Mike-

Marie pointed out that the below sign is an old sign and does not meet NPS sign standards (missing standard header and arrowhead). The header and arrowhead will need to be added to the other yellow signs as well.

A few other things to think about-

16" x 16" sign increases cost. Last quote; 1 color @ 6.95, 2 color @ 7.95.

To compare cost, the standard bird & turtle signs are 12" x 12", and can be as low as \$2.65@ in quantity of 500 or more.

Subject: Re: Fw: Shoreline Access signs 

Mike-

The current signs are 24" X 24"

I almost think it is better to leave the text in place for "No Kites" rather than finding a kite symbol. That way it will encompass regular kites as well as kites from kite

boards.

Subject Fw: Shoreline Access signs

Britta,

I met with Paul, Jon and David today regarding ORV ramps signs. During that meeting, we also discussed the latest version of the shoreline access signs. The rangers suggested that we simplify the wording on the YELLOW "shoreline access open" signs and thought it was not necessary to say "No horses" but thought it would be beneficial to say "No Kites" (see attached revision. I had to mock up a "No Kites" symbol for demonstration purposes - not sure if there is a symbol for it). The rangers also recommended that we NOT create a new "shoreline closed" sign, but suggested that we continue using the current sign that says something like "Shoreline closed beyond this point" sign. They think it makes sense to use a YELLOW background for the "shoreline access open" signs, to distinguish it from the various closure signs, and recommended that the YELLOW signs be the same size/dimension as the current "Shoreline closed beyond this point" sign so that it stands out compared to the smaller Resource Closure signs.

Please review and comment on the attached "shoreline access open" sign text/design and the above described approach in general. Can you live with it? If not, how would you change it? Also, please provide me with the exact text and height/width dimensions of the current "Shoreline closed beyond this point" signs, so that we have the information here at HQ.

Once we finalize the wording and size of these signs, Paul will submit a sign request for the following (**unless you suggest a different number**):

100 x yellow "Shoreline open" signs with left-facing arrow

0030305

100 x yellow "Shoreline open" signs with right-facing arrow
200 x current-style "Shoreline closed beyond this point" signs

Subject Re: Shoreline Access signs 

Sounds good. We will finalize the shoreline sign design today as well
as the ramp signs.

Just so there is no confusion, I'm coordinating ordering the soundside
and ramp signs and resources will be ordering the shoreline signs with
the numbers listed below.

Subject Shoreline Access signs

Paul,

I've worked with Britta to revise the pedestrian shoreline access open/closure signs. Please review the attached revised sign design and let me know if you can live with the revised design, recognizing that we will want the sign maker to use a consistent style of prohibition symbols, preferably with the red circle and slash overlying the activity symbol (like the No Vehicles and No Pets symbols in the attached), rather than the activity symbol being on top of the red circle and slash (like the No Horse symbol used in the attached). I couldn't find the desired style for the No Horses symbol.

[attachment "Ped shoreline access signs 111210.FINAL.docx" deleted by Mike Murray/CAHA/NPS]

I concur with Britta's suggestion that we should use regular Resource Closure signs (12" x 12" plastic Voss sign on 2"x2" wooden post) without string along the waterfront edge of the prenesting areas, rather than the more expensive red carsonite; then use the "shoreline access" open or closed signs in a larger format sign (e.g., 36"x24" for the YELLOW signs or 24"x24" for the white sign, of approximately same plastic material and thickness as the Voss signs), mounted on a 4"x4" wooden post at high tide line at each end of the prenesting area. In other words, for each prenesting area that has pedestrian shoreline access "open", we will need 1 yellow sign with a left-facing arrow and 1 with a right-facing arrow. For each such area that is a full beach closure (i.e., no pedestrian shoreline access allowed), we will need 2 of the closure signs (1 for each end).

We should plan to fund these signs and other resource management signs, sign pots, string, and carsonite (as needed) out of the permit fee revenue. To provide sufficient number of signs and replacements to last at least one complete breeding season, we expect we will need an initial order as follows :

100 of the yellow signs with left-facing arrow
100 of the yellow signs with left facing arrow
200 of the full closure signs

Thanks,

Mike Murray

Subject Re: shoreline signs 

Mike-

I'm fine with the wording on the signs. My only comment would be that the red circle with the diagonal line through it should be on top of the other graphic so that the red line passes over the top of the pedestrian/jeep/dog/horse (not underneath them).

My concern is that the red carsonite is expensive (~\$20/pc) and if spaced 100' apart will require approximately 52 signs/per mile. If they are left in place they will get washed out. I'm assuming that we are not using the spring high tide line for these pedestrian areas so these signs will at times be subject to inundation. Some areas will require lots of maintenance and other areas won't be so troublesome. Wooden stakes are much easier to replace and are available locally when compared to carsonite. We can experiment with painting them red to see if that makes them more visible or continue using the natural colored wooden stakes.

If you are thinking of going much bigger than the 12" X 12" closure signs that we currently put on our 2" X 2" wooden posts, I don't believe a 2" X 2" post will do a very good job of holding them in place. They would have to be placed on 4" X 4"s otherwise they will get blown around in the wind.

I know that in the past much of the sign money came out of the RM budget. Will the money for these signs/posts and sign replacement come out of the permit funds?

 Subject shoreline signs

Britta,

During your absence, I worked with the rangers on drafting language for the "shoreline access" signs that would be used to implement the provision in FEIS Table 10-1 for Prenesting Closures (highlighted section) that reads:

The NPS will determine the configuration of specific prenesting closures based on an annual habitat assessment. Once established at the beginning of the breeding season, these areas would not be reduced to accommodate an ORV corridor. Prenesting closures would be removed if no breeding activity is seen in the area by **Jul 31** (or **Aug 15** if black skimmers are present), or 2 weeks after all chicks have fledged, whichever comes later. Nonbreeding shorebird habitat protection would be implemented, as described later in this table, before prenesting areas are removed. **Pedestrian access along ocean and inlet shorelines below the high tide line will be permitted in front of (i.e., seaward of) prenesting areas until breeding activity is observed, then standard buffers for breeding activity would apply. The NPS retains discretion at all times to enforce more protective closures or take other measures, if considered necessary, consistent with its obligations under the law.**

In principle, the lateral boundaries of the prenesting area (i.e., perpendicular to the ocean) would be marked with typical symbolic fencing. The ocean shoreline boundary (parallel to the ocean at about the high tide line), which we currently do not post at all, would be periodically marked with RED carsonite posts (e.g., every 100 ft or so to provide a visible "guide line" along the shoreline, with every other red post having a CLOSURE sign attached to it facing the water), running from one lateral boundary to the next. Where the lateral boundary symbolic fence meets the shoreline would be posted one of two ways:

1) If the shoreline below the high tide line (seaward of the red posts) is open to pedestrians prior to breeding activity in the area, sign # 1a or 1b would be used. There are two versions of this sign - each has an arrow directing the reader toward the open area. The one pointing left

would be posted on the east or north side of the closure. The one pointing right would be posted on the west or south side of the closure;

2) If breeding activity has occurred and portions or all of the shoreline area (seaward of the red posts) is closed, sign # 2 would be used (i.e., a complete shoreline closure).

In theory, when we transition from situation # 1 to situation #2, the only sign change that would be needed would be to replace sign(s) # 1 with sign # 2. The red carsonite would be left in place to provide additional notice to anyone who may try to come ashore within the closure.

Please review the attached draft sign language and propose any edits you think would improve the wording. Presumably these signs would be light weight on a single post for ease of installation and of similar material but larger (2-3X?) than the typical resource closure signs. Note: The draft signs in the attached file are not numbered. The first two signs relate to situation #1 and the third sign relates to situation # 2.
