Carol,

That doesn't make sense to me. If you want to use the word roundtrips, that would be o.k., but I think the average reader would consider a vehicle entrance as a vehicle coming into the beach area and not leaving. However, I'm not sure what you mean when you say you took the average of the vehicles entering and exiting the beach during the two hour period. Does that mean you divided it by two or just summed the total? If you divided it by two then it would be the number of vehicles entering the beaches, if not, I think it's still confusing.

I deal with vehicles entering and exiting the parks all the time so I may be bias on my thinking.

Thanks
