Dear Mike, why did Walker Golder and the Park not include the shore birds nesting on the two dredge inlands in Hatteras inlet in the 2007 count? They feed on and all around the adjacent Park land. Is it possible the count would have dramatically increased the number of birds like skimmers, terns, and oyster catchers which would have made Audubon's lawsuit incorrect? The judge should know those numbers and I believe it is your job to let someone know this. Please email me with an answer and thanks for the good job you have done. Regards, Kim Mosher.
