Answers to the questions are:

Backshore Closures:

1. The lathe with blue/white flagging is not part of the backshore buffers.
2. If the beach is not at least 30 meters wide from the toe of the dune to the mean high tide line no backshore buffer will be installed.
3. There are no maps indicating where backshore buffer have been installed.
4. As stated in the Consent Decree the backshore buffer areas are intended for wildlife use but are closed only to vehicles and may be used by pedestrians.

Cyndy - we are using the standard carsonite ORV corridor markers (as seen in Mr Pitt's attached photo) to delineate the backshore buffers.

FEMA Surveys:

1. As Paul stated, FEMA flood maps.
2. Not sure if markers he is referring to are FEMA's. Steve Thompson has contact info for FEMA contractor - suggest he ask them.
3. FEMA contractors ATV's are supposed to have markings identifying them as the contractors. They are only supposed to be operated in areas that are open to ORV's.

Subject Re: Fw: Questions about Markers and "Backshore Corridors", and FEMA: 

District Rangers,

Please chime in on this question.

It is my understanding that the wooden stakes with blue flagging is from the FEMA surveys for the flood maps. The backshore closures are marked by carsonite posts and are only in areas where the beach is wide enough for the closure. If the beach is too narrow, and there are no safety or resource concerns, it would remain open to ORVs.

Subject Fw: Questions about Markers and "Backshore  
Corridors", and FEMA:

Paul,  
I can answer his questions re: FEMA survey.

The backshore corridor questions I need your (or your staff's) help with. I have not even seen one of the backshore closure signs yet so I need help with this. Can you assign someone to answer the questions relating to backshore corridors and ask them to work with me on the final response?  
Thank you!

Subject Questions about Markers and "Backshore Corridors", and FEMA:

Please respond to  
<apitt@jewettautomation.com>

Cyndy,

It's me again, with some questions about some markers observed recently, and the "Backshore Corridor" definition, and FEMA surveys. The three may actually be related.

Markers: There have been wooden stakes with a blue/white tape at the top, and what appears to be sequential numbers and location data hand-written on both sides of the stakes. These stakes have been seen from Frisco to Salvo, and there is much curiosity as to what they mean/are used for. Could you fill me in on their purpose? (See attached picture for clarity).

"Backshore Closures": Per the Consent Decree:

"Ocean Backshore Closures  
: For the benefit of all bird species, sea turtles, and seabeach amaranth, from March 15 to November 30, in all locations not in front of the villages, outside of the pre-nesting areas described above, and open to ORV use, NPS shall provide an ORV-free zone in the ocean backshore at least 10 m wide and running the length of the site, wherever backshore habitat exists, provided there is sufficient beach width to allow an ORV corridor of at least 20 m above the mean high tide line. This zone shall be adjacent to the toe of the primary dune whenever a primary dune exists (i.e., ORVs should be restricted to a corridor between the mean high tide line and the edge of the zone of the protected backshore). For the 2008 breeding season only, ocean backshore closures shall be established no later than June 1."

Several questions have arisen surrounding this subject:

1. Are the aforementioned markers part of the layout for these closures?
2. If a beach is not wide enough to support BOTH an ORV Corridor AND a Backshore closure, which, if any, takes precedence? (IE: If there is not 30 meters (20 for an ORV corridor and 10 for a backshore closure), does the area get closed, or If there is not 30 meters, is there no backshore corridor?)
3. Are there maps available to show where these areas are?
4. What is the ultimate intent for these corridors? Is it for species protection or for pedestrian access?

FEMA employees were recently spotted doing "Surveys" at numerous locations.

1. What is the purpose of these surveys?
2. Are the aforementioned markers part of the FEMA survey?
3. FEMA employees are apparently using ATV's, (Four-wheelers), to accomplish their missions. Will they be properly uniformed/marked in some fashion as to not cause their actions to be taken as a violation, and called in to the authorities as such?

That's all for now. I hope this all amounts to nothing, but many folks have come up with questions about all three topics.

0023209

Thanks in advance for your help in this matter!

Alan Pitt
