Mike / Darrell--

A couple of quick things.... Christina was out this week so the plover protocol isn't live on the public site, but you can download it in the interim at the following ridiculously long url if you need it before next Tuesday:

<http://inpserec2/staff/reports/ploverprotocol/Shared%20Documents/Byrne%202009.%20%20Methods%20for%20Monitoring%20Migratory%20and%20Wintering%20Shorebirds%20in%20the%20Southeast%20Coast%20Network.pdf>

Also, on Mike's sea level monitoring, NOAA conducts the monitoring nationwide; we will be using a derivative product that USGS produces from those data as a part of our shoreline mapping protocol (basically one that ties the sea level data into their benchmark elevation system). I've asked Tony to collect any historical sea level data he can get for the bouys we'll be using for our vital signs work so that we can track sea level change in addition to shoreline position. We'll have the data so it seems easy and prudent.

Have a good holiday.

Joe.
