Village Closure info

Robert and Ona,

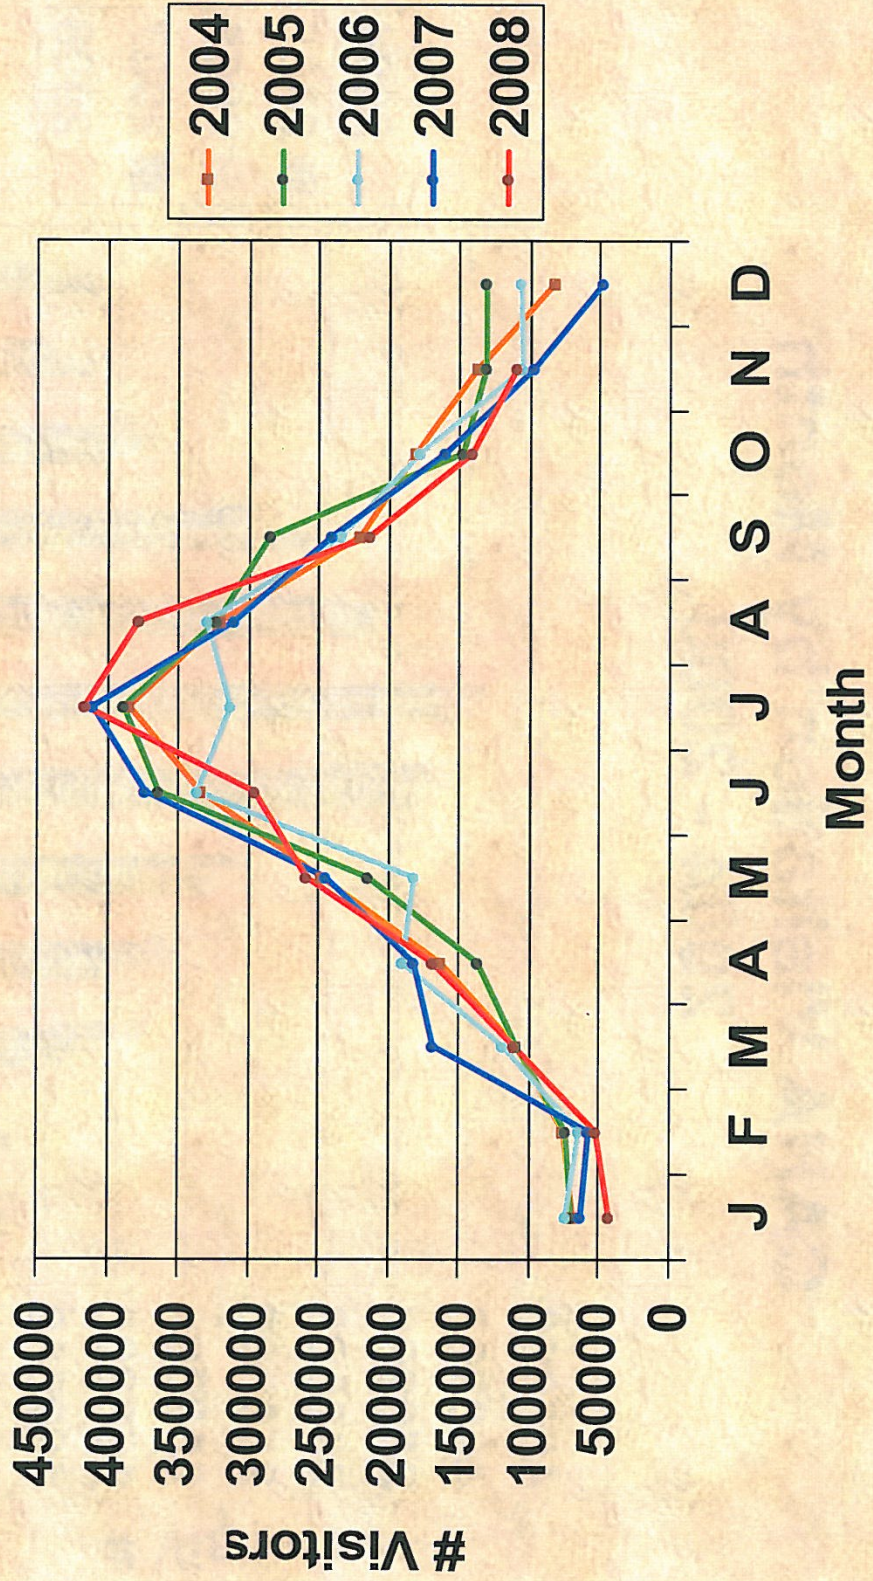

Here are some charts showing CAHA visitation for 2004-2008. (Note: Dec 2008 data not available yet.) Purpose of the charts is to try to show how visitation changes from the peak season, to the shoulder seasons, to the off-season in a fairly predictable fashion. The last slide shows the % of total visitation that would be affected by village closures of various lengths. While this information is interesting, I do not know if it is helpful or not in determining the appropriate time period for village closures, since it does not necessarily translate into the amount of pedestrian use during the respective months and still requires a judgment call as to when is there sufficient pedestrian use to warrant a closure to ORVs. Feel free to share this information with the Village Closure subcommittee.
