The National Park Service has reviewed the banding incident of June 22 that resulted in the death of an AMOY chick at Hatteras Inlet. The Park has determined the researcher was properly credentialed and followed the appropriate techniques in attempting to capture and band the chick. The death was determined as accidental. Permission for the researcher to band AMOYs has been reinstated, as the Park believes the benefits of continued banding of AMOYs on the Seashore outweigh the risks.

I totally disagree with this decision, I wonder had this been due to a park user if the decision would have been the same and I think not. Nature should be left to take care of itself.
