Is it realistic to expect in the short term to meet the maximum number of breeding pairs and in the long term to double the number experienced in the last 110 years?

TABLE 4. DESIRED FUTURE CONDITIONS FOR AMERICAN OYSTERCATCHERS Page 9 TABLE 5. DESIRED FUTURE CONDITIONS FOR COLONIAL WATERBIRDS Page 10

Comment: The methodology to determine the number for each species should include areas outside of NPS Jurisdiction. Specifically it should count all species from Kitty Hawk to Ocracoke as part of the population. The current methodology fails to count species in Pea Island, emergent islands in the sound such as Cora June Island, and non traditional nesting sites. A 2007 NCWRC found 3rd largest least tern nesting location was the roof of the Belks in Kitty Hawk. According to the same study Least Terns have previously nested in great numbers on the roof of the Outer Banks Mall. The survey also found that there were 55 least terns, 78 black skimmers, and 79 Colonial water birds on Cora June Island. Failure to include nesting areas contingent to the park is short sighted and does not reflect the actual status of the species in the area. Certainly you should include the wildlife refuge in the boundaries of the park.

Part 1 Basis and Need for Action Page 23 states "Dates of seasonal closures shall be May 15 through September 15 of each year, except on Pea Island National Wildlife Refuge, where the Refuge Manager shall post such closures as he may find necessary to implement the regulations of the USFWS."

Comment: Why was Pea Island Considered in the 1978 Plan and not today.

Page 28-29 States "Invertebrates are impacted by ORV use. A recent study at the Seashore researched the ghost crab (*Ocypode quadrata*) as an indicator of ecosystem health, since it may show the impacts of ORVs and other recreational uses. The study considered the impacts of ORVs on ghost crab population densities and Issues and Impact Topics Draft Off-Road Vehicle Management Plan / EIS 29 recovery rates in relation to ORV use and usage regulations. Data to determine the impacts of ORVs on crab populations were collected in several areas in the Seashore. Closures of the beaches to vehicles were initiated to study short-term effects and recovery rates. It was found that ORVs had a detrimental impact on ghost crab populations at the Seashore and that areas subject to vehicle use had significantly fewer ghost crab burrows than those areas without vehicles. As shown by Steiner and Leatherman (1981), ghost crabs can be killed or mortally injured by ORVs driving over them, or by altering their environment. This study concluded that high-energy weather events change the dynamics of the population, allowing more ghost crabs to inhabit the area, but ORVs reduce the ability for ghost crabs to inhabit the area (Hobbs et al. 2008)."

Page 30 "As an example, the burrows of ghost crabs, the most common beach inhabitants, are nearly absent from beaches where ORVs are allowed."

Comment: Ghost crabs are one of the predators of eggs and chicks. Why is the reduction of ghost crabs considered a negative for ORV access, but the murder of hundreds of mammals a management practice

Loefering, J.P., Fraser, J.D., and Loefering, L.L., 1995, Ghost crabs prey on piping plover chick: *Wilson Bulletin*, v. 107, no. 4, p. 768?769.

Page 30 "Other issues related to visitor use and experience include viewsheds, aesthetics, and night skies. While the sight of ORVs can destroy the viewshed and aesthetics for some visitors, they also change the viewshed by altering the natural landscape. Some visual signs of ORVs include tire ruts and markings and trash left behind. ORV use impedes or destroys coastal features like wave or wind ripples in the sand, tide wrack lines, overwash deposits, wind sorted sediments, dune formation, etc".

Comment: Pedestrians can leave trash behind and impede or destroy coastal features like wave or wind ripples in the sand, tide wrack lines, overwash deposits, wind sorted sediments, dune formation, etc. This shows some sort of pre-disposition against ORV.

Chapter 2 Alternatives Page 58 "Fishing piers are located near Frisco and at Avon and Rodanthe on Cape Hatteras Island, and a marina is located at Oregon Inlet on Bodie Island. These would continue to be available to the public."

Comment: As mentioned above the Frisco Pier has not been open in several years and is in a severe state of disrepair.

Page 67-68 "Appendix G of the Piping Plover Recovery Plan" "Protection of Chicks ? Sections of beaches where unfledged piping plover chicks are present should be temporarily closed to all vehicles not deemed essential. (See the provisions for essential vehicles below.) Areas where vehicles are prohibited should include all dune, beach, and intertidal habitat within the chicks' foraging range, to be determined by either of the following methods:" "The vehicle free area should extend 1000 meters on each side of a line drawn through the nest site and perpendicular to the long axis of the beach."

"Specifies the minimum size of vehicle-free areas to be established in the vicinity of unfledged broods based on the mobility of broods observed on the site in past years and on the frequency of monitoring. Unless substantial data from past years show that broods on a site stay very close to their nest locations, vehicle-free areas should extend at least 200 meters on each side of the nest site during the first week following hatching. The size and location of the protected area should Chapter 2: Alternatives 68 Cape Hatteras National Seashore be adjusted in response to the observed mobility of the brood,"

Comment : The NPS has defaulted to the greatest possible protection . There are options which would allow the buffers to adapt to the mobility of the brood. The 1000 meter buffer closes 1.25 miles of beach. In your short term goal for recovery that could close 18.75 miles, the long term goal would close 37.5 miles which is nearly all of the beach.

Assateague Island National Seashore uses 200m buffers for all parts of the plover breeding season. In this document there is no justification for the use of the largest possible buffer.

Discussion of Alternative F Page 82 "Alternative F would include a carrying-capacity requirement (peak use limit) for all areas based on a physical space requirement of one vehicle per 20 linear feet for Bodie Island, Hatteras Island, and Ocracoke Island Districts, except that 400 vehicles would be allowed within a 1-mile area centered on Cape Point. The carrying capacity would prevent safety concerns associated with overcrowding, such as at peak use periods during major summer holidays and weekends."

Comment: Based on past breeding history and the closures required by this alternative Bodie Island Spit, Cape Point and South Point would all be closed to access during major summer holidays. Why is it necessary to have carry limits outside of the breeding season.

Alternatives Page 100 Comment: Hatteras Inlet Spit and North Ocracoke are designated as permanently closed to ORV access. These have historically been good fishing areas. North Ocracoke is the finest place on the islands for flounder gigging. Currently Hatteras Inlets is eroding and North Ocracoke is benefiting. If the inlet moves will the access adjust accordingly. Where are people supposed to park at south end of the pole road.

Page 104 "Hours of allowable ORV Operation on the Beach. " Comments: Alternative F provides from May 1st to November 15th . Designated ORV routes in potential sea turtle nesting habitat would be closed from 1 hour after sunset until the turtle patrol has check the beach in the morning. In 2009 the first turtle nest was not located until May 22nd. The nighttime regulations appear to be based on the possible dates for first nests not the likely first dates. Regulations should be established based on the existing result set and modified accordingly.

Page 144 Socioeconomic Impacts "The ROI is expected to experience long-term negligible to minor adverse impacts."

Comments: The ROI used for the analysis utilizes all the villages in the Park. The impact will primarily impact Ocracoke, Avon, Frisco, Buxton and Hatteras. There is existing data that the consent decree has had a major impact on business in the area. The increase in pedestrian only areas will have a minimal impact on the economies of the areas. Survey the parking lots with pedestrian access versus the number of vehicles on the beach. ORV users are the vast majority of users and most pedestrians will only walk a limited distance in heavy sand.

Chapter 3 Affect Environment

"A University of Idaho study indicated that one of the reasons people visited the Seashore was to escape crowds and seek solitude. When asked about crowding, 27% of visitors said they felt "crowded" to "extremely crowded," while 43% of visitors felt "somewhat crowded." Thirty percent of visitors surveyed indicated that they felt "not at all crowded." Many visitor groups (49%) reported that crowding "detracted from" their park experience (University of Idaho 2003)."

Comment: Closures increase crowding.

I did not have time to evaluate the rest of the document. In the future the public comment period should be adjusted accommodate the complexity and size of the documents.

Correspondence: Comments on the Cape Hatteras National Seashore ORV Management Plan DEIS I wish to thank the National Park Service for an opportunity to comment on the Cape Hatteras National Seashore ORV Management Plan DEIS. As a concerned citizen, scientist, retired public administrator and university educator, I feel it is my professional and civic duty to make timely comment on a matter that affects thousands of citizens who wish to visit and have access to the Cape Hatteras National Seashore.

Comment 1 There is a clear need for an equitable, balanced, and effective seashore access policy and management plan. Growing national population, seashore visitation, transportation avenues into the Outer Banks region mandates an access management policy?but one which has widespread public support and one that balances the rights and traditions of public use and access to the national seashore with responsible but reasonable resource protection.

As currently structured, Alternative F is not primarily an ORV management plan. It is primarily a public access restriction plan. The plan is biased toward bird and turtle protection, seashore isolation and not to a reasonable extent on public use and visitor access??specifically ORV and pedestrian access.

Responsible environmental management uses sound science and unbiased professional judgment that balances the human needs and rights of people with the needs to manage and sustain natural processes. The preferred proposal, Alternative F, fails to meet these criteria. Alternative F fails to recognize objective science, enabling legislation, citizen rights, historical uses, and past promises of access to their environment.

Promulgation of Alternative F as it is currently structured will be the basis for widespread public dissatisfaction, continued distrust of government, especially the National Park Service, and costly litigation. Comment 2 As indicated by Alternative F, it is the intention of National Park Service (NPS) to transform a major part of the Cape Hatteras National Seashore Recreational Area?set aside over 70 years ago for use and enjoyment of American citizens??into a wildlife sanctuary, predominantly a national bird and turtle use area. NPS is using as its justification for this radical transformation and departure from traditional and intended public use, a thirty-five year old executive order directing NPS to formally promulgate an ORV management plan.

Alternative F management plan, with its excessive restrictions and denial of public access, both pedestrian and ORV, is in large part incompatible with the legislative purpose and intent of why the national seashore was established (16USC459 CHNSRA Enabling Legislation):

"said area shall be, and is, established, dedicated, and set apart as a national seashore recreational area for the benefit and enjoyment of the people and shall be known as the Cape Hatteras National Seashore Recreational Area."

Nowhere is it indicated in the DEIS where enabling legislation intends or permits both pedestrian and vehicular access denial for a major part of the year, particularly visitor or vacation season.

Comment 3 NPS Request for public comment appears to be more of a bureaucratic process than a search for substantive decision-making information. By virtue of its massive size, complexity, biased and incomplete explanation of science, and the inability for members of the public to access cited scientific literature and references, and ask questions of government officials responsible for the science and DEIS content, no single citizen can effectively review, understand, and constructively comment or suggest improvement to the DEIS in the 60 day comment period.

It appears by way of emphasis in the discussion in the DEIS that NPS has every intention to promulgate Alternative F in the next year, regardless of past or present public comment. There is virtually no significant reference to the workbooks the public provided in the early stages of the plan development process or to countless constructive comments made by the public during the 15 month Regulation Negotiation Process.

The National Park Service (NPS) should make it known to the public the specific information it seeks so as to make a final, objective decision with regard to an ORV management plan for Cape Hatteras National Sea Shore Recreational Area. Thus far NPS has failed to do so. By not asking for specific information, NPS is simply "going through the motions" superficially, and wasting the public's time.

Comment 4 NPS presents Alternative F as if it were recommended by the recent Regulatory Negotiation process. However, upon close examination Alternative F is found to be a biased and highly restrictive management plan that is in complete opposition to majority recommendations of the recent Regulation Negotiation process. Alternative F strengthens and codifies the denial of public access provisions of the current consent decree. The public access denying provisions of the consent decree, put into effect April 30, 2008, have been extended and transferred to Alternative F. The majority of Regulatory Negotiation Committee stakeholders (19 vs. 5) and numerous public commentators did not recommend an extension of the restrictive provisions of the consent decree as part of a final ORV plan. Comment 5 If promulgated, Alternative F will significantly change the economy and unique culture of the Outer Banks. The DEIS has failed to properly assess those changes. The Economic Impact Analysis found the DEIS by its own admission is incomplete. This alone is the basis for future litigation challenging the legality of the proposed plan. In addition the Economic analysis is structured in such a manner that it fails to address full costs?direct costs, indirect costs, lost opportunity costs, costs of future liability, and hidden costs. The Economic Analysis fails to recognize that the national seashore environment is a unique form of capital that serves the local economy, and in turn the health and wellbeing of citizens and families that depend of that economy. Access to the seashore is essential for family business operations on the Outer Banks.

The cost to society and the local communities under the restrictive consent decree has now been extended indefinitely into Alternative F. Economic losses in millions of dollars have occurred to island businesses especially motels, campgrounds, restaurants and tackle shops. The full costs of Alternative F are very much understated in the DEIS. Annual economic losses under the consent decree are already in excess of those estimated by Research Triangle Institute.

Comment 6 The DEIS has failed to inform the public of the extent of expected closures to the most popular recreational sites of the national seashore. Experience with the consent decree closures for the past two years (2008, 2009) provide a clear indication of the extent to which the national seashore will be closed to public access?ORV and pedestrian. In recent court testimony the National Seashore Superintendent indicated the extent of the closures, but nowhere does that data appear in the DEIS. The public should know what to expect when Alternative F is promulgated.

The Bodie Island Spit was closed a total of 136 days in 2009. Cape Point was closed 101 days in 2009. The Hatteras Island Spit was closed 125 days and south Ocracoke was closed 80 days. These are some of the most popular recreational use areas at the national seashore which will not be accessible to the public during late spring and summer months.

Comment 7 Nowhere in the DEIS is it indicated that should listed species populations grow in size through natural population cycles or management programs, the public loses even more access given the way the boundary distance are applied.

Comment 8 Nowhere in the DEIS is it mentioned that protected species populations are growing without the needs of additional restrictions such as those of consent decree and Alternative F.

Published USFWS data suggests that the piping plover is "recovering" well beyond 1986 levels and do not suggest that additional restrictions beyond

regional recovery plans are necessary or essential at the Cape Hatteras National Seashore Recreational Area for the continued recovery of the species.

Piping Plover--Atlantic Coast Pairs

Year 1986 1999 2005 2006 2007 Nesting Pairs (est.) 790 1386 1632 1749 1880

<http://www.fws.gov/northeast/pipingplover/index.html>

Comment 9 Data collected and published by NPS in recent suggest that Cape Hatteras National Seashore Interim Management Plan prepared with public input and publically reviewed in 2005, published in the Federal Register was showing every sign of being effective at protecting birds and natural resources. The Interim Management Plan was set aside by the court and replaced by the consent decree and settlement that mandated extensive closures without public comment or review.

The consent decree closures of recent years have been of exorbitantly high cost to the public but have not contributed to an improvement in species production or safety. The consent decree has produced no natural resource benefit over and above the interim plan. The fledge counts were higher under the interim plan than under the consent decree. 7 Piping Plovers fledged in 2008 under the interim plan, 6 in 2009 under the highly restrictive consent decree. 17 American Oyster Catchers (AMOY) fledged in 2008 under the interim plan and 13 in 2009 under the highly access restrictive consent decree, the same management structure now found in Alternative F. Species productivity is decreasing under consent decree and now Alternative F restrictions. Comment 10 The majority of nests and hatched birds the past two closure seasons under the consent decree were lost to predation, a few to storms, one at the hands of a university researcher trying to band a bird. None has been lost to ORVs or pedestrians accessing the national seashore. The huge closure distances in the consent decree and Alternative F restrictions keep pedestrians and ORVs off the seashore while birds are nesting. At the same time, the extensive closures also provide for the proliferation and increased free movement of predators. In effect, the extensive closures create an ecological trap for birds in large closures that encourage and enhance predation.

Comment 11 When the boundary distances shown on Table 11 are applied to the Alternative F framework, it is evident that the public, ORV and pedestrian, lose access to a vast amount of the seashore for most of the visitor season. Closure boundaries are overly restrictive at CHNSRA and are not used at other NPS properties. There has been no administrative or science based explanation given to the public for these especially restrictive closures that limit public access to the seashore.

NPS has failed to explain specifically why, by way of science justification, 1000 meter boundaries must be established every time a Plover chick is observed, where the literature indicates on average movement under 200 meters. There is no study or science based explanation that justifies an automatic 1000 meter boundary closure every time a plover chick is observed. In fact the public access denial consequences of such management policy for a national seashore set aside for public use is excessive and does not indicate a balance of responsible usage.

If, as the Alternative F regulation dictates, one extends a boundary out 1000m in every direction from a nest, one creates a circle with a boundary circumference of approximately 3.9 miles, and an area of approximately 1.2 square miles or approximately 775 acres. Given that the boundary regulation dictates 775 acres of national seashore be set aside for the exclusive use of a plover chick?during the height of vacation and visitor season, it obviously does not take too many widely distributed plover chicks to shut down a significant portion of Cape Hatteras National Seashore Recreational Area especially if the Plover population increases.

Comment 12 Alternative F, as with the consent decree, establishes a policy of denial of access punishment for the general public when intrusions into closure areas occur. Every time there is a closure intrusion the National Park Service, now at its own discretion, extends restrictive boundaries and widens non-access areas. There is no basis in science or environmental management practices that justifies such punitive measures. Comment 13 Many of the references used to justify Alternative F are those of individuals and activists organizations who have supported litigation that denies public access. The major science references are published by environmental activist organizations and authored by individuals trying to shut down ORV access to the national seashore: Audubon, Blue Water, Hatteras Island Bird Club, etc. Most of these references have not been reviewed for their accuracy or objectivity and are unsuitable for government decision-making. Many of the references are out dated, biased, contain incomplete and misleading information, and few have ever been reviewed in open forum.

Comment 14 NPS has failed to provide the public with essential items of information, specifically properly reviewed science. The main science references are unsuitable and inappropriate as the basis for a government regulation that restricts public access to the national seashore and has significant negative impacts on the Outer Banks economy.

The 2005 USGS Protocols are indicated by NPS as the primary basis for the highly restrictive boundary distances that restrict public access to the national seashore. The USGS Protocols are cited as being "in press" 5 years after they first appeared on the Park Service website. The 2005 USGS Protocols were challenged two years ago as being in non compliance with USGS Peer Review Policy. At that time the documents were not dated, had no government publication number, and were not published in the open literature or Federal Register and were clearly unsuitable to be a credible scientific basis for government decision-making, especially costly regulation. The documents were sent back to USGS for "review" in 2009, five years after they were first made known to the public.

NPS has indicated a new citation for the USGS Protocols. They are currently referenced on page 660 as: Cohen, J.B., R.M. Erwin, J.B. French Jr., J.L. Marion, and J.M. Meyers In press, Recommendations for Management of Endangered Species at Cape Hatteras National Seashore. U.S. Geological Survey Open-File Report 2009-1262.

NPS uses the USGS protocol recommendations as if they are "best available science." They are not science and have not been shown to be connected with specific scientific studies. The management options presented in the protocols are the policy and management recommendations and opinions of biased and non-reviewed contributors, deemed by USGS to the "experts." Nowhere is a specific science basis (study, data) for a given management option?established solely for the Cape Hatteras National Seashore Recreational Area??demonstrated.

In a slightly modified introduction to the most recent release of the Protocols, the government official responsible for the document states: "Although no new original research or experimental work was conducted, this synthesis of the existing information was peer reviewed by over 15 experts with familiarity with these species. This report does not establish NPS management protocols but does highlight scientific information on the biology of these species to be considered by NPS managers who make resource management decisions at CAHA."

The new publication was not accessible, peer reviewed, or fully explained by government authority at the time the DEIS was submitted to the public for comment in early March 2010.

The literature reviews found in the USGS Protocols as currently published are significantly out of date. In fact many studies were decades out of date at the time the document was prepared in 2005. They are mainly non-replicated, selective papers and studies. Many citations are over 20 years old and most are not related to the Cape Hatteras National Seashore Recreational Area. The public does not have access to the literature reviewed in this essential report and most of the citations are so insignificant they cannot even be found in a major university library (UNC-CH).

Comment 15 There is an "appearance of impropriety" and "conflict of interest" associated with the primary science basis justification for the Alternative F recommendation.

As noted two years ago, the cited protocols are not reviewed consistent with published USGS peer review policy guidelines (<http://www.usgs.gov/usgs-manual/500/502-3.html>) especially with regard to full disclosures and conflicts of interests. In fact the Protocols were developed and prepared in large part by well known environmental activists who subsequently used them as the basis for law suit against NPS, thus creating a very clear conflict of interest in full view of the federal government.

A review of the public record indicates that USGS commissioned well known environmental activist scientists to selectively review and discuss the science as they choose to represent it, and then formulate and recommend management options and policies. There was no outside questioning and review of their work--paid for by federal tax dollars.

It is clear to those of us who understand the scientific methods and process, objective scientific review, and the internal workings of federal government, that the 2004-2005 cooperative agreement review of the science (undertaken in part by members of the Audubon Society and other activist organizations) is biased and selective, misrepresented, fraught with speculation and opinion, and in many cases based on information that has nothing whatsoever to do with Cape Hatteras National Seashore.

In 2005 the architects of the access denying protocols were acknowledged for their contributions. For nearly three years now we have asked NPS and USGS to identify the "independent outside reviewers" of the USGS Protocols consistent with USGS Peer Review Policy. We are now being informed by USGS through their press office that the "science peer reviewers" are the original contributors and architects of the Protocols (which are not science at all, but policy and management opinions/recommendations that regulate the public and deny public access to the national seashore). We are also being informed by press officials that it is the policy of USGS to not identify outside independent peer reviewers or their comments. This is a violation

of the Freedom of Information Act and the Federal Advisory Committee Act.

Some of the original contributors (Cohen and Golder) have used the Protocols to be the basis for litigation and insist on denial of public access to the seashore. A lead author "J.B. Cohen" has previously shown his conflict of interest and activist affiliation when he "J.B. Cohen" signed a sworn affidavit in support of the Consent Decree for SELC (2008) and also signed the recent Audubon letter directed at NPS Officials recommending the highest level of access restriction (2009). Scientists working on behalf of the public cannot turn around and use that same work to sue to public without having the objectivity of their work called into question.

For over 15 months of Regulation Negotiation Process, Golder, other environmental activist members, and the federal government never disclosed participants' roles in the design of the Protocols, but constantly referred to them as being the definitive "best available science" justification for closures. Golder and others now appear as "peer reviewers" of their own work. This is discrediting in and of itself, but what is most disturbing and unethical about this is the fact that this highly biased, pseudo science process, sponsored by the federal government, has denied thousands of citizens access to their national seashore and will continue to do so unless it corrected by NPS, the federal courts, or the congress.

The above is clearly a "apparent conflict of interest" known to NPS and USGS officials and calls into question the credibility of science which in the public policy making process? specifically that of denying public access to the national seashore? must be "objective" beyond any doubt. Local media have noted this "apparent conflict of interest" and brought it to the attention of NPS and USGS officials who refuse to offer an explanation or response. The best course of action to resolve this matter is to turn the science review and update over the National Academy of Sciences or some other neutral party, to objectively, critically, and comprehensively review all relevant science, disclose the facts and restore some public trust in the scientific process used as the basis for environmental management decisions at Cape Hatteras National Seashore.

Respectfully Submitted

Correspondence: My comments concern the DEIS of the Off-Road Vehicle Management Plan prepared by the National Park Service (NPS) for the Cape Hatteras National Seashore Recreation Area.
1) Page 201: I disagree with the NPS statement: "Even with resource closures in place, protected species are still at risk [from pedestrians and ORVs]." No Piping Plover deaths have been attributed to ORVs. ORV violations continue to decrease as signage and education improve. Pedestrian violations are much more significant than ORV violations. It seems to me that any transgressions into protected area are the result of lack of NPS manpower and enforcement than the public purposely and willfully violating out of bounds areas.
2) Page xxiv: I question the statement of as per the DEIS: "Carrying capacity would be a 'peak use limit' determined for all areas based on the linear feet of beachfront?" If you close off huge sections of the beach, you force more people into smaller areas, potentially resulting in more resource impairment and diminished visitor experience.
3) Page xix and page 23: I am against having two different closures rules pertaining to the North facing beaches (North side) and the South facing beaches (South side) as per the grid outlined in Alternative "F". I disagree with the NPS proposal to close the beaches in villages of Frisco, Hatteras and Ocracoke Villages to ORV access longer than the traditional May 15 to September 15 period for the Northern beaches, even though seasonal visitor statistics are similar for all villages. Please, make them the same: May 15 -> September 15.
4) Page 1: I agree with your statement "ORVs have long served as a primary form of access for many portions of the beach in the seashore, and continue to be the most practical means of access and parking for many visitors."
However, pedestrian only areas discriminate against individuals with limited mobility due to age or physical impairments, families with small children, and those wishing to engage in activities requiring recreational equipment (boogie boards, beach umbrellas, beach chairs, coolers, fishing rods and tackle, etc)
5) Page 53: I disagree with the special use permit proposed guidelines. It is impractical to allow the transportation of disabled visitors to the village beaches and then require the vehicle to be returned to the street or parking area. This necessitates the disabled person to have a driver to drop him (or her) off, then drive to a parking area, then trudge a long distance to the site of the drop off, then trudge the long distance through the sand back to get the vehicle.
Suppose the handicap person wants to go to the beach, is capable of driving himself, yet cannot find another person to go with him? Does he now not go to the beach? This rule creates unnecessary hardships and risks in the event of an emergency as well.
6) Page 121 ? 127. I strongly disagree with the buffers as presented. We must allow for pass-thru corridors. The beach is linear with the ocean buffering on one side and the dune line on the other. For example - If you pinch off access on one side of a 4 mile linear beach and pinch off access on the other side of the 4 mile section of beach with no corridor, then you effectively have closed off all 4 miles of the beach because you CAN'T get there. The proposed bird buffers are too large, blocking access to the interior sections from the two "buffered" ends.
I propose ORV pass-thru only corridors and to use breeding / nesting buffer distances to establish ORV pass through only corridors to ensure beach access in a way that does not hinder resource protection. I believe pass through corridors should be maintained for pedestrians and ORVs in all areas of the Cape Hatteras National Seashore Recreational Area throughout the entire breeding and nesting season. Corridors are vital to providing access in a way that does not hinder resource protection.
Piping Plover unfledged chicks buffer should move with the brood as it relocates to reliable food source, not expanded.
The 1,000 meter distance for the piping plover is way too large and not based upon peer reviewed science. A more rational distance would be 200

meters per other sites in the nation for the piping plover. Ample scientific evidence and precedent exists to support a 200 meter buffer. Buffers for other species, including American Oystercatchers, Least Terns and Colonial Waterbirds must also be changed. An effective 30 meter buffer should be established for these species rather than the 300 meter closure outlined in the DEIS.

NON-ENDANGERED BIRDS should not have same protection as if endangered. Not allowing ORV access is paramount to denying the public access to these beaches.

7) Page 468: I disagree with the limitations imposed on pedestrian and ORVs. Corridors or bypasses should be provided thru, around or below high tide line in all SMAs during entire breeding season to maintain access.

8) Page 124: I strongly disagree with the NPS slant of providing for over protection of resource management over that of the public's right to access the beaches. Pro-active initiatives include: Vegetation Management, Habitat Management, Enhanced Predator Management, Colonial Water bird social attraction, Piping Plover check fledge rate, Piping plover chick buffer distance, and pass-through buffers during the incubation period. Opportunities to implement less restrictive closures as a result of the above initiatives should be considered more frequently than the 5-year periodic review process identified in the DEIS.

9) I disagree with the NPS Resource Management Pedestrian / ORV Closure Policies. These policies address the least significant factors affecting nest survival with little chance to have more than negligible impact. For example: the AMOY Nest Failures are predominately due to non-human events. Using your own stats, the mammalian predation is 54%, Storm / Lunar Tides: 29%, Nest Abandonment: 6%, Avian Predation: 5%, and Ghost Crab Predation: 3%.

So what is the percentage due to human interference: just 3%! It's insignificant, yet the NPS wants to ban humans when their actions provide very little influence on the success rate of breeding birds and turtles.

10) I disagree with the stats of breeding plovers and the other birds in the Park when the NPS does not adequately consider locations neighboring the Recreational Area that are part of the same ecosystem, namely dredge and spoil island that are located just yards away and within sight of the seashore. These birds are part of the same ecosystem and should be included.

Those spoil islands, developed by man from dredging the waterways in the Pamlico Sound for channel upkeep are slammed full of birds. The reason why so many birds? NO PREDATORS. SO, birds are not as stupid as one might think. You have to count these birds and incorporate them in the stats when the NPS is talking about any so called decline in breeding pairs in the National Park.

11) Page 1: I do not think the DEIS responsibly addresses the cultural resource issues. The very purpose of the DEIS as set forth in the National Environmental Policy Act (NEPA) is to protect and preserve natural and cultural resources in the federal decision making process. In the DEIS, the statement "protect and preserve natural and cultural resources" appears in the first sentence of the first page of the plan, in the Purpose of the Plan section, and numerous times thereafter. Yet, the 810 page document devotes only two paragraphs to analysis of cultural resource issues.

12) Pages 270-281; 561-598: I strongly disagree with your economic analysis of the impact of the DEIS. The region of influence (ROI) incorporates the Northern Beach communities, including Kill Devil Hills, Kitty Hawk, Southern Shores and Duck. These areas are almost completely disconnected from ORV use and access issues relating to the Seashore. ? Inclusion of the Northern Beaches in analysis significantly dilutes estimates of economic impact on the 8 Seashore Villages

? Analysis of economic impact to the Seashore Villages appears to be significantly down played. Emphasis in DEIS is on the ROI-wide or county-wide level impacts.

? Nowhere is it clearly addressed that the overwhelming majority of negative impacts will be felt by small businesses in the Seashore Villages rather than by overall economic interests within the greater ROI.

On page xlvi, Alternative F is characterized as having a "negligible to moderate" adverse impact on small businesses. I strongly disagree with this statement.

I believe the negligible to moderate projection is inaccurate and relies on economic surveys that has not yet been published. Furthermore, this material is not expected to be added to the DEIS until after the public comment period has ended.

Based upon the economic harm we have already experienced under the consent decree, Dare County projects the economic impact of Alternative F to be substantial.

Beach closures have already had a devastating and unfair impact on many Dare County Businesses, causing foreclosures, bankruptcies, lay-offs, cutbacks, expensive refinancing, and depleted college funds and savings accounts.

Pages 270-286, 561-598: The socio-economic data and analyses are incomplete and erroneous and result in an understatement of the effect the restrictions will have upon the Island, the region and the state of NC. The US Park Services answer: Businesses will have to "adapt" to the new rules. (p.383) The negative economic impacts of the decree ARE KNOWN, so to say that the added restrictions would have negligible to moderate impact is indefensible.

13) Overall Visitor Counts - Overall visitor counts appear to include visitors to Fort Raleigh National Historic Site and the Wright Brothers National Memorial. A large percentage of these visitors vacation in the Northern Beaches communities and recreate on the non-federal beaches outside of the Seashore. Visitors who patronize the Fort Raleigh National Historic Site and the Wright Brothers National Memorial but do not visit the actual seashore areas need to be factored out.

Maintenance of Future Access to Cape Point and South Point Ocracoke: All socioeconomic analyses related to Alternative F are predicated on the assumption that access corridors will remain open for at least an appreciable portion of the visitor high season. Under Alternative F, the access corridors will be subject to Resource Closures based on buffers similar or identical to the Consent Decree. Unless some predictability of access to Cape Point and South Point Ocracoke can be assured, economic analyses predicated on assumption of access are fundamentally flawed.

Why would a group of surf fisherman want to come to Hatteras Island to surf fish if they are not sure they can access the prime fishing grounds at Cape Point? The answer is they won't come. If they don't come, they don't rent vacation homes and spend their money on Hatteras and Ocracoke Islands. The definition of the Region of Influence (ROI), faulty data on economic activity generated by specific type recreational activity, incomplete visitation/business survey data, inflated overall Seashore visitor counts pertaining to beach use, and flawed key assumptions concerning the maintenance of access under Alternative F, all lead to inaccurate conclusions in the socioeconomic analyses. Specifically, these inaccuracies can be seen as understating the negative socio-economic impact of the Seashore Villages. Further, this negative impact will be absorbed almost entirely by Small Businesses. Neither of these important aspects of the management alternatives are adequately presented in the DEIS.

14) Page 136: I strongly disagree with your pet restriction proposals. The "?prohibition of pets in the Seashore during bird breeding season including in front of the villages." = No Pets in public areas ?beaches, campgrounds, soundfront, foot trails, park maintained roads -from March 15 ?July 31.

15) Pages 125; 392 ? 396: SEA TURTLES. I disagree with the stats and procedures proposed. I think endangered sea turtles would benefit from management practices now in use at other federal seashores that are more proactive in efforts to achieve nesting success. This includes relocating nests to more desirable locations as is done in other state and federally controlled areas.

The Cape Hatteras National Seashore Recreational Area is on the northernmost fringe of turtle nesting locations for the southeast, accounting for about 1% of all turtle nests. Proposed buffer areas are not needed for protection of the turtles and amount to overprotection.

16) Pages 97- 101. I strongly disagree with proposals in this section saying that ORVs will be prohibited year round between ramps 27 and 30, at Hatteras Inlet (Hatteras Spit), Ocracoke Inlet (North Ocracoke Spit) and various other locations.

Not allowing ORV access is paramount to denying the public access to these beaches. They are located miles from the nearest parking or paved road area and too far to access on foot. As a matter of course, there has been no breeding of piping plover or other endangered species at the Hatteras Island Inlet (spit) area in the past 6 years.

17) Page 104: I disagree with the proposed night time driving closures. Per your proposals, night driving will be prohibited between May 1 and November 15th, forcing visitors off of the beaches early in the evening and preventing sunrise surf fishermen access in the morning. I propose a more moderate night time ban if one is needed, perhaps from June 1 ? September 15 with times being 1 hour after sunset and 1 hour before sunrise to allow beach goers to gather their stuff and exit the beach area.

Certainly more proactive measures such as relocating nests prone to weather and ocean events would dramatically increase the nesting success rates.

18) Page 121: I disagree with the proposed beach closings, including pedestrian access from March 15 until July 31 in 8 different beach locations which have traditionally been available. Please leave these areas open to beach walkers, shell collectors and those that want to access the beaches in these areas.

Conclusion:

Please, incorporate access corridors through any SMA so we can get to the open beach beyond. Incorporate the birds into the count that nest on the spoil islands. Base your buffer zones on peer reviewed science and scale them back to more reasonable distances as discussed.

It is neither logical nor reasonable to spend so much time, money and energy to overprotect a bird (Piping Plover) in the Cape Hatteras National Seashore that is on the southernmost fringe area of its breeding ground. That goes for the loggerhead turtle that is in its northernmost breeding area. Let's scale back the buffer zones. You can always increase at a later date.

The USPS is leaning way over the line on over protection and not enough on the public's right to enjoy the beaches of the National Seashore. The proper balance is not achieved in the propose DEIS and needs to be modified so that the proper balance of reasonable resource protection and access to the beaches of the National Park is achieved. I could sum it up by saying "Protect, not Prohibit."

Thank you,

Correspondence Type: Web Form

Correspondence: My comments concern the DEIS of the Off-Road Vehicle Management Plan prepared by the National Park Service (NPS) for the Cape Hatteras National Seashore Recreation Area.

1) Page 201: I disagree with the NPS statement: "Even with resource closures in place, protected species are still at risk [from pedestrians and ORVs]." No Piping Plover deaths have been attributed to ORVs. ORV violations continue to decrease as signage and education improve. Pedestrian violations are much more significant than ORV violations. It seems to me that any transgressions into protected area are the result of lack of NPS manpower and enforcement than the public purposely and willfully violating out of bounds areas.

2) Page xxiv: I question the statement of as per the DEIS: "Carrying capacity would be a 'peak use limit' determined for all areas based on the linear feet of beachfront?" If you close off huge sections of the beach, you force more people into smaller areas, potentially resulting in more resource impairment and diminished visitor experience.

3) Page xix and page 23: I am against having two different closures rules pertaining to the North facing beaches (North side) and the South facing beaches (South side) as per the grid outlined in Alternative "F". I disagree with the NPS proposal to close the beaches in villages of Frisco, Hatteras and Ocracoke Villages to ORV access longer than the traditional May 15 to September 15 period for the Northern beaches, even though seasonal visitor statistics are similar for all villages. Please, make them the same: May 15 -> September 15.

4) Page 1: I agree with your statement "ORVs have long served as a primary form of access for many portions of the beach in the seashore, and continue to be the most practical means of access and parking for many visitors."

However, pedestrian only areas discriminate against individuals with limited mobility due to age or physical impairments, families with small children, and those wishing to engage in activities requiring recreational equipment (boogie boards, beach umbrellas, beach chairs, coolers, fishing rods and tackle, etc)

5) Page 53: I disagree with the special use permit proposed guidelines. It is impractical to allow the transportation of disabled visitors to the village beaches and then require the vehicle to be returned to the street or parking area. This necessitates the disabled person to have a driver to drop him (or her) off, then drive to a parking area, then trudge a long distance to the site of the drop off, then trudge the long distance through the sand back to get the vehicle.

Suppose the handicap person wants to go to the beach, is capable of driving himself, yet cannot find another person to go with him? Does he now not go to the beach? This rule creates unnecessary hardships and risks in the event of an emergency as well.

6) Page 121 ? 127. I strongly disagree with the buffers as presented. We must allow for pass-thru corridors. The beach is linear with the ocean buffering on one side and the dune line on the other. For example - If you pinch off access on one side of a 4 mile linear beach and pinch off access on the other side of the 4 mile section of beach with no corridor, then you effectively have closed off all 4 miles of the beach because you CAN'T get there. The proposed bird buffers are too large, blocking access to the interior sections from the two "buffered" ends.

I propose ORV pass-thru only corridors and to use breeding / nesting buffer distances to establish ORV pass through only corridors to ensure beach access in a way that does not hinder resource protection. I believe pass through corridors should be maintained for pedestrians and ORVs in all areas of the Cape Hatteras National Seashore Recreation Area throughout the entire breeding and nesting season. Corridors are vital to providing access in a way that does not hinder resource protection.

Piping Plover unfledged chicks buffer should move with the brood as it relocates to reliable food source, not expanded.

The 1,000 meter distance for the piping plover is way too large and not based upon peer reviewed science. A more rational distance would be 200 meters per other sites in the nation for the piping plover. Ample scientific evidence and precedent exists to support a 200 meter buffer.

Buffers for other species, including American Oystercatchers, Least Terns and Colonial Waterbirds must also be changed. An effective 30 meter buffer should be established for these species rather than the 300 meter closure outlined in the DEIS.

NON-ENDANGERED BIRDS should not have same protection as if endangered. Not allowing ORV access is paramount to denying the public access to these beaches.

7) Page 468: I disagree with the limitations imposed on pedestrian and ORVs. Corridors or bypasses should be provided thru, around or below high tide line in all SMAs during entire breeding season to maintain access.

8) Page 124: I strongly disagree with the NPS slant of providing for over protection of resource management over that of the public's right to access the beaches. Pro-active initiatives include: Vegetation Management, Habitat Management, Enhanced Predator Management, Colonial Water bird social attraction, Piping Plover check fledge rate, Piping plover chick buffer distance, and pass-through buffers during the incubation period. Opportunities to implement less restrictive closures as a result of the above initiatives should be considered more frequently than the 5-year periodic review process identified in the DEIS.

9) I disagree with the NPS Resource Management Pedestrian / ORV Closure Policies. These policies address the least significant factors affecting nest survival with little chance to have more than negligible impact. For example: the AMOY Nest Failures are predominately due to non-human events. Using your own stats, the mammalian predation is 54%, Storm / Lunar Tides: 29%, Nest Abandonment: 6%, Avian Predation: 5%, and Ghost Crab Predation: 3%,

So what is the percentage due to human interference: just 3%! It's insignificant, yet the NPS wants to ban humans when their actions provide very little influence on the success rate of breeding birds and turtles.

10) I disagree with the stats of breeding plovers and the other birds in the Park when the NPS does not adequately consider locations neighboring the Recreational Area that are part of the same ecosystem, namely dredge and spoil island that are located just yards away and within sight of the seashore. These birds are part of the same ecosystem and should be included.

Those spoil islands, developed by man from dredging the waterways in the Pamlico Sound for channel upkeep are slammed full of birds. The reason why so many birds? NO PREDATORS. SO, birds are not as stupid as one might think. You have to count these birds and incorporate them in the stats when the NPS is talking about any so called decline in breeding pairs in the National Park.

11) Page 1: I do not think the DEIS responsibly addresses the cultural resource issues. The very purpose of the DEIS as set forth in the National Environmental Policy Act (NEPA) is to protect and preserve natural and cultural resources in the federal decision making process. In the DEIS, the statement "protect and preserve natural and cultural resources" appears in the first sentence of the first page of the plan, in the Purpose of the Plan section, and numerous times thereafter. Yet, the 810 page document devotes only two paragraphs to analysis of cultural resource issues.

12) Pages 270-281; 561-598: I strongly disagree with your economic analysis of the impact of the DEIS. The region of influence (ROI) incorporates the Northern Beach communities, including Kill Devil Hills, Kitty Hawk, Southern Shores and Duck. These areas are almost completely disconnected from ORV use and access issues relating to the Seashore. ? Inclusion of the Northern Beaches in analysis significantly dilutes estimates of economic impact on the 8 Seashore Villages

? Analysis of economic impact to the Seashore Villages appears to be significantly down played. Emphasis in DEIS is on the ROI-wide or county-wide

level impacts.

? Nowhere is it clearly addressed that the overwhelming majority of negative impacts will be felt by small businesses in the Seashore Villages rather than by overall economic interests within the greater ROI.

On page xlvi, Alternative F is characterized as having a "negligible to moderate" adverse impact on small businesses. I strongly disagree with this statement.

I believe the negligible to moderate projection is inaccurate and relies on economic surveys that has not yet been published. Furthermore, this material is not expected to be added to the DEIS until after the public comment period has ended.

Based upon the economic harm we have already experienced under the consent decree, Dare County projects the economic impact of Alternative F to be substantial.

Beach closures have already had a devastating and unfair impact on many Dare County Businesses, causing foreclosures, bankruptcies, lay-offs, cutbacks, expensive refinancing, and depleted college funds and savings accounts.

Pages 270-286, 561-598: The socio-economic data and analyses are incomplete and erroneous and result in an understatement of the effect the restrictions will have upon the Island, the region and the state of NC. The US Park Services answer: Businesses will have to "adapt" to the new rules. (p.383) The negative economic impacts of the decree ARE KNOWN, so to say that the added restrictions would have negligible to moderate impact is indefensible.

13) Overall Visitor Counts - Overall visitor counts appear to include visitors to Fort Raleigh National Historic Site and the Wright Brothers National Memorial. A large percentage of these visitors vacation in the Northern Beaches communities and recreate on the non-federal beaches outside of the Seashore. Visitors who patronize the Fort Raleigh National Historic Site and the Wright Brothers National Memorial but do not visit the actual seashore areas need to be factored out.

Maintenance of Future Access to Cape Point and South Point Ocracoke: All socioeconomic analyses related to Alternative F are predicated on the assumption that access corridors will remain open for at least an appreciable portion of the visitor high season. Under Alternative F, the access corridors will be subject to Resource Closures based on buffers similar or identical to the Consent Decree. Unless some predictability of access to Cape Point and South Point Ocracoke can be assured, economic analyses predicated on assumption of access are fundamentally flawed.

Why would a group of surf fisherman want to come to Hatteras Island to surf fish if they are not sure they can access the prime fishing grounds at Cape Point? The answer is they won't come. If they don't come, they don't rent vacation homes and spend their money on Hatteras and Ocracoke Islands.

The definition of the Region of Influence (ROI), faulty data on economic activity generated by specific type recreational activity, incomplete visitation/business survey data, inflated overall Seashore visitor counts pertaining to beach use, and flawed key assumptions concerning the maintenance of access under Alternative F, all lead to inaccurate conclusions in the socioeconomic analyses. Specifically, these inaccuracies can be seen as understating the negative socio-economic impact of the Seashore Villages. Further, this negative impact will be absorbed almost entirely by Small Businesses. Neither of these important aspects of the management alternatives are adequately presented in the DEIS.

14) Page 136: I strongly disagree with your pet restriction proposals. The "prohibition of pets in the Seashore during bird breeding season including in front of the villages." = No Pets in public areas ?beaches, campgrounds, soundfront, foot trails, park maintained roads -from March 15 ?July 31.

15) Pages 125; 392 ? 396: SEA TURTLES. I disagree with the stats and procedures proposed. I think endangered sea turtles would benefit from management practices now in use at other federal seashores that are more proactive in efforts to achieve nesting success. This includes relocating nests to more desirable locations as is done in other state and federally controlled areas.

The Cape Hatteras National Seashore Recreational Area is on the northernmost fringe of turtle nesting locations for the southeast, accounting for about 1% of all turtle nests. Proposed buffer areas are not needed for protection of the turtles and amount to overprotection.

16) Pages 97- 101. I strongly disagree with proposals in this section saying that ORVs will be prohibited year round between ramps 27 and 30, at Hatteras Inlet (Hatteras Spit), Ocracoke Inlet (North Ocracoke Spit) and various other locations.

Correspondence:	I disagree with the plan to regulate the Cape Hatteras National Seashore in the manor you have provided. The disregard for "ALL" information is troubling. The park service has provided adequate protection for plant life, animals and visitors since the park opened. While it is true the population has increased there is no reason to close this RECREATION area and treat it as though it were a refuge. We hope you will act on this in the correct manor. Our Children will thank you for making the right decision. If the wrong decision is made then they will never know the beauty of the Outer Banks, and that will be tragic.

Correspondence:	137 Steve Basnight Road Manteo, NC 27954 May 11, 2010 RE: Cape Hatteras National Seashore ORV Negotiated Rulemaking Management EIS Dear Cape Hatteras National Seashore Officials, We are writing to comment on the Draft Environmental Impact Statement (DEIS) for managing Off Road Vehicle traffic at the Cape Hatteras National Seashore. We submit these comments as private citizens and long-time residents of Dare County, and not as representatives of our employers. In addition, we would like to state that we wholeheartedly support beach driving in CAHA but oppose management of the beaches as nothing more than a highway. We believe it is essential that a comprehensive, balanced management plan be adopted, implemented and enforced. We have reviewed the						

DEIS and are especially concerned about the paucity of quality, year-round pedestrian-only access. When we moved to Dare County in 1985, there was year-round pedestrian-only access in several locations, including from Ramp 1 to Coquina Beach and at what was then the Cape Hatteras Lighthouse beach south to Ramp 43. Pedestrian-only access continued for several years after the lighthouse was moved to its current location. Opening of these beaches to ORVs has occurred only during the tenure of the current superintendent. From examining the preferred alternative F, it seems that several of the pedestrian-only beaches are in areas where the beach is too narrow for driving. These areas would likely be closed to vehicles anyway because of safety concerns. In addition, some of the pedestrian-only areas are among the least desirable in the park. The area on the north end of Buxton is an example. The narrowness and steepness of the beach, the lack of any semblance of a natural beach setting and the noise from traffic on nearby roads would not give pedestrians along this stretch a quality park experience. In other instances, beaches are closed to ORVs only during the bird nesting season, and pedestrians would be confined to narrow corridors. An example is the 1.9 mile seasonal closure from .2 miles south of Ramp 4 to the bait pond. This would not allow the kind of relaxed beach walks that have always been one of the most important qualities afforded by the national seashore. The sad reality is this: The beaches are narrowing because of erosion and the continued insistence that Highway 12 be maintained in its current location. Because of this, everyone is losing?the ORV drivers, the pedestrians, and the birds and other wild animals that use the beaches and dunes as vital habitat. Without a paradigm change in beachfront management that will allow the islands' natural geologic migration, the National Park Service is simply struggling to cut up an ever-diminishing pie. While NPS has attempted to balance the needs of all users, we feel alternative F gives an abundance of access to those park visitors who want to drive the beaches and very little to those who want to enjoy wide, quiet beaches without having to be alert for and interrupted by motorized traffic. An alternative should be developed that provides additional pedestrian-only areas for the large number of seashore users who value a more natural experience. Thank you for this opportunity to comment. Sincerely, Jeff and Jan DeBlieu

Correspondence: I disagree with Closure Due to Birds addressed on page 468 - ML1 closure is too restrictive during breeding season; pedestrian and vehicular corridors should be provided for in order to mitigate significant economical impacts.
The closures should be moved, and not expanded, as birds relocate for access to food (ref pages 121-127)
I also disagree with the size of closure areas; they are extremely large for the population of birds
It is also not clear to me why the NPS has not addressed other areas (dredge islands, reefs in the sounds, Pea Island, etc) that would be more conducive to survival and also present fewer predators issues to deal with.
page 125 - Turtle Closures: Why not relocate the turtle nests? It seems that this would provide safer hatching areas and also eliminate the need to close areas of the beach for extended periods of time. As a minimum NPS should consider reducing closure times based on more accurate gestation periods. If turtles can be relocated before storms, why not simple relocate them earlier with an eye toward facilitating more success during the hatching process?
It seems clear to me that the Cultural & Historic Values have been slighted in the entire study, why? Only two paragraphs address this issue in an 800 page document. These traditional values have not been given their due.
The socioeconomic data (pages 270-281, 561-698) seem to result in erroneous conclusions re: Region of Influence, visitation/business surveys, recreational user data.
Why does the NPS selectively eradicate predators? There should be an overall integrated predator management policy that is made a part of the public record.

Correspondence: Caring about wildlife is appreciated, but the conservationist/National Park Service seems more concerned about wildlife welfare than human welfare.
The proposed rules seem to exclude regular people who want to enjoy the parks, and eliminate access for the handicapped and the elderly. That seems to be especially true for fishermen/women who have to LUG a significant amount of equipment considerable distances to fish IF BEACH ACCESS IS ALLOWED.
Is it your intent to deny access to the average Joe and Jane?

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are important to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent a fair balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information. Wildlife disturbance buffers in the preferred plan are minimums and should be increased if necessary to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence: Dear Superintendent Murray,
Please accept this letter as my comment on the ORV DEIS before you at this time.
After reviewing the National Park Service DEIS I must disagree with any of the six alternatives within the document.
I have reviewed the 77 page Coalition for Beach Access Position Statement signed by several groups that were a part of the negotiated rule making process and it by far succeeds in furnishing the best visitor experience while maintaining the needs of protecting the fragile resources.
Please consider all aspects of this alternative and put people back into the management of Cape Hatteras National Seashore.
Sincerely,
Jenna C. Auwarter

Correspondence: Comments on the Cape Hatteras National Seashore ORV Management Plan DEIS I wish to thank the National Park Service for an opportunity to comment on the Cape Hatteras National Seashore ORV Management Plan DEIS. As a concerned citizen, scientist, retired public administrator and university educator, I feel it is my professional and civic duty to make timely comment on a matter that affects thousands of citizens who wish to visit and have access to the Cape Hatteras National Seashore.
Comment 1 There is a clear need for an equitable, balanced, and effective seashore access policy and management plan. Growing national population, seashore visitation, transportation avenues into the Outer Banks region mandates an access management policy?but one which has widespread public support and one that balances the rights and traditions of public use and access to the national seashore with responsible but reasonable resource protection.
As currently structured, Alternative F is not primarily an ORV management plan. It is primarily a public access restriction plan. The plan is biased toward bird and turtle protection, seashore isolation and not to a reasonable extent on public use and visitor access??specifically ORV and pedestrian access.
Responsible environmental management uses sound science and unbiased professional judgment that balances the human needs and rights of people with the needs to manage and sustain natural processes. The preferred proposal, Alternative F, fails to meet these criteria. Alternative F fails to recognize objective science, enabling legislation, citizen rights, historical uses, and past promises of access to their environment.
Promulgation of Alternative F as it is currently structured will be the basis for widespread public dissatisfaction, continued distrust of government, especially the National Park Service, and costly litigation. Comment 2 As indicated by Alternative F, it is the intention of National Park Service (NPS) to transform a major part of the Cape Hatteras National Seashore Recreational Area?set aside over 70 years ago for use and enjoyment of American citizens??into a wildlife sanctuary, predominantly a national bird and turtle use area. NPS is using as its justification for this radical transformation and departure from traditional and intended public use, a thirty-five year old executive order directing NPS to formally promulgate an ORV management plan.
Alternative F management plan, with its excessive restrictions and denial of public access, both pedestrian and ORV, is in large part incompatible with the legislative purpose and intent of why the national seashore was established (16USC459 CHNSRA Enabling Legislation): "said area shall be, and is, established, dedicated, and set apart as a national seashore recreational area for the benefit and enjoyment of the people and shall be known as the Cape Hatteras National Seashore Recreational Area."
Nowhere is it indicated in the DEIS where enabling legislation intends or permits both pedestrian and vehicular access denial for a major part of the year, particularly visitor or vacation season. Comment 3 NPS Request for public comment appears to be more of a bureaucratic process than a search for substantive decision-making information.
By virtue of its massive size, complexity, biased and incomplete explanation of science, and the inability for members of the public to access cited scientific literature and references, and ask questions of government officials responsible for the science and DEIS content, no single citizen can effectively review, understand, and constructively comment or suggest improvement to the DEIS in the 60 day comment period.
It appears by way of emphasis in the discussion in the DEIS that NPS has every intention to promulgate Alternative F in the next year, regardless of past or present public comment. There is virtually no significant reference to the work by the public provided in the early stages of the plan development process or to countless constructive comments made by the public during the 15 month Regulation Negotiation Process.
The National Park Service (NPS) should make it known to the public the specific information it seeks so as to make a final, objective decision with regard to an ORV management plan for Cape Hatteras National Sea Shore Recreational Area. Thus far NPS has failed to do so. By not asking for specific information, NPS is simply "going through the motions" superficially, and wasting the public's time.
Comment 4 NPS presents Alternative F as if it were recommended by the recent Regulatory Negotiation process. However, upon close examination Alternative F is found to be a biased and highly restrictive management plan that is in complete opposition to majority recommendations of the recent Regulation Negotiation process. Alternative F strengthens and codifies the denial of public access provisions of the current consent decree. The public access denying provisions of the consent decree, put into effect April 30, 2008, have been extended and transferred to Alternative F. The majority of Regulatory Negotiation Committee stakeholders (19 vs. 5) and numerous public commentators did not recommend an extension of the restrictive provisions of the consent decree as part of a final ORV plan.
Comment 5 If promulgated, Alternative F will significantly change the economy and unique culture of the Outer Banks. The DEIS has failed to properly assess those changes. The Economic Impact Analysis found the DEIS by its own admission is incomplete. This alone is the basis for future litigation

challenging the legality of the proposed plan. In addition the Economic analysis is structured in such a manner that it fails to address full costs?direct costs, indirect costs, lost opportunity costs, costs of future liability, and hidden costs.

The Economic Analysis fails to recognize that the national seashore environment is a unique form of capital that serves the local economy, and in turn the health and wellbeing of citizens and families that depend of that economy. Access to the seashore is essential for family business operations on the Outer Banks.

The cost to society and the local communities under the restrictive consent decree has now been extended indefinitely into Alternative F. Economic losses in millions of dollars have occurred to island businesses especially motels, campgrounds, restaurants and tackle shops. The full costs of Alternative F are very much understated in the DEIS. Annual economic losses under the consent decree are already in excess of those estimated by Research Triangle Institute.

Comment 6 The DEIS has failed to inform the public of the extent of expected closures to the most popular recreational sites of the national seashore. Experience with the consent decree closures for the past two years (2008, 2009) provide a clear indication of the extent to which the national seashore will be closed to public access?ORV and pedestrian. In recent court testimony the National Seashore Superintendent indicated the extent of the closures, but nowhere does that data appear in the DEIS. The public should know what to expect when Alternative F is promulgated. The Bodie Island Spit was closed a total of 136 days in 2009. Cape Point was closed 101 days in 2009. The Hatteras Island Spit was closed 125 days and south Ocracoke was closed 80 days. These are some of the most popular recreational use areas at the national seashore which will not be accessible to the public during late spring and summer months.

Comment 7 Nowhere in the DEIS is it indicated that should listed species populations grow in size through natural population cycles or management programs, the public loses even more access given the way the boundary distance are applied.

Comment 8 Nowhere in the DEIS is it mentioned that protected species populations are growing without the needs of additional restrictions such as those of consent decree and Alternative F.

Published USFWS data suggests that the piping plover is "recovering" well beyond 1986 levels and do not suggest that additional restrictions beyond regional recovery plans are necessary or essential at the Cape Hatteras National Seashore Recreational Area for the continued recovery of the species.

Piping Plover--Atlantic Coast Pairs

Year 1986 1999 2005 2006 2007 Nesting Pairs (est.) 790 1386 1632 1749 1880

<http://www.fws.gov/northeast/pipingplover/index.html>

Comment 9 Data collected and published by NPS in recent suggest that Cape Hatteras National Seashore Interim Management Plan prepared with public input and publically reviewed in 2005, published in the Federal Register was showing every sign of being effective at protecting birds and natural resources. The Interim Management Plan was set aside by the court and replaced by the consent decree and settlement that mandated extensive closures without public comment or review.

The consent decree closures of recent years have been of exorbitantly high cost to the public but have not contributed to an improvement in species production or safety. The consent decree has produced no natural resource benefit over and above the interim plan. The fledge counts were higher under the interim plan than under the consent decree. 7 Piping Plovers fledged in 2008 under the interim plan, 6 in 2009 under the highly restrictive consent decree. 17 American Oyster Catchers (AMOY) fledged in 2008 under the interim plan and 13 in 2009 under the highly access restrictive consent decree, the same management structure now found in Alternative F. Species productivity is decreasing under consent decree and now Alternative F restrictions.

Comment 10 The majority of nests and hatched birds the past two closure seasons under the consent decree were lost to predation, a few to storms, one at the hands of a university researcher trying to band a bird. None has been lost to ORVs or pedestrians accessing the national seashore. The huge closure distances in the consent decree and Alternative F restrictions keep pedestrians and ORVs off the seashore while birds are nesting. At the same time, the extensive closures also provide for the proliferation and increased free movement of predators. In effect, the extensive closures create an ecological trap for birds in large closures that encourage and enhance predation.

Comment 11 When the boundary distances shown on Table 11 are applied to the Alternative F framework, it is evident that the public, ORV and pedestrian, lose access to a vast amount of the seashore for most of the visitor season. Closure boundaries are overly restrictive at CHNSRA and are not used at other NPS properties. There has been no administrative or science based explanation given to the public for these especially restrictive closures that limit public access to the seashore.

NPS has failed to explain specifically why, by way of science justification, 1000 meter boundaries must be established every time a Plover chick is observed, where the literature indicates on average movement under 200 meters. There is no study or science based explanation that justifies an automatic 1000 meter boundary closure every time a plover chick is observed. In fact the public access denial consequences of such management policy for a national seashore set aside for public use is excessive and does not indicate a balance of responsible usage.

If, as the Alternative F regulation dictates, one extends a boundary out 1000m in every direction from a nest, one creates a circle with a boundary circumference of approximately 3.9 miles, and an area of approximately 1.2 square miles or approximately 775 acres. Given that the boundary regulation dictates 775 acres of national seashore be set aside for the exclusive use of a plover chick?during the height of vacation and visitor season, it obviously does not take too many widely distributed plover chicks to shut down a significant portion of Cape Hatters National Seashore Recreational Area especially if the Plover population increases.

Comment 12 Alternative F, as with the consent decree, establishes a policy of denial of access punishment for the general public when intrusions into closure areas occur. Every time there is a closure intrusion the National Park Service, now at its own discretion, extends restrictive boundaries and widens non-access areas. There is no basis in science or environmental management practices that justifies such punitive measures.

Comment 13 Many of the references used to justify Alternative F are those of individuals and activists organizations who have supported litigation that denies public access. The major science references are published by environmental activist organizations and authored by individuals trying to shut down ORV access to the national seashore: Audubon, Blue Water, Hatteras Island Bird Club, etc. Most of these references have not been reviewed for their accuracy or objectivity and are unsuitable for government decision-making. Many of the references are out dated, biased, contain incomplete and misleading information, and few have ever been reviewed in open forum. Comment 14 NPS has failed to provide the public with essential items of information, specifically properly reviewed science. The main science references are unsuitable and inappropriate as the basis for a government regulation that restricts public access to the national seashore and has significant negative impacts on the Outer Banks economy.

The 2005 USGS Protocols are indicated by NPS as the primary basis for the highly restrictive boundary distances that restrict public access to the national seashore. The USGS Protocols are cited as being "in press" 5 years after they first appeared on the Park Service website. The 2005 USGS Protocols were challenged two years ago as being in non compliance with USGS Peer Review Policy. At that time the documents were not dated, had no government publication number, and were not published in the open literature or Federal Register and were clearly unsuitable to be a credible scientific basis for government decision-making, especially costly regulation. The documents were sent back to USGS for "review" in 2009, five years after they were first made known to the public.

NPS has indicated a new citation for the USGS Protocols. They are currently referenced on page 660 as: Cohen, J.B., R.M. Erwin, J.B. French Jr., J.L. Marion, and J.M. Meyers In press, Recommendations for Management of Endangered Species at Cape Hatteras National Seashore. U.S. Geological Survey Open-File Report 2009-1262.

NPS uses the USGS protocol recommendations as if they are "best available science." They are not science and have not been shown to be connected with specific scientific studies. The management options presented in the protocols are the policy and management recommendations and opinions of biased and non-reviewed contributors, deemed by USGS to the "experts." Nowhere is a specific science basis (study, data) for a given management option?established solely for the Cape Hatteras National Seashore Recreational Area??demonstrated.

In a slightly modified introduction to the most recent release of the Protocols, the government official responsible for the document states: "Although no new original research or experimental work was conducted, this synthesis of the existing information was peer reviewed by over 15 experts with familiarity with these species. This report does not establish NPS management protocols but does highlight scientific information on the biology of these species to be considered by NPS managers who make resource management decisions at CAHA."

The new publication was not accessible, peer reviewed, or fully explained by government authority at the time the DEIS was submitted to the public for comment in early March 2010.

The literature reviews found in the USGS Protocols as currently published are significantly out of date. In fact many studies were decades out of date at the time the document was prepared in 2005. They are mainly non-replicated, selective papers and studies. Many citations are over 20 years old and

most are not related to the Cape Hatteras National Seashore Recreational Area. The public does not have access to the literature reviewed in this essential report and most of the citations are so insignificant they cannot even be found in a major university library (UNC-CH). Comment 15 There is an "appearance of impropriety" and "conflict of interest" associated with the primary science basis justification for the Alternative F recommendation.

As noted two years ago, the cited protocols are not reviewed consistent with published USGS peer review policy guidelines (<http://www.usgs.gov/usgs-manual/500/502-3.html>) especially with regard to full disclosures and conflicts of interests. In fact the Protocols were developed and prepared in large part by well known environmental activists who subsequently used them as the basis for law suit against NPS, thus creating a very clear conflict of interest in full view of the federal government.

A review of the public record indicates that USGS commissioned well known environmental activist scientists to selectively review and discuss the science as they choose to represent it, and then formulate and recommend management options and policies. There was no outside questioning and review of their work—paid for by federal tax dollars.

It is clear to those of us who understand the scientific methods and process, objective scientific review, and the internal workings of federal government, that the 2004-2005 cooperative agreement review of the science (undertaken in part by members of the Audubon Society and other activist organizations) is biased and selective, misrepresented, fraught with speculation and opinion, and in many cases based on information that has nothing whatsoever to do with Cape Hatteras National Seashore.

In 2005 the architects of the access denying protocols were acknowledged for their contributions. For nearly three years now we have asked NPS and USGS to identify the "independent outside reviewers" of the USGS Protocols consistent with USGS Peer Review Policy. We are now being informed by USGS through their press office that the "science peer reviewers" are the original contributors and architects of the Protocols (which are not science at all, but policy and management opinions/recommendations that regulate the public and deny public access to the national seashore). We are also being informed by press officials that it is the policy of USGS to not identify outside independent peer reviewers or their comments. This is a violation of the Freedom of Information Act and the Federal Advisory Committee Act.

Some of the original contributors (Cohen and Golder) have used the Protocols to be the basis for litigation and insist on denial of public access to the seashore. A lead author "J.B. Cohen" has previously shown his conflict of interest and activist affiliation when he "J.B. Cohen" signed a sworn affidavit in support of the Consent Decree for SELC (2008) and also signed the recent Audubon letter directed at NPS Officials recommending the highest level of access restriction (2009). Scientists working on behalf of the public cannot turn around and use that same work to sue to public without having the objectivity of their work called into question.

For over 15 months of Regulation Negotiation Process, Golder, other environmental activist members, and the federal government never disclosed participants' roles in the design of the Protocols, but constantly referred to them as being the definitive "best available science" justification for closures. Golder and others now appear as "peer reviewers" of their own work. This is discrediting in and of itself, but what is most disturbing and unethical about this is the fact that this highly biased, pseudo science process, sponsored by the federal government, has denied thousands of citizens access to their national seashore and will continue to do so unless it corrected by NPS, the federal courts, or the congress.

The above is clearly a "apparent conflict of interest" known to NPS and USGS officials and calls into question the credibility of science which in the public policy making process—specifically that of denying public access to the national seashore—must be "objective" beyond any doubt. Local media have noted this "apparent conflict of interest" and brought it to the attention of NPS and USGS officials who refuse to offer an explanation or response. The best course of action to resolve this matter is to turn the science review and update over the National Academy of Sciences or some other neutral party, to objectively, critically, and comprehensively review all relevant science, disclose the facts and restore some public trust in the scientific process used as the basis for environmental management decisions at Cape Hatteras National Seashore.

Respectfully Submitted

Correspondence Type: Web Form
Correspondence: My comments concern the DEIS of the Off-Road Vehicle Management Plan prepared by the National Park Service (NPS) for the Cape Hatteras National Seashore Recreation Area.

- 1) Page 201: I disagree with the NPS statement: "Even with resource closures in place, protected species are still at risk [from pedestrians and ORVs]." No Piping Plover deaths have been attributed to ORVs. ORV violations continue to decrease as signage and education improve. Pedestrian violations are much more significant than ORV violations. It seems to me that any transgressions into protected area are the result of lack of NPS manpower and enforcement than the public purposely and willfully violating out of bounds areas.
- 2) Page xxiv: I question the statement of as per the DEIS: "Carrying capacity would be a 'peak use limit' determined for all areas based on the linear feet of beachfront?" If you close off huge sections of the beach, you force more people into smaller areas, potentially resulting in more resource impairment and diminished visitor experience.
- 3) Page six and page 23: I am against having two different closures rules pertaining to the North facing beaches (North side) and the South facing beaches (South side) as per the grid outlined in Alternative "F". I disagree with the NPS proposal to close the beaches in villages of Frisco, Hatteras and Ocracoke Villages to ORV access longer than the traditional May 15 to September 15 period for the Northern beaches, even though seasonal visitor statistics are similar for all villages. Please, make them the same: May 15 -> September 15.
- 4) Page 1: I agree with your statement "ORVs have long served as a primary form of access for many portions of the beach in the seashore, and continue to be the most practical means of access and parking for many visitors." However, pedestrian only areas discriminate against individuals with limited mobility due to age or physical impairments, families with small children, and those wishing to engage in activities requiring recreational equipment (boogie boards, beach umbrellas, beach chairs, coolers, fishing rods and tackle, etc)
- 5) Page 53: I disagree with the special use permit proposed guidelines. It is impractical to allow the transportation of disabled visitors to the village beaches and then require the vehicle to be returned to the street or parking area. This necessitates the disabled person to have a driver to drop him (or her) off, then drive to a parking area, then trudge a long distance to the site of the drop off, then trudge the long distance through the sand back to get the vehicle. Suppose the handicap person wants to go to the beach, is capable of driving himself, yet cannot find another person to go with him? Does he now not go to the beach? This rule creates unnecessary hardships and risks in the event of an emergency as well.
- 6) Page 121 ? 127. I strongly disagree with the buffers as presented. We must allow for pass-thru corridors. The beach is linear with the ocean buffering on one side and the dune line on the other. For example - If you pinch off access on one side of a 4 mile linear beach and pinch off access on the other side of the 4 mile section of beach with no corridor, then you effectively have closed off all 4 miles of the beach because you CAN'T get there. The proposed bird buffers are too large, blocking access to the interior sections from the two "buffered" ends. I propose ORV pass-thru only corridors and to use breeding / nesting buffer distances to establish ORV pass through only corridors to ensure beach access in a way that does not hinder resource protection. I believe pass through corridors should be maintained for pedestrians and ORVs in all areas of the Cape Hatteras National Seashore Recreational Area throughout the entire breeding and nesting season. Corridors are vital to providing access in a way that does not hinder resource protection.

Piping Plover unfledged chicks buffer should move with the brood as it relocates to reliable food source, not expanded.
The 1,000 meter distance for the piping plover is way too large and not based upon peer reviewed science. A more rational distance would be 200 meters per other sites in the nation for the piping plover. Ample scientific evidence and precedent exists to support a 200 meter buffer.
Buffers for other species, including American Oystercatchers, Least Terns and Colonial Waterbirds must also be changed. An effective 30 meter buffer should be established for these species rather than the 300 meter closure outlined in the DEIS.
NON-ENDANGERED BIRDS should not have same protection as if endangered. Not allowing ORV access is paramount to denying the public access to these beaches.

7) Page 468: I disagree with the limitations imposed on pedestrian and ORVs. Corridors or bypasses should be provided thru, around or below high tide line in all SMAs during entire breeding season to maintain access.

8) Page 124: I strongly disagree with the NPS slant of providing for over protection of resource management over that of the public's right to access the beaches. Pro-active initiatives include: Vegetation Management, Habitat Management, Enhanced Predator Management, Colonial Water bird social attraction, Piping Plover check fledge rate, Piping plover chick buffer distance, and pass-through buffers during the incubation period. Opportunities to implement less restrictive closures as a result of the above initiatives should be considered more frequently than the 5-year periodic review process identified in the DEIS.

9) I disagree with the NPS Resource Management Pedestrian / ORV Closure Policies. These policies address the least significant factors affecting nest survival with little chance to have more than negligible impact. For example: the AMOY Nest Failures are predominately due to non-human events. Using your own stats, the mammalian predation is 54%, Storm / Lunar Tides: 29%, Nest Abandonment: 6%, Avian Predation: 5%, and Ghost Crab Predation: 3%.

So what is the percentage due to human interference: just 3%! It's insignificant, yet the NPS wants to ban humans when their actions provide very little influence on the success rate of breeding birds and turtles.

10) I disagree with the stats of breeding plovers and the other birds in the Park when the NPS does not adequately consider locations neighboring the Recreational Area that are part of the same ecosystem, namely dredge and spoil island that are located just yards away and within sight of the seashore. These birds are part of the same ecosystem and should be included.

Those spoil islands, developed by man from dredging the waterways in the Pamlico Sound for channel upkeep are slammed full of birds. The reason why so many birds? NO PREDATORS. SO, birds are not as stupid as one might think. You have to count these birds and incorporate them in the stats when the NPS is talking about any so called decline in breeding pairs in the National Park.

11) Page 1: I do not think the DEIS responsibly addresses the cultural resource issues. The very purpose of the DEIS as set forth in the National Environmental Policy Act (NEPA) is to protect and preserve natural and cultural resources in the federal decision making process. In the DEIS, the statement "protect and preserve natural and cultural resources" appears in the first sentence of the first page of the plan, in the Purpose of the Plan section, and numerous times thereafter. Yet, the 810 page document devotes only two paragraphs to analysis of cultural resource issues.

12) Pages 270-281; 561-598: I strongly disagree with your economic analysis of the impact of the DEIS. The region of influence (ROI) incorporates the Northern Beach communities, including Kill Devil Hills, Kitty Hawk, Southern Shores and Duck. These areas are almost completely disconnected from ORV use and access issues relating to the Seashore. ? Inclusion of the Northern Beaches in analysis significantly dilutes estimates of economic impact on the 8 Seashore Villages

? Analysis of economic impact to the Seashore Villages appears to be significantly down played. Emphasis in DEIS is on the ROI-wide or county-wide level impacts.

? Nowhere is it clearly addressed that the overwhelming majority of negative impacts will be felt by small businesses in the Seashore Villages rather than by overall economic interests within the greater ROI.

On page xlvi, Alternative F is characterized as having a "negligible to moderate" adverse impact on small businesses. I strongly disagree with this statement.

I believe the negligible to moderate projection is inaccurate and relies on economic surveys that has not yet been published. Furthermore, this material is not expected to be added to the DEIS until after the public comment period has ended.

Based upon the economic harm we have already experienced under the consent decree, Dare County projects the economic impact of Alternative F to be substantial.

Beach closures have already had a devastating and unfair impact on many Dare County Businesses, causing foreclosures, bankruptcies, lay-offs, cutbacks, expensive refinancing, and depleted college funds and savings accounts.

Pages 270-286, 561-598: The socio-economic data and analyses are incomplete and erroneous and result in an understatement of the effect the restrictions will have upon the Island, the region and the state of NC. The US Park Services answer: Businesses will have to "adapt" to the new rules. (p.383) The negative economic impacts of the decree ARE KNOWN, so to say that the added restrictions would have negligible to moderate impact is indefensible.

13) Overall Visitor Counts - Overall visitor counts appear to include visitors to Fort Raleigh National Historic Site and the Wright Brothers National Memorial. A large percentage of these visitors vacation in the Northern Beaches communities and recreate on the non-federal beaches outside of the Seashore. Visitors who patronize the Fort Raleigh National Historic Site and the Wright Brothers National Memorial but do not visit the actual seashore areas need to be factored out.

Maintenance of Future Access to Cape Point and South Point Ocracoke: All socioeconomic analyses related to Alternative F are predicated on the assumption that access corridors will remain open for at least an appreciable portion of the visitor high season. Under Alternative F, the access corridors will be subject to Resource Closures based on buffers similar or identical to the Consent Decree. Unless some predictability of access to Cape Point and South Point Ocracoke can be assured, economic analyses predicated on assumption of access are fundamentally flawed.

Why would a group of surf fishermen want to come to Hatteras Island to surf fish if they are not sure they can access the prime fishing grounds at Cape Point? The answer is they won't come. If they don't come, they don't rent vacation homes and spend their money on Hatteras and Ocracoke Islands.

The definition of the Region of Influence (ROI), faulty data on economic activity generated by specific type recreational activity, incomplete visitation/business survey data, inflated overall Seashore visitor counts pertaining to beach use, and flawed key assumptions concerning the maintenance of access under Alternative F, all lead to inaccurate conclusions in the socioeconomic analyses. Specifically, these inaccuracies can be seen as understating the negative socio-economic impact of the Seashore Villages. Further, this negative impact will be absorbed almost entirely by Small Businesses. Neither of these important aspects of the management alternatives are adequately presented in the DEIS.

14) Page 136: I strongly disagree with your pet restriction proposals. The "?prohibition of pets in the Seashore during bird breeding season including in front of the villages." = No Pets in public areas ?beaches, campgrounds, soundfront, foot trails, park maintained roads -from March 15 ?July 31.

15) Pages 125; 392 ? 396: SEA TURTLES. I disagree with the stats and procedures proposed. I think endangered sea turtles would benefit from management practices now in use at other federal seashores that are more proactive in efforts to achieve nesting success. This includes relocating nests to more desirable locations as is done in other state and federally controlled areas.

The Cape Hatteras National Seashore Recreational Area is on the northernmost fringe of turtle nesting locations for the southeast, accounting for about 1% of all turtle nests. Proposed buffer areas are not needed for protection of the turtles and amount to overprotection.

16) Pages 97- 101. I strongly disagree with proposals in this section saying that ORVs will be prohibited year round between ramps 27 and 30, at Hatteras Inlet (Hatteras Spit), Ocracoke Inlet (North Ocracoke Spit) and various other locations.

Not allowing ORV access is paramount to denying the public access to these beaches. They are located miles from the nearest parking or paved road area and too far to access on foot. As a matter of course, there has been no breeding of piping plover or other endangered species at the Hatteras Island Inlet (spit) area in the past 6 years.

17) Page 104: I disagree with the proposed night time driving closures. Per your proposals, night driving will be prohibited between May 1 and November 15th, forcing visitors off of the beaches early in the evening and preventing sunrise surf fishermen access in the morning. I propose a more moderate night time ban if one is needed, perhaps from June 1 ? September 15 with times being 1 hour after sunset and 1 hour before sunrise to allow beach goers to gather their stuff and exit the beach area.

Certainly more proactive measures such as relocating nests prone to weather and ocean events would dramatically increase the nesting success rates.

18) Page 121: I disagree with the proposed beach closings, including pedestrian access from March 15 until July 31 in 8 different beach locations which have traditionally been available. Please leave these areas open to beach walkers, shell collectors and those that want to access the beaches in these areas.

Conclusion:

Please, incorporate access corridors through any SMA so we can get to the open beach beyond. Incorporate the birds into the count that nest on the spoil islands. Base your buffer zones on peer reviewed science and scale them back to more reasonable distances as discussed.

It is neither logical nor reasonable to spend so much time, money and energy to overprotect a bird (Piping Plover) in the Cape Hatteras National Seashore that is on the southernmost fringe area of its breeding ground. That goes for the loggerhead turtle that is in its northernmost breeding area.

Let's scale back the buffer zones. You can always increase at a later date.

The USPS is leaning way over the line on over protection and not enough on the public's right to enjoy the beaches of the National Seashore. The proper balance is not achieved in the propose DEIS and needs to be modified so that the proper balance of reasonable resource protection and access to the beaches of the National Park is achieved. I could sum it up by saying "Protect, not Prohibit."

Thank you,

Correspondence: My comments concern the DEIS of the Off-Road Vehicle Management Plan prepared by the National Park Service (NPS) for the Cape Hatteras National Seashore Recreation Area.

1) Page 201: I disagree with the NPS statement: "Even with resource closures in place, protected species are still at risk [from pedestrians and ORVs]." No Piping Plover deaths have been attributed to ORVs. ORV violations continue to decrease as signage and education improve. Pedestrian violations are much more significant than ORV violations. It seems to me that any transgressions into protected area are the result of lack of NPS manpower and enforcement than the public purposely and willfully violating out of bounds areas.

2) Page xxiv: I question the statement of as per the DEIS: "Carrying capacity would be a 'peak use limit' determined for all areas based on the linear feet of beachfront?" If you close off huge sections of the beach, you force more people into smaller areas, potentially resulting in more resource impairment and diminished visitor experience.

3) Page xix and page 23: I am against having two different closures rules pertaining to the North facing beaches (North side) and the South facing beaches (South side) as per the grid outlined in Alternative "F". I disagree with the NPS proposal to close the beaches in villages of Frisco, Hatteras and Ocracoke Villages to ORV access longer than the traditional May 15 to September 15 period for the Northern beaches, even though seasonal visitor statistics are similar for all villages. Please, make them the same: May 15 -> September 15.

4) Page 1: I agree with your statement "ORVs have long served as a primary form of access for many portions of the beach in the seashore, and continue to be the most practical means of access and parking for many visitors."

However, pedestrian only areas discriminate against individuals with limited mobility due to age or physical impairments, families with small children, and those wishing to engage in activities requiring recreational equipment (boogie boards, beach umbrellas, beach chairs, coolers, fishing rods and tackle, etc)

5) Page 53: I disagree with the special use permit proposed guidelines. It is impractical to allow the transportation of disabled visitors to the village beaches and then require the vehicle to be returned to the street or parking area. This necessitates the disabled person to have a driver to drop him (or her) off, then drive to a parking area, then trudge a long distance to the site of the drop off, then trudge the long distance through the sand back to get the vehicle.

Suppose the handicap person wants to go to the beach, is capable of driving himself, yet cannot find another person to go with him? Does he now not go to the beach? This rule creates unnecessary hardships and risks in the event of an emergency as well.

6) Page 121 ? 127. I strongly disagree with the buffers as presented. We must allow for pass-thru corridors. The beach is linear with the ocean buffering on one side and the dune line on the other. For example - If you pinch off access on one side of a 4 mile linear beach and pinch off access on the other side of the 4 mile section of beach with no corridor, then you effectively have closed off all 4 miles of the beach because you CAN'T get there. The proposed bird buffers are too large, blocking access to the interior sections from the two "buffered" ends.

I propose ORV pass-thru only corridors and to use breeding / nesting buffer distances to establish ORV pass through only corridors to ensure beach access in a way that does not hinder resource protection. I believe pass through corridors should be maintained for pedestrians and ORVs in all areas of the Cape Hatteras National Seashore Recreational Area throughout the entire breeding and nesting season. Corridors are vital to providing access in a way that does not hinder resource protection.

Piping Plover unfledged chicks buffer should move with the brood as it relocates to reliable food source, not expanded.

The 1,000 meter distance for the piping plover is way too large and not based upon peer reviewed science. A more rational distance would be 200 meters per other sites in the nation for the piping plover. Ample scientific evidence and precedent exists to support a 200 meter buffer.

Buffers for other species, including American Oystercatchers, Least Terns and Colonial Waterbirds must also be changed. An effective 30 meter buffer should be established for these species rather than the 300 meter closure outlined in the DEIS.

NON-ENDANGERED BIRDS should not have same protection as if endangered. Not allowing ORV access is paramount to denying the public access to these beaches.

7) Page 468: I disagree with the limitations imposed on pedestrian and ORVs. Corridors or bypasses should be provided thru, around or below high tide line in all SMAs during entire breeding season to maintain access.

8) Page 124: I strongly disagree with the NPS slant of providing for over protection of resource management over that of the public's right to access the beaches. Pro-active initiatives include: Vegetation Management, Habitat Management, Enhanced Predator Management, Colonial Water bird social attraction, Piping Plover check fledged rate, Piping plover chick buffer distance, and pass-through buffers during the incubation period. Opportunities to implement less restrictive closures as a result of the above initiatives should be considered more frequently than the 5-year periodic review process identified in the DEIS.

9) I disagree with the NPS Resource Management Pedestrian / ORV Closure Policies. These policies address the least significant factors affecting nest survival with little chance to have more than negligible impact. For example: the AMOY Nest Failures are predominately due to non-human events. Using your own stats, the mammalian predation is 54%, Storm / Lunar Tides: 29%, Nest Abandonment: 6%, Avian Predation: 5%, and Ghost Crab Predation: 3%,

So what is the percentage due to human interference: just 3%! It's insignificant, yet the NPS wants to ban humans when their actions provide very little influence on the success rate of breeding birds and turtles.

10) I disagree with the stats of breeding plovers and the other birds in the Park when the NPS does not adequately consider locations neighboring the Recreational Area that are part of the same ecosystem, namely dredge and spoil island that are located just yards away and within sight of the seashore. These birds are part of the same ecosystem and should be included.

Those spoil islands, developed by man from dredging the waterways in the Pamlico Sound for channel upkeep are slammed full of birds. The reason why so many birds? NO PREDATORS. SO, birds are not as stupid as one might think. You have to count these birds and incorporate them in the stats when the NPS is talking about any so called decline in breeding pairs in the National Park.

11) Page 1: I do not think the DEIS responsibly addresses the cultural resource issues. The very purpose of the DEIS as set forth in the National Environmental Policy Act (NEPA) is to protect and preserve natural and cultural resources in the federal decision making process. In the DEIS, the statement "protect and preserve natural and cultural resources" appears in the first sentence of the first page of the plan, in the Purpose of the Plan section, and numerous times thereafter. Yet, the 810 page document devotes only two paragraphs to analysis of cultural resource issues.

12) Pages 270-281; 561-598: I strongly disagree with your economic analysis of the impact of the DEIS. The region of influence (ROI) incorporates the Northern Beach communities, including Kill Devil Hills, Kitty Hawk, Southern Shores and Duck. These areas are almost completely disconnected from ORV use and access issues relating to the Seashore. ? Inclusion of the Northern Beaches in analysis significantly dilutes estimates of economic impact on the 8 Seashore Villages

? Analysis of economic impact to the Seashore Villages appears to be significantly down played. Emphasis in DEIS is on the ROI-wide or county-wide level impacts.

? Nowhere is it clearly addressed that the overwhelming majority of negative impacts will be felt by small businesses in the Seashore Villages rather than by overall economic interests within the greater ROI.

On page xlvi, Alternative F is characterized as having a "negligible to moderate" adverse impact on small businesses. I strongly disagree with this statement.

I believe the negligible to moderate projection is inaccurate and relies on economic surveys that has not yet been published. Furthermore, this material is not expected to be added to the DEIS until after the public comment period has ended.

Based upon the economic harm we have already experienced under the consent decree, Dare County projects the economic impact of Alternative F to be substantial.

Beach closures have already had a devastating and unfair impact on many Dare County Businesses, causing foreclosures, bankruptcies, lay-offs, cutbacks, expensive refinancing, and depleted college funds and savings accounts.

Pages 270-286, 561-598: The socio-economic data and analyses are incomplete and erroneous and result in an understatement of the effect the restrictions will have upon the Island, the region and the state of NC. The US Park Services answer: Businesses will have to "adapt" to the new rules. (p.383) The negative economic impacts of the decree ARE KNOWN, so to say that the added restrictions would have negligible to moderate impact is indefensible.

13) Overall Visitor Counts - Overall visitor counts appear to include visitors to Fort Raleigh National Historic Site and the Wright Brothers National Memorial. A large percentage of these visitors vacation in the Northern Beaches communities and recreate on the non-federal beaches outside of the Seashore. Visitors who patronize the Fort Raleigh National Historic Site and the Wright Brothers National Memorial but do not visit the actual seashore areas need to be factored out.

Maintenance of Future Access to Cape Point and South Point Ocracoke: All socioeconomic analyses related to Alternative F are predicated on the assumption that access corridors will remain open for at least an appreciable portion of the visitor high season. Under Alternative F, the access corridors will be subject to Resource Closures based on buffers similar or identical to the Consent Decree. Unless some predictability of access to Cape Point and South Point Ocracoke can be assured, economic analyses predicated on assumption of access are fundamentally flawed.

Why would a group of surf fishermen want to come to Hatteras Island to surf fish if they are not sure they can access the prime fishing grounds at Cape Point? The answer is they won't come. If they don't come, they don't rent vacation homes and spend their money on Hatteras and Ocracoke Islands.

The definition of the Region of Influence (ROI), faulty data on economic activity generated by specific type recreational activity, incomplete visitation/business survey data, inflated overall Seashore visitor counts pertaining to beach use, and flawed key assumptions concerning the maintenance of access under Alternative F, all lead to inaccurate conclusions in the socioeconomic analyses. Specifically, these inaccuracies can be seen as understating the negative socio-economic impact of the Seashore Villages. Further, this negative impact will be absorbed almost entirely by Small Businesses. Neither of these important aspects of the management alternatives are adequately presented in the DEIS.

14) Page 136: I strongly disagree with your pet restriction proposals. The "prohibition of pets in the Seashore during bird breeding season including in front of the villages." = No Pets in public areas ?beaches, campgrounds, soundfront, foot trails, park maintained roads -from March 15 ?July 31.

15) Pages 125; 392 ? 396: SEA TURTLES. I disagree with the stats and procedures proposed. I think endangered sea turtles would benefit from management practices now in use at other federal seashores that are more proactive in efforts to achieve nesting success. This includes relocating nests to more desirable locations as is done in other state and federally controlled areas.

The Cape Hatteras National Seashore Recreational Area is on the northernmost fringe of turtle nesting locations for the southeast, accounting for about 1% of all turtle nests. Proposed buffer areas are not needed for protection of the turtles and amount to overprotection.

16) Pages 97- 101. I strongly disagree with proposals in this section saying that ORVs will be prohibited year round between ramps 27 and 30, at Hatteras Inlet (Hatteras Spit), Ocracoke Inlet (North Ocracoke Spit) and various other locations.

Not allowing ORV access is paramount to denying the public access to these beaches. They are located miles from the nearest parking or paved road area and too far to access on foot. As a matter of course, there has been no breeding of piping plover or other endangered species at the Hatteras Island Inlet (spit) area in the past 6 years.

17) Page 104: I disagree with the proposed night time driving closures. Per your proposals, night driving will be prohibited between May 1 and November 15th, forcing visitors off of the beaches early in the evening and preventing sunrise surf fishermen access in the morning. I propose a more moderate night time ban if one is needed, perhaps from June 1 ? September 15 with times being 1 hour after sunset and 1 hour before sunrise to allow beach goers to gather their stuff and exit the beach area.

Certainly more proactive measures such as relocating nests prone to weather and ocean events would dramatically increase the nesting success rates.

18) Page 121: I disagree with the proposed beach closings, including pedestrian access from March 15 until July 31 in 8 different beach locations which have traditionally been available. Please leave these areas open to beach walkers, shell collectors and those that want to access the beaches in these areas.

Conclusion:

Please, incorporate access corridors through any SMA so we can get to the open beach beyond. Incorporate the birds into the count that nest on the spoil islands. Base your buffer zones on peer reviewed science and scale them back to more reasonable distances as discussed.

It is neither logical nor reasonable to spend so much time, money and energy to overprotect a bird (Piping Plover) in the Cape Hatteras National Seashore that is on the southernmost fringe area of its breeding ground. That goes for the loggerhead turtle that is in its northernmost breeding area.

Let's scale back the buffer zones. You can always increase at a later date.

The USPS is leaning way over the line on over protection and not enough on the public's right to enjoy the beaches of the National Seashore. The proper balance is not achieved in the propose DEIS and needs to be modified so that the proper balance of reasonable resource protection and access to the beaches of the National Park is achieved. I could sum it up by saying "Protect, not Prohibit."

Thank you

11) Page 1: I do not think the DEIS responsibly addresses the cultural resource issues. The very purpose of the DEIS as set forth in the National Environmental Policy Act (NEPA) is to protect and preserve natural and cultural resources in the federal decision making process. In the DEIS, the statement "protect and preserve natural and cultural resources" appears in the first sentence of the first page of the plan, in the Purpose of the Plan section, and numerous times thereafter. Yet, the 810 page document devotes only two paragraphs to analysis of cultural resource issues.

12) Pages 270-281; 561-598: I strongly disagree with your economic analysis of the impact of the DEIS. The region of influence (ROI) incorporates the Northern Beach communities, including Kill Devil Hills, Kitty Hawk, Southern Shores and Duck. These areas are almost completely disconnected from ORV use and access issues relating to the Seashore. ? Inclusion of the Northern Beaches in analysis significantly dilutes estimates of economic impact on the 8 Seashore Villages

? Analysis of economic impact to the Seashore Villages appears to be significantly down played. Emphasis in DEIS is on the ROI-wide or county-wide level impacts.

? Nowhere is it clearly addressed that the overwhelming majority of negative impacts will be felt by small businesses in the Seashore Villages rather than by overall economic interests within the greater ROI.

On page xlvi, Alternative F is characterized as having a "negligible to moderate" adverse impact on small businesses. I strongly disagree with this statement.

I believe the negligible to moderate projection is inaccurate and relies on economic surveys that has not yet been published. Furthermore, this material is not expected to be added to the DEIS until after the public comment period has ended.

Based upon the economic harm we have already experienced under the consent decree, Dare County projects the economic impact of Alternative F to be substantial.

Beach closures have already had a devastating and unfair impact on many Dare County Businesses, causing foreclosures, bankruptcies, lay-offs, cutbacks, expensive refinancing, and depleted college funds and savings accounts.

Pages 270-286, 561-598: The socio-economic data and analyses are incomplete and erroneous and result in an understatement of the effect the restrictions will have upon the Island, the region and the state of NC. The US Park Services answer: Businesses will have to "adapt" to the new rules. (p.383) The negative economic impacts of the decree ARE KNOWN, so to say that the added restrictions would have negligible to moderate impact is indefensible.

13) Overall Visitor Counts - Overall visitor counts appear to include visitors to Fort Raleigh National Historic Site and the Wright Brothers National Memorial. A large percentage of these visitors vacation in the Northern Beaches communities and recreate on the non-federal beaches outside of the Seashore. Visitors who patronize the Fort Raleigh National Historic Site and the Wright Brothers National Memorial but do not visit the actual seashore areas need to be factored out.

Maintenance of Future Access to Cape Point and South Point Ocracoke: All socioeconomic analyses related to Alternative F are predicated on the assumption that access corridors will remain open for at least an appreciable portion of the visitor high season. Under Alternative F, the access corridors will be subject to Resource Closures based on buffers similar or identical to the Consent Decree. Unless some predictability of access to Cape Point and South Point Ocracoke can be assured, economic analyses predicated on assumption of access are fundamentally flawed.

Why would a group of surf fisherman want to come to Hatteras Island to surf fish if they are not sure they can access the prime fishing grounds at Cape Point? The answer is they won't come. If they don't come, they don't rent vacation homes and spend their money on Hatteras and Ocracoke Islands.

The definition of the Region of Influence (ROI), faulty data on economic activity generated by specific type recreational activity, incomplete visitation/business survey data, inflated overall Seashore visitor counts pertaining to beach use, and flawed key assumptions concerning the maintenance of access under Alternative F, all lead to inaccurate conclusions in the socioeconomic analyses. Specifically, these inaccuracies can be seen as understating the negative socio-economic impact of the Seashore Villages. Further, this negative impact will be absorbed almost entirely by Small Businesses. Neither of these important aspects of the management alternatives are adequately presented in the DEIS.

14) Page 136: I strongly disagree with your pet restriction proposals. The "?prohibition of pets in the Seashore during bird breeding season including in front of the villages." = No Pets in public areas ?beaches, campgrounds, soundfront, foot trails, park maintained roads -from March 15 ?July 31.

15) Pages 125; 392 ? 396: SEA TURTLES. I disagree with the stats and procedures proposed. I think endangered sea turtles would benefit from management practices now in use at other federal seashores that are more proactive in efforts to achieve nesting success. This includes relocating nests to more desirable locations as is done in other state and federally controlled areas.

The Cape Hatteras National Seashore Recreational Area is on the northernmost fringe of turtle nesting locations for the southeast, accounting for about 1% of all turtle nests. Proposed buffer areas are not needed for protection of the turtles and amount to overprotection.

16) Pages 97- 101. I strongly disagree with proposals in this section saying that ORVs will be prohibited year round between ramps 27 and 30, at

Hatteras Inlet (Hatteras Spit), Ocracoke Inlet (North Ocracoke Spit) and various other locations.

Not allowing ORV access is paramount to denying the public access to these beaches. They are located miles from the nearest parking or paved road area and too far to access on foot. As a matter of course, there has been no breeding of piping plover or other endangered species at the Hatteras Island Inlet (spit) area in the past 6 years.

17) Page 104: I disagree with the proposed night time driving closures. Per your proposals, night driving will be prohibited between May 1 and November 15th, forcing visitors off of the beaches early in the evening and preventing sunrise surf fishermen access in the morning. I propose a more moderate night time ban if one is needed, perhaps from June 1 ? September 15 with times being 1 hour after sunset and 1 hour before sunrise to allow beach goers to gather their stuff and exit the beach area.

Certainly more proactive measures such as relocating nests prone to weather and ocean events would dramatically increase the nesting success rates.

18) Page 121: I disagree with the proposed beach closings, including pedestrian access from March 15 until July 31 in 8 different beach locations which have traditionally been available. Please leave these areas open to beach walkers, shell collectors and those that want to access the beaches in these areas.

Conclusion:

Correspondence: I do not agree with the National Park Service, DEIS, plan to limit off-road vehicle access to the Cape Hatteras National Seashore. This will be a detriment to the economy of the Islands and the tourism industry. The wildlife, cultural resources, and natural processes are not endangered by visitors having off road access. It is a shame sea turtle and wildlife have more protection than humans. Please change this plan in the interest of the visitors and the locals who depend on tourists for their livelihood.
 Thanks for the opportunity to share thoughts.

 My name is woody rowe my wife bonnie and i own two small companies on hatteras island. We work,pay taxes employ abide laws, all the things that make america the greatest place on earth. Unnecessary restrictions are being placed on the enjoyment of our beaches . The size of the buffers around nesting areas has no credible backing . I hope reasonable measures will come about that will protect wildlife as well humans. My wife and i are both dare county natives and love and enjoy the beauty of our beaches,and wish to able to enjoy the area to the fullest. In the years of going to beaches of dare county we have seen so few people mistreating our natural resoures it seems hard to believe that problem is as large as it has been turned into.

The 1,000 meter distance for the piping plover is way too large and not based upon peer reviewed science. A more rational distance would be 200 meters per other sites in the nation for the piping plover. Ample scientific evidence and precedent exists to support a 200 meter buffer.

Buffers for other species, including American Oystercatchers, Least Terns and Colonial Waterbirds must also be changed. An effective 30 meter buffer should be established for these species rather than the 300 meter closure outlined in the DEIS.

NON-ENDANGERED BIRDS should not have same protection as if endangered. Not allowing ORV access is paramount to denying the public access to these beaches.

7) Page 468: I disagree with the limitations imposed on pedestrian and ORVs. Corridors or bypasses should be provided thru, around or below high tide line in all SMAs during entire breeding season to maintain access.

8) Page 124: I strongly disagree with the NPS slant of providing for over protection of resource management over that of the public's right to access the beaches. Pro-active initiatives include: Vegetation Management, Habitat Management, Enhanced Predator Management, Colonial Water bird social attraction, Piping Plover check fledge rate, Piping plover chick buffer distance, and pass-through buffers during the incubation period. Opportunities to implement less restrictive closures as a result of the above initiatives should be considered more frequently than the 5-year periodic review process identified in the DEIS.

9) I disagree with the NPS Resource Management Pedestrian / ORV Closure Policies. These policies address the least significant factors affecting nest survival with little chance to have more than negligible impact. For example: the AMOY Nest Failures are predominately due to non-human events.

Using your own stats, the mammalian predation is 54%, Storm / Lunar Tides: 29%, Nest Abandonment: 6%, Avian Predation: 5%, and Ghost Crab Predation: 3%,

So what is the percentage due to human interference: just 3%! It's insignificant, yet the NPS wants to ban humans when their actions provide very little influence on the success rate of breeding birds and turtles.

10) I disagree with the stats of breeding plovers and the other birds in the Park when the NPS does not adequately consider locations neighboring the Recreational Area that are part of the same ecosystem, namely dredge and spoil island that are located just yards away and within sight of the seashore. These birds are part of the same ecosystem and should be included.

Those spoil islands, developed by man from dredging the waterways in the Pamlico Sound for channel upkeep are slammed full of birds. The reason why so many birds? NO PREDATORS. SO, birds are not as stupid as one might think. You have to count these birds and incorporate them in the stats when the NPS is talking about any so called decline in breeding pairs in the National Park.

11) Page 1: I do not think the DEIS responsibly addresses the cultural resource issues. The very purpose of the DEIS as set forth in the National Environmental Policy Act (NEPA) is to protect and preserve natural and cultural resources in the federal decision making process. In the DEIS, the statement "protect and preserve natural and cultural resources" appears in the first sentence of the first page of the plan, in the Purpose of the Plan section, and numerous times thereafter. Yet, the 810 page document devotes only two paragraphs to analysis of cultural resource issues.

12) Pages 270-281; 561-598: I strongly disagree with your economic analysis of the impact of the DEIS. The region of influence (ROI) incorporates the Northern Beach communities, including Kill Devil Hills, Kitty Hawk, Southern Shores and Duck. These areas are almost completely disconnected from ORV use and access issues relating to the Seashore. ? Inclusion of the Northern Beaches in analysis significantly dilutes estimates of economic impact on the 8 Seashore Villages

? Analysis of economic impact to the Seashore Villages appears to be significantly down played. Emphasis in DEIS is on the ROI-wide or county-wide level impacts.

? Nowhere is it clearly addressed that the overwhelming majority of negative impacts will be felt by small businesses in the Seashore Villages rather than by overall economic interests within the greater ROI.

On page xlvi, Alternative F is characterized as having a "negligible to moderate" adverse impact on small businesses. I strongly disagree with this statement.

I believe the negligible to moderate projection is inaccurate and relies on economic surveys that has not yet been published. Furthermore, this material is not expected to be added to the DEIS until after the public comment period has ended.

Based upon the economic harm we have already experienced under the consent decree, Dare County projects the economic impact of Alternative F to be substantial.

Beach closures have already had a devastating and unfair impact on many Dare County Businesses, causing foreclosures, bankruptcies, lay-offs, cutbacks, expensive refinancing, and depleted college funds and savings accounts.

Pages 270-286, 561-598: The socio-economic data and analyses are incomplete and erroneous and result in an understatement of the effect the restrictions will have upon the Island, the region and the state of NC. The US Park Services answer: Businesses will have to "adapt" to the new rules. (p.383) The negative economic impacts of the decree ARE KNOWN, so to say that the added restrictions would have negligible to moderate impact is indefensible.

13) Overall Visitor Counts - Overall visitor counts appear to include visitors to Fort Raleigh National Historic Site and the Wright Brothers National Memorial. A large percentage of these visitors vacation in the Northern Beaches communities and recreate on the non-federal beaches outside of the Seashore. Visitors who patronize the Fort Raleigh National Historic Site and the Wright Brothers National Memorial but do not visit the actual seashore areas need to be factored out.

Maintenance of Future Access to Cape Point and South Point Ocracoke: All socioeconomic analyses related to Alternative F are predicated on the assumption that access corridors will remain open for at least an appreciable portion of the visitor high season. Under Alternative F, the access corridors will be subject to Resource Closures based on buffers similar or identical to the Consent Decree. Unless some predictability of access to Cape Point and South Point Ocracoke can be assured, economic analyses predicated on assumption of access are fundamentally flawed.

Why would a group of surf fisherman want to come to Hatteras Island to surf fish if they are not sure they can access the prime fishing grounds at Cape Point? The answer is they won't come. If they don't come, they don't rent vacation homes and spend their money on Hatteras and Ocracoke Islands.

The definition of the Region of Influence (ROI), faulty data on economic activity generated by specific type recreational activity, incomplete visitation/business survey data, inflated overall Seashore visitor counts pertaining to beach use, and flawed key assumptions concerning the maintenance of access under Alternative F, all lead to inaccurate conclusions in the socioeconomic analyses. Specifically, these inaccuracies can be seen as understating the negative socio-economic impact of the Seashore Villages. Further, this negative impact will be absorbed almost entirely by Small Businesses. Neither of these important aspects of the management alternatives are adequately presented in the DEIS.

14) Page 136: I strongly disagree with your pet restriction proposals. The "?prohibition of pets in the Seashore during bird breeding season including in front of the villages." = No Pets in public areas ?beaches, campgrounds, soundfront, foot trails, park maintained roads -from March 15 ?July 31.

15) Pages 125; 392 ? 396: SEA TURTLES. I disagree with the stats and procedures proposed. I think endangered sea turtles would benefit from management practices now in use at other federal seashores that are more proactive in efforts to achieve nesting success. This includes relocating nests to more desirable locations as is done in other state and federally controlled areas.

The Cape Hatteras National Seashore Recreational Area is on the northernmost fringe of turtle nesting locations for the southeast, accounting for about 1% of all turtle nests. Proposed buffer areas are not needed for protection of the turtles and amount to overprotection.

16) Pages 97- 101. I strongly disagree with proposals in this section saying that ORVs will be prohibited year round between ramps 27 and 30, at

Hatteras Inlet (Hatteras Spit), Ocracoke Inlet (North Ocracoke Spit) and various other locations.

Not allowing ORV access is paramount to denying the public access to these beaches. They are located miles from the nearest parking or paved road area and too far to access on foot. As a matter of course, there has been no breeding of piping plover or other endangered species at the Hatteras Island Inlet (spit) area in the past 6 years.

17) Page 104: I disagree with the proposed night time driving closures. Per your proposals, night driving will be prohibited between May 1 and November 15th, forcing visitors off of the beaches early in the evening and preventing sunrise surf fishermen access in the morning. I propose a more moderate night time ban if one is needed, perhaps from June 1 ? September 15 with times being 1 hour after sunset and 1 hour before sunrise to allow beach goers to gather their stuff and exit the beach area.

Certainly more proactive measures such as relocating nests prone to weather and ocean events would dramatically increase the nesting success rates.

18) Page 121: I disagree with the proposed beach closings, including pedestrian access from March 15 until July 31 in 8 different beach locations which have traditionally been available. Please leave these areas open to beach walkers, shell collectors and those that want to access the beaches in these areas.

Conclusion:

Please, incorporate access corridors through any SMA so we can get to the open beach beyond. Incorporate the birds into the count that nest on the spoil islands. Base your buffer zones on peer reviewed science and scale them back to more reasonable distances as discussed.

It is neither logical nor reasonable to spend so much time, money and energy to overprotect a bird (Piping Plover) in the Cape Hatteras National Seashore that is on the southernmost fringe area of its breeding ground. That goes for the loggerhead turtle that is in its northernmost breeding area.

Let's scale back the buffer zones. You can always increase at a later date.

The USPS is leaning way over the line on over protection and not enough on the public's right to enjoy the beaches of the National Seashore. The proper balance is not achieved in the propose DEIS and needs to be modified so that the proper balance of reasonable resource protection and access to the beaches of the National Park is achieved. I could sum it up by saying "Protect, not Prohibit."

Thank you,

Correspondence Type:	Web Form						
Correspondence:	My comments concern the DEIS of the Off-Road Vehicle Management Plan prepared by the National Park Service (NPS) for the Cape Hatteras National Seashore Recreation Area.						

1) Page 201: I disagree with the NPS statement: "Even with resource closures in place, protected species are still at risk [from pedestrians and ORVs]." No Piping Plover deaths have been attributed to ORVs. ORV violations continue to decrease as signage and education improve. Pedestrian violations are much more significant than ORV violations. It seems to me that any transgressions into protected area are the result of lack of NPS manpower and enforcement than the public purposely and willfully violating out of bounds areas.

2) Page xxiv: I question the statement of as per the DEIS: "Carrying capacity would be a 'peak use limit' determined for all areas based on the linear feet of beachfront?" If you close off huge sections of the beach, you force more people into smaller areas, potentially resulting in more resource impairment and diminished visitor experience.

3) Page xix and page 23: I am against having two different closures rules pertaining to the North facing beaches (North side) and the South facing beaches (South side) as per the grid outlined in Alternative "F". I disagree with the NPS proposal to close the beaches in villages of Frisco, Hatteras and Ocracoke Villages to ORV access longer than the traditional May 15 to September 15 period for the Northern beaches, even though seasonal visitor statistics are similar for all villages. Please, make them the same: May 15 -> September 15.

4) Page 1: I agree with your statement "ORVs have long served as a primary form of access for many portions of the beach in the seashore, and continue to be the most practical means of access and parking for many visitors."

However, pedestrian only areas discriminate against individuals with limited mobility due to age or physical impairments, families with small children, and those wishing to engage in activities requiring recreational equipment (boogie boards, beach umbrellas, beach chairs, coolers, fishing rods and tackle, etc)

5) Page 53: I disagree with the special use permit proposed guidelines. It is impractical to allow the transportation of disabled visitors to the village beaches and then require the vehicle to be returned to the street or parking area. This necessitates the disabled person to have a driver to drop him (or her) off, then drive to a parking area, then trudge a long distance to the site of the drop off, then trudge the long distance through the sand back to get the vehicle.

Suppose the handicap person wants to go to the beach, is capable of driving himself, yet cannot find another person to go with him? Does he now not go to the beach? This rule creates unnecessary hardships and risks in the event of an emergency as well.

6) Page 121 ? 127. I strongly disagree with the buffers as presented. We must allow for pass-thru corridors. The beach is linear with the ocean buffering on one side and the dune line on the other. For example - If you pinch off access on one side of a 4 mile linear beach and pinch off access on the other side of the 4 mile section of beach with no corridor, then you effectively have closed off all 4 miles of the beach because you CAN'T get there. The proposed bird buffers are too large, blocking access to the interior sections from the two "buffered" ends.

I propose ORV pass-thru only corridors and to use breeding / nesting buffer distances to establish ORV pass through only corridors to ensure beach access in a way that does not hinder resource protection. I believe pass through corridors should be maintained for pedestrians and ORVs in all areas of the Cape Hatteras National Seashore Recreation Area throughout the entire breeding and nesting season. Corridors are vital to providing access in a way that does not hinder resource protection.

Piping Plover unfledged chicks buffer should move with the brood as it relocates to reliable food source, not expanded.

The 1,000 meter distance for the piping plover is way too large and not based upon peer reviewed science. A more rational distance would be 200 meters per other sites in the nation for the piping plover. Ample scientific evidence and precedent exists to support a 200 meter buffer.

Buffers for other species, including American Oystercatchers, Least Terns and Colonial Waterbirds must also be changed. An effective 30 meter buffer should be established for these species rather than the 300 meter closure outlined in the DEIS.

NON-ENDANGERED BIRDS should not have same protection as if endangered. Not allowing ORV access is paramount to denying the public access to these beaches.

7) Page 468: I disagree with the limitations imposed on pedestrian and ORVs. Corridors or bypasses should be provided thru, around or below high tide line in all SMAs during entire breeding season to maintain access.

8) Page 124: I strongly disagree with the NPS slant of providing for over protection of resource management over that of the public's right to access the beaches. Pro-active initiatives include: Vegetation Management, Habitat Management, Enhanced Predator Management, Colonial Water bird social attraction, Piping Plover check fledged rate, Piping plover chick buffer distance, and pass-through buffers during the incubation period. Opportunities to implement less restrictive closures as a result of the above initiatives should be considered more frequently than the 5-year periodic review process identified in the DEIS.

9) I disagree with the NPS Resource Management Pedestrian / ORV Closure Policies. These policies address the least significant factors affecting nest survival with little chance to have more than negligible impact. For example: the AMOY Nest Failures are predominately due to non-human events. Using your own stats, the mammalian predation is 54%, Storm / Lunar Tides: 29%, Nest Abandonment: 6%, Avian Predation: 5%, and Ghost Crab

Predation: 3%,

So what is the percentage due to human interference: just 3%! It's insignificant, yet the NPS wants to ban humans when their actions provide very little influence on the success rate of breeding birds and turtles.

10) I disagree with the stats of breeding plovers and the other birds in the Park when the NPS does not adequately consider locations neighboring the Recreational Area that are part of the same ecosystem, namely dredge and spoil island that are located just yards away and within sight of the seashore. These birds are part of the same ecosystem and should be included.

Those spoil islands, developed by man from dredging the waterways in the Pamlico Sound for channel upkeep are slammed full of birds. The reason why so many birds? NO PREDATORS. SO, birds are not as stupid as one might think. You have to count these birds and incorporate them in the stats when the NPS is talking about any so called decline in breeding pairs in the National Park.

11) Page 1: I do not think the DEIS responsibly addresses the cultural resource issues. The very purpose of the DEIS as set forth in the National Environmental Policy Act (NEPA) is to protect and preserve natural and cultural resources in the federal decision making process. In the DEIS, the statement "protect and preserve natural and cultural resources" appears in the first sentence of the first page of the plan, in the Purpose of the Plan section, and numerous times thereafter. Yet, the 810 page document devotes only two paragraphs to analysis of cultural resource issues.

12) Pages 270-281; 561-598: I strongly disagree with your economic analysis of the impact of the DEIS. The region of influence (ROI) incorporates the Northern Beach communities, including Kill Devil Hills, Kitty Hawk, Southern Shores and Duck. These areas are almost completely disconnected from ORV use and access issues relating to the Seashore. ? Inclusion of the Northern Beaches in analysis significantly dilutes estimates of economic impact on the 8 Seashore Villages

? Analysis of economic impact to the Seashore Villages appears to be significantly down played. Emphasis in DEIS is on the ROI-wide or county-wide level impacts.

? Nowhere is it clearly addressed that the overwhelming majority of negative impacts will be felt by small businesses in the Seashore Villages rather than by overall economic interests within the greater ROI.

On page xlvi, Alternative F is characterized as having a "negligible to moderate" adverse impact on small businesses. I strongly disagree with this statement.

I believe the negligible to moderate projection is inaccurate and relies on economic surveys that has not yet been published. Furthermore, this material is not expected to be added to the DEIS until after the public comment period has ended.

Based upon the economic harm we have already experienced under the consent decree, Dare County projects the economic impact of Alternative F to be substantial.

Beach closures have already had a devastating and unfair impact on many Dare County Businesses, causing foreclosures, bankruptcies, lay-offs, cutbacks, expensive refinancing, and depleted college funds and savings accounts.

Pages 270-286, 561-598: The socio-economic data and analyses are incomplete and erroneous and result in an understatement of the effect the restrictions will have upon the Island, the region and the state of NC. The US Park Services answer: Businesses will have to "adapt" to the new rules. (p.383) The negative economic impacts of the decree ARE KNOWN, so to say that the added restrictions would have negligible to moderate impact is indefensible.

13) Overall Visitor Counts - Overall visitor counts appear to include visitors to Fort Raleigh National Historic Site and the Wright Brothers National Memorial. A large percentage of these visitors vacation in the Northern Beaches communities and recreate on the non-federal beaches outside of the Seashore. Visitors who patronize the Fort Raleigh National Historic Site and the Wright Brothers National Memorial but do not visit the actual seashore areas need to be factored out.

Maintenance of Future Access to Cape Point and South Point Ocracoke: All socioeconomic analyses related to Alternative F are predicated on the assumption that access corridors will remain open for at least an appreciable portion of the visitor high season. Under Alternative F, the access corridors will be subject to Resource Closures based on buffers similar or identical to the Consent Decree. Unless some predictability of access to Cape Point and South Point Ocracoke can be assured, economic analyses predicated on assumption of access are fundamentally flawed.

Why would a group of surf fisherman want to come to Hatteras Island to surf fish if they are not sure they can access the prime fishing grounds at Cape Point? The answer is they won't come. If they don't come, they don't rent vacation homes and spend their money on Hatteras and Ocracoke Islands.

The definition of the Region of Influence (ROI), faulty data on economic activity generated by specific type recreational activity, incomplete visitation/business survey data, inflated overall Seashore visitor counts pertaining to beach use, and flawed key assumptions concerning the maintenance of access under Alternative F, all lead to inaccurate conclusions in the socioeconomic analyses. Specifically, these inaccuracies can be seen as understating the negative socio-economic impact of the Seashore Villages. Further, this negative impact will be absorbed almost entirely by Small Businesses. Neither of these important aspects of the management alternatives are adequately presented in the DEIS.

14) Page 136: I strongly disagree with your pet restriction proposals. The "prohibition of pets in the Seashore during bird breeding season including in front of the villages." = No Pets in public areas ?beaches, campgrounds, soundfront, foot trails, park maintained roads -from March 15 ?July 31.

15) Pages 125; 392 ? 396: SEA TURTLES. I disagree with the stats and procedures proposed. I think endangered sea turtles would benefit from management practices now in use at other federal seashores that are more proactive in efforts to achieve nesting success. This includes relocating nests to more desirable locations as is done in other state and federally controlled areas.

The Cape Hatteras National Seashore Recreational Area is on the northernmost fringe of turtle nesting locations for the southeast, accounting for about 1% of all turtle nests. Proposed buffer areas are not needed for protection of the turtles and amount to overprotection.

16) Pages 97- 101. I strongly disagree with proposals in this section saying that ORVs will be prohibited year round between ramps 27 and 30, at Hatteras Inlet (Hatteras Spit), Ocracoke Inlet (North Ocracoke Spit) and various other locations.

Not allowing ORV access is paramount to denying the public access to these beaches. They are located miles from the nearest parking or paved road area and too far to access on foot. As a matter of course, there has been no breeding of piping plover or other endangered species at the Hatteras Island Inlet (spit) area in the past 6 years.

17) Page 104: I disagree with the proposed night time driving closures. Per your proposals, night driving will be prohibited between May 1 and November 15th, forcing visitors off of the beaches early in the evening and preventing sunrise surf fishermen access in the morning. I propose a more moderate night time ban if one is needed, perhaps from June 1 ? September 15 with times being 1 hour after sunset and 1 hour before sunrise to allow beach goers to gather their stuff and exit the beach area.

Certainly more proactive measures such as relocating nests prone to weather and ocean events would dramatically increase the nesting success rates.

18) Page 121: I disagree with the proposed beach closings, including pedestrian access from March 15 until July 31 in 8 different beach locations which have traditionally been available. Please leave these areas open to beach walkers, shell collectors and those that want to access the beaches in these areas.

Conclusion:

Please, incorporate access corridors through any SMA so we can get to the open beach beyond. Incorporate the birds into the count that nest on the spoil islands. Base your buffer zones on peer reviewed science and scale them back to more reasonable distances as discussed.

It is neither logical nor reasonable to spend so much time, money and energy to overprotect a bird (Piping Plover) in the Cape Hatteras National Seashore that is on the southernmost fringe area of its breeding ground. That goes for the loggerhead turtle that is in its northernmost breeding area. Let's scale back the buffer zones. You can always increase at a later date.

The USFS is leaning way over the line on over protection and not enough on the public's right to enjoy the beaches of the National Seashore. The proper balance is not achieved in the propose DEIS and needs to be modified so that the proper balance of reasonable resource protection and access to the beaches of the National Park is achieved. I could sum it up by saying "Protect, not Prohibit."

Thank you,

Correspondence: "When we look up and down the ocean fronts of America, we find that everywhere they are passing behind the fences of private ownership. The people can no longer get to the ocean. When we have reached the point that a nation of 125 million people can no longer set foot upon the thousands of miles of beaches that border the Atlantic and Pacific Oceans, except by permission of those who monopolize the ocean front, then I say it is the prerogative and duty of the Federal and State Governments to step in and acquire, not a swimming beach here and there, but solid blocks of ocean front hundreds of miles in length. Call this ocean front a national park, or a national seashore, or a state park or anything you please ? I say that the people have a right to a fair share of it."
 ? Harold Ickes, U.S. Secretary of the Interior, 1938
 Every effort on the part of the National Park Service should be in carrying out the ideal of the Cape Hatteras National Seashore Recreational Area in the spirit of the original intention on which this park was established. Established by the U.S. Congress with local villagers donating the land of their families who have lived there for generations.
 There is no scientific data that supports the level of protection for the piping plovers and turtles that the environmentalists are demanding on this beach. The other species of concern which are being given an unprecedented level of protection are not even endorsed by NCWRC.
 I love coming to this beach as much as possible and would like to be able to bring my mother to the beach who is disabled and only able to get to the beach by vehicle.
 *Corridors need to be in place to access beaches that are open but not accessible due to nests.
 *Buffers need to be reasonable and based on scientific data that has been peer reviewed.
 *All the birds on the dredge islands and Pea Island Wildlife Reserve should be counted and not just on the Seashore.
 *Studies of how other parks and beaches manage the turtle nests to give them the best protection possible, including moving the nests to better locations to ensure their safety.
 *Pets should be given the same access as people although leashed and under the owners control.
 We need to use a common sense approach to this and not take the attitude that it is one or the other. The Cape Hatteras National Seashore Recreational Area has been shared by all in the past and the wildlife have been respected and protected for generations. There shouldn't be such a divisive attitude on either side but a coming together to allow this Seashore to be what it was intended and also protect the wildlife that comes there, but keeping in mind the wildlife refuge on Hatteras Island has already been established.
 Thank you for your consideration and I pray that common sense will prevail.
 Cynthia A. Hudson

Correspondence: To Whom It May Concern,
 Having grown up and witnessed firsthand the changes that increased ORV utilization has brought to the beaches of CAHA, I have a strong interest in the NPS's future plans for managing ORV use. I believe that the argument around beach driving has been illogically framed as primarily an issue of users rights as opposed to resource management. Simply because ORV use was not managed or restricted before the inception of CAHA does not mean that future regulation must respect some sort of inherent right to vehicular access, especially if it mitigates the duty of the NPS to preserve the park's natural resources. Although I've read the explanation of why the "No Action" plan does not prohibit ORV access, I believe that complete prohibition should have been presented. A fortiori, virtually unrestricted ORV access should not be the line from which increased conservation and management policies should have to prove their worth. That being said, I do believe that with careful highly restricted management and monitoring, some amount of vehicular access can be accommodated. Of the plans put forth, Alternative D is in my mind the most palatable in this sense.
 ORV access areas should be clearly demarcated, and any areas not clearly set aside for this use should be considered off limits to ORV access. The superintendent should not have discretionary power to increase access beyond this point, nor should these areas change seasonally. Current routes that bisect wetlands should be closed and replaced with footpaths to reduce the damaging effects that unnatural culverts have on the complex hydrodynamics inherent to these environments. Furthermore, the reduction in areas open to ORV traffic should be accompanied with the construction of new gravel parking lots to allow for continued public access (albeit via pedestrian routes). The total length of beach containing ORV access areas also needs to be reduced. Under the NPS preferred plan F, only 16 total miles of beach will be vehicle-free throughout the year, as compared to 52 miles of beach that will allow at least seasonal vehicular access. I again question why the NPS seems to regard ORV access as some sort of inherent right that carries greater worth than the rights of pedestrians to enjoy areas of the seashore without having to dodge trucks and SUVs. This allotment needs to be re-evaluated. Pedestrian use has the benefits of providing public access to the park while limiting the environmental implications (habitat destruction, carbon emission, sedentary lifestyles, etc) that vehicles bring with them.
 Policies concerning threatened and endangered species should also be managed more carefully than they have in years past. Pedestrian and vehicular access to areas surrounding piping plover, nesting sea turtle, and sea-beach amaranth habitat needs to be further curtailed to comply with the Threatened and Endangered species act. The first priority of the NPS should always be the protection and restoration of these dwindling and irreplaceable natural resources.
 I agree that a carefully managed permit process for vehicles needs to be implemented, and feel that tying this process to mandatory education (as outlined in alternative F) should be stipulated.
 In conclusion, I believe that alternative D is the best option proposed by the NPS at this juncture. It should be amended to provide for increased 'pedestrian only' areas of the beach and further limit ORV accessibility.
 Sincerely, -Patrick T Lyons

Correspondence: I have a broad public service record, technical, and scientific background. I have in-depth knowledge of environmental sciences, research methods, and review procedures, especially those related to animal behavior. I am a retired lecturer from Va Tech with 27 years of experience.
 I agree with Dr Mike Berry's comment4
 "NPS presents Alternative F as if it were recommended by the recent Regulatory Negotiation process. However, upon close examination Alternative F is found to be a biased and highly restrictive management plan that is in complete opposition to majority recommendations of the recent Regulatory Negotiation process. Alternative F strengthens and codifies the denial of public access provisions of the current consent decree. The public access denying provisions of the consent decree, put into effect April 30, 2008, have been extended and transferred to Alternative F. The majority of Regulatory Negotiation Committee stakeholders (19 vs. 5) and numerous public commentators did not recommend an extension of the restrictive

provisions of the consent decree as part of a final ORV plan."

Correspondence: My comments concern the DEIS of the Off-Road Vehicle Management Plan prepared by the National Park Service (NPS) for the Cape Hatteras National Seashore Recreation Area.

1) Page 201: I disagree with the NPS statement: "Even with resource closures in place, protected species are still at risk [from pedestrians and ORVs]." No Piping Plover deaths have been attributed to ORVs. ORV violations continue to decrease as signage and education improve. Pedestrian violations are much more significant than ORV violations. It seems to me that any transgressions into protected area are the result of lack of NPS manpower and enforcement than the public purposely and willfully violating out of bounds areas.

2) Page xxiv: I question the statement of as per the DEIS: "Carrying capacity would be a 'peak use limit' determined for all areas based on the linear feet of beachfront?" If you close off huge sections of the beach, you force more people into smaller areas, potentially resulting in more resource impairment and diminished visitor experience.

3) Page xix and page 23: I am against having two different closures rules pertaining to the North facing beaches (North side) and the South facing beaches (South side) as per the grid outlined in Alternative "F". I disagree with the NPS proposal to close the beaches in villages of Frisco, Hatteras and Ocracoke Villages to ORV access longer than the traditional May 15 to September 15 period for the Northern beaches, even though seasonal visitor statistics are similar for all villages. Please, make them the same: May 15 -> September 15.

4) Page 1: I agree with your statement "ORVs have long served as a primary form of access for many portions of the beach in the seashore, and continue to be the most practical means of access and parking for many visitors." However, pedestrian only areas discriminate against individuals with limited mobility due to age or physical impairments, families with small children, and those wishing to engage in activities requiring recreational equipment (boogie boards, beach umbrellas, beach chairs, coolers, fishing rods and tackle, etc)

5) Page 53: I disagree with the special use permit proposed guidelines. It is impractical to allow the transportation of disabled visitors to the village beaches and then require the vehicle to be returned to the street or parking area. This necessitates the disabled person to have a driver to drop him (or her) off, then drive to a parking area, then trudge a long distance to the site of the drop off, then trudge the long distance through the sand back to get the vehicle. Suppose the handicap person wants to go to the beach, is capable of driving himself, yet cannot find another person to go with him? Does he now not go to the beach? This rule creates unnecessary hardships and risks in the event of an emergency as well.

6) Page 121 ? 127. I strongly disagree with the buffers as presented. We must allow for pass-thru corridors. The beach is linear with the ocean buffering on one side and the dune line on the other. For example - If you pinch off access on one side of a 4 mile linear beach and pinch off access on the other side of the 4 mile section of beach with no corridor, then you effectively have closed off all 4 miles of the beach because you CAN'T get there. The proposed bird buffers are too large, blocking access to the interior sections from the two "buffered" ends. I propose ORV pass-thru only corridors and to use breeding / nesting buffer distances to establish ORV pass through only corridors to ensure beach access in a way that does not hinder resource protection. I believe pass through corridors should be maintained for pedestrians and ORVs in all areas of the Cape Hatteras National Seashore Recreational Area throughout the entire breeding and nesting season. Corridors are vital to providing access in a way that does not hinder resource protection. Piping Plover unfledged chicks buffer should move with the brood as it relocates to reliable food source, not expanded. The 1,000 meter distance for the piping plover is way too large and not based upon peer reviewed science. A more rational distance would be 200 meters per other sites in the nation for the piping plover. Ample scientific evidence and precedent exists to support a 200 meter buffer. Buffers for other species, including American Oystercatchers, Least Terns and Colonial Waterbirds must also be changed. An effective 30 meter buffer should be established for these species rather than the 300 meter closure outlined in the DEIS. NON-ENDANGERED BIRDS should not have same protection as if endangered. Not allowing ORV access is paramount to denying the public access to these beaches.

7) Page 468: I disagree with the limitations imposed on pedestrian and ORVs. Corridors or bypasses should be provided thru, around or below high tide line in all SMAs during entire breeding season to maintain access.

8) Page 124: I strongly disagree with the NPS slant of providing for over protection of resource management over that of the public's right to access the beaches. Pro-active initiatives include: Vegetation Management, Habitat Management, Enhanced Predator Management, Colonial Water bird social attraction, Piping Plover check fledge rate, Piping plover chick buffer distance, and pass-through buffers during the incubation period. Opportunities to implement less restrictive closures as a result of the above initiatives should be considered more frequently than the 5-year periodic review process identified in the DEIS.

9) I disagree with the NPS Resource Management Pedestrian / ORV Closure Policies. These policies address the least significant factors affecting nest survival with little chance to have more than negligible impact. For example: the AMOY Nest Failures are predominately due to non-human events. Using your own stats, the mammalian predation is 54%, Storm / Lunar Tides: 29%, Nest Abandonment: 6%, Avian Predation: 5%, and Ghost Crab Predation: 3%, So what is the percentage due to human interference: just 3%! It's insignificant, yet the NPS wants to ban humans when their actions provide very little influence on the success rate of breeding birds and turtles.

10) I disagree with the stats of breeding plovers and the other birds in the Park when the NPS does not adequately consider locations neighboring the Recreational Area that are part of the same ecosystem, namely dredge and spoil island that are located just yards away and within sight of the seashore. These birds are part of the same ecosystem and should be included. Those spoil islands, developed by man from dredging the waterways in the Pamlico Sound for channel upkeep are slammed full of birds. The reason why so many birds? NO PREDATORS. SO, birds are not as stupid as one might think. You have to count these birds and incorporate them in the stats when the NPS is talking about any so called decline in breeding pairs in the National Park.

11) Page 1: I do not think the DEIS responsibly addresses the cultural resource issues. The very purpose of the DEIS as set forth in the National Environmental Policy Act (NEPA) is to protect and preserve natural and cultural resources in the federal decision making process. In the DEIS, the statement "protect and preserve natural and cultural resources" appears in the first sentence of the first page of the plan, in the Purpose of the Plan section, and numerous times thereafter. Yet, the 810 page document devotes only two paragraphs to analysis of cultural resource issues.

12) Pages 270-281; 561-598: I strongly disagree with your economic analysis of the impact of the DEIS. The region of influence (ROI) incorporates the Northern Beach communities, including Kill Devil Hills, Kitty Hawk, Southern Shores and Duck. These areas are almost completely disconnected from ORV use and access issues relating to the Seashore. ? Inclusion of the Northern Beaches in analysis significantly dilutes estimates of economic impact on the 8 Seashore Villages ? Analysis of economic impact to the Seashore Villages appears to be significantly down played. Emphasis in DEIS is on the ROI-wide or county-wide level impacts. ? Nowhere is it clearly addressed that the overwhelming majority of negative impacts will be felt by small businesses in the Seashore Villages rather than by overall economic interests within the greater ROI. On page xlvi, Alternative F is characterized as having a "negligible to moderate" adverse impact on small businesses. I strongly disagree with this statement. I believe the negligible to moderate projection is inaccurate and relies on economic surveys that has not yet been published. Furthermore, this material is not expected to be added to the DEIS until after the public comment period has ended. Based upon the economic harm we have already experienced under the consent decree, Dare County projects the economic impact of Alternative F to be substantial.

Beach closures have already had a devastating and unfair impact on many Dare County Businesses, causing foreclosures, bankruptcies, lay-offs, cutbacks, expensive refinancing, and depleted college funds and savings accounts.

Pages 270-286, 561-598: The socio-economic data and analyses are incomplete and erroneous and result in an understatement of the effect the restrictions will have upon the Island, the region and the state of NC. The US Park Services answer: Businesses will have to "adapt" to the new rules. (p.383) The negative economic impacts of the decree ARE KNOWN, so to say that the added restrictions would have negligible to moderate impact is indefensible.

13) Overall Visitor Counts - Overall visitor counts appear to include visitors to Fort Raleigh National Historic Site and the Wright Brothers National Memorial. A large percentage of these visitors vacation in the Northern Beaches communities and recreate on the non-federal beaches outside of the Seashore. Visitors who patronize the Fort Raleigh National Historic Site and the Wright Brothers National Memorial but do not visit the actual seashore areas need to be factored out.

Maintenance of Future Access to Cape Point and South Point Ocracoke: All socioeconomic analyses related to Alternative F are predicated on the assumption that access corridors will remain open for at least an appreciable portion of the visitor high season. Under Alternative F, the access corridors will be subject to Resource Closures based on buffers similar or identical to the Consent Decree. Unless some predictability of access to Cape Point and South Point Ocracoke can be assured, economic analyses predicated on assumption of access are fundamentally flawed.

Why would a group of surf fishermen want to come to Hatteras Island to surf fish if they are not sure they can access the prime fishing grounds at Cape Point? The answer is they won't come. If they don't come, they don't rent vacation homes and spend their money on Hatteras and Ocracoke Islands.

The definition of the Region of Influence (ROI), faulty data on economic activity generated by specific type recreational activity, incomplete visitation/business survey data, inflated overall Seashore visitor counts pertaining to beach use, and flawed key assumptions concerning the maintenance of access under Alternative F, all lead to inaccurate conclusions in the socioeconomic analyses. Specifically, these inaccuracies can be seen as understating the negative socio-economic impact of the Seashore Villages. Further, this negative impact will be absorbed almost entirely by Small Businesses. Neither of these important aspects of the management alternatives are adequately presented in the DEIS.

14) Page 136: I strongly disagree with your pet restriction proposals. The "prohibition of pets in the Seashore during bird breeding season including in front of the villages." = No Pets in public areas ?beaches, campgrounds, soundfront, foot trails, park maintained roads -from March 15 ?July 31.

15) Pages 125; 392 ? 396: SEA TURTLES. I disagree with the stats and procedures proposed. I think endangered sea turtles would benefit from management practices now in use at other federal seashores that are more proactive in efforts to achieve nesting success. This includes relocating nests to more desirable locations as is done in other state and federally controlled areas.

The Cape Hatteras National Seashore Recreational Area is on the northernmost fringe of turtle nesting locations for the southeast, accounting for about 1% of all turtle nests. Proposed buffer areas are not needed for protection of the turtles and amount to overprotection.

16) Pages 97- 101. I strongly disagree with proposals in this section saying that ORVs will be prohibited year round between ramps 27 and 30, at Hatteras Inlet (Hatteras Spit), Ocracoke Inlet (North Ocracoke Spit) and various other locations.

Not allowing ORV access is paramount to denying the public access to these beaches. They are located miles from the nearest parking or paved road area and too far to access on foot. As a matter of course, there has been no breeding of piping plover or other endangered species at the Hatteras Island Inlet (spit) area in the past 6 years.

17) Page 104: I disagree with the proposed night time driving closures. Per your proposals, night driving will be prohibited between May 1 and November 15th, forcing visitors off of the beaches early in the evening and preventing sunrise surf fishermen access in the morning. I propose a more moderate night time ban if one is needed, perhaps from June 1 ? September 15 with times being 1 hour after sunset and 1 hour before sunrise to allow beach goers to gather their stuff and exit the beach area.

Certainly more proactive measures such as relocating nests prone to weather and ocean events would dramatically increase the nesting success rates.

18) Page 121: I disagree with the proposed beach closings, including pedestrian access from March 15 until July 31 in 8 different beach locations which have traditionally been available. Please leave these areas open to beach walkers, shell collectors and those that want to access the beaches in these areas.

Conclusion:

Please, incorporate access corridors through any SMA so we can get to the open beach beyond. Incorporate the birds into the count that nest on the spoil islands. Base your buffer zones on peer reviewed science and scale them back to more reasonable distances as discussed.

It is neither logical nor reasonable to spend so much time, money and energy to overprotect a bird (Piping Plover) in the Cape Hatteras National Seashore that is on the southernmost fringe area of its breeding ground. That goes for the loggerhead turtle that is in its northernmost breeding area.

Let's scale back the buffer zones. You can always increase at a later date.

The USPS is leaning way over the line on over protection and not enough on the public's right to enjoy the beaches of the National Seashore. The proper balance is not achieved in the propose DEIS and needs to be modified so that the proper balance of reasonable resource protection and access to the beaches of the National Park is achieved. I could sum it up by saying "Protect, not Prohibit."

Thank you,

Correspondence Type: Web Form
Correspondence: Dear Superintendent,

I am a student from the University of Missouri, Columbia and am Majoring in Environmental Studies. It gives me great pleasure to write to you giving my input on this certain issue. I find the thought that there has yet to be created a set of rules and regulations limiting the use of ORVs on one of our national Seashores. I personally have never been to Cape Hatteras but as a potential visitor and citizen of the United States, I am stakeholder in the issue. When I do come to Hatteras I want to be able to see as much endemic wildlife and habitat as possible. That's why I humbly ask that you pass this plan into a solid set of regulations of ORV usage.

Some of the animals that would be protected under alternative C in the EIS are; piping plover, three kinds of sea turtles (loggerhead, green, and leatherback) and seabeach amaranth. I read in the EIS that according to the USFWS, seabeach amaranth has been eliminated from two-thirds of its historic range and ORVs are cited as one of the more serious threats. Natural threats to the seabeach amaranth like storms are uncontrollable by the NPS however, "vehicular traffic, which can easily break or crush the fleshy plant and bury seeds below depths from which they can germinate" (EIS) can also create problems for the endangered species. We do have control over the amount of vehicular traffic on the seashore of Cape Hatteras. Though there haven't been any signs of amaranth for a few years, there still remains the possibility that the seeds still exist in the area, they just haven't manifested themselves, the population is known to bounce back after several years in dormancy.

Also, according to several graphs that I found, after the Consent Decree that was agreed upon as a temporary measure by the NPS to limit ORV use, numbers of sea turtles, piping plover, least tern, and other endangered or threatened shore birds took to the rise (North Carolina Wildlife Resources Commission). However, just enforcing the minimum regulation (or the status quo, Alternatives A and B) would be a mistake, more restrictions must be placed on ORVs if this precious natural resource is going to be protected.

Alternative C is attractive because of the "peak use limit" put on ORVs. This seems like a very good alternative to keeping management to the status quo because it accounts for use by each area. For instance one vehicle per 30 linear feet is allowed for the Ocracoke Island District while its one vehicle per 20 feet on Bodie and Hatteras. This, to me, is more specific management for the areas that need it and allows for different max densities of vehicles on the beach at once.

The yearly review of species non-breeding and breeding habitat will ensure that transient as well as annual populations of protected animals will be protected from ORV traffic that would be potentially threatening. This method of changing closed or restricted areas shows a great deal of effort on the part of the Park service to protect valuable natural resources and fits the description of the Organic Act which charges the park service with preservation of resources "unimpaired for the enjoyment of future generations". "Courts consistently interpret the Organic Act and its amendments to elevate resource conservation above visitor recreation." (DEIS) So though ORV users are being limited on recreation opportunities, conservation of the

resources is paramount for the Park Service.

I also like how the cost of the permit will be determined by the prices of management. This means the users who require special management are the ones bearing the brunt of the cost. For example if you were to raise the cost of camping permits in order to manage ORVs this wouldn't be fair to those campers who don't use the beach for an ORV.

Furthermore, the requirement of doing an online or in person training to obtain a permit makes the permittee responsible for knowledge of all the regulations and restrictions that come along with the permit. If they were just given out without anything required of the permittee, there exists the possibility that they can claim ignorance to the regulations and beach closures, and they could just ignore the signs. This clause ensures accountability as well because their permits could be taken away if they are caught breaking the agreement they consented to when obtaining the permit.

I want to now take a moment to point out one thing I disagree with that was under the "Issues Considered But Dismissed from Further Analysis" in Chapter One of the EIS. I respectfully disagree with geologic impacts on beaches being left out of the EIS. The document said that " the Seashore is part of a dynamic coastal barrier ecosystem, and visual effects of ORVs on ocean beaches can no longer be visible in a matter of hours due to daily tidal action, winds, rain, hurricanes, and other storm events." (EIS). This is true but if the use of ORVs is not limited at all, then the tracks might be always visible because there will always be ORVs to make new tracks after the old ones have been washed away and it might be possible for a visitor to walk the beaches all day without enjoying a view unobstructed by tire marks on the beach. This leads me to a discussion on aesthetics.

Under Chapter Two, Consistency with the purposes of NEPA, the second objective reads: NEPA should "Ensure for all Americans safe, healthful, productive, and esthetically and culturally pleasing surroundings,"(EIS). ORVs destroy coastal features like wave or wind ripples in the sand, tide wrack lines, overwash deposits, wind sorted sediments, dune formation, etc. As an example, the burrows of ghost crabs, the most common beach inhabitants, are nearly absent from beaches where ORVs are allowed (EIS). Alternative C , seems to be the best in between option that restricts ORVs on certain areas at biologically sensitive times. The noise is also a factor, it was found that, "Loud engines in quiet environments can disturb wildlife and affect visitor enjoyment for those who use parks as places of peace and solace" (Proescholdt 2007). I would count myself as one of these people. However I feel like those that need or want to use ORVs should also be represented, an ORVs definitely account for a major group of park users. I think Alternative C is the best option for the Park Service and all the stakeholders involved.

Thanks for your time, Kurt Heine

Correspondence:	<p>My comments concern the DEIS of the Off-Road Vehicle Management Plan prepared by the National Park Service (NPS) for the Cape Hatteras National Seashore Recreation Area.</p> <p>1) Page 201: I disagree with the NPS statement: "Even with resource closures in place, protected species are still at risk [from pedestrians and ORVs]." No Piping Plover deaths have been attributed to ORVs. ORV violations continue to decrease as signage and education improve. Pedestrian violations are much more significant than ORV violations. It seems to me that any transgressions into protected area are the result of lack of NPS manpower and enforcement than the public purposely and willfully violating out of bounds areas.</p> <p>2) Page xxiv: I question the statement of as per the DEIS: "Carrying capacity would be a 'peak use limit' determined for all areas based on the linear feet of beachfront?" If you close off huge sections of the beach, you force more people into smaller areas, potentially resulting in more resource impairment and diminished visitor experience.</p> <p>3) Page xix and page 23: I am against having two different closures rules pertaining to the North facing beaches (North side) and the South facing beaches (South side) as per the grid outlined in Alternative "F". I disagree with the NPS proposal to close the beaches in villages of Frisco, Hatteras and Ocracoke Villages to ORV access longer than the traditional May 15 to September 15 period for the Northern beaches, even though seasonal visitor statistics are similar for all villages. Please, make them the same: May 15 -> September 15.</p> <p>4) Page 1: I agree with your statement "ORVs have long served as a primary form of access for many portions of the beach in the seashore, and continue to be the most practical means of access and parking for many visitors." However, pedestrian only areas discriminate against individuals with limited mobility due to age or physical impairments, families with small children, and those wishing to engage in activities requiring recreational equipment (boogie boards, beach umbrellas, beach chairs, coolers, fishing rods and tackle, etc)</p> <p>5) Page 53: I disagree with the special use permit proposed guidelines. It is impractical to allow the transportation of disabled visitors to the village beaches and then require the vehicle to be returned to the street or parking area. This necessitates the disabled person to have a driver to drop him (or her) off, then drive to a parking area, then trudge a long distance to the site of the drop off, then trudge the long distance through the sand back to get the vehicle. Suppose the handicap person wants to go to the beach, is capable of driving himself, yet cannot find another person to go with him? Does he now not go to the beach? This rule creates unnecessary hardships and risks in the event of an emergency as well.</p> <p>6) Page 121 ? 127. I strongly disagree with the buffers as presented. We must allow for pass-thru corridors. The beach is linear with the ocean buffering on one side and the dune line on the other. For example - If you pinch off access on one side of a 4 mile linear beach and pinch off access on the other side of the 4 mile section of beach with no corridor, then you effectively have closed off all 4 miles of the beach because you CAN'T get there. The proposed bird buffers are too large, blocking access to the interior sections from the two "buffered" ends. I propose ORV pass-thru only corridors and to use breeding / nesting buffer distances to establish ORV pass through only corridors to ensure beach access in a way that does not hinder resource protection. I believe pass through corridors should be maintained for pedestrians and ORVs in all areas of the Cape Hatteras National Seashore Recreational Area throughout the entire breeding and nesting season. Corridors are vital to providing access in a way that does not hinder resource protection. Piping Plover unfledged chicks buffer should move with the brood as it relocates to reliable food source, not expanded. The 1,000 meter distance for the piping plover is way too large and not based upon peer reviewed science. A more rational distance would be 200 meters per other sites in the nation for the piping plover. Ample scientific evidence and precedent exists to support a 200 meter buffer. Buffers for other species, including American Oystercatchers, Least Terns and Colonial Waterbirds must also be changed. An effective 30 meter buffer should be established for these species rather than the 300 meter closure outlined in the DEIS. NON-ENDANGERED BIRDS should not have same protection as if endangered. Not allowing ORV access is paramount to denying the public access to these beaches.</p> <p>7) Page 468: I disagree with the limitations imposed on pedestrian and ORVs. Corridors or bypasses should be provided thru, around or below high tide line in all SMAs during entire breeding season to maintain access.</p> <p>8) Page 124: I strongly disagree with the NPS slant of providing for over protection of resource management over that of the public's right to access the beaches. Pro-active initiatives include: Vegetation Management, Habitat Management, Enhanced Predator Management, Colonial Water bird social attraction, Piping Plover check fledged rate, Piping plover chick buffer distance, and pass-through buffers during the incubation period. Opportunities to implement less restrictive closures as a result of the above initiatives should be considered more frequently than the 5-year periodic review process identified in the DEIS.</p> <p>9) I disagree with the NPS Resource Management Pedestrian / ORV Closure Policies. These policies address the least significant factors affecting nest survival with little chance to have more than negligible impact. For example: the AMOY Nest Failures are predominately due to non-human events. Using your own stats, the mammalian predation is 54%, Storm / Lunar Tides: 29%, Nest Abandonment: 6%, Avian Predation: 5%, and Ghost Crab Predation: 3%,</p>						

So what is the percentage due to human interference: just 3%! It's insignificant, yet the NPS wants to ban humans when their actions provide very little influence on the success rate of breeding birds and turtles.

10) I disagree with the stats of breeding plovers and the other birds in the Park when the NPS does not adequately consider locations neighboring the Recreational Area that are part of the same ecosystem, namely dredge and spoil island that are located just yards away and within sight of the seashore. These birds are part of the same ecosystem and should be included.

Those spoil islands, developed by man from dredging the waterways in the Pamlico Sound for channel upkeep are slammed full of birds. The reason why so many birds? NO PREDATORS. SO, birds are not as stupid as one might think. You have to count these birds and incorporate them in the stats when the NPS is talking about any so called decline in breeding pairs in the National Park.

11) Page 1: I do not think the DEIS responsibly addresses the cultural resource issues. The very purpose of the DEIS as set forth in the National Environmental Policy Act (NEPA) is to protect and preserve natural and cultural resources in the federal decision making process. In the DEIS, the statement "protect and preserve natural and cultural resources" appears in the first sentence of the first page of the plan, in the Purpose of the Plan section, and numerous times thereafter. Yet, the 810 page document devotes only two paragraphs to analysis of cultural resource issues.

12) Pages 270-281; 561-598: I strongly disagree with your economic analysis of the impact of the DEIS. The region of influence (ROI) incorporates the Northern Beach communities, including Kill Devil Hills, Kitty Hawk, Southern Shores and Duck. These areas are almost completely disconnected from ORV use and access issues relating to the Seashore. ? Inclusion of the Northern Beaches in analysis significantly dilutes estimates of economic impact on the 8 Seashore Villages

? Analysis of economic impact to the Seashore Villages appears to be significantly down played. Emphasis in DEIS is on the ROI-wide or county-wide level impacts.

? Nowhere is it clearly addressed that the overwhelming majority of negative impacts will be felt by small businesses in the Seashore Villages rather than by overall economic interests within the greater ROI.

On page xlvi, Alternative F is characterized as having a "negligible to moderate" adverse impact on small businesses. I strongly disagree with this statement.

I believe the negligible to moderate projection is inaccurate and relies on economic surveys that has not yet been published. Furthermore, this material is not expected to be added to the DEIS until after the public comment period has ended.

Based upon the economic harm we have already experienced under the consent decree, Dare County projects the economic impact of Alternative F to be substantial.

Beach closures have already had a devastating and unfair impact on many Dare County Businesses, causing foreclosures, bankruptcies, lay-offs, cutbacks, expensive refinancing, and depleted college funds and savings accounts.

Pages 270-286, 561-598: The socio-economic data and analyses are incomplete and erroneous and result in an understatement of the effect the restrictions will have upon the Island, the region and the state of NC. The US Park Services answer: Businesses will have to "adapt" to the new rules. (p.383) The negative economic impacts of the decree ARE KNOWN, so to say that the added restrictions would have negligible to moderate impact is indefensible.

13) Overall Visitor Counts - Overall visitor counts appear to include visitors to Fort Raleigh National Historic Site and the Wright Brothers National Memorial. A large percentage of these visitors vacation in the Northern Beaches communities and recreate on the non-federal beaches outside of the Seashore. Visitors who patronize the Fort Raleigh National Historic Site and the Wright Brothers National Memorial but do not visit the actual seashore areas need to be factored out.

Maintenance of Future Access to Cape Point and South Point Ocracoke: All socioeconomic analyses related to Alternative F are predicated on the assumption that access corridors will remain open for at least an appreciable portion of the visitor high season. Under Alternative F, the access corridors will be subject to Resource Closures based on buffers similar or identical to the Consent Decree. Unless some predictability of access to Cape Point and South Point Ocracoke can be assured, economic analyses predicated on assumption of access are fundamentally flawed.

Why would a group of surf fisherman want to come to Hatteras Island to surf fish if they are not sure they can access the prime fishing grounds at Cape Point? The answer is they won't come. If they don't come, they don't rent vacation homes and spend their money on Hatteras and Ocracoke Islands. The definition of the Region of Influence (ROI), faulty data on economic activity generated by specific type recreational activity, incomplete visitation/business survey data, inflated overall Seashore visitor counts pertaining to beach use, and flawed key assumptions concerning the maintenance of access under Alternative F, all lead to inaccurate conclusions in the socioeconomic analyses. Specifically, these inaccuracies can be seen as understating the negative socio-economic impact of the Seashore Villages. Further, this negative impact will be absorbed almost entirely by Small Businesses. Neither of these important aspects of the management alternatives are adequately presented in the DEIS.

14) Page 136: I strongly disagree with your pet restriction proposals. The "prohibition of pets in the Seashore during bird breeding season including in front of the villages." = No Pets in public areas ?beaches, campgrounds, soundfront, foot trails, park maintained roads -from March 15 ?July 31.

15) Pages 125; 392 ? 396: SEA TURTLES. I disagree with the stats and procedures proposed. I think endangered sea turtles would benefit from management practices now in use at other federal seashores that are more proactive in efforts to achieve nesting success. This includes relocating nests to more desirable locations as is done in other state and federally controlled areas.

The Cape Hatteras National Seashore Recreational Area is on the northernmost fringe of turtle nesting locations for the southeast, accounting for about 1% of all turtle nests. Proposed buffer areas are not needed for protection of the turtles and amount to overprotection.

16) Pages 97- 101. I strongly disagree with proposals in this section saying that ORVs will be prohibited year round between ramps 27 and 30, at Hatteras Inlet (Hatteras Spit), Ocracoke Inlet (North Ocracoke Spit) and various other locations.

Not allowing ORV access is paramount to denying the public access to these beaches. They are located miles from the nearest parking or paved road area and too far to access on foot. As a matter of course, there has been no breeding of piping plover or other endangered species at the Hatteras Island Inlet (spit) area in the past 6 years.

17) Page 104: I disagree with the proposed night time driving closures. Per your proposals, night driving will be prohibited between May 1 and November 15th, forcing visitors off of the beaches early in the evening and preventing sunrise surf fishermen access in the morning. I propose a more moderate night time ban if one is needed, perhaps from June 1 ? September 15 with times being 1 hour after sunset and 1 hour before sunrise to allow beach goers to gather their stuff and exit the beach area.

Certainly more proactive measures such as relocating nests prone to weather and ocean events would dramatically increase the nesting success rates.

18) Page 121: I disagree with the proposed beach closings, including pedestrian access from March 15 until July 31 in 8 different beach locations which have traditionally been available. Please leave these areas open to beach walkers, shell collectors and those that want to access the beaches in these areas.

Conclusion:

Please, incorporate access corridors through any SMA so we can get to the open beach beyond. Incorporate the birds into the count that nest on the spoil islands. Base your buffer zones on peer reviewed science and scale them back to more reasonable distances as discussed.

It is neither logical nor reasonable to spend so much time, money and energy to overprotect a bird (Piping Plover) in the Cape Hatteras National Seashore that is on the southernmost fringe area of its breeding ground. That goes for the loggerhead turtle that is in its northernmost breeding area. Let's scale back the buffer zones. You can always increase at a later date.

The USPS is leaning way over the line on over protection and not enough on the public's right to enjoy the beaches of the National Seashore. The proper balance is not achieved in the propose DEIS and needs to be modified so that the proper balance of reasonable resource protection and access to the beaches of the National Park is achieved. I could sum it up by saying "Protect, not Prohibit."

Thank you,

Correspondence: The comments provided by Senator Basnight, and the Chamber of Commerce illustrate what a slanted, poor (probably purposely incomplete and misleading) analysis of the economic impacts of the option B thru F alternatives that are included in the DEIS. By proposing such deeply flawed options casts a poor light on the NPS in general, and the Superintendent in particular. What a sad way for a career officer to end up. He is on site, and knows the truth, so you think he would finish his career with some pride.
Option A is the, while not good, is the only choice an honest man could make.

Correspondence: My comments concern the DEIS of the Off-Road Vehicle Management Plan prepared by the National Park Service (NPS) for the Cape Hatteras National Seashore Recreation Area.
1) Page 201: I disagree with the NPS statement: "Even with resource closures in place, protected species are still at risk [from pedestrians and ORVs]." No Piping Plover deaths have been attributed to ORVs. ORV violations continue to decrease as signage and education improve. Pedestrian violations are much more significant than ORV violations. It seems to me that any transgressions into protected area are the result of lack of NPS manpower and enforcement than the public purposely and willfully violating out of bounds areas.
2) Page xxiv: I question the statement of as per the DEIS: "Carrying capacity would be a 'peak use limit' determined for all areas based on the linear feet of beachfront?" If you close off huge sections of the beach, you force more people into smaller areas, potentially resulting in more resource impairment and diminished visitor experience.
3) Page xix and page 23: I am against having two different closures rules pertaining to the North facing beaches (North side) and the South facing beaches (South side) as per the grid outlined in Alternative "F". I disagree with the NPS proposal to close the beaches in villages of Frisco, Hatteras and Ocracoke Villages to ORV access longer than the traditional May 15 to September 15 period for the Northern beaches, even though seasonal visitor statistics are similar for all villages. Please, make them the same: May 15 -> September 15.
4) Page 1: I agree with your statement "ORVs have long served as a primary form of access for many portions of the beach in the seashore, and continue to be the most practical means of access and parking for many visitors."
However, pedestrian only areas discriminate against individuals with limited mobility due to age or physical impairments, families with small children, and those wishing to engage in activities requiring recreational equipment (boogie boards, beach umbrellas, beach chairs, coolers, fishing rods and tackle, etc)
5) Page 53: I disagree with the special use permit proposed guidelines. It is impractical to allow the transportation of disabled visitors to the village beaches and then require the vehicle to be returned to the street or parking area. This necessitates the disabled person to have a driver to drop him (or her) off, then drive to a parking area, then trudge a long distance to the site of the drop off, then trudge the long distance through the sand back to get the vehicle.
Suppose the handicap person wants to go to the beach, is capable of driving himself, yet cannot find another person to go with him? Does he now not go to the beach? This rule creates unnecessary hardships and risks in the event of an emergency as well.
6) Page 121 ? 127. I strongly disagree with the buffers as presented. We must allow for pass-thru corridors. The beach is linear with the ocean buffering on one side and the dune line on the other. For example - If you pinch off access on one side of a 4 mile linear beach and pinch off access on the other side of the 4 mile section of beach with no corridor, then you effectively have closed off all 4 miles of the beach because you CAN'T get there. The proposed bird buffers are too large, blocking access to the interior sections from the two "buffered" ends.
I propose ORV pass-thru only corridors and to use breeding / nesting buffer distances to establish ORV pass through only corridors to ensure beach access in a way that does not hinder resource protection. I believe pass through corridors should be maintained for pedestrians and ORVs in all areas of the Cape Hatteras National Seashore Recreational Area throughout the entire breeding and nesting season. Corridors are vital to providing access in a way that does not hinder resource protection.
Piping Plover unfledged chicks buffer should move with the brood as it relocates to reliable food source, not expanded.
The 1,000 meter distance for the piping plover is way too large and not based upon peer reviewed science. A more rational distance would be 200 meters per other sites in the nation for the piping plover. Ample scientific evidence and precedent exists to support a 200 meter buffer.
Buffers for other species, including American Oystercatchers, Least Terns and Colonial Waterbirds must also be changed. An effective 30 meter buffer should be established for these species rather than the 300 meter closure outlined in the DEIS.
NON-ENDANGERED BIRDS should not have same protection as if endangered. Not allowing ORV access is paramount to denying the public access to these beaches.
7) Page 468: I disagree with the limitations imposed on pedestrian and ORVs. Corridors or bypasses should be provided thru, around or below high tide line in all SMAs during entire breeding season to maintain access.
8) Page 124: I strongly disagree with the NPS slant of providing for over protection of resource management over that of the public's right to access the beaches. Pro-active initiatives include: Vegetation Management, Habitat Management, Enhanced Predator Management, Colonial Water bird social attraction, Piping Plover check fledge rate, Piping plover chick buffer distance, and pass-through buffers during the incubation period. Opportunities to implement less restrictive closures as a result of the above initiatives should be considered more frequently than the 5-year periodic review process identified in the DEIS.
9) I disagree with the NPS Resource Management Pedestrian / ORV Closure Policies. These policies address the least significant factors affecting nest survival with little chance to have more than negligible impact. For example: the AMOY Nest Failures are predominately due to non-human events. Using your own stats, the mammalian predation is 54%, Storm / Lunar Tides: 29%, Nest Abandonment: 6%, Avian Predation: 5%, and Ghost Crab Predation: 3%,
So what is the percentage due to human interference: just 3%! It's insignificant, yet the NPS wants to ban humans when their actions provide very little influence on the success rate of breeding birds and turtles.
10) I disagree with the stats of breeding plovers and the other birds in the Park when the NPS does not adequately consider locations neighboring the Recreational Area that are part of the same ecosystem, namely dredge and spoil island that are located just yards away and within sight of the seashore. These birds are part of the same ecosystem and should be included.
Those spoil islands, developed by man from dredging the waterways in the Pamlico Sound for channel upkeep are slammed full of birds. The reason why so many birds? NO PREDATORS. SO, birds are not as stupid as one might think. You have to count these birds and incorporate them in the stats when the NPS is talking about any so called decline in breeding pairs in the National Park.
11) Page 1: I do not think the DEIS responsibly addresses the cultural resource issues. The very purpose of the DEIS as set forth in the National Environmental Policy Act (NEPA) is to protect and preserve natural and cultural resources in the federal decision making process. In the DEIS, the statement "protect and preserve natural and cultural resources" appears in the first sentence of the first page of the plan, in the Purpose of the Plan section, and numerous times thereafter. Yet, the 810 page document devotes only two paragraphs to analysis of cultural resource issues.
12) Pages 270-281; 561-598: I strongly disagree with your economic analysis of the impact of the DEIS. The region of influence (ROI) incorporates the Northern Beach communities, including Kill Devil Hills, Kitty Hawk, Southern Shores and Duck. These areas are almost completely disconnected from ORV use and access issues relating to the Seashore. ? Inclusion of the Northern Beaches in analysis significantly dilutes estimates of economic impact

on the 8 Seashore Villages

? Analysis of economic impact to the Seashore Villages appears to be significantly down played. Emphasis in DEIS is on the ROI-wide or county-wide level impacts.

? Nowhere is it clearly addressed that the overwhelming majority of negative impacts will be felt by small businesses in the Seashore Villages rather than by overall economic interests within the greater ROI.

On page xlvi, Alternative F is characterized as having a "negligible to moderate" adverse impact on small businesses. I strongly disagree with this statement.

I believe the negligible to moderate projection is inaccurate and relies on economic surveys that has not yet been published. Furthermore, this material is not expected to be added to the DEIS until after the public comment period has ended.

Based upon the economic harm we have already experienced under the consent decree, Dare County projects the economic impact of Alternative F to be substantial.

Beach closures have already had a devastating and unfair impact on many Dare County Businesses, causing foreclosures, bankruptcies, lay-offs, cutbacks, expensive refinancing, and depleted college funds and savings accounts.

Pages 270-286, 561-598: The socio-economic data and analyses are incomplete and erroneous and result in an understatement of the effect the restrictions will have upon the Island, the region and the state of NC. The US Park Services answer: Businesses will have to "adapt" to the new rules. (p.383) The negative economic impacts of the decree ARE KNOWN, so to say that the added restrictions would have negligible to moderate impact is indefensible.

13) Overall Visitor Counts - Overall visitor counts appear to include visitors to Fort Raleigh National Historic Site and the Wright Brothers National Memorial. A large percentage of these visitors vacation in the Northern Beaches communities and recreate on the non-federal beaches outside of the Seashore. Visitors who patronize the Fort Raleigh National Historic Site and the Wright Brothers National Memorial but do not visit the actual seashore areas need to be factored out.

Maintenance of Future Access to Cape Point and South Point Ocracoke: All socioeconomic analyses related to Alternative F are predicated on the assumption that access corridors will remain open for at least an appreciable portion of the visitor high season. Under Alternative F, the access corridors will be subject to Resource Closures based on buffers similar or identical to the Consent Decree. Unless some predictability of access to Cape Point and South Point Ocracoke can be assured, economic analyses predicated on assumption of access are fundamentally flawed.

Why would a group of surf fisherman want to come to Hatteras Island to surf fish if they are not sure they can access the prime fishing grounds at Cape Point? The answer is they won't come. If they don't come, they don't rent vacation homes and spend their money on Hatteras and Ocracoke Islands.

The definition of the Region of Influence (ROI), faulty data on economic activity generated by specific type recreational activity, incomplete visitation/business survey data, inflated overall Seashore visitor counts pertaining to beach use, and flawed key assumptions concerning the maintenance of access under Alternative F, all lead to inaccurate conclusions in the socioeconomic analyses. Specifically, these inaccuracies can be seen as understating the negative socio-economic impact of the Seashore Villages. Further, this negative impact will be absorbed almost entirely by Small Businesses. Neither of these important aspects of the management alternatives are adequately presented in the DEIS.

14) Page 136: I strongly disagree with your pet restriction proposals. The "prohibition of pets in the Seashore during bird breeding season including in front of the villages." = No Pets in public areas ?beaches, campgrounds, soundfront, foot trails, park maintained roads -from March 15 ?July 31.

15) Pages 125; 392 ? 396: SEA TURTLES. I disagree with the stats and procedures proposed. I think endangered sea turtles would benefit from management practices now in use at other federal seashores that are more proactive in efforts to achieve nesting success. This includes relocating nests to more desirable locations as is done in other state and federally controlled areas.

The Cape Hatteras National Seashore Recreational Area is on the northernmost fringe of turtle nesting locations for the southeast, accounting for about 1% of all turtle nests. Proposed buffer areas are not needed for protection of the turtles and amount to overprotection.

16) Pages 97- 101. I strongly disagree with proposals in this section saying that ORVs will be prohibited year round between ramps 27 and 30, at Hatteras Inlet (Hatteras Spit), Ocracoke Inlet (North Ocracoke Spit) and various other locations.

Not allowing ORV access is paramount to denying the public access to these beaches. They are located miles from the nearest parking or paved road area and too far to access on foot. As a matter of course, there has been no breeding of piping plover or other endangered species at the Hatteras Island Inlet (spit) area in the past 6 years.

17) Page 104: I disagree with the proposed night time driving closures. Per your proposals, night driving will be prohibited between May 1 and November 15th, forcing visitors off of the beaches early in the evening and preventing sunrise surf fishermen access in the morning. I propose a more moderate night time ban if one is needed, perhaps from June 1 ? September 15 with times being 1 hour after sunset and 1 hour before sunrise to allow beach goers to gather their stuff and exit the beach area.

Certainly more proactive measures such as relocating nests prone to weather and ocean events would dramatically increase the nesting success rates.

18) Page 121: I disagree with the proposed beach closings, including pedestrian access from March 15 until July 31 in 8 different beach locations which have traditionally been available. Please leave these areas open to beach walkers, shell collectors and those that want to access the beaches in these areas.

Conclusion:

Please, incorporate access corridors through any SMA so we can get to the open beach beyond. Incorporate the birds into the count that nest on the spoil islands. Base your buffer zones on peer reviewed science and scale them back to more reasonable distances as discussed.

It is neither logical nor reasonable to spend so much time, money and energy to overprotect a bird (Piping Plover) in the Cape Hatteras National Seashore that is on the southernmost fringe area of its breeding ground. That goes for the loggerhead turtle that is in its northernmost breeding area.

Let's scale back the buffer zones. You can always increase at a later date.

The USPS is leaning way over the line on over protection and not enough on the public's right to enjoy the beaches of the National Seashore. The proper balance is not achieved in the propose DEIS and needs to be modified so that the proper balance of reasonable resource protection and access to the beaches of the National Park is achieved. I could sum it up by saying "Protect, not Prohibit."

Thank you,

 Manteo, NC 27954

Dear Superintendent Murray,

Please accept this letter as my comment on the ORV DEIS before you at this time.

After reviewing the National Park Service DEIS I must disagree with any of the six alternatives within the document.

I have; however, reviewed the 77 page Coalition for Beach Access Position Statement signed by several groups that were a part of the negotiated rule making process and it by far succeeds in furnishing the best visitor experience while maintaining the needs of protecting the fragile resources.

Please consider all aspects of this alternative and put people back into the management of Cape Hatteras National Seashore.

Correspondence: My comments concern the DEIS of the Off-Road Vehicle Management Plan prepared by the National Park Service (NPS) for the Cape Hatteras National Seashore Recreation Area.

1) Page 201: I disagree with the NPS statement: "Even with resource closures in place, protected species are still at risk [from pedestrians and ORVs]."

No Piping Plover deaths have been attributed to ORVs. ORV violations continue to decrease as signage and education improve. Pedestrian violations are much more significant than ORV violations. It seems to me that any transgressions into protected area are the result of lack of NPS manpower and enforcement than the public purposely and willfully violating out of bounds areas.

2) Page xxiv: I question the statement of as per the DEIS: "Carrying capacity would be a 'peak use limit' determined for all areas based on the linear feet of beachfront?" If you close off huge sections of the beach, you force more people into smaller areas, potentially resulting in more resource impairment and diminished visitor experience.

3) Page xix and page 23: I am against having two different closures rules pertaining to the North facing beaches (North side) and the South facing beaches (South side) as per the grid outlined in Alternative "F". I disagree with the NPS proposal to close the beaches in villages of Frisco, Hatteras and Ocracoke Villages to ORV access longer than the traditional May 15 to September 15 period for the Northern beaches, even though seasonal visitor statistics are similar for all villages. Please, make them the same: May 15 -> September 15.

4) Page 1: I agree with your statement "ORVs have long served as a primary form of access for many portions of the beach in the seashore, and continue to be the most practical means of access and parking for many visitors."

However, pedestrian only areas discriminate against individuals with limited mobility due to age or physical impairments, families with small children, and those wishing to engage in activities requiring recreational equipment (boogie boards, beach umbrellas, beach chairs, coolers, fishing rods and tackle, etc)

5) Page 53: I disagree with the special use permit proposed guidelines. It is impractical to allow the transportation of disabled visitors to the village beaches and then require the vehicle to be returned to the street or parking area. This necessitates the disabled person to have a driver to drop him (or her) off, then drive to a parking area, then trudge a long distance to the site of the drop off, then trudge the long distance through the sand back to get the vehicle.

Suppose the handicap person wants to go to the beach, is capable of driving himself, yet cannot find another person to go with him? Does he now not go to the beach? This rule creates unnecessary hardships and risks in the event of an emergency as well.

6) Page 121 ? 127. I strongly disagree with the buffers as presented. We must allow for pass-thru corridors. The beach is linear with the ocean buffering

on one side and the dune line on the other. For example - If you pinch off access on one side of a 4 mile linear beach and pinch off access on the other side of the 4 mile section of beach with no corridor, then you effectively have closed off all 4 miles of the beach because you CAN'T get there. The proposed bird buffers are too large, blocking access to the interior sections from the two "buffered" ends.

I propose ORV pass-thru only corridors and to use breeding / nesting buffer distances to establish ORV pass through only corridors to ensure beach access in a way that does not hinder resource protection. I believe pass through corridors should be maintained for pedestrians and ORVs in all areas of the Cape Hatteras National Seashore Recreational Area throughout the entire breeding and nesting season. Corridors are vital to providing access in a way that does not hinder resource protection.

Piping Plover unfledged chicks buffer should move with the brood as it relocates to reliable food source, not expanded.

The 1,000 meter distance for the piping plover is way too large and not based upon peer reviewed science. A more rational distance would be 200 meters per other sites in the nation for the piping plover. Ample scientific evidence and precedent exists to support a 200 meter buffer.

Buffers for other species, including American Oystercatchers, Least Terns and Colonial Waterbirds must also be changed. An effective 30 meter buffer should be established for these species rather than the 300 meter closure outlined in the DEIS.

NON-ENDANGERED BIRDS should not have same protection as if endangered. Not allowing ORV access is paramount to denying the public access to these beaches.

7) Page 468: I disagree with the limitations imposed on pedestrian and ORVs. Corridors or bypasses should be provided thru, around or below high tide line in all SMAs during entire breeding season to maintain access.

8) Page 124: I strongly disagree with the NPS slant of providing for over protection of resource management over that of the public's right to access the beaches. Pro-active initiatives include: Vegetation Management, Habitat Management, Enhanced Predator Management, Colonial Water bird social attraction, Piping Plover check fledge rate, Piping plover chick buffer distance, and pass-through buffers during the incubation period. Opportunities to implement less restrictive closures as a result of the above initiatives should be considered more frequently than the 5-year periodic review process identified in the DEIS.

9) I disagree with the NPS Resource Management Pedestrian / ORV Closure Policies. These policies address the least significant factors affecting nest survival with little chance to have more than negligible impact. For example: the AMOY Nest Failures are predominately due to non-human events. Using your own stats, the mammalian predation is 54%, Storm / Lunar Tides: 29%, Nest Abandonment: 6%, Avian Predation: 5%, and Ghost Crab Predation: 3%.

So what is the percentage due to human interference: just 3%! It's insignificant, yet the NPS wants to ban humans when their actions provide very little influence on the success rate of breeding birds and turtles.

10) I disagree with the stats of breeding plovers and the other birds in the Park when the NPS does not adequately consider locations neighboring the Recreational Area that are part of the same ecosystem, namely dredge and spoil island that are located just yards away and within sight of the seashore. These birds are part of the same ecosystem and should be included.

Those spoil islands, developed by man from dredging the waterways in the Pamlico Sound for channel upkeep are slammed full of birds. The reason why so many birds? NO PREDATORS. SO, birds are not as stupid as one might think. You have to count these birds and incorporate them in the stats when the NPS is talking about any so called decline in breeding pairs in the National Park.

11) Page 1: I do not think the DEIS responsibly addresses the cultural resource issues. The very purpose of the DEIS as set forth in the National Environmental Policy Act (NEPA) is to protect and preserve natural and cultural resources in the federal decision making process. In the DEIS, the statement "protect and preserve natural and cultural resources" appears in the first sentence of the first page of the plan, in the Purpose of the Plan section, and numerous times thereafter. Yet, the 810 page document devotes only two paragraphs to analysis of cultural resource issues.

12) Pages 270-281; 561-598: I strongly disagree with your economic analysis of the impact of the DEIS. The region of influence (ROI) incorporates the Northern Beach communities, including Kill Devil Hills, Kitty Hawk, Southern Shores and Duck. These areas are almost completely disconnected from ORV use and access issues relating to the Seashore. ? Inclusion of the Northern Beaches in analysis significantly dilutes estimates of economic impact on the 8 Seashore Villages

? Analysis of economic impact to the Seashore Villages appears to be significantly down played. Emphasis in DEIS is on the ROI-wide or county-wide level impacts.

? Nowhere is it clearly addressed that the overwhelming majority of negative impacts will be felt by small businesses in the Seashore Villages rather than by overall economic interests within the greater ROI.

On page xlvi, Alternative F is characterized as having a "negligible to moderate" adverse impact on small businesses. I strongly disagree with this statement.

I believe the negligible to moderate projection is inaccurate and relies on economic surveys that has not yet been published. Furthermore, this material is not expected to be added to the DEIS until after the public comment period has ended.

Based upon the economic harm we have already experienced under the consent decree, Dare County projects the economic impact of Alternative F to be substantial.

Beach closures have already had a devastating and unfair impact on many Dare County Businesses, causing foreclosures, bankruptcies, lay-offs, cutbacks, expensive refinancing, and depleted college funds and savings accounts.

Pages 270-286, 561-598: The socio-economic data and analyses are incomplete and erroneous and result in an understatement of the effect the restrictions will have upon the Island, the region and the state of NC. The US Park Services answer: Businesses will have to "adapt" to the new rules. (p.383) The negative economic impacts of the decree ARE KNOWN, so to say that the added restrictions would have negligible to moderate impact is indefensible.

13) Overall Visitor Counts - Overall visitor counts appear to include visitors to Fort Raleigh National Historic Site and the Wright Brothers National Memorial. A large percentage of these visitors vacation in the Northern Beaches communities and recreate on the non-federal beaches outside of the Seashore. Visitors who patronize the Fort Raleigh National Historic Site and the Wright Brothers National Memorial but do not visit the actual seashore areas need to be factored out.

Maintenance of Future Access to Cape Point and South Point Ocracoke: All socioeconomic analyses related to Alternative F are predicated on the assumption that access corridors will remain open for at least an appreciable portion of the visitor high season. Under Alternative F, the access corridors will be subject to Resource Closures based on buffers similar or identical to the Consent Decree. Unless some predictability of access to Cape Point and South Point Ocracoke can be assured, economic analyses predicated on assumption of access are fundamentally flawed.

Why would a group of surf fisherman want to come to Hatteras Island to surf fish if they are not sure they can access the prime fishing grounds at Cape Point? The answer is they won't come. If they don't come, they don't rent vacation homes and spend their money on Hatteras and Ocracoke Islands.

The definition of the Region of Influence (ROI), faulty data on economic activity generated by specific type recreational activity, incomplete visitation/business survey data, inflated overall Seashore visitor counts pertaining to beach use, and flawed key assumptions concerning the maintenance of access under Alternative F, all lead to inaccurate conclusions in the socioeconomic analyses. Specifically, these inaccuracies can be seen as understating the negative socio-economic impact of the Seashore Villages. Further, this negative impact will be absorbed almost entirely by Small Businesses. Neither of these important aspects of the management alternatives are adequately presented in the DEIS.

14) Page 136: I strongly disagree with your pet restriction proposals. The "?prohibition of pets in the Seashore during bird breeding season including in front of the villages." = No Pets in public areas ?beaches, campgrounds, soundfront, foot trails, park maintained roads -from March 15 ?July 31.

15) Pages 125; 392 ? 396: SEA TURTLES. I disagree with the stats and procedures proposed. I think endangered sea turtles would benefit from management practices now in use at other federal seashores that are more proactive in efforts to achieve nesting success. This includes relocating nests to more desirable locations as is done in other state and federally controlled areas.

The Cape Hatteras National Seashore Recreational Area is on the northernmost fringe of turtle nesting locations for the southeast, accounting for about 1% of all turtle nests. Proposed buffer areas are not needed for protection of the turtles and amount to overprotection.

16) Pages 97- 101. I strongly disagree with proposals in this section saying that ORVs will be prohibited year round between ramps 27 and 30, at Hatteras Inlet (Hatteras Spit), Ocracoke Inlet (North Ocracoke Spit) and various other locations.

Not allowing ORV access is paramount to denying the public access to these beaches. They are located miles from the nearest parking or paved road area and too far to access on foot. As a matter of course, there has been no breeding of piping plover or other endangered species at the Hatteras Island

Inlet (spit) area in the past 6 years.

17) Page 104: I disagree with the proposed night time driving closures. Per your proposals, night driving will be prohibited between May 1 and November 15th, forcing visitors off of the beaches early in the evening and preventing sunrise surf fishermen access in the morning. I propose a more moderate night time ban if one is needed, perhaps from June 1 ? September 15 with times being 1 hour after sunset and 1 hour before sunrise to allow beach goers to gather their stuff and exit the beach area.

Certainly more proactive measures such as relocating nests prone to weather and ocean events would dramatically increase the nesting success rates.

18) Page 121: I disagree with the proposed beach closings, including pedestrian access from March 15 until July 31 in 8 different beach locations which have traditionally been available. Please leave these areas open to beach walkers, shell collectors and those that want to access the beaches in these areas.

Conclusion:

Please, incorporate access corridors through any SMA so we can get to the open beach beyond. Incorporate the birds into the count that nest on the spoil islands. Base your buffer zones on peer reviewed science and scale them back to more reasonable distances as discussed.

It is neither logical nor reasonable to spend so much time, money and energy to overprotect a bird (Piping Plover) in the Cape Hatteras National Seashore that is on the southernmost fringe area of its breeding ground. That goes for the loggerhead turtle that is in its northernmost breeding area. Let's scale back the buffer zones. You can always increase at a later date.

The USPS is leaning way over the line on over protection and not enough on the public's right to enjoy the beaches of the National Seashore. The proper balance is not achieved in the propose DEIS and needs to be modified so that the proper balance of reasonable resource protection and access to the beaches of the National Park is achieved. I could sum it up by saying "Protect, not Prohibit."

Thank you,

Correspondence Type: Web Form
Correspondence: My comments concern the DEIS of the Off-Road Vehicle Management Plan prepared by the National Park Service (NPS) for the Cape Hatteras National Seashore Recreation Area.
1) Page 201: I disagree with the NPS statement: "Even with resource closures in place, protected species are still at risk [from pedestrians and ORVs]." No Piping Plover deaths have been attributed to ORVs. ORV violations continue to decrease as signage and education improve. Pedestrian violations are much more significant than ORV violations. It seems to me that any transgressions into protected area are the result of lack of NPS manpower and enforcement than the public purposely and willfully violating out of bounds areas.
2) Page xxiv: I question the statement of as per the DEIS: "Carrying capacity would be a 'peak use limit' determined for all areas based on the linear feet of beachfront?" If you close off huge sections of the beach, you force more people into smaller areas, potentially resulting in more resource impairment and diminished visitor experience.
3) Page six and page 23: I am against having two different closures rules pertaining to the North facing beaches (North side) and the South facing beaches (South side) as per the grid outlined in Alternative "F". I disagree with the NPS proposal to close the beaches in villages of Frisco, Hatteras and Ocracoke Villages to ORV access longer than the traditional May 15 to September 15 period for the Northern beaches, even though seasonal visitor statistics are similar for all villages. Please, make them the same: May 15 -> September 15.
4) Page 1: I agree with your statement "ORVs have long served as a primary form of access for many portions of the beach in the seashore, and continue to be the most practical means of access and parking for many visitors."
However, pedestrian only areas discriminate against individuals with limited mobility due to age or physical impairments, families with small children, and those wishing to engage in activities requiring recreational equipment (boogie boards, beach umbrellas, beach chairs, coolers, fishing rods and tackle, etc)
5) Page 53: I disagree with the special use permit proposed guidelines. It is impractical to allow the transportation of disabled visitors to the village beaches and then require the vehicle to be returned to the street or parking area. This necessitates the disabled person to have a driver to drop him (or her) off, then drive to a parking area, then trudge a long distance to the site of the drop off, then trudge the long distance through the sand back to get the vehicle.
Suppose the handicap person wants to go to the beach, is capable of driving himself, yet cannot find another person to go with him? Does he now not go to the beach? This rule creates unnecessary hardships and risks in the event of an emergency as well.
6) Page 121 ? 127. I strongly disagree with the buffers as presented. We must allow for pass-thru corridors. The beach is linear with the ocean buffering on one side and the dune line on the other. For example - If you pinch off access on one side of a 4 mile linear beach and pinch off access on the other side of the 4 mile section of beach with no corridor, then you effectively have closed off all 4 miles of the beach because you CAN'T get there. The proposed bird buffers are too large, blocking access to the interior sections from the two "buffered" ends.
I propose ORV pass-thru only corridors and to use breeding / nesting buffer distances to establish ORV pass through only corridors to ensure beach access in a way that does not hinder resource protection. I believe pass through corridors should be maintained for pedestrians and ORVs in all areas of the Cape Hatteras National Seashore Recreational Area throughout the entire breeding and nesting season. Corridors are vital to providing access in a way that does not hinder resource protection.
Piping Plover unfledged chicks buffer should move with the brood as it relocates to reliable food source, not expanded.
The 1,000 meter distance for the piping plover is way too large and not based upon peer reviewed science. A more rational distance would be 200 meters per other sites in the nation for the piping plover. Ample scientific evidence and precedent exists to support a 200 meter buffer.
Buffers for other species, including American Oystercatchers, Least Terns and Colonial Waterbirds must also be changed. An effective 30 meter buffer should be established for these species rather than the 300 meter closure outlined in the DEIS.
NON-ENDANGERED BIRDS should not have same protection as if endangered. Not allowing ORV access is paramount to denying the public access to these beaches.
7) Page 468: I disagree with the limitations imposed on pedestrian and ORVs. Corridors or bypasses should be provided thru, around or below high tide line in all SMAs during entire breeding season to maintain access.
8) Page 124: I strongly disagree with the NPS slant of providing for over protection of resource management over that of the public's right to access the beaches. Pro-active initiatives include: Vegetation Management, Habitat Management, Enhanced Predator Management, Colonial Water bird social attraction, Piping Plover check fledge rate, Piping plover chick buffer distance, and pass-through buffers during the incubation period. Opportunities to

implement less restrictive closures as a result of the above initiatives should be considered more frequently than the 5-year periodic review process identified in the DEIS.

9) I disagree with the NPS Resource Management Pedestrian / ORV Closure Policies. These policies address the least significant factors affecting nest survival with little chance to have more than negligible impact. For example: the AMOY Nest Failures are predominately due to non-human events. Using your own stats, the mammalian predation is 54%, Storm / Lunar Tides: 29%, Nest Abandonment: 6%, Avian Predation: 5%, and Ghost Crab Predation: 3%.

So what is the percentage due to human interference: just 3%! It's insignificant, yet the NPS wants to ban humans when their actions provide very little influence on the success rate of breeding birds and turtles.

 Suppose the handicap person wants to go to the beach, is capable of driving himself, yet cannot find another person to go with him? Does he now not go to the beach? This rule creates unnecessary hardships and risks in the event of an emergency as well.

6) Page 121 ? 127. I strongly disagree with the buffers as presented. We must allow for pass-thru corridors. The beach is linear with the ocean buffering on one side and the dune line on the other. For example - If you pinch off access on one side of a 4 mile linear beach and pinch off access on the other side of the 4 mile section of beach with no corridor, then you effectively have closed off all 4 miles of the beach because you CAN'T get there. The proposed bird buffers are too large, blocking access to the interior sections from the two "buffered" ends.
 I propose ORV pass-thru only corridors and to use breeding / nesting buffer distances to establish ORV pass through only corridors to ensure beach access in a way that does not hinder resource protection. I believe pass through corridors should be maintained for pedestrians and ORVs in all areas of the Cape Hatteras National Seashore Recreational Area throughout the entire breeding and nesting season. Corridors are vital to providing access in a way that does not hinder resource protection.
 Piping Plover unfledged chicks buffer should move with the brood as it relocates to reliable food source, not expanded.
 The 1,000 meter distance for the piping plover is way too large and not based upon peer reviewed science. A more rational distance would be 200 meters per other sites in the nation for the piping plover. Ample scientific evidence and precedent exists to support a 200 meter buffer.
 Buffers for other species, including American Oystercatchers, Least Terns and Colonial Waterbirds must also be changed. An effective 30 meter buffer should be established for these species rather than the 300 meter closure outlined in the DEIS.
 NON-ENDANGERED BIRDS should not have same protection as if endangered. Not allowing ORV access is paramount to denying the public access to these beaches.

7) Page 468: I disagree with the limitations imposed on pedestrian and ORVs. Corridors or bypasses should be provided thru, around or below high tide line in all SMAs during entire breeding season to maintain access.

8) Page 124: I strongly disagree with the NPS slant of providing for over protection of resource management over that of the public's right to access the beaches. Pro-active initiatives include: Vegetation Management, Habitat Management, Enhanced Predator Management, Colonial Water bird social attraction, Piping Plover check fledge rate, Piping plover chick buffer distance, and pass-through buffers during the incubation period. Opportunities to implement less restrictive closures as a result of the above initiatives should be considered more frequently than the 5-year periodic review process identified in the DEIS.

9) I disagree with the NPS Resource Management Pedestrian / ORV Closure Policies. These policies address the least significant factors affecting nest survival with little chance to have more than negligible impact. For example: the AMOY Nest Failures are predominately due to non-human events. Using your own stats, the mammalian predation is 54%, Storm / Lunar Tides: 29%, Nest Abandonment: 6%, Avian Predation: 5%, and Ghost Crab Predation: 3%,
 So what is the percentage due to human interference: just 3%! It's insignificant, yet the NPS wants to ban humans when their actions provide very little influence on the success rate of breeding birds and turtles.

10) I disagree with the stats of breeding plovers and the other birds in the Park when the NPS does not adequately consider locations neighboring the Recreational Area that are part of the same ecosystem, namely dredge and spoil island that are located just yards away and within sight of the seashore. These birds are part of the same ecosystem and should be included.
 Those spoil islands, developed by man from dredging the waterways in the Pamlico Sound for channel upkeep are slammed full of birds. The reason why so many birds? NO PREDATORS. SO, birds are not as stupid as one might think. You have to count these birds and incorporate them in the stats when the NPS is talking about any so called decline in breeding pairs in the National Park.

11) Page 1: I do not think the DEIS responsibly addresses the cultural resource issues. The very purpose of the DEIS as set forth in the National Environmental Policy Act (NEPA) is to protect and preserve natural and cultural resources in the federal decision making process. In the DEIS, the statement "protect and preserve natural and cultural resources" appears in the first sentence of the first page of the plan, in the Purpose of the Plan section, and numerous times thereafter. Yet, the 810 page document devotes only two paragraphs to analysis of cultural resource issues.

12) Pages 270-281; 561-598: I strongly disagree with your economic analysis of the impact of the DEIS. The region of influence (ROI) incorporates the Northern Beach communities, including Kill Devil Hills, Kitty Hawk, Southern Shores and Duck. These areas are almost completely disconnected from ORV use and access issues relating to the Seashore. ? Inclusion of the Northern Beaches in analysis significantly dilutes estimates of economic impact on the 8 Seashore Villages
 ? Analysis of economic impact to the Seashore Villages appears to be significantly down played. Emphasis in DEIS is on the ROI-wide or county-wide level impacts.
 ? Nowhere is it clearly addressed that the overwhelming majority of negative impacts will be felt by small businesses in the Seashore Villages rather than by overall economic interests within the greater ROI.
 On page xlvi, Alternative F is characterized as having a "negligible to moderate" adverse impact on small businesses. I strongly disagree with this statement.
 I believe the negligible to moderate projection is inaccurate and relies on economic surveys that has not yet been published. Furthermore, this material is not expected to be added to the DEIS until after the public comment period has ended.
 Based upon the economic harm we have already experienced under the consent decree, Dare County projects the economic impact of Alternative F to be substantial.
 Beach closures have already had a devastating and unfair impact on many Dare County Businesses, causing foreclosures, bankruptcies, lay-offs,

cutbacks, expensive refinancing, and depleted college funds and savings accounts.

Pages 270-286, 561-598: The socio-economic data and analyses are incomplete and erroneous and result in an understatement of the effect the restrictions will have upon the Island, the region and the state of NC. The US Park Services answer: Businesses will have to "adapt" to the new rules. (p.383) The negative economic impacts of the decree ARE KNOWN, so to say that the added restrictions would have negligible to moderate impact is indefensible.

13) Overall Visitor Counts - Overall visitor counts appear to include visitors to Fort Raleigh National Historic Site and the Wright Brothers National Memorial. A large percentage of these visitors vacation in the Northern Beaches communities and recreate on the non-federal beaches outside of the Seashore. Visitors who patronize the Fort Raleigh National Historic Site and the Wright Brothers National Memorial but do not visit the actual seashore areas need to be factored out.

Maintenance of Future Access to Cape Point and South Point Ocracoke: All socioeconomic analyses related to Alternative F are predicated on the assumption that access corridors will remain open for at least an appreciable portion of the visitor high season. Under Alternative F, the access corridors will be subject to Resource Closures based on buffers similar or identical to the Consent Decree. Unless some predictability of access to Cape Point and South Point Ocracoke can be assured, economic analyses predicated on assumption of access are fundamentally flawed.

Why would a group of surf fisherman want to come to Hatteras Island to surf fish if they are not sure they can access the prime fishing grounds at Cape Point? The answer is they won't come. If they don't come, they don't rent vacation homes and spend their money on Hatteras and Ocracoke Islands. The definition of the Region of Influence (ROI), faulty data on economic activity generated by specific type recreational activity, incomplete visitation/business survey data, inflated overall Seashore visitor counts pertaining to beach use, and flawed key assumptions concerning the maintenance of access under Alternative F, all lead to inaccurate conclusions in the socioeconomic analyses. Specifically, these inaccuracies can be seen as understating the negative socio-economic impact of the Seashore Villages. Further, this negative impact will be absorbed almost entirely by Small Businesses. Neither of these important aspects of the management alternatives are adequately presented in the DEIS.

14) Page 136: I strongly disagree with your pet restriction proposals. The "prohibition of pets in the Seashore during bird breeding season including in front of the villages." = No Pets in public areas ?beaches, campgrounds, soundfront, foot trails, park maintained roads -from March 15 ?July 31.

15) Pages 125; 392 ? 396: SEA TURTLES. I disagree with the stats and procedures proposed. I think endangered sea turtles would benefit from management practices now in use at other federal seashores that are more proactive in efforts to achieve nesting success. This includes relocating nests to more desirable locations as is done in other state and federally controlled areas.

The Cape Hatteras National Seashore Recreational Area is on the northernmost fringe of turtle nesting locations for the southeast, accounting for about 1% of all turtle nests. Proposed buffer areas are not needed for protection of the turtles and amount to overprotection.

16) Pages 97- 101. I strongly disagree with proposals in this section saying that ORVs will be prohibited year round between ramps 27 and 30, at Hatteras Inlet (Hatteras Spit), Ocracoke Inlet (North Ocracoke Spit) and various other locations.

Not allowing ORV access is paramount to denying the public access to these beaches. They are located miles from the nearest parking or paved road area and too far to access on foot. As a matter of course, there has been no breeding of piping plover or other endangered species at the Hatteras Island Inlet (spit) area in the past 6 years.

17) Page 104: I disagree with the proposed night time driving closures. Per your proposals, night driving will be prohibited between May 1 and November 15th, forcing visitors off of the beaches early in the evening and preventing sunrise surf fishermen access in the morning. I propose a more moderate night time ban if one is needed, perhaps from June 1 ? September 15 with times being 1 hour after sunset and 1 hour before sunrise to allow beach goers to gather their stuff and exit the beach area.

Certainly more proactive measures such as relocating nests prone to weather and ocean events would dramatically increase the nesting success rates.

18) Page 121: I disagree with the proposed beach closings, including pedestrian access from March 15 until July 31 in 8 different beach locations which have traditionally been available. Please leave these areas open to beach walkers, shell collectors and those that want to access the beaches in these areas.

Conclusion:

Please, incorporate access corridors through any SMA so we can get to the open beach beyond. Incorporate the birds into the count that nest on the spoil islands. Base your buffer zones on peer reviewed science and scale them back to more reasonable distances as discussed.

It is neither logical nor reasonable to spend so much time, money and energy to overprotect a bird (Piping Plover) in the Cape Hatteras National Seashore that is on the southernmost fringe area of its breeding ground. That goes for the loggerhead turtle that is in its northernmost breeding area.

Let's scale back the buffer zones. You can always increase at a later date.

The USPS is leaning way over the line on over protection and not enough on the public's right to enjoy the beaches of the National Seashore. The proper balance is not achieved in the propose DEIS and needs to be modified so that the proper balance of reasonable resource protection and access to the beaches of the National Park is achieved. I could sum it up by saying "Protect, not Prohibit."

Thank you,

Subject: DEIS Off-Road Vehicle Management Plan Comments

My comments concern the DEIS of the Off-Road Vehicle Management Plan prepared by the National Park Service (NPS) for the Cape Hatteras National Seashore Recreation Area.

1) Page 201: I disagree with the NPS statement: "Even with resource closures in place, protected species are still at risk [from pedestrians and ORVs]." No Piping Plover deaths have been attributed to ORVs. ORV violations continue to decrease as signage and education improve. Pedestrian violations are much more significant than ORV violations. It seems to me that any transgressions into protected area are the result of lack of NPS manpower and enforcement than the public purposely and willfully violating out of bounds areas.

2) Page xxiv: I question the statement of as per the DEIS: "Carrying capacity would be a 'peak use limit' determined for all areas based on the linear feet of beachfront?" If you close off huge sections of the beach, you force more people into smaller areas, potentially resulting in more resource impairment and diminished visitor experience.

3) Page six and page 23: I am against having two different closures rules pertaining to the North facing beaches (North side) and the South facing beaches (South side) as per the grid outlined in Alternative "F". I disagree with the NPS proposal to close the beaches in villages of Frisco, Hatteras and Ocracoke Villages to ORV access longer than the traditional May 15 to September 15 period for the Northern beaches, even though seasonal visitor statistics are similar for all villages. Please, make them the same: May 15 -> September 15.

4) Page 1: I agree with your statement "ORVs have long served as a primary form of access for many portions of the beach in the seashore, and continue to be the most practical means of access and parking for many visitors."

However, pedestrian only areas discriminate against individuals with limited mobility due to age or physical impairments, families with small children, and those wishing to engage in activities requiring recreational equipment (boogie boards, beach umbrellas, beach chairs, coolers, fishing rods and tackle, etc)

5) Page 53: I disagree with the special use permit proposed guidelines. It is impractical to allow the transportation of disabled visitors to the village beaches and then require the vehicle to be returned to the street or parking area. This necessitates the disabled person to have a driver to drop him (or her) off, then drive to a parking area, then trudge a long distance to the site of the drop off, then trudge the long distance through the sand back to get the vehicle.

Suppose the handicap person wants to go to the beach, is capable of driving himself, yet cannot find another person to go with him? Does he now not go

to the beach? This rule creates unnecessary hardships and risks in the event of an emergency as well.

6) Page 121 ? 127. I strongly disagree with the buffers as presented. We must allow for pass-thru corridors. The beach is linear with the ocean buffering on one side and the dune line on the other. For example - If you pinch off access on one side of a 4 mile linear beach and pinch off access on the other side of the 4 mile section of beach with no corridor, then you effectively have closed off all 4 miles of the beach because you CAN'T get there. The proposed bird buffers are too large, blocking access to the interior sections from the two "buffered" ends.

I propose ORV pass-thru only corridors and to use breeding / nesting buffer distances to establish ORV pass through only corridors to ensure beach access in a way that does not hinder resource protection. I believe pass through corridors should be maintained for pedestrians and ORVs in all areas of the Cape Hatteras National Seashore Recreational Area throughout the entire breeding and nesting season. Corridors are vital to providing access in a way that does not hinder resource protection.

Piping Plover unfledged chicks buffer should move with the brood as it relocates to reliable food source, not expanded.

The 1,000 meter distance for the piping plover is way too large and not based upon peer reviewed science. A more rational distance would be 200 meters per other sites in the nation for the piping plover. Ample scientific evidence and precedent exists to support a 200 meter buffer.

Buffers for other species, including American Oystercatchers, Least Terns and Colonial

Waterbirds must also be changed. An effective 30 meter buffer should be established for these species rather than the 300 meter closure outlined in the DEIS.

NON-ENDANGERED BIRDS should not have same protection as if endangered. Not allowing ORV access is paramount to denying the public access to these beaches.

7) Page 468: I disagree with the limitations imposed on pedestrian and ORVs. Corridors or bypasses should be provided thru, around or below high tide line in all SMAs during entire breeding season to maintain access.

8) Page 124: I strongly disagree with the NPS slant of providing for over protection of resource management over that of the public's right to access the beaches. Pro-active initiatives include: Vegetation Management, Habitat Management, Enhanced Predator Management, Colonial Water bird social attraction, Piping Plover check fledge rate, Piping plover chick buffer distance, and pass-through buffers during the incubation period. Opportunities to implement less restrictive closures as a result of the above initiatives should be considered more frequently than the 5-year periodic review process identified in the DEIS.

9) I disagree with the NPS Resource Management Pedestrian / ORV Closure Policies. These policies address the least significant factors affecting nest survival with little chance to have more than negligible impact. For example: the AMOY Nest Failures are predominately due to non-human events.

Using your own stats, the mammalian predation is 54%, Storm / Lunar Tides: 29%, Nest Abandonment: 6%, Avian Predation: 5%, and Ghost Crab Predation: 3%,

So what is the percentage due to human interference: just 3%! It's insignificant, yet the NPS wants to ban humans when their actions provide very little influence on the success rate of breeding birds and turtles.

10) I disagree with the stats of breeding plovers and the other birds in the Park when the NPS does not adequately consider locations neighboring the Recreational Area that are part of the same ecosystem, namely dredge and spoil island that are located just yards away and within sight of the seashore. These birds are part of the same ecosystem and should be included.

Those spoil islands, developed by man from dredging the waterways in the Pamlico Sound for channel upkeep are slammed full of birds. The reason why so many birds? NO PREDATORS. SO, birds are not as stupid as one might think. You have to count these birds and incorporate them in the stats when the NPS is talking about any so called decline in breeding pairs in the National Park.

11) Page 1: I do not think the DEIS responsibly addresses the cultural resource issues. The very purpose of the DEIS as set forth in the National Environmental Policy Act (NEPA) is to protect and preserve natural and cultural resources in the federal decision making process. In the DEIS, the statement "protect and preserve natural and cultural resources" appears in the first sentence of the first page of the plan, in the Purpose of the Plan section, and numerous times thereafter. Yet, the 810 page document devotes only two paragraphs to analysis of cultural resource issues.

12) Pages 270-281; 561-598: I strongly disagree with your economic analysis of the impact of the DEIS. The region of influence (ROI) incorporates the Northern Beach communities, including Kill Devil Hills, Kitty Hawk, Southern Shores and Duck. These areas are almost completely disconnected from ORV use and access issues relating to the Seashore.

? Inclusion of the Northern Beaches in analysis significantly dilutes estimates of economic impact on the 8 Seashore Villages

? Analysis of economic impact to the Seashore Villages appears to be significantly down played. Emphasis in DEIS is on the ROI-wide or county-wide level impacts.

? Nowhere is it clearly addressed that the overwhelming majority of negative impacts will be felt by small businesses in the Seashore Villages rather than by overall economic interests within the greater ROI.

On page xlvi, Alternative F is characterized as having a "negligible to moderate" adverse impact on small businesses. I strongly disagree with this statement.

I believe the negligible to moderate projection is inaccurate and relies on economic surveys that has not yet been published. Furthermore, this material is not expected to be added to the DEIS until after the public comment period has ended.

Based upon the economic harm we have already experienced under the consent decree, Dare County projects the economic impact of Alternative F to be substantial.

Beach closures have already had a devastating and unfair impact on many Dare County Businesses, causing foreclosures, bankruptcies, lay-offs, cutbacks, expensive refinancing, and depleted college funds and savings accounts.

Even businesses whose revenue has stayed level or showed a modest increase have accomplished this at a costly price. Many have had to cut back employee hours, forego much-needed capital improvements, and sacrifice profits. That is certainly the case with Hatteras Realty.

Pages 270-286, 561-598: The socio-economic data and analyses are incomplete and erroneous and result in an understatement of the effect the restrictions will have upon the Island, the region and the state of NC. The US Park Services answer: Businesses will have to "adapt" to the new rules. (p.383) The negative economic impacts of the decree ARE KNOWN, so to say that the added restrictions would have negligible to moderate impact is indefensible.

13) Overall Visitor Counts - Overall visitor counts appear to include visitors to Fort Raleigh National Historic Site and the Wright Brothers National Memorial. A large percentage of these visitors vacation in the Northern Beaches communities and recreate on the non-federal beaches outside of the Seashore. Visitors who patronize the Fort Raleigh National Historic Site and the Wright Brothers National Memorial but do not visit the actual seashore areas need to be factored out.

Maintenance of Future Access to Cape Point and South Point Ocracoke: All socioeconomic analyses related to Alternative F are predicated on the assumption that access corridors will remain open for at least an appreciable portion of the visitor high season. Under Alternative F, the access corridors will be subject to Resource Closures based on buffers similar or identical to the Consent Decree. Unless some predictability of access to Cape Point and South Point Ocracoke can be assured, economic analyses predicated on assumption of access are fundamentally flawed.

Why would a group of surf fisherman want to come to Hatteras Island to surf fish if they are not sure they can access the prime fishing grounds at Cape Point? The answer is they won't come. If they don't come, they don't rent vacation homes and spend their money on Hatteras and Ocracoke Islands.

The definition of the Region of Influence (ROI), faulty data on economic activity generated by specific type recreational activity, incomplete visitation/business survey data, inflated overall Seashore visitor counts pertaining to beach use, and flawed key assumptions concerning the maintenance of access under Alternative F, all lead to inaccurate conclusions in the socioeconomic analyses. Specifically, these inaccuracies can be seen as understating the negative socio-economic impact of the Seashore Villages. Further, this negative impact will be absorbed almost entirely by Small Businesses. Neither of these important aspects of the management alternatives are adequately presented in the DEIS.

14) Page 136: I strongly disagree with your pet restriction proposals. The "prohibition of pets in the Seashore during bird breeding season including in front of the villages." = No Pets in public areas ?beaches, campgrounds, soundfront, foot trails, park maintained roads -from March 15 ?July 31.

15) Pages 125; 392 ? 396: SEA TURTLES. I disagree with the stats and procedures proposed. I think endangered sea turtles would benefit from management practices now in use at other federal seashores that are more proactive in efforts to achieve nesting success. This includes relocating nests to more desirable locations as is done in other state and federally controlled areas.

The Cape Hatteras National Seashore Recreational Area is on the northernmost fringe of turtle nesting locations for the southeast, accounting for about

1% of all turtle nests. Proposed buffer areas are not needed for protection of the turtles and amount to overprotection.

16) Pages 97- 101. I strongly disagree with proposals in this section saying that ORVs will be prohibited year round between ramps 27 and 30, at Hatteras Inlet (Hatteras Spit), Ocracoke Inlet (North Ocracoke Spit) and various other locations.

Not allowing ORV access is paramount to denying the public access to these beaches. They are located miles from the nearest parking or paved road area and too far to access on foot. As a matter of course, there has been no breeding of piping plover or other endangered species at the Hatteras Island Inlet (spit) area in the past 6 years.

17) Page 104: I disagree with the proposed night time driving closures. Per your proposals, night driving will be prohibited between May 1 and November 15th, forcing visitors off of the beaches early in the evening and preventing sunrise surf fishermen access in the morning. I propose a more moderate night time ban if one is needed, perhaps from June 1 ? September 15 with times being 1 hour after sunset and 1 hour before sunrise to allow beach goers to gather their stuff and exit the beach area.

Certainly more proactive measures such as relocating nests prone to weather and ocean events would dramatically increase the nesting success rates.

18) Page 121: I disagree with the proposed beach closings, including pedestrian access from March 15 until July 31 in 8 different beach locations which have traditionally been available. Please leave these areas open to beach walkers, shell collectors and those that want to access the beaches in these areas.

Conclusion:

Please, incorporate access corridors through any SMA so we can get to the open beach beyond. Incorporate the birds into the count that nest on the spoil islands. Base your buffer zones on peer reviewed science and scale them back to more reasonable distances as discussed.

It is neither logical nor reasonable to spend so much time, money and energy to overprotect a bird (Piping Plover) in the Cape Hatteras National Seashore that is on the southernmost fringe area of its breeding ground. That goes for the loggerhead turtle that is in its northernmost breeding area.

Let's scale back the buffer zones. You can always increase at a later date.

The USPS is leaning way over the line on over protection and not enough on the public's right to enjoy the beaches of the National Seashore. The proper balance is not achieved in the propose DEIS and needs to be modified so that the proper balance of reasonable resource protection and access to the beaches of the National Park is achieved. I could sum it up by saying "Protect, not Prohibit."

Thank you, Stephen L. Ingram

Correspondence: I am a resident of NC who enjoys the recreational opportunities offered by the Cape Hatteras National Seashore and Recreational area. Reasonable and safe pedestrian and vehicular access to the beach is essential to participate and enjoy these resources and opportunities. I also support restrictions and conditions necessary to protect the birds, sea turtles, and other animals that are supported by scientific data and can make the Seashore home for part of the year. I believe that alternative #7 advanced by the NPS is more restrictive than necessary to meet protection of the seashore. I have read and agree with the proposal to manage ORV's on the Seashore prepared and submitted for consideration by the Coalition for Beach Access. My position is that the NPS accept this alternative or at least postpone a final decision on the ORV Plan pending further review and negotiation on the counter points raised by the Coalition for Beach Access.
Thank You for the opportunity to comment, David Gundersen

As a matter of course, there has been no breeding of piping plover or other endangered species at the Hatteras Island Inlet (spit) area in the past 6 years.

17) Page 104: I disagree with the proposed night time driving closures. Per your proposals, night driving will be prohibited between May 1 and November 15th, forcing visitors off of the beaches early in the evening and preventing sunrise surf fishermen access in the morning. I propose a more moderate night time ban if one is needed, perhaps from June 1 ? September 15 with times being 1 hour after sunset and 1 hour before sunrise to allow beach goers to gather their stuff and exit the beach area.

Certainly more proactive measures such as relocating nests prone to weather and ocean events would dramatically increase the nesting success rates.

18) Page 121: I disagree with the proposed beach closings, including pedestrian access from March 15 until July 31 in 8 different beach locations which have traditionally been available. Please leave these areas open to beach walkers, shell collectors and those that want to access the beaches in these areas.

Conclusion:

Please, incorporate access corridors through any SMA so we can get to the open beach beyond. Incorporate the birds into the count that nest on the spoil islands. Base your buffer zones on peer reviewed science and scale them back to more reasonable distances as discussed.

It is neither logical nor reasonable to spend so much time, money and energy to overprotect a bird (Piping Plover) in the Cape Hatteras National Seashore that is on the southernmost fringe area of its breeding ground. That goes for the loggerhead turtle that is in its northernmost breeding area. Let's scale back the buffer zones. You can always increase at a later date.

The USPS is leaning way over the line on over protection and not enough on the public's right to enjoy the beaches of the National Seashore. The proper balance is not achieved in the propose DEIS and needs to be modified so that the proper balance of reasonable resource protection and access to the beaches of the National Park is achieved. I could sum it up by saying "Protect, not Prohibit."
Thank you,

Correspondence Type: Web Form
Correspondence: My comments concern the DEIS of the Off-Road Vehicle Management Plan prepared by the National Park Service (NPS) for the Cape Hatteras National Seashore Recreation Area.

1) Page 201: I disagree with the NPS statement: "Even with resource closures in place, protected species are still at risk [from pedestrians and ORVs]." No Piping Plover deaths have been attributed to ORVs. ORV violations continue to decrease as signage and education improve. Pedestrian violations are much more significant than ORV violations. It seems to me that any transgressions into protected area are the result of lack of NPS manpower and enforcement than the public purposely and willfully violating out of bounds areas.

2) Page xxiv: I question the statement of as per the DEIS: "Carrying capacity would be a 'peak use limit' determined for all areas based on the linear feet of beachfront?" If you close off huge sections of the beach, you force more people into smaller areas, potentially resulting in more resource impairment and diminished visitor experience.

3) Page xix and page 23: I am against having two different closures rules pertaining to the North facing beaches (North side) and the South facing beaches (South side) as per the grid outlined in Alternative "F". I disagree with the NPS proposal to close the beaches in villages of Frisco, Hatteras and Ocracoke Villages to ORV access longer than the traditional May 15 to September 15 period for the Northern beaches, even though seasonal visitor statistics are similar for all villages. Please, make them the same: May 15 -> September 15.

4) Page 1: I agree with your statement "ORVs have long served as a primary form of access for many portions of the beach in the seashore, and continue to be the most practical means of access and parking for many visitors."
However, pedestrian only areas discriminate against individuals with limited mobility due to age or physical impairments, families with small children, and those wishing to engage in activities requiring recreational equipment (boogie boards, beach umbrellas, beach chairs, coolers, fishing rods and tackle, etc)

5) Page 53: I disagree with the special use permit proposed guidelines. It is impractical to allow the transportation of disabled visitors to the village beaches and then require the vehicle to be returned to the street or parking area. This necessitates the disabled person to have a driver to drop him (or her) off, then drive to a parking area, then trudge a long distance to the site of the drop off, then trudge the long distance through the sand back to get the vehicle.
Suppose the handicap person wants to go to the beach, is capable of driving himself, yet cannot find another person to go with him? Does he now not go to the beach? This rule creates unnecessary hardships and risks in the event of an emergency as well.

6) Page 121 ? 127. I strongly disagree with the buffers as presented. We must allow for pass-thru corridors. The beach is linear with the ocean buffering on one side and the dune line on the other. For example - If you pinch off access on one side of a 4 mile linear beach and pinch off access on the other side of the 4 mile section of beach with no corridor, then you effectively have closed off all 4 miles of the beach because you CAN'T get there. The proposed bird buffers are too large, blocking access to the interior sections from the two "buffered" ends.
I propose ORV pass-thru only corridors and to use breeding / nesting buffer distances to establish ORV pass through only corridors to ensure beach access in a way that does not hinder resource protection. I believe pass through corridors should be maintained for pedestrians and ORVs in all areas of the Cape Hatteras National Seashore Recreational Area throughout the entire breeding and nesting season. Corridors are vital to providing access in a way that does not hinder resource protection.
Piping Plover unfledged chicks buffer should move with the brood as it relocates to reliable food source, not expanded.
The 1,000 meter distance for the piping plover is way too large and not based upon peer reviewed science. A more rational distance would be 200 meters per other sites in the nation for the piping plover. Ample scientific evidence and precedent exists to support a 200 meter buffer.
Buffers for other species, including American Oystercatchers, Least Terns and Colonial Waterbirds must also be changed. An effective 30 meter buffer should be established for these species rather than the 300 meter closure outlined in the DEIS.
NON-ENDANGERED BIRDS should not have same protection as if endangered. Not allowing ORV access is paramount to denying the public access to these beaches.

7) Page 468: I disagree with the limitations imposed on pedestrian and ORVs. Corridors or bypasses should be provided thru, around or below high tide line in all SMAs during entire breeding season to maintain access.

8) Page 124: I strongly disagree with the NPS slant of providing for over protection of resource management over that of the public's right to access the beaches. Pro-active initiatives include: Vegetation Management, Habitat Management, Enhanced Predator Management, Colonial Water bird social attraction, Piping Plover check fledge rate, Piping plover chick buffer distance, and pass-through buffers during the incubation period. Opportunities to implement less restrictive closures as a result of the above initiatives should be considered more frequently than the 5-year periodic review process identified in the DEIS.

9) I disagree with the NPS Resource Management Pedestrian / ORV Closure Policies. These policies address the least significant factors affecting nest survival with little chance to have more than negligible impact. For example: the AMOY Nest Failures are predominately due to non-human events. Using your own stats, the mammalian predation is 54%, Storm / Lunar Tides: 29%, Nest Abandonment: 6%, Avian Predation: 5%, and Ghost Crab Predation: 3%,
So what is the percentage due to human interference: just 3%! It's insignificant, yet the NPS wants to ban humans when their actions provide very little influence on the success rate of breeding birds and turtles.

10) I disagree with the stats of breeding plovers and the other birds in the Park when the NPS does not adequately consider locations neighboring the Recreational Area that are part of the same ecosystem, namely dredge and spoil island that are located just yards away and within sight of the seashore. These birds are part of the same ecosystem and should be included.
Those spoil islands, developed by man from dredging the waterways in the Pamlico Sound for channel upkeep are slammed full of birds. The reason why so many birds? NO PREDATORS. SO, birds are not as stupid as one might think. You have to count these birds and incorporate them in the stats when the NPS is talking about any so called decline in breeding pairs in the National Park.

11) Page 1: I do not think the DEIS responsibly addresses the cultural resource issues. The very purpose of the DEIS as set forth in the National Environmental Policy Act (NEPA) is to protect and preserve natural and cultural resources in the federal decision making process. In the DEIS, the statement "protect and preserve natural and cultural resources" appears in the first sentence of the first page of the plan, in the Purpose of the Plan section, and numerous times thereafter. Yet, the 810 page document devotes only two paragraphs to analysis of cultural resource issues.

12) Pages 270-281; 561-598: I strongly disagree with your economic analysis of the impact of the DEIS. The region of influence (ROI) incorporates the Northern Beach communities, including Kill Devil Hills, Kitty Hawk, Southern Shores and Duck. These areas are almost completely disconnected from ORV use and access issues relating to the Seashore. ? Inclusion of the Northern Beaches in analysis significantly dilutes estimates of economic impact on the 8 Seashore Villages
? Analysis of economic impact to the Seashore Villages appears to be significantly down played. Emphasis in DEIS is on the ROI-wide or county-wide level impacts.
? Nowhere is it clearly addressed that the overwhelming majority of negative impacts will be felt by small businesses in the Seashore Villages rather than by overall economic interests within the greater ROI.
On page xlvi, Alternative F is characterized as having a "negligible to moderate" adverse impact on small businesses. I strongly disagree with this statement.
I believe the negligible to moderate projection is inaccurate and relies on economic surveys that has not yet been published. Furthermore, this material is

not expected to be added to the DEIS until after the public comment period has ended.

Based upon the economic harm we have already experienced under the consent decree, Dare County projects the economic impact of Alternative F to be substantial.

Beach closures have already had a devastating and unfair impact on many Dare County Businesses, causing foreclosures, bankruptcies, lay-offs, cutbacks, expensive refinancing, and depleted college funds and savings accounts.

Pages 270-286, 561-598: The socio-economic data and analyses are incomplete and erroneous and result in an understatement of the effect the restrictions will have upon the Island, the region and the state of NC. The US Park Services answer: Businesses will have to "adapt" to the new rules. (p.383) The negative economic impacts of the decree ARE KNOWN, so to say that the added restrictions would have negligible to moderate impact is indefensible.

13) Overall Visitor Counts - Overall visitor counts appear to include visitors to Fort Raleigh National Historic Site and the Wright Brothers National Memorial. A large percentage of these visitors vacation in the Northern Beaches communities and recreate on the non-federal beaches outside of the Seashore. Visitors who patronize the Fort Raleigh National Historic Site and the Wright Brothers National Memorial but do not visit the actual seashore areas need to be factored out.

Maintenance of Future Access to Cape Point and South Point Ocracoke: All socioeconomic analyses related to Alternative F are predicated on the assumption that access corridors will remain open for at least an appreciable portion of the visitor high season. Under Alternative F, the access corridors will be subject to Resource Closures based on buffers similar or identical to the Consent Decree. Unless some predictability of access to Cape Point and South Point Ocracoke can be assured, economic analyses predicated on assumption of access are fundamentally flawed.

Why would a group of surf fisherman want to come to Hatteras Island to surf fish if they are not sure they can access the prime fishing grounds at Cape Point? The answer is they won't come. If they don't come, they don't rent vacation homes and spend their money on Hatteras and Ocracoke Islands.

The definition of the Region of Influence (ROI), faulty data on economic activity generated by specific type recreational activity, incomplete visitation/business survey data, inflated overall Seashore visitor counts pertaining to beach use, and flawed key assumptions concerning the maintenance of access under Alternative F, all lead to inaccurate conclusions in the socioeconomic analyses. Specifically, these inaccuracies can be seen as understating the negative socio-economic impact of the Seashore Villages. Further, this negative impact will be absorbed almost entirely by Small Businesses. Neither of these important aspects of the management alternatives are adequately presented in the DEIS.

14) Page 136: I strongly disagree with your pet restriction proposals. The "prohibition of pets in the Seashore during bird breeding season including in front of the villages." = No Pets in public areas ?beaches, campgrounds, soundfront, foot trails, park maintained roads -from March 15 ?July 31.

15) Pages 125; 392 ? 396: SEA TURTLES. I disagree with the stats and procedures proposed. I think endangered sea turtles would benefit from management practices now in use at other federal seashores that are more proactive in efforts to achieve nesting success. This includes relocating nests to more desirable locations as is done in other state and federally controlled areas.

The Cape Hatteras National Seashore Recreational Area is on the northernmost fringe of turtle nesting locations for the southeast, accounting for about 1% of all turtle nests. Proposed buffer areas are not needed for protection of the turtles and amount to overprotection.

16) Pages 97- 101. I strongly disagree with proposals in this section saying that ORVs will be prohibited year round between ramps 27 and 30, at Hatteras Inlet (Hatteras Spit), Ocracoke Inlet (North Ocracoke Spit) and various other locations.

Not allowing ORV access is paramount to denying the public access to these beaches. They are located miles from the nearest parking or paved road area and too far to access on foot. As a matter of course, there has been no breeding of piping plover or other endangered species at the Hatteras Island Inlet (spit) area in the past 6 years.

17) Page 104: I disagree with the proposed night time driving closures. Per your proposals, night driving will be prohibited between May 1 and November 15th, forcing visitors off of the beaches early in the evening and preventing sunrise surf fishermen access in the morning. I propose a more moderate night time ban if one is needed, perhaps from June 1 ? September 15 with times being 1 hour after sunset and 1 hour before sunrise to allow beach goers to gather their stuff and exit the beach area.

Certainly more proactive measures such as relocating nests prone to weather and ocean events would dramatically increase the nesting success rates.

18) Page 121: I disagree with the proposed beach closings, including pedestrian access from March 15 until July 31 in 8 different beach locations which have traditionally been available. Please leave these areas open to beach walkers, shell collectors and those that want to access the beaches in these areas.

Conclusion:

Please, incorporate access corridors through any SMA so we can get to the open beach beyond. Incorporate the birds into the count that nest on the spoil islands. Base your buffer zones on peer reviewed science and scale them back to more reasonable distances as discussed.

It is neither logical nor reasonable to spend so much time, money and energy to overprotect a bird (Piping Plover) in the Cape Hatteras National Seashore that is on the southernmost fringe area of its breeding ground. That goes for the loggerhead turtle that is in its northernmost breeding area.

Let's scale back the buffer zones. You can always increase at a later date.

The USPS is leaning way over the line on over protection and not enough on the public's right to enjoy the beaches of the National Seashore. The proper balance is not achieved in the propose DEIS and needs to be modified so that the proper balance of reasonable resource protection and access to the beaches of the National Park is achieved. I could sum it up by saying "Protect, not Prohibit."

Thank you,

Correspondence: Dear Superintendent Murray,

As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.

1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."

2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness..."

Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.

3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.

Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

Correspondence: Please accept this letter as my comments on the ORV DEIS before you at this time.

This 800+ page manifesto is government BS at it's best. The sum of dollars spent, and the numbers of life-long employees (or wannabe's) to produce such an overwhelming book of foolishness is unbelievable. My gosh!

The problem was that the NPS never finished the ORV Executive Order requirements, right? The NPS screwed up badly, but how many NPS people were fired or lost their jobs, retirement, savings etc.? You know the answer. ZERO.

Now the reimbursed lawyers for about three lunatic groups sue the NPS and others to cash in. Guess who gets off their butts, acts and reacts. NPS. Not an original thought came forth, just WE CONSENT.

You CONSENTED, and now you take that and even add to it to come up with this 800+ page pile of garbage. This is all written by people many miles from where the land-grab is taking place. The NPS opponent (or co-conspirator) is many miles away as well.

Government is local when it works best. The Hatteras Island people, Conrad Wirth, and the US Congress had a vision and signed on to create the Recreation Area, NOT a bird sanctuary.

Again, government is local when it works best. I recommend you review and I recommend the 77 page Coalition for Beach Access Statement signed by several groups that were a part of the negotiated rule making process (another travesty) and it by far succeeds in furnishing the best visitor experience while maintaining the needs of protecting the fragile resources. Please consider all aspects of this alternative and put actual people, not lawyers, back into the management of Cape Hatteras National Seashore.

Correspondence: I have been vacationing on the outer banks since i was a child. My fondest memories are of flying kites at sunset. I now take my children every summer.

It is wonderful to watch them enjoy the same things that I did at their age.

When I heard of the plans to close the beaches, I felt like I was loosing a life long friend.

The outer banks hold a special place in my heart. Please don't let the beaches close..

Correspondence: My comments concern the DEIS of the Off-Road Vehicle Management Plan prepared by the National Park Service (NPS) for the Cape Hatteras National Seashore Recreation Area.

1) Page 201: I disagree with the NPS statement: "Even with resource closures in place, protected species are still at risk [from pedestrians and ORVs]." No Piping Plover deaths have been attributed to ORVs. ORV violations continue to decrease as signage and education improve. Pedestrian violations are much more significant than ORV violations. It seems to me that any transgressions into protected area are the result of lack of NPS manpower and enforcement than the public purposely and willfully violating out of bounds areas.

2) Page xxiv: I question the statement of as per the DEIS: "Carrying capacity would be a 'peak use limit' determined for all areas based on the linear feet of beachfront?" If you close off huge sections of the beach, you force more people into smaller areas, potentially resulting in more resource impairment and diminished visitor experience.

3) Page xix and page 23: I am against having two different closures rules pertaining to the North facing beaches (North side) and the South facing beaches (South side) as per the grid outlined in Alternative "F". I disagree with the NPS proposal to close the beaches in villages of Frisco, Hatteras and Ocracoke Villages to ORV access longer than the traditional May 15 to September 15 period for the Northern beaches, even though seasonal visitor statistics are similar for all villages. Please, make them the same: May 15 -> September 15.

4) Page 1: I agree with your statement "ORVs have long served as a primary form of access for many portions of the beach in the seashore, and continue to be the most practical means of access and parking for many visitors."

However, pedestrian only areas discriminate against individuals with limited mobility due to age or physical impairments, families with small children, and those wishing to engage in activities requiring recreational equipment (boogie boards, beach umbrellas, beach chairs, coolers, fishing rods and tackle, etc)

5) Page 53: I disagree with the special use permit proposed guidelines. It is impractical to allow the transportation of disabled visitors to the village beaches and then require the vehicle to be returned to the street or parking area. This necessitates the disabled person to have a driver to drop him (or her) off, then drive to a parking area, then trudge a long distance to the site of the drop off, then trudge the long distance through the sand back to get the vehicle.

Suppose the handicap person wants to go to the beach, is capable of driving himself, yet cannot find another person to go with him? Does he now not go to the beach? This rule creates unnecessary hardships and risks in the event of an emergency as well.

6) Page 121 ? 127. I strongly disagree with the buffers as presented. We must allow for pass-thru corridors. The beach is linear with the ocean buffering on one side and the dune line on the other. For example - If you pinch off access on one side of a 4 mile linear beach and pinch off access on the other side of the 4 mile section of beach with no corridor, then you effectively have closed off all 4 miles of the beach because you CAN'T get there. The proposed bird buffers are too large, blocking access to the interior sections from the two "buffered" ends.

I propose ORV pass-thru only corridors and to use breeding / nesting buffer distances to establish ORV pass through only corridors to ensure beach access in a way that does not hinder resource protection. I believe pass through corridors should be maintained for pedestrians and ORVs in all areas of the Cape Hatteras National Seashore Recreational Area throughout the entire breeding and nesting season. Corridors are vital to providing access in a way that does not hinder resource protection.

Piping Plover unfledged chicks buffer should move with the brood as it relocates to reliable food source, not expanded.

The 1,000 meter distance for the piping plover is way too large and not based upon peer reviewed science. A more rational distance would be 200 meters per other sites in the nation for the piping plover. Ample scientific evidence and precedent exists to support a 200 meter buffer.

Buffers for other species, including American Oystercatchers, Least Terns and Colonial Waterbirds must also be changed. An effective 30 meter buffer should be established for these species rather than the 300 meter closure outlined in the DEIS.

NON-ENDANGERED BIRDS should not have same protection as if endangered. Not allowing ORV access is paramount to denying the public access to these beaches.

7) Page 468: I disagree with the limitations imposed on pedestrian and ORVs. Corridors or bypasses should be provided thru, around or below high tide line in all SMAs during entire breeding season to maintain access.

8) Page 124: I strongly disagree with the NPS slant of providing for over protection of resource management over that of the public's right to access the beaches. Pro-active initiatives include: Vegetation Management, Habitat Management, Enhanced Predator Management, Colonial Water bird social attraction, Piping Plover check fledge rate, Piping plover chick buffer distance, and pass-through buffers during the incubation period. Opportunities to implement less restrictive closures as a result of the above initiatives should be considered more frequently than the 5-year periodic review process identified in the DEIS.

9) I disagree with the NPS Resource Management Pedestrian / ORV Closure Policies. These policies address the least significant factors affecting nest survival with little chance to have more than negligible impact. For example: the AMOY Nest Failures are predominately due to non-human events.

Using your own stats, the mammalian predation is 54%, Storm / Lunar Tides: 29%, Nest Abandonment: 6%, Avian Predation: 5%, and Ghost Crab Predation: 3%,

So what is the percentage due to human interference: just 3%! It's insignificant, yet the NPS wants to ban humans when their actions provide very little

influence on the success rate of breeding birds and turtles.

10) I disagree with the stats of breeding plovers and the other birds in the Park when the NPS does not adequately consider locations neighboring the Recreational Area that are part of the same ecosystem, namely dredge and spoil island that are located just yards away and within sight of the seashore. These birds are part of the same ecosystem and should be included.

Those spoil islands, developed by man from dredging the waterways in the Pamlico Sound for channel upkeep are slammed full of birds. The reason why so many birds? NO PREDATORS. SO, birds are not as stupid as one might think. You have to count these birds and incorporate them in the stats when the NPS is talking about any so called decline in breeding pairs in the National Park.

11) Page 1: I do not think the DEIS responsibly addresses the cultural resource issues. The very purpose of the DEIS as set forth in the National Environmental Policy Act (NEPA) is to protect and preserve natural and cultural resources in the federal decision making process. In the DEIS, the statement "protect and preserve natural and cultural resources" appears in the first sentence of the first page of the plan, in the Purpose of the Plan section, and numerous times thereafter. Yet, the 810 page document devotes only two paragraphs to analysis of cultural resource issues.

12) Pages 270-281; 561-598: I strongly disagree with your economic analysis of the impact of the DEIS. The region of influence (ROI) incorporates the Northern Beach communities, including Kill Devil Hills, Kitty Hawk, Southern Shores and Duck. These areas are almost completely disconnected from ORV use and access issues relating to the Seashore. ? Inclusion of the Northern Beaches in analysis significantly dilutes estimates of economic impact on the 8 Seashore Villages

? Analysis of economic impact to the Seashore Villages appears to be significantly down played. Emphasis in DEIS is on the ROI-wide or county-wide level impacts.

? Nowhere is it clearly addressed that the overwhelming majority of negative impacts will be felt by small businesses in the Seashore Villages rather than by overall economic interests within the greater ROI.

On page xlvi, Alternative F is characterized as having a "negligible to moderate" adverse impact on small businesses. I strongly disagree with this statement.

I believe the negligible to moderate projection is inaccurate and relies on economic surveys that has not yet been published. Furthermore, this material is not expected to be added to the DEIS until after the public comment period has ended.

Based upon the economic harm we have already experienced under the consent decree, Dare County projects the economic impact of Alternative F to be substantial.

Beach closures have already had a devastating and unfair impact on many Dare County Businesses, causing foreclosures, bankruptcies, lay-offs, cutbacks, expensive refinancing, and depleted college funds and savings accounts.

Pages 270-286, 561-598: The socio-economic data and analyses are incomplete and erroneous and result in an understatement of the effect the restrictions will have upon the Island, the region and the state of NC. The US Park Services answer: Businesses will have to "adapt" to the new rules.

(p.383) The negative economic impacts of the decree ARE KNOWN, so to say that the added restrictions would have negligible to moderate impact is indefensible.

13) Overall Visitor Counts - Overall visitor counts appear to include visitors to Fort Raleigh National Historic Site and the Wright Brothers National Memorial. A large percentage of these visitors vacation in the Northern Beaches communities and recreate on the non-federal beaches outside of the Seashore. Visitors who patronize the Fort Raleigh National Historic Site and the Wright Brothers National Memorial but do not visit the actual seashore areas need to be factored out.

Maintenance of Future Access to Cape Point and South Point Ocracoke: All socioeconomic analyses related to Alternative F are predicated on the assumption that access corridors will remain open for at least an appreciable portion of the visitor high season. Under Alternative F, the access corridors will be subject to Resource Closures based on buffers similar or identical to the Consent Decree. Unless some predictability of access to Cape Point and South Point Ocracoke can be assured, economic analyses predicated on assumption of access are fundamentally flawed.

Why would a group of surf fisherman want to come to Hatteras Island to surf fish if they are not sure they can access the prime fishing grounds at Cape Point? The answer is they won't come. If they don't come, they don't rent vacation homes and spend their money on Hatteras and Ocracoke Islands.

The definition of the Region of Influence (ROI), faulty data on economic activity generated by specific type recreational activity, incomplete visitation/business survey data, inflated overall Seashore visitor counts pertaining to beach use, and flawed key assumptions concerning the maintenance of access under Alternative F, all lead to inaccurate conclusions in the socioeconomic analyses. Specifically, these inaccuracies can be seen as understating the negative socio-economic impact of the Seashore Villages. Further, this negative impact will be absorbed almost entirely by Small Businesses. Neither of these important aspects of the management alternatives are adequately presented in the DEIS.

14) Page 136: I strongly disagree with your pet restriction proposals. The "prohibition of pets in the Seashore during bird breeding season including in front of the villages." = No Pets in public areas ?beaches, campgrounds, soundfront, foot trails, park maintained roads -from March 15 ?July 31.

15) Pages 125; 392 ? 396: SEA TURTLES. I disagree with the stats and procedures proposed. I think endangered sea turtles would benefit from management practices now in use at other federal seashores that are more proactive in efforts to achieve nesting success. This includes relocating nests to more desirable locations as is done in other state and federally controlled areas.

The Cape Hatteras National Seashore Recreational Area is on the northernmost fringe of turtle nesting locations for the southeast, accounting for about 1% of all turtle nests. Proposed buffer areas are not needed for protection of the turtles and amount to overprotection.

16) Pages 97- 101. I strongly disagree with proposals in this section saying that ORVs will be prohibited year round between ramps 27 and 30, at Hatteras Inlet (Hatteras Spit), Ocracoke Inlet (North Ocracoke Spit) and various other locations.

Not allowing ORV access is paramount to denying the public access to these beaches. They are located miles from the nearest parking or paved road area and too far to access on foot. As a matter of course, there has been no breeding of piping plover or other endangered species at the Hatteras Island Inlet (spit) area in the past 6 years.

17) Page 104: I disagree with the proposed night time driving closures. Per your proposals, night driving will be prohibited between May 1 and November 15th, forcing visitors off of the beaches early in the evening and preventing sunrise surf fishermen access in the morning. I propose a more moderate night time ban if one is needed, perhaps from June 1 ? September 15 with times being 1 hour after sunset and 1 hour before sunrise to allow beach goers to gather their stuff and exit the beach area.

Certainly more proactive measures such as relocating nests prone to weather and ocean events would dramatically increase the nesting success rates.

18) Page 121: I disagree with the proposed beach closings, including pedestrian access from March 15 until July 31 in 8 different beach locations which have traditionally been available. Please leave these areas open to beach walkers, shell collectors and those that want to access the beaches in these areas.

Conclusion:

Please, incorporate access corridors through any SMA so we can get to the open beach beyond. Incorporate the birds into the count that nest on the spoil islands. Base your buffer zones on peer reviewed science and scale them back to more reasonable distances as discussed.

It is neither logical nor reasonable to spend so much time, money and energy to overprotect a bird (Piping Plover) in the Cape Hatteras National Seashore that is on the southernmost fringe area of its breeding ground. That goes for the loggerhead turtle that is in its northernmost breeding area. Let's scale back the buffer zones. You can always increase at a later date.

The USPS is leaning way over the line on over protection and not enough on the public's right to enjoy the beaches of the National Seashore. The proper balance is not achieved in the propose DEIS and needs to be modified so that the proper balance of reasonable resource protection and access to the beaches of the National Park is achieved. I could sum it up by saying "Protect, not Prohibit."

Thank you,

Correspondence:	As a frequent tourist in NC, I have enjoyed your beaches. Please do not ruin them by allowing motorized traffic. The beach structure, the protective						

dunes and the wildlife who call the NC beaches their homes can be destroyed by this sort of traffic. I'd like my future grandchildren to enjoy these beaches as I have. Thank you.

Correspondence: My comments concern the DEIS of the Off-Road Vehicle Management Plan prepared by the National Park Service (NPS) for the Cape Hatteras National Seashore Recreation Area.

1) Page 201: I disagree with the NPS statement: "Even with resource closures in place, protected species are still at risk [from pedestrians and ORVs]." No Piping Plover deaths have been attributed to ORVs. ORV violations continue to decrease as signage and education improve. Pedestrian violations are much more significant than ORV violations. It seems to me that any transgressions into protected area are the result of lack of NPS manpower and enforcement than the public purposely and willfully violating out of bounds areas.

2) Page xxiv: I question the statement of as per the DEIS: "Carrying capacity would be a 'peak use limit' determined for all areas based on the linear feet of beachfront?" If you close off huge sections of the beach, you force more people into smaller areas, potentially resulting in more resource impairment and diminished visitor experience.

3) Page xix and page 23: I am against having two different closures rules pertaining to the North facing beaches (North side) and the South facing beaches (South side) as per the grid outlined in Alternative "F". I disagree with the NPS proposal to close the beaches in villages of Frisco, Hatteras and Ocracoke Villages to ORV access longer than the traditional May 15 to September 15 period for the Northern beaches, even though seasonal visitor statistics are similar for all villages. Please, make them the same: May 15 -> September 15.

4) Page 1: I agree with your statement "ORVs have long served as a primary form of access for many portions of the beach in the seashore, and continue to be the most practical means of access and parking for many visitors." However, pedestrian only areas discriminate against individuals with limited mobility due to age or physical impairments, families with small children, and those wishing to engage in activities requiring recreational equipment (boogie boards, beach umbrellas, beach chairs, coolers, fishing rods and tackle, etc)

5) Page 53: I disagree with the special use permit proposed guidelines. It is impractical to allow the transportation of disabled visitors to the village beaches and then require the vehicle to be returned to the street or parking area. This necessitates the disabled person to have a driver to drop him (or her) off, then drive to a parking area, then trudge a long distance to the site of the drop off, then trudge the long distance through the sand back to get the vehicle. Suppose the handicap person wants to go to the beach, is capable of driving himself, yet cannot find another person to go with him? Does he now not go to the beach? This rule creates unnecessary hardships and risks in the event of an emergency as well.

6) Page 121 ? 127. I strongly disagree with the buffers as presented. We must allow for pass-thru corridors. The beach is linear with the ocean buffering on one side and the dune line on the other. For example - If you pinch off access on one side of a 4 mile linear beach and pinch off access on the other side of the 4 mile section of beach with no corridor, then you effectively have closed off all 4 miles of the beach because you CAN'T get there. The proposed bird buffers are too large, blocking access to the interior sections from the two "buffered" ends. I propose ORV pass-thru only corridors and to use breeding / nesting buffer distances to establish ORV pass through only corridors to ensure beach access in a way that does not hinder resource protection. I believe pass through corridors should be maintained for pedestrians and ORVs in all areas of the Cape Hatteras National Seashore Recreational Area throughout the entire breeding and nesting season. Corridors are vital to providing access in a way that does not hinder resource protection. Piping Plover unfledged chicks buffer should move with the brood as it relocates to reliable food source, not expanded. The 1,000 meter distance for the piping plover is way too large and not based upon peer reviewed science. A more rational distance would be 200 meters per other sites in the nation for the piping plover. Ample scientific evidence and precedent exists to support a 200 meter buffer. Buffers for other species, including American Oystercatchers, Least Terns and Colonial Waterbirds must also be changed. An effective 30 meter buffer should be established for these species rather than the 300 meter closure outlined in the DEIS. NON-ENDANGERED BIRDS should not have same protection as if endangered. Not allowing ORV access is paramount to denying the public access to these beaches.

7) Page 468: I disagree with the limitations imposed on pedestrian and ORVs. Corridors or bypasses should be provided thru, around or below high tide line in all SMAs during entire breeding season to maintain access.

8) Page 124: I strongly disagree with the NPS slant of providing for over protection of resource management over that of the public's right to access the beaches. Pro-active initiatives include: Vegetation Management, Habitat Management, Enhanced Predator Management, Colonial Water bird social attraction, Piping Plover check fledged rate, Piping plover chick buffer distance, and pass-through buffers during the incubation period. Opportunities to implement less restrictive closures as a result of the above initiatives should be considered more frequently than the 5-year periodic review process identified in the DEIS.

9) I disagree with the NPS Resource Management Pedestrian / ORV Closure Policies. These policies address the least significant factors affecting nest survival with little chance to have more than negligible impact. For example: the AMOY Nest Failures are predominately due to non-human events. Using your own stats, the mammalian predation is 54%, Storm / Lunar Tides: 29%, Nest Abandonment: 6%, Avian Predation: 5%, and Ghost Crab Predation: 3%, So what is the percentage due to human interference: just 3%! It's insignificant, yet the NPS wants to ban humans when their actions provide very little influence on the success rate of breeding birds and turtles.

10) I disagree with the stats of breeding plovers and the other birds in the Park when the NPS does not adequately consider locations neighboring the Recreational Area that are part of the same ecosystem, namely dredge and spoil island that are located just yards away and within sight of the seashore. These birds are part of the same ecosystem and should be included. Those spoil islands, developed by man from dredging the waterways in the Pamlico Sound for channel upkeep are slammed full of birds. The reason why so many birds? NO PREDATORS. SO, birds are not as stupid as one might think. You have to count these birds and incorporate them in the stats when the NPS is talking about any so called decline in breeding pairs in the National Park.

11) Page 1: I do not think the DEIS responsibly addresses the cultural resource issues. The very purpose of the DEIS as set forth in the National Environmental Policy Act (NEPA) is to protect and preserve natural and cultural resources in the federal decision making process. In the DEIS, the statement "protect and preserve natural and cultural resources" appears in the first sentence of the first page of the plan, in the Purpose of the Plan section, and numerous times thereafter. Yet, the 810 page document devotes only two paragraphs to analysis of cultural resource issues.

12) Pages 270-281; 561-598: I strongly disagree with your economic analysis of the impact of the DEIS. The region of influence (ROI) incorporates the Northern Beach communities, including Kill Devil Hills, Kitty Hawk, Southern Shores and Duck. These areas are almost completely disconnected from ORV use and access issues relating to the Seashore. ? Inclusion of the Northern Beaches in analysis significantly dilutes estimates of economic impact on the 8 Seashore Villages ? Analysis of economic impact to the Seashore Villages appears to be significantly down played. Emphasis in DEIS is on the ROI-wide or county-wide level impacts. ? Nowhere is it clearly addressed that the overwhelming majority of negative impacts will be felt by small businesses in the Seashore Villages rather than by overall economic interests within the greater ROI. On page xlvi, Alternative F is characterized as having a "negligible to moderate" adverse impact on small businesses. I strongly disagree with this statement. I believe the negligible to moderate projection is inaccurate and relies on economic surveys that has not yet been published. Furthermore, this material is not expected to be added to the DEIS until after the public comment period has ended. Based upon the economic harm we have already experienced under the consent decree, Dare County projects the economic impact of Alternative F to be

substantial.

Beach closures have already had a devastating and unfair impact on many Dare County Businesses, causing foreclosures, bankruptcies, lay-offs, cutbacks, expensive refinancing, and depleted college funds and savings accounts.

Pages 270-286, 561-598: The socio-economic data and analyses are incomplete and erroneous and result in an understatement of the effect the restrictions will have upon the Island, the region and the state of NC. The US Park Services answer: Businesses will have to "adapt" to the new rules. (p.383) The negative economic impacts of the decree ARE KNOWN, so to say that the added restrictions would have negligible to moderate impact is indefensible.

13) Overall Visitor Counts - Overall visitor counts appear to include visitors to Fort Raleigh National Historic Site and the Wright Brothers National Memorial. A large percentage of these visitors vacation in the Northern Beaches communities and recreate on the non-federal beaches outside of the Seashore. Visitors who patronize the Fort Raleigh National Historic Site and the Wright Brothers National Memorial but do not visit the actual seashore areas need to be factored out.

Maintenance of Future Access to Cape Point and South Point Ocracoke: All socioeconomic analyses related to Alternative F are predicated on the assumption that access corridors will remain open for at least an appreciable portion of the visitor high season. Under Alternative F, the access corridors will be subject to Resource Closures based on buffers similar or identical to the Consent Decree. Unless some predictability of access to Cape Point and South Point Ocracoke can be assured, economic analyses predicated on assumption of access are fundamentally flawed.

Why would a group of surf fisherman want to come to Hatteras Island to surf fish if they are not sure they can access the prime fishing grounds at Cape Point? The answer is they won't come. If they don't come, they don't rent vacation homes and spend their money on Hatteras and Ocracoke Islands.

The definition of the Region of Influence (ROI), faulty data on economic activity generated by specific type recreational activity, incomplete visitation/business survey data, inflated overall Seashore visitor counts pertaining to beach use, and flawed key assumptions concerning the maintenance of access under Alternative F, all lead to inaccurate conclusions in the socioeconomic analyses. Specifically, these inaccuracies can be seen as understating the negative socio-economic impact of the Seashore Villages. Further, this negative impact will be absorbed almost entirely by Small Businesses. Neither of these important aspects of the management alternatives are adequately presented in the DEIS.

14) Page 136: I strongly disagree with your pet restriction proposals. The "prohibition of pets in the Seashore during bird breeding season including in front of the villages." = No Pets in public areas ?beaches, campgrounds, soundfront, foot trails, park maintained roads -from March 15 ?July 31.

15) Pages 125; 392 ? 396: SEA TURTLES. I disagree with the stats and procedures proposed. I think endangered sea turtles would benefit from management practices now in use at other federal seashores that are more proactive in efforts to achieve nesting success. This includes relocating nests to more desirable locations as is done in other state and federally controlled areas.

The Cape Hatteras National Seashore Recreational Area is on the northernmost fringe of turtle nesting locations for the southeast, accounting for about 1% of all turtle nests. Proposed buffer areas are not needed for protection of the turtles and amount to overprotection.

16) Pages 97- 101. I strongly disagree with proposals in this section saying that ORVs will be prohibited year round between ramps 27 and 30, at Hatteras Inlet (Hatteras Spit), Ocracoke Inlet (North Ocracoke Spit) and various other locations.

Not allowing ORV access is paramount to denying the public access to these beaches. They are located miles from the nearest parking or paved road area and too far to access on foot. As a matter of course, there has been no breeding of piping plover or other endangered species at the Hatteras Island Inlet (spit) area in the past 6 years.

17) Page 104: I disagree with the proposed night time driving closures. Per your proposals, night driving will be prohibited between May 1 and November 15th, forcing visitors off of the beaches early in the evening and preventing sunrise surf fishermen access in the morning. I propose a more moderate night time ban if one is needed, perhaps from June 1 ? September 15 with times being 1 hour after sunset and 1 hour before sunrise to allow beach goers to gather their stuff and exit the beach area.

Certainly more proactive measures such as relocating nests prone to weather and ocean events would dramatically increase the nesting success rates.

18) Page 121: I disagree with the proposed beach closings, including pedestrian access from March 15 until July 31 in 8 different beach locations which have traditionally been available. Please leave these areas open to beach walkers, shell collectors and those that want to access the beaches in these areas.

Conclusion:

Please, incorporate access corridors through any SMA so we can get to the open beach beyond. Incorporate the birds into the count that nest on the spoil islands. Base your buffer zones on peer reviewed science and scale them back to more reasonable distances as discussed.

It is neither logical nor reasonable to spend so much time, money and energy to overprotect a bird (Piping Plover) in the Cape Hatteras National Seashore that is on the southernmost fringe area of its breeding ground. That goes for the loggerhead turtle that is in its northernmost breeding area.

Let's scale back the buffer zones. You can always increase at a later date.

The USPS is leaning way over the line on over protection and not enough on the public's right to enjoy the beaches of the National Seashore. The proper balance is not achieved in the propose DEIS and needs to be modified so that the proper balance of reasonable resource protection and access to the beaches of the National Park is achieved. I could sum it up by saying "Protect, not Prohibit."

Thank you,

Those spoil islands, developed by man from dredging the waterways in the Pamlico Sound for channel upkeep are slammed full of birds. The reason why so many birds? NO PREDATORS. SO, birds are not as stupid as one might think. You have to count these birds and incorporate them in the stats when the NPS is talking about any so called decline in breeding pairs in the National Park.

11) Page 1: I do not think the DEIS responsibly addresses the cultural resource issues. The very purpose of the DEIS as set forth in the National Environmental Policy Act (NEPA) is to protect and preserve natural and cultural resources in the federal decision making process. In the DEIS, the statement "protect and preserve natural and cultural resources" appears in the first sentence of the first page of the plan, in the Purpose of the Plan section, and numerous times thereafter. Yet, the 810 page document devotes only two paragraphs to analysis of cultural resource issues.

12) Pages 270-281; 561-598: I strongly disagree with your economic analysis of the impact of the DEIS. The region of influence (ROI) incorporates the Northern Beach communities, including Kill Devil Hills, Kitty Hawk, Southern Shores and Duck. These areas are almost completely disconnected from ORV use and access issues relating to the Seashore. ? Inclusion of the Northern Beaches in analysis significantly dilutes estimates of economic impact on the 8 Seashore Villages

? Analysis of economic impact to the Seashore Villages appears to be significantly down played. Emphasis in DEIS is on the ROI-wide or county-wide level impacts.

? Nowhere is it clearly addressed that the overwhelming majority of negative impacts will be felt by small businesses in the Seashore Villages rather than by overall economic interests within the greater ROI.

On page xlvi, Alternative F is characterized as having a "negligible to moderate" adverse impact on small businesses. I strongly disagree with this statement.

I believe the negligible to moderate projection is inaccurate and relies on economic surveys that has not yet been published. Furthermore, this material is not expected to be added to the DEIS until after the public comment period has ended.

Based upon the economic harm we have already experienced under the consent decree, Dare County projects the economic impact of Alternative F to be substantial.

Beach closures have already had a devastating and unfair impact on many Dare County Businesses, causing foreclosures, bankruptcies, lay-offs, cutbacks, expensive refinancing, and depleted college funds and savings accounts.

Pages 270-286, 561-598: The socio-economic data and analyses are incomplete and erroneous and result in an understatement of the effect the restrictions will have upon the Island, the region and the state of NC. The US Park Services answer: Businesses will have to "adapt" to the new rules. (p.383) The negative economic impacts of the decree ARE KNOWN, so to say that the added restrictions would have negligible to moderate impact is indefensible.

13) Overall Visitor Counts - Overall visitor counts appear to include visitors to Fort Raleigh National Historic Site and the Wright Brothers National Memorial. A large percentage of these visitors vacation in the Northern Beaches communities and recreate on the non-federal beaches outside of the Seashore. Visitors who patronize the Fort Raleigh National Historic Site and the Wright Brothers National Memorial but do not visit the actual seashore areas need to be factored out.

Maintenance of Future Access to Cape Point and South Point Ocracoke: All socioeconomic analyses related to Alternative F are predicated on the assumption that access corridors will remain open for at least an appreciable portion of the visitor high season. Under Alternative F, the access corridors will be subject to Resource Closures based on buffers similar or identical to the Consent Decree. Unless some predictability of access to Cape Point and South Point Ocracoke can be assured, economic analyses predicated on assumption of access are fundamentally flawed.

Why would a group of surf fisherman want to come to Hatteras Island to surf fish if they are not sure they can access the prime fishing grounds at Cape Point? The answer is they won't come. If they don't come, they don't rent vacation homes and spend their money on Hatteras and Ocracoke Islands.

The definition of the Region of Influence (ROI), faulty data on economic activity generated by specific type recreational activity, incomplete visitation/business survey data, inflated overall Seashore visitor counts pertaining to beach use, and flawed key assumptions concerning the maintenance of access under Alternative F, all lead to inaccurate conclusions in the socioeconomic analyses. Specifically, these inaccuracies can be seen as understating the negative socio-economic impact of the Seashore Villages. Further, this negative impact will be absorbed almost entirely by Small Businesses. Neither of these important aspects of the management alternatives are adequately presented in the DEIS.

14) Page 136: I strongly disagree with your pet restriction proposals. The "prohibition of pets in the Seashore during bird breeding season including in front of the villages." = No Pets in public areas ?beaches, campgrounds, soundfront, foot trails, park maintained roads -from March 15 ?July 31.

15) Pages 125; 392 ? 396: SEA TURTLES. I disagree with the stats and procedures proposed. I think endangered sea turtles would benefit from management practices now in use at other federal seashores that are more proactive in efforts to achieve nesting success. This includes relocating nests to more desirable locations as is done in other state and federally controlled areas.

The Cape Hatteras National Seashore Recreational Area is on the northernmost fringe of turtle nesting locations for the southeast, accounting for about 1% of all turtle nests. Proposed buffer areas are not needed for protection of the turtles and amount to overprotection.

16) Pages 97- 101. I strongly disagree with proposals in this section saying that ORVs will be prohibited year round between ramps 27 and 30, at Hatteras Inlet (Hatteras Spit), Ocracoke Inlet (North Ocracoke Spit) and various other locations.

Not allowing ORV access is paramount to denying the public access to these beaches. They are located miles from the nearest parking or paved road area and too far to access on foot. As a matter of course, there has been no breeding of piping plover or other endangered species at the Hatteras Island

Inlet (spit) area in the past 6 years.

17) Page 104: I disagree with the proposed night time driving closures. Per your proposals, night driving will be prohibited between May 1 and November 15th, forcing visitors off of the beaches early in the evening and preventing sunrise surf fishermen access in the morning. I propose a more moderate night time ban if one is needed, perhaps from June 1 ? September 15 with times being 1 hour after sunset and 1 hour before sunrise to allow beach goers to gather their stuff and exit the beach area.

Certainly more proactive measures such as relocating nests prone to weather and ocean events would dramatically increase the nesting success rates.

18) Page 121: I disagree with the proposed beach closings, including pedestrian access from March 15 until July 31 in 8 different beach locations which have traditionally been available. Please leave these areas open to beach walkers, shell collectors and those that want to access the beaches in these areas.

Conclusion:

Please, incorporate access corridors through any SMA so we can get to the open beach beyond. Incorporate the birds into the count that nest on the spoil islands. Base your buffer zones on peer reviewed science and scale them back to more reasonable distances as discussed.

It is neither logical nor reasonable to spend so much time, money and energy to overprotect a bird (Piping Plover) in the Cape Hatteras National Seashore that is on the southernmost fringe area of its breeding ground. That goes for the loggerhead turtle that is in its northernmost breeding area. Let's scale back the buffer zones. You can always increase at a later date.

The USPS is leaning way over the line on over protection and not enough on the public's right to enjoy the beaches of the National Seashore. The proper balance is not achieved in the propose DEIS and needs to be modified so that the proper balance of reasonable resource protection and access to the beaches of the National Park is achieved. I could sum it up by saying "Protect, not Prohibit."

Thank you,

Correspondence: I am a homeowner at Emerald Isle, NC. Vehicles are allowed on the beach there at varying times throughout the year. The problems that vehicles can cause at Cape Hatteras are undoubtedly the same as those caused at Emerald Isle.
I just learned about the comment period and I will simply list a number of reasons that all vehicles should be banned from beaches, rather than write an organized and edited statement.
1 - Vehicular traffic interferes with wildlife, particularly with the behavior of nesting turtles. 2 - Vehicles are often driven in an unsafe manner. 3 - Even if driven slowly, vehicles cause unsightly tracks on the beach and make it more difficult to walk along the shoreline. 4 - Although the argument is sometimes made that elderly people need vehicles in order to access the beach, the reality is that most drivers are younger, often teens. 5 - There seems to be no good reason for vehicles to be on the beach. 6 - The American epidemic of obesity provides a salutary reminder that we need policies that encourage physical activities, not sedentary ones. 7 - Not only are vehicles detrimental to marine wildlife, other environmental problems are associated with vehicles on the beach, not least of which is air pollution and the pointless "spending" of resources.
Thank you very much, Katherine McGinnis

Correspondence: I am in 6th grade. If the beaches are closed down because of these birds that arent even native here I will loose all hope. Most of my friends parents fish. If the tourists stop coming here they will probably loose their jobs and I will loose all my best friends. The population of the Plovers has gone down since the begining of the closures now what does that tell you. Even a sixth grader can tell that this is absurd. No matter what you do to help the birds the population of Plovers is plummeting and it will continue to do so. If you can move a turtle nest it should be about the same for a Plover. Like one of the signs says " we the people NOT we the plovers" and that is exactly why I disagree with plan F.
Thanks for your time,
PLEASE COME UP WITH A DIFFERENT PLAN
Hannah Lofty
6th grader that cares

Correspondence: Dear Superintendent Murray, Please accept this letter as my comment on the ORV DEIS before you at this time. After reviewing the National Park Service DEIS I must disagree with any of the six alternatives within the document. I think that it is a miss-directed approach to preservation of our natural environment and our wildlife. It is a direct violation of our rights and freedoms as Americans and as naturalists who love and take care of our natural environment. As a fisherman, a surfer, a beach and wildlife lover as well as the owner of a well behaved and trained Golden Retriever, I feel that these proposals are unnecessary, arbitrary, illegal and totally uncalled for. I have reviewed the Coalition for Beach Access Position Statement signed by several groups that were a part of the negotiated rule making process and it by far succeeds in furnishing the best visitor experience while maintaining the needs of protecting the fragile resources. Balance is a must and a requirement of our democratic society. Extremist views must be countered and balanced by reasonable approaches Please consider all aspects of this alternative and put people back into the management of Cape Hatteras National Seashore. We love this seashore and will take care of it and ensure its endurance through the course of our lives. Please do not let extremist, radical views misguide and misdirect the intent of legislation and efforts to protect our beautiful and valuable natural environment. Reasonable and balanced access to our natural resources is a requirement of our democratic society that many of us have spent time and effort to protect and defend.
Thank you Sincerely
Jose & Sharon Simon

Correspondence: My comments concern the DEIS of the Off-Road Vehicle Management Plan prepared by the National Park Service (NPS) for the Cape Hatteras

National Seashore Recreation Area.

1) Page 201: I disagree with the NPS statement: "Even with resource closures in place, protected species are still at risk [from pedestrians and ORVs]." No Piping Plover deaths have been attributed to ORVs. ORV violations continue to decrease as signage and education improve. Pedestrian violations are much more significant than ORV violations. It seems to me that any transgressions into protected area are the result of lack of NPS manpower and enforcement than the public purposely and willfully violating out of bounds areas.

2) Page xxiv: I question the statement of as per the DEIS: "Carrying capacity would be a 'peak use limit' determined for all areas based on the linear feet of beachfront?" If you close off huge sections of the beach, you force more people into smaller areas, potentially resulting in more resource impairment and diminished visitor experience.

3) Page xix and page 23: I am against having two different closures rules pertaining to the North facing beaches (North side) and the South facing beaches (South side) as per the grid outlined in Alternative "F". I disagree with the NPS proposal to close the beaches in villages of Frisco, Hatteras and Ocracoke Villages to ORV access longer than the traditional May 15 to September 15 period for the Northern beaches, even though seasonal visitor statistics are similar for all villages. Please, make them the same: May 15 -> September 15.

4) Page 1: I agree with your statement "ORVs have long served as a primary form of access for many portions of the beach in the seashore, and continue to be the most practical means of access and parking for many visitors."

However, pedestrian only areas discriminate against individuals with limited mobility due to age or physical impairments, families with small children, and those wishing to engage in activities requiring recreational equipment (boogie boards, beach umbrellas, beach chairs, coolers, fishing rods and tackle, etc)

5) Page 53: I disagree with the special use permit proposed guidelines. It is impractical to allow the transportation of disabled visitors to the village beaches and then require the vehicle to be returned to the street or parking area. This necessitates the disabled person to have a driver to drop him (or her) off, then drive to a parking area, then trudge a long distance to the site of the drop off, then trudge the long distance through the sand back to get the vehicle.

Suppose the handicap person wants to go to the beach, is capable of driving himself, yet cannot find another person to go with him? Does he now not go to the beach? This rule creates unnecessary hardships and risks in the event of an emergency as well.

6) Page 121 ? 127. I strongly disagree with the buffers as presented. We must allow for pass-thru corridors. The beach is linear with the ocean buffering on one side and the dune line on the other. For example - If you pinch off access on one side of a 4 mile linear beach and pinch off access on the other side of the 4 mile section of beach with no corridor, then you effectively have closed off all 4 miles of the beach because you CAN'T get there. The proposed bird buffers are too large, blocking access to the interior sections from the two "buffered" ends.

I propose ORV pass-thru only corridors and to use breeding / nesting buffer distances to establish ORV pass through only corridors to ensure beach access in a way that does not hinder resource protection. I believe pass through corridors should be maintained for pedestrians and ORVs in all areas of the Cape Hatteras National Seashore Recreational Area throughout the entire breeding and nesting season. Corridors are vital to providing access in a way that does not hinder resource protection.

Piping Plover unfledged chicks buffer should move with the brood as it relocates to reliable food source, not expanded.

The 1,000 meter distance for the piping plover is way too large and not based upon peer reviewed science. A more rational distance would be 200 meters per other sites in the nation for the piping plover. Ample scientific evidence and precedent exists to support a 200 meter buffer.

Buffers for other species, including American Oystercatchers, Least Terns and Colonial Waterbirds must also be changed. An effective 30 meter buffer should be established for these species rather than the 300 meter closure outlined in the DEIS.

NON-ENDANGERED BIRDS should not have same protection as if endangered. Not allowing ORV access is paramount to denying the public access to these beaches.

7) Page 468: I disagree with the limitations imposed on pedestrian and ORVs. Corridors or bypasses should be provided thru, around or below high tide line in all SMAs during entire breeding season to maintain access.

8) Page 124: I strongly disagree with the NPS slant of providing for over protection of resource management over that of the public's right to access the beaches. Pro-active initiatives include: Vegetation Management, Habitat Management, Enhanced Predator Management, Colonial Water bird social attraction, Piping Plover check fledge rate, Piping plover chick buffer distance, and pass-through buffers during the incubation period. Opportunities to implement less restrictive closures as a result of the above initiatives should be considered more frequently than the 5-year periodic review process identified in the DEIS.

9) I disagree with the NPS Resource Management Pedestrian / ORV Closure Policies. These policies address the least significant factors affecting nest survival with little chance to have more than negligible impact. For example: the AMOY Nest Failures are predominately due to non-human events. Using your own stats, the mammalian predation is 54%, Storm / Lunar Tides: 29%, Nest Abandonment: 6%, Avian Predation: 5%, and Ghost Crab Predation: 3%,

So what is the percentage due to human interference: just 3%! It's insignificant, yet the NPS wants to ban humans when their actions provide very little influence on the success rate of breeding birds and turtles.

10) I disagree with the stats of breeding plovers and the other birds in the Park when the NPS does not adequately consider locations neighboring the Recreational Area that are part of the same ecosystem, namely dredge and spoil island that are located just yards away and within sight of the seashore. These birds are part of the same ecosystem and should be included.

Those spoil islands, developed by man from dredging the waterways in the Pamlico Sound for channel upkeep are slammed full of birds. The reason why so many birds? NO PREDATORS. SO, birds are not as stupid as one might think. You have to count these birds and incorporate them in the stats when the NPS is talking about any so called decline in breeding pairs in the National Park.

11) Page 1: I do not think the DEIS responsibly addresses the cultural resource issues. The very purpose of the DEIS as set forth in the National Environmental Policy Act (NEPA) is to protect and preserve natural and cultural resources in the federal decision making process. In the DEIS, the statement "protect and preserve natural and cultural resources" appears in the first sentence of the first page of the plan, in the Purpose of the Plan section, and numerous times thereafter. Yet, the 810 page document devotes only two paragraphs to analysis of cultural resource issues.

12) Pages 270-281; 561-598: I strongly disagree with your economic analysis of the impact of the DEIS. The region of influence (ROI) incorporates the Northern Beach communities, including Kill Devil Hills, Kitty Hawk, Southern Shores and Duck. These areas are almost completely disconnected from ORV use and access issues relating to the Seashore. ? Inclusion of the Northern Beaches in analysis significantly dilutes estimates of economic impact on the 8 Seashore Villages

? Analysis of economic impact to the Seashore Villages appears to be significantly down played. Emphasis in DEIS is on the ROI-wide or county-wide level impacts.

? Nowhere is it clearly addressed that the overwhelming majority of negative impacts will be felt by small businesses in the Seashore Villages rather than by overall economic interests within the greater ROI.

On page xlvi, Alternative F is characterized as having a "negligible to moderate" adverse impact on small businesses. I strongly disagree with this statement.

I believe the negligible to moderate projection is inaccurate and relies on economic surveys that has not yet been published. Furthermore, this material is not expected to be added to the DEIS until after the public comment period has ended.

Based upon the economic harm we have already experienced under the consent decree, Dare County projects the economic impact of Alternative F to be substantial.

Beach closures have already had a devastating and unfair impact on many Dare County Businesses, causing foreclosures, bankruptcies, lay-offs, cutbacks, expensive refinancing, and depleted college funds and savings accounts.

Pages 270-286, 561-598: The socio-economic data and analyses are incomplete and erroneous and result in an understatement of the effect the restrictions will have upon the Island, the region and the state of NC. The US Park Services answer: Businesses will have to "adapt" to the new rules. (p.383) The negative economic impacts of the decree ARE KNOWN, so to say that the added restrictions would have negligible to moderate impact is indefensible.

13) Overall Visitor Counts - Overall visitor counts appear to include visitors to Fort Raleigh National Historic Site and the Wright Brothers National Memorial. A large percentage of these visitors vacation in the Northern Beaches communities and recreate on the non-federal beaches outside of the

Seashore. Visitors who patronize the Fort Raleigh National Historic Site and the Wright Brothers National Memorial but do not visit the actual seashore areas need to be factored out.

Maintenance of Future Access to Cape Point and South Point Ocracoke: All socioeconomic analyses related to Alternative F are predicated on the assumption that access corridors will remain open for at least an appreciable portion of the visitor high season. Under Alternative F, the access corridors will be subject to Resource Closures based on buffers similar or identical to the Consent Decree. Unless some predictability of access to Cape Point and South Point Ocracoke can be assured, economic analyses predicated on assumption of access are fundamentally flawed.

Why would a group of surf fisherman want to come to Hatteras Island to surf fish if they are not sure they can access the prime fishing grounds at Cape Point? The answer is they won't come. If they don't come, they don't rent vacation homes and spend their money on Hatteras and Ocracoke Islands.

The definition of the Region of Influence (ROI), faulty data on economic activity generated by specific type recreational activity, incomplete visitation/business survey data, inflated overall Seashore visitor counts pertaining to beach use, and flawed key assumptions concerning the maintenance of access under Alternative F, all lead to inaccurate conclusions in the socioeconomic analyses. Specifically, these inaccuracies can be seen as understating the negative socio-economic impact of the Seashore Villages. Further, this negative impact will be absorbed almost entirely by Small Businesses. Neither of these important aspects of the management alternatives are adequately presented in the DEIS.

14) Page 136: I strongly disagree with your pet restriction proposals. The "prohibition of pets in the Seashore during bird breeding season including in front of the villages." = No Pets in public areas ?beaches, campgrounds, soundfront, foot trails, park maintained roads -from March 15 ?July 31.

15) Pages 125; 392 ? 396: SEA TURTLES. I disagree with the stats and procedures proposed. I think endangered sea turtles would benefit from management practices now in use at other federal seashores that are more proactive in efforts to achieve nesting success. This includes relocating nests to more desirable locations as is done in other state and federally controlled areas.

The Cape Hatteras National Seashore Recreational Area is on the northernmost fringe of turtle nesting locations for the southeast, accounting for about 1% of all turtle nests. Proposed buffer areas are not needed for protection of the turtles and amount to overprotection.

16) Pages 97- 101. I strongly disagree with proposals in this section saying that ORVs will be prohibited year round between ramps 27 and 30, at Hatteras Inlet (Hatteras Spit), Ocracoke Inlet (North Ocracoke Spit) and various other locations.

Not allowing ORV access is paramount to denying the public access to these beaches. They are located miles from the nearest parking or paved road area and too far to access on foot. As a matter of course, there has been no breeding of piping plover or other endangered species at the Hatteras Island Inlet (spit) area in the past 6 years.

17) Page 104: I disagree with the proposed night time driving closures. Per your proposals, night driving will be prohibited between May 1 and November 15th, forcing visitors off of the beaches early in the evening and preventing sunrise surf fishermen access in the morning. I propose a more moderate night time ban if one is needed, perhaps from June 1 ? September 15 with times being 1 hour after sunset and 1 hour before sunrise to allow beach goers to gather their stuff and exit the beach area.

Certainly more proactive measures such as relocating nests prone to weather and ocean events would dramatically increase the nesting success rates.

18) Page 121: I disagree with the proposed beach closings, including pedestrian access from March 15 until July 31 in 8 different beach locations which have traditionally been available. Please leave these areas open to beach walkers, shell collectors and those that want to access the beaches in these areas.

Conclusion:

Please, incorporate access corridors through any SMA so we can get to the open beach beyond. Incorporate the birds into the count that nest on the spoil islands. Base your buffer zones on peer reviewed science and scale them back to more reasonable distances as discussed.

It is neither logical nor reasonable to spend so much time, money and energy to overprotect a bird (Piping Plover) in the Cape Hatteras National Seashore that is on the southernmost fringe area of its breeding ground. That goes for the loggerhead turtle that is in its northernmost breeding area.

Let's scale back the buffer zones. You can always increase at a later date.

The USPS is leaning way over the line on over protection and not enough on the public's right to enjoy the beaches of the National Seashore. The proper balance is not achieved in the propose DEIS and needs to be modified so that the proper balance of reasonable resource protection and access to the beaches of the National Park is achieved. I could sum it up by saying "Protect, not Prohibit."

Thank you,

Correspondence Type: Web Form
Correspondence: For as long as I have been living, now 64 years, the Cape Hatteras National Seashore has been for all living things pretty much equally. We humans have respectfully guarded the living beings intrusted to us. Any being that has been endangered has always been protected and guarded. The idea that now suddenly, we are not responsible is preposterous to me.

In reviewing the demands of the political group pushing this suit, I see something that disturbs me. First, I see the attempt by a small group of misguided persons to take away from the group at large. Then I see this political group manipulate the facts and the law to achieve a narrow victory that will impact the lives of many.

This manipulation is determined to strip the very rights the larger group has enjoyed for longer than this current group has been living on this earth. All for the idealistic longing of a utopian life that no one can really sustain even if it did come true.

The danger in what is taking place is more than just a request to protect birds and turtles that have survived for longer than humans have been walking on the Outer Banks. The danger is real and present to the rights of humans to be free.

Think about this please, you in the National Seashore service. You, who are required to protect ALL living things, (that would include humans....) we are all entitled to walk, ride, drive, fly, swim, and however you can get there, to enjoy the Outer Banks.

You are required by the laws set forth in your founding documents to allow the citizens of this country to have FREE access to and to allow the enjoyment of these lands set forth as a National Seashore for the citizens of the United States of America. Not to try to use flawed and untrue information as a basis to manipulate the courts to block the use of these treasures for the general public, but only a select few.

I admonish you to take careful thought as to what you are trying to do. To what benefit is this request? To block the use of these lands set aside for the public to use? Why? Who benefits if the people whose ancestors first settled these banks are run out of business and can no longer live here? I suggest you look further up the Coast to the lands between Sanderling and the Virginia state line. Do you remember the developers who achieved a similar coup? Let's bring this back up now, before Hatteras Island becomes another Carolla at best, or an abandoned sand bank at worst.

Thank you, Michael Dente

This necessitates the disabled person to have a driver to drop him (or her) off, then drive to a parking area, then trudge a long distance to the site of the drop off, then trudge the long distance through the sand back to get the vehicle.

Suppose the handicap person wants to go to the beach, is capable of driving himself, yet cannot find another person to go with him? Does he now not go to the beach? This rule creates unnecessary hardships and risks in the event of an emergency as well.

6) Page 121 ? 127. I strongly disagree with the buffers as presented. We must allow for pass-thru corridors. The beach is linear with the ocean buffering on one side and the dune line on the other. For example - If you pinch off access on one side of a 4 mile linear beach and pinch off access on the other side of the 4 mile section of beach with no corridor, then you effectively have closed off all 4 miles of the beach because you CAN'T get there. The proposed bird buffers are too large, blocking access to the interior sections from the two "buffered" ends.

I propose ORV pass-thru only corridors and to use breeding / nesting buffer distances to establish ORV pass through only corridors to ensure beach access in a way that does not hinder resource protection. I believe pass through corridors should be maintained for pedestrians and ORVs in all areas of the Cape Hatteras National Seashore Recreational Area throughout the entire breeding and nesting season. Corridors are vital to providing access in a way that does not hinder resource protection.

Piping Plover unfledged chicks buffer should move with the brood as it relocates to reliable food source, not expanded.

The 1,000 meter distance for the piping plover is way too large and not based upon peer reviewed science. A more rational distance would be 200 meters per other sites in the nation for the piping plover. Ample scientific evidence and precedent exists to support a 200 meter buffer.

Buffers for other species, including American Oystercatchers, Least Terns and Colonial Waterbirds must also be changed. An effective 30 meter buffer should be established for these species rather than the 300 meter closure outlined in the DEIS.

NON-ENDANGERED BIRDS should not have same protection as if endangered. Not allowing ORV access is paramount to denying the public access to these beaches.

7) Page 468: I disagree with the limitations imposed on pedestrian and ORVs. Corridors or bypasses should be provided thru, around or below high tide line in all SMAs during entire breeding season to maintain access.

8) Page 124: I strongly disagree with the NPS slant of providing for over protection of resource management over that of the public's right to access the

beaches. Pro-active initiatives include: Vegetation Management, Habitat Management, Enhanced Predator Management, Colonial Water bird social attraction, Piping Plover check fledge rate, Piping plover chick buffer distance, and pass-through buffers during the incubation period. Opportunities to implement less restrictive closures as a result of the above initiatives should be considered more frequently than the 5-year periodic review process identified in the DEIS.

9) I disagree with the NPS Resource Management Pedestrian / ORV Closure Policies. These policies address the least significant factors affecting nest survival with little chance to have more than negligible impact. For example: the AMOY Nest Failures are predominately due to non-human events. Using your own stats, the mammalian predation is 54%, Storm / Lunar Tides: 29%, Nest Abandonment: 6%, Avian Predation: 5%, and Ghost Crab Predation: 3%.

So what is the percentage due to human interference: just 3%! It's insignificant, yet the NPS wants to ban humans when their actions provide very little influence on the success rate of breeding birds and turtles.

10) I disagree with the stats of breeding plovers and the other birds in the Park when the NPS does not adequately consider locations neighboring the Recreational Area that are part of the same ecosystem, namely dredge and spoil island that are located just yards away and within sight of the seashore. These birds are part of the same ecosystem and should be included.

Those spoil islands, developed by man from dredging the waterways in the Pamlico Sound for channel upkeep are slammed full of birds. The reason why so many birds? NO PREDATORS. SO, birds are not as stupid as one might think. You have to count these birds and incorporate them in the stats when the NPS is talking about any so called decline in breeding pairs in the National Park.

11) Page 1: I do not think the DEIS responsibly addresses the cultural resource issues. The very purpose of the DEIS as set forth in the National Environmental Policy Act (NEPA) is to protect and preserve natural and cultural resources in the federal decision making process. In the DEIS, the statement "protect and preserve natural and cultural resources" appears in the first sentence of the first page of the plan, in the Purpose of the Plan section, and numerous times thereafter. Yet, the 810 page document devotes only two paragraphs to analysis of cultural resource issues.

12) Pages 270-281; 561-598: I strongly disagree with your economic analysis of the impact of the DEIS. The region of influence (ROI) incorporates the Northern Beach communities, including Kill Devil Hills, Kitty Hawk, Southern Shores and Duck. These areas are almost completely disconnected from ORV use and access issues relating to the Seashore. ? Inclusion of the Northern Beaches in analysis significantly dilutes estimates of economic impact on the 8 Seashore Villages

? Analysis of economic impact to the Seashore Villages appears to be significantly down played. Emphasis in DEIS is on the ROI-wide or county-wide level impacts.

? Nowhere is it clearly addressed that the overwhelming majority of negative impacts will be felt by small businesses in the Seashore Villages rather than by overall economic interests within the greater ROI.

On page xlvi, Alternative F is characterized as having a "negligible to moderate" adverse impact on small businesses. I strongly disagree with this statement.

I believe the negligible to moderate projection is inaccurate and relies on economic surveys that has not yet been published. Furthermore, this material is not expected to be added to the DEIS until after the public comment period has ended.

Based upon the economic harm we have already experienced under the consent decree, Dare County projects the economic impact of Alternative F to be substantial.

Beach closures have already had a devastating and unfair impact on many Dare County Businesses, causing foreclosures, bankruptcies, lay-offs, cutbacks, expensive refinancing, and depleted college funds and savings accounts.

Pages 270-286, 561-598: The socio-economic data and analyses are incomplete and erroneous and result in an understatement of the effect the restrictions will have upon the Island, the region and the state of NC. The US Park Services answer: Businesses will have to "adapt" to the new rules.

(p.383) The negative economic impacts of the decree ARE KNOWN, so to say that the added restrictions would have negligible to moderate impact is indefensible.

13) Overall Visitor Counts - Overall visitor counts appear to include visitors to Fort Raleigh National Historic Site and the Wright Brothers National Memorial. A large percentage of these visitors vacation in the Northern Beaches communities and recreate on the non-federal beaches outside of the Seashore. Visitors who patronize the Fort Raleigh National Historic Site and the Wright Brothers National Memorial but do not visit the actual seashore areas need to be factored out.

Maintenance of Future Access to Cape Point and South Point Ocracoke: All socioeconomic analyses related to Alternative F are predicated on the assumption that access corridors will remain open for at least an appreciable portion of the visitor high season. Under Alternative F, the access corridors will be subject to Resource Closures based on buffers similar or identical to the Consent Decree. Unless some predictability of access to Cape Point and South Point Ocracoke can be assured, economic analyses predicated on assumption of access are fundamentally flawed.

Why would a group of surf fisherman want to come to Hatteras Island to surf fish if they are not sure they can access the prime fishing grounds at Cape Point? The answer is they won't come. If they don't come, they don't rent vacation homes and spend their money on Hatteras and Ocracoke Islands.

The definition of the Region of Influence (ROI), faulty data on economic activity generated by specific type recreational activity, incomplete visitation/business survey data, inflated overall Seashore visitor counts pertaining to beach use, and flawed key assumptions concerning the maintenance of access under Alternative F, all lead to inaccurate conclusions in the socioeconomic analyses. Specifically, these inaccuracies can be seen as understating the negative socio-economic impact of the Seashore Villages. Further, this negative impact will be absorbed almost entirely by Small Businesses. Neither of these important aspects of the management alternatives are adequately presented in the DEIS.

14) Page 136: I strongly disagree with your pet restriction proposals. The "?prohibition of pets in the Seashore during bird breeding season including in front of the villages." = No Pets in public areas ?beaches, campgrounds, soundfront, foot trails, park maintained roads -from March 15 ?July 31.

15) Pages 125; 392 ? 396: SEA TURTLES. I disagree with the stats and procedures proposed. I think endangered sea turtles would benefit from management practices now in use at other federal seashores that are more proactive in efforts to achieve nesting success. This includes relocating nests to more desirable locations as is done in other state and federally controlled areas.

The Cape Hatteras National Seashore Recreational Area is on the northernmost fringe of turtle nesting locations for the southeast, accounting for about 1% of all turtle nests. Proposed buffer areas are not needed for protection of the turtles and amount to overprotection.

16) Pages 97- 101. I strongly disagree with proposals in this section saying that ORVs will be prohibited year round between ramps 27 and 30, at Hatteras Inlet (Hatteras Spit), Ocracoke Inlet (North Ocracoke Spit) and various other locations.

Not allowing ORV access is paramount to denying the public access to these beaches. They are located miles from the nearest parking or paved road area and too far to access on foot. As a matter of course, there has been no breeding of piping plover or other endangered species at the Hatteras Island Inlet (spit) area in the past 6 years.

17) Page 104: I disagree with the proposed night time driving closures. Per your proposals, night driving will be prohibited between May 1 and November 15th, forcing visitors off of the beaches early in the evening and preventing sunrise surf fishermen access in the morning. I propose a more moderate night time ban if one is needed, perhaps from June 1 ? September 15 with times being 1 hour after sunset and 1 hour before sunrise to allow beach goers to gather their stuff and exit the beach area.

Certainly more proactive measures such as relocating nests prone to weather and ocean events would dramatically increase the nesting success rates.

18) Page 121: I disagree with the proposed beach closings, including pedestrian access from March 15 until July 31 in 8 different beach locations which have traditionally been available. Please leave these areas open to beach walkers, shell collectors and those that want to access the beaches in these areas.

Conclusion:

Please, incorporate access corridors through any SMA so we can get to the open beach beyond. Incorporate the birds into the count that nest on the spoil islands. Base your buffer zones on peer reviewed science and scale them back to more reasonable distances as discussed.

It is neither logical nor reasonable to spend so much time, money and energy to overprotect a bird (Piping Plover) in the Cape Hatteras National Seashore that is on the southernmost fringe area of its breeding ground. That goes for the loggerhead turtle that is in its northernmost breeding area.

Let's scale back the buffer zones. You can always increase at a later date.

The USPS is leaning way over the line on over protection and not enough on the public's right to enjoy the beaches of the National Seashore. The proper balance is not achieved in the propose DEIS and needs to be modified so that the proper balance of reasonable resource protection and access to the

beaches of the National Park is achieved. I could sum it up by saying "Protect, not Prohibit."
Thank you,

Correspondence Type: Web Form
Correspondence: Dear Mr. Murray, I am a 14 year old student of Cape Hatteras Middle School and a life-long resident of Hatteras Island. My family has been here for over 3 centuries. I am very proud to be a Midgett. I love our beach and Hatteras Island. I love to swim, surf and skateboard. I am very sad about the government taking control of the beaches in a way that gets rid of humans and mostly only allows birds. I like birds, but I have seen them on the islands behind Hatteras, they are happy there and are nesting without raccoons or cats getting the eggs and babies. I learned in school that a species needs to adapt to survive. Haven't they done that by moving their nests to a safer place? My Dad and I ride the beach to Hatteras Inlet every Sunday (when it is not closed). It is our time. We look for shells and driftwood, listen to music, but mostly talk. I will miss that.
If you all put these rules in place I can't even take my dog to the beach on a leash and that just does not make sense to me. My Mom and Dad are worried about the family and the family business but they try not to let me see it. That is stressful to me. I want them to be happy. I want my family to be happy and successful. I work hard at school and get great grades so I can go to college. I have 4 brothers and they all work hard and live here on the Island. Will they have to move away to get jobs? Will I have to when I get older? I hear from my Pop that the Park Service promised that the beach would always be open to the public and that the government wanted us to be good to the visitors and make them feel welcome. We do that. Did the government lie to them? I don't think it is right to say a promise doesn't matter. Thank You, Todd Midgett Hatteras Village Resident all my life.

Correspondence: 1. Page 1: I agree with your statement "ORVs have long served as a primary form of access for many portions of the beach in the seashore, and continue to be the most practical means of access and parking for many visitors."
Although I currently do not drive to the beach, as I get older I can see the time when I will take advantage of driving to the beach.
2. Page 121 ? 127. I disagree with the buffers, as I think pass thru corridors must be allowed. I think ORV pass thru only corridors and use of buffer distances to set the corridors will allow for beach access without hindering resource protection. I believe pass through corridors should be maintained for pedestrians and ORVs in all areas of the Cape Hatteras National Seashore Recreational Area throughout the entire breeding and nesting season. . The 1,000 meter distance for the piping plover is too big and not based upon peer reviewed science. A more reasonable distance would be 200 meters per other sites in the nation for the piping plover. Ample scientific evidence and precedent exists to support a 200 meter buffer. Buffers for other species, including American Oystercatchers, Least Terns and Colonial Waterbirds must also be changed. An effective 30 meter buffer should be established for these species rather than the 300 meter closure outlined in the DEIS. NON-ENDANGERED BIRDS should not have same protection as if endangered
3. Page 121: I disagree with the proposed beach closings, including pedestrian access from March 15 until July 31 in 8 different beach locations which have traditionally been available. These areas should be open to beach walkers, shell collectors and those that want to access the beaches in these areas.
4. Page 468: I disagree with the limitations imposed on pedestrian and ORVs. Corridors or bypasses should be provided thru, around or below high tide line in all SMAs during entire breeding season to maintain access.
5. I disagree with the stats of breeding plovers and the other birds in the Park when the NPS does not consider locations neighboring the Recreational Area that are part of the same ecosystem, namely dredge and spoil island that are located just yards away and within sight of the seashore. These birds are part of the same ecosystem and should be included.
6. Pages 270-281; 561-598: I strongly disagree with your economic analysis of the impact of the DEIS. The region of influence (ROI) incorporates the Northern Beach communities, including Kill Devil Hills, Kitty Hawk, Southern Shores and Duck. These areas are almost completely disconnected from ORV use and access issues relating to the Seashore.
On page xlvi, Alternative F is characterized as having a "negligible to moderate" adverse impact on small businesses. I strongly disagree with this statement.
As an owner of rental property, my 2008 rentals were about 20% down from the average of the previous three years. In addition, my rental fees have been reduced in an attempt to compete and continue to fill out the rental calendar. Reduced rental weeks affect not just me, but also those locals who service and maintain my property.
We spend at least 4 weeks per year on Hatteras Island and have for many years. Thru that time I have become acquainted with many locals and I'm aware of the severe impact the Beach closures have already had on many Dare County businesses, causing foreclosures, bankruptcies, lay-offs, and drastic cutbacks.
7. Page 136: I strongly disagree with your pet restriction proposals. The "prohibition of pets in the Seashore during bird breeding season including in front of the villages." = No Pets in public areas ?beaches, campgrounds, soundfront, foot trails, park maintained roads -from March 15 ?July 31. We have brought our pets many times, and I see many other people with their pets.
8. Pages 125; 392 ? 396: SEA TURTLES. I disagree with the stats and procedures proposed. I think endangered sea turtles would benefit from management practices now in use at other federal seashores that are more proactive in efforts to achieve nesting success. This includes relocating nests to more desirable locations as is done in other state and federally controlled areas. The Cape Hatteras National Seashore Recreational Area is on the northernmost fringe of turtle nesting locations for the southeast, accounting for about 1% of all turtle nests. Proposed buffer areas are not needed for protection of the turtles and amount to overprotection.
9. Pages 97- 101. I disagree with proposals saying that ORVs will be prohibited year round between ramps 27 and 30, at Hatteras Inlet (Hatteras Spit), Ocracoke Inlet (North Ocracoke Spit) and various other locations. Not allowing ORV access is the same as denying the public access to these beaches. They are located far from the nearest parking or paved road area and too far to access on foot.
Final comments
Please, incorporate access corridors so we can get to the open beach beyond. Incorporate birds into the count that nest on the spoil islands. Base your buffer zones on peer reviewed science and scale them back as noted. It is not reasonable to spend so much time, money and energy to overprotect a bird (Piping Plover) in the Cape Hatteras National Seashore that is on the southernmost fringe area of its breeding ground. That goes for the loggerhead turtle that is in its northernmost breeding area. The proper balance needs to be achieved between public access and resource protection. The resource protection can be achieved without the severe restriction on the public's right to enjoy the beaches of the National Seashore. The proper balance is not achieved in the propose DEIS and needs to be modified so that the proper balance of reasonable resource protection and access to the beaches of the National Park is achieved. Thank you for your consideration of my comments.

Correspondence ID: 14470 **Project:** 10641 **Document:** 32596 **Private:** Y

Correspondence Type: Web Form
Correspondence: My comments concern the DEIS of the Off-Road Vehicle Management Plan prepared by the National Park Service (NPS) for the Cape Hatteras National Seashore Recreation Area.
1) Page 201: I disagree with the NPS statement: "Even with resource closures in place, protected species are still at risk [from pedestrians and ORVs]." No Piping Plover deaths have been attributed to ORVs. ORV violations continue to decrease as signage and education improve. Pedestrian violations are much more significant than ORV violations. It seems to me that any transgressions into protected area are the result of lack of NPS manpower and

enforcement than the public purposely and willfully violating out of bounds areas.

2) Page xxiv: I question the statement of as per the DEIS: "Carrying capacity would be a 'peak use limit' determined for all areas based on the linear feet of beachfront?" If you close off huge sections of the beach, you force more people into smaller areas, potentially resulting in more resource impairment and diminished visitor experience.

3) Page xix and page 23: I am against having two different closures rules pertaining to the North facing beaches (North side) and the South facing beaches (South side) as per the grid outlined in Alternative "F". I disagree with the NPS proposal to close the beaches in villages of Frisco, Hatteras and Ocracoke Villages to ORV access longer than the traditional May 15 to September 15 period for the Northern beaches, even though seasonal visitor statistics are similar for all villages. Please, make them the same: May 15 -> September 15.

4) Page 1: I agree with your statement "ORVs have long served as a primary form of access for many portions of the beach in the seashore, and continue to be the most practical means of access and parking for many visitors."

However, pedestrian only areas discriminate against individuals with limited mobility due to age or physical impairments, families with small children, and those wishing to engage in activities requiring recreational equipment (boogie boards, beach umbrellas, beach chairs, coolers, fishing rods and tackle, etc)

5) Page 53: I disagree with the special use permit proposed guidelines. It is impractical to allow the transportation of disabled visitors to the village beaches and then require the vehicle to be returned to the street or parking area. This necessitates the disabled person to have a driver to drop him (or her) off, then drive to a parking area, then trudge a long distance to the site of the drop off, then trudge the long distance through the sand back to get the vehicle.

Suppose the handicap person wants to go to the beach, is capable of driving himself, yet cannot find another person to go with him? Does he now not go to the beach? This rule creates unnecessary hardships and risks in the event of an emergency as well.

6) Page 121 ? 127. I strongly disagree with the buffers as presented. We must allow for pass-thru corridors. The beach is linear with the ocean buffering on one side and the dune line on the other. For example - If you pinch off access on one side of a 4 mile linear beach and pinch off access on the other side of the 4 mile section of beach with no corridor, then you effectively have closed off all 4 miles of the beach because you CAN'T get there. The proposed bird buffers are too large, blocking access to the interior sections from the two "buffered" ends.

I propose ORV pass-thru only corridors and to use breeding / nesting buffer distances to establish ORV pass through only corridors to ensure beach access in a way that does not hinder resource protection. I believe pass through corridors should be maintained for pedestrians and ORVs in all areas of the Cape Hatteras National Seashore Recreational Area throughout the entire breeding and nesting season. Corridors are vital to providing access in a way that does not hinder resource protection.

Piping Plover unfledged chicks buffer should move with the brood as it relocates to reliable food source, not expanded.

The 1,000 meter distance for the piping plover is way too large and not based upon peer reviewed science. A more rational distance would be 200 meters per other sites in the nation for the piping plover. Ample scientific evidence and precedent exists to support a 200 meter buffer.

Buffers for other species, including American Oystercatchers, Least Terns and Colonial Waterbirds must also be changed. An effective 30 meter buffer should be established for these species rather than the 300 meter closure outlined in the DEIS.

NON-ENDANGERED BIRDS should not have same protection as if endangered. Not allowing ORV access is paramount to denying the public access to these beaches.

7) Page 468: I disagree with the limitations imposed on pedestrian and ORVs. Corridors or bypasses should be provided thru, around or below high tide line in all SMAs during entire breeding season to maintain access.

8) Page 124: I strongly disagree with the NPS slant of providing for over protection of resource management over that of the public's right to access the beaches. Pro-active initiatives include: Vegetation Management, Habitat Management, Enhanced Predator Management, Colonial Water bird social attraction, Piping Plover check fledge rate, Piping plover chick buffer distance, and pass-through buffers during the incubation period. Opportunities to implement less restrictive closures as a result of the above initiatives should be considered more frequently than the 5-year periodic review process identified in the DEIS.

9) I disagree with the NPS Resource Management Pedestrian / ORV Closure Policies. These policies address the least significant factors affecting nest survival with little chance to have more than negligible impact. For example: the AMOY Nest Failures are predominately due to non-human events. Using your own stats, the mammalian predation is 54%, Storm / Lunar Tides: 29%, Nest Abandonment: 6%, Avian Predation: 5%, and Ghost Crab Predation: 3%,

So what is the percentage due to human interference: just 3%! It's insignificant, yet the NPS wants to ban humans when their actions provide very little influence on the success rate of breeding birds and turtles.

10) I disagree with the stats of breeding plovers and the other birds in the Park when the NPS does not adequately consider locations neighboring the Recreational Area that are part of the same ecosystem, namely dredge and spoil island that are located just yards away and within sight of the seashore. These birds are part of the same ecosystem and should be included.

Those spoil islands, developed by man from dredging the waterways in the Pamlico Sound for channel upkeep are slammed full of birds. The reason why so many birds? NO PREDATORS. SO, birds are not as stupid as one might think. You have to count these birds and incorporate them in the stats when the NPS is talking about any so called decline in breeding pairs in the National Park.

11) Page 1: I do not think the DEIS responsibly addresses the cultural resource issues. The very purpose of the DEIS as set forth in the National Environmental Policy Act (NEPA) is to protect and preserve natural and cultural resources in the federal decision making process. In the DEIS, the statement "protect and preserve natural and cultural resources" appears in the first sentence of the first page of the plan, in the Purpose of the Plan section, and numerous times thereafter. Yet, the 810 page document devotes only two paragraphs to analysis of cultural resource issues.

12) Pages 270-281; 561-598: I strongly disagree with your economic analysis of the impact of the DEIS. The region of influence (ROI) incorporates the Northern Beach communities, including Kill Devil Hills, Kitty Hawk, Southern Shores and Duck. These areas are almost completely disconnected from ORV use and access issues relating to the Seashore. ? Inclusion of the Northern Beaches in analysis significantly dilutes estimates of economic impact on the 8 Seashore Villages

? Analysis of economic impact to the Seashore Villages appears to be significantly down played. Emphasis in DEIS is on the ROI-wide or county-wide level impacts.

? Nowhere is it clearly addressed that the overwhelming majority of negative impacts will be felt by small businesses in the Seashore Villages rather than by overall economic interests within the greater ROI.

On page xlvi, Alternative F is characterized as having a "negligible to moderate" adverse impact on small businesses. I strongly disagree with this statement.

I believe the negligible to moderate projection is inaccurate and relies on economic surveys that has not yet been published. Furthermore, this material is not expected to be added to the DEIS until after the public comment period has ended.

Based upon the economic harm we have already experienced under the consent decree, Dare County projects the economic impact of Alternative F to be substantial.

Beach closures have already had a devastating and unfair impact on many Dare County Businesses, causing foreclosures, bankruptcies, lay-offs, cutbacks, expensive refinancing, and depleted college funds and savings accounts.

Pages 270-286, 561-598: The socio-economic data and analyses are incomplete and erroneous and result in an understatement of the effect the restrictions will have upon the Island, the region and the state of NC. The US Park Services answer: Businesses will have to "adapt" to the new rules. (p.383) The negative economic impacts of the decree ARE KNOWN, so to say that the added restrictions would have negligible to moderate impact is indefensible.

13) Overall Visitor Counts - Overall visitor counts appear to include visitors to Fort Raleigh National Historic Site and the Wright Brothers National Memorial. A large percentage of these visitors vacation in the Northern Beaches communities and recreate on the non-federal beaches outside of the Seashore. Visitors who patronize the Fort Raleigh National Historic Site and the Wright Brothers National Memorial but do not visit the actual seashore areas need to be factored out.

Maintenance of Future Access to Cape Point and South Point Ocracoke: All socioeconomic analyses related to Alternative F are predicated on the assumption that access corridors will remain open for at least an appreciable portion of the visitor high season. Under Alternative F, the access corridors

will be subject to Resource Closures based on buffers similar or identical to the Consent Decree. Unless some predictability of access to Cape Point and South Point Ocracoke can be assured, economic analyses predicated on assumption of access are fundamentally flawed.

Why would a group of surf fisherman want to come to Hatteras Island to surf fish if they are not sure they can access the prime fishing grounds at Cape Point? The answer is they won't come. If they don't come, they don't rent vacation homes and spend their money on Hatteras and Ocracoke Islands.

The definition of the Region of Influence (ROI), faulty data on economic activity generated by specific type recreational activity, incomplete visitation/business survey data, inflated overall Seashore visitor counts pertaining to beach use, and flawed key assumptions concerning the maintenance of access under Alternative F, all lead to inaccurate conclusions in the socioeconomic analyses. Specifically, these inaccuracies can be seen as understating the negative socio-economic impact of the Seashore Villages. Further, this negative impact will be absorbed almost entirely by Small Businesses. Neither of these important aspects of the management alternatives are adequately presented in the DEIS.

14) Page 136: I strongly disagree with your pet restriction proposals. The "prohibition of pets in the Seashore during bird breeding season including in front of the villages." = No Pets in public areas ?beaches, campgrounds, soundfront, foot trails, park maintained roads -from March 15 ?July 31.

15) Pages 125; 392 ? 396: SEA TURTLES. I disagree with the stats and procedures proposed. I think endangered sea turtles would benefit from management practices now in use at other federal seashores that are more proactive in efforts to achieve nesting success. This includes relocating nests to more desirable locations as is done in other state and federally controlled areas.

The Cape Hatteras National Seashore Recreational Area is on the northernmost fringe of turtle nesting locations for the southeast, accounting for about 1% of all turtle nests. Proposed buffer areas are not needed for protection of the turtles and amount to overprotection.

16) Pages 97- 101. I strongly disagree with proposals in this section saying that ORVs will be prohibited year round between ramps 27 and 30, at Hatteras Inlet (Hatteras Spit), Ocracoke Inlet (North Ocracoke Spit) and various other locations.

Not allowing ORV access is paramount to denying the public access to these beaches. They are located miles from the nearest parking or paved road area and too far to access on foot. As a matter of course, there has been no breeding of piping plover or other endangered species at the Hatteras Island Inlet (spit) area in the past 6 years.

17) Page 104: I disagree with the proposed night time driving closures. Per your proposals, night driving will be prohibited between May 1 and November 15th, forcing visitors off of the beaches early in the evening and preventing sunrise surf fishermen access in the morning. I propose a more moderate night time ban if one is needed, perhaps from June 1 ? September 15 with times being 1 hour after sunset and 1 hour before sunrise to allow beach goers to gather their stuff and exit the beach area.

Certainly more proactive measures such as relocating nests prone to weather and ocean events would dramatically increase the nesting success rates.

18) Page 121: I disagree with the proposed beach closings, including pedestrian access from March 15 until July 31 in 8 different beach locations which have traditionally been available. Please leave these areas open to beach walkers, shell collectors and those that want to access the beaches in these areas.

Conclusion:

Please, incorporate access corridors through any SMA so we can get to the open beach beyond. Incorporate the birds into the count that nest on the spoil islands. Base your buffer zones on peer reviewed science and scale them back to more reasonable distances as discussed.

It is neither logical nor reasonable to spend so much time, money and energy to overprotect a bird (Piping Plover) in the Cape Hatteras National Seashore that is on the southernmost fringe area of its breeding ground. That goes for the loggerhead turtle that is in its northernmost breeding area.

Let's scale back the buffer zones. You can always increase at a later date.

The USPS is leaning way over the line on over protection and not enough on the public's right to enjoy the beaches of the National Seashore. The proper balance is not achieved in the propose DEIS and needs to be modified so that the proper balance of reasonable resource protection and access to the beaches of the National Park is achieved. I could sum it up by saying "Protect, not Prohibit."

Thank you,

Correspondence Type:	Web Form						
Correspondence:	My comments concern the DEIS of the Off-Road Vehicle Management Plan prepared by the National Park Service (NPS) for the Cape Hatteras National Seashore Recreation Area.						
	1) Page 201: I disagree with the NPS statement: "Even with resource closures in place, protected species are still at risk [from pedestrians and ORVs]." No Piping Plover deaths have been attributed to ORVs. ORV violations continue to decrease as signage and education improve. Pedestrian violations are much more significant than ORV violations. It seems to me that any transgressions into protected area are the result of lack of NPS manpower and enforcement than the public purposely and willfully violating out of bounds areas.						
	2) Page xxiv: I question the statement of as per the DEIS: "Carrying capacity would be a 'peak use limit' determined for all areas based on the linear feet of beachfront?" If you close off huge sections of the beach, you force more people into smaller areas, potentially resulting in more resource impairment and diminished visitor experience.						
	3) Page xix and page 23: I am against having two different closures rules pertaining to the North facing beaches (North side) and the South facing beaches (South side) as per the grid outlined in Alternative "F". I disagree with the NPS proposal to close the beaches in villages of Frisco, Hatteras and Ocracoke Villages to ORV access longer than the traditional May 15 to September 15 period for the Northern beaches, even though seasonal visitor statistics are similar for all villages. Please, make them the same: May 15 -> September 15.						
	4) Page 1: I agree with your statement "ORVs have long served as a primary form of access for many portions of the beach in the seashore, and continue to be the most practical means of access and parking for many visitors." However, pedestrian only areas discriminate against individuals with limited mobility due to age or physical impairments, families with small children, and those wishing to engage in activities requiring recreational equipment (boogie boards, beach umbrellas, beach chairs, coolers, fishing rods and tackle, etc)						
	5) Page 53: I disagree with the special use permit proposed guidelines. It is impractical to allow the transportation of disabled visitors to the village beaches and then require the vehicle to be returned to the street or parking area. This necessitates the disabled person to have a driver to drop him (or her) off, then drive to a parking area, then trudge a long distance to the site of the drop off, then trudge the long distance through the sand back to get the vehicle. Suppose the handicap person wants to go to the beach, is capable of driving himself, yet cannot find another person to go with him? Does he now not go to the beach? This rule creates unnecessary hardships and risks in the event of an emergency as well.						
	6) Page 121 ? 127. I strongly disagree with the buffers as presented. We must allow for pass-thru corridors. The beach is linear with the ocean buffering on one side and the dune line on the other. For example - If you pinch off access on one side of a 4 mile linear beach and pinch off access on the other side of the 4 mile section of beach with no corridor, then you effectively have closed off all 4 miles of the beach because you CAN'T get there. The proposed bird buffers are too large, blocking access to the interior sections from the two "buffered" ends. I propose ORV pass-thru only corridors and to use breeding / nesting buffer distances to establish ORV pass through only corridors to ensure beach access in a way that does not hinder resource protection. I believe pass through corridors should be maintained for pedestrians and ORVs in all areas of the Cape Hatteras National Seashore Recreational Area throughout the entire breeding and nesting season. Corridors are vital to providing access in a						

way that does not hinder resource protection.

Piping Plover unfledged chicks buffer should move with the brood as it relocates to reliable food source, not expanded.

The 1,000 meter distance for the piping plover is way too large and not based upon peer reviewed science. A more rational distance would be 200 meters per other sites in the nation for the piping plover. Ample scientific evidence and precedent exists to support a 200 meter buffer.

Buffers for other species, including American Oystercatchers, Least Terns and Colonial Waterbirds must also be changed. An effective 30 meter buffer should be established for these species rather than the 300 meter closure outlined in the DEIS.

NON-ENDANGERED BIRDS should not have same protection as if endangered. Not allowing ORV access is paramount to denying the public access to these beaches.

7) Page 468: I disagree with the limitations imposed on pedestrian and ORVs. Corridors or bypasses should be provided thru, around or below high tide line in all SMAs during entire breeding season to maintain access.

8) Page 124: I strongly disagree with the NPS slant of providing for over protection of resource management over that of the public's right to access the beaches. Pro-active initiatives include: Vegetation Management, Habitat Management, Enhanced Predator Management, Colonial Water bird social attraction, Piping Plover check fledge rate, Piping plover chick buffer distance, and pass-through buffers during the incubation period. Opportunities to implement less restrictive closures as a result of the above initiatives should be considered more frequently than the 5-year periodic review process identified in the DEIS.

9) I disagree with the NPS Resource Management Pedestrian / ORV Closure Policies. These policies address the least significant factors affecting nest survival with little chance to have more than negligible impact. For example: the AMOY Nest Failures are predominately due to non-human events. Using your own stats, the mammalian predation is 54%, Storm / Lunar Tides: 29%, Nest Abandonment: 6%, Avian Predation: 5%, and Ghost Crab Predation: 3%.

So what is the percentage due to human interference: just 3%! It's insignificant, yet the NPS wants to ban humans when their actions provide very little influence on the success rate of breeding birds and turtles.

10) I disagree with the stats of breeding plovers and the other birds in the Park when the NPS does not adequately consider locations neighboring the Recreational Area that are part of the same ecosystem, namely dredge and spoil island that are located just yards away and within sight of the seashore. These birds are part of the same ecosystem and should be included.

Those spoil islands, developed by man from dredging the waterways in the Pamlico Sound for channel upkeep are slammed full of birds. The reason why so many birds? NO PREDATORS. SO, birds are not as stupid as one might think. You have to count these birds and incorporate them in the stats when the NPS is talking about any so called decline in breeding pairs in the National Park.

11) Page 1: I do not think the DEIS responsibly addresses the cultural resource issues. The very purpose of the DEIS as set forth in the National Environmental Policy Act (NEPA) is to protect and preserve natural and cultural resources in the federal decision making process. In the DEIS, the statement "protect and preserve natural and cultural resources" appears in the first sentence of the first page of the plan, in the Purpose of the Plan section, and numerous times thereafter. Yet, the 810 page document devotes only two paragraphs to analysis of cultural resource issues.

12) Pages 270-281; 561-598: I strongly disagree with your economic analysis of the impact of the DEIS. The region of influence (ROI) incorporates the Northern Beach communities, including Kill Devil Hills, Kitty Hawk, Southern Shores and Duck. These areas are almost completely disconnected from ORV use and access issues relating to the Seashore. ? Inclusion of the Northern Beaches in analysis significantly dilutes estimates of economic impact on the 8 Seashore Villages

? Analysis of economic impact to the Seashore Villages appears to be significantly down played. Emphasis in DEIS is on the ROI-wide or county-wide level impacts.

? Nowhere is it clearly addressed that the overwhelming majority of negative impacts will be felt by small businesses in the Seashore Villages rather than by overall economic interests within the greater ROI.

On page xlvi, Alternative F is characterized as having a "negligible to moderate" adverse impact on small businesses. I strongly disagree with this statement.

I believe the negligible to moderate projection is inaccurate and relies on economic surveys that has not yet been published. Furthermore, this material is not expected to be added to the DEIS until after the public comment period has ended.

Based upon the economic harm we have already experienced under the consent decree, Dare County projects the economic impact of Alternative F to be substantial.

Beach closures have already had a devastating and unfair impact on many Dare County Businesses, causing foreclosures, bankruptcies, lay-offs, cutbacks, expensive refinancing, and depleted college funds and savings accounts.

Pages 270-286, 561-598: The socio-economic data and analyses are incomplete and erroneous and result in an understatement of the effect the restrictions will have upon the Island, the region and the state of NC. The US Park Services answer: Businesses will have to "adapt" to the new rules.

(p.383) The negative economic impacts of the decree ARE KNOWN, so to say that the added restrictions would have negligible to moderate impact is indefensible.

13) Overall Visitor Counts - Overall visitor counts appear to include visitors to Fort Raleigh National Historic Site and the Wright Brothers National Memorial. A large percentage of these visitors vacation in the Northern Beaches communities and recreate on the non-federal beaches outside of the Seashore. Visitors who patronize the Fort Raleigh National Historic Site and the Wright Brothers National Memorial but do not visit the actual seashore areas need to be factored out.

Maintenance of Future Access to Cape Point and South Point Ocracoke: All socioeconomic analyses related to Alternative F are predicated on the assumption that access corridors will remain open for at least an appreciable portion of the visitor high season. Under Alternative F, the access corridors will be subject to Resource Closures based on buffers similar or identical to the Consent Decree. Unless some predictability of access to Cape Point and South Point Ocracoke can be assured, economic analyses predicated on assumption of access are fundamentally flawed.

Why would a group of surf fisherman want to come to Hatteras Island to surf fish if they are not sure they can access the prime fishing grounds at Cape Point? The answer is they won't come. If they don't come, they don't rent vacation homes and spend their money on Hatteras and Ocracoke Islands.

The definition of the Region of Influence (ROI), faulty data on economic activity generated by specific type recreational activity, incomplete visitation/business survey data, inflated overall Seashore visitor counts pertaining to beach use, and flawed key assumptions concerning the maintenance of access under Alternative F, all lead to inaccurate conclusions in the socioeconomic analyses. Specifically, these inaccuracies can be seen as understating the negative socio-economic impact of the Seashore Villages. Further, this negative impact will be absorbed almost entirely by Small Businesses. Neither of these important aspects of the management alternatives are adequately presented in the DEIS.

14) Page 136: I strongly disagree with your pet restriction proposals. The "prohibition of pets in the Seashore during bird breeding season including in front of the villages." = No Pets in public areas ?beaches, campgrounds, soundfront, foot trails, park maintained roads -from March 15 ?July 31.

15) Pages 125; 392 ? 396: SEA TURTLES. I disagree with the stats and procedures proposed. I think endangered sea turtles would benefit from management practices now in use at other federal seashores that are more proactive in efforts to achieve nesting success. This includes relocating nests to more desirable locations as is done in other state and federally controlled areas.

The Cape Hatteras National Seashore Recreational Area is on the northernmost fringe of turtle nesting locations for the southeast, accounting for about 1% of all turtle nests. Proposed buffer areas are not needed for protection of the turtles and amount to overprotection.

16) Pages 97- 101. I strongly disagree with proposals in this section saying that ORVs will be prohibited year round between ramps 27 and 30, at Hatteras Inlet (Hatteras Spit), Ocracoke Inlet (North Ocracoke Spit) and various other locations.

Not allowing ORV access is paramount to denying the public access to these beaches. They are located miles from the nearest parking or paved road area and too far to access on foot. As a matter of course, there has been no breeding of piping plover or other endangered species at the Hatteras Island Inlet (spit) area in the past 6 years.

17) Page 104: I disagree with the proposed night time driving closures. Per your proposals, night driving will be prohibited between May 1 and November 15th, forcing visitors off of the beaches early in the evening and preventing sunrise surf fishermen access in the morning. I propose a more moderate night time ban if one is needed, perhaps from June 1 ? September 15 with times being 1 hour after sunset and 1 hour before sunrise to allow beach goers to gather their stuff and exit the beach area.

Certainly more proactive measures such as relocating nests prone to weather and ocean events would dramatically increase the nesting success rates.

18) Page 121: I disagree with the proposed beach closings, including pedestrian access from March 15 until July 31 in 8 different beach locations which have traditionally been available. Please leave these areas open to beach walkers, shell collectors and those that want to access the beaches in these areas.

Conclusion:

Please, incorporate access corridors through any SMA so we can get to the open beach beyond. Incorporate the birds into the count that nest on the spoil islands. Base your buffer zones on peer reviewed science and scale them back to more reasonable distances as discussed.

It is neither logical nor reasonable to spend so much time, money and energy to overprotect a bird (Piping Plover) in the Cape Hatteras National Seashore that is on the southernmost fringe area of its breeding ground. That goes for the loggerhead turtle that is in its northernmost breeding area. Let's scale back the buffer zones. You can always increase at a later date.

The USFS is leaning way over the line on over protection and not enough on the public's right to enjoy the beaches of the National Seashore. The proper balance is not achieved in the propose DEIS and needs to be modified so that the proper balance of reasonable resource protection and access to the beaches of the National Park is achieved. I could sum it up by saying "Protect, not Prohibit."

Thank you,

Correspondence:

I have been a frequent visitor to the Cape Hatteras NS for the last 15 years. I go to fish, windsurf and just get away from it all. Having the ability to access the beaches by vehicle is essential for these activities.

While I understand some ORV restrictions are going to be necessary, I would like of course to see the minimum amount of restrictions put in place.

Having had almost unrestricted access in the past, the visitors and residents of the outer banks have a lot to lose both in terms of beach access and lost revenue due to decreased visitors. It seems reasonable to implement minimal restrictions at this time and then monitor the wildlife populations to see if the improvements are sufficient to ensure their long term survivability.

I believe the wildlife and ORV's can coexist at the outer banks and I support alternative E.

Thank you.

Frank Green

Correspondence: My comments concern the DEIS of the Off-Road Vehicle Management Plan prepared by the National Park Service (NPS) for the Cape Hatteras National Seashore Recreation Area.

1) Page 201: I disagree with the NPS statement: "Even with resource closures in place, protected species are still at risk [from pedestrians and ORVs]." No Piping Plover deaths have been attributed to ORVs. ORV violations continue to decrease as signage and education improve. Pedestrian violations are much more significant than ORV violations. It seems to me that any transgressions into protected area are the result of lack of NPS manpower and enforcement than the public purposely and willfully violating out of bounds areas.

2) Page xxiv: I question the statement of as per the DEIS: "Carrying capacity would be a 'peak use limit' determined for all areas based on the linear feet of beachfront?" If you close off huge sections of the beach, you force more people into smaller areas, potentially resulting in more resource impairment and diminished visitor experience.

3) Page xix and page 23: I am against having two different closures rules pertaining to the North facing beaches (North side) and the South facing beaches (South side) as per the grid outlined in Alternative "F". I disagree with the NPS proposal to close the beaches in villages of Frisco, Hatteras and Ocracoke Villages to ORV access longer than the traditional May 15 to September 15 period for the Northern beaches, even though seasonal visitor statistics are similar for all villages. Please, make them the same: May 15 -> September 15.

4) Page 1: I agree with your statement "ORVs have long served as a primary form of access for many portions of the beach in the seashore, and continue to be the most practical means of access and parking for many visitors." However, pedestrian only areas discriminate against individuals with limited mobility due to age or physical impairments, families with small children, and those wishing to engage in activities requiring recreational equipment (boogie boards, beach umbrellas, beach chairs, coolers, fishing rods and tackle, etc)

5) Page 53: I disagree with the special use permit proposed guidelines. It is impractical to allow the transportation of disabled visitors to the village beaches and then require the vehicle to be returned to the street or parking area. This necessitates the disabled person to have a driver to drop him (or her) off, then drive to a parking area, then trudge a long distance to the site of the drop off, then trudge the long distance through the sand back to get the vehicle. Suppose the handicap person wants to go to the beach, is capable of driving himself, yet cannot find another person to go with him? Does he now not go to the beach? This rule creates unnecessary hardships and risks in the event of an emergency as well.

6) Page 121 ? 127. I strongly disagree with the buffers as presented. We must allow for pass-thru corridors. The beach is linear with the ocean buffering on one side and the dune line on the other. For example - If you pinch off access on one side of a 4 mile linear beach and pinch off access on the other side of the 4 mile section of beach with no corridor, then you effectively have closed off all 4 miles of the beach because you CAN'T get there. The proposed bird buffers are too large, blocking access to the interior sections from the two "buffered" ends. I propose ORV pass-thru only corridors and to use breeding / nesting buffer distances to establish ORV pass through only corridors to ensure beach access in a way that does not hinder resource protection. I believe pass through corridors should be maintained for pedestrians and ORVs in all areas of the Cape Hatteras National Seashore Recreational Area throughout the entire breeding and nesting season. Corridors are vital to providing access in a way that does not hinder resource protection. Piping Plover unfledged chicks buffer should move with the brood as it relocates to reliable food source, not expanded. The 1,000 meter distance for the piping plover is way too large and not based upon peer reviewed science. A more rational distance would be 200 meters per other sites in the nation for the piping plover. Ample scientific evidence and precedent exists to support a 200 meter buffer. Buffers for other species, including American Oystercatchers, Least Terns and Colonial Waterbirds must also be changed. An effective 30 meter buffer should be established for these species rather than the 300 meter closure outlined in the DEIS. NON-ENDANGERED BIRDS should not have same protection as if endangered. Not allowing ORV access is paramount to denying the public access to these beaches.

7) Page 468: I disagree with the limitations imposed on pedestrian and ORVs. Corridors or bypasses should be provided thru, around or below high tide line in all SMAs during entire breeding season to maintain access.

8) Page 124: I strongly disagree with the NPS slant of providing for over protection of resource management over that of the public's right to access the beaches. Pro-active initiatives include: Vegetation Management, Habitat Management, Enhanced Predator Management, Colonial Water bird social attraction, Piping Plover check fledge rate, Piping plover chick buffer distance, and pass-through buffers during the incubation period. Opportunities to implement less restrictive closures as a result of the above initiatives should be considered more frequently than the 5-year periodic review process identified in the DEIS.

9) I disagree with the NPS Resource Management Pedestrian / ORV Closure Policies. These policies address the least significant factors affecting nest survival with little chance to have more than negligible impact. For example: the AMOY Nest Failures are predominately due to non-human events. Using your own stats, the mammalian predation is 54%, Storm / Lunar Tides: 29%, Nest Abandonment: 6%, Avian Predation: 5%, and Ghost Crab Predation: 3%, So what is the percentage due to human interference: just 3%! It's insignificant, yet the NPS wants to ban humans when their actions provide very little influence on the success rate of breeding birds and turtles.

10) I disagree with the stats of breeding plovers and the other birds in the Park when the NPS does not adequately consider locations neighboring the Recreational Area that are part of the same ecosystem, namely dredge and spoil island that are located just yards away and within sight of the seashore. These birds are part of the same ecosystem and should be included. Those spoil islands, developed by man from dredging the waterways in the Pamlico Sound for channel upkeep are slammed full of birds. The reason why so many birds? NO PREDATORS. SO, birds are not as stupid as one might think. You have to count these birds and incorporate them in the stats when the NPS is talking about any so called decline in breeding pairs in the National Park.

11) Page 1: I do not think the DEIS responsibly addresses the cultural resource issues. The very purpose of the DEIS as set forth in the National Environmental Policy Act (NEPA) is to protect and preserve natural and cultural resources in the federal decision making process. In the DEIS, the statement "protect and preserve natural and cultural resources" appears in the first sentence of the first page of the plan, in the Purpose of the Plan section, and numerous times thereafter. Yet, the 810 page document devotes only two paragraphs to analysis of cultural resource issues.

12) Pages 270-281; 561-598: I strongly disagree with your economic analysis of the impact of the DEIS. The region of influence (ROI) incorporates the Northern Beach communities, including Kill Devil Hills, Kitty Hawk, Southern Shores and Duck. These areas are almost completely disconnected from ORV use and access issues relating to the Seashore. ? Inclusion of the Northern Beaches in analysis significantly dilutes estimates of economic impact on the 8 Seashore Villages ? Analysis of economic impact to the Seashore Villages appears to be significantly down played. Emphasis in DEIS is on the ROI-wide or county-wide level impacts. ? Nowhere is it clearly addressed that the overwhelming majority of negative impacts will be felt by small businesses in the Seashore Villages rather than by overall economic interests within the greater ROI. On page xlvi, Alternative F is characterized as having a "negligible to moderate" adverse impact on small businesses. I strongly disagree with this statement. I believe the negligible to moderate projection is inaccurate and relies on economic surveys that has not yet been published. Furthermore, this material is not expected to be added to the DEIS until after the public comment period has ended. Based upon the economic harm we have already experienced under the consent decree, Dare County projects the economic impact of Alternative F to be substantial.

Beach closures have already had a devastating and unfair impact on many Dare County Businesses, causing foreclosures, bankruptcies, lay-offs, cutbacks, expensive refinancing, and depleted college funds and savings accounts.

Pages 270-286, 561-598: The socio-economic data and analyses are incomplete and erroneous and result in an understatement of the effect the restrictions will have upon the Island, the region and the state of NC. The US Park Services answer: Businesses will have to "adapt" to the new rules. (p.383) The negative economic impacts of the decree ARE KNOWN, so to say that the added restrictions would have negligible to moderate impact is indefensible.

13) Overall Visitor Counts - Overall visitor counts appear to include visitors to Fort Raleigh National Historic Site and the Wright Brothers National Memorial. A large percentage of these visitors vacation in the Northern Beaches communities and recreate on the non-federal beaches outside of the Seashore. Visitors who patronize the Fort Raleigh National Historic Site and the Wright Brothers National Memorial but do not visit the actual seashore areas need to be factored out.

Maintenance of Future Access to Cape Point and South Point Ocracoke: All socioeconomic analyses related to Alternative F are predicated on the assumption that access corridors will remain open for at least an appreciable portion of the visitor high season. Under Alternative F, the access corridors will be subject to Resource Closures based on buffers similar or identical to the Consent Decree. Unless some predictability of access to Cape Point and South Point Ocracoke can be assured, economic analyses predicated on assumption of access are fundamentally flawed.

Why would a group of surf fisherman want to come to Hatteras Island to surf fish if they are not sure they can access the prime fishing grounds at Cape Point? The answer is they won't come. If they don't come, they don't rent vacation homes and spend their money on Hatteras and Ocracoke Islands. The definition of the Region of Influence (ROI), faulty data on economic activity generated by specific type recreational activity, incomplete visitation/business survey data, inflated overall Seashore visitor counts pertaining to beach use, and flawed key assumptions concerning the maintenance of access under Alternative F, all lead to inaccurate conclusions in the socioeconomic analyses. Specifically, these inaccuracies can be seen as understating the negative socio-economic impact of the Seashore Villages. Further, this negative impact will be absorbed almost entirely by Small Businesses. Neither of these important aspects of the management alternatives are adequately presented in the DEIS.

14) Page 136: I strongly disagree with your pet restriction proposals. The "prohibition of pets in the Seashore during bird breeding season including in front of the villages." = No Pets in public areas ?beaches, campgrounds, soundfront, foot trails, park maintained roads -from March 15 ?July 31.

15) Pages 125; 392 ? 396: SEA TURTLES. I disagree with the stats and procedures proposed. I think endangered sea turtles would benefit from management practices now in use at other federal seashores that are more proactive in efforts to achieve nesting success. This includes relocating nests to more desirable locations as is done in other state and federally controlled areas.

The Cape Hatteras National Seashore Recreational Area is on the northernmost fringe of turtle nesting locations for the southeast, accounting for about 1% of all turtle nests. Proposed buffer areas are not needed for protection of the turtles and amount to overprotection.

16) Pages 97- 101. I strongly disagree with proposals in this section saying that ORVs will be prohibited year round between ramps 27 and 30, at Hatteras Inlet (Hatteras Spit), Ocracoke Inlet (North Ocracoke Spit) and various other locations.

Not allowing ORV access is paramount to denying the public access to these beaches. They are located miles from the nearest parking or paved road area and too far to access on foot. As a matter of course, there has been no breeding of piping plover or other endangered species at the Hatteras Island Inlet (spit) area in the past 6 years.

17) Page 104: I disagree with the proposed night time driving closures. Per your proposals, night driving will be prohibited between May 1 and November 15th, forcing visitors off of the beaches early in the evening and preventing sunrise surf fishermen access in the morning. I propose a more moderate night time ban if one is needed, perhaps from June 1 ? September 15 with times being 1 hour after sunset and 1 hour before sunrise to allow beach goers to gather their stuff and exit the beach area.

Certainly more proactive measures such as relocating nests prone to weather and ocean events would dramatically increase the nesting success rates.

18) Page 121: I disagree with the proposed beach closings, including pedestrian access from March 15 until July 31 in 8 different beach locations which have traditionally been available. Please leave these areas open to beach walkers, shell collectors and those that want to access the beaches in these areas.

Conclusion:

Please, incorporate access corridors through any SMA so we can get to the open beach beyond. Incorporate the birds into the count that nest on the spoil islands. Base your buffer zones on peer reviewed science and scale them back to more reasonable distances as discussed.

It is neither logical nor reasonable to spend so much time, money and energy to overprotect a bird (Piping Plover) in the Cape Hatteras National Seashore that is on the southernmost fringe area of its breeding ground. That goes for the loggerhead turtle that is in its northernmost breeding area. Let's scale back the buffer zones. You can always increase at a later date.

The USPS is leaning way over the line on over protection and not enough on the public's right to enjoy the beaches of the National Seashore. The proper balance is not achieved in the propose DEIS and needs to be modified so that the proper balance of reasonable resource protection and access to the beaches of the National Park is achieved. I could sum it up by saying "Protect, not Prohibit."

Thank you,

Correspondence: Dear Sir or Madam, I view with great concern the proposed new plan for beach access on the Cape Hatteras National Seashore. The proposed plan goes far beyond what I believe is necessary to protect a bird whose population is actually increasing. My primary concerns are as follows: 1. The 1,000 meter closure allocated to a piping plover unfledged chick seems excessive. As a citizen I can not support an area larger than a square mile for one nest. The 300 meter restriction for the oyster catcher, a bird that is not threatened, also seems excessive. 2. Pets, including dogs on leashes, will not be permitted on the beach between March 15 and July 31. I know that pets can harm ground nesting birds but not when they are leashed. This ruling will impact use of the beach without doing anything to help the birds. 3. Large sections of the beach will be closed to even pedestrians during the March 15 and July 31 period. This seems excessive. 4. Off road vehicles will be prohibited year round at the Hatteras and Ocracoke Inlet areas. This too seems excessive. I believe that it is important to protect wildlife, but I also believe that such protection must be viewed as rational by the general population such that the political body will continue to support it.

Correspondence: Dear Superintendent Murray,
As a member of the National Parks Conservation Association and a supporter of national parks, I appreciate the chance to submit comments on the draft plan to manage Off Road Vehicle (ORV) use on the beaches of Cape Hatteras National Seashore. The Seashore is a nationally significant resource with its sandy beaches, salt marshes, and maritime woods on the storied Outer Banks of North Carolina. This area is cherished by family vacationers, bird watchers, and many other people who enjoy undeveloped beaches. All of the alternatives presented in the draft environmental impact statement privilege ORV use over all other visitors. Overall, this approach is unbalanced and fails to conserve and protect the wilderness, birds, and turtles that make this area nationally significant. Of the six alternative plans outlined in the draft, I support the identified "environmentally preferred" Alternative D, if it is modified to include and recognize the following points.

1) The National Park Service cannot ignore its responsibilities under the Organic Act and the National Seashore's authorizing legislation to protect all visitors and wildlife and the habitat on which it depends. Conserving Cape Hatteras for future generations and protecting its wildlife must take precedence over one form of recreation (ORVs), and any recreational use is required by law to leave the resource "unimpaired for the enjoyment of future generations."

2) When Cape Hatteras was established, Congress specifically designated it a park system unit for the following reason, "Except for certain portions of the area, deemed to be especially adaptable for recreational uses... , the said area shall be permanently reserved as a primitive wilderness..." Thus, the intent of Congress was to protect the visitor experience of primitive wilderness, not ORV use. It is absolutely essential that NPS protect the pedestrian visitor experience to Cape Hatteras and allow ORV use only if it can occur without harming wilderness and wildlife resources.

3) The final Plan/EIS must assert NPS authority to adaptively manage the wildlife resources, in response to information produced by monitoring and analysis, to achieve wildlife species recovery goals.

Thank you for the opportunity to provide these comments. I appreciate the hard work and dedication of the National Park Service in preserving the best examples of America's natural and cultural heritage for future generations. I look forward to seeing an improved final ORV management plan.

***** Thank you very much for taking the time to protect one of America's most beautiful stretches of Atlantic seashore! Sea turtles, nesting shorebirds

Correspondence: Mike Murray, Superintendent Cape Hatteras National Seashore Recreational Area 1401 National Park Drive Manteo, NC 27954
Dear Superintendent Murray,
Please accept this letter as my comment on the ORV DEIS before you at this time.
After reviewing the National Park Service DEIS I must disagree with any of the six alternatives within the document.
I have; however, reviewed the 77 page Coalition for Beach Access Position Statement signed by several groups that were a part of the negotiated rule making process and it by far succeeds in furnishing the best visitor experience while maintaining the needs of protecting the fragile resources.
Please consider all aspects of this alternative and put people back into the management of Cape Hatteras National Seashore.
Victoria T. Oliver Dunes East Drive Hatteras, NC

Correspondence Type: Web Form
Correspondence: My comments concern the DEIS of the Off-Road Vehicle Management Plan prepared by the National Park Service (NPS) for the Cape Hatteras National Seashore Recreation Area.

1) Page 201: I disagree with the NPS statement: "Even with resource closures in place, protected species are still at risk [from pedestrians and ORVs]." No Piping Plover deaths have been attributed to ORVs. ORV violations continue to decrease as signage and education improve. Pedestrian violations are much more significant than ORV violations. It seems to me that any transgressions into protected area are the result of lack of NPS manpower and enforcement than the public purposely and willfully violating out of bounds areas.

2) Page xxiv: I question the statement of as per the DEIS: "Carrying capacity would be a 'peak use limit' determined for all areas based on the linear feet of beachfront?" If you close off huge sections of the beach, you force more people into smaller areas, potentially resulting in more resource impairment and diminished visitor experience.

3) Page xix and page 23: I am agnind having two different closures rules pertaining to the North facing beaches (North side) and the South facing beaches (South side) as per the grid outlined in Alternative "F". I disagree with the NPS proposal to close the beaches in villages of Frisco, Hatteras and Ocracoke Villages to ORV access longer than the traditional May 15 to September 15 period for the Northern beaches, even though seasonal visitor statistics are similar for all villages. Please, make them the same: May 15 -> September 15.

4) Page 1: I agree with your statement "ORVs have long served as a primary form of access for many portions of the beach in the seashore, and continue to be the most practical means of access and parking for many visitors."
However, pedestrian only areas discriminate against individuals with limited mobility due to age or physical impairments, families with small children, and those wishing to engage in activities requiring recreational equipment (boogie boards, beach umbrellas, beach chairs, coolers, fishing rods and tackle, etc)

5) Page 53: I disagree with the special use permit proposed guidelines. It is impractical to allow the transportation of disabled visitors to the village beaches and then require the vehicle to be returned to the street or parking area. This necessitates the disabled person to have a driver to drop him (or her) off, then drive to a parking area, then trudge a long distance to the site of the drop off, then trudge the long distance through the sand back to get the vehicle.
Suppose the handicap person wants to go to the beach, is capable of driving himself, yet cannot find another person to go with him? Does he now not go to the beach? This rule creates unnecessary hardships and risks in the event of an emergency as well.

6) Page 121 ? 127. I strongly disagree with the buffers as presented. We must allow for pass-thru corridors. The beach is linear with the ocean buffering on one side and the dune line on the other. For example - If you pinch off access on one side of a 4 mile linear beach and pinch off access on the other side of the 4 mile section of beach with no corridor, then you effectively have closed off all 4 miles of the beach because you CAN'T get there. The proposed bird buffers are too large, blocking access to the interior sections from the two "buffered" ends.
I propose ORV pass-thru only corridors and to use breeding / nesting buffer distances to establish ORV pass through only corridors to ensure beach access in a way that does not hinder resource protection. I believe pass through corridors should be maintained for pedestrians and ORVs in all areas of the Cape Hatteras National Seashore Recreational Area throughout the entire breeding and nesting season. Corridors are vital to providing access in a way that does not hinder resource protection.
Piping Plover unfledged chicks buffer should move with the brood as it relocates to reliable food source, not expanded.
The 1,000 meter distance for the piping plover is way too large and not based upon peer reviewed science. A more rational distance would be 200 meters per other sites in the nation for the piping plover. Ample scientific evidence and precedent exists to support a 200 meter buffer.
Buffers for other species, including American Oystercatchers, Least Terns and Colonial Waterbirds must also be changed. An effective 30 meter buffer should be established for these species rather than the 300 meter closure outlined in the DEIS.
NON-ENDANGERED BIRDS should not have same protection as if endangered. Not allowing ORV access is paramount to denying the public access to these beaches.

7) Page 468: I disagree with the limitations imposed on pedestrian and ORVs. Corridors or bypasses should be provided thru, around or below high tide line in all SMAs during entire breeding season to maintain access.

8) Page 124: I strongly disagree with the NPS slant of providing for over protection of resource management over that of the public's right to access the beaches. Pro-active initiatives include: Vegetation Management, Habitat Management, Enhanced Predator Management, Colonial Water bird social attraction, Piping Plover check fledge rate, Piping plover chick buffer distance, and pass-through buffers during the incubation period. Opportunities to implement less restrictive closures as a result of the above initiatives should be considered more frequently than the 5-year periodic review process identified in the DEIS.

9) I disagree with the NPS Resource Management Pedestrian / ORV Closure Policies. These policies address the least significant factors affecting nest survival with little chance to have more than negligible impact. For example: the AMOY Nest Failures are predominately due to non-human events. Using your own stats, the mammalian predation is 54%, Storm / Lunar Tides: 29%, Nest Abandonment: 6%, Avian Predation: 5%, and Ghost Crab Predation: 3%,
So what is the percentage due to human interference: just 3%! It's insignificant, yet the NPS wants to ban humans when their actions provide very little influence on the success rate of breeding birds and turtles.

10) I disagree with the stats of breeding plovers and the other birds in the Park when the NPS does not adequately consider locations neighboring the Recreational Area that are part of the same ecosystem, namely dredge and spoil island that are located just yards away and within sight of the seashore.

These birds are part of the same ecosystem and should be included.

Those spoil islands, developed by man from dredging the waterways in the Pamlico Sound for channel upkeep are slammed full of birds. The reason why so many birds? NO PREDATORS. SO, birds are not as stupid as one might think. You have to count these birds and incorporate them in the stats when the NPS is talking about any so called decline in breeding pairs in the National Park.

11) Page 1: I do not think the DEIS responsibly addresses the cultural resource issues. The very purpose of the DEIS as set forth in the National Environmental Policy Act (NEPA) is to protect and preserve natural and cultural resources in the federal decision making process. In the DEIS, the statement "protect and preserve natural and cultural resources" appears in the first sentence of the first page of the plan, in the Purpose of the Plan section, and numerous times thereafter. Yet, the 810 page document devotes only two paragraphs to analysis of cultural resource issues.

12) Pages 270-281; 561-598: I strongly disagree with your economic analysis of the impact of the DEIS. The region of influence (ROI) incorporates the Northern Beach communities, including Kill Devil Hills, Kitty Hawk, Southern Shores and Duck. These areas are almost completely disconnected from ORV use and access issues relating to the Seashore. ? Inclusion of the Northern Beaches in analysis significantly dilutes estimates of economic impact on the 8 Seashore Villages

? Analysis of economic impact to the Seashore Villages appears to be significantly down played. Emphasis in DEIS is on the ROI-wide or county-wide level impacts.

? Nowhere is it clearly addressed that the overwhelming majority of negative impacts will be felt by small businesses in the Seashore Villages rather than by overall economic interests within the greater ROI.

On page xlvi, Alternative F is characterized as having a "negligible to moderate" adverse impact on small businesses. I strongly disagree with this statement.

I believe the negligible to moderate projection is inaccurate and relies on economic surveys that has not yet been published. Furthermore, this material is not expected to be added to the DEIS until after the public comment period has ended.

Based upon the economic harm we have already experienced under the consent decree, Dare County projects the economic impact of Alternative F to be substantial.

Beach closures have already had a devastating and unfair impact on many Dare County Businesses, causing foreclosures, bankruptcies, lay-offs, cutbacks, expensive refinancing, and depleted college funds and savings accounts.

Pages 270-286, 561-598: The socio-economic data and analyses are incomplete and erroneous and result in an understatement of the effect the restrictions will have upon the Island, the region and the state of NC. The US Park Services answer: Businesses will have to "adapt" to the new rules.

(p.383) The negative economic impacts of the decree ARE KNOWN, so to say that the added restrictions would have negligible to moderate impact is indefensible.

13) Overall Visitor Counts - Overall visitor counts appear to include visitors to Fort Raleigh National Historic Site and the Wright Brothers National Memorial. A large percentage of these visitors vacation in the Northern Beaches communities and recreate on the non-federal beaches outside of the Seashore. Visitors who patronize the Fort Raleigh National Historic Site and the Wright Brothers National Memorial but do not visit the actual seashore areas need to be factored out.

Maintenance of Future Access to Cape Point and South Point Ocracoke: All socioeconomic analyses related to Alternative F are predicated on the assumption that access corridors will remain open for at least an appreciable portion of the visitor high season. Under Alternative F, the access corridors will be subject to Resource Closures based on buffers similar or identical to the Consent Decree. Unless some predictability of access to Cape Point and South Point Ocracoke can be assured, economic analyses predicated on assumption of access are fundamentally flawed.

Why would a group of surf fisherman want to come to Hatteras Island to surf fish if they are not sure they can access the prime fishing grounds at Cape Point? The answer is they won't come. If they don't come, they don't rent vacation homes and spend their money on Hatteras and Ocracoke Islands.

The definition of the Region of Influence (ROI), faulty data on economic activity generated by specific type recreational activity, incomplete visitation/business survey data, inflated overall Seashore visitor counts pertaining to beach use, and flawed key assumptions concerning the maintenance of access under Alternative F, all lead to inaccurate conclusions in the socioeconomic analyses. Specifically, these inaccuracies can be seen as understating the negative socio-economic impact of the Seashore Villages. Further, this negative impact will be absorbed almost entirely by Small Businesses. Neither of these important aspects of the management alternatives are adequately presented in the DEIS.

14) Page 136: I strongly disagree with your pet restriction proposals. The "?prohibition of pets in the Seashore during bird breeding season including in front of the villages." = No Pets in public areas ?beaches, campgrounds, soundfront, foot trails, park maintained roads -from March 15 ?July 31.

15) Pages 125; 392 ? 396: SEA TURTLES. I disagree with the stats and procedures proposed. I think endangered sea turtles would benefit from management practices now in use at other federal seashores that are more proactive in efforts to achieve nesting success. This includes relocating nests to more desirable locations as is done in other state and federally controlled areas.

The Cape Hatteras National Seashore Recreational Area is on the northernmost fringe of turtle nesting locations for the southeast, accounting for about 1% of all turtle nests. Proposed buffer areas are not needed for protection of the turtles and amount to overprotection.

16) Pages 97- 101. I strongly disagree with proposals in this section saying that ORVs will be prohibited year round between ramps 27 and 30, at Hatteras Inlet (Hatteras Spit), Ocracoke Inlet (North Ocracoke Spit) and various other locations.

Not allowing ORV access is paramount to denying the public access to these beaches. They are located miles from the nearest parking or paved road area and too far to access on foot. As a matter of course, there has been no breeding of piping plover or other endangered species at the Hatteras Island Inlet (spit) area in the past 6 years.

17) Page 104: I disagree with the proposed night time driving closures. Per your proposals, night driving will be prohibited between May 1 and November 15th, forcing visitors off of the beaches early in the evening and preventing sunrise surf fishermen access in the morning. I propose a more moderate night time ban if one is needed, perhaps from June 1 ? September 15 with times being 1 hour after sunset and 1 hour before sunrise to allow beach goers to gather their stuff and exit the beach area.

Certainly more proactive measures such as relocating nests prone to weather and ocean events would dramatically increase the nesting success rates.

18) Page 121: I disagree with the proposed beach closings, including pedestrian access from March 15 until July 31 in 8 different beach locations which have traditionally been available. Please leave these areas open to beach walkers, shell collectors and those that want to access the beaches in these areas.

Conclusion:

Please, incorporate access corridors through any SMA so we can get to the open beach beyond. Incorporate the birds into the count that nest on the spoil islands. Base your buffer zones on peer reviewed science and scale them back to more reasonable distances as discussed.

It is neither logical nor reasonable to spend so much time, money and energy to overprotect a bird (Piping Plover) in the Cape Hatteras National Seashore that is on the southernmost fringe area of its breeding ground. That goes for the loggerhead turtle that is in its northernmost breeding area.

Let's scale back the buffer zones. You can always increase at a later date.

The USPS is leaning way over the line on over protection and not enough on the public's right to enjoy the beaches of the National Seashore. The proper balance is not achieved in the propose DEIS and needs to be modified so that the proper balance of reasonable resource protection and access to the beaches of the National Park is achieved. I could sum it up by saying "Protect, not Prohibit."

Thank you,

Correspondence: Mike Murray, Superintendent Cape Hatteras National Seashore Recreational Area 1401 National Park Drive Manteo, NC 27954
Re: ORV DEIS
Dear Superintendent Murray,
First I would like to note that I have never driven, or ridden in, an ORV on the beach in the Seashore despite owning various rental properties in the area

for nearly 35 years.

It is clear that reasonable beach access has been available and utilized for many generations as a crucial aspect of residents' way of life and livelihood. The prohibition of future development in the National Seashore is reasonable and supported by nearly everyone as a benefit to all, including wildlife. On the other hand, aggressive beach closures proposed in the DEIS appear to well exceed means necessary to reasonably protect wildlife and balance its needs with those of humans. In particular, aggressive closures implemented at huge economic loss to protect one or two species appears quite foolish when weighed against the observations (1) that the effectiveness of these means remain unproven, and (2) when thousands of species are being lost worldwide by means whose prevention is vastly more practical and cost effective.

I would like to strongly suggest that all of the six ORV management policies in the DEIS exceed the means necessary to reasonably protect wildlife, and that a much less aggressive policy be considered. I believe that the measurable impact on wildlife of such a policy would differ little, if at all, from the most aggressive DEIS approach, and that striking a reasonable balance amongst all concerned weighs heavily in support of the less aggressive policy. Your serious consideration of these thoughts would be most sincerely appreciated in reaching a decision that equitably balances the needs of wildlife preservation with historical use patterns and the future lives and livelihoods of all who love the Outer Banks.

Sincerely Yours,

Peter A. Jansson

As a resident of Hatteras Island, North Carolina, I respectful request that you consider the residents of this island in your decision to preserve the wildlife. I'm a N.C.Licensed Professional Counselor and I truly love nature and the wildlife, but I also see the devastation that has been occurring to the families with children on this island. Anxiety has increased, people are fearful of their livelihood, and children suffer when families are under stress. Birds are important, but at what expense? I hear about the studies of the economic impact, but what about the emotional impact and the disruption of peoples lives. Please consider a realistic balance for those who live on this island, those who have invested in this island, and the wildlife. Stephen Covey wrote a great book, "The Seven Habits of Highly Successful People." There is a possibility of a "win - win" solution if everyone would agree to expand their thinking. We are in the 21st century, we can expand our perspectives and go for a win - win solution. Please don't get stuck on a position and disregard the people and children. Sincerely, Nellene M. Groetsch

I am heartened to see that the NPS is finally getting serious about ORV regulation on our National Seashore. However, I see some serious flaws in the document. In my analysis of the NPS preferred plan (Alternative F), the use and experience of non-ORV visitors to the year-round non-ORV areas will not be regarded as beneficial because they include some of the least attractive and cramped areas of beach in the entire seashore. These areas compare most unfavorably to the grand vistas of the expansive stretches that are open to ORV use. The NPS preferred plan obviously favors the ORV user, much to the detriment of pedestrian use of the seashore. For aesthetic and safety reasons this pedestrian user (and many others I know) is discouraged from using beaches when ORV's are present. The greater the density of these machines, the more intimidating they are to an individual on foot. It is also quite apparent that the NPS preferred plan affords inadequate protection of the seashore physical resources, threatened, endangered and other protected species, native plant species, other wildlife and wildlife habitat. Squandering these resources for the sake of adding a few miles of recreational driving is an unwise trade off that generations to come will regret.

Mike Murray, Superintendent Cape Hatteras National Seashore 1401 National Park Drive Manteo, NC 27954
Dear Superintendent Murray,

While I believe in the preservation of life, whether human or animal, I find what is happening at the Cape Hatteras National Recreational Seashore (and I emphasize "Recreational") a travesty to the community. The "recreational" seashore was developed with the promise of open and free access to the beaches. After all wasn't the beach the initial means of travel?

I have visited Cape Hatteras for most of my life and am now a resident and business owner in Frisco, North Carolina. I am astounded every day by the number of visitors who are not even aware of the money fueled controversy that is occurring and the number of those visitors who find it appalling that our government would allow the devastation of a community, a community they love to visit in order to enjoy the nature and beauty. Where is the public coverage and education that this dilemma deserves? Haven't the good people of this country suffered enough? Is this another Goldman Sachs fiasco!

I find it hard to believe that we are a nation that can go to the moon but we cannot find a way for humans and wildlife to coexist on the shoreline. In my experience, the birds appear to be appreciative of the piece of shrimp that I throw to them while I am on the beach. Evolution and predation are facts of life, however, there continues to be the destruction of other species. And this is allowed?

My recommendations would be as follows:

1. Develop a nesting site for Piping Plovers and Turtles where they can nest free from predators, weather and tides that will also enable residents and visitors of Cape Hatteras to access the beaches. As the saying goes, "build it and they will come".
2. Develop and distribute educational material regarding the species of Cape Hatteras so that the public is aware of their responsibilities when accessing the beaches. With the enormous amount of funds that have been obtained and spent fighting, the Audobon Society, SELU and NPS could provide a vast amount of material to the community and businesses to assist in education.

I hope that the devastation that the beach closures will cause to this community are taken into consideration. Access to the beaches is vital and was always guarantee by Congress.

Sincerely,

Bob and Beverly Cox Frisco Tackle

Correspondence Type: Web Form
Correspondence:

My comments concern the DEIS of the Off-Road Vehicle Management Plan prepared by the National Park Service (NPS) for the Cape Hatteras National Seashore Recreation Area.

1) Page 201: I disagree with the NPS statement: "Even with resource closures in place, protected species are still at risk [from pedestrians and ORVs]." No Piping Plover deaths have been attributed to ORVs. ORV violations continue to decrease as signage and education improve. Pedestrian violations

are much more significant than ORV violations. It seems to me that any transgressions into protected area are the result of lack of NPS manpower and enforcement than the public purposely and willfully violating out of bounds areas.

2) Page xxiv: I question the statement of as per the DEIS: "Carrying capacity would be a 'peak use limit' determined for all areas based on the linear feet of beachfront?" If you close off huge sections of the beach, you force more people into smaller areas, potentially resulting in more resource impairment and diminished visitor experience.

3) Page xix and page 23: I am against having two different closures rules pertaining to the North facing beaches (North side) and the South facing beaches (South side) as per the grid outlined in Alternative "F". I disagree with the NPS proposal to close the beaches in villages of Frisco, Hatteras and Ocracoke Villages to ORV access longer than the traditional May 15 to September 15 period for the Northern beaches, even though seasonal visitor statistics are similar for all villages. Please, make them the same: May 15 -> September 15.

4) Page 1: I agree with your statement "ORVs have long served as a primary form of access for many portions of the beach in the seashore, and continue to be the most practical means of access and parking for many visitors."

However, pedestrian only areas discriminate against individuals with limited mobility due to age or physical impairments, families with small children, and those wishing to engage in activities requiring recreational equipment (boogie boards, beach umbrellas, beach chairs, coolers, fishing rods and tackle, etc)

5) Page 53: I disagree with the special use permit proposed guidelines. It is impractical to allow the transportation of disabled visitors to the village beaches and then require the vehicle to be returned to the street or parking area. This necessitates the disabled person to have a driver to drop him (or her) off, then drive to a parking area, then trudge a long distance to the site of the drop off, then trudge the long distance through the sand back to get the vehicle.

Suppose the handicap person wants to go to the beach, is capable of driving himself, yet cannot find another person to go with him? Does he now not go to the beach? This rule creates unnecessary hardships and risks in the event of an emergency as well.

6) Page 121 ? 127. I strongly disagree with the buffers as presented. We must allow for pass-thru corridors. The beach is linear with the ocean buffering on one side and the dune line on the other. For example - If you pinch off access on one side of a 4 mile linear beach and pinch off access on the other side of the 4 mile section of beach with no corridor, then you effectively have closed off all 4 miles of the beach because you CAN'T get there. The proposed bird buffers are too large, blocking access to the interior sections from the two "buffered" ends.

I propose ORV pass-thru only corridors and to use breeding / nesting buffer distances to establish ORV pass through only corridors to ensure beach access in a way that does not hinder resource protection. I believe pass through corridors should be maintained for pedestrians and ORVs in all areas of the Cape Hatteras National Seashore Recreational Area throughout the entire breeding and nesting season. Corridors are vital to providing access in a way that does not hinder resource protection.

Piping Plover unfledged chicks buffer should move with the brood as it relocates to reliable food source, not expanded.

The 1,000 meter distance for the piping plover is way too large and not based upon peer reviewed science. A more rational distance would be 200 meters per other sites in the nation for the piping plover. Ample scientific evidence and precedent exists to support a 200 meter buffer.

Buffers for other species, including American Oystercatchers, Least Terns and Colonial Waterbirds must also be changed. An effective 30 meter buffer should be established for these species rather than the 300 meter closure outlined in the DEIS.

NON-ENDANGERED BIRDS should not have same protection as if endangered. Not allowing ORV access is paramount to denying the public access to these beaches.

7) Page 468: I disagree with the limitations imposed on pedestrian and ORVs. Corridors or bypasses should be provided thru, around or below high tide line in all SMAs during entire breeding season to maintain access.

8) Page 124: I strongly disagree with the NPS slant of providing for over protection of resource management over that of the public's right to access the beaches. Pro-active initiatives include: Vegetation Management, Habitat Management, Enhanced Predator Management, Colonial Water bird social attraction, Piping Plover check fledge rate, Piping plover chick buffer distance, and pass-through buffers during the incubation period. Opportunities to implement less restrictive closures as a result of the above initiatives should be considered more frequently than the 5-year periodic review process identified in the DEIS.

9) I disagree with the NPS Resource Management Pedestrian / ORV Closure Policies. These policies address the least significant factors affecting nest survival with little chance to have more than negligible impact. For example: the AMOY Nest Failures are predominately due to non-human events. Using your own stats, the mammalian predation is 54%, Storm / Lunar Tides: 29%, Nest Abandonment: 6%, Avian Predation: 5%, and Ghost Crab Predation: 3%,

So what is the percentage due to human interference: just 3%! It's insignificant, yet the NPS wants to ban humans when their actions provide very little influence on the success rate of breeding birds and turtles.

10) I disagree with the stats of breeding plovers and the other birds in the Park when the NPS does not adequately consider locations neighboring the Recreational Area that are part of the same ecosystem, namely dredge and spoil island that are located just yards away and within sight of the seashore. These birds are part of the same ecosystem and should be included.

Those spoil islands, developed by man from dredging the waterways in the Pamlico Sound for channel upkeep are slammed full of birds. The reason why so many birds? NO PREDATORS. SO, birds are not as stupid as one might think. You have to count these birds and incorporate them in the stats when the NPS is talking about any so called decline in breeding pairs in the National Park.

11) Page 1: I do not think the DEIS responsibly addresses the cultural resource issues. The very purpose of the DEIS as set forth in the National Environmental Policy Act (NEPA) is to protect and preserve natural and cultural resources in the federal decision making process. In the DEIS, the statement "protect and preserve natural and cultural resources" appears in the first sentence of the first page of the plan, in the Purpose of the Plan section, and numerous times thereafter. Yet, the 810 page document devotes only two paragraphs to analysis of cultural resource issues.

12) Pages 270-281; 561-598: I strongly disagree with your economic analysis of the impact of the DEIS. The region of influence (ROI) incorporates the Northern Beach communities, including Kill Devil Hills, Kitty Hawk, Southern Shores and Duck. These areas are almost completely disconnected from ORV use and access issues relating to the Seashore. ? Inclusion of the Northern Beaches in analysis significantly dilutes estimates of economic impact on the 8 Seashore Villages

? Analysis of economic impact to the Seashore Villages appears to be significantly down played. Emphasis in DEIS is on the ROI-wide or county-wide level impacts.

? Nowhere is it clearly addressed that the overwhelming majority of negative impacts will be felt by small businesses in the Seashore Villages rather than by overall economic interests within the greater ROI.

On page xlvi, Alternative F is characterized as having a "negligible to moderate" adverse impact on small businesses. I strongly disagree with this statement.

I believe the negligible to moderate projection is inaccurate and relies on economic surveys that has not yet been published. Furthermore, this material is not expected to be added to the DEIS until after the public comment period has ended.

Based upon the economic harm we have already experienced under the consent decree, Dare County projects the economic impact of Alternative F to be substantial.

Beach closures have already had a devastating and unfair impact on many Dare County Businesses, causing foreclosures, bankruptcies, lay-offs, cutbacks, expensive refinancing, and depleted college funds and savings accounts.

Pages 270-286, 561-598: The socio-economic data and analyses are incomplete and erroneous and result in an understatement of the effect the restrictions will have upon the Island, the region and the state of NC. The US Park Services answer: Businesses will have to "adapt" to the new rules. (p.383) The negative economic impacts of the decree ARE KNOWN, so to say that the added restrictions would have negligible to moderate impact is indefensible.

13) Overall Visitor Counts - Overall visitor counts appear to include visitors to Fort Raleigh National Historic Site and the Wright Brothers National Memorial. A large percentage of these visitors vacation in the Northern Beaches communities and recreate on the non-federal beaches outside of the Seashore. Visitors who patronize the Fort Raleigh National Historic Site and the Wright Brothers National Memorial but do not visit the actual seashore areas need to be factored out.

Maintenance of Future Access to Cape Point and South Point Ocracoke: All socioeconomic analyses related to Alternative F are predicated on the

assumption that access corridors will remain open for at least an appreciable portion of the visitor high season. Under Alternative F, the access corridors will be subject to Resource Closures based on buffers similar or identical to the Consent Decree. Unless some predictability of access to Cape Point and South Point Ocracoke can be assured, economic analyses predicated on assumption of access are fundamentally flawed.

Why would a group of surf fisherman want to come to Hatteras Island to surf fish if they are not sure they can access the prime fishing grounds at Cape Point? The answer is they won't come. If they don't come, they don't rent vacation homes and spend their money on Hatteras and Ocracoke Islands. The definition of the Region of Influence (ROI), faulty data on economic activity generated by specific type recreational activity, incomplete visitation/business survey data, inflated overall Seashore visitor counts pertaining to beach use, and flawed key assumptions concerning the maintenance of access under Alternative F, all lead to inaccurate conclusions in the socioeconomic analyses. Specifically, these inaccuracies can be seen as understating the negative socio-economic impact of the Seashore Villages. Further, this negative impact will be absorbed almost entirely by Small Businesses. Neither of these important aspects of the management alternatives are adequately presented in the DEIS.

14) Page 136: I strongly disagree with your pet restriction proposals. The "prohibition of pets in the Seashore during bird breeding season including in front of the villages." = No Pets in public areas beaches, campgrounds, soundfront, foot trails, park maintained roads -from March 15 July 31.

15) Pages 125; 392 ? 396: SEA TURTLES. I disagree with the stats and procedures proposed. I think endangered sea turtles would benefit from management practices now in use at other federal seashores that are more proactive in efforts to achieve nesting success. This includes relocating nests to more desirable locations as is done in other state and federally controlled areas.

The Cape Hatteras National Seashore Recreational Area is on the northernmost fringe of turtle nesting locations for the southeast, accounting for about 1% of all turtle nests. Proposed buffer areas are not needed for protection of the turtles and amount to overprotection.

16) Pages 97- 101. I strongly disagree with proposals in this section saying that ORVs will be prohibited year round between ramps 27 and 30, at Hatteras Inlet (Hatteras Spit), Ocracoke Inlet (North Ocracoke Spit) and various other locations.

Not allowing ORV access is paramount to denying the public access to these beaches. They are located miles from the nearest parking or paved road area and too far to access on foot. As a matter of course, there has been no breeding of piping plover or other endangered species at the Hatteras Island Inlet (spit) area in the past 6 years.

17) Page 104: I disagree with the proposed night time driving closures. Per your proposals, night driving will be prohibited between May 1 and November 15th, forcing visitors off of the beaches early in the evening and preventing sunrise surf fishermen access in the morning. I propose a more moderate night time ban if one is needed, perhaps from June 1 ? September 15 with times being 1 hour after sunset and 1 hour before sunrise to allow beach goers to gather their stuff and exit the beach area.

Certainly more proactive measures such as relocating nests prone to weather and ocean events would dramatically increase the nesting success rates.

18) Page 121: I disagree with the proposed beach closings, including pedestrian access from March 15 until July 31 in 8 different beach locations which have traditionally been available. Please leave these areas open to beach walkers, shell collectors and those that want to access the beaches in these areas.

Conclusion:

Please, incorporate access corridors through any SMA so we can get to the open beach beyond. Incorporate the birds into the count that nest on the spoil islands. Base your buffer zones on peer reviewed science and scale them back to more reasonable distances as discussed.

It is neither logical nor reasonable to spend so much time, money and energy to overprotect a bird (Piping Plover) in the Cape Hatteras National Seashore that is on the southernmost fringe area of its breeding ground. That goes for the loggerhead turtle that is in its northernmost breeding area. Let's scale back the buffer zones. You can always increase at a later date.

The USPS is leaning way over the line on over protection and not enough on the public's right to enjoy the beaches of the National Seashore. The proper balance is not achieved in the propose DEIS and needs to be modified so that the proper balance of reasonable resource protection and access to the beaches of the National Park is achieved. I could sum it up by saying "Protect, not Prohibit."

Thank you,

Correspondence: Mike Murray, Superintendent Cape Hatteras National Seashore Recreational Area 1401 National Park Drive Manteo, NC 27954 Dear Superintendent Murray, Please accept this letter as our comment on the ORV DEIS before you at this time. After reviewing the National Park Service DEIS, we cannot agree with any of the six alternatives within the document. We have reviewed the 77 page Coalition for Beach Access Position Statement signed by several groups that were a part of the negotiated rule making process, and we believe it will furnish the best visitor experience while maintaining the needs of protecting the fragile resources. Please consider all aspects of this alternative and put people back into the management of Cape Hatteras National Seashore. We need some return to sanity and balance in both the use and the maintenance of our natural resources.
Sincerely,
Frank Crawford & C. S. Reinhardt

Correspondence: Dear Superintendent Murray,
I would like to submit my comments on Alternative F of the DEIS. Like most people I have not had time to read the whole document, but a couple items mean the most to me.
I believe the buffer zones set forth by the consent decree are much too large and the policy of expanding the buffer whenever there is a violation (willful or not) makes no sense whatsoever. The act of an uninformed individual resulting in punishment for everyone else who uses the beach is ridiculous. I believe the buffers in place and enforced by the NPS before the consent decree were fair and adequate for all involved, including the birds and turtles. While I am happy that more access ramps are proposed I fear they will be a waste of time and effort if the current closures and buffers are still in place. Please take into consideration the comments of the vast majority of residents, property owners, and others who use the beaches and return to the procedures and buffers in place before the consent decree. I can live with the permits, night driving restrictions and seasonal closures in front of the villages but the amount of beach set aside for very few birds has no scientific justification.
And just to be clear, I am NOT an ORV enthusiast. Just a guy who uses his vehicle to take the family to the beach.
Thank you,
John Contestable Salvo, NC

Correspondence: PG 1 I Disagree
Pea Island is a pedestrian-only area and should be a sufficient area for wildlife without closing areas in the NPS to ORV'S.
PG 121 - 127 I Disagree
The buffer zones are much too large for the individual nesting areas.
PG 136 I Disagree

Pets should be allowed in all areas open to ORV's & pedestrians as long as they are on a 6ft leash as currently required.

We totally believe that the National Seashore was developed for the use of people as a recreational area. We have a wildlife refuge at Pea Island. We are very sympathetic of endangered species, but feel National Parks are for people. We are also concerned about the economic impact on all of Hatteras Island & Ocracoke Island. If this legislation goes through we could end up being like Portsmouth Island (which is a ghost town). We really have to look at the total affect.

We feel if the NPS wants to develop this as a total refuge then homeowners & businesses should get fair market value for their properties if they are forced to leave the island.

Correspondence: Dear Mr. Murray; of the several plans described in the Draft, I could endorse only plan D, which appears to be the most stringent in protecting the natural aspects of the Park and in limiting ORV access. It is, in my opinion, the plan that comes closest to the Presidential directives that we were supposed to discuss and respect during the long negotiating process.
At the last hour, I need to convey once more my greatest concern regarding the entire project and your feedback operation. I worry that the entire discussion did not take sufficiently into account, from the very beginning, the opinion of the "larger" American public. Rather, it seemed more focused around local forces, despite the fact that the Park is not a State Park, but a federal entity. Some groups described themselves as representing out-of-state constituencies that were either true "one-color" memberships (as the dune buggy association, to quote one example) or loosely aggregated groups of "property owners". In neither case was the Park visitor truly represented.
You may recall that I suggested to you on several occasions for the Park Authority to run an independent survey among the Park visitors and identify their recommendations. To my knowledge, this was never done, despite the significant amount of time and money spent in the negotiating process. (Still to my knowledge, I was the only one who forwarded to you the opinions of individual visitors, written in their own hands and with their identities spelled out. I strongly recommend that you include them in this feedback process!)
I suspect that during these past sixty days the Park's attempts to reach the larger public have been limited, if present at all. Once again, it appears to me that the feedback has been sought at a local level and through local advertisement, as if it were mainly a local or State issue
I may be wrong. If I am right, however, the process of validation of the Park's choice through feedback may indeed be largely meaningless. If this is the case, I would recommend that you extend the feedback period so that you may incorporate a survey from the seasonal visitors who are beginning to visit the park in growing numbers.
In closing, I strongly recommend that recreational ORV access be at most limited to selected areas distant from the villages; that ORV use of the Park be limited to access, without any driving through; that the protection of the Villages areas and beaches be a permanent, all year process. Non recreational (business-related) access should be allowed upon documentation of need and through a permit system at the discretion of the Park Authority.
Sincerely;
Vincenzo Sanguineti MD
Philadelphia, PA

Correspondence: I appreciate the opportunity to comment on the National Park Service's proposed plan to manage ORV use on Cape Hatteras National Seashore. Of the alternative plans presented in the draft environmental impact statement, I support the identified "environmentally preferred" Alternative D if modified to provide greater pedestrian access.
This alternative plan would provide more opportunity for non-ORV uses of the beaches and result in less disturbance of wildlife, which are of paramount importance to me.
The following principles should underpin the park's formulation of its final plan, should it not choose to enact Alternative D:
*Provide Equal Access for All Visitors. Under the National Park Service's preferred plan, Alternative F, ORVs would be prohibited year round on only 16 of the 68 total miles of Seashore beach. This does not represent an equitable balance for other users and wildlife. If ORV use is allowed within the park, at least half of the beach should be available year round for non-ORV users and wildlife. Combined with more walkways and better access facilities, this approach would provide balanced access for all visitors. Pedestrians and families could then more safely enjoy the Seashore, and wildlife could have a chance to rebound to its traditional numbers and diversity within the park.
* Put Natural Resources First. Protection of the natural resources and wildlife of the Seashore should come first, and recreational use should be consistent with this protection. The preferred plan fails to set aside adequate areas that are free of ORV use year round for wildlife including breeding, migrating, and wintering species. Wildlife protection must be based on the best scientific information available. Wildlife disturbance buffers in the preferred plan are minimums and should be increased to protect breeding birds and sea turtles.
* Establish and Meet Clear Goals for Wildlife Recovery. A plan must include clear goals and milestones for wildlife recovery. Where there are management targets in the DEIS, they need more thorough vetting based on the potential of the Seashore to support wildlife rather than on its recent degraded abilities. Where birds, turtles, and plants are not coming back as planned, based on annual reviews, additional protective measures should be implemented until recovery goals are met. These goals, and adequate management to realize them, should be for migrating and wintering species as well as breeding ones.
Thank you for the opportunity to provide these comments. I will be following the progress of your efforts at Cape Hatteras and look forward to a more balanced final plan for all visitors that better protects the natural resources of the Seashore.

Correspondence Type: Web Form
Correspondence: In response to the proposed ORV Management Plan for the Cape Hatteras National Seashore, I would like to comment on a number of issues pertinent to residents and visitors of Hatteras Island.
The first issue of concern is the economical impact such proposed plans do not address. The Draft Environmental Impact Statement provides only a glance to what extent the proposed plans would cause on island economy. Loss of jobs, tourism, and income to the county is something that should be of great concern before such a permanent solution is put into place.
Second, it is of unknown certainty throughout the NPS as to what acceptable barriers provide proven protection for the endangered species located on the National Seashore. It seems that the Audubon Society and other environmental special interest groups have provided evidence that does not support scientific evidence as to the best management of the species. The NPS should closely examine models founded in science, not emotion, to provide appropriate measures taken to protect the endangered species.
If it is indeed proven that limited ORV access is warranted, it is important to consider that access be allowed by pedestrians for recreational purposes. The Cape Hatteras area is the home to many entrepreneurs that provide for their families that comes from recreational usage of park service property. Finally, it seems most appropriate to allow more public input on the issues that directly impact those that reside and visit the National Seashore.

Correspondence: We have been going to the outer banks for over 25 years. It has been our choice because of its nearness to nature, the ability to be on the beach with the birds. 15 years ago we chose to buy in Avon because it was different from all other beaches. There has to be a way that we can keep the outer banks we love and save the wild life. We also travel to Captiva Island in Florida and the beaches there are very similar to the Outer Banks. They have saved the turtles by just marking the spot - because of the people these markers are never moved and the turtle eggs are saved. Why can not the same thing be done in the outer banks have strips of areas reserved for the bird nesting area and this way both can survive. Without the vacations there will be no tax bases to sustain the beaches. The type of people who use these beaches understand nature and the beauty of nature. They want to preserve the beaches and animals as well because that is what makes the outer banks what they are. Please us true scientific information to do the best thing that the beaches, nature and for all of us that enjoy the outer banks. thanks you

Correspondence: Having just submitted lengthy comment pertaining to policies and regulations, I realized it may not have captured the heartfelt feelings I have for this coastal resource. Over thirty years ago and new to the Outer Banks, I found myself with friends at a tail gate dinner party at Cape Point. I remember looking around at all the noisy vehicles coming and going and people clumsily trying to negotiate the tire ruts as they walked from one potluck dish to the other. The whole landscape was marred with tire tracks in every direction. The scene felt disrespectful to me. I couldn't believe I was in a national park. Some years later on an occasion when the park service closed the beaches to vehicles due to a passing tropical storm, I had a very different experience. Just after the storm, I walked out to see what the Point looked like without vehicles. The scene was one of the most beautiful sights in my memory. A wild, windswept landscape replaced the usual rutted terrain. Different shades of black, white and gold sand sorted by wind and waves covered the beach surface. Fresh overwash fans. Stratified erosional scarps. Wrack lines alive with Sargassum life. A sooty tern, blown towards shore by wind, rested above the tide line. The Point looked like a gem of a geological feature that it was. I could actually see the Point - the view unbroken, unobstructed - get a feel for the east facing shoreline curving at the shoals to meet the shoreline moving up from the west. There were others out there that day enjoying this rare occasion. A friend later said that she had never thought of the Point as a beautiful place until that moment. I thought how sad- this is a national park.

Correspondence Type: Web Form
Correspondence: My comments concern the DEIS of the Off-Road Vehicle Management Plan prepared by the National Park Service (NPS) for the Cape Hatteras National Seashore Recreation Area.
1) Page 201: I disagree with the NPS statement: "Even with resource closures in place, protected species are still at risk [from pedestrians and ORVs]." No Piping Plover deaths have been attributed to ORVs. ORV violations continue to decrease as signage and education improve. Pedestrian violations are much more significant than ORV violations. It seems to me that any transgressions into protected area are the result of lack of NPS manpower and enforcement than the public purposely and willfully violating out of bounds areas.
2) Page xxiv: I question the statement of as per the DEIS: "Carrying capacity would be a 'peak use limit' determined for all areas based on the linear feet of beachfront?" If you close off huge sections of the beach, you force more people into smaller areas, potentially resulting in more resource impairment and diminished visitor experience.
3) Page six and page 23: I am against having two different closure rules pertaining to the North facing beaches (North side) and the South facing beaches (South side) as per the grid outlined in Alternative "F". I disagree with the NPS proposal to close the beaches in villages of Frisco, Hatteras and Ocracoke Villages to ORV access longer than the traditional May 15 to September 15 period for the Northern beaches, even though seasonal visitor statistics are similar for all villages. Please, make them the same: May 15 -> September 15.
4) Page 1: I agree with your statement "ORVs have long served as a primary form of access for many portions of the beach in the seashore, and continue to be the most practical means of access and parking for many visitors." However, pedestrian only areas discriminate against individuals with limited mobility due to age or physical impairments, families with small children, and those wishing to engage in activities requiring recreational equipment (boogie boards, beach umbrellas, beach chairs, coolers, fishing rods and tackle, etc)
5) Page 53: I disagree with the special use permit proposed guidelines. It is impractical to allow the transportation of disabled visitors to the village beaches and then require the vehicle to be returned to the street or parking area. This necessitates the disabled person to have a driver to drop him (or her) off, then drive to a parking area, then trudge a long distance to the site of the drop off, then trudge the long distance through the sand back to get the vehicle. Suppose the handicap person wants to go to the beach, is capable of driving himself, yet cannot find another person to go with him? Does he now not go to the beach? This rule creates unnecessary hardships and risks in the event of an emergency as well.
6) Page 121 ? 127. I strongly disagree with the buffers as presented. We must allow for pass-thru corridors. The beach is linear with the ocean buffering on one side and the dune line on the other. For example - If you pinch off access on one side of a 4 mile linear beach and pinch off access on the other side of the 4 mile section of beach with no corridor, then you effectively have closed off all 4 miles of the beach because you CAN'T get there. The proposed bird buffers are too large, blocking access to the interior sections from the two "buffered" ends. I propose ORV pass-thru only corridors and to use breeding / nesting buffer distances to establish ORV pass through only corridors to ensure beach access in a way that does not hinder resource protection. I believe pass through corridors should be maintained for pedestrians and ORVs in all areas of the Cape Hatteras National Seashore Recreation Area throughout the entire breeding and nesting season. Corridors are vital to providing access in a way that does not hinder resource protection. Piping Plover unfledged chicks buffer should move with the brood as it relocates to reliable food source, not expanded. The 1,000 meter distance for the piping plover is way too large and not based upon peer reviewed science. A more rational distance would be 200 meters per other sites in the nation for the piping plover. Ample scientific evidence and precedent exists to support a 200 meter buffer. Buffers for other species, including American Oystercatchers, Least Terns and Colonial Waterbirds must also be changed. An effective 30 meter buffer should be established for these species rather than the 300 meter closure outlined in the DEIS. NON-ENDANGERED BIRDS should not have same protection as if endangered. Not allowing ORV access is paramount to denying the public access to these beaches.
7) Page 468: I disagree with the limitations imposed on pedestrian and ORVs. Corridors or bypasses should be provided thru, around or below high tide line in all SMAs during entire breeding season to maintain access.
8) Page 124: I strongly disagree with the NPS slant of providing for over protection of resource management over that of the public's right to access the beaches. Pro-active initiatives include: Vegetation Management, Habitat Management, Enhanced Predator Management, Colonial Water bird social attraction, Piping Plover check fledge rate, Piping plover chick buffer distance, and pass-through buffers during the incubation period. Opportunities to implement less restrictive closures as a result of the above initiatives should be considered more frequently than the 5-year periodic review process

identified in the DEIS.

9) I disagree with the NPS Resource Management Pedestrian / ORV Closure Policies. These policies address the least significant factors affecting nest survival with little chance to have more than negligible impact. For example: the AMOY Nest Failures are predominately due to non-human events. Using your own stats, the mammalian predation is 54%, Storm / Lunar Tides: 29%, Nest Abandonment: 6%, Avian Predation: 5%, and Ghost Crab Predation: 3%.

So what is the percentage due to human interference: just 3%! It's insignificant, yet the NPS wants to ban humans when their actions provide very little influence on the success rate of breeding birds and turtles.

10) I disagree with the stats of breeding plovers and the other birds in the Park when the NPS does not adequately consider locations neighboring the Recreational Area that are part of the same ecosystem, namely dredge and spoil island that are located just yards away and within sight of the seashore. These birds are part of the same ecosystem and should be included.

Those spoil islands, developed by man from dredging the waterways in the Pamlico Sound for channel upkeep are slammed full of birds. The reason why so many birds? NO PREDATORS. SO, birds are not as stupid as one might think. You have to count these birds and incorporate them in the stats when the NPS is talking about any so called decline in breeding pairs in the National Park.

11) Page 1: I do not think the DEIS responsibly addresses the cultural resource issues. The very purpose of the DEIS as set forth in the National Environmental Policy Act (NEPA) is to protect and preserve natural and cultural resources in the federal decision making process. In the DEIS, the statement "protect and preserve natural and cultural resources" appears in the first sentence of the first page of the plan, in the Purpose of the Plan section, and numerous times thereafter. Yet, the 810 page document devotes only two paragraphs to analysis of cultural resource issues.

12) Pages 270-281; 561-598: I strongly disagree with your economic analysis of the impact of the DEIS. The region of influence (ROI) incorporates the Northern Beach communities, including Kill Devil Hills, Kitty Hawk, Southern Shores and Duck. These areas are almost completely disconnected from ORV use and access issues relating to the Seashore. ? Inclusion of the Northern Beaches in analysis significantly dilutes estimates of economic impact on the 8 Seashore Villages

? Analysis of economic impact to the Seashore Villages appears to be significantly down played. Emphasis in DEIS is on the ROI-wide or county-wide level impacts.

? Nowhere is it clearly addressed that the overwhelming majority of negative impacts will be felt by small businesses in the Seashore Villages rather than by overall economic interests within the greater ROI.

On page xlvi, Alternative F is characterized as having a "negligible to moderate" adverse impact on small businesses. I strongly disagree with this statement.

I believe the negligible to moderate projection is inaccurate and relies on economic surveys that has not yet been published. Furthermore, this material is not expected to be added to the DEIS until after the public comment period has ended.

Based upon the economic harm we have already experienced under the consent decree, Dare County projects the economic impact of Alternative F to be substantial.

Beach closures have already had a devastating and unfair impact on many Dare County Businesses, causing foreclosures, bankruptcies, lay-offs, cutbacks, expensive refinancing, and depleted college funds and savings accounts.

Pages 270-286, 561-598: The socio-economic data and analyses are incomplete and erroneous and result in an understatement of the effect the restrictions will have upon the Island, the region and the state of NC. The US Park Services answer: Businesses will have to "adapt" to the new rules. (p.383) The negative economic impacts of the decree ARE KNOWN, so to say that the added restrictions would have negligible to moderate impact is indefensible.

13) Overall Visitor Counts - Overall visitor counts appear to include visitors to Fort Raleigh National Historic Site and the Wright Brothers National Memorial. A large percentage of these visitors vacation in the Northern Beaches communities and recreate on the non-federal beaches outside of the Seashore. Visitors who patronize the Fort Raleigh National Historic Site and the Wright Brothers National Memorial but do not visit the actual seashore areas need to be factored out.

Maintenance of Future Access to Cape Point and South Point Ocracoke: All socioeconomic analyses related to Alternative F are predicated on the assumption that access corridors will remain open for at least an appreciable portion of the visitor high season. Under Alternative F, the access corridors will be subject to Resource Closures based on buffers similar or identical to the Consent Decree. Unless some predictability of access to Cape Point and South Point Ocracoke can be assured, economic analyses predicated on assumption of access are fundamentally flawed.

Why would a group of surf fishermen want to come to Hatteras Island to surf fish if they are not sure they can access the prime fishing grounds at Cape Point? The answer is they won't come. If they don't come, they don't rent vacation homes and spend their money on Hatteras and Ocracoke Islands.

The definition of the Region of Influence (ROI), faulty data on economic activity generated by specific type recreational activity, incomplete visitation/business survey data, inflated overall Seashore visitor counts pertaining to beach use, and flawed key assumptions concerning the maintenance of access under Alternative F, all lead to inaccurate conclusions in the socioeconomic analyses. Specifically, these inaccuracies can be seen as understating the negative socio-economic impact of the Seashore Villages. Further, this negative impact will be absorbed almost entirely by Small Businesses. Neither of these important aspects of the management alternatives are adequately presented in the DEIS.

14) Page 136: I strongly disagree with your pet restriction proposals. The "prohibition of pets in the Seashore during bird breeding season including in front of the villages." = No Pets in public areas ?beaches, campgrounds, soundfront, foot trails, park maintained roads -from March 15 ?July 31.

15) Pages 125; 392 ? 396: SEA TURTLES. I disagree with the stats and procedures proposed. I think endangered sea turtles would benefit from management practices now in use at other federal seashores that are more proactive in efforts to achieve nesting success. This includes relocating nests to more desirable locations as is done in other state and federally controlled areas.

The Cape Hatteras National Seashore Recreational Area is on the northernmost fringe of turtle nesting locations for the southeast, accounting for about 1% of all turtle nests. Proposed buffer areas are not needed for protection of the turtles and amount to overprotection.

16) Pages 97- 101. I strongly disagree with proposals in this section saying that ORVs will be prohibited year round between ramps 27 and 30, at Hatteras Inlet (Hatteras Spit), Ocracoke Inlet (North Ocracoke Spit) and various other locations.

Not allowing ORV access is paramount to denying the public access to these beaches. They are located miles from the nearest parking or paved road area and too far to access on foot. As a matter of course, there has been no breeding of piping plover or other endangered species at the Hatteras Island Inlet (spit) area in the past 6 years.

17) Page 104: I disagree with the proposed night time driving closures. Per your proposals, night driving will be prohibited between May 1 and November 15th, forcing visitors off of the beaches early in the evening and preventing sunrise surf fishermen access in the morning. I propose a more moderate night time ban if one is needed, perhaps from June 1 ? September 15 with times being 1 hour after sunset and 1 hour before sunrise to allow beach goers to gather their stuff and exit the beach area.

Certainly more proactive measures such as relocating nests prone to weather and ocean events would dramatically increase the nesting success rates.

18) Page 121: I disagree with the proposed beach closings, including pedestrian access from March 15 until July 31 in 8 different beach locations which have traditionally been available. Please leave these areas open to beach walkers, shell collectors and those that want to access the beaches in these areas.

Conclusion:

Please, incorporate access corridors through any SMA so we can get to the open beach beyond. Incorporate the birds into the count that nest on the spoil islands. Base your buffer zones on peer reviewed science and scale them back to more reasonable distances as discussed.

It is neither logical nor reasonable to spend so much time, money and energy to overprotect a bird (Piping Plover) in the Cape Hatteras National Seashore that is on the southernmost fringe area of its breeding ground. That goes for the loggerhead turtle that is in its northernmost breeding area. Let's scale back the buffer zones. You can always increase at a later date.

The USPS is leaning way over the line on over protection and not enough on the public's right to enjoy the beaches of the National Seashore. The proper balance is not achieved in the propose DEIS and needs to be modified so that the proper balance of reasonable resource protection and access to the beaches of the National Park is achieved. I could sum it up by saying "Protect, not Prohibit."

Thank you,

Correspondence Type: Web Form
Correspondence: My comments concern the DEIS of the Off-Road Vehicle Management Plan prepared by the National Park Service (NPS) for the Cape Hatteras National Seashore Recreation Area.

1) Page 201: I disagree with the NPS statement: "Even with resource closures in place, protected species are still at risk [from pedestrians and ORVs]." No Piping Plover deaths have been attributed to ORVs. ORV violations continue to decrease as signage and education improve. Pedestrian violations are much more significant than ORV violations. It seems to me that any transgressions into protected area are the result of lack of NPS manpower and enforcement than the public purposely and willfully violating out of bounds areas.

2) Page xxiv: I question the statement of as per the DEIS: "Carrying capacity would be a 'peak use limit' determined for all areas based on the linear feet of beachfront?" If you close off huge sections of the beach, you force more people into smaller areas, potentially resulting in more resource impairment and diminished visitor experience.

3) Page xix and page 23: I am against having two different closures rules pertaining to the North facing beaches (North side) and the South facing beaches (South side) as per the grid outlined in Alternative "F". I disagree with the NPS proposal to close the beaches in villages of Frisco, Hatteras and Ocracoke Villages to ORV access longer than the traditional May 15 to September 15 period for the Northern beaches, even though seasonal visitor statistics are similar for all villages. Please, make them the same: May 15 -> September 15.

4) Page 1: I agree with your statement "ORVs have long served as a primary form of access for many portions of the beach in the seashore, and continue to be the most practical means of access and parking for many visitors."
 However, pedestrian only areas discriminate against individuals with limited mobility due to age or physical impairments, families with small children, and those wishing to engage in activities requiring recreational equipment (boogie boards, beach umbrellas, beach chairs, coolers, fishing rods and tackle, etc)

5) Page 53: I disagree with the special use permit proposed guidelines. It is impractical to allow the transportation of disabled visitors to the village beaches and then require the vehicle to be returned to the street or parking area. This necessitates the disabled person to have a driver to drop him (or her) off, then drive to a parking area, then trudge a long distance to the site of the drop off, then trudge the long distance through the sand back to get the vehicle.
 Suppose the handicap person wants to go to the beach, is capable of driving himself, yet cannot find another person to go with him? Does he now not go to the beach? This rule creates unnecessary hardships and risks in the event of an emergency as well.

6) Page 121 ? 127. I strongly disagree with the buffers as presented. We must allow for pass-thru corridors. The beach is linear with the ocean buffering on one side and the dune line on the other. For example - If you pinch off access on one side of a 4 mile linear beach and pinch off access on the other side of the 4 mile section of beach with no corridor, then you effectively have closed off all 4 miles of the beach because you CAN'T get there. The proposed bird buffers are too large, blocking access to the interior sections from the two "buffered" ends.
 I propose ORV pass-thru only corridors and to use breeding / nesting buffer distances to establish ORV pass through only corridors to ensure beach access in a way that does not hinder resource protection. I believe pass through corridors should be maintained for pedestrians and ORVs in all areas of the Cape Hatteras National Seashore Recreational Area throughout the entire breeding and nesting season. Corridors are vital to providing access in a way that does not hinder resource protection.
 Piping Plover unfledged chicks buffer should move with the brood as it relocates to reliable food source, not expanded.
 The 1,000 meter distance for the piping plover is way too large and not based upon peer reviewed science. A more rational distance would be 200 meters per other sites in the nation for the piping plover. Ample scientific evidence and precedent exists to support a 200 meter buffer.
 Buffers for other species, including American Oystercatchers, Least Terns and Colonial Waterbirds must also be changed. An effective 30 meter buffer should be established for these species rather than the 300 meter closure outlined in the DEIS.
 NON-ENDANGERED BIRDS should not have same protection as if endangered. Not allowing ORV access is paramount to denying the public access to these beaches.

7) Page 468: I disagree with the limitations imposed on pedestrian and ORVs. Corridors or bypasses should be provided thru, around or below high tide line in all SMAs during entire breeding season to maintain access.

8) Page 124: I strongly disagree with the NPS slant of providing for over protection of resource management over that of the public's right to access the beaches. Pro-active initiatives include: Vegetation Management, Habitat Management, Enhanced Predator Management, Colonial Water bird social attraction, Piping Plover check fledge rate, Piping plover chick buffer distance, and pass-through buffers during the incubation period. Opportunities to implement less restrictive closures as a result of the above initiatives should be considered more frequently than the 5-year periodic review process identified in the DEIS.

9) I disagree with the NPS Resource Management Pedestrian / ORV Closure Policies. These policies address the least significant factors affecting nest survival with little chance to have more than negligible impact. For example: the AMOY Nest Failures are predominately due to non-human events. Using your own stats, the mammalian predation is 54%, Storm / Lunar Tides: 29%, Nest Abandonment: 6%, Avian Predation: 5%, and Ghost Crab Predation: 3%,
 So what is the percentage due to human interference: just 3%! It's insignificant, yet the NPS wants to ban humans when their actions provide very little influence on the success rate of breeding birds and turtles.

10) I disagree with the stats of breeding plovers and the other birds in the Park when the NPS does not adequately consider locations neighboring the Recreational Area that are part of the same ecosystem, namely dredge and spoil island that are located just yards away and within sight of the seashore. These birds are part of the same ecosystem and should be included.
 Those spoil islands, developed by man from dredging the waterways in the Pamlico Sound for channel upkeep are slammed full of birds. The reason why so many birds? NO PREDATORS. SO, birds are not as stupid as one might think. You have to count these birds and incorporate them in the stats when the NPS is talking about any so called decline in breeding pairs in the National Park.

11) Page 1: I do not think the DEIS responsibly addresses the cultural resource issues. The very purpose of the DEIS as set forth in the National Environmental Policy Act (NEPA) is to protect and preserve natural and cultural resources in the federal decision making process. In the DEIS, the statement "protect and preserve natural and cultural resources" appears in the first sentence of the first page of the plan, in the Purpose of the Plan section, and numerous times thereafter. Yet, the 810 page document devotes only two paragraphs to analysis of cultural resource issues.

12) Pages 270-281; 561-598: I strongly disagree with your economic analysis of the impact of the DEIS. The region of influence (ROI) incorporates the Northern Beach communities, including Kill Devil Hills, Kitty Hawk, Southern Shores and Duck. These areas are almost completely disconnected from ORV use and access issues relating to the Seashore. ? Inclusion of the Northern Beaches in analysis significantly dilutes estimates of economic impact on the 8 Seashore Villages
 ? Analysis of economic impact to the Seashore Villages appears to be significantly down played. Emphasis in DEIS is on the ROI-wide or county-wide level impacts.
 ? Nowhere is it clearly addressed that the overwhelming majority of negative impacts will be felt by small businesses in the Seashore Villages rather than by overall economic interests within the greater ROI.
 On page xlvi, Alternative F is characterized as having a "negligible to moderate" adverse impact on small businesses. I strongly disagree with this statement.
 I believe the negligible to moderate projection is inaccurate and relies on economic surveys that has not yet been published. Furthermore, this material is not expected to be added to the DEIS until after the public comment period has ended.
 Based upon the economic harm we have already experienced under the consent decree, Dare County projects the economic impact of Alternative F to be substantial.
 Beach closures have already had a devastating and unfair impact on many Dare County Businesses, causing foreclosures, bankruptcies, lay-offs,

cutbacks, expensive refinancing, and depleted college funds and savings accounts.

Pages 270-286, 561-598: The socio-economic data and analyses are incomplete and erroneous and result in an understatement of the effect the restrictions will have upon the Island, the region and the state of NC. The US Park Services answer: Businesses will have to "adapt" to the new rules. (p.383) The negative economic impacts of the decree ARE KNOWN, so to say that the added restrictions would have negligible to moderate impact is indefensible.

13) Overall Visitor Counts - Overall visitor counts appear to include visitors to Fort Raleigh National Historic Site and the Wright Brothers National Memorial. A large percentage of these visitors vacation in the Northern Beaches communities and recreate on the non-federal beaches outside of the Seashore. Visitors who patronize the Fort Raleigh National Historic Site and the Wright Brothers National Memorial but do not visit the actual seashore areas need to be factored out.

Maintenance of Future Access to Cape Point and South Point Ocracoke: All socioeconomic analyses related to Alternative F are predicated on the assumption that access corridors will remain open for at least an appreciable portion of the visitor high season. Under Alternative F, the access corridors will be subject to Resource Closures based on buffers similar or identical to the Consent Decree. Unless some predictability of access to Cape Point and South Point Ocracoke can be assured, economic analyses predicated on assumption of access are fundamentally flawed.

Why would a group of surf fisherman want to come to Hatteras Island to surf fish if they are not sure they can access the prime fishing grounds at Cape Point? The answer is they won't come. If they don't come, they don't rent vacation homes and spend their money on Hatteras and Ocracoke Islands. The definition of the Region of Influence (ROI), faulty data on economic activity generated by specific type recreational activity, incomplete visitation/business survey data, inflated overall Seashore visitor counts pertaining to beach use, and flawed key assumptions concerning the maintenance of access under Alternative F, all lead to inaccurate conclusions in the socioeconomic analyses. Specifically, these inaccuracies can be seen as understating the negative socio-economic impact of the Seashore Villages. Further, this negative impact will be absorbed almost entirely by Small Businesses. Neither of these important aspects of the management alternatives are adequately presented in the DEIS.

14) Page 136: I strongly disagree with your pet restriction proposals. The "prohibition of pets in the Seashore during bird breeding season including in front of the villages." = No Pets in public areas ?beaches, campgrounds, soundfront, foot trails, park maintained roads -from March 15 ?July 31.

15) Pages 125; 392 ? 396: SEA TURTLES. I disagree with the stats and procedures proposed. I think endangered sea turtles would benefit from management practices now in use at other federal seashores that are more proactive in efforts to achieve nesting success. This includes relocating nests to more desirable locations as is done in other state and federally controlled areas.

The Cape Hatteras National Seashore Recreational Area is on the northernmost fringe of turtle nesting locations for the southeast, accounting for about 1% of all turtle nests. Proposed buffer areas are not needed for protection of the turtles and amount to overprotection.

16) Pages 97- 101. I strongly disagree with proposals in this section saying that ORVs will be prohibited year round between ramps 27 and 30, at Hatteras Inlet (Hatteras Spit), Ocracoke Inlet (North Ocracoke Spit) and various other locations.

Not allowing ORV access is paramount to denying the public access to these beaches. They are located miles from the nearest parking or paved road area and too far to access on foot. Visitors who patronize the Fort Raleigh National Historic Site and the Wright Brothers National Memorial but do not visit the actual seashore areas need to be factored out.

Maintenance of Future Access to Cape Point and South Point Ocracoke: All socioeconomic analyses related to Alternative F are predicated on the assumption that access corridors will remain open for at least an appreciable portion of the visitor high season. Under Alternative F, the access corridors will be subject to Resource Closures based on buffers similar or identical to the Consent Decree. Unless some predictability of access to Cape Point and South Point Ocracoke can be assured, economic analyses predicated on assumption of access are fundamentally flawed.

Why would a group of surf fisherman want to come to Hatteras Island to surf fish if they are not sure they can access the prime fishing grounds at Cape Point? The answer is they won't come. If they don't come, they don't rent vacation homes and spend their money on Hatteras and Ocracoke Islands.

The definition of the Region of Influence (ROI), faulty data on economic activity generated by specific type recreational activity, incomplete visitation/business survey data, inflated overall Seashore visitor counts pertaining to beach use, and flawed key assumptions concerning the maintenance of access under Alternative F, all lead to inaccurate conclusions in the socioeconomic analyses. Specifically, these inaccuracies can be seen as understating the negative socio-economic impact of the Seashore Villages. Further, this negative impact will be absorbed almost entirely by Small Businesses. Neither of these important aspects of the management alternatives are adequately presented in the DEIS.

14) Page 136: I strongly disagree with your pet restriction proposals. The "prohibition of pets in the Seashore during bird breeding season including in front of the villages." = No Pets in public areas ?beaches, campgrounds, soundfront, foot trails, park maintained roads -from March 15 ?July 31.

15) Pages 125; 392 ? 396: SEA TURTLES. I disagree with the stats and procedures proposed. I think endangered sea turtles would benefit from management practices now in use at other federal seashores that are more proactive in efforts to achieve nesting success. This includes relocating nests to more desirable locations as is done in other state and federally controlled areas.

The Cape Hatteras National Seashore Recreational Area is on the northernmost fringe of turtle nesting locations for the southeast, accounting for about 1% of all turtle nests. Proposed buffer areas are not needed for protection of the turtles and amount to overprotection.

16) Pages 97- 101. I strongly disagree with proposals in this section saying that ORVs will be prohibited year round between ramps 27 and 30, at Hatteras Inlet (Hatteras Spit), Ocracoke Inlet (North Ocracoke Spit) and various other locations.

Not allowing ORV access is paramount to denying the public access to these beaches. They are located miles from the nearest parking or paved road area and too far to access on foot. As a matter of course, there has been no breeding of piping plover or other endangered species at the Hatteras Island Inlet (spit) area in the past 6 years.

17) Page 104: I disagree with the proposed night time driving closures. Per your proposals, night driving will be prohibited between May 1 and

November 15th, forcing visitors off of the beaches early in the evening and preventing sunrise surf fishermen access in the morning. I propose a more moderate night time ban if one is needed, perhaps from June 1 ? September 15 with times being 1 hour after sunset and 1 hour before sunrise to allow beach goers to gather their stuff and exit the beach area.

Certainly more proactive measures such as relocating nests prone to weather and ocean events would dramatically increase the nesting success rates.

18) Page 121: I disagree with the proposed beach closings, including pedestrian access from March 15 until July 31 in 8 different beach locations which have traditionally been available. Please leave these areas open to beach walkers, shell collectors and those that want to access the beaches in these areas.

Conclusion:

Please, incorporate access corridors through any SMA so we can get to the open beach beyond. Incorporate the birds into the count that nest on the spoil islands. Base your buffer zones on peer reviewed science and scale them back to more reasonable distances as discussed.

It is neither logical nor reasonable to spend so much time, money and energy to overprotect a bird (Piping Plover) in the Cape Hatteras National Seashore that is on the southernmost fringe area of its breeding ground. That goes for the loggerhead turtle that is in its northernmost breeding area.

Let's scale back the buffer zones. You can always increase at a later date.

The USPS is leaning way over the line on over protection and not enough on the public's right to enjoy the beaches of the National Seashore. The proper balance is not achieved in the propose DEIS and needs to be modified so that the proper balance of reasonable resource protection and access to the beaches of the National Park is achieved. I could sum it up by saying "Protect, not Prohibit."

Thank you,

The off road vehicle is not used for recreation in the normal sense on the Cape Hatteras Seashore. It is a tool that gets you to a location to fish,surf,picnic and see the wildlife of the park. It does this without large asphalt or concrete roadways and parking lots on sands that may or may not be there next week or next year. I can not understand how people who do not live here can come in with no understanding of our environment and want to change it to their beliefs that are based on weak science. If the piping plover is truly in danger it is because they nest on barren storm swep beaches that are covered with one of their natural enemies the ghost crab. The birds that nest further to the north seem to do a lot better. Less storms and fewer if any crabs. I have seen nest that the plovers did not care if heavy equipment operated within 100yds only to be wiped out by a late May northeaster. This example alone makes your proposal of 1000m look a ridiculous.The nesting area at Isabelle inlet has Tractor trailers travelling by at 55mph and the bird do not care.You do not count the birds on the islands in the sound yet many species nest there with out predators except other birds. Giving endangered status to the terns and oystercatchers is also poor science,the birds are here in greater numbers than in the early 70s. When I was net fishing on the beach in the early 70's seldom did you see the colorful oystercatcher and there were very few off road vehicles then. Now you see them often. People are part of the environment and should not be blocked out like the many hundreds of small mammals you have killed. You are playing god with only your love of small feathered critters being allowed. The island of Hatteras has per person more acres of wildlife habitat than any place that you people live that regulate us. Even with the anger that swells up inside with the heavy handed NPS and Judge Boyle consent decree based on lies by the audubon and defenders [haha] of wildlife I understand that these birds need help with nesting protection of reasonable distances. A number that has proven to work in other areas of the coast with a chance for people to use the land also. The turtle nest are also a bit tough to understand. With the birds you kill and trap predators but with the turtles you want nature to take its course even if it means nest wash into the sea or are not kept warm enough to hatch. If these turtles are so endangered move the eggs and incubate them to make sure they make it. If you moved one or two nest to allow beach traffic and the turtles make it to hatching then this is win win. In closing I believe the NPS has an obligation not only to the wildlife but to the people from which they took this land and promised that the future generations could enjoy it. To do so you must sometimes move eggs,use good solid science and allow pedestrian and orv traffic thru areas so that the people can use the park as it was intended and yet protect the wildlife. Then maybe you will find an ally in all of the park visitors.

Correspondence:

My comments concern the DEIS of the Off-Road Vehicle Management Plan prepared by the National Park Service (NPS) for the Cape Hatteras National Seashore Recreation Area.

1) Page 201: I disagree with the NPS statement: "Even with resource closures in place, protected species are still at risk [from pedestrians and ORVs]." No Piping Plover deaths have been attributed to ORVs. ORV violations continue to decrease as signage and education improve. Pedestrian violations are much more significant than ORV violations. It seems to me that any transgressions into protected area are the result of lack of NPS manpower and enforcement than the public purposely and willfully violating out of bounds areas.

2) Page xxiv: I question the statement of as per the DEIS: "Carrying capacity would be a 'peak use limit' determined for all areas based on the linear feet of beachfront?" If you close off huge sections of the beach, you force more people into smaller areas, potentially resulting in more resource impairment and diminished visitor experience.

3) Page xix and page 23: I am against having two different closures rules pertaining to the North facing beaches (North side) and the South facing beaches (South side) as per the grid outlined in Alternative "F". I disagree with the NPS proposal to close the beaches in villages of Frisco, Hatteras and Ocracoke Villages to ORV access longer than the traditional May 15 to September 15 period for the Northern beaches, even though seasonal visitor statistics are similar for all villages. Please, make them the same: May 15 -> September 15.

4) Page 1: I agree with your statement "ORVs have long served as a primary form of access for many portions of the beach in the seashore, and continue to be the most practical means of access and parking for many visitors."

However, pedestrian only areas discriminate against individuals with limited mobility due to age or physical impairments, families with small children, and those wishing to engage in activities requiring recreational equipment (boogie boards, beach umbrellas, beach chairs, coolers, fishing rods and tackle, etc)

5) Page 53: I disagree with the special use permit proposed guidelines. It is impractical to allow the transportation of disabled visitors to the village beaches and then require the vehicle to be returned to the street or parking area. This necessitates the disabled person to have a driver to drop him (or her) off, then drive to a parking area, then trudge a long distance to the site of the drop off, then trudge the long distance through the sand back to get the vehicle.

Suppose the handicap person wants to go to the beach, is capable of driving himself, yet cannot find another person to go with him? Does he now not go to the beach? This rule creates unnecessary hardships and risks in the event of an emergency as well.

6) Page 121 ? 127. I strongly disagree with the buffers as presented. We must allow for pass-thru corridors. The beach is linear with the ocean buffering on one side and the dune line on the other. For example - If you pinch off access on one side of a 4 mile linear beach and pinch off access on the other side of the 4 mile section of beach with no corridor, then you effectively have closed off all 4 miles of the beach because you CAN'T get there. The proposed bird buffers are too large, blocking access to the interior sections from the two "buffered" ends.

I propose ORV pass-thru only corridors and to use breeding / nesting buffer distances to establish ORV pass through only corridors to ensure beach access in a way that does not hinder resource protection. I believe pass through corridors should be maintained for pedestrians and ORVs in all areas of the Cape Hatteras National Seashore Recreational Area throughout the entire breeding and nesting season. Corridors are vital to providing access in a way that does not hinder resource protection.

Piping Plover unfledged chicks buffer should move with the brood as it relocates to reliable food source, not expanded.

The 1,000 meter distance for the piping plover is way too large and not based upon peer reviewed science. A more rational distance would be 200

meters per other sites in the nation for the piping plover. Ample scientific evidence and precedent exists to support a 200 meter buffer. Buffers for other species, including American Oystercatchers, Least Terns and Colonial Waterbirds must also be changed. An effective 30 meter buffer should be established for these species rather than the 300 meter closure outlined in the DEIS.

NON-ENDANGERED BIRDS should not have same protection as if endangered. Not allowing ORV access is paramount to denying the public access to these beaches.

7) Page 468: I disagree with the limitations imposed on pedestrian and ORVs. Corridors or bypasses should be provided thru, around or below high tide line in all SMAs during entire breeding season to maintain access.

8) Page 124: I strongly disagree with the NPS slant of providing for over protection of resource management over that of the public's right to access the beaches. Pro-active initiatives include: Vegetation Management, Habitat Management, Enhanced Predator Management, Colonial Water bird social attraction, Piping Plover check fledge rate, Piping plover chick buffer distance, and pass-through buffers during the incubation period. Opportunities to implement less restrictive closures as a result of the above initiatives should be considered more frequently than the 5-year periodic review process identified in the DEIS.

9) I disagree with the NPS Resource Management Pedestrian / ORV Closure Policies. These policies address the least significant factors affecting nest survival with little chance to have more than negligible impact. For example: the AMOY Nest Failures are predominately due to non-human events. Using your own stats, the mammalian predation is 54%, Storm / Lunar Tides: 29%, Nest Abandonment: 6%, Avian Predation: 5%, and Ghost Crab Predation: 3%.

So what is the percentage due to human interference: just 3%! It's insignificant, yet the NPS wants to ban humans when their actions provide very little influence on the success rate of breeding birds and turtles.

10) I disagree with the stats of breeding plovers and the other birds in the Park when the NPS does not adequately consider locations neighboring the Recreational Area that are part of the same ecosystem, namely dredge and spoil island that are located just yards away and within sight of the seashore. These birds are part of the same ecosystem and should be included.

Those spoil islands, developed by man from dredging the waterways in the Pamlico Sound for channel upkeep are slammed full of birds. The reason why so many birds? NO PREDATORS. SO, birds are not as stupid as one might think. You have to count these birds and incorporate them in the stats when the NPS is talking about any so called decline in breeding pairs in the National Park.

11) Page 1: I do not think the DEIS responsibly addresses the cultural resource issues. The very purpose of the DEIS as set forth in the National Environmental Policy Act (NEPA) is to protect and preserve natural and cultural resources in the federal decision making process. In the DEIS, the statement "protect and preserve natural and cultural resources" appears in the first sentence of the first page of the plan, in the Purpose of the Plan section, and numerous times thereafter. Yet, the 810 page document devotes only two paragraphs to analysis of cultural resource issues.

12) Pages 270-281; 561-598: I strongly disagree with your economic analysis of the impact of the DEIS. The region of influence (ROI) incorporates the Northern Beach communities, including Kill Devil Hills, Kitty Hawk, Southern Shores and Duck. These areas are almost completely disconnected from ORV use and access issues relating to the Seashore. ? Inclusion of the Northern Beaches in analysis significantly dilutes estimates of economic impact on the 8 Seashore Villages

? Analysis of economic impact to the Seashore Villages appears to be significantly down played. Emphasis in DEIS is on the ROI-wide or county-wide level impacts.

? Nowhere is it clearly addressed that the overwhelming majority of negative impacts will be felt by small businesses in the Seashore Villages rather than by overall economic interests within the greater ROI.

On page xlvi, Alternative F is characterized as having a "negligible to moderate" adverse impact on small businesses. I strongly disagree with this statement.

I believe the negligible to moderate projection is inaccurate and relies on economic surveys that has not yet been published. Furthermore, this material is not expected to be added to the DEIS until after the public comment period has ended.

Based upon the economic harm we have already experienced under the consent decree, Dare County projects the economic impact of Alternative F to be substantial.

Beach closures have already had a devastating and unfair impact on many Dare County Businesses, causing foreclosures, bankruptcies, lay-offs, cutbacks, expensive refinancing, and depleted college funds and savings accounts.

Pages 270-286, 561-598: The socio-economic data and analyses are incomplete and erroneous and result in an understatement of the effect the restrictions will have upon the Island, the region and the state of NC. The US Park Services answer: Businesses will have to "adapt" to the new rules. (p.383) The negative economic impacts of the decree ARE KNOWN, so to say that the added restrictions would have negligible to moderate impact is indefensible.

13) Overall Visitor Counts - Overall visitor counts appear to include visitors to Fort Raleigh National Historic Site and the Wright Brothers National Memorial. A large percentage of these visitors vacation in the Northern Beaches communities and recreate on the non-federal beaches outside of the Seashore. Visitors who patronize the Fort Raleigh National Historic Site and the Wright Brothers National Memorial but do not visit the actual seashore areas need to be factored out.

Maintenance of Future Access to Cape Point and South Point Ocracoke: All socioeconomic analyses related to Alternative F are predicated on the assumption that access corridors will remain open for at least an appreciable portion of the visitor high season. Under Alternative F, the access corridors will be subject to Resource Closures based on buffers similar or identical to the Consent Decree. Unless some predictability of access to Cape Point and South Point Ocracoke can be assured, economic analyses predicated on assumption of access are fundamentally flawed.

Why would a group of surf fisherman want to come to Hatteras Island to surf fish if they are not sure they can access the prime fishing grounds at Cape Point? The answer is they won't come. If they don't come, they don't rent vacation homes and spend their money on Hatteras and Ocracoke Islands. The definition of the Region of Influence (ROI), faulty data on economic activity generated by specific type recreational activity, incomplete visitation/business survey data, inflated overall Seashore visitor counts pertaining to beach use, and flawed key assumptions concerning the maintenance of access under Alternative F, all lead to inaccurate conclusions in the socioeconomic analyses. Specifically, these inaccuracies can be seen as understating the negative socio-economic impact of the Seashore Villages. Further, this negative impact will be absorbed almost entirely by Small Businesses. Neither of these important aspects of the management alternatives are adequately presented in the DEIS.

14) Page 136: I strongly disagree with your pet restriction proposals. The "prohibition of pets in the Seashore during bird breeding season including in front of the villages." = No Pets in public areas ?beaches, campgrounds, soundfront, foot trails, park maintained roads -from March 15 ?July 31.

15) Pages 125; 392 ? 396: SEA TURTLES. I disagree with the stats and procedures proposed. Correspondence: I disagree with the NPS preferred option F. I disagree with prohibiting pedestrian access. Access is the core component of the cultural and historical values of the Park, and these values were not adequately recognized in the DEIS. The Park was designated a recreational area and access to humans must be available for recreation to occur. In the socioeconomic analysis, the region of influences should be the villages within the National Seashore Recreational Area. The towns in northern Dare County are not as directly affected by decisions in the off-road management plan. The data concerning businesses is incomplete. Correct data about economic impact does not come from a projection model, but instead would come from business owners and residents. I support the positions taken by the Coalition for Beach Access.

I think endangered sea turtles would benefit from management practices now in use at other federal seashores that are more proactive in efforts to achieve nesting success. This includes relocating nests to more desirable locations as is done in other state and federally controlled areas.

The Cape Hatteras National Seashore Recreational Area is on the northernmost fringe of turtle nesting locations for the southeast, accounting for about 1% of all turtle nests. Proposed buffer areas are not needed for protection of the turtles and amount to overprotection.

16) Pages 97- 101. I strongly disagree with proposals in this section saying that ORVs will be prohibited year round between ramps 27 and 30, at Hatteras Inlet (Hatteras Spit), Ocracoke Inlet (North Ocracoke Spit) and various other locations.

Not allowing ORV access is paramount to denying the public access to these beaches. They are located miles from the nearest parking or paved road area and too far to access on foot. As a matter of course, there has been no breeding of piping plover or other endangered species at the Hatteras Island Inlet (spit) area in the past 6 years.

17) Page 104: I disagree with the proposed night time driving closures. Per your proposals, night driving will be prohibited between May 1 and November 15th, forcing visitors off of the beaches early in the evening and preventing sunrise surf fishermen access in the morning. I propose a more moderate night time ban if one is needed, perhaps from June 1 ? September 15 with times being 1 hour after sunset and 1 hour before sunrise to allow beach goers to gather their stuff and exit the beach area.

Certainly more proactive measures such as relocating nests prone to weather and ocean events would dramatically increase the nesting success rates.

18) Page 121: I disagree with the proposed beach closings, including pedestrian access from March 15 until July 31 in 8 different beach locations which have traditionally been available. Please leave these areas open to beach walkers, shell collectors and those that want to access the beaches in these areas.

Conclusion:

Please, incorporate access corridors through any SMA so we can get to the open beach beyond. Incorporate the birds into the count that nest on the spoil islands. Base your buffer zones on peer reviewed science and scale them back to more reasonable distances as discussed.

It is neither logical nor reasonable to spend so much time, money and energy to overprotect a bird (Piping Plover) in the Cape Hatteras National Seashore that is on the southernmost fringe area of its breeding ground. That goes for the loggerhead turtle that is in its northernmost breeding area.

Let's scale back the buffer zones. You can always increase at a later date.

The USPS is leaning way over the line on over protection and not enough on the public's right to enjoy the beaches of the National Seashore. The proper balance is not achieved in the propose DEIS and needs to be modified so that the proper balance of reasonable resource protection and access to the beaches of the National Park is achieved. I could sum it up by saying "Protect, not Prohibit."

Thank you,

Correspondence: I'm afraid of the economic impact of the beach closures / restrictions. Times are already difficult and this could make being a resident on Hatteras Island even more difficult. Perhaps this would make living here financially impossible.

Secondly, I'm concerned about not being able to access certain areas of the beach via walking or ORV. There are specific areas (Cape point, Hatteras spit, South point) that are like no other place on the Outer Banks for fishing, surfing, kiteboarding, shelling, bird watching, and windsurfing. If these areas are inaccessible it will limit the recreation opportunities available for residents and visitors alike. This leads back to my first concern.

Thanks for considering my comment.

Correspondence: My comments concern the DEIS of the Off-Road Vehicle Management Plan prepared by the National Park Service (NPS) for the Cape Hatteras National Seashore Recreation Area.

1) Page 201: I disagree with the NPS statement: "Even with resource closures in place, protected species are still at risk [from pedestrians and ORVs]." No Piping Plover deaths have been attributed to ORVs. ORV violations continue to decrease as signage and education improve. Pedestrian violations are much more significant than ORV violations. It seems to me that any transgressions into protected area are the result of lack of NPS manpower and enforcement than the public purposely and willfully violating out of bounds areas.

2) Page xxiv: I question the statement of as per the DEIS: "Carrying capacity would be a 'peak use limit' determined for all areas based on the linear feet of beachfront?" If you close off huge sections of the beach, you force more people into smaller areas, potentially resulting in more resource impairment and diminished visitor experience.

3) Page xix and page 23: I am against having two different closures rules pertaining to the North facing beaches (North side) and the South facing beaches (South side) as per the grid outlined in Alternative "F". I disagree with the NPS proposal to close the beaches in villages of Frisco, Hatteras and Ocracoke Villages to ORV access longer than the traditional May 15 to September 15 period for the Northern beaches, even though seasonal visitor statistics are similar for all villages. Please, make them the same: May 15 -> September 15.

4) Page 1: I agree with your statement "ORVs have long served as a primary form of access for many portions of the beach in the seashore, and continue to be the most practical means of access and parking for many visitors."
 However, pedestrian only areas discriminate against individuals with limited mobility due to age or physical impairments, families with small children, and those wishing to engage in activities requiring recreational equipment (boogie boards, beach umbrellas, beach chairs, coolers, fishing rods and tackle, etc)

5) Page 53: I disagree with the special use permit proposed guidelines. It is impractical to allow the transportation of disabled visitors to the village beaches and then require the vehicle to be returned to the street or parking area. This necessitates the disabled person to have a driver to drop him (or her) off, then drive to a parking area, then trudge a long distance to the site of the drop off, then trudge the long distance through the sand back to get the vehicle.
 Suppose the handicap person wants to go to the beach, is capable of driving himself, yet cannot find another person to go with him? Does he now not go to the beach? This rule creates unnecessary hardships and risks in the event of an emergency as well.

6) Page 121 ? 127. I strongly disagree with the buffers as presented. We must allow for pass-thru corridors. The beach is linear with the ocean buffering on one side and the dune line on the other. For example - If you pinch off access on one side of a 4 mile linear beach and pinch off access on the other side of the 4 mile section of beach with no corridor, then you effectively have closed off all 4 miles of the beach because you CAN'T get there. The proposed bird buffers are too large, blocking access to the interior sections from the two "buffered" ends.
 I propose ORV pass-thru only corridors and to use breeding / nesting buffer distances to establish ORV pass through only corridors to ensure beach access in a way that does not hinder resource protection. I believe pass through corridors should be maintained for pedestrians and ORVs in all areas of the Cape Hatteras National Seashore Recreational Area throughout the entire breeding and nesting season. Corridors are vital to providing access in a way that does not hinder resource protection.
 Piping Plover unfledged chicks buffer should move with the brood as it relocates to reliable food source, not expanded.
 The 1,000 meter distance for the piping plover is way too large and not based upon peer reviewed science. A more rational distance would be 200 meters per other sites in the nation for the piping plover. Ample scientific evidence and precedent exists to support a 200 meter buffer.
 Buffers for other species, including American Oystercatchers, Least Terns and Colonial Waterbirds must also be changed. An effective 30 meter buffer should be established for these species rather than the 300 meter closure outlined in the DEIS.
 NON-ENDANGERED BIRDS should not have same protection as if endangered. Not allowing ORV access is paramount to denying the public access to these beaches.

7) Page 468: I disagree with the limitations imposed on pedestrian and ORVs. Corridors or bypasses should be provided thru, around or below high tide line in all SMAs during entire breeding season to maintain access.

8) Page 124: I strongly disagree with the NPS slant of providing for over protection of resource management over that of the public's right to access the beaches. Pro-active initiatives include: Vegetation Management, Habitat Management, Enhanced Predator Management, Colonial Water bird social attraction, Piping Plover check fledge rate, Piping plover chick buffer distance, and pass-through buffers during the incubation period. Opportunities to implement less restrictive closures as a result of the above initiatives should be considered more frequently than the 5-year periodic review process identified in the DEIS.

9) I disagree with the NPS Resource Management Pedestrian / ORV Closure Policies. These policies address the least significant factors affecting nest survival with little chance to have more than negligible impact. For example: the AMOY Nest Failures are predominately due to non-human events. Using your own stats, the mammalian predation is 54%, Storm / Lunar Tides: 29%, Nest Abandonment: 6%, Avian Predation: 5%, and Ghost Crab Predation: 3%,
 So what is the percentage due to human interference: just 3%! It's insignificant, yet the NPS wants to ban humans when their actions provide very little influence on the success rate of breeding birds and turtles.

10) I disagree with the stats of breeding plovers and the other birds in the Park when the NPS does not adequately consider locations neighboring the Recreational Area that are part of the same ecosystem, namely dredge and spoil island that are located just yards away and within sight of the seashore. These birds are part of the same ecosystem and should be included.
 Those spoil islands, developed by man from dredging the waterways in the Pamlico Sound for channel upkeep are slammed full of birds. The reason why so many birds? NO PREDATORS. SO, birds are not as stupid as one might think. You have to count these birds and incorporate them in the stats when the NPS is talking about any so called decline in breeding pairs in the National Park.

11) Page 1: I do not think the DEIS responsibly addresses the cultural resource issues. The very purpose of the DEIS as set forth in the National Environmental Policy Act (NEPA) is to protect and preserve natural and cultural resources in the federal decision making process. In the DEIS, the statement "protect and preserve natural and cultural resources" appears in the first sentence of the first page of the plan, in the Purpose of the Plan section, and numerous times thereafter. Yet, the 810 page document devotes only two paragraphs to analysis of cultural resource issues.

12) Pages 270-281; 561-598: I strongly disagree with your economic analysis of the impact of the DEIS. The region of influence (ROI) incorporates the Northern Beach communities, including Kill Devil Hills, Kitty Hawk, Southern Shores and Duck. These areas are almost completely disconnected from ORV use and access issues relating to the Seashore. ? Inclusion of the Northern Beaches in analysis significantly dilutes estimates of economic impact on the 8 Seashore Villages
 ? Analysis of economic impact to the Seashore Villages appears to be significantly down played. Emphasis in DEIS is on the ROI-wide or county-wide level impacts.
 ? Nowhere is it clearly addressed that the overwhelming majority of negative impacts will be felt by small businesses in the Seashore Villages rather than by overall economic interests within the greater ROI.
 On page xlvi, Alternative F is characterized as having a "negligible to moderate" adverse impact on small businesses. I strongly disagree with this statement.
 I believe the negligible to moderate projection is inaccurate and relies on economic surveys that has not yet been published. Furthermore, this material is not expected to be added to the DEIS until after the public comment period has ended.
 Based upon the economic harm we have already experienced under the consent decree, Dare County projects the economic impact of Alternative F to be substantial.
 Beach closures have already had a devastating and unfair impact on many Dare County Businesses, causing foreclosures, bankruptcies, lay-offs,

cutbacks, expensive refinancing, and depleted college funds and savings accounts.

Pages 270-286, 561-598: The socio-economic data and analyses are incomplete and erroneous and result in an understatement of the effect the restrictions will have upon the Island, the region and the state of NC. The US Park Services answer: Businesses will have to "adapt" to the new rules. (p.383) The negative economic impacts of the decree ARE KNOWN, so to say that the added restrictions would have negligible to moderate impact is indefensible.

13) Overall Visitor Counts - Overall visitor counts appear to include visitors to Fort Raleigh National Historic Site and the Wright Brothers National Memorial. A large percentage of these visitors vacation in the Northern Beaches communities and recreate on the non-federal beaches outside of the Seashore. Visitors who patronize the Fort Raleigh National Historic Site and the Wright Brothers National Memorial but do not visit the actual seashore areas need to be factored out.

Maintenance of Future Access to Cape Point and South Point Ocracoke: All socioeconomic analyses related to Alternative F are predicated on the assumption that access corridors will remain open for at least an appreciable portion of the visitor high season. Under Alternative F, the access corridors will be subject to Resource Closures based on buffers similar or identical to the Consent Decree. Unless some predictability of access to Cape Point and South Point Ocracoke can be assured, economic analyses predicated on assumption of access are fundamentally flawed.

Why would a group of surf fisherman want to come to Hatteras Island to surf fish if they are not sure they can access the prime fishing grounds at Cape Point? The answer is they won't come. If they don't come, they don't rent vacation homes and spend their money on Hatteras and Ocracoke Islands. The definition of the Region of Influence (ROI), faulty data on economic activity generated by specific type recreational activity, incomplete visitation/business survey data, inflated overall Seashore visitor counts pertaining to beach use, and flawed key assumptions concerning the maintenance of access under Alternative F, all lead to inaccurate conclusions in the socioeconomic analyses. Specifically, these inaccuracies can be seen as understating the negative socio-economic impact of the Seashore Villages. Further, this negative impact will be absorbed almost entirely by Small Businesses. Neither of these important aspects of the management alternatives are adequately presented in the DEIS.

14) Page 136: I strongly disagree with your pet restriction proposals. The "prohibition of pets in the Seashore during bird breeding season including in front of the villages." = No Pets in public areas ?beaches, campgrounds, soundfront, foot trails, park maintained roads -from March 15 ?July 31.

15) Pages 125; 392 ? 396: SEA TURTLES. I disagree with the stats and procedures proposed. I think endangered sea turtles would benefit from management practices now in use at other federal seashores that are more proactive in efforts to achieve nesting success. This includes relocating nests to more desirable locations as is done in other state and federally controlled areas.

The Cape Hatteras National Seashore Recreational Area is on the northernmost fringe of turtle nesting locations for the southeast, accounting for about 1% of all turtle nests. Proposed buffer areas are not needed for protection of the turtles and amount to overprotection.

16) Pages 97- 101. I strongly disagree with proposals in this section saying that ORVs will be prohibited year round between ramps 27 and 30, at Hatteras Inlet (Hatteras Spit), Ocracoke Inlet (North Ocracoke Spit) and various other locations.

Not allowing ORV access is paramount to denying the public access to these beaches. They are located miles from the nearest parking or paved road area and too far to access on foot. As a matter of course, there has been no breeding of piping plover or other endangered species at the Hatteras Island Inlet (spit) area in the past 6 years.

17) Page 104: I disagree with the proposed night time driving closures. Per your proposals, night driving will be prohibited between May 1 and November 15th, forcing visitors off of the beaches early in the evening and preventing sunrise surf fishermen access in the morning. I propose a more moderate night time ban if one is needed, perhaps from June 1 ? September 15 with times being 1 hour after sunset and 1 hour before sunrise to allow beach goers to gather their stuff and exit the beach area.

Certainly more proactive measures such as relocating nests prone to weather and ocean events would dramatically increase the nesting success rates.

18) Page 121: I disagree with the proposed beach closings, including pedestrian access from March 15 until July 31 in 8 different beach locations which have traditionally been available. Please leave these areas open to beach walkers, shell collectors and those that want to access the beaches in these areas.

Conclusion:

Please, incorporate access corridors through any SMA so we can get to the open beach beyond. Incorporate the birds into the count that nest on the spoil islands. Base your buffer zones on peer reviewed science and scale them back to more reasonable distances as discussed.

It is neither logical nor reasonable to spend so much time, money and energy to overprotect a bird (Piping Plover) in the Cape Hatteras National Seashore that is on the southernmost fringe area of its breeding ground. That goes for the loggerhead turtle that is in its northernmost breeding area. Let's scale back the buffer zones. You can always increase at a later date.

The USPS is leaning way over the line on over protection and not enough on the public's right to enjoy the beaches of the National Seashore. The proper balance is not achieved in the propose DEIS and needs to be modified so that the proper balance of reasonable resource protection and access to the beaches of the National Park is achieved. I could sum it up by saying "Protect, not Prohibit."

11) Page 1: I do not think the DEIS responsibly addresses the cultural resource issues. The very purpose of the DEIS as set forth in the National Environmental Policy Act (NEPA) is to protect and preserve natural and cultural resources in the federal decision making process. In the DEIS, the statement "protect and preserve natural and cultural resources" appears in the first sentence of the first page of the plan, in the Purpose of the Plan section, and numerous times thereafter. Yet, the 810 page document devotes only two paragraphs to analysis of cultural resource issues.

12) Pages 270-281; 561-598: I strongly disagree with your economic analysis of the impact of the DEIS. The region of influence (ROI) incorporates the Northern Beach communities, including Kill Devil Hills, Kitty Hawk, Southern Shores and Duck. These areas are almost completely disconnected from ORV use and access issues relating to the Seashore. ? Inclusion of the Northern Beaches in analysis significantly dilutes estimates of economic impact on the 8 Seashore Villages

? Analysis of economic impact to the Seashore Villages appears to be significantly down played. Emphasis in DEIS is on the ROI-wide or county-wide level impacts.

? Nowhere is it clearly addressed that the overwhelming majority of negative impacts will be felt by small businesses in the Seashore Villages rather than by overall economic interests within the greater ROI.

On page xlvi, Alternative F is characterized as having a "negligible to moderate" adverse impact on small businesses. I strongly disagree with this statement.

I believe the negligible to moderate projection is inaccurate and relies on economic surveys that has not yet been published. Furthermore, this material is not expected to be added to the DEIS until after the public comment period has ended.

Based upon the economic harm we have already experienced under the consent decree, Dare County projects the economic impact of Alternative F to be substantial.

Beach closures have already had a devastating and unfair impact on many Dare County Businesses, causing foreclosures, bankruptcies, lay-offs, cutbacks, expensive refinancing, and depleted college funds and savings accounts.

Pages 270-286, 561-598: The socio-economic data and analyses are incomplete and erroneous and result in an understatement of the effect the restrictions will have upon the Island, the region and the state of NC. The US Park Services answer: Businesses will have to "adapt" to the new rules.

(p.383) The negative economic impacts of the decree ARE KNOWN, so to say that the added restrictions would have negligible to moderate impact is indefensible.

13) Overall Visitor Counts - Overall visitor counts appear to include visitors to Fort Raleigh National Historic Site and the Wright Brothers National Memorial. A large percentage of these visitors vacation in the Northern Beaches communities and recreate on the non-federal beaches outside of the Seashore. Visitors who patronize the Fort Raleigh National Historic Site and the Wright Brothers National Memorial but do not visit the actual seashore areas need to be factored out.

Maintenance of Future Access to Cape Point and South Point Ocracoke: All socioeconomic analyses related to Alternative F are predicated on the assumption that access corridors will remain open for at least an appreciable portion of the visitor high season. Under Alternative F, the access corridors will be subject to Resource Closures based on buffers similar or identical to the Consent Decree. Unless some predictability of access to Cape Point and South Point Ocracoke can be assured, economic analyses predicated on assumption of access are fundamentally flawed.

Why would a group of surf fisherman want to come to Hatteras Island to surf fish if they are not sure they can access the prime fishing grounds at Cape Point? The answer is they won't come. If they don't come, they don't rent vacation homes and spend their money on Hatteras and Ocracoke Islands.

The definition of the Region of Influence (ROI), faulty data on economic activity generated by specific type recreational activity, incomplete visitation/business survey data, inflated overall Seashore visitor counts pertaining to beach use, and flawed key assumptions concerning the maintenance of access under Alternative F, all lead to inaccurate conclusions in the socioeconomic analyses. Specifically, these inaccuracies can be seen as understating the negative socio-economic impact of the Seashore Villages. Further, this negative impact will be absorbed almost entirely by Small Businesses. Neither of these important aspects of the management alternatives are adequately presented in the DEIS.

14) Page 136: I strongly disagree with your pet restriction proposals. The "prohibition of pets in the Seashore during bird breeding season including in front of the villages." = No Pets in public areas ?beaches, campgrounds, soundfront, foot trails, park maintained roads -from March 15 ?July 31.

15) Pages 125; 392 ? 396: SEA TURTLES. I disagree with the stats and procedures proposed. I think endangered sea turtles would benefit from management practices now in use at other federal seashores that are more proactive in efforts to achieve nesting success. This includes relocating nests to more desirable locations as is done in other state and federally controlled areas.

The Cape Hatteras National Seashore Recreational Area is on the northernmost fringe of turtle nesting locations for the southeast, accounting for about

1% of all turtle nests. Proposed buffer areas are not needed for protection of the turtles and amount to overprotection.

16) Pages 97- 101. I strongly disagree with proposals in this section saying that ORVs will be prohibited year round between ramps 27 and 30, at Hatteras Inlet (Hatteras Spit), Ocracoke Inlet (North Ocracoke Spit) and various other locations.

Not allowing ORV access is paramount to denying the public access to these beaches. They are located miles from the nearest parking or paved road area and too far to access on foot. As a matter of course, there has been no breeding of piping plover or other endangered species at the Hatteras Island Inlet (spit) area in the past 6 years.

17) Page 104: I disagree with the proposed night time driving closures. Per your proposals, night driving will be prohibited between May 1 and November 15th, forcing visitors off of the beaches early in the evening and preventing sunrise surf fishermen access in the morning. I propose a more moderate night time ban if one is needed, perhaps from June 1 ? September 15 with times being 1 hour after sunset and 1 hour before sunrise to allow beach goers to gather their stuff and exit the beach area.

Certainly more proactive measures such as relocating nests prone to weather and ocean events would dramatically increase the nesting success rates.

18) Page 121: I disagree with the proposed beach closings, including pedestrian access from March 15 until July 31 in 8 different beach locations which have traditionally been available. Please leave these areas open to beach walkers, shell collectors and those that want to access the beaches in these areas.

Conclusion:

Please, incorporate access corridors through any SMA so we can get to the open beach beyond. Incorporate the birds into the count that nest on the spoil islands. Base your buffer zones on peer reviewed science and scale them back to more reasonable distances as discussed.

It is neither logical nor reasonable to spend so much time, money and energy to overprotect a bird (Piping Plover) in the Cape Hatteras National Seashore that is on the southernmost fringe area of its breeding ground. That goes for the loggerhead turtle that is in its northernmost breeding area. Let's scale back the buffer zones. You can always increase at a later date.

The USPS is leaning way over the line on over protection and not enough on the public's right to enjoy the beaches of the National Seashore. The proper balance is not achieved in the propose DEIS and needs to be modified so that the proper balance of reasonable resource protection and access to the beaches of the National Park is achieved. I could sum it up by saying "Protect, not Prohibit."

Thank you,

Received: May,11,2010 00:00:00

Correspondence Type: Web Form

Correspondence: I am a 30 plus year resident of Hatteras Island. Hatteras Island has been good to me. I met my wife in NC and we have a 20 year old native Hatteras Island son. I have travelled the world. My wife and I both have advanced college degrees. We could have called anywhere home. We chose Hatteras Island because of the beauty of the island, ocean, sound, the nature, but most importantly the people. 35 years ago a young long haired hippy could not have settled happily just anywhere in NC. However on Hatteras the islanders accepted me with open arms and smiles. The island friends that I started with are even better friends today. We have argued over everything from beer brands, to fishing poles, and politics but today the new argument over beach access has provided a huge divide. I hope the new plan for access and management will provide an equitable and protective use of the resource.

Page 121 Pass through corridors are necessary and I believe not detrimental to the animal populations.

Page 124: Please allow shorter than 5 year periods to review and revise management strategys.

I absolutely disagree with the punitive nature of entrance into restricted areas by persons unknown. That the protected areas could be expanded with geometric proportions is absurd.

I disagree with the predation of the NPS on the species on Hatteras Island. The killing of unwanted animals to protect a now wanted animal is absurd. I miss the wild pheasants that use to inhabit Hatteras Island.

I strongly disagree with the 1,000 meter distance for piping plover nest and brood protection. I believe these birds benefit by the proximity of man. Man keeps the beach open and the predators at bay.

I could go on and on. We have a shrinking resource. Hatteras Island is getting smaller every day. Visit the beach in North Rodanthe, Kinnakeet Shores Avon, and the beach just north of the point. It is shrinking daily. We need to make this resource work for both man and animal. Thank you.

Correspondence Type: Web Form

Correspondence: My comments concern the DEIS of the Off-Road Vehicle Management Plan prepared by the National Park Service (NPS) for the Cape Hatteras National Seashore Recreation Area.

1) Page 201: I disagree with the NPS statement: "Even with resource closures in place, protected species are still at risk [from pedestrians and ORVs]." No Piping Plover deaths have been attributed to ORVs. ORV violations continue to decrease as signage and education improve. Pedestrian violations are much more significant than ORV violations. It seems to me that any transgressions into protected area are the result of lack of NPS manpower and enforcement than the public purposely and willfully violating out of bounds areas.

2) Page xxiv: I question the statement of as per the DEIS: "Carrying capacity would be a 'peak use limit' determined for all areas based on the linear feet of beachfront?" If you close off huge sections of the beach, you force more people into smaller areas, potentially resulting in more resource impairment and diminished visitor experience.

3) Page xix and page 23: I am against having two different closures rules pertaining to the North facing beaches (North side) and the South facing beaches (South side) as per the grid outlined in Alternative "F". I disagree with the NPS proposal to close the beaches in villages of Frisco, Hatteras and Ocracoke Villages to ORV access longer than the traditional May 15 to September 15 period for the Northern beaches, even though seasonal visitor statistics are similar for all villages. Please, make them the same: May 15 -> September 15.

4) Page 1: I agree with your statement "ORVs have long served as a primary form of access for many portions of the beach in the seashore, and continue to be the most practical means of access and parking for many visitors."

However, pedestrian only areas discriminate against individuals with limited mobility due to age or physical impairments, families with small children, and those wishing to engage in activities requiring recreational equipment (boogie boards, beach umbrellas, beach chairs, coolers, fishing rods and tackle, etc)

5) Page 53: I disagree with the special use permit proposed guidelines. It is impractical to allow the transportation of disabled visitors to the village beaches and then require the vehicle to be returned to the street or parking area. This necessitates the disabled person to have a driver to drop him (or her) off, then drive to a parking area, then trudge a long distance to the site of the drop off, then trudge the long distance through the sand back to get the vehicle.

Suppose the handicap person wants to go to the beach, is capable of driving himself, yet cannot find another person to go with him? Does he now not go to the beach? This rule creates unnecessary hardships and risks in the event of an emergency as well.

6) Page 121 ? 127. I strongly disagree with the buffers as presented. We must allow for pass-thru corridors. The beach is linear with the ocean buffering on one side and the dune line on the other. For example - If you pinch off access on one side of a 4 mile linear beach and pinch off access on the other side of the 4 mile section of beach with no corridor, then you effectively have closed off all 4 miles of the beach because you CAN'T get there. The proposed bird buffers are too large, blocking access to the interior sections from the two "buffered" ends.

I propose ORV pass-thru only corridors and to use breeding / nesting buffer distances to establish ORV pass through only corridors to ensure beach access in a way that does not hinder resource protection. I believe pass through corridors should be maintained for pedestrians and ORVs in all areas of

the Cape Hatteras National Seashore Recreational Area throughout the entire breeding and nesting season. Corridors are vital to providing access in a way that does not hinder resource protection.

Piping Plover unfledged chicks buffer should move with the brood as it relocates to reliable food source, not expanded.

The 1,000 meter distance for the piping plover is way too large and not based upon peer reviewed science. A more rational distance would be 200 meters per other sites in the nation for the piping plover. Ample scientific evidence and precedent exists to support a 200 meter buffer.

Buffers for other species, including American Oystercatchers, Least Terns and Colonial Waterbirds must also be changed. An effective 30 meter buffer should be established for these species rather than the 300 meter closure outlined in the DEIS.

NON-ENDANGERED BIRDS should not have same protection as if endangered. Not allowing ORV access is paramount to denying the public access to these beaches.

7) Page 468: I disagree with the limitations imposed on pedestrian and ORVs. Corridors or bypasses should be provided thru, around or below high tide line in all SMAs during entire breeding season to maintain access.

8) Page 124: I strongly disagree with the NPS slant of providing for over protection of resource management over that of the public's right to access the beaches. Pro-active initiatives include: Vegetation Management, Habitat Management, Enhanced Predator Management, Colonial Water bird social attraction, Piping Plover check fledge rate, Piping plover chick buffer distance, and pass-through buffers during the incubation period. Opportunities to implement less restrictive closures as a result of the above initiatives should be considered more frequently than the 5-year periodic review process identified in the DEIS.

9) I disagree with the NPS Resource Management Pedestrian / ORV Closure Policies. These policies address the least significant factors affecting nest survival with little chance to have more than negligible impact. For example: the AMOY Nest Failures are predominately due to non-human events. Using your own stats, the mammalian predation is 54%, Storm / Lunar Tides: 29%, Nest Abandonment: 6%, Avian Predation: 5%, and Ghost Crab Predation: 3%.

So what is the percentage due to human interference: just 3%! It's insignificant, yet the NPS wants to ban humans when their actions provide very little influence on the success rate of breeding birds and turtles.

10) I disagree with the stats of breeding plovers and the other birds in the Park when the NPS does not adequately consider locations neighboring the Recreational Area that are part of the same ecosystem, namely dredge and spoil island that are located just yards away and within sight of the seashore. These birds are part of the same ecosystem and should be included.

Those spoil islands, developed by man from dredging the waterways in the Pamlico Sound for channel upkeep are slammed full of birds. The reason why so many birds? NO PREDATORS. SO, birds are not as stupid as one might think. You have to count these birds and incorporate them in the stats when the NPS is talking about any so called decline in breeding pairs in the National Park.

11) Page 1: I do not think the DEIS responsibly addresses the cultural resource issues. The very purpose of the DEIS as set forth in the National Environmental Policy Act (NEPA) is to protect and preserve natural and cultural resources in the federal decision making process. In the DEIS, the statement "protect and preserve natural and cultural resources" appears in the first sentence of the first page of the plan, in the Purpose of the Plan section, and numerous times thereafter. Yet, the 810 page document devotes only two paragraphs to analysis of cultural resource issues.

12) Pages 270-281; 561-598: I strongly disagree with your economic analysis of the impact of the DEIS. The region of influence (ROI) incorporates the Northern Beach communities, including Kill Devil Hills, Kitty Hawk, Southern Shores and Duck. These areas are almost completely disconnected from ORV use and access issues relating to the Seashore. ? Inclusion of the Northern Beaches in analysis significantly dilutes estimates of economic impact on the 8 Seashore Villages

? Analysis of economic impact to the Seashore Villages appears to be significantly down played. Emphasis in DEIS is on the ROI-wide or county-wide level impacts.

? Nowhere is it clearly addressed that the overwhelming majority of negative impacts will be felt by small businesses in the Seashore Villages rather than by overall economic interests within the greater ROI.

On page xlvi, Alternative F is characterized as having a "negligible to moderate" adverse impact on small businesses. I strongly disagree with this statement.

I believe the negligible to moderate projection is inaccurate and relies on economic surveys that has not yet been published. Furthermore, this material is not expected to be added to the DEIS until after the public comment period has ended.

Based upon the economic harm we have already experienced under the consent decree, Dare County projects the economic impact of Alternative F to be substantial.

Beach closures have already had a devastating and unfair impact on many Dare County Businesses, causing foreclosures, bankruptcies, lay-offs, cutbacks, expensive refinancing, and depleted college funds and savings accounts.

Pages 270-286, 561-598: The socio-economic data and analyses are incomplete and erroneous and result in an understatement of the effect the restrictions will have upon the Island, the region and the state of NC. The US Park Services answer: Businesses will have to "adapt" to the new rules. (p.383) The negative economic impacts of the decree ARE KNOWN, so to say that the added restrictions would have negligible to moderate impact is indefensible.

13) Overall Visitor Counts - Overall visitor counts appear to include visitors to Fort Raleigh National Historic Site and the Wright Brothers National Memorial. A large percentage of these visitors vacation in the Northern Beaches communities and recreate on the non-federal beaches outside of the Seashore. Visitors who patronize the Fort Raleigh National Historic Site and the Wright Brothers National Memorial but do not visit the actual seashore areas need to be factored out.

Maintenance of Future Access to Cape Point and South Point Ocracoke: All socioeconomic analyses related to Alternative F are predicated on the assumption that access corridors will remain open for at least an appreciable portion of the visitor high season. Under Alternative F, the access corridors will be subject to Resource Closures based on buffers similar or identical to the Consent Decree. Unless some predictability of access to Cape Point and South Point Ocracoke can be assured, economic analyses predicated on assumption of access are fundamentally flawed.

Why would a group of surf fisherman want to come to Hatteras Island to surf fish if they are not sure they can access the prime fishing grounds at Cape Point? The answer is they won't come. If they don't come, they don't rent vacation homes and spend their money on Hatteras and Ocracoke Islands.

The definition of the Region of Influence (ROI), faulty data on economic activity generated by specific type recreational activity, incomplete visitation/business survey data, inflated overall Seashore visitor counts pertaining to beach use, and flawed key assumptions concerning the maintenance of access under Alternative F, all lead to inaccurate conclusions in the socioeconomic analyses. Specifically, these inaccuracies can be seen as understating the negative socio-economic impact of the Seashore Villages. Further, this negative impact will be absorbed almost entirely by Small Businesses. Neither of these important aspects of the management alternatives are adequately presented in the DEIS.

14) Page 136: I strongly disagree with your pet restriction proposals. The "prohibition of pets in the Seashore during bird breeding season including in front of the villages." = No Pets in public areas ?beaches, campgrounds, soundfront, foot trails, park maintained roads -from March 15 ?July 31.

15) Pages 125; 392 ? 396: SEA TURTLES. I disagree with the stats and procedures proposed. I think endangered sea turtles would benefit from management practices now in use at other federal seashores that are more proactive in efforts to achieve nesting success. This includes relocating nests to more desirable locations as is done in other state and federally controlled areas.

The Cape Hatteras National Seashore Recreational Area is on the northernmost fringe of turtle nesting locations for the southeast, accounting for about 1% of all turtle nests. Proposed buffer areas are not needed for protection of the turtles and amount to overprotection.

16) Pages 97- 101. I strongly disagree with proposals in this section saying that ORVs will be prohibited year round between ramps 27 and 30, at Hatteras Inlet (Hatteras Spit), Ocracoke Inlet (North Ocracoke Spit) and various other locations.

Not allowing ORV access is paramount to denying the public access to these beaches. They are located miles from the nearest parking or paved road area and too far to access on foot. As a matter of course, there has been no breeding of piping plover or other endangered species at the Hatteras Island Inlet (spit) area in the past 6 years.

17) Page 104: I disagree with the proposed night time driving closures. Per your proposals, night driving will be prohibited between May 1 and November 15th, forcing visitors off of the beaches early in the evening and preventing sunrise surf fishermen access in the morning. I propose a more moderate night time ban if one is needed, perhaps from June 1 ? September 15 with times being 1 hour after sunset and 1 hour before sunrise to allow beach goers to gather their stuff and exit the beach area.

Certainly more proactive measures such as relocating nests prone to weather and ocean events would dramatically increase the nesting success rates.
18) Page 121: I disagree with the proposed beach closings, including pedestrian access from March 15 until July 31 in 8 different beach locations which have traditionally been available. Please leave these areas open to beach walkers, shell collectors and those that want to access the beaches in these areas.

Conclusion:

Please, incorporate access corridors through any SMA so we can get to the open beach beyond. Incorporate the birds into the count that nest on the spoil islands. Base your buffer zones on peer reviewed science and scale them back to more reasonable distances as discussed.

It is neither logical nor reasonable to spend so much time, money and energy to overprotect a bird (Piping Plover) in the Cape Hatteras National Seashore that is on the southernmost fringe area of its breeding ground. That goes for the loggerhead turtle that is in its northernmost breeding area.

Let's scale back the buffer zones. You can always increase at a later date.

The USPS is leaning way over the line on over protection and not enough on the public's right to enjoy the beaches of the National Seashore. The proper balance is not achieved in the propose DEIS and needs to be modified so that the proper balance of reasonable resource protection and access to the beaches of the National Park is achieved. I could sum it up by saying "Protect, not Prohibit."

Thank you,

Correspondence: I strongly oppose the beach closures. We are real people who live on Hatteras Island and live here year round. Human Life on our Island must be a priority vs.birds and turtles. We cannot survive on this island with our beaches being closed. Our beaches are so well known in this country and tourist are not coming here if our beaches are closed to vehicles and pedestrians. Hatteras Island is noted for the most beautiful beaches for tourist to vacation and Hatteras is the FISHING CAPITAL! It is absurd to consider the birds and turtles existance and not our survival. I have lived on Hatteras Island for 66years and we have never had any problem getting along with them and they have always gotten along with us. Without our beaches it will be devastating to my business and every business on the Island. We are already suffering from the stagnant economy and closure of our beaches will take us to the bottom. Please consider OUR EXISTANCE!

Correspondence: I have been vacationing here for over 24 years. I love it here and the people, your beaches are beautiful. Our dogs also love the beaches. However the closing of your beaches will force me to go somewhere else. Please do not close these beaches!!! We love it here and so do our dogs! I realize birds are important too but so are people and with the economy the way it is I would ask that you reconsider. Most people on vacation here spend money and I would think it would certainly hurt your economy even more if we quite comming. Again please do not close these beaches.

Correspondence: I am a 25 year resident of Dare Co. and the Outer Banks and have always enjoyed open access to the beaches and its ability to bring us closer to nature and the enviroment.To restrict this access limits our ability to enjoy and appreciate the unique nature of the Outer Banks and changes the chance to celebrate in its beauty.To view our beaches from afar and behind protective barriers will only cause people to not understand our enviroment and not be as open to its presevation.Life is all about balance and how nature adjusts to us and we adjust to nature,but this should not be controlled by groups that have a narrow scope and limited vision.All interests must be concidered and everyone should have a choice in such decisions. Thank You, Billy Moseley

Correspondence: I am 6 years old and asked my PaPa to type this for me. I do not understand how people could be so evil to keep me from fishing with my papa and hunting seashells with my nana at cape point. I will never be able to visit again because of being in school the only time the point is open if it is open at all. This has been my favorite place since my first visit when I was just 5 months old. I can show you pictures of me fishing there 3 years ago before it was closed. I still tell all my friends how great the beach is. Again how could people be so evil to not let me go back to the point. I hate birds and hope they all die since they are the reason I cannot go to the beach.
Josh Kiser 6 years old Salem Va

The definition of the Region of Influence (ROI), faulty data on economic activity generated by specific type recreational activity, incomplete visitation/business survey data, inflated overall Seashore visitor counts pertaining to beach use, and flawed key assumptions concerning the maintenance of access under Alternative F, all lead to inaccurate conclusions in the socioeconomic analyses. Specifically, these inaccuracies can be seen as understating the negative socio-economic impact of the Seashore Villages. Further, this negative impact will be absorbed almost entirely by Small Businesses. Neither of these important aspects of the management alternatives are adequately presented in the DEIS.
- 14) Page 136: I strongly disagree with your pet restriction proposals. The "prohibition of pets in the Seashore during bird breeding season including in front of the villages." = No Pets in public areas ?beaches, campgrounds, soundfront, foot trails, park maintained roads -from March 15 ?July 31.
- 15) Pages 125; 392 ? 396: SEA TURTLES. I disagree with the stats and procedures proposed. I think endangered sea turtles would benefit from management practices now in use at other federal seashores that are more proactive in efforts to achieve nesting success. This includes relocating nests

to more desirable locations as is done in other state and federally controlled areas.

The Cape Hatteras National Seashore Recreational Area is on the northernmost fringe of turtle nesting locations for the southeast, accounting for about 1% of all turtle nests. Proposed buffer areas are not needed for protection of the turtles and amount to overprotection.

16) Pages 97- 101. I strongly disagree with proposals in this section saying that ORVs will be prohibited year round between ramps 27 and 30, at Hatteras Inlet (Hatteras Spit), Ocracoke Inlet (North Ocracoke Spit) and various other locations.

Not allowing ORV access is paramount to denying the public access to these beaches. They are located miles from the nearest parking or paved road area and too far to access on foot. As a matter of course, there has been no breeding of piping plover or other endangered species at the Hatteras Island Inlet (spit) area in the past 6 years.

17) Page 104: I disagree with the proposed night time driving closures. Per your proposals, night driving will be prohibited between May 1 and November 15th, forcing visitors off of the beaches early in the evening and preventing sunrise surf fishermen access in the morning. I propose a more moderate night time ban if one is needed, perhaps from June 1 ? September 15 with times being 1 hour after sunset and 1 hour before sunrise to allow beach goers to gather their stuff and exit the beach area.

Certainly more proactive measures such as relocating nests prone to weather and ocean events would dramatically increase the nesting success rates.

18) Page 121: I disagree with the proposed beach closings, including pedestrian access from March 15 until July 31 in 8 different beach locations which have traditionally been available. Please leave these areas open to beach walkers, shell collectors and those that want to access the beaches in these areas.

Conclusion:

Please, incorporate access corridors through any SMA so we can get to the open beach beyond. Incorporate the birds into the count that nest on the spoil islands. Base your buffer zones on peer reviewed science and scale them back to more reasonable distances as discussed.

It is neither logical nor reasonable to spend so much time, money and energy to overprotect a bird (Piping Plover) in the Cape Hatteras National Seashore that is on the southernmost fringe area of its breeding ground. That goes for the loggerhead turtle that is in its northernmost breeding area.

Let's scale back the buffer zones. You can always increase at a later date.

The USPS is leaning way over the line on over protection and not enough on the public's right to enjoy the beaches of the National Seashore. The proper balance is not achieved in the propose DEIS and needs to be modified so that the proper balance of reasonable resource protection and access to the beaches of the National Park is achieved. I could sum it up by saying "Protect, not Prohibit."

Thank you,

Correspondence: To whom it may concern:

I have reviewed the National Park Service's Off Road Vehicle (ORV) Management plan for the Cape Hatteras National Seashore (CHNS).

I am a long-time resident of North Carolina who enjoys visiting the CHNS. I spend money during my visits and supports the local Hatteras economy by doing so. I enjoy a variety of beach activities including sunbathing, bird watching, walking and driving on the beach. I firmly believe that protecting all of these activities and creating a predictable experience is best served by "Alternative D ? Increased Predictability and Simplified Management."

With this option D, I will never again be surprised while stretched out prone on the beach by a roaring ORV. I will know that our birds are protected for future generations, and I will continue to have predictable access to the beach whenever I choose to visit with my 4-wheel drive truck.

I encourage you to protect our beaches and to keep things simple for residents and visitors alike.

Thank you for this opportunity to comment.

Sincerely,

Elizabeth Hilborn

Correspondence: My comments concern the DEIS of the Off-Road Vehicle Management Plan prepared by the National Park Service (NPS) for the Cape Hatteras National Seashore Recreation Area.

1) Page 201: I disagree with the NPS statement: "Even with resource closures in place, protected species are still at risk [from pedestrians and ORVs]." No Piping Plover deaths have been attributed to ORVs. ORV violations continue to decrease as signage and education improve. Pedestrian violations are much more significant than ORV violations. It seems to me that any transgressions into protected area are the result of lack of NPS manpower and enforcement than the public purposely and willfully violating out of bounds areas.

2) Page xxiv: I question the statement of as per the DEIS: "Carrying capacity would be a 'peak use limit' determined for all areas based on the linear feet of beachfront?" If you close off huge sections of the beach, you force more people into smaller areas, potentially resulting in more resource impairment and diminished visitor experience.

3) Page xix and page 23: I am against having two different closures rules pertaining to the North facing beaches (North side) and the South facing beaches (South side) as per the grid outlined in Alternative "F". I disagree with the NPS proposal to close the beaches in villages of Frisco, Hatteras and Ocracoke Villages to ORV access longer than the traditional May 15 to September 15 period for the Northern beaches, even though seasonal visitor statistics are similar for all villages. Please, make them the same: May 15 -> September 15.

4) Page 1: I agree with your statement "ORVs have long served as a primary form of access for many portions of the beach in the seashore, and continue to be the most practical means of access and parking for many visitors."

However, pedestrian only areas discriminate against individuals with limited mobility due to age or physical impairments, families with small children, and those wishing to engage in activities requiring recreational equipment (boogie boards, beach umbrellas, beach chairs, coolers, fishing rods and tackle, etc)

5) Page 53: I disagree with the special use permit proposed guidelines. It is impractical to allow the transportation of disabled visitors to the village beaches and then require the vehicle to be returned to the street or parking area. This necessitates the disabled person to have a driver to drop him (or her) off, then drive to a parking area, then trudge a long distance to the site of the drop off, then trudge the long distance through the sand back to get the vehicle.

Suppose the handicap person wants to go to the beach, is capable of driving himself, yet cannot find another person to go with him? Does he now not go to the beach? This rule creates unnecessary hardships and risks in the event of an emergency as well.

6) Page 121 ? 127. I strongly disagree with the buffers as presented. We must allow for pass-thru corridors. The beach is linear with the ocean buffering on one side and the dune line on the other. For example - If you pinch off access on one side of a 4 mile linear beach and pinch off access on the other side of the 4 mile section of beach with no corridor, then you effectively have closed off all 4 miles of the beach because you CAN'T get there. The proposed bird buffers are too large, blocking access to the interior sections from the two "buffered" ends.

I propose ORV pass-thru only corridors and to use breeding / nesting buffer distances to establish ORV pass through only corridors to ensure beach access in a way that does not hinder resource protection. I believe pass through corridors should be maintained for pedestrians and ORVs in all areas of the Cape Hatteras National Seashore Recreational Area throughout the entire breeding and nesting season. Corridors are vital to providing access in a way that does not hinder resource protection.

Piping Plover unfledged chicks buffer should move with the brood as it relocates to reliable food source, not expanded.

The 1,000 meter distance for the piping plover is way too large and not based upon peer reviewed science. A more rational distance would be 200 meters per other sites in the nation for the piping plover. Ample scientific evidence and precedent exists to support a 200 meter buffer.

Buffers for other species, including American Oystercatchers, Least Terns and Colonial Waterbirds must also be changed. An effective 30 meter buffer should be established for these species rather than the 300 meter closure outlined in the DEIS.

NON-ENDANGERED BIRDS should not have same protection as if endangered. Not allowing ORV access is paramount to denying the public access to these beaches.

7) Page 468: I disagree with the limitations imposed on pedestrian and ORVs. Corridors or bypasses should be provided thru, around or below high tide line in all SMAs during entire breeding season to maintain access.

8) Page 124: I strongly disagree with the NPS slant of providing for over protection of resource management over that of the public's right to access the beaches. Pro-active initiatives include: Vegetation Management, Habitat Management, Enhanced Predator Management, Colonial Water bird social attraction, Piping Plover check fledge rate, Piping plover chick buffer distance, and pass-through buffers during the incubation period. Opportunities to implement less restrictive closures as a result of the above initiatives should be considered more frequently than the 5-year periodic review process identified in the DEIS.

9) I disagree with the NPS Resource Management Pedestrian / ORV Closure Policies. These policies address the least significant factors affecting nest survival with little chance to have more than negligible impact. For example: the AMOY Nest Failures are predominately due to non-human events.

Using your own stats, the mammalian predation is 54%, Storm / Lunar Tides: 29%, Nest Abandonment: 6%, Avian Predation: 5%, and Ghost Crab Predation: 3%,

So what is the percentage due to human interference: just 3%! It's insignificant, yet the NPS wants to ban humans when their actions provide very little influence on the success rate of breeding birds and turtles.

10) I disagree with the stats of breeding plovers and the other birds in the Park when the NPS does not adequately consider locations neighboring the Recreational Area that are part of the same ecosystem, namely dredge and spoil island that are located just yards away and within sight of the seashore. These birds are part of the same ecosystem and should be included.

Those spoil islands, developed by man from dredging the waterways in the Pamlico Sound for channel upkeep are slammed full of birds. The reason why so many birds? NO PREDATORS. SO, birds are not as stupid as one might think. You have to count these birds and incorporate them in the stats when the NPS is talking about any so called decline in breeding pairs in the National Park.

11) Page 1: I do not think the DEIS responsibly addresses the cultural resource issues. The very purpose of the DEIS as set forth in the National Environmental Policy Act (NEPA) is to protect and preserve natural and cultural resources in the federal decision making process. In the DEIS, the statement "protect and preserve natural and cultural resources" appears in the first sentence of the first page of the plan, in the Purpose of the Plan section, and numerous times thereafter. Yet, the 810 page document devotes only two paragraphs to analysis of cultural resource issues.

12) Pages 270-281; 561-598: I strongly disagree with your economic analysis of the impact of the DEIS. The region of influence (ROI) incorporates the Northern Beach communities, including Kill Devil Hills, Kitty Hawk, Southern Shores and Duck. These areas are almost completely disconnected from ORV use and access issues relating to the Seashore. ? Inclusion of the Northern Beaches in analysis significantly dilutes estimates of economic impact on the 8 Seashore Villages

? Analysis of economic impact to the Seashore Villages appears to be significantly down played. Emphasis in DEIS is on the ROI-wide or county-wide level impacts.

? Nowhere is it clearly addressed that the overwhelming majority of negative impacts will be felt by small businesses in the Seashore Villages rather than by overall economic interests within the greater ROI.

On page xlvi, Alternative F is characterized as having a "negligible to moderate" adverse impact on small businesses. I strongly disagree with this statement.

I believe the negligible to moderate projection is inaccurate and relies on economic surveys that has not yet been published. Furthermore, this material is not expected to be added to the DEIS until after the public comment period has ended.

Based upon the economic harm we have already experienced under the consent decree, Dare County projects the economic impact of Alternative F to be substantial.

Beach closures have already had a devastating and unfair impact on many Dare County Businesses, causing foreclosures, bankruptcies, lay-offs, cutbacks, expensive refinancing, and depleted college funds and savings accounts.

Pages 270-286, 561-598: The socio-economic data and analyses are incomplete and erroneous and result in an understatement of the effect the restrictions will have upon the Island, the region and the state of NC. The US Park Services answer: Businesses will have to "adapt" to the new rules. (p.383) The negative economic impacts of the decree ARE KNOWN, so to say that the added restrictions would have negligible to moderate impact is indefensible.

13) Overall Visitor Counts - Overall visitor counts appear to include visitors to Fort Raleigh National Historic Site and the Wright Brothers National Memorial. A large percentage of these visitors vacation in the Northern Beaches communities and recreate on the non-federal beaches outside of the Seashore. Visitors who patronize the Fort Raleigh National Historic Site and the Wright Brothers National Memorial but do not visit the actual seashore areas need to be factored out.

Maintenance of Future Access to Cape Point and South Point Ocracoke: All socioeconomic analyses related to Alternative F are predicated on the assumption that access corridors will remain open for at least an appreciable portion of the visitor high season. Under Alternative F, the access corridors will be subject to Resource Closures based on buffers similar or identical to the Consent Decree. Unless some predictability of access to Cape Point and South Point Ocracoke can be assured, economic analyses predicated on assumption of access are fundamentally flawed.

Why would a group of surf fisherman want to come to Hatteras Island to surf fish if they are not sure they can access the prime fishing grounds at Cape Point? The answer is they won't come. If they don't come, they don't rent vacation homes and spend their money on Hatteras and Ocracoke Islands.

The definition of the Region of Influence (ROI), faulty data on economic activity generated by specific type recreational activity, incomplete visitation/business survey data, inflated overall Seashore visitor counts pertaining to beach use, and flawed key assumptions concerning the maintenance of access under Alternative F, all lead to inaccurate conclusions in the socioeconomic analyses. Specifically, these inaccuracies can be seen as understating the negative socio-economic impact of the Seashore Villages. Further, this negative impact will be absorbed almost entirely by Small Businesses. Neither of these important aspects of the management alternatives are adequately presented in the DEIS.

14) Page 136: I strongly disagree with your pet restriction proposals. The "?prohibition of pets in the Seashore during bird breeding season including in front of the villages." = No Pets in public areas ?beaches, campgrounds, soundfront, foot trails, park maintained roads -from March 15 ?July 31.

15) Pages 125; 392 ? 396: SEA TURTLES. I disagree with the stats and procedures proposed. I think endangered sea turtles would benefit from management practices now in use at other federal seashores that are more proactive in efforts to achieve nesting success. This includes relocating nests to more desirable locations as is done in other state and federally controlled areas.

The Cape Hatteras National Seashore Recreational Area is on the northernmost fringe of turtle nesting locations for the southeast, accounting for about 1% of all turtle nests. Proposed buffer areas are not needed for protection of the turtles and amount to overprotection.

16) Pages 97- 101. I strongly disagree with proposals in this section saying that ORVs will be prohibited year round between ramps 27 and 30, at Hatteras Inlet (Hatteras Spit), Ocracoke Inlet (North Ocracoke Spit) and various other locations.

Not allowing ORV access is paramount to denying the public access to these beaches. They are located miles from the nearest parking or paved road area and too far to access on foot. As a matter of course, there has been no breeding of piping plover or other endangered species at the Hatteras Island Inlet (spit) area in the past 6 years.

17) Page 104: I disagree with the proposed night time driving closures. Per your proposals, night driving will be prohibited between May 1 and November 15th, forcing visitors off of the beaches early in the evening and preventing sunrise surf fishermen access in the morning. I propose a more moderate night time ban if one is needed, perhaps from June 1 ? September 15 with times being 1 hour after sunset and 1 hour before sunrise to allow beach goers to gather their stuff and exit the beach area.

Certainly more proactive measures such as relocating nests prone to weather and ocean events would dramatically increase the nesting success rates.

18) Page 121: I disagree with the proposed beach closings, including pedestrian access from March 15 until July 31 in 8 different beach locations which have traditionally been available. Please leave these areas open to beach walkers, shell collectors and those that want to access the beaches in these areas.

Conclusion:

Please, incorporate access corridors through any SMA so we can get to the open beach beyond. Incorporate the birds into the count that nest on the spoil islands. Base your buffer zones on peer reviewed science and scale them back to more reasonable distances as discussed.

It is neither logical nor reasonable to spend so much time, money and energy to overprotect a bird (Piping Plover) in the Cape Hatteras National Seashore that is on the southernmost fringe area of its breeding ground. That goes for the loggerhead turtle that is in its northernmost breeding area.

Let's scale back the buffer zones. You can always increase at a later date.

The USPS is leaning way over the line on over protection and not enough on the public's right to enjoy the beaches of the National Seashore. The proper balance is not achieved in the propose DEIS and needs to be modified so that the proper balance of reasonable resource protection and access to the beaches of the National Park is achieved. I could sum it up by saying "Protect, not Prohibit."

Thank you,

Correspondence: May 11, 2010
To: National Park Service
From: Meg Hughes (22 year resident of Avon; owner of two small businesses)
Subject: DEIS Off-Road Vehicle Management Plan
Following are my comments on the proposed Off-Road Vehicle Management Plan for the Cape Hatteras National Seashore:
Page 1 - I agree with "ORVs have long served as a primary form of access for many portions of the beach in the seashore, and continue to be the most practical means of access and parking for many visitors." Thousands of people come to the CHNS (Cape Hatteras National Seashore) every year because it is one of the best places to fish and the ability to drive on the beach is a huge part of the appeal. To my knowledge there has never been an incident involving an ORV and a pedestrian. I live right on the ocean and I have never observed ANY problem with ORVs.
Page 210 ? I disagree that people or ORVs have resulted in incidents involving bird or turtle nests. In my experience, anyone who comes to the CHNS loves nature and is very respectful of any wildlife ? They just think that the buffer area is too large (pages 121 ? 127). Access through the buffer by ORVs and pedestrians is of utmost importance to the enjoyment of the beach by residents and vacationers.
Page 124 ? I disagree with the time period of five years until the restrictions are reviewed. In my opinion, any and all courses of action should be reviewed after one year, or at most two. The results can certainly be measured sooner than the five-year period outlined in your plan.
Page 124 - I disagree with the way the NPS calculates successful nesting areas. Why don't calculations of successful nesting areas include the dredge islands in the Pamlico Sound and Pea Island Wildlife Refuge? Everyone who lives here knows that the dredge islands in the Sound are filled with Piping Plover (and other bird) nests. No one bothers or even approaches those islands! Pea Island is an area where ORVs are prohibited already ? why not count those miles of seashore in the total number of miles closed to vehicles?
Pages 125 and 377 ? I agree with your concern about the sea turtle nests and hatchlings. Although we have an active volunteer group that monitors the nests there is a chance that driving at night might be a hazard. However, I don't think there has been any interference to date that has affected the hatchling population. Certainly, other factors are far more significant ? storms and ghost crabs, for example. Pages 270 ? 281 and 561 ? 598. I strongly disagree with your analysis of the economic impact of ORV restrictions and beach closures due to nesting. Hatteras Island is a unique environment that does not exist in the other parts of the Outer Banks. Many of our visitors/tourists come because of the access to fishing on the points of land in Buxton and Hatteras as well as other locations on the Island. They come to the beaches on Hatteras Island because they are unspoiled and uncrowded. They don't come for the nightlife (there is none), boardwalks (there are none) or beaches with lifeguards (we have almost none). They are independent people who want to be able to go to a beach where they can be completely alone if they want to. I know of no other beach like ours? it is a VERY special place. The economic impact of some of the NPS policies in the last couple of years has definitely affected our two businesses. Our building is located next to a tackle shop ? if the fishermen and women don't come back (and MANY didn't) our businesses suffer. At this time, when our country's economy is suffering, no one feels it more than small businesses. Neither my husband nor I took a paycheck in the calendar year of 2009 or so far in 2010! We basically keep our business open in order to keep our employees employed! I know that I am not the only business owner on Hatteras Island in this situation. We don't need any more hardships! We need all the vacationers we can attract!
Page 136 ? I very strongly disagree with the proposed restrictions on pets. First of all, it will result in the immediate demise of at least two businesses on Hatteras. Trail rides to the beach are extremely popular with the tourists. If horses are not allowed on the beach, those businesses will close. I have been coming to Hatteras Island since the opening of the CHNS. From the time I first came here to camp with my family in 1958 until probably 1978, our family dog was an integral part of our vacation. As a resident I cannot imagine going to the beach without my dog. The leash law on the beach has made all of us very diligent about keeping our dogs in control and on a leash! I have NEVER observed an incident involving a dog and a turtle or a piping plover! Where did this idea come from? Certainly it is far too restrictive and, in my opinion, without cause!
I know from working in real estate that MANY people rent houses because they accommodate dogs. Approximately 30% of the rental houses allow pets. The other alternative has been to bring their dogs and put them in a kennel where they can take them out during the day to take them to the beach ? many people take advantage of this policy. If pets are not allowed on the beach, I guarantee you that at least 25% of those renters will never come back to Hatteras Island. In addition, the owners of the kennels will suffer to the point that they, too, may have to close.
In conclusion, I would like to ask that the NPS be more lenient in their efforts to protect the wildlife. This National Seashore was created for the use and enjoyment of the citizens, not as a wildlife refuge. I think that compromises can be made that will allow us to enjoy our beaches while respecting nature and all animal species ? endangered or not.
Thank you for any consideration you may give to my opinions on this matter.

Correspondence: I am opposed to the NPS preferred Alternative F. I am a nature lover but this plan goes too far in restricting access with no demonstrated benefits for birds and turtles. The plan implements all of the protocols recommended by Environmental Organizations and makes no allowances for protecting traditional access.
The plan uses the most restrictive USGS protocols including protections for state listed birds that do not require that level of protection. Gordon Myers, the executive director of the N.C. Wildlife Resources Commission, said that some birds don't require the buffers and beach closures that the plan allows. The NPS does not have baseline economic data prior to the consent decree. Without this data they cannot reliably estimate the impact to island businesses.
I would change the plan as follows. 1. Realistic buffers that adapt to behavior of the birds and geography of the nesting location. 2. Access corridors to spits and points year round. 3. Night Driving Restrictions based on when and where turtles nest not arbitrary dates. The night driving restrictions start on may 1st. Last year the first turtle nest was may 22nd. 4. Leave both sides of Hatteras inlet open for orv access. 5. Implement the turtle management plan recommended in this document: <http://www.obpa-nc.org/turtles/TurtleMgmtProgram.pdf>

Correspondence: I would like to address two different aspects of this plan. Number one I would like to look at the socioeconomic aspects. I work for two small

businesses, one is a headboat operation, the other a small marina. Both of these businesses have and will be affected by the beach closures. I have seen many customers on the headboat who also surf fish all week long with one trip offshore. These customers also shop in the marina where I work. Many customers have not been back due to the beach closures. We will definitely feel an impact in Hatteras village if there is no driving on the beach. Why not keep roping areas off where no vehicles or foot traffic are allowed. Everyone that uses the beach understands turtle nests and breeding areas, plus the predators are kept to a minimum, without the park service having to dispose of them. More interpretation and less enforcement might help to gain the support of the uneducated public. The second aspect I would like to address is the closure of Hatteras Inlet. This has been a very popular fishing spot in the past, especially when the bluefish are running. A man I worked with at the marina would stay out there until he couldn't see to tie his hooks on anymore. Just recently a charter boat capsized on the Hatteras side of the inlet. One man died and five more were rescued, if the Hatteras side of the inlet had been open to beach drivers that man may still be alive. They were in the water for a couple hours before the first boat came in from fishing. I am sure with interpretation and explanation, beach drivers and fishermen could be responsible enough not to intrude in certain areas.

I believe the negligible to moderate projection is inaccurate and relies on economic surveys that has not yet been published. Furthermore, this material is not expected to be added to the DEIS until after the public comment period has ended.

Based upon the economic harm we have already experienced under the consent decree, Dare County projects the economic impact of Alternative F to be substantial.

Beach closures have already had a devastating and unfair impact on many Dare County Businesses, causing foreclosures, bankruptcies, lay-offs, cutbacks, expensive refinancing, and depleted college funds and savings accounts.

Pages 270-286, 561-598: The socio-economic data and analyses are incomplete and erroneous and result in an understatement of the effect the restrictions will have upon the Island, the region and the state of NC. The US Park Services answer: Businesses will have to "adapt" to the new rules. (p.383) The negative economic impacts of the decree ARE KNOWN, so to say that the added restrictions would have negligible to moderate impact is indefensible.

13) Overall Visitor Counts - Overall visitor counts appear to include visitors to Fort Raleigh National Historic Site and the Wright Brothers National Memorial. A large percentage of these visitors vacation in the Northern Beaches communities and recreate on the non-federal beaches outside of the Seashore. Visitors who patronize the Fort Raleigh National Historic Site and the Wright Brothers National Memorial but do not visit the actual seashore areas need to be factored out.

Maintenance of Future Access to Cape Point and South Point Ocracoke: All socioeconomic analyses related to Alternative F are predicated on the assumption that access corridors will remain open for at least an appreciable portion of the visitor high season. Under Alternative F, the access corridors will be subject to Resource Closures based on buffers similar or identical to the Consent Decree. Unless some predictability of access to Cape Point and South Point Ocracoke can be assured, economic analyses predicated on assumption of access are fundamentally flawed.

Why would a group of surf fisherman want to come to Hatteras Island to surf fish if they are not sure they can access the prime fishing grounds at Cape Point? The answer is they won't come. If they don't come, they don't rent vacation homes and spend their money on Hatteras and Ocracoke Islands. The definition of the Region of Influence (ROI), faulty data on economic activity generated by specific type recreational activity, incomplete visitation/business survey data, inflated overall Seashore visitor counts pertaining to beach use, and flawed key assumptions concerning the maintenance of access under Alternative F, all lead to inaccurate conclusions in the socioeconomic analyses. Specifically, these inaccuracies can be seen as understating the negative socio-economic impact of the Seashore Villages. Further, this negative impact will be absorbed almost entirely by Small Businesses. Neither of these important aspects of the management alternatives are adequately presented in the DEIS.

14) Page 136: I strongly disagree with your pet restriction proposals. The "prohibition of pets in the Seashore during bird breeding season including in front of the villages." = No Pets in public areas ?beaches, campgrounds, soundfront, foot trails, park maintained roads -from March 15 ?July 31.

15) Pages 125; 392 ? 396: SEA TURTLES. I disagree with the stats and procedures proposed. I think endangered sea turtles would benefit from management practices now in use at other federal seashores that are more proactive in efforts to achieve nesting success. This includes relocating nests to more desirable locations as is done in other state and federally controlled areas.

The Cape Hatteras National Seashore Recreational Area is on the northernmost fringe of turtle nesting locations for the southeast, accounting for about 1% of all turtle nests. Proposed buffer areas are not needed for protection of the turtles and amount to overprotection.

16) Pages 97- 101. I strongly disagree with proposals in this section saying that ORVs will be prohibited year round between ramps 27 and 30, at Hatteras Inlet (Hatteras Spit), Ocracoke Inlet (North Ocracoke Spit) and various other locations.

Not allowing ORV access is paramount to denying the public access to these beaches. They are located miles from the nearest parking or paved road area and too far to access on foot. As a matter of course, there has been no breeding of piping plover or other endangered species at the Hatteras Island Inlet (spit) area in the past 6 years.

17) Page 104: I disagree with the proposed night time driving closures. Per your proposals, night driving will be prohibited between May 1 and November 15th, forcing visitors off of the beaches early in the evening and preventing sunrise surf fishermen access in the morning. I propose a more moderate night time ban if one is needed, perhaps from June 1 ? September 15 with times being 1 hour after sunset and 1 hour before sunrise to allow beach goers to gather their stuff and exit the beach area.

Certainly more proactive measures such as relocating nests prone to weather and ocean events would dramatically increase the nesting success rates.

18) Page 121: I disagree with the proposed beach closings, including pedestrian access from March 15 until July 31 in 8 different beach locations which have traditionally been available. Please leave these areas open to beach walkers, shell collectors and those that want to access the beaches in these areas.

Conclusion:

Please, incorporate access corridors through any SMA so we can get to the open beach beyond. Incorporate the birds into the count that nest on the spoil islands. Base your buffer zones on peer reviewed science and scale them back to more reasonable distances as discussed.

It is neither logical nor reasonable to spend so much time, money and energy to overprotect a bird (Piping Plover) in the Cape Hatteras National Seashore that is on the southernmost fringe area of its breeding ground. That goes for the loggerhead turtle that is in its northernmost breeding area.

Let's scale back the buffer zones. You can always increase at a later date.

The USPS is leaning way over the line on over protection and not enough on the public's right to enjoy the beaches of the National Seashore. The proper balance is not achieved in the propose DEIS and needs to be modified so that the proper balance of reasonable resource protection and access to the beaches of the National Park is achieved. I could sum it up by saying "Protect, not Prohibit."

Thank you,

Correspondence: As an avid angler on the North Carolina seashore, I am strongly opposed to the National Park Service (NPS) preferred alternative, Alternative F, in the DEIS and urge you to make significant changes to the preferred alternative in order to provide both reasonable resource protection and reasonable public access to public land. Recreational fishing is one of the most enjoyable American pastimes, and Cape Hatteras National Seashore has some of the best surf fishing locations on the east coast ? accessible only by ORV.
Alternative F is the most restrictive management option to date, far exceeding any sense of balance between resource protection and public access and betraying all promises made to the public regarding recreational uses in the seashore. The majority of the provisions included within the preferred alternative far exceed anything proposed by a majority of the Negotiated Rulemaking Committee, including excessively large resource closures (buffers), unnecessary year-round and floating closures, and the lack of access corridors around or through resource closures.
In order to restore balance to the DEIS, I highly recommend that the NPS revisit the proposal put forth to the Negotiated Rulemaking Committee in December of 2009. It provides the necessary protections for wildlife resources while having the support of a majority of the local community. Without reasonable ORV access, responsible anglers like me, and the local economy that is supported by recreational fishing, suffer greatly. I urge you to provide a better balance between resource protection and recreational uses by incorporating the December 2009 recommendations from the Negotiated Rulemaking Committee into the preferred alternative.

Correspondence: To Mike Murray, I am writing to state my opposition to the DEIS proposal of Alternative F. The solution that is suggested is no solution at all. The only thing that will be accomplished is that a chosen number of special interest groups will benefit in taking public land and making it a private entitlement area. Many decades have passed since I first discovered C.H.N.S.R.A.. It has for many years been the place where we vacation with our family, including our pets. We enjoy a variety of activities. We have come to feel that it is like a second home. The fact that this magnificent piece of shoreline was set aside for ALL citizens of our country no matter what socioeconomic background they come from is truly beyond words. It is a NATIONAL seashore and RECREATIONAL area for all to enjoy and cherish. And should remain as such. In reviewing the proposals of each Alternative it seems very clear that this is leaning toward special interest groups and not the community or the population of visitors this will effect. We have already noticed a decline in people on the island which in turn effects the whole economic stability of it, residents. It is also very clear that certain property owners would like nothing better than to have the beaches closed off so they can create a private beach effect to entice a higher rent for themselves. It is also no secret that every autumn Ornithologist converge down to the Outer Banks to observe the migration of birds on their Winter trek. Again they also would like nothing better than to have all this area available for their viewing pleasure. It is also very clear that your research is weak and not very accurate. Anywhere you drive on the island you see Oystercatchers, Terns, & Skimmers. They are all over the place from sitting on the beach to hanging out in the Food Lion parking lot. Perhaps you would like to eliminate the grocery store in your proposal also? Clearly they are doing just fine among the population. As for the plovers, yes, they do need a little extra care but, not the whole CHNSRA. After all it is the outer boundary of where they travel. They actually enjoy cool weather better. Now the turtles are another concern. As stated by other people the biggest danger to the beloved Turtle is the natural environment of tide lines and natural wildlife predators, Not visiting or residential Dogs. I have always brought my dogs for decades to CHNSRA and I can assure you that they have never had an interest in any Turtle nesting enclosure. I support having dogs on leashes and keep ours accountable. In conclusion I urge you to realize how important CHNSRA is to everyone. That it was preserved for Everyone and should remain open and free to all citizens, including, being able to bring their dogs. It is a National Seashore & Recreational Area and that means it is not just for a chosen few but for ALL people in this country. Respectfully yours, Joanne Chamberlain 75 Tremper Drive Wallingford, CT. 06492

Correspondence Type: Web Form

Correspondence: My comments concern the DEIS of the Off-Road Vehicle Management Plan prepared by the National Park Service (NPS) for the Cape Hatteras National Seashore Recreation Area.

- 1) Page 201: I disagree with the NPS statement: "Even with resource closures in place, protected species are still at risk [from pedestrians and ORVs]." No Piping Plover deaths have been attributed to ORVs. ORV violations continue to decrease as signage and education improve. Pedestrian violations are much more significant than ORV violations. It seems to me that any transgressions into protected area are the result of lack of NPS manpower and enforcement than the public purposely and willfully violating out of bounds areas.
- 2) Page xxiv: I question the statement of as per the DEIS: "Carrying capacity would be a 'peak use limit' determined for all areas based on the linear feet of beachfront?" If you close off huge sections of the beach, you force more people into smaller areas, potentially resulting in more resource impairment and diminished visitor experience.
- 3) Page xix and page 23: I am against having two different closure rules pertaining to the North facing beaches (North side) and the South facing beaches (South side) as per the grid outlined in Alternative "F". I disagree with the NPS proposal to close the beaches in villages of Frisco, Hatteras and Ocracoke Villages to ORV access longer than the traditional May 15 to September 15 period for the Northern beaches, even though seasonal visitor statistics are similar for all villages. Please, make them the same: May 15 -> September 15.
- 4) Page 1: I agree with your statement "ORVs have long served as a primary form of access for many portions of the beach in the seashore, and continue to be the most practical means of access and parking for many visitors." However, pedestrian only areas discriminate against individuals with limited mobility due to age or physical impairments, families with small children, and those wishing to engage in activities requiring recreational equipment (boogie boards, beach umbrellas, beach chairs, coolers, fishing rods and tackle, etc)
- 5) Page 53: I disagree with the special use permit proposed guidelines. It is impractical to allow the transportation of disabled visitors to the village beaches and then require the vehicle to be returned to the street or parking area. This necessitates the disabled person to have a driver to drop him (or her) off, then drive to a parking area, then trudge a long distance to the site of the drop off, then trudge the long distance through the sand back to get the vehicle. Suppose the handicap person wants to go to the beach, is capable of driving himself, yet cannot find another person to go with him? Does he now not go to the beach? This rule creates unnecessary hardships and risks in the event of an emergency as well.
- 6) Page 121 ? 127. I strongly disagree with the buffers as presented. We must allow for pass-thru corridors. The beach is linear with the ocean buffering on one side and the dune line on the other. For example - If you pinch off access on one side of a 4 mile linear beach and pinch off access on the other side of the 4 mile section of beach with no corridor, then you effectively have closed off all 4 miles of the beach because you CAN'T get there. The proposed bird buffers are too large, blocking access to the interior sections from the two "buffered" ends. I propose ORV pass-thru only corridors and to use breeding / nesting buffer distances to establish ORV pass through only corridors to ensure beach access in a way that does not hinder resource protection. I believe pass through corridors should be maintained for pedestrians and ORVs in all areas of the Cape Hatteras National Seashore Recreation Area throughout the entire breeding and nesting season. Corridors are vital to providing access in a way that does not hinder resource protection. Piping Plover unfledged chicks buffer should move with the brood as it relocates to reliable food source, not expanded. The 1,000 meter distance for the piping plover is way too large and not based upon peer reviewed science. A more rational distance would be 200 meters per other sites in the nation for the piping plover. Ample scientific evidence and precedent exists to support a 200 meter buffer. Buffers for other species, including American Oystercatchers, Least Terns and Colonial Waterbirds must also be changed. An effective 30 meter buffer should be established for these species rather than the 300 meter closure outlined in the DEIS. NON-ENDANGERED BIRDS should not have same protection as if endangered. Not allowing ORV access is paramount to denying the public access to these beaches.
- 7) Page 468: I disagree with the limitations imposed on pedestrian and ORVs. Corridors or bypasses should be provided thru, around or below high tide line in all SMAs during entire breeding season to maintain access.
- 8) Page 124: I strongly disagree with the NPS slant of providing for over protection of resource management over that of the public's right to access the beaches. Pro-active initiatives include: Vegetation Management, Habitat Management, Enhanced Predator Management, Colonial Water bird social attraction, Piping Plover check fledge rate, Piping plover chick buffer distance, and pass-through buffers during the incubation period. Opportunities to implement less restrictive closures as a result of the above initiatives should be considered more frequently than the 5-year periodic review process identified in the DEIS.
- 9) I disagree with the NPS Resource Management Pedestrian / ORV Closure Policies. These policies address the least significant factors affecting nest survival with little chance to have more than negligible impact. For example: the AMOY Nest Failures are predominately due to non-human events. Using your own stats, the mammalian predation is 54%, Storm / Lunar Tides: 29%, Nest Abandonment: 6%, Avian Predation: 5%, and Ghost Crab Predation: 3%. So what is the percentage due to human interference: just 3%! It's insignificant, yet the NPS wants to ban humans when their actions provide very little influence on the success rate of breeding birds and turtles.
- 10) I disagree with the stats of breeding plovers and the other birds in the Park when the NPS does not adequately consider locations neighboring the Recreational Area that are part of the same ecosystem, namely dredge and spoil island that are located just yards away and within sight of the seashore. These birds are part of the same ecosystem and should be included. Those spoil islands, developed by man from dredging the waterways in the Pamlico Sound for channel upkeep are slammed full of birds. The reason

why so many birds? NO PREDATORS. SO, birds are not as stupid as one might think. You have to count these birds and incorporate them in the stats when the NPS is talking about any so called decline in breeding pairs in the National Park.

11) Page 1: I do not think the DEIS responsibly addresses the cultural resource issues. The very purpose of the DEIS as set forth in the National Environmental Policy Act (NEPA) is to protect and preserve natural and cultural resources in the federal decision making process. In the DEIS, the statement "protect and preserve natural and cultural resources" appears in the first sentence of the first page of the plan, in the Purpose of the Plan section, and numerous times thereafter. Yet, the 810 page document devotes only two paragraphs to analysis of cultural resource issues.

12) Pages 270-281; 561-598: I strongly disagree with your economic analysis of the impact of the DEIS. The region of influence (ROI) incorporates the Northern Beach communities, including Kill Devil Hills, Kitty Hawk, Southern Shores and Duck. These areas are almost completely disconnected from ORV use and access issues relating to the Seashore. ? Inclusion of the Northern Beaches in analysis significantly dilutes estimates of economic impact on the 8 Seashore Villages

? Analysis of economic impact to the Seashore Villages appears to be significantly down played. Emphasis in DEIS is on the ROI-wide or county-wide level impacts.

? Nowhere is it clearly addressed that the overwhelming majority of negative impacts will be felt by small businesses in the Seashore Villages rather than by overall economic interests within the greater ROI.

On page xlvi, Alternative F is characterized as having a "negligible to moderate" adverse impact on small businesses. I strongly disagree with this statement.

I believe the negligible to moderate projection is inaccurate and relies on economic surveys that has not yet been published. Furthermore, this material is not expected to be added to the DEIS until after the public comment period has ended.

Based upon the economic harm we have already experienced under the consent decree, Dare County projects the economic impact of Alternative F to be substantial.

Beach closures have already had a devastating and unfair impact on many Dare County Businesses, causing foreclosures, bankruptcies, lay-offs, cutbacks, expensive refinancing, and depleted college funds and savings accounts.

Pages 270-286, 561-598: The socio-economic data and analyses are incomplete and erroneous and result in an understatement of the effect the restrictions will have upon the Island, the region and the state of NC. The US Park Services answer: Businesses will have to "adapt" to the new rules. (p.383) The negative economic impacts of the decree ARE KNOWN, so to say that the added restrictions would have negligible to moderate impact is indefensible.

13) Overall Visitor Counts - Overall visitor counts appear to include visitors to Fort Raleigh National Historic Site and the Wright Brothers National Memorial. A large percentage of these visitors vacation in the Northern Beaches communities and recreate on the non-federal beaches outside of the Seashore. Visitors who patronize the Fort Raleigh National Historic Site and the Wright Brothers National Memorial but do not visit the actual seashore areas need to be factored out.

Maintenance of Future Access to Cape Point and South Point Ocracoke: All socioeconomic analyses related to Alternative F are predicated on the assumption that access corridors will remain open for at least an appreciable portion of the visitor high season. Under Alternative F, the access corridors will be subject to Resource Closures based on buffers similar or identical to the Consent Decree. Unless some predictability of access to Cape Point and South Point Ocracoke can be assured, economic analyses predicated on assumption of access are fundamentally flawed.

Why would a group of surf fisherman want to come to Hatteras Island to surf fish if they are not sure they can access the prime fishing grounds at Cape Point? The answer is they won't come. If they don't come, they don't rent vacation homes and spend their money on Hatteras and Ocracoke Islands.

The definition of the Region of Influence (ROI), faulty data on economic activity generated by specific type recreational activity, incomplete visitation/business survey data, inflated overall Seashore visitor counts pertaining to beach use, and flawed key assumptions concerning the maintenance of access under Alternative F, all lead to inaccurate conclusions in the socioeconomic analyses. Specifically, these inaccuracies can be seen as understating the negative socio-economic impact of the Seashore Villages. Further, this negative impact will be absorbed almost entirely by Small Businesses. Neither of these important aspects of the management alternatives are adequately presented in the DEIS.

14) Page 136: I strongly disagree with your pet restriction proposals. The "?prohibition of pets in the Seashore during bird breeding season including in front of the villages." = No Pets in public areas ?beaches, campgrounds, soundfront, foot trails, park maintained roads -from March 15 ?July 31.

15) Pages 125; 392 ? 396: SEA TURTLES. I disagree with the stats and procedures proposed. I think endangered sea turtles would benefit from management practices now in use at other federal seashores that are more proactive in efforts to achieve nesting success. This includes relocating nests to more desirable locations as is done in other state and federally controlled areas.

The Cape Hatteras National Seashore Recreational Area is on the northernmost fringe of turtle nesting locations for the southeast, accounting for about 1% of all turtle nests. Proposed buffer areas are not needed for protection of the turtles and amount to overprotection.

16) Pages 97- 101. I strongly disagree with proposals in this section saying that ORVs will be prohibited year round between ramps 27 and 30, at Hatteras Inlet (Hatteras Spit), Ocracoke Inlet (North Ocracoke Spit) and various other locations.

Not allowing ORV access is paramount to denying the public access to these beaches. They are located miles from the nearest parking or paved road area and too far to access on foot. As a matter of course, there has been no breeding of piping plover or other endangered species at the Hatteras Island Inlet (spit) area in the past 6 years.

17) Page 104: I disagree with the proposed night time driving closures. Per your proposals, night driving will be prohibited between May 1 and November 15th, forcing visitors off of the beaches early in the evening and preventing sunrise surf fishermen access in the morning. I propose a more moderate night time ban if one is needed, perhaps from June 1 ? September 15 with times being 1 hour after sunset and 1 hour before sunrise to allow beach goers to gather their stuff and exit the beach area.

Certainly more proactive measures such as relocating nests prone to weather and ocean events would dramatically increase the nesting success rates.

18) Page 121: I disagree with the proposed beach closings, including pedestrian access from March 15 until July 31 in 8 different beach locations which have traditionally been available. Please leave these areas open to beach walkers, shell collectors and those that want to access the beaches in these areas.

Conclusion:

Please, incorporate access corridors through any SMA so we can get to the open beach beyond. Incorporate the birds into the count that nest on the spoil islands. Base your buffer zones on peer reviewed science and scale them back to more reasonable distances as discussed.

It is neither logical nor reasonable to spend so much time, money and energy to overprotect a bird (Piping Plover) in the Cape Hatteras National Seashore that is on the southernmost fringe area of its breeding ground. That goes for the loggerhead turtle that is in its northernmost breeding area. Let's scale back the buffer zones. You can always increase at a later date.

The USFS is leaning way over the line on over protection and not enough on the public's right to enjoy the beaches of the National Seashore. The proper balance is not achieved in the propose DEIS and needs to be modified so that the proper balance of reasonable resource protection and access to the beaches of the National Park is achieved. I could sum it up by saying "Protect, not Prohibit."

Thank you,

Correspondence: I do not agree with the new rules proposed for the beaches at Cape Hatteras, NC. We have spent four months or more each year on the Island for the last twenty years. We have an ORV and love to surf fish and ride on the beautiful beaches.. We feel if the new rules are passed it will be a disaster for the island. Not only for us BUT for all the people who live and work on the island It will close ALL the businesses and people will lose their homes as well as their livelihoods. Think of the money that North Carolina will lose by the loss of all the vacationers alone. The empty campgrounds, motels, homes, businesses, it would be devastating. You might as well cut the island off the map and let the ocean swallow it up!!!!!!

God made these birds and he will take care of them. They will survive as they have for many, many years.....These bird lovers are crazy and don't think of the people who will be effected.

I ask that you think of the people of Hatteras Island and not a birds that are not even in danger and PLEASE do not close our beaches.....

Thanks,
Betty Noel

Correspondence: May 11, 2010
 To: National Park Service
 From: Joe Klea (22 year resident of Avon; owner of two small businesses)
 Subject: DEIS Off-Road Vehicle Management Plan
 Following are my comments on the proposed Off-Road Vehicle Management Plan for the Cape Hatteras National Seashore:
 Page 1 - I agree with "ORVs have long served as a primary form of access for many portions of the beach in the seashore, and continue to be the most practical means of access and parking for many visitors." Thousands of people come to the CHNS (Cape Hatteras National Seashore) every year because it is one of the best places to fish and the ability to drive on the beach is a huge part of the appeal. To my knowledge there has never been an incident involving an ORV and a pedestrian. I live right on the ocean and I have never observed ANY problem with ORVs.
 Page 210 ? I disagree that people or ORVs have resulted in incidents involving bird or turtle nests. In my experience, anyone who comes to the CHNS loves nature and is very respectful of any wildlife ? They just think that the buffer area is too large (pages 121 ? 127). Access through the buffer by ORVs and pedestrians is of utmost importance to the enjoyment of the beach by residents and vacationers.
 Page 124 ? I disagree with the time period of five years until the restrictions are reviewed. In my opinion, any and all courses of action should be reviewed after one year, or at most two. The results can certainly be measured sooner than the five-year period outlined in your plan.
 Page 124 - I disagree with the way the NPS calculates successful nesting areas. Why don't calculations of successful nesting areas include the dredge islands in the Pamlico Sound and Pea Island Wildlife Refuge? Everyone who lives here knows that the dredge islands in the Sound are filled with Piping Plover (and other bird) nests. No one bothers or even approaches those islands! Pea Island is an area where ORVs are prohibited already ? why not count those miles of seashore in the total number of miles closed to vehicles?
 Pages 125 and 377 ? I agree with your concern about the sea turtle nests and hatchlings. Although we have an active volunteer group that monitors the nests there is a chance that driving at night might be a hazard. However, I don't think there has been any interference to date that has affected the hatchling population. Certainly, other factors are far more significant ? storms and ghost crabs, for example.
 Pages 270 ? 281 and 561 ? 598. I strongly disagree with your analysis of the economic impact of ORV restrictions and beach closures due to nesting. Hatteras Island is a unique environment that does not exist in the other parts of the Outer Banks. Many of our visitors/tourists come because of the access to fishing on the points of land in Buxton and Hatteras as well as other locations on the Island. They come to the beaches on Hatteras Island because they are unspoiled and uncrowded. They don't come for the nightlife (there is none), boardwalks (there are none) or beaches with lifeguards (we have almost none). They are independent people who want to be able to go to a beach where they can be completely alone if they want to. I know of no other beach like ours? it is a VERY special place.
 The economic impact of some of the NPS policies in the last couple of years has definitely affected our two businesses. Our building is located next to a tackle shop ? if the fishermen and women don't come back (and MANY didn't) our businesses suffer. At this time, when our country's economy is suffering, no one feels it more than small businesses. Neither my wife nor I took a paycheck in the calendar year of 2009 or so far in 2010! We basically keep our business open in order to keep our employees employed! I know that I am not the only business owner on Hatteras Island in this situation. We don't need any more hardships! We need all the vacationers we can attract!
 Page 136 ? I very strongly disagree with the proposed restrictions on pets. First of all, it will result in the immediate demise of at least two businesses on Hatteras. Trail rides to the beach are extremely popular with the tourists. If horses are not allowed on the beach, those businesses will close.
 As a resident I cannot imagine going to the beach without my dog. The leash law on the beach has made all of us very diligent about keeping our dogs in control and on a leash! I have NEVER observed an incident involving a dog and a turtle or a piping plover! Where did this idea come from? Certainly it is far too restrictive and, in my opinion, without cause!
 I know from working in real estate that MANY people rent houses because they accommodate dogs. Approximately 30% of the rental houses allow pets. The other alternative has been to bring their dogs and put them in a kennel where they can take them out during the day to take them to the beach ? many people take advantage of this policy. If pets are not allowed on the beach, I guarantee you that at least 25% of those renters will never come back to Hatteras Island. In addition, the owners of the kennels will suffer to the point that they, too, may have to close.
 In conclusion, I would like to ask that the NPS be more lenient in their efforts to protect the wildlife. This National Seashore was created for the use and enjoyment of the citizens, not as a wildlife refuge. I think that compromises can be made that will allow us to enjoy our beaches while respecting nature and all animal species ? endangered or not.
 Thank you for any consideration you may give to my opinions on this matter.

Correspondence: Mike Murray, Superintendent
 Cape Hatteras National Seashore Recreational Area
 1401 National Park Drive
 Manteo, NC 27954
 Dear Superintendent Murray,
 Please accept this letter as my comment on the ORV DEIS before you at this time.
 After reviewing the National Park Service DEIS I must disagree with any of the six alternatives within the document.
 I have; however, reviewed the 77 page Coalition for Beach Access Position Statement signed by several groups that were a part of the negotiated rule making process and it by far succeeds in furnishing the best visitor experience while maintaining the needs of protecting the fragile resources.
 Please consider all aspects of this alternative and put people back into the management of Cape Hatteras National Seashore

Correspondence: My comments concern the DEIS of the Off-Road Vehicle Management Plan prepared by the National Park Service (NPS) for the Cape Hatteras National Seashore Recreation Area.
 1) Page 201: I disagree with the NPS statement: "Even with resource closures in place, protected species are still at risk [from pedestrians and ORVs]." No Piping Plover deaths have been attributed to ORVs. ORV violations continue to decrease as signage and education improve. Pedestrian violations are much more significant than ORV violations. It seems to me that any transgressions into protected area are the result of lack of NPS manpower and enforcement than the public purposely and willfully violating out of bounds areas.

2) Page xxiv: I question the statement of as per the DEIS: "Carrying capacity would be a 'peak use limit' determined for all areas based on the linear feet of beachfront?" If you close off huge sections of the beach, you force more people into smaller areas, potentially resulting in more resource impairment and diminished visitor experience.

3) Page xix and page 23: I am against having two different closures rules pertaining to the North facing beaches (North side) and the South facing beaches (South side) as per the grid outlined in Alternative "F". I disagree with the NPS proposal to close the beaches in villages of Frisco, Hatteras and Ocracoke Villages to ORV access longer than the traditional May 15 to September 15 period for the Northern beaches, even though seasonal visitor statistics are similar for all villages. Please, make them the same: May 15 -> September 15.

4) Page 1: I agree with your statement "ORVs have long served as a primary form of access for many portions of the beach in the seashore, and continue to be the most practical means of access and parking for many visitors."

However, pedestrian only areas discriminate against individuals with limited mobility due to age or physical impairments, families with small children, and those wishing to engage in activities requiring recreational equipment (boogie boards, beach umbrellas, beach chairs, coolers, fishing rods and tackle, etc)

5) Page 53: I disagree with the special use permit proposed guidelines. It is impractical to allow the transportation of disabled visitors to the village beaches and then require the vehicle to be returned to the street or parking area. This necessitates the disabled person to have a driver to drop him (or her) off, then drive to a parking area, then trudge a long distance to the site of the drop off, then trudge the long distance through the sand back to get the vehicle.

Suppose the handicap person wants to go to the beach, is capable of driving himself, yet cannot find another person to go with him? Does he now not go to the beach? This rule creates unnecessary hardships and risks in the event of an emergency as well.

6) Page 121 ? 127. I strongly disagree with the buffers as presented. We must allow for pass-thru corridors. The beach is linear with the ocean buffering on one side and the dune line on the other. For example - If you pinch off access on one side of a 4 mile linear beach and pinch off access on the other side of the 4 mile section of beach with no corridor, then you effectively have closed off all 4 miles of the beach because you CAN'T get there. The proposed bird buffers are too large, blocking access to the interior sections from the two "buffered" ends.

I propose ORV pass-thru only corridors and to use breeding / nesting buffer distances to establish ORV pass through only corridors to ensure beach access in a way that does not hinder resource protection. I believe pass through corridors should be maintained for pedestrians and ORVs in all areas of the Cape Hatteras National Seashore Recreational Area throughout the entire breeding and nesting season. Corridors are vital to providing access in a way that does not hinder resource protection.

Piping Plover unfledged chicks buffer should move with the brood as it relocates to reliable food source, not expanded.

The 1,000 meter distance for the piping plover is way too large and not based upon peer reviewed science. A more rational distance would be 200 meters per other sites in the nation for the piping plover. Ample scientific evidence and precedent exists to support a 200 meter buffer.

Buffers for other species, including American Oystercatchers, Least Terns and Colonial Waterbirds must also be changed. An effective 30 meter buffer should be established for these species rather than the 300 meter closure outlined in the DEIS.

NON-ENDANGERED BIRDS should not have same protection as if endangered. Not allowing ORV access is paramount to denying the public access to these beaches.

7) Page 468: I disagree with the limitations imposed on pedestrian and ORVs. Corridors or bypasses should be provided thru, around or below high tide line in all SMAs during entire breeding season to maintain access.

8) Page 124: I strongly disagree with the NPS slant of providing for over protection of resource management over that of the public's right to access the beaches. Pro-active initiatives include: Vegetation Management, Habitat Management, Enhanced Predator Management, Colonial Water bird social attraction, Piping Plover check fledge rate, Piping plover chick buffer distance, and pass-through buffers during the incubation period. Opportunities to implement less restrictive closures as a result of the above initiatives should be considered more frequently than the 5-year periodic review process identified in the DEIS.

9) I disagree with the NPS Resource Management Pedestrian / ORV Closure Policies. These policies address the least significant factors affecting nest survival with little chance to have more than negligible impact. For example: the AMOY Nest Failures are predominately due to non-human events. Using your own stats, the mammalian predation is 54%, Storm / Lunar Tides: 29%, Nest Abandonment: 6%, Avian Predation: 5%, and Ghost Crab Predation: 3%.

So what is the percentage due to human interference: just 3%! It's insignificant, yet the NPS wants to ban humans when their actions provide very little influence on the success rate of breeding birds and turtles.

10) I disagree with the stats of breeding plovers and the other birds in the Park when the NPS does not adequately consider locations neighboring the Recreational Area that are part of the same ecosystem, namely dredge and spoil island that are located just yards away and within sight of the seashore. These birds are part of the same ecosystem and should be included.

Those spoil islands, developed by man from dredging the waterways in the Pamlico Sound for channel upkeep are slammed full of birds. The reason why so many birds? NO PREDATORS. SO, birds are not as stupid as one might think. You have to count these birds and incorporate them in the stats when the NPS is talking about any so called decline in breeding pairs in the National Park.

11) Page 1: I do not think the DEIS responsibly addresses the cultural resource issues. The very purpose of the DEIS as set forth in the National Environmental Policy Act (NEPA) is to protect and preserve natural and cultural resources in the federal decision making process. In the DEIS, the statement "protect and preserve natural and cultural resources" appears in the first sentence of the first page of the plan, in the Purpose of the Plan section, and numerous times thereafter. Yet, the 810 page document devotes only two paragraphs to analysis of cultural resource issues.

12) Pages 270-281; 561-598: I strongly disagree with your economic analysis of the impact of the DEIS. The region of influence (ROI) incorporates the Northern Beach communities, including Kill Devil Hills, Kitty Hawk, Southern Shores and Duck. These areas are almost completely disconnected from ORV use and access issues relating to the Seashore. ? Inclusion of the Northern Beaches in analysis significantly dilutes estimates of economic impact on the 8 Seashore Villages

? Analysis of economic impact to the Seashore Villages appears to be significantly down played. Emphasis in DEIS is on the ROI-wide or county-wide level impacts.

? Nowhere is it clearly addressed that the overwhelming majority of negative impacts will be felt by small businesses in the Seashore Villages rather than by overall economic interests within the greater ROI.

On page xlvi, Alternative F is characterized as having a "negligible to moderate" adverse impact on small businesses. I strongly disagree with this statement.

I believe the negligible to moderate projection is inaccurate and relies on economic surveys that has not yet been published. Furthermore, this material is not expected to be added to the DEIS until after the public comment period has ended.

Based upon the economic harm we have already experienced under the consent decree, Dare County projects the economic impact of Alternative F to be substantial.

Beach closures have already had a devastating and unfair impact on many Dare County Businesses, causing foreclosures, bankruptcies, lay-offs, cutbacks, expensive refinancing, and depleted college funds and savings accounts.

Pages 270-286, 561-598: The socio-economic data and analyses are incomplete and erroneous and result in an understatement of the effect the restrictions will have upon the Island, the region and the state of NC. The US Park Services answer: Businesses will have to "adapt" to the new rules.

(p.383) The negative economic impacts of the decree ARE KNOWN, so to say that the added restrictions would have negligible to moderate impact is indefensible.

13) Overall Visitor Counts - Overall visitor counts appear to include visitors to Fort Raleigh National Historic Site and the Wright Brothers National Memorial. A large percentage of these visitors vacation in the Northern Beaches communities and recreate on the non-federal beaches outside of the Seashore. Visitors who patronize the Fort Raleigh National Historic Site and the Wright Brothers National Memorial but do not visit the actual seashore areas need to be factored out.

Maintenance of Future Access to Cape Point and South Point Ocracoke: All socioeconomic analyses related to Alternative F are predicated on the assumption that access corridors will remain open for at least an appreciable portion of the visitor high season. Under Alternative F, the access corridors will be subject to Resource Closures based on buffers similar or identical to the Consent Decree. Unless some predictability of access to Cape Point and

South Point Ocracoke can be assured, economic analyses predicated on assumption of access are fundamentally flawed.

Why would a group of surf fisherman want to come to Hatteras Island to surf fish if they are not sure they can access the prime fishing grounds at Cape Point? The answer is they won't come. If they don't come, they don't rent vacation homes and spend their money on Hatteras and Ocracoke Islands.

The definition of the Region of Influence (ROI), faulty data on economic activity generated by specific type recreational activity, incomplete visitation/business survey data, inflated overall Seashore visitor counts pertaining to beach use, and flawed key assumptions concerning the maintenance of access under Alternative F, all lead to inaccurate conclusions in the socioeconomic analyses. Specifically, these inaccuracies can be seen as understating the negative socio-economic impact of the Seashore Villages. Further, this negative impact will be absorbed almost entirely by Small Businesses. Neither of these important aspects of the management alternatives are adequately presented in the DEIS.

14) Page 136: I strongly disagree with your pet restriction proposals. The "prohibition of pets in the Seashore during bird breeding season including in front of the villages." = No Pets in public areas ?beaches, campgrounds, soundfront, foot trails, park maintained roads -from March 15 ?July 31.

15) Pages 125; 392 ? 396: SEA TURTLES. I disagree with the stats and procedures proposed. I think endangered sea turtles would benefit from management practices now in use at other federal seashores that are more proactive in efforts to achieve nesting success. This includes relocating nests to more desirable locations as is done in other state and federally controlled areas.

The Cape Hatteras National Seashore Recreational Area is on the northernmost fringe of turtle nesting locations for the southeast, accounting for about 1% of all turtle nests. Proposed buffer areas are not needed for protection of the turtles and amount to overprotection.

16) Pages 97- 101. I strongly disagree with proposals in this section saying that ORVs will be prohibited year round between ramps 27 and 30, at Hatteras Inlet (Hatteras Spit), Ocracoke Inlet (North Ocracoke Spit) and various other locations.

Not allowing ORV access is paramount to denying the public access to these beaches. They are located miles from the nearest parking or paved road area and too far to access on foot. As a matter of course, there has been no breeding of piping plover or other endangered species at the Hatteras Island Inlet (spit) area in the past 6 years.

17) Page 104: I disagree with the proposed night time driving closures. Per your proposals, night driving will be prohibited between May 1 and November 15th, forcing visitors off of the beaches early in the evening and preventing sunrise surf fishermen access in the morning. I propose a more moderate night time ban if one is needed, perhaps from June 1 ? September 15 with times being 1 hour after sunset and 1 hour before sunrise to allow beach goers to gather their stuff and exit the beach area.

Certainly more proactive measures such as relocating nests prone to weather and ocean events would dramatically increase the nesting success rates.

18) Page 121: I disagree with the proposed beach closings, including pedestrian access from March 15 until July 31 in 8 different beach locations which have traditionally been available. Please leave these areas open to beach walkers, shell collectors and those that want to access the beaches in these areas.

Conclusion:

Please, incorporate access corridors through any SMA so we can get to the open beach beyond. Incorporate the birds into the count that nest on the spoil islands. Base your buffer zones on peer reviewed science and scale them back to more reasonable distances as discussed.

It is neither logical nor reasonable to spend so much time, money and energy to overprotect a bird (Piping Plover) in the Cape Hatteras National Seashore that is on the southernmost fringe area of its breeding ground. That goes for the loggerhead turtle that is in its northernmost breeding area.

Let's scale back the buffer zones. You can always increase at a later date.

The USPS is leaning way over the line on over protection and not enough on the public's right to enjoy the beaches of the National Seashore. The proper balance is not achieved in the propose DEIS and needs to be modified so that the proper balance of reasonable resource protection and access to the beaches of the National Park is achieved. I could sum it up by saying "Protect, not Prohibit."

Thank you,

Mike Murray, Superintendent Cape Hatteras National Seashore 1401 National Park Drive Manteo, NC 27954
RE: Cape Hatteras National Seashore Recreational Area ? 2010 DEIS

Dear Mr. Murray,
My first comment is on the 800+ page document known as the DEIS. How does the general public take a document that size, digest it logically and form a well informed comment in 60 days? Seems a bit unfair. You've had several years to create this, a minimum 90 day comment period seems more reasonable to me.

Second comment is the fact that this Park was named by Congress the Cape Hatteras National Seashore Recreational Area in 1937. The word "Recreational" needs to be put back in the name in all literature, signs, advertising, etc.

Third comment is that I STRONGLY DISAGREE with the DEIS and Plan F that you, Mr. Murray, feel is the best use of Park Service lands for the Cape Hatteras National Seashore Recreational Area. And here's why:

Your lack of thorough comment on this area being a Traditional and Cultural Property (TCP) is downright inexcusable. For someone who grew up coming to this area with your family, you of all people should know the access to the surf zone has LONG been of traditional and cultural importance to the Outer Banks. It has long been a tradition of locals and visitors to meet on the beach for a broad and diverse range of social, economic and other cultural experiences. Many uses come to mind but mostly the annual fishing tournaments held on the Seashore. The thought of the annual tradition of tournaments not being held because of lack of access to the surf zone is just wrong. The economic impact that will have on the Seashore is mind boggling. Have you noticed the average age of those that participate? The culture and heritage of the Outer Banks IS the free and open access to the water's edge. To remove access to those whose families landed here hundreds of years ago is unacceptable. The visitors will never be able to know and experience the history of this area, which is also unacceptable.

The economic impacts are already apparent under the Consent Decree. To put a plan in place that mimics this Decree in any degree is like putting the last nail in the coffin. We have already seen many businesses fail and the food pantries cannot keep enough food in them to feed those that are not working because of the Consent Decree. As a local Realtor, I have lost many clients who love the Cape Hatteras National Seashore but felt they should not purchase here because of the threat of beach closures and the drop in valuation of their homes if that was to happen. Another comment from them is the fact they wanted to move here because they would have ORV access to the beaches. Without it, they could move to another State and find a cheaper home and walk to the beach, which a few of them have done. I challenge you to take a long hard look at the economic statistics and take the time to digest this information and come up with a plan that benefits all, including the birds and turtles. There is a way that we can ALL coexist. If you implement Plan F, it will be the death of Cape Hatteras National Seashore Recreational Area and the blood will be on your hands.

The recreational values of this area span all ages and all hobbies. By taking ORV access away, it takes away the privilege of quiet enjoyment of the beach by those that have disabilities, those that are aging and those that have young families. To park and then carry all that may be needed is a hardship for many. The long walk it would take for those just carrying binoculars would discourage even the healthiest visitors of the Park on a hot summer day. Activities that would be affected are birdwatching, fishing, horseback riding, shelling, swimming and water sports. This pretty much knocks out every person that would like to visit our beaches. As for ORV Management, new ramps and inter-dunal roads should be created to help avoid past situations where an area becomes closed to access because there is no practical ingress due to necessary, temporary protection or safety closures. All ramps whether they be new or not, must be maintained as two lanes wide because deep loose sand at ramps often requires continuous forward motion to avoid getting the ORV stuck. The allowable hours of access for ORV operation should be 24/7. The facts show that night driving does not harm the turtles. It is understood that ORV use is only in areas and on routes designated open for ORVs an must comply with posted restrictions.

Resource protection measures are important and there IS a way that we can ALL coexist. Alternatives that can be taken to protect the natural resources within the Seashore and allow public access without impairment to endangered and threatened species can be the following: restrictive fencing, buffers, access corridors, nest relocation and vegetation controls. I totally disagree with Plan F closure measurements and ask that you incorporate the

suggestions of The Coalition for Beach Access, Cape Hatteras National Seashore Recreational Area, ORV Access Environmental Impact Position Statement, namely Exhibit H ? Resource Protection Position Statement dated March 5, 2010. I STRONGLY DISAGREE WITH THE KILLING OF INNOCENT ANIMALS FOR THE PROTECTION OF ANY OTHER ANIMAL, BIRD OR TURTLE. There is only one God in this universe and the NPS is not it. Again, the blood is on your hands Mr. Murray.

In closing, in 1937, during the Great Depression, Congress established the Cape Hatteras National Seashore Recreational Area as a recreational area for the benefit and enjoyment of the people for the purpose of lifting the spirits of economically distressed citizens who could not otherwise afford other forms of recreation. Mr. Murray, the Park is for "the people" and "the people" do not agree with your DEIS. Our current economy may not be as bad as the Great Depression however; it doesn't take a rocket scientist to see how distressed we are.

KEEP THE BEACHES OPEN MR. MURRAY! Go back to your office and start over, your current DEIS is unacceptable!

Regards,

Laura Davis P. O. Box 3175 Kitty Hawk, NC 27949 Director ? North Carolina Beach Buggy Association NC Licensed Realtor (also licensed in Virginia)

Name: private

Received: May, 11, 2010 20:08:29

Correspondence Type: Web Form

Correspondence: My comments concern the DEIS of the Off-Road Vehicle Management Plan prepared by the National Park Service (NPS) for the Cape Hatteras National Seashore Recreation Area.

1) Page 201: I disagree with the NPS statement: "Even with resource closures in place, protected species are still at risk [from pedestrians and ORVs]." No Piping Plover deaths have been attributed to ORVs. ORV violations continue to decrease as signage and education improve. Pedestrian violations are much more significant than ORV violations. It seems to me that any transgressions into protected area are the result of lack of NPS manpower and enforcement than the public purposely and willfully violating out of bounds areas.

2) Page xxiv: I question the statement of as per the DEIS: "Carrying capacity would be a 'peak use limit' determined for all areas based on the linear feet of beachfront?" If you close off huge sections of the beach, you force more people into smaller areas, potentially resulting in more resource impairment and diminished visitor experience.

3) Page xix and page 23: I am against having two different closures rules pertaining to the North facing beaches (North side) and the South facing beaches (South side) as per the grid outlined in Alternative "F". I disagree with the NPS proposal to close the beaches in villages of Frisco, Hatteras and Ocracoke Villages to ORV access longer than the traditional May 15 to September 15 period for the Northern beaches, even though seasonal visitor statistics are similar for all villages. Please, make them the same: May 15 -> September 15.

4) Page 1: I agree with your statement "ORVs have long served as a primary form of access for many portions of the beach in the seashore, and continue to be the most practical means of access and parking for many visitors." However, pedestrian only areas discriminate against individuals with limited mobility due to age or physical impairments, families with small children, and those wishing to engage in activities requiring recreational equipment (boogie boards, beach umbrellas, beach chairs, coolers, fishing rods and tackle, etc)

5) Page 53: I disagree with the special use permit proposed guidelines. It is impractical to allow the transportation of disabled visitors to the village beaches and then require the vehicle to be returned to the street or parking area. This necessitates the disabled person to have a driver to drop him (or her) off, then drive to a parking area, then trudge a long distance to the site of the drop off, then trudge the long distance through the sand back to get the vehicle. Suppose the handicap person wants to go to the beach, is capable of driving himself, yet cannot find another person to go with him? Does he now not go to the beach? This rule creates unnecessary hardships and risks in the event of an emergency as well.

6) Page 121 ? 127. I strongly disagree with the buffers as presented. We must allow for pass-thru corridors. The beach is linear with the ocean buffering on one side and the dune line on the other. For example - If you pinch off access on one side of a 4 mile linear beach and pinch off access on the other side of the 4 mile section of beach with no corridor, then you effectively have closed off all 4 miles of the beach because you CAN'T get there. The proposed bird buffers are too large, blocking access to the interior sections from the two "buffered" ends. I propose ORV pass-thru only corridors and to use breeding / nesting buffer distances to establish ORV pass through only corridors to ensure beach access in a way that does not hinder resource protection. I believe pass through corridors should be maintained for pedestrians and ORVs in all areas of the Cape Hatteras National Seashore Recreational Area throughout the entire breeding and nesting season. Corridors are vital to providing access in a way that does not hinder resource protection. Piping Plover unfledged chicks buffer should move with the brood as it relocates to reliable food source, not expanded. The 1,000 meter distance for the piping plover is way too large and not based upon peer reviewed science. A more rational distance would be 200 meters per other sites in the nation for the piping plover. Ample scientific evidence and precedent exists to support a 200 meter buffer. Buffers for other species, including American Oystercatchers, Least Terns and Colonial Waterbirds must also be changed. An effective 30 meter buffer should be established for these species rather than the 300 meter closure outlined in the DEIS. NON-ENDANGERED BIRDS should not have same protection as if endangered. Not allowing ORV access is paramount to denying the public access to these beaches.

7) Page 468: I disagree with the limitations imposed on pedestrian and ORVs. Corridors or bypasses should be provided thru, around or below high tide line in all SMAs during entire breeding season to maintain access.

8) Page 124: I strongly disagree with the NPS slant of providing for over protection of resource management over that of the public's right to access the beaches. Pro-active initiatives include: Vegetation Management, Habitat Management, Enhanced Predator Management, Colonial Water bird social attraction, Piping Plover check fledge rate, Piping plover chick buffer distance, and pass-through buffers during the incubation period. Opportunities to implement less restrictive closures as a result of the above initiatives should be considered more frequently than the 5-year periodic review process identified in the DEIS.

9) I disagree with the NPS Resource Management Pedestrian / ORV Closure Policies. These policies address the least significant factors affecting nest survival with little chance to have more than negligible impact. For example: the AMOY Nest Failures are predominately due to non-human events. Using your own stats, the mammalian predation is 54%, Storm / Lunar Tides: 29%, Nest Abandonment: 6%, Avian Predation: 5%, and Ghost Crab Predation: 3%, So what is the percentage due to human interference: just 3%! It's insignificant, yet the NPS wants to ban humans when their actions provide very little influence on the success rate of breeding birds and turtles.

10) I disagree with the stats of breeding plovers and the other birds in the Park when the NPS does not adequately consider locations neighboring the Recreational Area that are part of the same ecosystem, namely dredge and spoil island that are located just yards away and within sight of the seashore. These birds are part of the same ecosystem and should be included. Those spoil islands, developed by man from dredging the waterways in the Pamlico Sound for channel upkeep are slammed full of birds. The reason why so many birds? NO PREDATORS. SO, birds are not as stupid as one might think. You have to count these birds and incorporate them in the stats when the NPS is talking about any so called decline in breeding pairs in the National Park.

11) Page 1: I do not think the DEIS responsibly addresses the cultural resource issues. The very purpose of the DEIS as set forth in the National Environmental Policy Act (NEPA) is to protect and preserve natural and cultural resources in the federal decision making process. In the DEIS, the statement "protect and preserve natural and cultural resources" appears in the first sentence of the first page of the plan, in the Purpose of the Plan section, and numerous times thereafter. Yet, the 810 page document devotes only two paragraphs to analysis of cultural resource issues.

12) Pages 270-281; 561-598: I strongly disagree with your economic analysis of the impact of the DEIS. The region of influence (ROI) incorporates the Northern Beach communities, including Kill Devil Hills, Kitty Hawk, Southern Shores and Duck. These areas are almost completely disconnected from ORV use and access issues relating to the Seashore. ? Inclusion of the Northern Beaches in analysis significantly dilutes estimates of economic impact

on the 8 Seashore Villages

? Analysis of economic impact to the Seashore Villages appears to be significantly down played. Emphasis in DEIS is on the ROI-wide or county-wide level impacts.

? Nowhere is it clearly addressed that the overwhelming majority of negative impacts will be felt by small businesses in the Seashore Villages rather than by overall economic interests within the greater ROI.

On page xlvi, Alternative F is characterized as having a "negligible to moderate" adverse impact on small businesses. I strongly disagree with this statement.

I believe the negligible to moderate projection is inaccurate and relies on economic surveys that has not yet been published. Furthermore, this material is not expected to be added to the DEIS until after the public comment period has ended.

Based upon the economic harm we have already experienced under the consent decree, Dare County projects the economic impact of Alternative F to be substantial.

Beach closures have already had a devastating and unfair impact on many Dare County Businesses, causing foreclosures, bankruptcies, lay-offs, cutbacks, expensive refinancing, and depleted college funds and savings accounts.

Pages 270-286, 561-598: The socio-economic data and analyses are incomplete and erroneous and result in an understatement of the effect the restrictions will have upon the Island, the region and the state of NC. The US Park Services answer: Businesses will have to "adapt" to the new rules. (p.383) The negative economic impacts of the decree ARE KNOWN, so to say that the added restrictions would have negligible to moderate impact is indefensible.

13) Overall Visitor Counts - Overall visitor counts appear to include visitors to Fort Raleigh National Historic Site and the Wright Brothers National Memorial. A large percentage of these visitors vacation in the Northern Beaches communities and recreate on the non-federal beaches outside of the Seashore. Visitors who patronize the Fort Raleigh National Historic Site and the Wright Brothers National Memorial but do not visit the actual seashore areas need to be factored out.

Maintenance of Future Access to Cape Point and South Point Ocracoke: All socioeconomic analyses related to Alternative F are predicated on the assumption that access corridors will remain open for at least an appreciable portion of the visitor high season. Under Alternative F, the access corridors will be subject to Resource Closures based on buffers similar or identical to the Consent Decree. Unless some predictability of access to Cape Point and South Point Ocracoke can be assured, economic analyses predicated on assumption of access are fundamentally flawed.

Why would a group of surf fisherman want to come to Hatteras Island to surf fish if they are not sure they can access the prime fishing grounds at Cape Point? The answer is they won't come. If they don't come, they don't rent vacation homes and spend their money on Hatteras and Ocracoke Islands.

The definition of the Region of Influence (ROI), faulty data on economic activity generated by specific type recreational activity, incomplete visitation/business survey data, inflated overall Seashore visitor counts pertaining to beach use, and flawed key assumptions concerning the maintenance of access under Alternative F, all lead to inaccurate conclusions in the socioeconomic analyses. Specifically, these inaccuracies can be seen as understating the negative socio-economic impact of the Seashore Villages. Further, this negative impact will be absorbed almost entirely by Small Businesses. Neither of these important aspects of the management alternatives are adequately presented in the DEIS.

14) Page 136: I strongly disagree with your pet restriction proposals. The "prohibition of pets in the Seashore during bird breeding season including in front of the villages." = No Pets in public areas ?beaches, campgrounds, soundfront, foot trails, park maintained roads -from March 15 ?July 31.

15) Pages 125; 392 ? 396: SEA TURTLES. I disagree with the stats and procedures proposed. I think endangered sea turtles would benefit from management practices now in use at other federal seashores that are more proactive in efforts to achieve nesting success. This includes relocating nests to more desirable locations as is done in other state and federally controlled areas.

The Cape Hatteras National Seashore Recreational Area is on the northernmost fringe of turtle nesting locations for the southeast, accounting for about 1% of all turtle nests. Proposed buffer areas are not needed for protection of the turtles and amount to overprotection.

16) Pages 97- 101. I strongly disagree with proposals in this section saying that ORVs will be prohibited year round between ramps 27 and 30, at Hatteras Inlet (Hatteras Spit), Ocracoke Inlet (North Ocracoke Spit) and various other locations.

Not allowing ORV access is paramount to denying the public access to these beaches. They are located miles from the nearest parking or paved road area and too far to access on foot. As a matter of course, there has been no breeding of piping plover or other endangered species at the Hatteras Island Inlet (spit) area in the past 6 years.

17) Page 104: I disagree with the proposed night time driving closures. Per your proposals, night driving will be prohibited between May 1 and November 15th, forcing visitors off of the beaches early in the evening and preventing sunrise surf fishermen access in the morning. I propose a more moderate night time ban if one is needed, perhaps from June 1 ? September 15 with times being 1 hour after sunset and 1 hour before sunrise to allow beach goers to gather their stuff and exit the beach area.

Certainly more proactive measures such as relocating nests prone to weather and ocean events would dramatically increase the nesting success rates.

18) Page 121: I disagree with the proposed beach closings, including pedestrian access from March 15 until July 31 in 8 different beach locations which have traditionally been available. Please leave these areas open to beach walkers, shell collectors and those that want to access the beaches in these areas.

Conclusion:

Please, incorporate access corridors through any SMA so we can get to the open beach beyond. Incorporate the birds into the count that nest on the spoil islands. Base your buffer zones on peer reviewed science and scale them back to more reasonable distances as discussed.

It is neither logical nor reasonable to spend so much time, money and energy to overprotect a bird (Piping Plover) in the Cape Hatteras National Seashore that is on the southernmost fringe area of its breeding ground. That goes for the loggerhead turtle that is in its northernmost breeding area. Let's scale back the buffer zones. You can always increase at a later date.

The USPS is leaning way over the line on over protection and not enough on the public's right to enjoy the beaches of the National Seashore. The proper balance is not achieved in the propose DEIS and needs to be modified so that the proper balance of reasonable resource protection and access to the beaches of the National Park is achieved. I could sum it up by saying "Protect, not Prohibit."

Thank you,

6) Page 121 ? 127. I strongly disagree with the buffers as presented. We must allow for pass-thru corridors. The beach is linear with the ocean buffering on one side and the dune line on the other. For example - If you pinch off access on one side of a 4 mile linear beach and pinch off access on the other side of the 4 mile section of beach with no corridor, then you effectively have closed off all 4 miles of the beach because you CAN'T get there. The proposed bird buffers are too large, blocking access to the interior sections from the two "buffered" ends.

I propose ORV pass-thru only corridors and to use breeding / nesting buffer distances to establish ORV pass through only corridors to ensure beach access in a way that does not hinder resource protection. I believe pass through corridors should be maintained for pedestrians and ORVs in all areas of the Cape Hatteras National Seashore Recreational Area throughout the entire breeding and nesting season. Corridors are vital to providing access in a way that does not hinder resource protection.

Piping Plover unfledged chicks buffer should move with the brood as it relocates to reliable food source, not expanded.

The 1,000 meter distance for the piping plover is way too large and not based upon peer reviewed science. A more rational distance would be 200 meters per other sites in the nation for the piping plover. Ample scientific evidence and precedent exists to support a 200 meter buffer.

Buffers for other species, including American Oystercatchers, Least Terns and Colonial Waterbirds must also be changed. An effective 30 meter buffer should be established for these species rather than the 300 meter closure outlined in the DEIS.

NON-ENDANGERED BIRDS should not have same protection as if endangered. Not allowing ORV access is paramount to denying the public access to these beaches.

7) Page 468: I disagree with the limitations imposed on pedestrian and ORVs. Corridors or bypasses should be provided thru, around or below high tide line in all SMAs during entire breeding season to maintain access.

8) Page 124: I strongly disagree with the NPS slant of providing for over protection of resource management over that of the public's right to access the beaches. Pro-active initiatives include: Vegetation Management, Habitat Management, Enhanced Predator Management, Colonial Water bird social attraction, Piping Plover check fledge rate, Piping plover chick buffer distance, and pass-through buffers during the incubation period. Opportunities to implement less restrictive closures as a result of the above initiatives should be considered more frequently than the 5-year periodic review process identified in the DEIS.

9) I disagree with the NPS Resource Management Pedestrian / ORV Closure Policies. These policies address the least significant factors affecting nest survival with little chance to have more than negligible impact. For example: the AMOY Nest Failures are predominately due to non-human events.

Using your own stats, the mammalian predation is 54%, Storm / Lunar Tides: 29%, Nest Abandonment: 6%, Avian Predation: 5%, and Ghost Crab Predation: 3%,

So what is the percentage due to human interference: just 3%! It's insignificant, yet the NPS wants to ban humans when their actions provide very little influence on the success rate of breeding birds and turtles.

10) I disagree with the stats of breeding plovers and the other birds in the Park when the NPS does not adequately consider locations neighboring the Recreational Area that are part of the same ecosystem, namely dredge and spoil island that are located just yards away and within sight of the seashore. These birds are part of the same ecosystem and should be included.

Those spoil islands, developed by man from dredging the waterways in the Pamlico Sound for channel upkeep are slammed full of birds. The reason why so many birds? NO PREDATORS. SO, birds are not as stupid as one might think. You have to count these birds and incorporate them in the stats when the NPS is talking about any so called decline in breeding pairs in the National Park.

11) Page 1: I do not think the DEIS responsibly addresses the cultural resource issues. The very purpose of the DEIS as set forth in the National Environmental Policy Act (NEPA) is to protect and preserve natural and cultural resources in the federal decision making process. In the DEIS, the statement "protect and preserve natural and cultural resources" appears in the first sentence of the first page of the plan, in the Purpose of the Plan section, and numerous times thereafter. Yet, the 810 page document devotes only two paragraphs to analysis of cultural resource issues.

12) Pages 270-281; 561-598: I strongly disagree with your economic analysis of the impact of the DEIS. The region of influence (ROI) incorporates the Northern Beach communities, including Kill Devil Hills, Kitty Hawk, Southern Shores and Duck. These areas are almost completely disconnected from ORV use and access issues relating to the Seashore. ? Inclusion of the Northern Beaches in analysis significantly dilutes estimates of economic impact on the 8 Seashore Villages

? Analysis of economic impact to the Seashore Villages appears to be significantly down played. Emphasis in DEIS is on the ROI-wide or county-wide level impacts.

? Nowhere is it clearly addressed that the overwhelming majority of negative impacts will be felt by small businesses in the Seashore Villages rather than by overall economic interests within the greater ROI.

On page xlvi, Alternative F is characterized as having a "negligible to moderate" adverse impact on small businesses. I strongly disagree with this statement.

I believe the negligible to moderate projection is inaccurate and relies on economic surveys that has not yet been published. Furthermore, this material is not expected to be added to the DEIS until after the public comment period has ended.

Based upon the economic harm we have already experienced under the consent decree, Dare County projects the economic impact of Alternative F to be substantial.

Beach closures have already had a devastating and unfair impact on many Dare County Businesses, causing foreclosures, bankruptcies, lay-offs, cutbacks, expensive refinancing, and depleted college funds and savings accounts.

Pages 270-286, 561-598: The socio-economic data and analyses are incomplete and erroneous and result in an understatement of the effect the restrictions will have upon the Island, the region and the state of NC. The US Park Services answer: Businesses will have to "adapt" to the new rules. (p.383) The negative economic impacts of the decree ARE KNOWN, so to say that the added restrictions would have negligible to moderate impact is indefensible.

13) Overall Visitor Counts - Overall visitor counts appear to include visitors to Fort Raleigh National Historic Site and the Wright Brothers National Memorial. A large percentage of these visitors vacation in the Northern Beaches communities and recreate on the non-federal beaches outside of the Seashore. Visitors who patronize the Fort Raleigh National Historic Site and the Wright Brothers National Memorial but do not visit the actual seashore areas need to be factored out.

Maintenance of Future Access to Cape Point and South Point Ocracoke: All socioeconomic analyses related to Alternative F are predicated on the assumption that access corridors will remain open for at least an appreciable portion of the visitor high season. Under Alternative F, the access corridors will be subject to Resource Closures based on buffers similar or identical to the Consent Decree. Unless some predictability of access to Cape Point and South Point Ocracoke can be assured, economic analyses predicated on assumption of access are fundamentally flawed.

Why would a group of surf fisherman want to come to Hatteras Island to surf fish if they are not sure they can access the prime fishing grounds at Cape Point? The answer is they won't come. If they don't come, they don't rent vacation homes and spend their money on Hatteras and Ocracoke Islands.

The definition of the Region of Influence (ROI), faulty data on economic activity generated by specific type recreational activity, incomplete visitation/business survey data, inflated overall Seashore visitor counts pertaining to beach use, and flawed key assumptions concerning the maintenance of access under Alternative F, all lead to inaccurate conclusions in the socioeconomic analyses. Specifically, these inaccuracies can be seen as understating the negative socio-economic impact of the Seashore Villages. Further, this negative impact will be absorbed almost entirely by Small Businesses. Neither of these important aspects of the management alternatives are adequately presented in the DEIS.

14) Page 136: I strongly disagree with your pet restriction proposals. The "?prohibition of pets in the Seashore during bird breeding season including in

front of the villages." = No Pets in public areas ?beaches, campgrounds, soundfront, foot trails, park maintained roads -from March 15 ?July 31.
 15) Pages 125; 392 ? 396: SEA TURTLES. I disagree with the stats and procedures proposed. I think endangered sea turtles would benefit from management practices now in use at other federal seashores that are more proactive in efforts to achieve nesting success. This includes relocating nests to more desirable locations as is done in other state and federally controlled areas.

The Cape Hatteras National Seashore Recreational Area is on the northernmost fringe of turtle nesting locations for the southeast, accounting for about 1% of all turtle nests. Proposed buffer areas are not needed for protection of the turtles and amount to overprotection.

16) Pages 97- 101. I strongly disagree with proposals in this section saying that ORVs will be prohibited year round between ramps 27 and 30, at Hatteras Inlet (Hatteras Spit), Ocracoke Inlet (North Ocracoke Spit) and various other locations.

Not allowing ORV access is paramount to denying the public access to these beaches. They are located miles from the nearest parking or paved road area and too far to access on foot. As a matter of course, there has been no breeding of piping plover or other endangered species at the Hatteras Island Inlet (spit) area in the past 6 years.

17) Page 104: I disagree with the proposed night time driving closures. Per your proposals, night driving will be prohibited between May 1 and November 15th, forcing visitors off of the beaches early in the evening and preventing sunrise surf fishermen access in the morning. I propose a more moderate night time ban if one is needed, perhaps from June 1 ? September 15 with times being 1 hour after sunset and 1 hour before sunrise to allow beach goers to gather their stuff and exit the beach area.

Certainly more proactive measures such as relocating nests prone to weather and ocean events would dramatically increase the nesting success rates.

18) Page 121: I disagree with the proposed beach closings, including pedestrian access from March 15 until July 31 in 8 different beach locations which have traditionally been available. Please leave these areas open to beach walkers, shell collectors and those that want to access the beaches in these areas.

Conclusion:

Please, incorporate access corridors through any SMA so we can get to the open beach beyond. Incorporate the birds into the count that nest on the spoil islands. Base your buffer zones on peer reviewed science and scale them back to more reasonable distances as discussed.

It is neither logical nor reasonable to spend so much time, money and energy to overprotect a bird (Piping Plover) in the Cape Hatteras National Seashore that is on the southernmost fringe area of its breeding ground. That goes for the loggerhead turtle that is in its northernmost breeding area.

Let's scale back the buffer zones. You can always increase at a later date.

The USPS is leaning way over the line on over protection and not enough on the public's right to enjoy the beaches of the National Seashore. The proper balance is not achieved in the propose DEIS and needs to be modified so that the proper balance of reasonable resource protection and access to the beaches of the National Park is achieved. I could sum it up by saying "Protect, not Prohibit."

Thank you,

Correspondence ID:	14528	Project:	10641	Document:	32596	Private:	Y
Name:	private						
Received:	May,11,2010 20:09:53						
Correspondence Type:	Web Form						
Correspondence:	My comments concern the DEIS of the Off-Road Vehicle Management Plan prepared by the National Park Service (NPS) for the Cape Hatteras National Seashore Recreation Area.						
	1) Page 201: I disagree with the NPS statement: "Even with resource closures in place, protected species are still at risk [from pedestrians and ORVs]." No Piping Plover deaths have been attributed to ORVs. ORV violations continue to decrease as signage and education improve. Pedestrian violations are much more significant than ORV violations. It seems to me that any transgressions into protected area are the result of lack of NPS manpower and enforcement than the public purposely and willfully violating out of bounds areas.						
	2) Page xxiv: I question the statement of as per the DEIS: "Carrying capacity would be a 'peak use limit' determined for all areas based on the linear feet of beachfront?" If you close off huge sections of the beach, you force more people into smaller areas, potentially resulting in more resource impairment and diminished visitor experience.						
	3) Page six and page 23: I am against having two different closures rules pertaining to the North facing beaches (North side) and the South facing beaches (South side) as per the grid outlined in Alternative "F". I disagree with the NPS proposal to close the beaches in villages of Frisco, Hatteras and Ocracoke Villages to ORV access longer than the traditional May 15 to September 15 period for the Northern beaches, even though seasonal visitor statistics are similar for all villages. Please, make them the same: May 15 -> September 15.						
	4) Page 1: I agree with your statement "ORVs have long served as a primary form of access for many portions of the beach in the seashore, and continue to be the most practical means of access and parking for many visitors." However, pedestrian only areas discriminate against individuals with limited mobility due to age or physical impairments, families with small children, and those wishing to engage in activities requiring recreational equipment (boogie boards, beach umbrellas, beach chairs, coolers, fishing rods and tackle, etc)						
	5) Page 53: I disagree with the special use permit proposed guidelines. It is impractical to allow the transportation of disabled visitors to the village beaches and then require the vehicle to be returned to the street or parking area. This necessitates the disabled person to have a driver to drop him (or her) off, then drive to a parking area, then trudge a long distance to the site of the drop off, then trudge the long distance through the sand back to get the vehicle. Suppose the handicap person wants to go to the beach, is capable of driving himself, yet cannot find another person to go with him? Does he now not go to the beach? This rule creates unnecessary hardships and risks in the event of an emergency as well.						
	6) Page 121 ? 127. I strongly disagree with the buffers as presented. We must allow for pass-thru corridors. The beach is linear with the ocean buffering on one side and the dune line on the other. For example - If you pinch off access on one side of a 4 mile linear beach and pinch off access on the other side of the 4 mile section of beach with no corridor, then you effectively have closed off all 4 miles of the beach because you CAN'T get there. The proposed bird buffers are too large, blocking access to the interior sections from the two "buffered" ends. I propose ORV pass-thru only corridors and to use breeding / nesting buffer distances to establish ORV pass through only corridors to ensure beach access in a way that does not hinder resource protection. I believe pass through corridors should be maintained for pedestrians and ORVs in all areas of the Cape Hatteras National Seashore Recreational Area throughout the entire breeding and nesting season. Corridors are vital to providing access in a way that does not hinder resource protection. Piping Plover unfledged chicks buffer should move with the brood as it relocates to reliable food source, not expanded. The 1,000 meter distance for the piping plover is way too large and not based upon peer reviewed science. A more rational distance would be 200 meters per other sites in the nation for the piping plover. Ample scientific evidence and precedent exists to support a 200 meter buffer. Buffers for other species, including American Oystercatchers, Least Terns and Colonial Waterbirds must also be changed. An effective 30 meter buffer should be established for these species rather than the 300 meter closure outlined in the DEIS. NON-ENDANGERED BIRDS should not have same protection as if endangered. Not allowing ORV access is paramount to denying the public access to these beaches.						
	7) Page 468: I disagree with the limitations imposed on pedestrian and ORVs. Corridors or bypasses should be provided thru, around or below high tide line in all SMAs during entire breeding season to maintain access.						
	8) Page 124: I strongly disagree with the NPS slant of providing for over protection of resource management over that of the public's right to access the beaches. Pro-active initiatives include: Vegetation Management, Habitat Management, Enhanced Predator Management, Colonial Water bird social attraction, Piping Plover check fledge rate, Piping plover chick buffer distance, and pass-through buffers during the incubation period. Opportunities to implement less restrictive closures as a result of the above initiatives should be considered more frequently than the 5-year periodic review process identified in the DEIS.						
	9) I disagree with the NPS Resource Management Pedestrian / ORV Closure Policies. These policies address the least significant factors affecting nest survival with little chance to have more than negligible impact. For example: the AMOY Nest Failures are predominately due to non-human events.						

Using your own stats, the mammalian predation is 54%, Storm / Lunar Tides: 29%, Nest Abandonment: 6%, Avian Predation: 5%, and Ghost Crab Predation: 3%,

So what is the percentage due to human interference: just 3%! It's insignificant, yet the NPS wants to ban humans when their actions provide very little influence on the success rate of breeding birds and turtles.

10) I disagree with the stats of breeding plovers and the other birds in the Park when the NPS does not adequately consider locations neighboring the Recreational Area that are part of the same ecosystem, namely dredge and spoil island that are located just yards away and within sight of the seashore. These birds are part of the same ecosystem and should be included.

Those spoil islands, developed by man from dredging the waterways in the Pamlico Sound for channel upkeep are slammed full of birds. The reason why so many birds? NO PREDATORS. SO, birds are not as stupid as one might think. You have to count these birds and incorporate them in the stats when the NPS is talking about any so called decline in breeding pairs in the National Park.

11) Page 1: I do not think the DEIS responsibly addresses the cultural resource issues. The very purpose of the DEIS as set forth in the National Environmental Policy Act (NEPA) is to protect and preserve natural and cultural resources in the federal decision making process. In the DEIS, the statement "protect and preserve natural and cultural resources" appears in the first sentence of the first page of the plan, in the Purpose of the Plan section, and numerous times thereafter. Yet, the 810 page document devotes only two paragraphs to analysis of cultural resource issues.

12) Pages 270-281; 561-598: I strongly disagree with your economic analysis of the impact of the DEIS. The region of influence (ROI) incorporates the Northern Beach communities, including Kill Devil Hills, Kitty Hawk, Southern Shores and Duck. These areas are almost completely disconnected from ORV use and access issues relating to the Seashore. ? Inclusion of the Northern Beaches in analysis significantly dilutes estimates of economic impact on the 8 Seashore Villages

? Analysis of economic impact to the Seashore Villages appears to be significantly down played. Emphasis in DEIS is on the ROI-wide or county-wide level impacts.

? Nowhere is it clearly addressed that the overwhelming majority of negative impacts will be felt by small businesses in the Seashore Villages rather than by overall economic interests within the greater ROI.

On page xlvi, Alternative F is characterized as having a "negligible to moderate" adverse impact on small businesses. I strongly disagree with this statement.

I believe the negligible to moderate projection is inaccurate and relies on economic surveys that has not yet been published. Furthermore, this material is not expected to be added to the DEIS until after the public comment period has ended.

Based upon the economic harm we have already experienced under the consent decree, Dare County projects the economic impact of Alternative F to be substantial.

Beach closures have already had a devastating and unfair impact on many Dare County Businesses, causing foreclosures, bankruptcies, lay-offs, cutbacks, expensive refinancing, and depleted college funds and savings accounts.

Pages 270-286, 561-598: The socio-economic data and analyses are incomplete and erroneous and result in an understatement of the effect the restrictions will have upon the Island, the region and the state of NC. The US Park Services answer: Businesses will have to "adapt" to the new rules. (p.383) The negative economic impacts of the decree ARE KNOWN, so to say that the added restrictions would have negligible to moderate impact is indefensible.

13) Overall Visitor Counts - Overall visitor counts appear to include visitors to Fort Raleigh National Historic Site and the Wright Brothers National Memorial. A large percentage of these visitors vacation in the Northern Beaches communities and recreate on the non-federal beaches outside of the Seashore. Visitors who patronize the Fort Raleigh National Historic Site and the Wright Brothers National Memorial but do not visit the actual seashore areas need to be factored out.

Maintenance of Future Access to Cape Point and South Point Ocracoke: All socioeconomic analyses related to Alternative F are predicated on the assumption that access corridors will remain open for at least an appreciable portion of the visitor high season. Under Alternative F, the access corridors will be subject to Resource Closures based on buffers similar or identical to the Consent Decree. Unless some predictability of access to Cape Point and South Point Ocracoke can be assured, economic analyses predicated on assumption of access are fundamentally flawed.

Why would a group of surf fishermen want to come to Hatteras Island to surf fish if they are not sure they can access the prime fishing grounds at Cape Point? The answer is they won't come. If they don't come, they don't rent vacation homes and spend their money on Hatteras and Ocracoke Islands.

The definition of the Region of Influence (ROI), faulty data on economic activity generated by specific type recreational activity, incomplete visitation/business survey data, inflated overall Seashore visitor counts pertaining to beach use, and flawed key assumptions concerning the maintenance of access under Alternative F, all lead to inaccurate conclusions in the socioeconomic analyses. Specifically, these inaccuracies can be seen as understating the negative socio-economic impact of the Seashore Villages. Further, this negative impact will be absorbed almost entirely by Small Businesses. Neither of these important aspects of the management alternatives are adequately presented in the DEIS.

14) Page 136: I strongly disagree with your pet restriction proposals. The "prohibition of pets in the Seashore during bird breeding season including in front of the villages." = No Pets in public areas ?beaches, campgrounds, soundfront, foot trails, park maintained roads -from March 15 ?July 31.

15) Pages 125; 392 ? 396: SEA TURTLES. I disagree with the stats and procedures proposed. I think endangered sea turtles would benefit from management practices now in use at other federal seashores that are more proactive in efforts to achieve nesting success. This includes relocating nests to more desirable locations as is done in other state and federally controlled areas.

The Cape Hatteras National Seashore Recreational Area is on the northernmost fringe of turtle nesting locations for the southeast, accounting for about 1% of all turtle nests. Proposed buffer areas are not needed for protection of the turtles and amount to overprotection.

16) Pages 97- 101. I strongly disagree with proposals in this section saying that ORVs will be prohibited year round between ramps 27 and 30, at Hatteras Inlet (Hatteras Spit), Ocracoke Inlet (North Ocracoke Spit) and various other locations.

Not allowing ORV access is paramount to denying the public access to these beaches. They are located miles from the nearest parking or paved road area and too far to access on foot. As a matter of course, there has been no breeding of piping plover or other endangered species at the Hatteras Island Inlet (spit) area in the past 6 years.

17) Page 104: I disagree with the proposed night time driving closures. Per your proposals, night driving will be prohibited between May 1 and November 15th, forcing visitors off of the beaches early in the evening and preventing sunrise surf fishermen access in the morning. I propose a more moderate night time ban if one is needed, perhaps from June 1 ? September 15 with times being 1 hour after sunset and 1 hour before sunrise to allow beach goers to gather their stuff and exit the beach area.

Certainly more proactive measures such as relocating nests prone to weather and ocean events would dramatically increase the nesting success rates.

18) Page 121: I disagree with the proposed beach closings, including pedestrian access from March 15 until July 31 in 8 different beach locations which have traditionally been available. Please leave these areas open to beach walkers, shell collectors and those that want to access the beaches in these areas.

Conclusion:

Please, incorporate access corridors through any SMA so we can get to the open beach beyond. Incorporate the birds into the count that nest on the spoil islands. Base your buffer zones on peer reviewed science and scale them back to more reasonable distances as discussed.

It is neither logical nor reasonable to spend so much time, money and energy to overprotect a bird (Piping Plover) in the Cape Hatteras National Seashore that is on the southernmost fringe area of its breeding ground. That goes for the loggerhead turtle that is in its northernmost breeding area. Let's scale back the buffer zones. You can always increase at a later date.

The USPS is leaning way over the line on over protection and not enough on the public's right to enjoy the beaches of the National Seashore. The proper balance is not achieved in the propose DEIS and needs to be modified so that the proper balance of reasonable resource protection and access to the beaches of the National Park is achieved. I could sum it up by saying "Protect, not Prohibit."

Thank you,

Dear Mr. Murray,

Thank you for the opportunity to make public comment on the draft ORV Management plan.

My name is Trip Forman. I am a 20 year, full time resident of Hatteras Island. I am also a former member of the Board of Directors for the Outer Banks Chamber of Commerce. My business employs over 75 people, 74 of which moved here (Cape Hatteras), from out of state or foreign countries, specifically to pursue careers in the watersports industry. I am the primary representative of the WSIA (Watersports Industry Association) which represents millions of watersports enthusiasts worldwide, who consider Cape Hatteras one of the top destinations in the world.

I would like to focus this comment on "our" (myself and WSIA alternate Matt Nuzzo's) involvement in the Reg Neg process and the following DEIS Draft ORV Management Plan. While I may mention Reg Neg throughout this comment, I would like to make clear that this comment is purely based on the Draft ORV Management Plan and the inaccuracies that I/we found during the review of such plan:
