Hello David,

Trying my best to understand and not wanting to insult I have a question of you. If turtle nest are to have a goal and 2 or 3 times the present number becomes the goal, how do you expect to do this?

I would also appreciate an overlay of Pea Island's management of buffer zones in order to understand why you and Pete Benjamin seem to be so far removed from creating an ORV plan and just eliminating ORV's from the beach.

Again, no insult intended but I just don't understand.

Thanks,

Bob Eakes
