Subject: Re: mileage question 

I've updated the distances. Now both charts will show 66.8 miles. At least 1.3 miles included is from soundside accesses. Additionally, I measured distances so that they wrap all the way around the spits to as far as you can drive if and when those areas are open. Consistency is important, but it sure has been difficult finding a way to do this consistently. I think I've developed a good process since Annabeth Rice's visit. I put the distances between ramps on a worksheet titled Park mileage in the same project that I use to update Cyndy on open beach distances. All the other worksheets in that project are titled with a date. Please let me know if there is any confusion. Thanks.

Subject: mileage question

Hi Abra,

Is the attached chart (page 1) showing distances between points still valid? I believe it was done in 2007 or over last winter. It shows a total of 62.9 miles, whereas this year we've generally been saying we have 66 miles or so. Didn't know if the chart needed to be updated or not? (I am using it and the Beach Access reports to determine distances between points as we develop draft ORV management alternatives and am having a little trouble reconciling the difference between 62.9 and 66+ miles.)

If you think the 62.9 miles is still reasonably accurate, I can work with that. If you think it needs to be updated for 2008, please do.

Thanks!
