

**Negotiated Rulemaking Advisory Committee for Off-Road Vehicle Management
At Cape Hatteras National Seashore**

**Final Report of the Proceedings
Submitted to the National Park Service on behalf of the Committee
by Patrick Field, Robert Fisher, and Ona Ferguson, Committee Facilitators
March 30, 2009**

This report is submitted by the facilitators to the National Park Service pursuant to Section VI (F) of the Final Groundrules of the Negotiated Rulemaking Advisory Committee for Off-Road Vehicle Management at Cape Hatteras National Seashore (Committee) adopted on January 4, 2008 and the Negotiated Rulemaking Act, 5 U.S.C. 561-570. This report outlines the Committee's process and the outcome of the Committee's work, and provides information, recommendations, and materials submitted by one or more Committee members as an addendum. As provided in Section 556(f) of the Negotiated Rulemaking Act all Committee members were given the opportunity to submit information, recommendations, and materials along with this report.

As required by Section 556 (g) of the Negotiated Rulemaking Act and the Federal Advisory Committee Act, 5 U.S. C. Appendix 2, documents which were made available to or prepared for or by the Committee and meeting summaries containing the required information have been maintained by the CAHA Superintendent, as the Designated Federal Official (DFO), and are available for public inspection.

Committee Process

The Committee was established through a feasibility assessment and convening process. A draft Negotiated Rulemaking Feasibility Report, based on 55 interviews, was released on June 17, 2005. The revised Report was released for public comment on December 16, 2005. The final Feasibility Report, released April 4, 2006, concluded that: “. . . a consensus-based negotiation to develop a management plan and proposed implementing regulations can be convened, can yield important benefits even if agreement is not reached, and has a modest chance of success. . . .” The National Park Service issued a Federal Register Notice of Intent to Establish a Negotiated Rulemaking Advisory Committee on June 29, 2007. The Secretary of the Interior signed the Charter establishing the Committee on November 26, 2007, and the National Park Service issued the Federal Register Notice of Establishment of the Committee, including Committee member names, on December 20, 2007.

The Committee convened its first meeting on January 3 and 4, 2008. Subsequently, the Committee held 10 additional meetings on the following dates: February 26-27, 2008, March 18-19, 2008, May 8-9, 2008, June 17-18, 2008, September 8-9, 2008, November 14-15, 2008, December 11-12, 2008, January 6-7, 2009, February 3, 2009, and February 26, 2009. The Committee established seven (7) subcommittees that undertook aspects of

the Committee's work. These subcommittees included: Agenda Planning; Natural Resources; Permits, Passes, and Fees; Routes and Areas; Socio-Economic Analysis; Vehicle Characteristics and Operations; and Village Closures. There also were a number of informal workgroups.

At the February 3, 2009 meeting, the Committee charged an Integration Group to develop a single proposal recommendation to the Committee for discussion at the final meeting. The Integration Group met in-person February 11-13 and 16-17, as well as via conference call on February 23 and 24. The Committee considered the work of the Integration Group in its final meeting and concluded its work on February 26, 2009. The Committee's work product can be found on the internet at: <http://parkplanning.nps.gov/parkHome.cfm?parkId=358>.

Committee Outcome

The Committee did not reach consensus on the concepts and language to be used as the basis for a proposed special regulation governing ORV use at the Seashore as contemplated by the Committee's Charter. The Committee in its Final Groundrules defined consensus as unanimous concurrence of the principals, or in the absence of the principal, his or her alternate.

As requested by the National Park Service and Committee members, the Committee discussed in detail, such issues as: 1) access to beach areas for commercial fishing and recreational activities; 2) providing for a variety of visitor experiences on the seashore, including both ORV and non-ORV experiences; 3) public safety; and 4) protection of the beach environment and the associated plant and wildlife resources. The Committee gathered extensive information and data on key issues, deliberated about key subjects related to a proposed regulation, reviewed and discussed the National Park Services' draft proposed National Environmental Policy Act (NEPA) ORV Management Alternatives (11/05/08) and developed numerous ideas and options for addressing the key issues.

Addenda to the Facilitators' Report

The Committee's Final Groundrules provided for the Committee, through the Facilitators, to transmit to NPS a report, and for Committee members to submit, as addenda to the report, additional information, recommendations, or materials. The following addenda to this report contain the additional information, recommendations, or materials as provided to the Facilitators by Committee members without alteration.

Coalition of National Park Service Retirees

Addendum to the Final Report of the Proceedings of the Negotiated
Rulemaking Advisory Committee for Off-Road Vehicle Management at
Cape Hatteras National Seashore

Rob Milne and Dwight Rettie
Coalition of National Park Service Retirees

March 27, 2009

REPRESENTING THE COALITION OF NATIONAL PARK SERVICE RETIREES:

For reasons beyond our control, Rob Milne and Dwight Rettie were unable to participate fully in the last meetings of the Committee. Because we represented the Coalition of National Park Service Retirees, an organization with no institutional turf to protect, both Rob and Dwight have seen it as their role to represent present and prospective users of Cape Hatteras National Seashore and other areas subject to present and potentially future ORV use and other forms of motorized recreation. We specifically viewed our "clientele" as all of the American people, the ultimate owners of the National Park System.

We are disappointed that the negotiation process did not result in a consensus package to which everyone could agree. It was, indeed, a noble goal. Perhaps the bits and pieces on which there was agreement will serve as starting places for progress at informal resolution of other problems when possible. We were often impressed with the goodwill and open mindedness around the negotiating table. Negotiating about matters so deeply embedded in the local culture was inevitably difficult, especially during a period of economic crisis when separating out the effects of even small amounts of lesser ORV and beach use from the untoward effects of a national recession. Those effects are commingled to a degree impossible to separate.

We take away from this effort three lessons for CAHA and for other units of the National Park System that are now and may in the future be impacted by recreational forms having known or predictable long term adverse impacts on the environment and on the quality of visitors' experiences.

1. Cape Hatteras National Seashore is a classic example of a problem that has been known, visible and of concern to both visitors and park management for decades. The problem has, as a consequence, become more and more difficult to resolve. The same basic conditions exist elsewhere in the National Park System. Delay in stepping up to the problem makes it increasingly more difficult to resolve. NPS should inventory similar problems at other locations in the system and set some sort of process in motion to negotiate or otherwise resolve the issues between now and 2016. That goal does not seem unrealistic.

2. Park planning and management practices should afford a means by which future problems can be identified before they become acute conflicts or before they place park resources in danger of impairment.

3. As visitation grows CAHA and dozens of other National Park System sites will have an opportunity to look ahead and come seriously to grips with the reality that at some time in the future park use will reach saturation levels that will again raise the issue of "carrying capacity" of both the resource and the quality of visitors' experience. We acknowledge the theoretical and practical difficulties in designing any servicewide definitions and numerical indicators. Perhaps a servicewide system is unrealistic and focus should be on individual parks and sites. We are not troubled by differences in "carrying capacity" dependant on the inherent differences in park resources and visitor experiences. Nor do we believe all these answers must or can be resolved by 2016. We do urge that without such knowledge and standards, park managers

Coalition of National Park Service Retirees

should examine the merits of "capping" visitation by one means or another, to afford the needed time to develop more specific carrying capacity methods while beginning a public education effort so that when the date of ultimate saturation arrives, the public understands its necessity. Such levels may only be reached for short periods each season. Understanding that reality is also important for both visitors and park management.

It has been an honor and privilege to represent the Coalition of National Park Service Retirees at the negotiating table. We wish we had the wisdom or the magic wand that could have led to the consensus we know everyone would have preferred. Learning the nature and depth of other points of view was perhaps enough in itself.

Respectfully submitted,

Rob Milne, Committee Member
Dwight Rettie, Alternate

Rulemaking Advisory Committee for Off-Road Vehicle Management at
Cape Hatteras National Seashore

North Carolina Wildlife Resources Commission

March 27, 2009

Recommendations Pertaining to Night Driving on CAHA during the Sea Turtle Nesting Season

Introduction

The recommendations contained herein are interim concepts being presented by the North Carolina Wildlife Resources Commission at the request of the National Park Service. These concepts consider both biological and social issues related to beach driving on CAHA. These concepts are provided to indicate the current thinking of our agency, but by their very nature will require further development before being finalized. As indicated below, we agree that above-ambient lighting in CAHA and throughout Dare County impacts turtle populations more than human activity on the beach. We believe these recommendations reflect acceptable compromises between biological and social issues and provide a foundation from which opportunities to successfully address lighting, night driving, and wildlife population issues can be maximized.

Goals for Recovery

- Recovered population of sea turtle nests at CAHA = 200 nest annually
- Annual increase in sea turtle nests $\geq 2\%$ (or greater) annually, based on the past 5-yr average.
- Decrease the number of sea turtle takes associated with night driving activities to $< 3/\text{yr}$.
- Decrease the number of violations to sea turtle, bird and sea beach amaranth resources associated with night driving activities to $< 5/\text{yr}$.
- Show an average annual increase in loggerhead sea turtle nests of $\geq 2\%$ from the last 5 yr. average.
- Reduce “takes”/yr. on individual sea turtles or individual eggs associated with night driving activities (i.e. hatchlings caught in tire ruts, disorientation due to lights associated with vehicles, eggs or hatchlings run over, etc.).
- Document an average of < 10 resource violations associated with night driving activities/yr.

Performance Objectives

Reduced lighting county-wide: Year 3 = 25% reduction from baseline; Year 5= 50% reduction from baseline; Year 10 = 75% reduction from baseline.

Assumptions and Background

- We are assuming that lighting (all sources) is affecting turtle nesting and hatchling survival at CAHA and throughout Dare County to a greater degree than is human activity on the beach.
- We are assuming the below biological criteria are reasonable and achievable and are accurate measures of a sustainable sea turtle nesting population.

North Carolina Wildlife Resources Commission

- Recovery criteria, as stated in the Recovery Plan for the Northwest Atlantic Population of the Loggerhead Sea Turtle, are: “(1)...statistical confidence (95 percent) that the annual rate of increase over a generation time of 50 years is 2 percent or greater resulting in a total annual number of nests of 14,000 or greater for this recovery unit (approximate distribution of nests is NC=14% [2,000], SC=66% [9,200], and GA=20% [2,800]); and (2) (t)his increase in number of nests must be a result of corresponding increases in number of nesting females (estimated from nests, clutch frequency, and remigration interval). CAHA historically accounts for approximately 10 percent of the nests laid in NC (although, the last two years – 2007 and 2008 – have seen percentages of 14.5 and 13.2, respectively, of the state-wide totals), the above range-wide objectives translate into a CAHA-specific objective of 200 nests per year within the next 50 years, with interim benchmarks based on an approximate 2 percent annual rate of increase.
- NPS establishes turtle friendly lighting restrictions on NPS property by May 2011.
- County establishes turtle friendly lighting program county-wide by May 2011.

Recommendations

Year 1 (est. implementation 2011) –

- Unrestricted night driving from Nov. 16th through April 30th, subject to resource closures.
- No night driving May 22nd through Sept. 15th between 1 hour after sunset until all beaches have been cleared in the morning by NPS personnel (or authorized personnel).
- Restricted night driving from May 1st through May 21st and again starting Sept. 16th through Nov. 15th between 1 hour after sunset until all beaches have been cleared in the morning by NPS personnel (or authorized personnel), subject to the following conditions:
 - Permits are required with associated education about turtles, lighting rules, and reporting (turtle activity or violations) guidelines.
 - Night driving permitted only on designated ORV routes to Bodie Island spit, Cape Point, Hatteras Inlet Spit and South Point Ocracoke (subject to resource closure).
 - Headlights only on during transit and not shining into bird nesting areas.
 - Other light restrictions as previously identified (i.e. no campfires, lanterns etc.)
 - NPS enforcement officer and technician on location and available to provide enforcement, education, and conduct basic monitoring and documentation of violations.

“Park and stay” option available at Bodie Island spit, one location at Ramp 23, 30, or 38, Cape Point, Hatteras Inlet Spit, and South Point Ocracoke (subject to resource closure).

Year 3, provided the following metrics are met;

- 1) Reduced problem beachfront lighting county-wide by 25% from baseline.
- Unrestricted night driving from Nov. 1st through April 30th, subject to resource closures.
 - No night driving May 22nd through Labor Day between 1 hour after sunset until all beaches have been cleared in the morning by NPS personnel (or authorized personnel).
 - Restricted night driving from May 1st through May 21st, and again from the Tuesday after Labor Day through October 31st between 1 hour after sunset until all beaches have been cleared by NPS personnel (or authorized personnel), subject to the following condition.

North Carolina Wildlife Resources Commission

- Permits are required with associated education about turtles, lighting rules, and reporting (turtle activity or violations) guidelines.
- Night driving permitted only on designated ORV routes to Bodie Island spit, Cape Point, Hatteras Inlet Spit and South Point Ocracoke (subject to resource closure).
- Headlights only on during transit and not shining into bird nesting areas.
- Other light restrictions as previously identified (i.e. no campfires, lanterns etc.)
- NPS enforcement officer and technician on location and available to provide enforcement, education, and conduct basic monitoring and documentation of violations.
- “Park and stay” option available at Bodie Island spit, one location at Ramp 23, 30, or 38, Cape Point, Hatteras Inlet Spit, and South Point Ocracoke (subject to resource closure).

Year 5, provided the following metrics are met;

- 1) Reduced problem beachfront lighting county-wide by 50% from baseline.
- Unrestricted night driving from Nov. 1st through April 30th, subject to resource closures.
 - No night driving the Tuesday after Memorial Day through the Friday before Labor Day between 1 hour after sunset until all beaches have been cleared in the morning by NPS personnel (or authorized personnel).
 - Restricted night driving from May 1st through Memorial Day, and again from the Saturday before Labor Day through October 31st between 1 hour after sunset until all beaches have been cleared by NPS personnel (or authorized personnel), subject to the following condition.
 - Permits are required with associated education about turtles, lighting rules, and reporting (turtle activity or violations) guidelines.
 - Night driving permitted only on designated ORV routes to Bodie Island spit, Cape Point, Hatteras Inlet Spit and South Point Ocracoke (subject to resource closure).
 - Headlights only on during transit and not shining into bird nesting areas.
 - Other light restrictions as previously identified (i.e. no campfires, lanterns etc.)
 - NPS enforcement officer and technician on location and available to provide enforcement, education, and conduct basic monitoring and documentation of violations.
 - “Park and stay” option available at Bodie Island spit, one location at Ramp 23, 30, or 38, Cape Point, Hatteras Inlet Spit, and South Point Ocracoke (subject to resource closure).

Year 10, provided the following metrics are met; If they are not met, NPS returns to one of the above management regimes depending on the level of progress indicated by the metrics.

- 1) Reduced problem beachfront lighting county-wide by 75% from baseline.
- Unrestricted night driving from Nov. 1st through April 30th, subject to resource closures.
 - No night driving the Tuesday after Memorial Day through the Friday before Labor Day between 1 hour after sunset until all beaches have been cleared in the morning by NPS personnel (or authorized personnel).
 - Restricted night driving from May 1st through Memorial Day, and again from the Saturday before Labor Day through October 31st between 1 hour after sunset until all

North Carolina Wildlife Resources Commission

beaches have been cleared by NPS personnel (or authorized personnel), subject to the following condition.

- Permits are required with associated education about turtles, lighting rules, and reporting (turtle activity or violations) guidelines.
 - Night driving permitted only on designated ORV routes to Bodie Island spit, Cape Point, Hatteras Inlet Spit and South Point Ocracoke (subject to resource closure).
 - Headlights only on during transit and not shining into bird nesting areas.
 - Other light restrictions as previously identified (i.e. no campfires, lanterns etc.)
 - NPS enforcement officer and technician on location and available to provide enforcement, education, and conduct basic monitoring and documentation of violations.
- “Park and stay” option available throughout CHNS subject to resource closures.

Needed Evaluations:

Conduct assessment to determine baseline lighting conditions (number of lights visible from the beach) throughout Dare County by 2010. May be able to use “Night Skies” data as part of baseline.

Continue to monitor number of sea turtle nests as in the past. Track % increases or decreases. Baseline is set using past 5–yr. average.

Establish scientifically defensible methods to track sea turtle “takes” and resource violations and monitor these for use in relaxing night driving restrictions.

U.S. Fish and Wildlife Service

Addendum to the Final Report of the Proceedings of the Negotiated
Rulemaking Advisory Committee for Off-Road Vehicle Management at Cape
Hatteras National Seashore

Summary Recommendations Regarding Rule Development for the
Regulation of Off-Road Vehicles at Cape Hatteras National Seashore

Presented By:

Pete Benjamin

Lead U.S. Fish and Wildlife Service Representative
to the Negotiated Rule-Making Committee

February 10, 2009

Updated March 27, 2009

Note: The following was first submitted to the Committee on February 10, 2009. It is provide here again for the record. The content is unchanged. However, we offer the following additional comments:

- 1) With respect to non-listed beach-nesting birds, the comments provided below remain valid with the additional comment that we note the buffer recommendations provided in the protocols prepared by the U.S. Geological Survey represent appropriate applications of the available scientific information regarding protection of these species.
- 2) With respect to night driving, we have been coordinating with the North Carolina Wildlife Resources Commission in an effort to develop a joint recommendation to present to the National Park Service. We have been unable to reach agreement on a joint recommendation in the time available. I feel that with additional coordination, agreement among the FWS and WRC could be reached, and we would be willing to pursue such agreement if the NPS so desires. As such the night driving recommendations attached to the end of this document represent only the views of the U.S. Fish and Wildlife Service. The attached recommendations replace those contained in the body of this document.

The remaining text is as originally submitted in February:

The purpose of this document is to summarize my views as the primary Fish and Wildlife Service representative on the Negotiated Rule-making Committee regarding the discussions that have taken place over the past year. As a Committee we have learned a great deal about the interests of the various Committee members and the many factors that will influence whatever action the National Park Service ultimately takes, and I feel there is sufficient information to allow me to firmly state my views regarding the type of alternative to which I could offer my consent. My Alternate and I have articulated these views throughout the course of the negotiations; but the flow of the negotiations has been such that we have not yet presented our recommendations comprehensively. This document will attempt to pull our views and

recommendations together in a single framework for the benefit of the NPS as you move forward.

To provide context let me say that in evaluating potential alternatives in terms of whether I could offer my consent if the question were put before the Committee I see my decision space as follows. At the low end (non-consent) would be an alternative that would be unlikely (in my estimation) to satisfy basic legal requirements or be within reasonable bounds as indicated by the available scientific information. An example would be an alternative that I think would approach the “jeopardy” threshold or be likely to result in a high amount of avoidable incidental take for one or more listed species. This is a very low bar to clear. Also near this end of the scale would be alternatives that deviate so substantially from existing recovery plans as to be, in my view, unsupported by the best available scientific information. At the high end (hearty consent) would be alternatives through which the NPS would be fully embracing endangered species recovery and conservation as a primary focus. Somewhere in between is a point below which I could not offer consent, as I would not feel comfortable lending the credence of my agency to the plan, but would be equally uncomfortable objecting because the alternative would be likely to meet the bare minimum standards of the statutes and policies under my purview. In that case, I would be inclined to abstain.

The Adaptive Management Framework

Since before the Committee was convened, and throughout its negotiations, I have advocated that NPS apply the concepts of Adaptive Management to the regulation of off-road vehicles at Cape Hatteras National Seashore. Per Secretary’s Order No. 3270, the Department of the Interior supports the use of Adaptive Management where appropriate conditions exist. As identified in the Order and the document “Adaptive Management: The U.S. Department of the Interior Technical Guide,” consideration of Adaptive Management is warranted when: “(a) there are consequential decisions to be made; (b) there is an opportunity to apply learning; (c) the objectives of management are clear; (d) the value of reducing uncertainty is high; (e) uncertainty can be expressed as a set of competing testable models; and (f) an experimental design and monitoring system can be put in place with a reasonable expectation of reducing uncertainty.”

All of these conditions clearly exist with respect to the ORV issue at CAHA, with the exception of (c) above. Though the NPS has yet to state specific management objectives with respect to ORV management and natural resource management at CAHA, it is obvious that such objectives must be clearly defined. These objectives need to describe NPS goals regarding natural resource conditions and visitor experience in concise, measurable terms.

As I see it, all the alternatives under consideration thus far (including those put forth by the natural resource interest groups) are very permissive in terms of ORV access. Most public lands within the breeding ranges of the subject species close preferred habitat to ORV use (if it is allowed at all) throughout the breeding season. By attempting to meet your obligations to conserve the Seashore’s natural resources while simultaneously affording a high amount of ORV access (including access to sensitive habitat) you are trying to codify something at CAHA that is unique as near as I can tell. If this effort is successful, CAHA would provide a unique visitor experience among East Coast public lands; or more accurately, the continuation of what is a

unique experience. I fully understand and support your efforts in this regard. But, at the risk of stating the obvious, balancing these two sets of goals is a very complicated task. I submit that it is too complicated to manage effectively in the absence of a robust Adaptive Management framework.

We have offered to assist NPS in developing natural resource goals and objectives for those species of fish and wildlife under our jurisdiction, recognizing that any decisions regarding adoption of such objectives are the sole purview of the NPS. While continuing to respect your obligations to determine natural resource goals, objectives and management strategies within the Seashore, I offer the following advice regarding appropriate goals and objectives for federally listed species that occur at CAHA in order to provide context and a framework for our overall management recommendations. The following are derived or taken directly from the recovery plans for the listed species occurring within CAHA. These plans represent the state-of-the-science with respect to these species, with the addition of a few references regarding piping plovers that have become available since the plan for that species was last revised in 1996.

Suggested Goals and Objectives

Piping Plovers:

I continue to encourage the NPS to adopt as its goal that you will meet your obligations under Section 7(a)(1) of the Endangered Species Act by contributing to the recovery of this species. This translates into the measurable objectives of managing the CAHA breeding population such that it is approaching the estimated carrying capacity of the habitat within CAHA within the next 10 years, and that productivity is such that CAHA is contributing positively to the Southern Recovery Unit's recovery criteria. According to Appendix B of the Piping Plover, Atlantic Coast Population, Revised Recovery Plan (1996), the estimated carrying capacity for breeding piping plovers at CAHA is 30 nesting pairs. Although this level of breeding activity has not been previously documented at CAHA, I note that the entire period for which reasonably accurate records have been kept at CAHA has been characterized by high levels of relatively uncontrolled human activity resulting in high levels of disturbance during the piping plover breeding season. I further note that NPS units elsewhere in the breeding range exceeded the estimated carrying capacity identified in Appendix B following the implementation of reasonable management measures (e.g., Assateague Island National Seashore. 2006. Management and monitoring of the piping plover, *Charadrius melodus* 2006 breeding season.). Further, we have seen a rapid increase in the number of breeding pairs over the past three years, following implementation of the Interim Strategy and Consent Decree. This indicates to me that habitat availability/suitability is not currently a limiting factor. All this leads me to conclude that 30 nesting pairs is a reasonable objective for CAHA. It also represents an explicit and testable assumption toward which future evaluation, monitoring, and research should be directed (i.e., The carrying capacity for breeding piping plovers at CAHA is 30 breeding pairs). It would be reasonable to adjust this goal modestly based on changed conditions at CAHA since the Recovery Plan was published.

Regarding productivity, the Recovery Plan indicates that an annual rate of 1.5 fledged chicks per pair is needed throughout the breeding range in order to recover the Atlantic Coast piping plover

population. The Recovery Plan also indicates that a rate of 1.25 fledged chicks per pair is needed to prevent population declines. While the productivity rates for past years on record at CAHA are generally much lower than these rates (as is the case for all sites in NC), the fact remains that these rates represent the best available scientific information regarding what is needed to contribute to the recovery of the species. So, I suggest 1.5 fledged chicks per pair per year as the recommended objective. As with the population objective above, this objective in and of itself embodies explicit and testable assumptions (i.e., that it is in fact an achievable rate that will provide for a growing population). In addition, many other testable assumptions relate to this measure, which have implications for management. For example, it is known that human disturbance is among the factors that affect productivity, and that management of human disturbance (including but not limited to management of ORV use) is beneficial. Given that management of ORV use is time consuming, costly and controversial, it would be worth assessing the extent to which human disturbance influences productivity relative to other factors. There would also be obvious benefit in exploring the extent to which different types of human activity influence productivity relative to each other and other factors. Additional learning in all of these areas (and others) would help in making better management decisions, and would inform any needed adjustments to the goals themselves.

Regarding non-breeding piping plovers, we know that piping plovers migrate through and winter at CAHA. We also know that while at CAHA these non-breeding birds utilize a mosaic of habitat at and near the Point and spits (both within CAHA and without). We further know that piping plovers spend approximately 70 percent of their annual life cycle in non-breeding status. This leads us to strongly believe that factors affecting survival during the non-breeding season are important to the survival and recovery of the species. All available evidence also indicates that the factors affecting piping plover fitness and survival during the non-breeding season are the same as those factors that have been well documented to affect breeding plovers, including human-caused factors subject to management control at CAHA. Indeed, in a recent study of Atlantic Canada piping plovers, adult survival during the non-breeding period was considered to be the single most important factor influencing population trends (Amirault et al., 2006; see also Melvin et al., 2006). As such, an appropriate goal would be to address factors subject to management control within CAHA such that the survival and fitness of non-breeding piping plovers is not adversely affected. This translates into an objective of minimizing disturbance of non-breeding piping plovers by human activity within CAHA, and a related objective of minimizing predation of non-breeding piping plovers within CAHA.

Sea Turtles:

As with piping plovers, I continue to encourage NPS to embrace your obligations under Section 7(a)(1) of the ESA and establish an explicit goal of contributing to the recovery of federally listed sea turtles that occur at CAHA. Per the newly revised Recovery Plan for the Northwest Atlantic Population of the Loggerhead Sea Turtle, the recovery criteria for the Northern Recovery Unit (Georgia to Virginia) are: “(1)...statistical confidence (95 percent) that the annual rate of increase over a generation time of 50 years is 2 percent or greater resulting in a total annual number of nests of 14,000 or greater for this recovery unit (approximate distribution of nests is NC=14% [2,000], SC=66% [9,200], and GA=20% [2,800]); and (2) (t)his increase in number of nests must be a result of corresponding increases in number of nesting females

(estimated from nests, clutch frequency, and remigration interval). Since CAHA historically accounts for approximately 10 percent of the nests laid in NC, the above range-wide objectives translate into a CAHA-specific objective of 200 nests per year within the next 50 years, with interim benchmarks based on an approximate 2 percent annual rate of increase. As with the goals and objectives for piping plover conservation, a set of testable assumptions are either inherent in or can be derived from this objective.

The criteria in the Recovery Plan focus on nesting females, which makes sense given the biology of this species. However, given that the role of CAHA with respect to sea turtle conservation is limited to nesting habitat, it would be appropriate to also establish objectives related to nesting success. These could be described in terms such as a desired percentage of non-relocated nests that produce hatchlings, or other similar measure. I stress the term “non-relocated” because in terms of conserving listed species we are striving to ensure that the habitat is sufficient to sustain the recovered population level. While nest re-location is a tool available to managers, the focus needs to be on management actions to promote habitat conditions that are favorable for the species’ long-term conservation.

Seabeach amaranth:

The NPS should embrace their obligations under Section 7(a)(1) of the ESA and establish an explicit goal of contributing to the recovery of federally listed seabeach amaranth. The recovery criteria identified in the Recovery Plan for Seabeach amaranth (*Amaranthus pumilus*), Rafinesque (1996), state that a “minimum of 75 percent of the sites with suitable habitat be occupied by seabeach amaranth populations for 10 consecutive years.” Cape Hatteras National Seashore has at least four seabeach amaranth sites – Bodie Island spit, Cape Point, Hatteras Inlet spits (Hatteras Island spit and North Ocracoke spit) and Ocracoke Inlet spits (Southern Ocracoke Island spit). Based on the stated recovery criteria, an appropriate goal would be to implement management control to promote and protect the occurrence of seabeach amaranth, at a minimum, at three of the four identified sites. As with the goals and objectives for the other species, a set of testable assumptions are either inherent in or can be derived from this objective.

Modeling

Models (empirical or conceptual) are essential components of an Adaptive Management framework. Please refer to page 12 of “Adaptive Management: The U.S. Department of the Interior Technical Guide” for a very good summary of why models are important. From my own experience, models articulate our understanding of how various factors (variables) interact to affect the resource we are attempting to manage. Models allow us to describe the relative importance of each factor, the uncertainty and risks surrounding each factor and its interrelation with other factors, and to make predictions regarding the effects of alternative management approaches relative to stated goals and objectives. Models help us identify which factors have the greatest potential influence on the resource under management (thereby helping to focus management actions) and the areas of greatest uncertainty (thereby helping to focus research needs). Models are essential tools for organizing scientific information, evaluating alternative management actions and selecting preferred options, organizing monitoring efforts, and identifying research needs. Models help pull all these activities together in a consistent, logical

and transparent framework that is grounded in science. For these reasons models also facilitate stakeholder understanding and input.

In short, you need models. I have been encouraging you to pursue this course since before the negotiated rule-making process began. I am not an expert in this area, but the Department has people with unquestionable expertise. I have provided NPS with their names. I continue to strongly encourage you to avail yourself of their expertise. If you would prefer, I can contact them on your behalf. To do Adaptive Management right you must do it from the start of a process. You cannot tack Adaptive Management on at the end. The Adaptive Management language currently presented in your November 5, 2008 ORV Management Alternatives represents, at best, half measures that will consume NPS resources without providing useful knowledge upon which to base future management decisions. It is already late in the game, but it is not too late. This situation cries out for the application of Adaptive Management, and models are the heart of an Adaptive Management approach.

Other Components of Adaptive Management

Without going into detail at this time, you will also need to build a detailed and specific monitoring protocol that will give you the information needed to measure outcomes, learn through doing, and refine your objectives and models. Additionally, you will need to commit resources to research targeted toward reducing uncertainty surrounding the assumptions upon which your models and management plans are based. This opportunity and commitment to learning, to me, represents one of the greatest potential benefits of this endeavor. Indeed the prospect for developing knowledge that could benefit the conservation of these species range-wide is a primary factor enabling me to consent to a management approach that varies substantially from those described in the recovery plans for these federally listed species.

A final thought regarding Adaptive Management: it requires stakeholder involvement. This is in part why I said earlier that it is already late in the game, even though a final rule is not due until Spring 2011. The Committee's work is near its end, but I think you are going to need some forum or body to afford continued stakeholder involvement throughout the remainder of this rule-making and beyond into implementation of any plan ultimately adopted.

My Bottom Line

The preceding was lengthy but necessary in order for the following specific comments and recommendations to be understood in their proper context. Specifically, IF the NPS were to embrace goals and objectives similar to those outlined above, commit to doing what is necessary to reach those goals, and commit to pursuing those goals via a true Adaptive Management framework, then, it would make little difference to me what specific actions you decide to employ at any given time on any given beach. Under such conditions I would be confident that you were using the best available science and an effective set of decision-support tools to help guide your day-to-day management decision-making. In short, I would be likely to consent to any alternative that embraces the above principles. Conversely, I will likely find it very difficult to consent to any alternative that does not. As I see it, you have an opportunity here to build something really new and substantial that would truly integrate science, management and

stakeholder involvement. Missing this opportunity would represent a substantial loss in my view, and a substantial departure from the kind of science-based decision making that my agency advocates. This would likely prevent me from offering my consent, and the best I'd be likely to offer the Committee would be my abstention.

Nonetheless, with science-based decision making in an Adaptive Management environment, you start with what you know or think you know and work from there. As such, I offer the following site-specific recommendations as a summary of what the current state of the science indicates or suggests, as taken from the recovery plans for these species.

Specific Management Recommendations

Actions to protect federally threatened and endangered species, by law, must be based on the best scientific information available. (Measures to protect non-listed natural resources also should be based on the best scientific information available.) As stated above, the best scientific information for listed species is generally encapsulated in the species' recovery plan. For older recovery plans, additional, more recent, scientific literature was considered in the development of these protective measures. Literature cited in the recovery plans are incorporated by reference. Additional literature not cited in the recovery plans is referenced below.

Piping Plover

The protection measures for the piping plover are drawn largely from Appendix G of the piping plover Recovery Plan (1996) which is limited to prohibitions of take under section 9 of the ESA, and may not include measures to satisfy potential legal mandates under other portions of the ESA (e.g., section 7) or Executive Orders (e.g., 11644 and 11989). Furthermore, Appendix G is primarily guidance for the protection of breeding piping plovers. Additional information is provided for non-breeding piping plovers.

Pre-nesting Areas:

All suitable piping plover nesting and courtship habitat should be identified by a qualified biologist and delineated with symbolic fencing consisting of wooden posts, bird usage signs, strings, and flagging tape on or before 15 March each year. Pre-nesting areas should include the areas of moist soil habitat, permanent and ephemeral ponds or pools, ocean backshore, dunes, dry sand flats, overwashes, blowouts, and the ocean tidal zone.

All vehicular access into or through posted nesting habitat should be prohibited.

Monitoring should be conducted at least once every two days from 15 March to 15 April, and then daily from 16 April to 15 July, to determine if any birds are exhibiting pre-nesting and/or breeding behavior.

The pre-nesting areas should remain in place until the later of 15 July or two weeks after the last shorebird (e.g., least tern, black skimmer, American oystercatcher, or Wilson's plover chick) within the area has fledged and no other nesting activities by any species are observed, as

determined by two consecutive monitoring events conducted over at least two days. [Other shorebirds are selected here as a measure to determine the last nesting activity because piping plovers may be difficult to detect.]

All unposted sites should be posted immediately upon detection of breeding behavior (i.e., within the same day), including but not limited to territorial behavior, courtship, mating, scrapes, or other nest-building activities.

These recommendations are essentially similar to the measures identified in your November 5, 2008, CAHA ORV Resource Protection Tables, Species Management 1 (SM1) and Species Management 2 (SM2). A potentially significant difference between the above and SM1/SM2 is the distinction between “recent breeding area” and “all potential habitat.” We do not understand the practical difference, and recommend that “all potential habitat” be treated the same. We also recommend that instead of stating that pre-nesting closures will be “removed” following cessation of nesting activity, that they will be “rolled back” to become “non-breeding buffers”.

As applied to specific sites within CAHA, we recommend the following modifications to the proposed SM2 procedures.

At Bodie Island, much of the best foraging habitat is the wet sand and ephemeral pools near the inlet. Maintenance of a corridor around the entire inlet would result in a high probability of disturbance of pre-nesting birds in the inlet area. We would recommend that baseline management be to terminate the corridor at the point of the inlet/ocean interface beginning March 15. Also, it appears possible to maintain a narrow access corridor to the northwest corner of the “bait pond”.

At South Beach, monitoring data are sparse but the condition of the habitat indicates that the area provides suitable and potentially valuable foraging habitat for pre-nesting plovers. As such we recommend as baseline management conditions the opening of a back dune road with parking and walk-overs.

At Hatteras Inlet, we recommend as the baseline management condition establishment of a high beach corridor from where the spur roads empties onto the ocean beach to the vicinity of the inlet, in order to provide some undisturbed ocean intertidal foraging habitat.

At South Ocracoke, similar to Bodie Island spit, we recommend as the baseline management condition that you terminate the corridor at the point of the inlet/ocean interface beginning March 15.

At this point I think it may be useful to illustrate the type of decision-making that could be achievable under a robust Adaptive Management framework. This is just an example for illustration purposes, and it is very simplistic in that it only considers piping plover pre-nesting habitat management. Nonetheless, let’s assume that the population objective for breeding piping plovers is 30 nesting pairs, based on the numbers provided in Appendix B of the Recovery Plan. Let’s also assume that it is March 2012 and during the 2011 breeding season there were 20 pairs of plovers as follows: Bodie Island 3; Cape Point 10; Hatteras Spit 2; Ocracoke (north and south)

5. Assuming that we have done some analysis and affirmed that the numbers from Appendix B remain reasonable site-specific targets (again being simplistic) then it would be reasonable to conclude at the beginning of the 2012 season that Cape Point is approaching its projected carrying capacity, and presumably there is relatively limited opportunity for additional population growth here as compared to Ocracoke or Bodie Island. So a reasonable management response would be to implement SM2 management at Cape Point with the intent of maintaining access to the greatest extent possible without experiencing a decline in the number of breeding pairs (i.e., the site-specific objective is to hold the population steady at Cape Point). At the same time you would be implementing SM1 standards at Bodie Island and Ocracoke; predicting that these sites offer the best opportunities for continued growth toward your overall objective. I feel that this type of management is only achievable after you have built the Adaptive Management framework through which you have documented your assumptions and established reasonable science-based goals and objectives; have developed models that enable you to make detailed predictions regarding the effects of management actions, characterize uncertainty, evaluate risk, and that provide a framework for assimilation of monitoring data and research findings; and have clearly defined management protocols that have been carefully refined through experience and knowledge.

Protection of Nests:

The recovery plan suggests that a 50 meter buffer around a piping plover nests will be adequate to prevent harassment of the majority of incubating piping plovers, but also acknowledges that available data indicate that larger buffers are needed in some locations of the plover's Atlantic Coast range, especially in the Southern Recovery Unit. At this time we recommend that a 50 meter-radius around nests above the high tide line should be delineated with warning signs and symbolic fencing and all non-essential access (pedestrian and vehicles) prohibited. However, we strongly encourage the NPS to evaluate whether this buffer is sufficient to protect the nests and whether such a buffer will allow them to meet stated goals. We also recommend that the NPS reference Assateague Island National Seashore's Piping plover Management Plan (1993) for additional information on increasing nest site buffers.

Prior to hatching, vehicles may pass by plover nests along designated vehicle corridors established along the outside edge of plover nesting habitat as long as a 50 meter buffer remains between the vehicle corridor and the nest. Vehicles may also park outside delineated nesting habitat, if beach width and configuration and tidal conditions allow. Vehicle corridors or parking areas should be moved, constricted, or temporarily closed if territorial, courting, or nesting plovers are disturbed by passing or parked vehicles or if disturbance is anticipated because of unusual tides or expected increases in vehicle use during weekends, holidays, or special events.

Only persons engaged in rare species monitoring, management, or research activities should enter posted areas. These areas should remain fenced as long as viable eggs are present. Fencing around nests should be expanded in cases where the standard 50 meter-radius is inadequate to protect incubating adults or eggs from harm or disturbance.

U.S. Fish and Wildlife Service

In cases where the nest is located less than 50 meters above the high tide line, fencing should be situated at the high tide line, and a qualified biologist should monitor responses of the birds to passersby, documenting his/her observations in clearly recorded field notes.

If nests are discovered outside fenced areas, fencing should be extended to create a 50 meter buffer to prevent disturbance to incubating adults, eggs, or unfledged chicks.

These preceding recommendations are similar to the measures identified in your Resource Protection Tables, SM1 and SM2. A notable difference between the above and SM1/SM2 is the closure that results from a nest buffer that falls within the intertidal zone. We commend your proposal to implement a full beach closure under such circumstances and do not necessarily advocate for less should you feel that a complete closure is warranted. However, we note that a less restrictive (to access) buffer that extends to the high tide line is a potentially plausible alternative that can be explored as sufficiently protective using Adaptive Management. Another potentially significant difference between the above and SM1/SM2 is the distinction between “nests occurring outside existing closures” and those occurring within existing closures. We recognize that a 50 meter nest buffer likely will be encompassed within the existing closure, but we recommend that nests be evaluated to ensure at least a 50 meter buffer around the nest is maintained.

As applied to specific sites within CAHA, we recommend corridors as described above, subject to closure by nest buffers. However, the illustrative type of decision-making scenario described above regarding the implementation of SM2 at Cape Point could be applied in providing additional access through the intertidal zone. Once again, though, this type of management is only achievable after you have built the Adaptive Management framework through which you have documented your assumptions and established reasonable science-based goals and objectives; have developed models that enable you to make detailed predictions regarding the effects of management actions, characterize uncertainty, evaluate risk, and that provide a framework for assimilation of monitoring data and research findings; and have clearly defined management protocols that have been carefully refined through experience and knowledge.

Protection of Chicks:

Sections of beaches where unfledged piping plover chicks are present should be temporarily closed to all vehicles not deemed essential. Areas where vehicles are prohibited should include all dune, beach, and intertidal habitat within the chicks' foraging range.

A vehicle free area should extend 1000 meters on each side of a line drawn through the nest site and perpendicular to the long axis of the beach. The resulting 2000 meter-wide area of protected habitat for plover chicks should extend from the ocean-side low water line to the bay-side low water line or to the farthest extent of dune habitat if no bay-side intertidal habitat exists.

A pedestrian free area should extend 300 meters on each side of a line drawn through the nest site and perpendicular to the long axis of the beach. The resulting 600 meter-wide area of protected habitat for plover chicks should extend from the ocean-side low water line to the bay-side low water line or to the farthest extent of dune habitat if no bay-side intertidal habitat exists.

A monitoring program should be implemented to gather basic data on location, population size, foraging areas, and success of breeding piping plovers and other imperiled species. However, this type of monitoring program is not a sufficient replacement for the implementation of Adaptive Management.

These recommendations are essentially similar to the measures identified in your Resource Protection Tables, SM1 and SM2. A potentially significant difference between the above and SM1/SM2 is the uncertainty of the buffer zone to protect piping plover chicks. In SM1 a 1000 meter buffer is established “based on observation of bird behavior and terrain conditions” at each site. Exactly how do these conditions (bird behavior or terrain conditions) determine whether a 1000 meter buffer is needed and what is the alternative? Similarly, under SM2 the buffer is reduced (to 500 meter for ORVs, and 200 meters for pedestrians) two weeks after hatching, and once again observed behavior of the brood determines whether a reduced buffer can be employed. We do not understand the reasoning for reducing established buffers with minimal observations (e.g., once daily for SM1) or after a set period of time (e.g., two weeks after hatching for SM2) when such criteria offer little information on the effects of the management action. We recommend a 1000 meter buffer be established in all situations. We also recommend that Adaptive Management be used to determine when and under what conditions an alternative buffer might be warranted. As applied to specific sites within CAHA, we recommend corridors as described above, subject to closure by buffers to protect chicks.

Timing of Vehicle Restrictions in Chick Habitat:

Restrictions on the use of vehicles in areas where unfledged plover chicks are present should begin on or before the date that hatching begins and continue until chicks have fledged. For purposes of vehicle management, plover chicks are considered fledged at 35 days of age or when observed in sustained flight for at least 15 meters, whichever occurs first.

When piping plover nests are found before the last egg is laid, restrictions on vehicles should begin on the 26th day after the last egg is laid. This assumes an average incubation period of 27 days, and provides a 1 day margin of error.

When plover nests are found after the last egg has been laid, making it impossible to predict hatch date, restrictions on vehicles should begin on 15 May (the earliest probable hatch date). If the nest is discovered after 15 May, then restrictions should start immediately. If hatching occurs earlier than expected, or chicks are discovered from an unreported nest, restrictions on vehicles should begin immediately.

If the nest is monitored at least twice per day, at dawn and dusk by a qualified biologist, vehicle use may continue until hatching begins, subject to the protection buffers discussed above and the nighttime restrictions below. Nests should be monitored at dawn and dusk to minimize the time that hatching may go undetected if it occurs after dark. Whenever possible, nests should be monitored from a distance with spotting scope or binoculars to minimize disturbance to incubating plovers.

If ruts are present that are deep enough to restrict movements of plover chicks, then restrictions on vehicles should begin at least 5 days prior to the anticipated hatching date of plover nests. If a plover nest is found with a complete clutch, precluding estimation of hatching date, and deep ruts have been created that could reasonably be expected to impede chick movements, then restrictions on vehicles should begin immediately.

The above recommendations for the protection of chicks are generally similar to the SM1/SM2 measures identified by NPS. Regarding the language that states: "Points and spits would only be accessible from 7 a.m. - 7 p.m. as long as unfledged chicks are in the area and if buffers can be maintained. The 7 a.m. opening may be delayed until the chicks have been located." We recommend that the phrase "Points and spits" be replaced with "Areas with unfledged chicks", and that the 7 am to 7 pm timeframe be adjusted to be consistent with the Sea Turtle protection measures in the effected area, using which ever is the more restrictive.

Non-breeding Areas:

Suitable interior habitats should be closed to pedestrians and vehicles year-round with a 100 meter buffer to vehicle and pedestrian use to protect essential resting and foraging habitats. Access to the Point or spits would be maintained. These areas in conjunction with the nearby islands would provide valuable high beach roosting habitat as well as sound side intertidal, mudflat, and ephemeral moist sand foraging habitat. Additionally, since we know that non-breeding piping plovers use a mosaic of habitat within a few kilometers of the Point and spits, and that it is important to maintain access to all habitat types (including ocean intertidal habitat) we would recommend that efforts be made to provide disturbance-free ocean intertidal habitat in the vicinity of the Point and the spits. This could be in the form of high beach ORV corridors and/or inter-dunal roads that route vehicles around select areas of ocean inter-tidal habitat. I do not believe we know enough at this time to determine objectively how much of this habitat type is needed to sustain non-breeding birds or where specifically the preferred ocean intertidal foraging habitat is located (other than to say it is in the general vicinity of the Point (specifically South Beach) and the spits). As such, I would recommend that every effort be made to provide this habitat, and I would also agree that there is insufficient evidence to support complete closure of any area to ORV access for the purpose of providing undisturbed ocean intertidal foraging habitat at this time.

A monitoring program should be implemented on the 5th, 15th, and 25th of each month to gather basic data on location, population size, and habitat use by non-breeding plovers as well as other important shorebirds. The non-breeding plover season extends from 1 July to 31 May. However, this type of monitoring program is not a sufficient replacement for the implementation of Adaptive Management.

These recommendations are similar to the measures identified in your Resource Protection Tables, SM1 and SM2. A potentially significant difference between the above and SM1/SM2 is the difference between available ocean intertidal habitats. Another potential difference between the above and SM1/SM2 is the monitoring of non-breeding piping plovers. We understand the difficulties of identifying and distinguishing migrating piping plovers from nesting piping plovers during the spring and fall. However, the proposed monitoring may miss two to three

months of the migration period, and thus important information on the use of CAHA by migrating piping plovers. We recommend that surveys for non-breeding piping plovers begin on 1 July according to the schedule describe above and continue through 31 May, noting that numbers during the “shoulder” months may include breeding birds. Furthermore, we recommend that all piping plover habitats be monitored rather than just “pre-established locations” to truly understand the use of CAHA by non-breeding piping plovers.

Other Measures:

Notwithstanding the thoughtful comments by fellow Committee members on behalf of dog owners, the fact is that dogs pose a serious threat to beach-nesting birds and sea turtle nests. As such, pets should be prohibited within all natural resources closure areas and should not be permitted within 100 m of any resource closure area between 1 April and 15 November. Furthermore, pets should be leashed and under the control of their owner at all times. Perhaps there is an opportunity to create more “pet friendly” beaches elsewhere within CAHA, or to work with the villages and/or counties to provide such amenities within the broader Outer Banks community.

Kite flying should be prohibited within 200 meters of all piping plover nesting or territorial adult or unfledged juvenile piping plovers between 1 April and 31 August.

Fireworks should be prohibited on beaches where piping plovers nest from 1 April until all chicks are fledged.

Other Beach-Nesting Birds

I am going to continue to demure from making any site specific recommendations regarding management of other beach nesting birds, because I feel that others on the Committee, such as the NC Wildlife Resources Commission, have far greater site-specific knowledge than do we. However, I will say generally that protection of these species is warranted and should be done within the same Adaptive Management framework described above; although it appears to me that there is relatively less readily available information upon which to base specific objectives for these species, which may make developing a framework somewhat more complicated – though not impossible. Also, I am willing to assist you in attempting to reconcile the differences that exist between the ORV groups’ recommendations and the Environmental groups’ recommendations at those areas other than the spits and the Point (e.g., the area north of Avon and the ocean beach along Ocracoke). It is these areas where non-listed species (i.e., beach nesting and non-breeding birds other than piping plovers) appear to be driving the discussion. In these areas I tend to believe it would be reasonable to designate routes through these areas SO LONG AS it is clearly understood that those routes are subject to closure (including potential pre-nesting closures). I have heard several representatives from the ORV groups state repeatedly that this is understood. Under an Adaptive Management framework a decision process similar to the above example could be used to determine which of these areas would be subject to pre-nesting closures during a given season, and I like the idea of a management approach that is progressively more permissive to access as milestones toward objectives are achieved.

Sea Turtles

The protection measures for sea turtles are drawn largely from the second revised (2008) loggerhead recovery plan, and from the Volusia County HCP (2008). Nighttime restrictions are based on emergence data of sea turtles presented in Neville et al. (1988) and Witherington et al. (1990). Protection measures may differ for different sea turtle species. The following measures do not preclude implementation of additional measures to protect those species.

A monitoring program also should be implemented to gather basic data on nesting locations, population size, nesting success, and hatching success of sea turtles. However, this type of monitoring program is not a sufficient replacement for the implementation of Adaptive Management.

Protection of Nesting Areas, Nests, and Hatchlings:

Surveys should begin monitoring for nesting sea turtles beginning 1 May and continue through 31 August (or two weeks after the last sea turtle nesting activity is found, whichever is later). All sea turtle nests should be located each morning, assessed according to NCWRC guidelines (2006), and immediately posted with symbolic fencing. The sea turtle closure should be a minimum of 10 meters by 10 meters around the nest.

At day 50 of the incubation cycle, the closure should be expanded to encompass the area 20 meters duneward of the nest site down to the tide line. The width of the closures (running parallel to the shoreline) also should be expanded to 25 meters each side of the nest. The nest sites should be monitored daily for hatching activity after day 50 of the incubation cycle.

Silt fencing should be installed at day 50 of the incubation cycle if any sources of light pollution from villages or other structures have the potential to disorient hatchlings. The fencing should be placed in a "U" shape behind the nest and extend oceanward to the high tide line. Vehicle ruts that have the potential to impede hatchlings emerging from nests and attempting to reach the ocean must be removed.

Light Restrictions:

Lanterns or auxiliary lights and fixed lights of any kind burning for more than 5 minutes should be prohibited on beaches from 1 May through 15 November.

Campfires should be prohibited from 1 May through 15 November.

Night Driving Restrictions:

The following recommendations regarding night driving are the major difference between our recommendations for baseline management and the SM1/SM2 proposal. These recommendations are based on our current state of knowledge and as such we recommend them as the baseline against which other options should be evaluated. In general, night time vehicular

U.S. Fish and Wildlife Service

traffic on nesting beaches should be minimize and controlled to protect sea turtles engaged in nesting behavior, their nests, and their young.

From 1 May through 15 November, all non-essential vehicles should be prohibited on the beach from 10 pm until the following morning. The beach will be opened to non-essential vehicles each morning only after being checked for nesting activity and after new nests have been adequately protected by the sea turtle patrol staff.

From 1 September through 15 November, National Park Service may authorize and regulate non-essential vehicle access after 10 pm (until the next morning) if the beach is continuously patrolled throughout the night by sea turtle patrol staff during those hours. The patrols should look for all hatching activity, including monitoring for unknown nests, and potential late season nesting activity. If vehicle access is granted during the period from 1 September through 15 November, light restrictions must remain in effect.

From 16 November through 30 April, the beach is open to all non-essential vehicles in accordance with National Park Service policies.

It is my view that these recommendations could be modified considerably if put into the broader context of overall light management throughout Dare County. Including the broader lighting issues in the above-mentioned Adaptive Management framework would provide the proper analytical structure to support decisions to provide greater night access to select portions of the Seashore. As mentioned above with respect to piping plover nesting I could foresee a scenario under which the NPS could scientifically justify a decision to maintain night access to the Point or other such area while continuing to make acceptable progress toward defined goals via cooperative light management throughout the County, and focused management elsewhere within CAHA.

Seabeach Amaranth

The protection measures for Seabeach amaranth are drawn largely from the species' recovery plan (1996). The following measures do not preclude implementation of additional measures to protect the species.

Potential suitable seabeach amaranth habitat in the vicinity of the inlet spits and Cape Point should be identified by a qualified biologist and delineated with symbolic fencing consisting of wooden posts and string on or before 1 June. We recognize that these areas may be encapsulated within shorebird nesting areas and may not warrant additional symbolic fencing. However, protections for seabeach amaranth plants should not be removed before the plant has senesced (typically 1 December).

These recommendations are similar to the measures identified in your Resource Protection Tables, SM1 and SM2. A potentially significant difference between the above and SM1/SM2 is the protection of potential suitable seabeach amaranth habitat in the vicinity of the Point and

spits and outside of existing resource closures. We recommend that “potential habitat” in these areas be protected, especially if they lay outside of other resource closures. We also recommend that seabeach amaranth areas within other resource closures be protected using symbolic fencing following cessation of nesting activity or otherwise any opening of the “other” natural resource closure.

Conclusion

To sum up, the above specific recommendations and comments are provided to illustrate how our current state of knowledge applies to the specific conditions that exist within CAHA, and should represent the starting point from which future decisions are made under an Adaptive Management framework. All that said, I reiterate that it really would not matter to me what specific measures were implemented on a given beach at any given time if NPS were to embrace the goals and Adaptive Management principles identified above. However, I caution that our state of knowledge regarding management of these species is relatively advanced. These recommendations are founded on a relatively robust body of scientific research and management experience. While I think you may be able to avoid “jeopardy” doing otherwise, unless you embrace the Adaptive Management approach I have advocated you will have a very difficult time producing credible scientific justifications for deviating substantially from these recommendations while meeting the NPS mandates of avoiding adverse impacts. The “balance” for which you strive is a worthy goal, and I will continue to support you to the best of my ability. But it is a very ambitious goal and you are going to need to make effective use of the very best tools at your disposal to reach it, and in my mind Adaptive Management is the best tool for this job.

Recommendations Regarding Night Driving on CAHA from the FWS

Goals for Recovery:

- Achieve recovery criteria for loggerhead sea turtle nesting at CAHA as portion of North Carolina total goal (200 nests annually at CAHA by 2058).
- Achieve an annual population growth rate of 2%.
- Maximize nest hatching success and hatchling survival.

Assumptions and Background:

- We are assuming that lighting (all sources) is affecting turtle nesting and hatchling survival at CAHA and throughout Dare County.
- We are assuming the biological criteria described herein are reasonable and achievable and are accurate measures of a sustainable sea turtle nesting population.
- Recovery criteria, as stated in the Recovery Plan for the Northwest Atlantic Population of the Loggerhead Sea Turtle, are: “(1)...statistical confidence (95 percent) that the annual rate of increase over a generation time of 50 years is 2 percent or greater resulting in a total annual number of nests of 14,000 or greater for this recovery unit (approximate distribution of nests is NC=14% [2,000], SC=66% [9,200], and GA=20% [2,800]); and (2) (t)his increase in number of nests must be a result of corresponding increases in number of nesting females (estimated from nests, clutch frequency, and remigration interval). CAHA historically accounts for approximately 10 percent of the nests laid in NC (although, the last two years – 2007 and 2008 – have seen percentages of 14.5 and 13.2, respectively, of the state-wide totals), the above range-wide objectives translate into a CAHA-specific objective of 200 nests per year within the next 50 years, with interim benchmarks based on an approximate 2 percent annual rate of increase.
- Hatching success at CAHA (all nests), based on 8-year average, is 60%. Desired increases in the number of nests amount to maintaining greater than 60% hatching success of non-relocated nests.
- Desired increases in the number of hatchlings reaching the ocean unassisted are greater than 95%. This provides a standard by which to measure the efficacy of the lighting restrictions and possibly predator controls.
- NPS establishes turtle friendly lighting restrictions on NPS property by May 2011.
- County establishes turtle friendly lighting program county-wide by May 2011.

Performance Objectives (metrics for success):

- Reduced lighting county-wide: Year 3 = 25% reduction from baseline; Year 5= 50% reduction from baseline; Year 10 = 75% reduction from baseline.
- Decrease the number of violations to sea turtle, bird and sea beach amaranth resources associated with night driving activities to less than 5/yr.
- Decrease the amount of incidental take of sea turtle adults and hatchlings (e.g., disorientation of females, disturbed nests, hatchlings trapped in ruts) associated with night driving activities to less than 2% of total nests/yr.
- Increase the number of sea turtle nests by 2% (or greater) annually, based on the past 5-yr average.
- Increase the number of hatchlings reaching the ocean unassisted to >95% (all nests).

U.S. Fish and Wildlife Service

Proposed Strategy for Balancing ORV access and Sea Turtle Conservation:

Year 1 (est. implementation 2011) –

- Night driving from Nov. 16th through April 30th, subject to other provisions.
- Restricted night driving from May 1st through Nov. 15th between ½ hour after sunset until all beaches have been cleared by NPS personnel (or authorized personnel), subject to the following conditions:
 - Night driving permitted only on designated ORV routes and areas, subject to other restrictions, and only to the following areas – Bodie Island spit; one location at Ramp 23, 30, or 38 (i.e., approximately one mile around ramp open); and, Hatteras Inlet spit.
 - NPS enforcement officer and technician on location and available to provide enforcement, education, and conduct basic monitoring and documentation of biological information, including violations.
 - Permits are required with associated education about turtles, lighting rules, and reporting (turtle activity or violations) guidelines.
 - Headlights only on during transit and not shining into bird nesting areas. Other light restrictions as previously identified (i.e., no campfires, lanterns, etc.).
 - This is not a suitable replacement for Adaptive Management (see USFWS's Summary Recommendations Regarding Rule Development for the Regulation of Off-Road Vehicles at Cape Hatteras National Seashore, dated February 10, 2009 for additional information on the use of Adaptive Management).

Year 3 (provided the above metrics are met); same as Year 1 with the following changes –

- Night driving from Sept. 1st through April 30th, subject to other provisions.
- Restricted night driving from May 1st through Aug. 31st between ½ hour after sunset until all beaches have been cleared by NPS personnel (or authorized personnel), per the above conditions.

Year 5 (provided the above metrics are met); same as Year 3 with the following changes –

- Restricted night driving from May 1st through Aug. 31st between ½ hour after sunset until 1 hour after sunrise (or earlier if beaches are cleared by NPS personnel or authorized personnel), subject to the following condition.
 - Night driving permitted only on designated ORV routes and areas, subject to other restrictions, and only to the following areas – Bodie Island spit; one location at Ramp 23, 30, or 38; east beach of Cape Point; Hatteras Inlet spit; and, spit at south end of Ocracoke Island).

Year 10 (provided the above metrics are met); same as Year 5 with the following changes –

- Night driving from first Friday before Labor Day through Memorial Day, subject to other provisions.
- Restricted night driving from the first Tuesday after Memorial Day through the last Thursday before Labor Day between ½ hour after sunset until 1 hour after sunrise (or earlier if beaches are cleared by NPS personnel or authorized personnel).

Achievement of the above performance objectives ensures implementation of the following incremental strategies for ORV access and sea turtle conservation. Failure to meet performance standards would indicate that the next sequential stage could not be implemented and the performance standards met. Thus, failure to meet performance standards suggests continuation of the current strategy or reversal to a previous strategy in which performance measures were being met until such time that the limiting factors are addressed. Because the performance measures are based on certain assumptions, we recommend that the following be evaluated to determine if such measures are appropriate or achievable and to ensure success in implementing the successive stages of the strategy:

- Conduct assessment to determine whether population goal and population growth are appropriate.
- Conduct assessment to determine whether hatching success and hatchling survival performance measures are appropriate.
- Conduct assessment to determine baseline lighting conditions (number of lights visible from the beach) throughout Dare County by 2010. The recent “Night Skies” data may be used as part of baseline.
- Implement a monitoring protocol or periodic evaluation to determine rates of disorientation/misorientation of adult and hatchling sea turtles and track changes in these rates through time and in response to changes in management practices.
- Implement a monitoring protocol or periodic evaluation to determine rates of take to sea turtles and their nests and track changes in these rates through time and in response to changes in management practices.
- Conduct an assessment of habitat conditions focusing on beaches with a history of high rates of nest failure with the intent of identifying and implementing habitat improvement projects.

1.0 BACKGROUND.

In 1937, during the Great depression, Congress established the Cape Hatteras National Seashore Recreational Area. The enabling legislation for the National Recreational Seashore states, in part, “said area shall be, and is, established, dedicated, and set apart as a national seashore recreational area for the benefit and enjoyment of the people and shall be known as the Cape Hatteras National Seashore Recreational Area”.¹ A purpose of the national seashore was to lift the spirit of economically distressed citizens who could not otherwise afford other forms of recreation. The enabling legislation excepted certain portions of the seashore recreational area from protection as a primitive wilderness area as contemplated and required by the Organic Act. Those portions excepted from protection were, “those areas deemed to be especially adaptable for recreational uses, particularly swimming, boating, sailing, fishing, and other recreational activities similar in nature”.² Due to the nature of the activities specifically identified in the enabling legislation, the location of those areas necessarily included all waters and shorelines of the recreational area.

In 1952 with the completion of paving NC Highway 12 from Whalebone Junction to Oregon Inlet and from Pea Island’s northern boundary to Hatteras Village, visitation began to grow within the park. On October 27, 1952, Conrad Wirth, then Director of the National Park Service, wrote the people of the outer banks a letter assuring the people in the villages within the seashore that vehicular access was guaranteed and the task of serving the visitors to the seashore should make the economy flourish. (See Exhibit A) Since before the founding of the seashore motor vehicles have been the typical form of transportation on the seashore beaches. From 1952 when access ramps were installed until 1978 vehicles have been used from the border with Nags Head to Ocracoke Inlet. In 1978 ORV use in Pea Island was stopped and due to heavy pedestrian traffic seasonal closures to ORV from Memorial Day to Labor Day were imposed within village limits.

In 1972, executive Order 11644 directed all national parks to prepare an ORV plan to insure environmental sustainability and enjoyable use for future generations of Americans. In 1978 NPS, Manteo, produced an approved draft ORV management plan, forwarded the plan to the Regional Office in Atlanta where approval was never completed and the document failed to be recorded in the Federal Register and signed by the Secretary of the Interior. Due diligence was done by the local communities and NPS in completing their required task, implementing the 1978 plan and revising the plan in proper intervals. No safety issues of visitors and few conflicts between users have occurred between ORV’s and other users within the seashore.

The Redwoods Act of 1978 reiterated the purposes of the Organic Act by stating, “Authorization of activities shall not be exercised in derogation of the values and purposes for which these various areas have been established, ***except as may have been or shall be directly and specifically provided by Congress***” (emphasis added).³ In the case of Cape Hatteras National Seashore Recreational Area, Congress did in fact specifically except areas whereby the no impairment standard and the no-derogation of values standard was to be applied on balance with

¹ 16 USC 459a-1.

² 16 USC 459a-2.

³ 16 USC 1.

the legislatively protected rights of recreation. The Organic Act gives broad discretion in determining what avenues best achieve the Organic Act's mandate. The following final report proposes management actions and ORV regulations that achieve the Organic Act and subsequent Redwoods Act mandates and fall well within the agency's broad discretion to balance no-impairment of park values with the legislatively protected rights of recreation at the waterline and within the water as memorialized by the Enabling Legislation.

2.0 INTRODUCTION.

The following report evaluates the long established cultural values of Off-Road Vehicle (ORV) use while establishing criteria in forming an ORV management policy that maintains the cultural, resource protection, and diverse visitor experience for management of Cape Hatteras National Seashore Recreational Area (CAHA). The goal of this proposal integrates uses of the seashore for enjoyment of its many diverse visitors while ensuring adequate protection for natural resources.

There is no need to have conflict between conserving the resources and values and providing for the enjoyment of them. The NPS has a duty not only to ensure that resources are conserved but to resist the lure to swing the "protection" pendulum too great a distance from its mandate to provide for the enjoyment of resources. One such lure is "ease of implementation". Managing Cape Hatteras National Seashore under the Organic Act, its Enabling Legislation and other legal mandates is not intended to be easy or cheap. It can however be practicable and reasonable. Such an approach appears below.

The proposal below balances the need to conserve natural resources with the mandate to provide for the enjoyment of them. It gives consideration to natural resource management within the context of all recreational uses of the beach, particularly emphasizing the distinct needs for ORV access and management.

1. Some ORV users enjoy a trip to the beach to transverse an area free of the confines of roads.
2. Most ORV users access the beach areas to reach an area to recreate outside the vehicle.
 - A. Distance to get to an area requires vehicular access due to distance from highway.
 - B. Equipment needed for recreating in area of beach accessed. (Beach toys, umbrellas, beach chairs, coolers, fishing equipment, water-sports boards, cameras and binoculars)
 - C. Enables visitors with disabilities and families with infants and young children to enjoy beach activities.
 - D. Elderly and health disadvantaged are able to enjoy beach activities.
 - E. The principle activity aided by ORV access on these beaches is best described as multiple use. This concept has developed over many years of public experience. ORV operation provides the flexibility to respond to the rapid weather and ecological changes that occur along these shifting strands of sand. Weather, wind, and waves often dictate where and when a particular recreation will be practiced.

The proposal also gives consideration to year round and seasonal pedestrian use. Seasonal ORV use is contemplated only in non-peak visitation times of the year in front of villages. Year round pedestrian closures are contemplated where pedestrian visitors can easily access and use beaches free of ORV traffic.

3.0 ORV MANAGEMENT ACTIVITIES.

Attached as Exhibit B is a table of *ORV Management Activities*. All activities and sub-issues that appear on the *ORV Management Activities* in Exhibit B are included for consideration in this proposal. However, in addition to the ORV Management Activities listed in the table at Exhibit B please see the following supplemental narrative for specific management activities. Below are only those items requiring additional clarification or justification.

3.1 ORV ACCESS –

3.1.1 OCEANSIDE RAMPS – ramps are indicated on *ORV Designated Routes And Areas Maps* (see Exhibit C). Ramps exist or are proposed at intervals to provide access while maintaining resource protections. The purpose of additional ramps is to provide access beyond the necessary protection closures to avoid situations in the past where an area becomes “effectively” closed because there is no practical ingress or egress into a land locked area.

Ramps are maintained at two lanes wide because deep loose sand at ramps often requires continuous forward motion to avoid getting the ORV stuck. The necessity of continuous forward motion requires greater safety precautions to avoid interaction between vehicles, and between vehicles and pedestrians.

“High Use Ramps” include the following: 2/4, 23, 34, 38, 44, 49, 55, 59, 70, and 72.

3.1.2 RECREATIONAL VALUES - The purpose of this section is to demonstrate the desired recreational experiences and needs sought by the visiting public and the relevance of ORV accessibility. Each of these areas contains essential elements, such as physical attributes, and the obvious need for ORV accessibility in order for visitors to enjoy the sought-out experience.

Recreational uses are indicated on *Recreational Use Maps* (see Exhibit D).

3.1.2.1 **Criteria** These criteria are vital for the desired visitor experiences which have been traditionally expected and are a part of what makes this particular seashore uniquely attractive. (Desired visitor experience is not limited to those out of town visitors on whom the local and state economy is almost completely dependent upon, but also includes the residents that

UFWDA et al.

reside within and adjacent to the boundaries of the Seashore, the most frequent visitors to the Seashore.)

Visitor experience will be significantly impaired if access is denied to the majority of those who seek out these recreational opportunities. Impaired visitor experience results in less visitation which results in economic devastation to the eight villages located within the boundaries of the Seashore itself, along with broader reaching impacts to neighboring towns, local and state governments. The NEPA process requires economic impact analysis. The final plan must take into consideration economic, historical and logistical use in order to be viable.

The purpose of the Executive Order 11644 was to “...*establish policies and provide for procedures that will ensure that the use of off-road vehicles on public lands will be controlled and directed so as to protect the resources of those lands, to promote the safety of all users of those lands and to minimize conflicts among the various uses of those lands*”. It was not intended to be used to prevent the public from recreating on and enjoying the use of public lands.

It is imperative that ORV use be recognized for exactly what it is: A historical means of access to an area especially attractive for recreational opportunities. The use of an ORV is not considered a recreational activity in this Seashore. These recreational opportunities sought, allow the public to enjoy the Seashore’s resources and values. Denying access to recreational opportunities, many of which are specifically protected in the Enabling Legislation, denies the Seashore’s current visitors the opportunity to enjoy the park’s resources and values and denies future generations the opportunity to enjoy the park’s resources in direct violation of Park Services Management Policies. The recreational activities outlined below are activities which do not cause harm or impairment to the parks resources or values, nor do they cause “unacceptable impacts”. All of these recreational activities are historic and traditional uses and meet the requirements outlined in the U.S.C. Code (5)

3.1.2.2. **Birdwatching/Wildlife Viewing**

Birding opportunities abound within the Seashore; however viewing shorebirds can only take place at the shore, where the birds are present. A wide variety of shorebirds is preferable. The areas denoted on the maps have been identified with the assistance of the Cape Hatteras Bird Club, in particular Neal and Pat Moore and “*The North Carolina Birding Trail*” publication, which includes input from David Allen, NCWRC and Walker Golder from Audubon.

3.1.2.3. **Fishing**

Access to the shoreline is first and foremost when it comes to essential elements required in order to participate in this recreational opportunity. Second is the off-shore structure, current, etc. associated with that shoreline. Surf fishing opportunities abound, but offshore structure dictate where the best areas are for fishing especially when one is targeting specific types of fish. Fish are migratory and do not necessarily remain in one location. Many visitors target only those fish that are edible, while many others fish solely for sport and practice catch and release. Large Red Drum, the most targeted game fish from the surf and the state fish of North Carolina, has to be released by law. The majority of those who surf fish target both types of fish. No matter the preference, access to the key fishing areas is vital to the enjoyment of surf fishing. There are at least 9 surf fishing tournaments held within the Seashore each year and bring much needed business during the shoulder seasons. Teams can wait as long as 17 years to get into these tournaments.

The areas denoted on the map were identified by members of the Cape Hatteras Anglers Club, and with input from local fishing enthusiasts and tackle shop employees. It should be noted that The Dare County Parks and Recreation Department also offers surf fishing camps during the summer to our youth, utilizing ORV areas as well as piers. Without ORV access there would be no place for them to park in order to teach children about fishing.

3.1.2.4 . **Horseback riding**

Access to ORV areas is vital to equine interests as a result of current park policy which limits horses to ORV areas. While recognizing that the local management policy may be modified to permit horses in non-ORV areas, the accessibility of the non-ORV areas is still critical for those accessing the beach via horseback. Not all local horse owners have trailers to transport their horses to other areas. Furthermore, it is time consuming and more costly to transport horses rather than riding them. Allowing horses in areas that are seasonally closed in front of the villages is dangerous for both the public and the horses and will cause user conflicts. The largest equestrian user on Hatteras Island accesses the beach via trails in the woods near her residence and has a very successful established riding business that provides a unique visitor experience to hundreds of park visitors every year via horseback. She cannot relocate this business. Many of the horse owners volunteer their time and horses to the local community by participating in school events, parades, girl scouts, therapeutic riding and working with disadvantaged students. The areas denoted on the maps were identified by Equine Adventures, local horse owners and equestrian interests from Hyde County, Mainland Dare County and Currituck County.

3.1.2.5. **Shelling**

Shelling/beachcombing is a huge attraction, especially for those who cannot partake in more strenuous physical activities. In 1965, the Scotch Bonnet was named the state shell of North Carolina. Scotch Bonnet shells wash ashore in abundance on North Carolina's Outer Banks as a result of Gulf Stream moving tropical waters close to the North Carolina coast. After storms, hundreds of Scotch Bonnets may be washed ashore on the Outer banks especially between Cape Hatteras and Cape Lookout due to the close proximity of the Gulf Stream to that section of the coast. They are rare elsewhere in the state. Seeking Scotch Bonnets is an attraction which draws many shell enthusiasts to our Seashore, along with the wide variety of other shells to be found. Shell beds naturally appear and disappear from week to week. ORV access is vital to seeking out shell beds. The points and spits, as well as the South facing beach, are prime shelling areas. Shelling/beachcombing information denoted on the maps were identified by Dewey Parr, native resident, business owner, and local shell authority- www.outerbanksshells.com as well as information gathered from the North Carolina Shelling Club and from VisitNC.com.

Sea Glass collecting has emerged as the newest form of beachcombing and the North American Sea Glass Association (NASGA) has developed as a result of the popularity of Sea Glass collecting. *By The Sea Jewelry* is owned by Linda Jereb who has lived in the Outer Banks for over 20 years. She was one of the founding members of NASGA. One of the current board members, Richard LaMotte, author of *Pure Sea Glass* has visited the Outer Banks numerous times for book signings and has given lectures about Sea Glass at the NC Aquarium in Manteo. NASGA also works closely with The American Shore & Beach Preservation Association and recognizes that the shores, beaches, and other coastal resources of America provide important quality-of-life assets within the reach of the largest possible number of people in accordance with the ideals of a democratic nation. NASGA is dedicated to preserving, protecting and enhancing the beaches, shores and other coastal resources of America. They pursue their mission by means of:

- Protecting and improving healthy and diverse recreational opportunities.
- Managing, protecting and enhancing environmental resources.
- Encouraging responsible and sustainable economic development.
- Preserving aesthetic values.
- Reducing damage from natural hazards and human activities.
- Mitigating human impacts to natural processes.

3.1.2.6. **Swimming**

Where there is water visitors want to swim. Areas in front of villages and campgrounds have a higher seasonal swimming use due to easy access by those renting Oceanside homes, motel rooms or campgrounds, not necessarily due to preference. Public parking is very limited and/or non-existent for visitors who are not renting an Oceanside house. The maps highlight the most desirable and safest areas for swimming due to off-shore structure, water temperature, and the presence of lifeguards. It should be noted that despite a life guarded beach designation on the map for the Village of Buxton, seldom in the past 8 years has there actually been a lifeguard on duty there. It is sporadic and one year the lifeguard quit mid-season and was not replaced. The areas denoted on the maps were identified by the NPS maps designating life guarded beaches and by Judy Swartwood (a local motel owner) based on her experience with the visiting public, listening to the needs and desires of mothers like herself of young children, and her own experiences in seeking safe areas for her son to swim.

3.1.2.7. Watersports

Without water there are no water sports. Again, access to the shoreline is the essential element needed. Access to the areas of shoreline that provide the best recreational opportunities for watersports is critical. Watersports most enjoyed by visitors to our Seashore include kayaking, kite boarding, paddle boarding, skim boarding, body boarding, surfing and windsurfing. Each of these activities is dependent on shoreline access and has varying requirements based on wind direction, open water, water depths, consistent wave action, or curved shoreline. Shoreline access is especially vital in seeking these areas that are primarily dependent on wind direction and speed. Watersports competitions also draw large numbers of out of town visitors. Watersports areas denoted on the maps were identified by Trip Foreman and Matt Nuzzo, local experts representing the Watersports Industry Association, Inc.

3.1.2.8. Visitor and Recreational Use Authorities

3.1.2.8.1. **The Cape Hatteras National Seashore Recreational Area Enabling legislation** The Cape Hatteras National Seashore Recreational Area Enabling legislation(1. (Aug. 17, 1937, ch. 687, Sec. 4, 50 Stat. 670; June 29,1940, ch. 459, Sec. 1, 54 Stat. 702; Mar. 6, 1946, ch. 50, 60 Stat. 32.) emphasizes recreational opportunities for visitors to the Seashore, **“except for certain portions of the area, deemed to be especially adaptable for recreational uses, particularly swimming, boating, sailing, fishing, and other recreational activities of similar nature, which shall be developed for such uses as needed, the said area**

shall be permanently reserved as a primitive wilderness and no development of the project or plan for the convenience of visitors shall be undertaken which would be incompatible with the preservation of the unique flora and fauna or the physiographic conditions now prevailing in this area . . .”

3.1.2.8.2. NPS Management policies: Section 1.4.6 What Constitutes Park Resources and Values “The “park resources and values” that are subject to the no-impairment standard include:

- * the park’s scenery, natural and historic objects, and wildlife, and the processes and conditions that sustain them, including, to the extent present in the park: the ecological, biological, and physical processes that created the park and continue to act upon it; scenic features; natural visibility, both in daytime and at night; natural landscapes; natural sound scrapes and smells; water and air resources; soils; geological resources; paleontological resources; archeological resources; cultural landscapes; ethnographic resources; historic and prehistoric sites, structures, and objects; museum collections; and native plants and animals;
- * appropriate opportunities to experience enjoyment of the above resources, to the extent that can be done without impairing them;
- * the park’s role in contributing to the national dignity, the high public value and integrity, and the superlative environmental quality of the national park system, and the benefit and inspiration provided to the American people by the national park system; and
- * any additional attributes encompassed by the specific values and purposes for which the park was established”

3.1.2.8.3. Organic Act. Enjoyment of Park Resources and Values: “The fundamental purpose of all parks also includes providing for the enjoyment of park resources and values by the people of the United States. The enjoyment that is contemplated by the statute is broad; it is the enjoyment of all the people of the United States and includes enjoyment both by people who visit parks and by those who appreciate them from afar. It also includes deriving benefit (including scientific knowledge) and inspiration from parks, as well as other forms of enjoyment and inspiration. Congress, recognizing that the enjoyment by future generations of the national parks can be ensured only if the superb quality of park resources and values is left unimpaired, has provided that when there is a conflict between conserving resources and values and providing for enjoyment of them, conservation is to be

UFWDA et al.

predominant. This is how courts have consistently interpreted the Organic Act. 1.4.5 (1.)”

3.1.2.8.4. Management Policies 2006 Enjoyment of Park Resources and Values “The fundamental purpose of all parks also includes providing for the enjoyment of park resources and values by the people of the United States. The enjoyment that is contemplated by the statute is broad; it is the enjoyment of all the people of the United States and includes enjoyment both by people who visit parks and by those who appreciate them from afar. It also includes deriving benefit (including scientific knowledge) and inspiration from parks, as well as other forms of enjoyment and inspiration. Congress, recognizing that the enjoyment by future generations of the national parks can be ensured only if the superb quality of park resources and values is left unimpaired, has provided that when there is a conflict between conserving resources and values and providing for enjoyment of them, conservation is to be predominant. This is how courts have consistently interpreted the **Organic Act. 1.4.5 (1.)**”

3.1.2.8.5 1.4.7.1 Unacceptable Impacts are those that are:

- * inconsistent with a park’s purposes or values, or
- * impede the attainment of a park’s desired future conditions for natural and cultural resources as identified through the park’s planning process, or
- * create an unsafe or unhealthful environment for visitors or employees, or
- * diminish opportunities for current or future generations to enjoy, learn about, or be inspired by park resources or values, or
- * unreasonably interfere with:
 1. park programs or activities, or
 2. an appropriate use, or
 3. the atmosphere of peace and tranquility, or the natural soundscape maintained in wilderness and natural, historic, or commemorative locations within the park.
 4. NPS concessionaire or contractor operations or services.”

3.1.2.8.6. U.S.C. Code

16 U.S.C. Section 1a-1 states, “The authorization of activities shall be conducted in the light of the high public value and integrity of the National Park System and shall not be exercised in derogation of the values and purposes for which these various areas have been

established, except as may have been or shall be directly and specifically provided by Congress.”

3.1.3 HIGH RECREATIONAL VALUE LOCATIONS – Some locations on the seashore possess particularly high recreational value for various types of recreation. These areas are as follows:

3.1.3.1 **Bodie Island Spit** –

- a. (Easter through January) - High use on holiday's and summer for family gatherings
- b. High use for fishing from May through January.
- c. Close proximity to highly populated northern towns, cities, and villages draws many year round visitors.

3.1.3.2 **North Beach Rodanthe to Cape Point**

- a. (March 15 to January) – Fishing
- b. (March through December) –Watersports, favorite area of locals and visiting family
- c. (Year-round) - Bird watching

3.1.3.3 **Cape Point to the Frisco Village line**

- a. (March to January) – Fishing
- b. (May to September)- Favorite “locals” and visitor family gathering area, watersports, swimming, snorkeling, sunbathing, birding, shelling and horseback riding

3.1.3.4 **Frisco Village East Line to Ramp 55**

- a. (March-January) – Fishing
- b (May-September)- Family gathering, watersports, crabbing, bird-watching, shelling

3.1.3.5 **Ramp 55 to/including Hatteras Spit**

- a. (March-January) – Fishing
- b. (May-September)- Family gathering, watersports, crabbing, bird-watching, shelling

3.1.3.6 **Ramp 59 to/including North end of Ocracoke (Hatteras Inlet)**

- a. (March-December) – Fishing, watersports
- b. (Year Round) – Bird watching and shelling

3.1.3.7 **Ramp 59 to Ramp 67**

- a. (Year Round) – Shelling
- b. (March –January) - Fishing
- c. (May – September) – Swimming, watersports, fishing, sunbathing

3.1.3.8 **Ocracoke Day Use line (South end) to Ramp 70**

- a. (March-January) – Fishing
- b. (Year Round) – Shelling and bird watching
- c. (May-September) – Local and visitor family gathering, swimming, watersports, crabbing, clamming

3.1.3.9 **Ramp 72 to/including South Point of Ocracoke (Ocracoke Inlet/Spit)**

- a. (March-December) – Fishing
- b. (Year Round) – Shelling
- c. (April-October) – Local and visitor gatherings, swimming, surfing, watersports, sunbathing, and horseback riding

3.1.3.10 **Sound-side**

- a. Salvo Day Use Area –
 - i. (Year round) Water-sports
 - ii. (May-September) Fishing, crabbing, family gathering for swimming and wading
- b. Sound Access 46
 - i. (Year Round) Water Sports
 - ii. (May-September) Fishing, crabbing, family gathering for swimming and wading
 - iii. (Waterfowl hunting season) Traditional “locals” hunting area
- c. Sound Access 48
 - i. (Year Round) Water Sports
 - ii. May-September) Fishing, crabbing, family gathering for swimming and wading
 - iii. (Waterfowl hunting season) Traditional “locals” hunting area
 - iv. (June-September) Small boat launching area for sound fishing
- d. Sound Access 52 (Little Kinnakeet Life Saving Station) 3 access roads
 - i. (Year Round) Water Sports
 - ii. (May-September) Fishing, crabbing, family gathering for swimming and wading
- e. Sound Access 57
 - i. (May-September) Fishing, crabbing, family gathering for swimming and wading
 - ii. (Waterfowl hunting season) Traditional “locals” hunting area
- f. Sound access 58
 - i. (Year Round) Water Sports

UFWDA et al.

- ii. (May-September) Fishing, crabbing, family gathering for swimming and wading
- iii. (Waterfowl hunting season) Traditional “locals” hunting area
- iv. (June-September) Small boat launching area for sound fishing and waterfowl hunting
- g. Sound Access “The Haul Over”, Access 59 (KitePoint), Access 60
 - i. (Year Round) Water Sports
 - ii. (May-September) Fishing, crabbing, family gathering for swimming and wading, scallop harvesting
 - iii. (Waterfowl hunting season) Traditional “locals” hunting area
 - iv. (June-September) Small boat launching area for sound fishing and waterfowl hunting
- h. Access behind Hatteras Coast Guard Station - . (Year Round) Fishing, Clamming, Crabbing, Small Boat Launching, Scallop harvesting

3.2 HOURS OF ALLOWABLE ORV OPERATION ON BEACH

3.2.1 See Exhibit E *Nighttime Beach Access During Sea Turtle Nesting & Hatching Season*. Nighttime beach access which prohibits the movement of stationary vehicles between the hours of 10:00 p.m. and 6:00 a.m. is not prohibited by the Recovery Plan for the Northwest Atlantic Population of the Loggerhead Turtle Recovery Plan. Utilization of the beach between the hours of 10:00 p.m. and 6:00 a.m. will not jeopardize the recovery of the Loggerhead Sea Turtle and will minimize degradation of nesting habitat in compliance with the recovery plan. Such utilization between 10:00 p.m. and 6:00 a.m. and between May 27 and August 28 is particularly suitable for Cape Hatteras National Seashore Recreational Area in light of the historical statistics of turtle nesting and hatching locations and times of day at Cape Hatteras.

Only twice in the past 11 years have turtle nests been recorded within the unit prior to May 27, representing only two tenths of one percent (0.20%) of all turtle nests in eleven years.

During the same 11 year period only 11 nests remained after August 28, representing just over one percent (1%) of all turtle nests. In over half of the 11 years reported zero nests remained after August 28. Nighttime driving after August 28 does not equate to zero protection of turtle nests. All other protection measures at each nest site would continue to be employed. Furthermore, beach closures around a nest to the surf line would continue to be employed during the hatching period for any nests remaining after August 28.

3.3 ORV ROUTES – Visitors accessing the Seashore by ORV must drive only on areas and routes designated open for ORVs and must comply with posted restrictions. ORV routes/areas will be a designated area seaward from the toe of the dune or vegetation line to the water line. ORV access will be prohibited in all areas of the seashore not designated open as an ORV area or route. Routes and areas designated open, as well as those designated closed to ORV is presented in Exhibit C – *ORV Designated Routes and Areas Map*.

3.4 ORV USE AREAS – A list of all routes and areas designated open to ORV use, as well as points of ingress and egress via ramp are listed in Exhibit F *Routes and Areas Table*.

3.5 SAFETY CLOSURES – Safety closures were recommended in order to establish objective criteria upon which the NPS can temporarily close segments of a beach that pose a

safety hazard to ORVs or their drivers as well as criteria for reopening closed segments. The emphasis on the criteria is to balance safety with the desire to only close the beach in situations where the threat of life and property destruction is imminent. The pedestrian safety recommendations were based on a desire to reduce the likelihood of unsafe pedestrian vehicle interaction. These recommendations mimic vehicle regulations and driving etiquette most commonly understood while driving on-highway or during front-country driving with the belief that such regulations and etiquette will be second nature to ORV drivers and thus compliance will occur consistently. See Exhibit G *Safety Closures* for a complete list of safety closures and criteria for closures and re-opening.

3.6 RESOURCE PROTECTION MEASURES –

Resource protection buffers, breeding, and non-breeding protection measures are outlined in Exhibit I, *Resource Protection Table*. Buffers and other protection measures outlined in Exhibit I are based on scientific studies supporting these recommended buffers and protection measures.

3.6.1. **Wintering buffers:** Wintering buffers should allow ORV use to the greatest extent possible when balancing the need for protection of birds with the need to maintain open sandy beaches needed for Colonial Waterbirds (CWB).

“To assure that important sites where nesting birds are successful and where management is possible, we recommend that ORV traffic be allowed in such key colony sites as Cape Point, Hatteras Inlet, Power Squadron Spit, and the west end of Shackleford Island during the fall and winter to assist in maintaining the bare or nearly bare upper beach habitat necessary for nesting terns and skimmers. Terns and skimmers that nest on bare or nearly bare sites need the most assistance.”⁴

“We make the following recommendations to help enhance the populations of CAHA [Cape Hatteras] and CALO...At present, beach closures are unnecessary and are not likely to favorably impact breeding piping plovers on the islands.”⁵

3.6.2. **Pass-through corridors:** pass-through corridors are particularly well suited at Cape Hatteras National Seashore Recreational Area due to the lower latitude and environment in North Carolina.

“Our brief study of piping plover breeding biology has revealed that factors affecting reproductive success in North Carolina are different than those in northern regions. Being along the edge of the piping plover's breeding range and at a lower latitude, the environment at North Carolina seashores is likely to have different conditions for survival and reproduction. Storms in the early part of the

⁴ Jaime A. Collazo, J.R. Walters, and J.F. Parnell, Factors Affecting Reproduction and Migration of Waterbirds on the North Carolina Barrier Islands, Final Report to the National Park Service Cape Hatteras and Cape Lookout Seashores (1995).

⁵ Jaime A. Collazo, J.R. Walters, and J.F. Parnell, Factors Affecting Reproduction and Migration of Waterbirds on the North Carolina Barrier Islands, Final Report to the National Park Service Cape Hatteras and Cape Lookout Seashores (1995).

breeding season cause breeding losses and delays, and high temperatures, especially late in the breeding season, impose heat stress that may indirectly cause chick mortality. For these reasons, productivity goals set in the recovery plan (1.5 fledged chicks/pair/year), established from studies of more northern populations, are probably unrealistic for North Carolina.”⁶

Flushing of incubating American Oystercatchers (AMOY) should not be dispositive in determining whether pass-through corridor widths should be adjusted.

“Regression models showed that there was little or no association between ORV traffic and the rate at which incubating oystercatchers made trips to and from their nests or the percent time they spent incubating.”⁷

3.6.3 Vegetation control measures: Vegetation control measures should be implemented at Cape Point and be strongly considered for Bodie Island.

“We make the following recommendations to help enhance the populations of CAHA [Cape Hatteras] and CALO... Continue vegetation removal at Cape Point along the south shore of the brackish pond. To delay the re-growth of vegetation in these treated areas, **it** may be beneficial to use raking machinery after disking to prevent vegetative growth from cuttings. Growth of vegetation in other piping plover foraging and nesting areas of CAHA should be monitored; additional areas may need to be maintained. Preservation of interior wet and mud flats on CAHA is critical; otherwise piping plovers may only find suitable foraging habitat along the ocean intertidal zone where human disturbance is a problem.”⁸

3.6.4. Non-breeding Migratory Shorebird Protection Measures: Extraordinary protection measures consisting of large segments or a sizable percentage of protection area within Cape Hatteras National Seashore are unwarranted for non-breeding migratory shorebirds, particularly where protection measures are greater than those measures afforded to species which have been vetted through the listing process under the Endangered Species Act. For example, large segments of ORV and/or pedestrian free beaches during migration season are unwarranted for Red Knots at Cape Hatteras. Red Knots are not a listed species under the Endangered Species Act nor is the species listed in North Carolina as protected species. The numbers of Red Knots that utilize Cape Hatteras is very few, accounting for less than 3% of the population. This proposal provides adequate levels of protected shoreline in relation to the potential for positive impact upon the relatively low numbers of individuals using Cape Hatteras as a migratory stop-over. Thus, the additional protection measures provided for in this proposal compared to past practices are sufficient to meet the burden of non-impairment.

⁶Jaime A. Collazo, J.R. Walters, and J.F. Parnell, Factors Affecting Reproduction and Migration of Waterbirds on the North Carolina Barrier Islands, Final Report to the National Park Service Cape Hatteras and Cape Lookout Seashores (1995).

⁷Conor P. McGowan, Simons, T.R., *Effects of Human Recreation on the Incubation Behavior of American Oystercatchers*, The Wilson Journal of Ornithology 118(4): 485-493, 2006, at 489.

⁸Jaime A. Collazo, J.R. Walters, and J.F. Parnell, Factors Affecting Reproduction and Migration of Waterbirds on the North Carolina Barrier Islands, Final Report to the National Park Service Cape Hatteras and Cape Lookout Seashores (1995).

“This study documents that moderate numbers of Red Knot use the Outer Banks during migration and in winter. Morrison and Harrington (1992) estimated the North American population of Red Knots at 180,000. The vast majority of these birds stage in Delaware Bay during spring (Clark et al. 1993), with small concentrations noted at other sites along the Atlantic Coast (Hicklin 1987, Marsh and Wilkinson 1991). On the Outer Banks, over 4,700 knots were counted in May and June 1992, with 73% on North Core Banks. Not accounting for turnover, the Outer Banks host 2-3% of the estimated North American Red Knot population during spring. The importance of the Outer Banks as a wintering area is less understood. Censuses indicated that >500 knots wintered each year, the northernmost sizeable wintering aggregation on the Atlantic Coast. The largest known wintering group in North America is on the Gulf Coast of Florida, where a mean of 6300 ± 3400 were detected in 1980-82 (Harrington et al. 1988).”⁹

3.7 PERMIT – A special use permit for ORV users is not required. However, many ORV users comply with permit requirements when they perceive value in exchange for the burden of a permit. Value in exchange for the burden of a permit includes ease of access to restrooms, air stations, well-maintained ramps, or adequate law enforcement, for example. The price structure of a permit should be as low as possible to afford access for all people who desire it. The money spent by users for the permit will be detracted from the amount of money users will spend in the local economy so be mindful that the original promises of the National Park Service to the people of the islands to work cooperatively with them so that they may enjoy “the prosperity [they] so rightfully deserve because of long occupancy on [the] lands” within the Recreational Area.¹⁰

3.8 CARRYING CAPACITY – Carrying capacity decisions should not be made in the absence of peer reviewed studies or visitor use capacity planning. If carrying capacity is implemented as a visitor control measure in the future it should be done only after the determination of desired conditions, selection of indicators and standards that reflect the desired conditions, and monitoring of the indicators and standards. Carrying capacity under this methodology will not specify the total number of visitors that the Recreational Area, as a whole, can accommodate at one time; will not be driven by existing capacity of infrastructure; and should not be static but instead rely upon visitor use patterns, desired visitor experiences, and the dynamic ecological changes experienced at Cape Hatteras. In order that carrying capacity management is successful it must consider, “1) that recreationists seek multiple satisfactions from recreation and, depending on these, encounters with others might add, detract, or be neutral in their effect on those experiences; 2) satisfaction is a function of more than use level – the type, frequency, and location of encounters are important intervening variables; 3) clearly stated objectives are essential to identifying carrying capacities; and 4) the emphasis on management needs to be on outputs – the experiential and environmental conditions desired –

⁹ Dinsmore, S.J. and J.A. Collazo. 1995. Seasonal numbers, distribution and population dynamics of shorebirds on the outer banks of North Carolina. In Factors Affecting Reproduction and Migration of Waterbirds on the North Carolina Barrier Islands. Final Report to the National Park Service.

¹⁰ Conrad Wirth, Director, National Park Service, 1952, letter to the people of Ocracoke, Hatteras, and Bodie Islands. See also Exhibit A.

not on the inputs such as use levels”.¹¹ Management should not focus on “how much is too much”, but focus on what kinds of conditions are appropriate and acceptable in different settings. Finally, part of the decision-making matrix on carrying capacity must consider the specific park legislation where at Cape Hatteras there is a legislative guarantee to ocean access, including ORV access.¹²

3.9 OFF-ROAD VEHICLE REQUIREMENTS - Off-road vehicle requirements appear in Exhibit I, *Off-road Vehicle Requirement and Characteristics*.

3.10 SPEED LIMITS – A speed limit of 15 mph is implemented uniformly within the Recreational Area, except where otherwise posted. A uniform speed limit facilitates consistency and driver compliance.

3.11 ECONOMIC IMPACTS –

Salt water recreational anglers contributed more than \$31 billion to the U.S. economy in 2006. North Carolina ranks 3rd at \$2 billion, falling only behind Florida and Louisiana.

Worldwide numbers of watersports enthusiasts that visit Cape Hatteras and consider it one of the top venues in the world for their sport(s): 500,000 kiteboarders, 450,000 windsurfers, 20 million surfers, nearly 3x that number of kayakers. World Champions that visit Cape Hatteras annually : Kelly Slater 9x World Surfing Champion, CJ Hobgood : Former World Surfing Champion, Aaron Hadlow 5 x Kiteboarding World Champion, Robby Naish 23x World Windsurfing Champion, Jimmy Buffett World Lifestyle Champion also an avid Surfer and Fisherman.

4.0 CONCLUSION

Please take into consideration this proposal when formulating a preferred alternative, taking into account the legal sufficiency and scientific support for the ideas presented above. Thank you for the opportunity to participate in this meaningful work and for the chance to help guide ORV management at Cape Hatteras National Seashore Recreational Area.

Those organizations listed on the cover page of this Addendum to the Final Report of the Proceedings of the Negotiated Rulemaking Advisory Committee constitute the full list of signatories to this document.

Retyped from copies of The Coastland Times, Manteo, N. C.

Friday, October 31, 1952 The Coastland Times, Manteo, N.C.

A LETTER TO THE PEOPLE OF THE OUTER BANKS

When I visited with you earlier this month, I told you that we would study further some of the problems that were bothering you and see if some adjustments in the boundary of the Cape Hatteras National Seashore Recreational Area could be made to meet our joint problems more satisfactorily. This we have done. Rather than make another three-day trip to your Islands, I believe that the best way to get the results of these studies to all of you in a clear and concise way is to print them in your local paper. Victor Meekins has agreed to see that every family on Ocracoke, Hatteras, and Bodie Islands, south of Whale Bone, gets a copy.

This issue of The Coastland Times contains a set of maps and descriptions which show in detail the new boundary lines for the Cape Hatteras National Seashore Recreational Area. In general, the new lines leave more room for expansion around the towns and they bring in the boundary at Pamlico Sound to within 150 feet of the shores of Ocracoke and Hatteras Islands. The new boundary lines have the approval of the Secretary of the Interior; and I have discussed them with Mr. George Ross, Director, North Carolina Department of Conservation and Development, who also approves of them.

During the week of October 6, I met with many of you individually and in public meetings held in the towns of Ocracoke, Hatteras, Avon, and Rodanthe, to answer questions about the Cape Hatteras National Seashore Recreational Area project. We discussed its purposes, boundary lines, and the programs for its acquisition and development. Congressman Herbert C. Bonner and others joined in several of the meetings and discussions. You asked many questions; many of these were on how the establishment of the Recreational Area would affect you personally, your business, or your property. I hope, and believe that those questions were answered to the satisfaction of those who asked them.

In the public meetings, you brought out four main points:

1. Many of you were uncertain as to just where the Recreational Area boundary lines would be around the communities and felt that not enough room was being left for community expansion.
2. There was the question as to the rights of individuals to continue commercial and sport fishing.
3. There was concern as to whether your present hunting rights would be affected.
4. There was a feeling that once the Recreational Area is established the local people would be denied access to the ocean beach.

I wish to re-emphasize the answers to these questions, with the aid of the accompanying maps.

As to the first question, I promised you that we would restudy the boundaries and change them if necessary and desirable. The study was based on a personal visit to all of the communities and the Recreational Area, as well as the statement made to me by many local people personally and in public meetings. Our studies showed that the old Recreational Area boundary lines were too confining, so we have changed them in all cases by moving the boundary lines around the communities close to the ocean. On the ocean side of the towns, the new, approved boundary

EXHIBIT A

Retyped from copies of The Coastland Times, Manteo, N. C.

lines include in the Recreational Area only those lands along the ocean which are necessary to protect and control the sand dunes, to re-establish them where necessary, and hold them to protect the communities from the intrusion of the ocean. The National Park Service intends to resume the sand fixation work that it started in the 1930's and more firmly establish the dunes. The boundary line has also been changed on the Sound Side. It has been moved in to a distance of 150 feet from the shore lines of Ocracoke and Hatteras Islands, except in front of the communities, and the offshore islands outside of that line are eliminated from the Recreational Area. The boundary line of the Cape Hatteras National Seashore Area does not extend in front of the communities on the Sound side. In the case of Bodie Island it was more practical to describe a meets and bounds line, as shown on the accompanying maps, than it was to use an irregular line 150 feet offshore.

In regard to fishing and hunting (questions 2 and 3), - under the basic legislation authorizing the Cape Hatteras National Seashore Recreational Area, fishing and hunting rights in the Sound were reserved to the people. That being the case there is no real need to include Pamlico Sound waters in the Recreational Area. This is so because the North Carolina fishing and hunting laws and regulations and those of the Federal Government which have been in effect for a great many years in the Sound area will still apply to waters both inside and outside the Recreational boundaries. Therefore, the new boundary line in the Sound has been set only 150 feet offshore from Hatteras and Ocracoke Islands. That is purely an arbitrary distance. It brings the line close enough in so that everyone can know definitely where it is. Due to the irregularity of the shore line, it may be necessary to make minor adjustments in some places so that any small offshore islands will be either wholly in or wholly out of the Recreational Area. In other words, the line won't split any islands.

The following larger islands are excluded from the Recreational Area:

Off Bodie Island – those among others: Pond, Grun, House, Warren, Headquarters, Bells, Bowser, Cedar, Cutoff and Herring Shoal, Big Tim, and Little Tim Islands.

Off Hatteras Island – these among others: both Great Island, Midgett, Noache, Bull, Big, and Kings Islands.

Off Ocracoke Island – these among others: Outer Green, Cockrel, and Negro Islands.

The guarantee in the laws relating to hunting and continuation of commercial fishing in the waters of the Sounds will apply within this 150 offshore strip exactly as they do outside of it. The State and Federal fishing and hunting regulations within this strip cannot be affected by any National Park Service regulation.

The law says that hunting will be permitted on Ocracoke Island, at the waters of the Sounds and on not more than 2,000 Island Refuge and its waters. The law requires the Secretary of the Interior to designate the 2,000 acre hunting area would be selected by a committee composed of two representatives of the State of North Carolina, to be designated by the Governor, and one each from the Fish and Wildlife Service and the National Park Service of the Department of the Interior. The National Park Service will move toward the establishment of this committee and the designation of these lands at the earliest possible moment, after the lands have been acquired. Of course, no part of the 2,000 acres will be in the Pea Island Refuge.

EXHIBIT A

Retyped from copies of The Coastland Times, Manteo, N. C.

Concerning access to the beach (question 4), - - when I met with you I explained that when the lands for the Recreational Area are acquired and become public property there will always be access to the beach for all people, whether they are local residents or visitors from the outside. However, it will be necessary to establish certain regulations, such as to designate places for vehicles to get to the beach in order to reduce said dune erosion to a minimum; to manage ocean fishing where large numbers of bathers are using the beach; and to confine bathing to certain areas. These latter are safety measures, as it would be dangerous to permit surf fishing where there are large numbers of people in bathing and, likewise, fishermen would not want bathers to interfere with their fishing.

With the changed boundary lines in the Sound and the enlargement of the areas excluded for community expansion, as indicated on the accompanying maps the establishment of the committee to determine the 2,000 additional acres of land on the islands to be open to hunting, and making clear the problem of access to the ocean beach, I feel that we have found a reasonable solution that meets the needs of the Recreational Area. I might add that if, at any time, the State is in a position to build a road on Ocracoke, we can easily reach agreement on the right-of-way for it.

Now a word concerning the future development of the Area. As state above, the National Park Service proposes to resume the sand fixation work; to re-establish the natural plant and wild-life within the area; and to provide access to the beach for everybody. We plan also to tell the story of the sea. Cape Hatteras has perhaps one of the most interesting and heroic sea histories in the entire United States, if not the world. It is the plan of the National Park Service to establish a museum to tell the story of the sea, and especially the part that the Cape Hatteras coast line and you people have played in it. The fascinating history of the Outer Banks, combined with the story that is told at the Wright Memorial and at Fort Raleigh on Roanoke Island will make this part of the North Carolina one of the most important tourist objectives in the United States.

As our plans move forward we will call upon the people of the communities on Ocracoke, Hatteras, and Bodie Island to work with us in establishing the museum. Many of you have relics of the past and stories of great accomplishments handed down through your families that are needed to record and relate this history. It is hoped that when the museum is ready you will see fit to donate or loan appropriate objects for exhibit purposes. When our plans are formulated in more detail they will be made known to you, and we are going to ask for your advice and suggestions.

The National Park Service has always believed in free enterprise, and has practiced it in all the area of the National Park System. In the case of the Cape Hatteras National Seashore Recreational Area, we expect the people in the communities on the Islands of Ocracoke, Hatteras and Bodie to take care of the tourists. No developments for tourists accommodations are planned or will be permitted on government property. Consequently, the property within the communities will, without any doubt, have an increasing commercial value because of the existence of the Recreational Area; its greatest value will be for use in taking care of the public.

EXHIBIT B	
ORV Management Activities Table	
MANAGEMENT ACTIVITY	X
ORV Access	<p>Visitors accessing the Seashore by ORV must use only designated beach access ramps and soundside access roads to enter designated ORV routes.</p> <p>ORV access is provided via oceanside ramps and access points (18 minimum) located off NC-12.</p> <p>Oceanside Ramps See ORV Routes and Areas Table for details, EXHIBIT F</p> <p>Seashore staff maintains ramps and signage.</p> <p>Soundside Access Existing soundside ramps would remain open</p> <p>Signage/posts would be installed at the primitive parking areas and boat launch areas to prevent damage to vegetation and other soundside resources.</p> <p>Add 1 soundside ORV access on Bodie Island. Plus all ramps would be constructed/maintained with a clay & shell surface. All ramps would be maintained at 2 lanes wide for the safety of visitors.</p> <p>Interdunal Roads Two lane, interdunal routes have been designated as follows in EXHIBIT F. Plus all ramps would be constructed/maintained with a clay & shell surface. All ramps would be maintained at 2 lanes wide for the safety of visitors. If any road is a one lane interdunal road it must have passing turnouts.</p> <p><i>Bodie Island Ranger District</i> To be determined with design/access of new ramp 2 & 3. (replacing current ramps 2 & 4)</p> <p><i>Hatteras Island Ranger District</i> Cape Point between Ramp 44 to Ramp 45 Extend interdunal road west of Ramp 45 to Ramp 49. Establish new Ramps at Drain Road, 46, 47, and 48 off of interdunal road. See EXHIBIT C</p> <p>Maintain Pole Road, crossover roads on either side of Isabell washover, Bone Rd. & Spur Rd. to allow for safe 2 way passage.</p> <p><i>Ocracoke Island Ranger District</i> All current soundside access routes to be kept open with maintenance to allow safe access for ORV & PED Reopen soundside access @ So boundry of Village. Reopen soundside access from ramp 72 south of spur around SW end of dune in non-breeding season.</p>

MANAGEMENT ACTIVITY		X
Resource Protection	See EXHIBIT H, <i>Resource Protection Table</i>	
Buffers		
		X
Permit Requirements	Permits required for ORV use on beaches and ramps of Cape Hatteras National Seashore Recreational Area.	
	No limit on number of permits.	
		X
Permit Distribution	Available in-person at various locations and on-line	
		X
Permit Issuance	ORV owners must read the rules and regulations governing ORV use at the seashore. The owner would sign for their permit in acknowledgment that they understood the rule and that all drivers will abide by the rules and regulations governing ORV use at the seashore, including beach driving safety and resource closure requirements.	
Requirements		
		X
Permit number limits	No limit on the number of permits granted per year.	
		X
Permit types	* Special Use Permit. Daily, weekly, or annual.	
	* Special free "nighttime ORV access" permit required for specified locations. See EXHIBIT E. Special Use Permit must be obtained prior to receiving "nighttime beach access" permit. Nighttime Beach Access only required from May 27 through August 25.	
	* Special free "Self-contained Vehicle" permit. See EXHIBIT I.	
	* Commercial Fishing Permit	
		X
Permit fees	\$7/day/vehicle; \$20/week/vehicle; or \$30/year/vehicle	
		X
Permit form	Permit affixed to vehicle in a manner approved by NPS.	
		X
Permit Revocation	A permit may be revoked after conviction for violation of applicable park regulations or terms and conditions of the permit, for period of time commensurate with the violation(s).	
		X
Beach Parking	Parking is allowed in any configuration so long as parked vehicles do not interfere with the clear and safe passage of a single lane of traffic.	
		X
Vehicle Carrying	Vehicle carrying capacity will not be established until such time as a carrying capacity visitor use plan or study is completed by NPS.	
Capacity Determination		

MANAGEMENT ACTIVITY		X
Temporary Emergency Beach Closures	The NPS retains the authority to implement a temporary emergency beach closure is any of the following conditions are observed:	
	* ORV traffic backing up on the beach access ramps, either on-or off-beach bound, which threatens to impede traffic flow for a significant length of time	
	* ORV traffic on beach is parked in such a way that 2-way traffic is impeded for a significant length of time	
	* Multiple incidents of disorderly behavior are witnesses by NPS and conflicts can not otherwise be mitigated.	
		X
Seasonal Element related to Carrying Capacity	Applicable only May 15 to September 15.	
		X
Periodic Review of Carrying Capacity	Visitation, crowding, and safety monitored periodically to determine if implementation of carrying capacity is warranted. Once implemented, carrying capacity limits would be reviewed every 2 years. Review to include NPS and the appointed FACA committee at least every 2 years and more often if requested.	
		X
Areas of Implementation	Would apply to all areas of the seashore. Carrying capacity requirement only implemented if carrying capacity plan is finalized and increased visitation results in crowding threshold being met.	
		X
Off-Road Vehicle Requirements	See EXHIBIT I, <i>Off-Road Vehicle Requirements and Characteristitcs</i>	
		X
Equipment Requirements	See EXHIBIT I, <i>Off-Road Vehicle Requirements and Characteristitcs</i>	
		X
Speed Limits	15 mph (unless otherwise posted). Emergency vehicles exempt when responding to a call.	
		X
Non-ORV Areas	Non-ORV areas as designated in the ORV Routes and Areas Table. See EXHIBIT F.	
		X
Parking Areas for Non-ORV Access	Any new parking areas to be located near Non-ORV Areas and located away from eroding areas or potential inlet areas. New parking areas will implement environmentally appropriate design standards to minimize stormwater runoff. New or expanded parking areas for oceanside locations are identified in ORV Routes and Areas Table. See EXHIBIT F.	

MANAGEMENT ACTIVITY		X
Non-ORV Parking Area Characteristics	* Each site would have a boardwalk or other appropriate pedestrian route for crossing the dune.	
	* Parking areas with 25 or more parking spaces would have waste receptacles and toilet facilities.	
	* Access provided for mobility impaired at select locations.	
		X
Alternative Transportation	Alternative transportation is not provided at the seashore.	
		X
Restroom Facilities	At all locations with 25 or more spaces	
		X
Pets	Pets are to be regulated by 36 CFR §2.13	
	See also special considerations for pets at EXHIBIT H, <i>Resource Protection Table</i> .	
	Dog walking or "doggie park" areas should be established to provide alternatives for pet owners to minimize pet/resource conflicts.	
		X
Beach Fires	Beach fires are allowed per 36 CFR §2.13 and prohibited 12:00 midnight to 6:00am. No fires are allowed within 100 meters of a known turtle nest.	
		X
Nighttime Beach Use	Camping*, as defined in 36 CFR 1.4 is prohibited on seashore beaches per Superintendent's Compendium §2.10(a). A new order will be issued to allow for Self-Contained Vehicles according to EXHIBIT I, <i>Off-Road Vehicle Requirements and Characteristics</i> . ORV use at night is allowed except as outlined in EXHIBIT E, <i>Nighttime Beach Access During Sea Turtle Nesting & Hatching Season</i> . * Camping means the erecting of a tent or shelter of natural or synthetic material, preparing a sleeping bag or other bedding material for use, parking or a motor vehicle, motor home, or trailer, or mooring of a vessel for the apparent purpose of overnight occupancy. (36 CFR §1.4).	
		X
Boat Access	Launch sites, as designated under 36 CFR § 3.8(a)(2), are identified in the Superintendent's Compendium. Launching or recovery of vessels is prohibited within resources closures.	
		X
Commercial Fishing Vehicles	Authorized by permit, plus may be authorized by special use permit to access non-ORV areas and night driving restricted areas if there is no resource conflict.	
		X
Law Enforcement (LE)	To be determined by NPS	

MANAGEMENT ACTIVITY		X
Staffing	To be determined by NPS	
(including RM, sign crew, LE, Maintenance, and others?)		
		X
Materials	To be determined by NPS	
	Discontinue use of carsonite stakes as they increase sea turtle false crawls.	
		X
Advisory Committee	An advisory committee shall be established to review the ORV Management plan annually or more often if requested by the superintendent. The committee shall consist of a reasonable cross sectional representation of the visitors to Cape Hatteras National Seashore Recreational Area.

ORV DESIGNATED ROUTES AND AREAS MAP

LEGEND

- Closed to ORVs y/r: 
- Open to ORVs y/r: 
- Open to ORVs Seasonally: 
- Open to ORVs Conditionally: 

Note: “Open to ORVs Conditionally” in the legend above means that the area is designated open to ORVs but special management considerations will govern management during breeding season for listed species or species of special concern.

Note: Pea Island NWR shall be considered as an addition to any area designated as pedestrian-only.

REALWATERSPORTS.COM

Cape Hatteras Kiteboarding Rules

- Stay 150 ft away from power lines.
- Stay out of and away from NPS* Bird/Turtle closures.
- Stay 300 ft away from fishing piers and surf fishermen.
- Don't kite in straight on-shore or off-shore wind.
- Be respectful to other beach goers.

EXHIBIT E**Nighttime Beach Access
During Sea Turtle Nesting and Hatchling Season****Acknowledgement**

Numerous factors may affect sea turtles, turtle behavior, and turtle habitat including natural factors (ocean water quality, water temperature, storm events, predators, etc.), general human activity on beaches, artificial lighting (stationary in particular), and ORVs. Though the scope and focus of this plan is ORV management, this is not to imply numerous other management actions are not necessary and important to maintain and improve turtle populations on CAHA.

General Goals of Nighttime ORV Access, Seasonal Restrictions, and Turtle Management

- Protect the sea turtles and contribute to the recovery of the species. More specific goals include:
 - Reduce the potential for false crawls due to night activity on the beach;
 - Reduce the potential for female turtles not emerging onto the beach due to night activity on the beach;
 - Reduce the potential for hatchling disorientation, when attempting to return to the sea, due to night activity on the beach;
 - Reduce potential direct impact to hatchlings seeking to reach the ocean, especially those hatchlings emerging from undiscovered/unmarked nests.
 - Reduce potential direct impact to nesting females.
- Protect the opportunity for access.

Overview of Nighttime ORV Access Program

- In general, night driving would be prohibited during the dates of May 27 and August 25;
- In general, night driving would be prohibited during the times of 10:00 p.m. to 6:00 a.m.
- Night driving on specific designated routes to spits and points that are not otherwise closed due to bird breeding activity would occur with nighttime restrictions from May 27 to August 25, with sufficient NPS monitoring.
- Specifically, in four areas of the Park (Bodie Island Spit, Cape Point, Hatteras Spit and South Point Ocracoke), provided those areas are not otherwise closed due to bird breeding activity, limited access for appropriate nighttime access and appropriate recreational activity, with significant restrictions, would be permitted from May 27 to August 25. At the designated location(s), drivers would have to park and stay parked at night, with lighting restrictions. Fishing or other appropriate recreation (i.e., stargazing) would occur though vehicles must remain parked until the area reopens to ORV access at 6:00 a.m.
- Night driving on all routes and areas would occur without nighttime restrictions from August 26 until May 26.

EXHIBIT E**Monitoring**

- Daily sea turtle patrols will begin on May 1. Patrol will continue until September 15, or two weeks after the last sea turtle nest or crawl is found, whichever is later.
- Conduct daily morning surveys by ATV/UTVs and possibly ORVs for crawls and nests on all beaches before onset of heavy public ORV use. Morning surveys must begin on the beach no later than twilight. Daily surveys for nests end September 15, or two weeks after the last sea turtle nest or crawl was found, whichever is later. Periodic monitoring (e.g., every two to three days) for unknown nesting and emerging hatchlings will occur in areas of high visitation.
- Monitoring will also occur for post-hatchling washbacks during periods when there are large quantities of seaweed washed ashore or following severe storm events. Nest observations stop when all nests have hatched or excavations indicate that any nests remaining are not viable.
- At approximately 50-55 days into incubation, NPS will expand closures around a nest to the surf line, establish the filter fencing, and monitor the nest daily for signs of hatchling emergence.
- Using personnel with local turtle experience survey the ocean beaches each year to identify problems of poor nesting sites and appropriate relocation areas.

General Management

- In general, NPS will follow the guidance found in the NCWRC Handbook for Sea Turtle Volunteers until such time as NPS develops site-specific guidelines for the unit and can transition to solely implementing such NPS guidelines.
- May 27 – August 25: The general park wide approach to sea turtle management during these dates includes the following:
 - All potential sea turtle nesting habitat (ocean intertidal zone, ocean backshore, and dunes) will be closed to non-essential ORV use from 10:00 p.m. until 6:00 a.m.. Pedestrian use of beaches from 10:00 p.m. until 6:00 a.m. is allowed. All users, whether arriving via foot or via ORV, must comply with turtle etiquette regarding use of lights, prohibition of campfires, approach of turtles or nests, etc. as outlined below.
 - Areas of beach shall be cleared by turtle patrol prior to allowing ORV morning access. NPS shall provide sufficient personnel to meet the 6:00 a.m. standard. The turtle patrols will place as a first priority patrolling those areas that are currently open to ORV access, and as necessary, further prioritize those open areas within the spits and points.
 - Early morning monitoring will be done in the most effective and efficient fashion possible. This may include an initial sweep for marking of new nests and false crawls followed by a second sweep for detailed fencing, more permanent protections, etc.; beginning patrols at first twilight on the beach; and so forth.

EXHIBIT E

- Signaling of some kind should be established at ORV access ramps to indicate if the beach is closed. This may be signage, traffic-light lights, or so forth.
 - The Park shall seek, in partnership with the NCWC, Dare County, and a volunteers program to provide for at least 8 separate turtle patrols per day during the turtle-nesting season.
 - The Park shall provide for sufficient and necessary enforcement to ensure the beach is cleared at night by 10:00 p.m., and that any violators are found and receive appropriate penalties.
 - Nest closures and buffers are described in the *Resource Protection Table*, EXHIBIT H.
- August 26 – Date of Last Hatching: Designated ORV routes and areas are open to ORV use 24 hours a day subject to other natural resource closures. NPS will conduct night nest monitoring/watch during expected hatching to ensure the safety of hatchlings in any areas open to ORV use with turtle nests present. The NPS will work to establish a nest watch program with volunteers under appropriate supervision.
 - The Park will install filter fencing for managing light and will provide for an appropriate buffer around turtle nests to ensure hatchlings may make their way to the sea. Filter fencing should be no further from the nest than 5 meters to ensure light from distances further away from the nests is filtered.
 - Resources Management staff will examine all sea turtle nests after hatching to determine productivity rates.
 - Excavate nests in the evening a minimum of 72 hours after hatching event.
 - In cases where hatching events or dates were unknown, unearth nest cavities 80–90 days after the lay date, or later if eggs are still viable.
 - Any live hatchlings found during excavations will be released at dusk or after dark on the same day as excavation.
 - Date of Last Hatching – May 26: Designated ORV routes and areas are open to ORV use 24 hours a day subject to other natural resource closures.

Site Specific Management for Nighttime ORV Access

- General Requirements for Nighttime ORV Access of Bodie Island, Cape Point, Hatteras Inlet, and South Point Ocracoke - May 27 to August 25: Bodie Island Spit, Cape Point, Hatteras Inlet and South Point Ocracoke, if not otherwise closed due to bird breeding activity, are open to nighttime ORV access. The following additional restrictions apply within said ORV routes/areas.
 - All ORVs must obtain an ORV Special Use Permit, See EXHIBIT B for details.
 - All ORVs must also obtain a Special Use Permit for Nighttime ORV Access.
 - Nighttime ORV Access Permits will be accompanied by education about sea turtles, their protection, the rules of nighttime access, and a phone number to report any violations or specific turtle behavior (nesting, false crawls, etc.).
 - In areas open to nighttime ORV access, campfires, use of vehicle headlights (other than as below), auxiliary lights, vehicle battery powered spotlights, or

EXHIBIT E

lanterns that cast light in a 360 degree direction are prohibited, except as needed in a true emergency situation. Intermittent use of lighting (5 minutes or less) is limited to handheld flashlights, headlamps or other battery powered lighting devices that cast a one-directional beam of light.

- Headlights may only be used when in transit and will be turned off when the vehicle is parked.
 - Drivers and pedestrian should not approach turtles or turtle nests and should not aim any lights including flash photography toward adult sea turtles or hatchlings.
 - NPS will conduct night monitoring of the specific ORV routes and areas open to nighttime ORV access, with at least one monitor per ranger district, to identify, record, and monitor nesting females and record false crawls.
 - Incentives should be established for beach users to report any turtle activity.
 - Limitation on numbers of vehicles for areas open to nighttime ORV access.
- Number of Vehicles per Nighttime ORV Access Area The number of vehicles allowed in Nighttime ORV Access areas will be limited and such limitations will be established in the Superintendent's Compendium under the authority of 36 CFR § 1.5, subject to periodic review by NPS, and adjusted as appropriate (could be increased if no negative impacts to resources are determined or decreased if needed to protect park resources). The limitation on number of vehicles will be as follows:
 - Bodie Island Spit limit – 25 vehicles
 - Cape Point: Vehicle limit – 50 vehicles
 - Hatteras Inlet Vehicle limit – 25 vehicles
 - Ocracoke South Point limit – 25 vehicles
- Special Use Permit for Nighttime ORV Access. The above areas will be accessible by ORV only before 10:00 p.m., subject to resource closures for bird breeding activity or turtle nests, and subject to terms and conditions of a special use permit, which include the following:
 - Such vehicles must have a special use permit for “Nighttime ORV Access” which will be in addition to any standard beach access permit.
 - Appropriate recreation would include fishing, stargazing, or other passive activities.
 - Permitted vehicles must arrive at the site no later than 10:00 p.m. and remain parked within the designated area with headlights off until the beach is cleared by turtle patrol, which shall be by 6:00 a.m..
 - Under rare circumstances, should a Nighttime ORV Access permittee need to leave the beach during the night due to a serious emergency, they must make a call to Dare County central dispatch (473-3444) or 911. Dispatch information will be listed on the nightly permit.
 - Parking areas at the respective nighttime ORV access areas will be designated by NPS law enforcement staff and marked with signage (e.g., posts or barricades) that will be maintained by the LE staff. Permittees must park their vehicles only in the designated area. Such areas will be contained and shall prevent vehicles from being spread up or down large sections of beach.
 - Pets are prohibited

EXHIBIT E

- Campfires, use of vehicle headlights, vehicle battery powered spotlights, or lanterns that cast light in a 360 degree direction are prohibited, except as needed in a true emergency situation. Intermittent use of lighting is limited to handheld flashlights, headlamps or other battery powered lighting devices that cast a one-directional beam of light.
- Drivers and pedestrians should not approach turtles or turtle nests and should not aim any lights, including flash photography, toward adult sea turtles, hatchlings, or into a nest enclosure.
- Special use permits will be issued one night at a time and must be obtained in person at a designated NPS permit issuing station (locations TBD). If NPS issuing stations are scheduled to be closed due to day of the week or known holiday, NPS must make permit available the business day immediate occurring before the day the permit issuing station is closed.
- Each vehicle must have a functional portable toilet.
- If it appears that there is routinely more demand for permits than the vehicle limits allow NPS may impose a limit on the number of nights in a row an individual may obtain a nighttime ORV access permit. If a permit is obtained but permittee will not utilize permit for that day the permit must be returned to the permit issuing station prior to the time the permit station closes.
- NPS retains the right to refuse issuance of nighttime ORV access permits when adverse weather conditions are forecasted that pose dangerous conditions that will, or are likely to, lead to safety measures that would require evacuation from the beach between the hours of 10:00 p.m. and 6:00 a.m.
- NPS may utilize volunteer hosts at nighttime ORV access areas as a management tool to monitor compliance with the permit requirements.
- If a permittee, or individual accompanying a permittee, violates the terms and conditions of the permit, including any natural resource protection rules or any of the above provisions, the violator is subject to a citation and the person's privilege to obtain a night-access permit will be revoked for the remainder of the season.
-

Education and Outreach

The NPS will develop an appropriate, robust, and effective turtle education and outreach program to help inform all beach users, regardless of the means they use to access the beach, regarding turtle species, their behavior, and all appropriate human behavior to ensure the success of nesting and hatching of turtles on Cape Hatteras National Seashore.

Research and Knowledge Base

The NPS will commit sufficient resources to the monitoring, science, and adaptive management approach to build a detailed, thorough knowledge of turtle management on Cape Hatteras National Seashore to be used for future management of sea turtles at Cape Hatteras and to share that knowledge with others within the state, other Parks, and up and down the Atlantic Seashore.

EXHIBIT E**Volunteer Program**

The NPS will develop an appropriate and effective volunteer program to increase its access to resources, to inform and educate interested members of the public, and to help advance the recovery of turtle species. To the greatest extent possible, the NPS will also partner with Dare County and such state agencies as the North Carolina Wildlife Resources Commission (NCWRC) to maximize resources and abilities to achieve the goals noted above. Volunteers may assist with turtle patrols and may also serve as nest watchers during hatching.

Stationary Lighting within the Control of the NPS

The NPS will work with USFWS, the NCWRC, and appropriate others to develop turtle-friendly lighting at all NPS facilities that might affect lighting on or near the beach, as well as require all concessionaires with potential impact to utilize the same lighting through their special use permits.

Predator Control

Under a separate process, NPS will develop and implement a predator control plan for predators of turtles, particularly hatchlings, in order to reduce harm and death to hatchlings.

Commercial Fishing

Commercial fishing permittees regulated pursuant to 36 CFR 7.58(b)(2) are not subject to the provisions of this ORV regulation during times or periods when beach use occurs while engaged in commercial fishing from seashore beaches. Appropriate requirements for protection of turtles will be managed separately through the commercial fishing special use permit.

Adaptive Management

Objective: To determine the effect of management at Cape Hatteras on nesting rate, hatching success, sea-finding by hatchlings (prevalence of misorientation/disorientation and trapping by obstacles), and proportion of false crawls.

Proposal: Identify the “management category” of each ocean beach segment as one of the following:

1. ORV areas (ORV/pedestrian segments, open to ORV use during daylight hours)
2. Non-ORV areas (pedestrian only segments)
3. Resource Areas that are closed from (date) to (date) to all ORV and pedestrian use (control segments)
4. Village

EXHIBIT E

Monitor and Document the following information:

1. Turtle species
2. Nest vs. false crawl
3. Document nests lost to storms, overwash, predators, etc.
4. Dates and times of activities (nest, false crawls, hatching)
5. Location (physical description and GPS location)
6. Management category (ORV, Non-ORV, Resource Area, other Resource Closures, or Experimental, Villages) of the nest site at the time it was laid
7. If nest needs to be relocated and, if so, why and where (new physical description and GPS location), number of eggs relocated, and time of day
8. Necessary protective measures for nest and hatchlings
9. Information regarding any resource closure violations, predation, hatchling misorientation, trapping by obstacles, or possible “take” incidents
10. Information regarding any post hatching nest excavation and analysis
11. Visitor use in terms of number of visitors using the beach from May 1 to October 31, kinds of use, night use, kinds of night activities, and other appropriate socio-economic data.
12. Examine all nests after hatching to determine productivity rates. Excavate nests in the evening a minimum of 72 hours after hatching event. In cases where hatching events or dates were unknown, unearth nest cavities 80–90 days after the lay date, or later if the eggs are still viable (i.e., late season nests). Any live hatchlings found during excavations will be released after dark on the same day as excavation.

Evaluate:

1. Compare the number and proportion of nests, false crawls, hatchling misorientation/disorientation incidents, predation incidents, lost nests, and hatchling emergence rate that occur in the respective management categories. Document in annual sea turtle report.
2. Evaluate data over multiple years to help determine management actions chosen in terms of dates, times, and restrictions, to the extent possible, against such criteria as nests, false crawls, and others noted above, generally related to risk management, overall impact, etc.
3. Conduct periodic review and evaluate trends every 5 years and include a summary of that analysis in the annual sea turtle report for the respective year. Review results with USFWS. (Note: Loggerhead and green turtles typically nest every 2-3 years, so this would allow for a minimum of two nesting cycles to be considered.)

Adapt:

1. If no significant effect of recreation at a particular site is found, recreational restrictions can be varied systematically to distinguish the effects of type and level of activity. This might include changing dates, times, and locations. On the other hand, if no effect is detected, then the next round of experiments could entail allowing similar night access to other selected sites. Any change in management would require consultation with USFWS and NCWRC, prior to implementation.

Further Studies to Consider:

EXHIBIT E

1. Design a systematic research study to monitor and determine the effects, if any, of night access on sea turtle nesting at Cape Hatteras.

Alternative Management To the extent practicable, please utilize the report, presented to NPS under separate cover as part of the Negotiated Rulemaking record, entitled CHNSRA TURTLE PROGRAM.

EXHIBIT F - Routes and Areas Table

EXHIBIT F		
Routes & Areas Table		
Oceanside Location	Approx Map Color	NOTES
ORV Use Areas (YR = ORV permitted Year Round) All areas subject to temporary resource/safety closures:	Mileage Code	
Bodie Island (approx 6.1 miles)		
Ramp 1 (Town of Nags Head/NPS boundary)	2	Add 25 parking places @ Ramp 1 & expand parking @ Coquina Beach Ped access
South 2 miles (includes Coquina Beach)	or less	
Ramps		Ramp 2 moves So. For ped safety, Ramp 4 moves No. due to bridge construction
From 2 miles so of NPS bondry to Ramp 4	1.5	
Ramp 4 to "Bait Pond", (Bodie Island Spit, a Traditional & Cultural Recreational Area)	2.6	Open July 15 - March 15 Open (restricted) March 16 - July 14 *see specific plan for Bodie Island Spit access during Breeding season. (SM2)
		Establish Ped/ORV access corridor which may include a pass thru to Bodie Island spit. Delineate the corridor with posts placed 150 ft. above the high tide line.
Bodie Island - Soundside Access		Add at least 1 soundside access (ORV & Ped combined) somewhere between North boundary of CAHA and Oregon Inlet
Pea Island NWR (approx 15 miles)		
Pea Island NWR	15	PINWR & NCDOT should cooperate to provide roadside & other parking with walkovers wherever practicle to provide public with access to beaches.
Hatteras Island (approx 42.6 miles)		
South Boundry PINWR to South boundary Village of Salvo	5.3	Designated open to ORV. Seasonal closure for ORV use 5/15 to 9/15
South boundry Salvo to Ramp 27	4.4	Add ramps @ "24" & "26" (Ramp 23 as is)
Ramp 27 to new Ramp "28"	1	Add new Ramp "28" with Ped facilities & parking
Ramp 28 to North boundary of Avon	5.5	Add new Ramp "32" opp Little Kinnekeet Light Station (Ramps 30 & 36 as is).
North boundary Avon to South boundary Avon	3.8	Designated open to ORV. Seasonal closure for ORV use 5/15 to 9/15
South boundary Avon to new ramp "39"	2	Add new Ramp 39 within 100 ft North of Haulover access road
Ramp "39" to Buxton North Boundary	1.7	
Hatteras Island con't		

Oceanside Location	Approx Map Color	NOTES
Mileage	Code	
ORV Use Areas (YR = ORV permitted Year Round) All areas subject to temporary resource/safety closures		
North Boundry to South Boundry Buxton	0.6	Designated open to ORV. Seasonal closure for ORV use 5/15 to 9/15
South Boundry Buxton to 0.7 mile North of Ramp 43	1	Add new Ramp "4.1" @ Coast Guard Station
0.7 mile North of Ramp 43 to 44	1.1	
Ramp 44 to Ramp 45 (Cape Point, a Traditional & Cultural Recreational Area)	2.4	Open July 15 - March 15 Open (restricted) March 16 - July 14 *see specific plan for Cape Point access during Breeding season. (SM2)
		Establish Ped/ORV access corridor which may include a pass thru to Cape Point. Delineate the corridor with posts placed up to 150 ft above the high tide line.
Ramp 45 to North Boundry Frisco. (South Beach, a Traditional & Cultural Rec Area)	4.6	Add new interdunal road from Ramp 45 to Ramp 49. Add three new ramps between Ramps 45 and 49 to be numbered 46, 47, and 48.
No. Boundry Frisco to So. Boundry Frisco	1	Designated open to ORV. Seasonal closure for ORV use 5/15 to 9/15 Add new Ramp "5.1" @ So. Boundry Frisco
Ramp "5.1" to Hatteras Village No. Boundry	2	
No. Boundry Hatteras Vil. to So. Boundry Hatteras Vil.	1.3	Designated open to ORV. Seasonal closure for ORV use 5/15 to 9/15
So. Boundry Hatteras Vil. To So. Exit of Pole Road	2.2	
Pole Road around Inlet beach to Cable Crossing	2.7	Open July 15 - March 15 Open (restricted) March 16 - July 14 *see specific plan for Hatteras Inlet access during Breeding season. (SM2)
(A Traditional & Cultural Recreational Area)	42.6	Establish Ped/ORV access corridor which may include a pass thru to Hatteras Inlet. Delineate the corridor with posts placed 150 ft above the high tide line.
Hatteras Island - Soundside Access & Interdunal road		
All current soundside access routes (including Pole Road, Spur Road, Bone Road, Little Kinnakeet & others) are to be kept open with reasonable maintenance to allow safe, year round, access to both ORV & Ped. Boat launching to be allowed @ Sound access # 48 & #58, behind Coastguard station & at Cable Crossing.		

Oceanside Location	Approx Map Color	NOTES
ORV Use Areas (YR = ORV permitted Year Round) All areas subject to temporary resource/safety closures:	Mileage Code	
Ocracoke Island (approx 19.8 miles)		
Borrow Road to Mid point of Spit	2	
Mid Point of Spit to Ramp "59"	1.2	
Ramp "59" to new Ramp "62"	2.7	Add Ramp "66" with parking & Ped Access
Ramp "62" to 1 mi. No of Pony Pens	2	
1 Mi. No. Of Pony Pens to 1 Mi. So. of Pony Pens	2	
1 Mi. So of Pony Pens to Campground	1.5	
Campground to Ocracoke Day Use Area	3.1	Designated open to ORV. Seasonal closure for ORV use 5/15 to 9/15
Ocracoke Day Use Area to 0.5 mi. So. Of Ramp 72	2.7	
0.5 mi. So of Ramp 72 around Oak. Inlet	2.6	Open July 15 - March 15
A traditional & Cultural Recreational Area		Open (restricted*) March 16 - July 14 *see specific plan for Ocracoke Inlet (South Point) access during Breeding season.
	19.8	SM2
		Establish Ped/ORV access corridor which may include a pass thru to Ocracoke Inlet. Delineate the corridor with posts placed 150 ft above the high tide line.
Ocracoke Island - Soundside access & Interdunal roads		
		All current soundside access routes are to be kept open with reasonable maintenance to allow safe access to both ORV & Ped.
		Reopen soundside access @ So. Boudnry of Ocracoke Village from Ramp 72 road bed for both ORV & Ped.
		Reopen soundside access from Ramp 72 road bed south of spur to Ramp 72 (around SW end of dunes in non breeding season).
Milage Summary (approx)		
Closed to ORV's	29.4	Red = designated closed to ORV
ORV open with seasonal restrictions	10.3	Purple = designated open to ORV subject to restrictions
Open Year Round Villages (Ped YR & ORV seasonally)	28.7	Green = designated open to ORV
	15.1	Blue = designated open to ORV seasonally
	83.5	

SAFETY CLOSURE**ORV SAFETY CLOSURE**

PURPOSE: Ensuring the safety of the public when natural conditions within a specific area of CAHA present a clear and imminent threat of (a) significant bodily injury or death to the driving public or other CAHA users or (b) significant damage to personal property, primarily vehicles and their contents.

SCOPE: May be applied within any routes, trails, and areas designated for ORV driving.

TRIGGERS FOR CLOSURE: Conditions listed below may trigger an ORV Safety Closure in the event of a clear and imminent threat of significant bodily injury or death; and/or damage to personal property, primarily vehicles and their contents. Examples of hazards that could justify a closure include, but are not limited to:

- deep beach cuts which block the beach from dune to surf with no obvious way around;
- obstacles, such as exposed stumps, shipwrecks, or debris that cannot be safely bypassed or that block the entire width of the beach and cannot be easily removed;
- severe beach slope that puts vehicles in an unsafe gradient position that increases the chances of the loss of vehicular control.
- A high concentration of pedestrian users coupled with a narrow beach

Triggers do not include:

- a narrow beach, by itself;
- tides which block access through portions of beaches occur periodically and predictably and are an obvious, easily avoidable hazard;
- hazards blocking only a portion of the beach, where safe passage is available around the hazard.

While the above criteria provide the rationale for what does or does not constitute a "safety closure," the Superintendent retains the authority under 36 CFR §1.5 (a) to close all or a portion of a park area to all public use or to a specific use or activity, based upon a determination that such action is necessary for the maintenance of public health and safety, protection of environmental or scenic values, protection of natural or cultural resources, aid to scientific research, implementation of management responsibilities, equitable allocation and use of facilities, or the avoidance of conflict among visitor use activities. For any such closures implemented, the public will be notified in accordance with the public notice requirements identified in 36 CFR § 1.7.

CAHA PERSONNEL ACTION: Providing for the public safety is the responsibility of all CAHA employees. The following is expected of CAHA personnel.

- Law enforcement (LE) rangers should have the authority to enact closures consistent with the triggers noted above.
- Non-emergency service staff, when encountering safety hazards, should establish initial safety precautions and contact the LE ranger staff to evaluate the situation and

EXHIBIT G

establish any necessary ORV Safety Closures.

- Where hazards block only a portion of the beach, staff will mark and post the hazard to direct ORV traffic safely around the hazard.

MONITORING: ORV Safety Closures shall be monitored on a weekly basis.

DEMARCATIION: ORV Safety Closures shall be clearly marked by posts and signs indicating the area is closed to ORV use. The signs used for this purpose shall indicate that safety is the reason for the closure.

ORV SAFETY CLOSURE NOTIFICATION AND CONTINUANCE: Any employee initiating an emergency ORV safety closure will notify their supervisor immediately. The Superintendent and Division Chief will be notified as soon as possible of any such emergency ORV safety closure. As soon as possible after the initial closure has been established, but no later than one week, the employee will complete a "Closure Request Form" and submit the form for final approval through the chain of command. Such form should include the coordinates of the closure, the specific reasons for the closure, the dates of action, and the employee taking action. Completion of a "Closure Request Form" will only be required when a complete beach closure is established and does not apply to any modification of the ORV corridor width that does not preclude access. As long as the area is closed, the form shall be updated weekly to include a brief description of the condition of the area based on the weekly monitoring.

TRIGGERS FOR RE-OPENING: Sufficient diminishment, reduction or elimination of the conditions and hazards described under *TRIGGERS FOR CLOSURE* would constitute the trigger for re-opening a closure. ORV safety closures are intended to be in effect only as long as visitor safety or personal property is clearly and imminently threatened.

STAKEHOLDER INPUT: The Park shall establish and maintain a standing stakeholder advisory committee pursuant to the Federal Advisory Committee Act (FACA) with representatives from various sections/geographies of the Park representing diverse and balanced interests to provide input to the Park on, among other things, safety closures and openings.

PEDESTRIAN SAFETY

Due to ambient level of natural sounds on the beach (from surf, wind, etc.), and other inherent distractions in the beach setting, pedestrians may not be attentive to or aware of moving vehicles (ORVs) on the beach, especially those vehicles approaching from the sides or from behind. It is the legal responsibility of the ORV operator to always give pedestrians the right of way on the beach. The following federal regulations currently apply to motor vehicle operation in the vicinity of pedestrians:

36 CFR § 4.20 *RIGHT OF WAY*

An operator of a motor vehicle shall yield the right of way to pedestrians, (saddle and pack animals, and vehicles drawn by animals). Failure to yield the right of way is prohibited.

36 CFR § 4.22 *UNSAFE OPERATION*

(b) The following are prohibited:

(3) Failing to maintain that degree of control of a motor vehicle necessary to avoid danger to persons, property or wildlife.

In addition, the following measures apply (*assuming a parkwide ORV speed limit of 15 mph*):

- 1) When approaching or passing a pedestrian(s) on the beach, ORVs shall move to the landward side of the available ORV driving corridor to the extent practicable without driving on the toe of the dune or the dune itself in order to yield the wider portion of the beach corridor to the pedestrian(s).
- 2) ORVs shall slow to 5 mph (or the slowest possible speed to maintain traction without exceeding the overall speed limit) when traveling within 10 meters (30 ft) or less of pedestrians at any location on the beach at any time of year.
- 3) Pedestrians should not block access ramps and should use pedestrian ramps/boardwalks where available. If a pedestrian walkover is not available, pedestrians should walk to the side of ORV ramps, not in the tire tracks.
- 4) Pedestrians should avoid establishing their stationary area on the sand where vehicle tracks exist as the tracks are a clear indication of the most frequently traversed segment of the sand by vehicles.

EXHIBIT H - Resource Protection Table

Survey Time and Frequency	Piping Plover	American Oystercatcher	Colonial Waterbirds
<p>All Bird Species</p>	<p>Species Management 1 (SM1): Will use larger, longer lasting buffers with less monitoring to alleviate the need for constant monitoring and frequent fencing changes. Will be used at locations which would likely be closed anyway if SM2 buffers were used. Estimated staffing requirements TBD by NPS.</p> <p>Species Management 2 (SM2): Will use smaller buffers and require more frequent monitoring and fencing changes. Will be used at selected inlets, Cape Point and West to Ramp 47, and, at the discretion of NPS, at other locations in which more labor intensive management would provide access. Estimated staffing requirements TBD by NPS.</p> <p>Pass-through Corridors: At a limited number of locations (TBD), a smaller buffer may be used as part of a controlled study with adequate monitoring to determine if a smaller buffer for an ORV pass-through corridor is adequate to prevent disturbance.</p>	<p>March 15 – July 15 survey recent breeding areas (last three years) two times per week. Turtle patrol will take over monitoring after July 15th.</p> <p>If an AMOY nests in a pre-nesting closure at one of the points or spits in an area which requires an expended buffer (e.g., nest inside pre-nesting closure but buffer not adequate) and the nest is over-washed or predated, the buffer expansion shall be removed to the established pre-nesting closure.</p>	<p>April 1 – July 15 survey recent breeding areas (last three years) two times per week. Turtle patrol will take over monitoring after July 15th.</p> <p>If a colony is established in a pre-nesting closure at one of the points or spits in an area which requires an expended buffer (e.g., colony inside pre-nesting closure but buffer not adequate) and the colony is over-washed or predated, the buffer expansion shall be removed to the established pre-nesting closure.</p>
<p>Pre-Nesting Surveys</p>	<p>By March 1, all potential habitats will have been evaluated. PIPL prenesting closures will be recommended based upon that habitat evaluation. Those closures will installed by March 15.</p> <p>March 15 – July 15: survey recent breeding areas (last three years) three times per week (or every other day). Survey potential new and or former habitat two times per week. Survey for Wilson’s plover during piping plover surveys.</p> <p>The PIPL pre-nesting areas will be surveyed 3 times per week if piping plovers are present in the area. To mitigate disturbance to nesting birds, surveys may need to be curtailed.</p>		

	<p>Pre-nesting buffers will not be modified in cases where the beach erodes into the buffered habitat.</p>		
<p>Pre-Nesting Buffers</p>	<p><u>SM1</u>: Resource closures will not allow ORV or pedestrian access. <u>SM2</u>: Areas designated as SM2 may have a designated ORV and/or pedestrian access corridor. In areas open to ORV use, delineate the ORV corridor with posts placed up to 100 feet above the high tide line, or as designated in a site specific plan (e.g., Bodie Island Spit, Cape Point, and South Point). During the breeding season, pets are prohibited in pass-through corridors or at the points and spits.</p>	<p><u>SM1</u>: Pre-nesting closures will be installed by March 15 in areas that had nest(s) in the past 3 years, if habitat is still suitable. Closures will be removed if no breeding activity is seen in the area by July 15, or 2 weeks after the site is abandoned by AMOY, whichever comes later.</p>	<p><u>SM1 & SM2</u>: Pre-nesting closures will not be established for CWB. Note: CWBs do not return to exactly the same location every year making it difficult to establish a pre-nesting closure for them under SM1. Also, most will be in Resource Areas.</p>
	<p>In February or March of each year, NPS natural resource staff will conduct an annual assessment of piping plover breeding habitat to plan pre-nesting closures in recent breeding areas that are adapted to current habitat and physiographic conditions. Recent breeding areas will be closed by posting symbolic fencing by March 15. Closures will be removed if no breeding activity is seen in the area by June 15th or when area has been abandoned for a 2-</p>	<p><u>SM2</u>: Pre-nesting closures will not be established prior to the</p>	

	<p>week period, whichever comes later.</p>	<p>bird's arrival.</p>	
<p>Courtship/Mating Surveys:</p>	<p>If PPL, AMOY, or CWB are observed exhibiting territorial or courtship behavior in suitable habitat during two separate observations in recent breeding habitat, observe 3 times per week. If scrapes are observed in the absence of courtship behavior, survey three times per week. Survey potential new habitat 2 times per week.</p>	<p><u>SM1</u>: Pre-nesting closures will have already been established for the majority of returning birds. Pre-nesting closures will be evaluated to determine the adequacy of their placement. For observed activity outside of pre-nesting closures by pairs with <u>known</u> nesting history, buffers will be established when one observation or scraping or territorial has been documented or if a scrape is being maintained. For birds with unknown nesting history, such buffers will be</p>	<p><u>SM1</u>: If scraping is observed outside of existing closures, a 200 meter buffer will be established around the scrape locations. Closure establishment will be based on the locations of scrapes and not locations for copulation or "fish flashing". Consider using SM2 buffer and survey frequency at sites in which the smaller buffer would still allow access. <u>SM2</u>: If scraping is observed outside a resource closures, a buffer will be established around the scrape location. Buffer will be 100 meters for least terns and 200 meters if the colony contains</p>
<p>Courtship/Mating Buffers:</p>	<p>If courtship or copulation is observed outside of existing pre-nesting closures, establish or expand buffer to ensure 50 m buffer for the observed birds. Buffer will be increased if flushing occurs due to human disturbance. Designate an ORV or pedestrian access corridor as identified. In the case of ORV pass-through corridor, pets restricted to vehicle while vehicle is in corridor. In the case of pedestrian use of corridor, pets must be on leash no longer than that</p>		

	<p>necessary to keep pet within 1 foot of keeper.</p>	<p>established when three such observations occur. Based on bird behavior and suitable habitat, a 200 meter buffer will be established around the bird activity.</p> <p><u>SM2</u>: For observed breeding activity outside of pre-nesting closures by pairs of <u>known</u> nesting history, closure will be installed when one observation of scraping or territorial behavior have been documented or if a scrape is being maintained. For observed breeding activity outside of pre-nesting closure by pairs of <u>unknown</u> nesting history, closure will be installed when three separate observations of scraping or territorial behavior have been documented or if a scrape is being maintained. Based on bird behavior and suitable habitat, a 150 meter pedestrian/ORV buffer or a 75 meter buffer ORV pass-through buffer will be established around the bird activity.</p> <p>Designate an ORV or pedestrian access corridor as identified. In the case of ORV pass-through corridor, pets restricted to</p>	<p>common terns, gull-billed terns or black skimmers For an ORV pass-through, buffer will be 50-75 meters for LETE and 75 meters if other CWB are present.</p> <p>If, in the judgment of NPS Resources Management staff, a colony has abandoned a territory and established a new territory at another location, the buffer may be removed at the abandoned territory.</p> <p>Designate an ORV or pedestrian access corridor as identified. In the case of ORV pass-through corridor, pets restricted to vehicle while vehicle is in corridor. In the case of pedestrian use of corridor, pets must be on leash no longer than that necessary to keep pet within 1 foot of keeper.</p>
--	---	--	--

		<p>vehicle while vehicle is in corridor. In the case of pedestrian use of corridor, pets must be on leash no longer than that necessary to keep pet within 1 foot of keeper.</p>	
<p>Nesting Surveys:</p>	<p>Observe nests daily from a distance that does not disturb the birds, based on professional judgment. Approach nests once per week to observe and record data.</p>	<p><u>SM1</u>: Observe nests at least three times per week from a distance. For incubating birds that cannot be observed from a distance, check nests on a weekly basis (or as staff is available). <u>SM2</u>: Observe nests daily from a distance that does not disturb the birds, based on professional judgment. For incubating birds that cannot be observed from a distance, check nests every three days.</p>	<p>Colonies will be surveyed by foot during the “peak” nesting period which is during the last week of May and the first week of June. <u>SM1</u>: Observe colonies at least three times per week from a distance. For incubating birds that cannot be observed from a distance, check colonies on a weekly basis. <u>SM2</u>: Observe nests daily from a distance that does not disturb the birds, based on professional judgment. For incubating birds that cannot be observed from a distance, check colonies every three days.</p>
<p>Nesting Buffers:</p>	<p>All Species: The park retains the discretion to expand buffers under SM1 and SM2 depending on staffing and bird behavior. In unprotected areas, a closure will be established immediately when a nest with egg(s) is found. When nesting occurs in the immediate vicinity of paved roads, parking lots, campgrounds, building and other facilities, NPS retains the discretion to provide resource protection to the maximum extent possible while still allowing those sites to remain operational. Buffers will remain in place for 2 weeks after a nest is lost to determine if pair will re-nest, if no other species nesting in area. After August 1, closures will be removed if all nesting is complete.</p>		

	<p><u>SM1 & SM2:</u> Establish 50 m buffer/closure around piping plover nests occurring outside existing closures. If flushing off nest occurs due to human disturbance, buffer will be increased using flexible increments dependent on observed bird behavior. If the buffer falls within the intertidal zone a full-beach closure will result.</p> <p>Designate an ORV or pedestrian access corridor as identified. Pets restricted.</p>	<p>Establish buffer/closure based on adult's reaction to human disturbance.</p> <p><u>SM1:</u> Buffer will be the same as four courtship and mating – 200 meters.</p> <p><u>SM2:</u> Buffer around nests will be a minimum of 150 m for pedestrians/ORVs; or 75 m for an ORV pass-through. If flushing off nests occurs due to pedestrian disturbance, pass-through will be limited only to ORV. If flushing off nests occurs due to ORV activity, buffer will not be increased.</p>	<p><u>SM1:</u> Use buffer of 200 m.</p> <p>Consider using SM2 buffer and survey frequency at sites in which the smaller buffer would still allow access.</p> <p><u>SM2:</u> Use buffer of 100 m for least terns and 200 m if the colony contains common terns, gull-billed terns or black skimmers; or for an ORV pass-through, a minimum of 50-75 meters for LETE and 75 meters if other CWB present. If flushing off nest(s) occurs due to pedestrian disturbance, pass-through will be limited only to ORV.</p> <p><u>All:</u> Establish buffer immediately when a nest is located. Increase buffer in flexible increments if necessary to prevent human disturbance. If the buffer falls within the intertidal zone a full-beach closure will result. Closures will be removed when areas have been abandoned for a two week period. After July 15 the 2-week removal period will no longer be required for closure removal.</p>
--	---	--	--

<p>Adult Foraging Surveys & Buffer:</p>	<p>For breeding adults (with an associated scrape or nest territory) foraging outside of a closure on two consecutive surveys, establish or expand the buffer using flexible increments based on observed bird behavior to include foraging site if the foraging area is associated with a pre-nesting closure. These closures are intended to provide foraging opportunities close to breeding sites. Remove closure if no foraging observed for a 2-week period during the breeding season, or when associated breeding activity has concluded.</p>	<p>No additional buffers/closures.</p>	<p>No additional buffers/closures.</p>
<p>Unfledged Chicks Surveys:</p>	<p><u>SM1</u>: Observe brood once daily. <u>SM2</u>: Observe brood am and pm daily. Have monitor(s) present during periods of ORV or pedestrian access. Observations end once chicks have fledged. Chicks are considered fledged at 35 days or are observed in sustained flight of >15 m.</p>	<p><u>SM1</u>: Observe brood at a minimum every other day. <u>SM2</u>: Observe brood once daily. Observations end once the chicks have fledged. Chicks are considered fledged if they have been observed to be proficient in flying or observed in sustained flight of >30 m.</p>	<p>Colonies will be surveyed by foot during the “peak” hatching period which should fall 21 days after initial nest counts. A follow-up survey by foot should be conducted during the “peak” fledge which should fall 20 days after hatch counts. <u>SM1</u>: Observe colony weekly. <u>SM2</u>: Observe colony at two-three day intervals; or daily if shoreline is open to ORV use. Observations end after no unfledged chicks have been observed on two consecutive occasions. Closure can be removed after all chicks have fledged.</p>

<p>Unfledged Chick Buffers:</p>	<p><u>SM1</u>: Establish a minimum 1000 meter buffer on either side of brood based on observation of bird behavior and terrain conditions at site. No ORV or pedestrian access until all chicks have fledged.</p> <p><u>SM2</u>: For the first 2 weeks after hatching, establish a 1000 m buffer for ORVs and pedestrians on either side of the brood.</p> <p>Based on observed behavior (i.e., mobility of the brood) at the discretion of park management, the buffer can be reduced after the first two weeks to 500 m for ORVs and 200 m for pedestrians. It will be up to the discretion of the park whether or not the area can be opened to pedestrians. If the chicks are highly mobile the 1000 meter buffer may need to be maintained. Buffer moves with chicks. Vehicle may be allowed to pass through portions of the protected area that are considered inaccessible to PPL chicks because of steep topography, dense vegetation, or other naturally occurring obstacles. Points and spits would only be accessible from 7 a.m. to 7 p.m. as long as unfledged chicks are in the area and if buffers can be maintained. The 7 a.m. opening may</p>	<p><u>SM1</u>: Establish a 300 meter buffer when unfledged chicks are present. Closure would be removed 2 weeks after fledging. Consider using SM2 buffer and survey frequency at sites in which the smaller buffer would still allow access.</p> <p><u>SM2</u>: Establish a 200 meter buffer around the unfledged chick(s) location. Adjust/increase buffer as needed when chicks are mobile. ORV access would not be allowed until 2 weeks after AMOY chicks have fledged (observed flight of 30 meters); a pedestrian corridor may be established prior to 2 week requirement for access to the points and spits.</p> <p>Points and spits would only be accessible 7 a.m. – 7 p.m. as long as unfledged chicks are in the area and if buffers can be maintained. The 7 a.m. opening may be delayed until the chicks have been located.</p>	<p><u>SM1</u>: Use 200 m buffer. If chicks move outside of the buffer, it will be adjusted to include an additional 100 meters from the chick(s) location outside of the closure. Consider using SM2 buffer and survey frequency at sites in which the smaller buffer would still allow access.</p> <p><u>SM2</u>: Establish a 200 meter buffer around the chick(s) location. Adjust buffer as needed when chicks are mobile. Monitor daily if shoreline in front of colony open to ORV use.</p>
--	---	---	--

	<p>be delayed until the chicks have been located.</p>		
<p>Non-breeding / Wintering Survey</p>	<p>Reopen access corridor outside of pre-nesting area after chicks fledge (except for AMOYs where the area will remain closed to ORVs for an additional 2 weeks). During breeding season, pets are prohibited in pass-through corridors or at the points and spits. Remove pre-nesting closure 2 weeks after all chicks in the area have fledged.</p> <p>NPS will monitor presence, abundance and behavior of migrating and wintering PIPL, AMOY, WIPL, and REKN at the points and spits July 1 through May 31 following the existing NPS winter monitoring protocol. In addition, the International Shorebird Survey (ISS) protocol will be used to document other migrating/wintering species.</p>		
<p>Non-breeding / Wintering Buffers</p>	<p>Annual habitat assessment will be conducted after all birds have fledged from the area. Winter closures will be based on habitat used by wintering PIPLs in the past 3 years, the presence of birds at the beginning of the migratory season, and the suitable habitat types based on the results of the annual survey. All winter closures will be installed no later than September 15th. Actual locations of suitable foraging and resting habitat may change periodically due to natural processes. Access will be maintained to inlet shoreline via the ocean shoreline. (Exact terminus and configuration of access corridor TBD by NPS resource management staff based on an annual habitat assessment).</p>	<p>No closures.</p>	<p>No closures.</p>
<p>Data Collected</p>	<p>GPS will be used to document nest locations.</p>	<p>GPS will be used to document nest locations.</p>	<p>GPS will be used to document colony locations.</p>

	<p>Record locations where territorial/courtship behavior occurs, including scrape locations. Estimate where adult and chick foraging occurs. Chicks should never be disturbed to obtain this information. Record presence and abundance of birds. Assess productivity and known reasons for nest failure.</p>	<p>Record presence and abundance of birds. Assess productivity and known reasons for nest failure.</p>	<p>Record presence and abundance of birds.</p>
<p>Sea Turtles (a minimum of 7 field personnel is required to meet the daily monitoring requirements on the Park's 67 miles of shoreline)</p>			
<p>Survey Time and Frequency</p>	<p>Sea turtle patrol will begin on May 1. Patrol will continue until September 15, or two weeks after the last sea turtle nest or crawl is found, whichever is later. Conduct daily morning surveys by ATV/UTVs and possibly ORVs for crawls and nests on all beaches before onset of heavy public ORV use. Daily surveys for nests end September 15, or two weeks after the last sea turtle nest or crawl was found, whichever is later. Periodic monitoring (e.g., every two to three days) for unknown nesting and emerging hatchlings will continue, especially in areas of high visitation from that date until November 15. Monitoring will also occur for post-hatchling washbacks during periods when there are large quantities of seaweed washed ashore or following severe storm events. Nest observations stop when all nests have hatched or excavation indicates that the nest was not viable. Once a light filter fence is installed, monitor nests daily for signs of hatchling emergence.</p>		
<p>Data Collected</p>	<p>Follow the North Carolina Wildlife Resources Commission Handbook and record: -Turtle species -Nest vs. false crawl -nests lost to storms, overwash, predators, etc. -Location (physical description and GPS location) -management category (ORV, Non-ORV, Resource Area, other Resource Closures, Villages) -If nest needs to be relocated and, if so, why and where (new physical description and GPS location), number of eggs relocated, and time of day</p>		

	<p>-Necessary protective measures for nest and hatchlings</p> <p>-Information regarding any post hatching nest excavation and analysis</p> <p>Examine all nests after hatching to determine productivity rates. Excavate nests in the evening a minimum of 72 hours after hatching event. In cases where hatching events or dates were unknown, unearth nest cavities 80–90 days after the lay date. Any live hatchlings found during excavations will be released after dark on the same day as excavation.</p> <p>For strandings the following will be recorded: species, location, measurements, and signs of human interactions. Samples and photos will be collected when necessary. Necropsies will be conducted when possible.</p>
<p>Nest Closures/ Buffers</p>	<p>Establish a buffer approximately 10 meters square with symbolic fencing and signage around nest. Closure size may be modified due to environmental conditions at the nest site.</p> <p>Approximately 50– 55 days into incubation, closures expanded to the surf line. The width of the closure based on the type and level of use in the area of the beach where the nest was laid:</p> <ul style="list-style-type: none"> a. Vehicle-free areas with little or no pedestrian traffic – 25 meters wide (total width); b. Villages or other areas with high levels of day use –50 meters wide (total width); c.Areas with ORV traffic –105 meters wide (total width). <p>Opposite the surf line on the landward side of the closure, expand the closed area to 15 meters where possible, but no less than 10 meters landward from the nest. Traffic detours behind the nest area clearly marked with signs and reflective arrows.</p> <p>Where present within closure, vehicle tracks manually smoothed with rakes or a steel mat attached to an ATV, so as not to impede hatchlings attempting to reach the surf.</p> <p>Use light filtering fence no more than 5 meters behind nests nearing hatch dates to block light pollution from the villages and vehicles operating on the beach after dark.</p> <p>If multiple nests are located near each other (within 150 feet), and have similar hatch dates (14 days), then closures will encompass all nests in the area, and will not be removed until all nests within the closure have hatched.</p>
<p>Nest Relocation</p>	<p>By April 15th, areas deemed unsuitable for turtle nests (i.e. high erosion rate) will be identified by Park staff. Maps and descriptions of these areas will be analyzed by NCWRC prior to nesting season.</p> <p>When a nest is found, staff assesses need for nest relocation and follows relocation guidance identified in the NCWRC handbook.</p> <p>If it is determined the nest will not be relocated, it will be immediately protected with a symbolic fencing and signs and will measure approximately 10 meters by 10 meters in size. Closure size may vary at the discretion of staff due to the</p>

	<p>environmental factors at a nest location.</p> <p>If a nest is threatened by an imminent storm event, NPS will consult with NCWRC to determine appropriate action.</p>
Light Management	<p>Establish turtle friendly lighting standards and/or reduce light for all Seashore (NPS) structures.</p> <p>Encourage concessioners to install turtle friendly lighting.</p> <p>Develop educational material to inform visitors about their impact on the success of sea turtle nests.</p>
Research	<p>Support research efforts looking at the sex ratios of sea turtles.</p> <p>Respond to sea turtle strandings in a timely manner, and report all information, pictures, and signs of human interaction to NCWRC.</p> <p>Necropsies of strandings will be done when possible.</p>

Seabeach Amaranth

Survey Time and Frequency	<p>August</p> <p>An annual survey of potential habitat will be conducted. Some bird closure areas may not be surveyed due to the potential to disturb nesting birds. Some areas may not be surveyed until just prior to re-opening an area to ORV traffic.</p> <p>July – September</p> <p>Before opening any species closure or identifying alternate ORV corridors, survey for seedlings/plants.</p> <p>End observations when all plants have died back.</p>
Data Collected	<p>Record location of all individual plants or plant clusters using a GPS and note if the plant is located in an area open or closed to recreational use.</p>
Buffers	<p>April 15 – November 30</p> <p>If a plant/seedling is found outside of an existing closure, the Seashore will erect symbolic fencing with signage creating a 10 meter by 10 meter buffer around the plant. If plants are located next to each other, the area will be expanded to create one enclosure protecting several plants.</p> <p>If a SBA is found during the survey prior to reopening a bird closure to ORV and pedestrian use, the Seashore will protect the SBA as described above and reopen the areas of the bird closure where no plants exist.</p> <p>Areas reopened if no plants are present by September 1. Where plants occur, the closed areas will be reopened after the plants have died.</p>

Shorebird / Waterbird Buffer Summary

Species	Breeding Behavior/ Nest Buffer	ORV Pass-through	Unfledged Chicks
	SM1 / SM2	SM2 only	SM1 / SM2
Piping Plover	50 m / 50 m	50 m	1000 m / 200-1000 m
American Oystercatcher	200 m / 150 m	75 m	300 m / 200 m
Least Terns	200 m / 100 m	50-57 m	300 m / 200 m
Other Species CWB	200 m / 200 m	75 m	300 m / 200 m

EXHIBIT I

Vehicle Characteristics, Equipment and Operations**I. GENERAL**

ENFORCEMENT: Such regulation shall be enforced by the NPS according to graduated law enforcement principles.

STAKEHOLDER INPUT: The Park shall establish and maintain a standing stakeholder advisory [FACA] committee with representatives from various sections/geographies of the Park representing diverse and balanced interests to provide input to the Park on, among other things, ORV-related issues via a standing ORV subcommittee.

ESSENTIAL VEHICLES: Essential vehicles are allowed in non-ORV areas, and within resource closures subject to guidelines in Essential Vehicles section of Appendix G of the U.S. Fish and Wildlife Service Piping Plover (*Charadrius melodus*), Atlantic Coast Population, Revised Recovery Plan (USFWS 1996a, as cited in the strategy/EA). To the extent practicable, emergency response vehicle operators will consult with trained resources management staff regarding protected species before driving into or through resource closures; however, prior consultation may not always be practical.

In the event of an emergency, the protection of human life takes precedence over all other management activities.

Essential vehicles will avoid driving within turtle nest closures.

COMMERCIAL FISHING: ORV operations by commercial fishermen will be addressed in the Commercial Fishing CFR (CFR 7.58) and any associated permits.

II. VEHICLE CHARACTERISTICS

PURPOSE: Manage and regulate the type of vehicle allowed to drive on CAHA beaches.

SCOPE: Applied for all driving on all routes, trails, and areas designated for ORV driving.

VEHICLE CHARACTERISTICS: All vehicles must exhibit the following characteristics to drive on the Park's beaches. Drivers are responsible for ensuring their vehicles meet these characteristics.

1. All vehicles must be registered, licensed, and insured and comply with inspection regulations within the state, country or province where the vehicle is registered.
2. Four-wheel drive vehicles are allowed.
3. Motorcycles are allowed.
4. Two wheel drive vehicles are allowed after the operator obtains a special use permit.
5. All-Terrain Vehicles (ATVs) are prohibited. ATVs are defined as a type of off-highway

EXHIBIT I

vehicle that travels on three or more low-pressure tires; has handle-bar steering; is less than or equal to 50 inches in width; and has a seat designed to be straddled by the Operator.

6. The Park Superintendent will determine the acceptability of new or state of the art vehicles (those that are not listed in items 2-5) for driving on CAHA as needed, with input from the standing advisory group and/or state law.
7. There is a three axle maximum for vehicles (this is the axle maximum for the powered vehicle only and does not include the additional number of axles on towed trailers).
8. Any trailers are limited to no more than two axles.
9. The maximum vehicle length is thirty (30') feet (this is the maximum length for the powered vehicle and does not include the additional length of a towed trailer).
10. Tires must be U.S. Department of Transportation listed and/or approved tires only.

III. REQUIRED AND RECOMMENDED EQUIPMENT

PURPOSE: To identify special equipment required and recommended to safely operate a vehicle on the beach

REQUIRED EQUIPMENT: All vehicles operated on the beach shall contain the following required equipment.

1. A low-pressure tire gauge effective down to 5 psi.
2. A shovel
3. A jack
4. A jack support
5. Trash bag or container
6. A flashlight
7. Copy of the current NPS ORV regulations and map.

HIGHLY RECOMMENDED EQUIPMENT: The following equipment is recommended but not required.

1. A full size spare tire
2. First aid kit
3. Fire extinguisher
4. Tow strap with loop ends, no hooks, with a rating capacity at or above the GVW of item being recovered or moved unless vehicle is equipped with an operable electric or hand winch

IV. VEHICLE OPERATIONS

PURPOSE: Ensuring the safety of all public users of the Park and protection of Park resources.

SCOPE: Applied for all driving on all routes, trails, and areas designated for ORV driving.

EXHIBIT I

DRIVER'S LICENSE: All drivers must carry a valid driver's license.

SPEED LIMITS: The speed limit on CAHA beaches is 15 mph year-round, unless otherwise posted.

TIRE PRESSURE: When driving on designated routes, tire pressure must be lowered sufficiently to maintain adequate traction within the posted speed limit. Twenty (20) psi is recommended for most vehicles. The softer the sand, the lower the pressure needed. When you return to paved roads, inflate the tires to normal as soon as possible.

RIGHT OF WAY: Right of way shall be as follows:

1. A vehicle exiting the beach via a Ramp or Interdunal Road has the right of way until reaching state-regulated roads.
2. When traveling parallel to the ocean or sound, the vehicle with the water to its right side has the right of way.
3. Vehicles must yield to pedestrians at all times, including on beaches and ramps.

SELF-CONTAINED VEHICLE CAMPING: Self contained vehicle camping is allowed in CAHA and will be managed under a special use permit system. The special use permit will be an addition to any other broad beach access permit or pass system required.

The special use permit will include a fee whose price will be determined under NPS rules, regulations, and policies regarding a value of service determination.

Self-contained vehicle camping is limited to designated areas in the beach environment only. At all designated times there will be at least one designated area on each of the three islands (Bodie, Hatteras & Ocracoke) contained within CAHA. These areas include Oregon Inlet Campground, Cape Point Campground, and Ocracoke Campground.

For the purpose of this CAHA-specific regulation, a self-contained vehicle camper is defined as follows:

- Self-contained vehicle campers must meet the ORV characteristics and requirements.
- Self-contained vehicles must be 4WD only. 2WD campers are prohibited.
- Self-contained vehicles are limited to a maximum length of thirty feet (30') including front racks and rear decks.
- Self-contained vehicles must have a self-contained water or chemical toilet and a separate permanently installed holding tank for both black and grey water, each with a minimum capacity of 3 days waste.
- Tents and camping trailers are prohibited.

There will be no limit to the total number of available self-contained vehicle permits.

EXHIBIT I

The number of self-contained vehicle campers allowed to camp in CAHA at any one time will be limited by the space available in the designated self-contained vehicle camping areas. The camping space limits are as follows:

- Oregon Inlet Campground: not more than 100 spaces
- Cape Point Campground: not more than 100 spaces
- Ocracoke Campground: not more than 50 spaces

Other than the parking space for self-contained vehicles, the NPS will provide no additional services other than garbage and septage dumping services. The experience is intended to be a primitive, beach camping experience within appropriate self-contained vehicles. When possible, the only access to the camping will be via a four-wheel drive only path or road (i.e., access to Cape Point Campground only via the interdunal road).

Self-contained camping will be allowed from November 1 until March 31.

Self-contained camping permits will be offered either weekly or annually.

There will be a self-contained camping limit of no more than seven consecutive days/six nights) in any one visit.

There will be a self-contained camping limit of no more than one visit per month.

All self-contained beach camping spaces are available on a first-come, first-served basis.

All self-contained vehicles arriving for an overnight stay must check in/register via a system to be determined before entering the self-contained camping area. An overnight authorization must be displayed at all times the vehicle is in the designated self-contained camping area.

Self-contained vehicles **MUST** exit the self-contained camping area after no longer than 72 consecutive hours in order to empty holding tanks and gray water at an established septage dumping facility.

Any permittee who violates the terms and conditions of the self-contained vehicle (SCV) permit is subject to being cited for the violation, will have his/her SCV permit revoked, and may be denied from obtaining any ORV related permit at CAHA for a period of at least one year.

Generally, the NPS will work to discourage illegal camping on any and all NPS properties via signage, education, information, and/or other appropriate and effective means

OTHER RELEVANT REGULATIONS: Other pertinent and relevant federal or state regulations include:

- Camping is only allowed at designated areas. (36 CFR 2.10)
- Obstructing traffic on park roads is prohibited. (36 CFR 4.13)
- Driving under the influence of alcohol or drugs is prohibited. (36 CFR

EXHIBIT I

- 4.23)
- All drivers and passengers are required to wear seatbelts. (36 CFR 4.15)
- A valid state driver's license is required for all operators of motor vehicles on park roads. (36 CFR 4.2)
- Operating a motor vehicle without due care or at a speed greater than which is reasonable and prudent considering wildlife, traffic, weather, road and light conditions and road character is prohibited. (36 CFR 4.22)
- Operators of motor vehicles involved in accidents resulting in property damage, personal injury, or death shall immediately report the accident to park rangers. (36 CFR 4.4)
- The operators of authorized emergency vehicles, when responding to an emergency or when pursuing or apprehending an actual or suspected violator of the law may disregard traffic control divides, exceed the speed limit, and obstruct traffic. (36 CFR 4.3)

**Addendum to the Final Report of the Proceedings of the Negotiated Rulemaking Advisory
Committee for Off-Road Vehicle Management at Cape Hatteras National Seashore**

March 27, 2009

Prepared and submitted by:

Walker Golder, Audubon North Carolina

Sidney Maddock, National Audubon Society

Jason Rylander, Defenders of Wildlife

Derb Carter, Southern Environmental Law Center

Destry Jarvis, Natural Resources Defense Council and The Wilderness Society

Audubon North Carolina, National Audubon Society, Defenders of Wildlife, Southern Environmental Law Center, Natural Resources Defense Council, The Wilderness Society

Cape Hatteras National Seashore is one of seven National Seashores on the Atlantic coast. Approximately 67 linear miles of barrier islands and associated habitats within the Seashore represent approximately 21 % of the entire barrier island coastline of North Carolina. The Seashore is a critical link in the migratory pathway of 22 species of shorebirds and 15 species of waterbirds; provides vital breeding habitat for 2 species of sea turtles and 8 species of water and shorebirds; provides habitat essential to sustaining wintering waterbird and shorebird populations; and supports--or supported--a once-thriving population of seabeach amaranth (*Amaranthus pumilis*), a federally-threatened plant species.

The Seashore is critical to state, regional, continental, and global populations of shorebirds and waterbirds. In 2004, the Seashore was recognized as a globally significant Important Bird Area by the American Bird Conservancy and the National Audubon Society for migrant and wintering shorebirds. It is recognized as continentally and state significant for nesting waterbirds and shorebirds. Audubon North Carolina considers Cape Hatteras National Seashore to be one of the most important sites for North Carolina's waterbirds and shorebirds, and is the most seriously threatened of North Carolina's 96 Important Bird Areas.

In a relatively short period of time, the Seashore has gone from one of the most important places for waterbirds and shorebirds to the most threatened. There have been significant and dramatic declines in breeding pairs of shorebirds and colonial waterbirds in the past 10 years, and even more significant declines if you look back 20 years. With the exception of Piping Plover, which has recently rebounded, the Seashore is presently experiencing the lowest number nesting waterbirds and shorebirds in the past 30 years, and it is probable that the present number of nesting waterbirds and shorebirds are all-time historic lows. The reasons for these declines are evident and can be categorized into three primary causes: human disturbance, predation, and habitat loss resulting from lack of adequate protection from vehicles and the associated anthropogenic disturbances.

Prior actions by the National Park Service regarding shorebird and waterbird protection within Cape Hatteras National Seashore have jeopardized breeding and non-breeding waterbirds and shorebirds, and other natural resources. These actions primarily concern inadequate protection measures to protect nesting waterbirds and shorebirds from human disturbances.

It is critically important that Cape Hatteras National Seashore implement an ORV regulation that protects shorebirds and waterbirds, and their habitats. It is also important for protection measures to be based on the current science and the biological needs of the species in question. The peer-reviewed scientific literature is clear and the recommendations developed by biologists who are among the leading experts in their respective fields are also clear. Furthermore, the guiding laws and policies are clear.

In addition to an inadequate protection plan for waterbirds and shorebirds the Seashore's present management of vehicular traffic jeopardizes the safety of people. In 2004, the five-year-old son of a Hatteras Island property owner was nearly killed by a reckless off-road vehicle operator while playing on the beach in front of his home. In the past seven years, several areas of beach that were historically closed to vehicles and managed as pedestrian only beaches, where people could enjoy the beach without tire ruts or fearing for their personal safety, have been opened to

Audubon North Carolina, National Audubon Society, Defenders of Wildlife, Southern Environmental Law Center, Natural Resources Defense Council, The Wilderness Society

vehicles. In addition, in 2007, areas of beach were opened and closed at will in an attempt to balance the amount of beach closed to vehicles for safety and resource protection with the amount of area opened to vehicles. The opening of beaches in front of residential developments jeopardizes public safety and one's ability to enjoy the beach in front of their residence or rental property.

ORV Management Plan

Presidential Executive Order 11644 (1972), amended by Executive Order 11989 (1977), requires certain federal agencies that permit off-road vehicle (ORV) use on federal lands to "develop and publish...regulations prescribing operating conditions for off-road vehicles on public lands. These regulations shall be directed at protecting resource values, preserving public health, safety, and welfare, and minimizing use conflicts." In a press release dated July 18, 2007 the National Park Service stated: "Despite previous efforts since the late 1970s, the National Park Service (NPS) has yet to develop an ORV management plan or regulation that would provide the necessary management and regulatory framework to manage ORV use at the Seashore."

ORV use within Cape Hatteras National Seashore is a serious threat to birds, sea turtles, other wildlife, plants, and plant communities, especially those species that depend on dune, beach, intertidal and associated habitats. The impacts of ORVs on barrier islands and wildlife are clear and well known, and have been documented in more than 200 scientific studies. The actions necessary to protect wildlife, plants, and the habitats they depend on are equally clear.

In order for wildlife to continue to exist on the Seashore's beaches, the species and the habitats they require to meet their energetic and reproductive needs during all life stages must be protected. The species are sensitive to off-road vehicle activity and the associated human disturbances and are presently jeopardized by ORV use and the associated human disturbances.

NPS Laws and Policies

NPS Management Policies 2006

The national park system was created to conserve unimpaired many of the world's most magnificent landscapes, places that enshrine our nation's enduring principles, and places that remind us of the tremendous sacrifices Americans have made on behalf of those principles. They are the most remarkable collection of places in America for recreation and learning. Visitors can immerse themselves in places where events actually happened and enjoy some of the most significant natural and historic places in America. These are places that offer renewal for the body, the spirit and the mind. As required by the 1916 Organic Act, these special places must be managed in a special way—a way that allows them to be enjoyed not just by those who are here today, but also by generations that follow. Enjoyment by present and future generations can be assured only if these special places are passed on to them in an unimpaired condition. And that is the challenge that faces all the employees of the National Park Service. It is a challenge eagerly embraced, but employees must have the tools required to perform the job successfully. The Management Policies contained in these pages represent one of the most important tools available. Through their judicious and consistent application, these

Audubon North Carolina, National Audubon Society, Defenders of Wildlife, Southern Environmental Law Center, Natural Resources Defense Council, The Wilderness Society

policies will set a firm foundation for stewardship that will continue to earn the trust and confidence of the American people.

Underlying Principles

The National Park Service adhered to a number of principles in preparing this 2006 edition of *Management Policies*. The key principles were that the policies must:

- comply with current laws, regulations and executive orders;
- prevent impairment of park resources and values;
- ensure that conservation will be predominant when there is a conflict between the protection of resources and their use;
- maintain NPS responsibility for making decisions and for exercising key authorities;
- emphasize consultation and cooperation with local/state/tribal/federal entities;
- support pursuit of the best contemporary business practices and sustainability;
- encourage consistency across the system —“one national park system”;
- reflect NPS goals and a commitment to cooperative conservation and civic engagement;
- employ a tone that leaves no room for misunderstanding the National Park Service’s commitment to the public’s appropriate use and enjoyment, including education and interpretation, of park resources, while preventing unacceptable impacts;
- pass on to future generations natural, cultural, and physical resources that meet desired conditions better than they do today, along with improved opportunities for enjoyment.

GENERAL AUTHORITIES & GUIDANCE

16 USC § 1 – NPS Organic Act

- “The service thus established shall promote and regulate the use of the Federal areas known as national parks, monuments, and reservations hereinafter specified, except such as are under the jurisdiction of the Secretary of the Army, as provided by law, by such means and measures as conform to the fundamental purpose of the said parks, monuments, and reservations, **which purpose is to conserve the scenery and the natural and historic objects and the wild life therein and to provide for the enjoyment of the same in such manner and by such means as will leave them unimpaired for the enjoyment of future generations.**”

16 USC § 3. Rules and regulations of national parks...

- “[*The Secretary of the Interior*] may also provide in his discretion for the destruction of such animals and of such plant life as may be detrimental to the use of any said parks, monuments, or reservations.”

NPS Management Policies 2006

Audubon North Carolina, National Audubon Society, Defenders of Wildlife, Southern Environmental Law Center, Natural Resources Defense Council, The Wilderness Society

1.4.4 The Prohibition on Impairment of Park Resources and Values

While Congress has given the Service the management discretion to allow impacts within parks, that discretion is limited by the statutory requirement (generally enforceable by the federal courts) that the **Park Service must leave park resources and values unimpaired unless a particular law directly and specifically provides otherwise.** This, the cornerstone of the Organic Act, establishes the primary responsibility of the National Park Service. It ensures that park resources and values will continue to exist in a condition that will allow the American people to have present and future opportunities for enjoyment of them.

The impairment of park resources and values may not be allowed by the Service unless directly and specifically provided for by legislation or by the proclamation establishing the park. The relevant legislation or proclamation must provide explicitly (not by implication or inference) for the activity, in terms that keep the Service from having the authority to manage the activity so as to avoid the impairment.

1.4.7.1 Unacceptable Impacts

The impact threshold at which impairment occurs is not always readily apparent. Therefore, **the Service will apply a standard that offers greater assurance that impairment will not occur. The Service will do this by avoiding impacts that it determines to be unacceptable.** These are impacts that fall short of impairment, but are still not acceptable within a particular park's environment. Park managers must not allow uses that would cause unacceptable impacts; they must evaluate existing or proposed uses and determine whether the associated impacts on park resources and values are acceptable.

1.5 Appropriate Use of the Parks

In its role as steward of park resources, the National Park Service must ensure that park uses that are allowed would not cause impairment of, or unacceptable impacts on, park resources and values. **When proposed park uses and the protection of park resources and values come into conflict, the protection of resources and values must be predominant.**

1.4.7.2 Improving Resource Conditions within the Parks

The Service will also strive to ensure that park resources and values are passed on to future generations in a condition that is as good as, or better than, the conditions that exist today. In particular, **the Service will strive to restore the integrity of park resources that have been damaged or compromised in the past.** Restoration activities will be guided by the natural and cultural resource-specific policies identified in chapters 4 and 5 of these *Management Policies*.

4.4.1 General Principles for Managing Biological Resources

The National Park Service will maintain as parts of the natural ecosystems of parks all plants and animals native to park ecosystems. The Service will successfully maintain native plants and animals by

Audubon North Carolina, National Audubon Society, Defenders of Wildlife, Southern Environmental Law Center, Natural Resources Defense Council, The Wilderness Society

- preserving and restoring the natural abundances, diversities, dynamics, distributions, habitats, and behaviors of native plant and animal populations and the communities and ecosystems in which they occur;
- restoring native plant and animal populations in parks when they have been extirpated by past human-caused actions; and
- minimizing human impacts on native plants, animals, populations, communities, and ecosystems, and the processes that sustain them.

4.4.2 Management of Native Plants and Animals

Whenever possible, natural processes will be relied upon to maintain native plant and animal species and influence natural fluctuations in populations of these species. The Service may intervene to manage populations or individuals of native species only when such intervention will not cause unacceptable impacts to the populations of the species or to other components and processes of the ecosystems that support them. The second is that at least one of the following conditions exists:

- Management is necessary
 - because a population occurs in an unnaturally high or low concentration as a result of human influences (such as loss of seasonal habitat, the extirpation of predators, the creation of highly productive habitat through agriculture or urban landscapes) and it is not possible to mitigate the effects of the human influences;
 - to protect specific cultural resources of parks;
 - to accommodate intensive development in portions of parks appropriate for and dedicated to such development;
 - to protect rare, threatened, or endangered species;
 - to protect human health as advised by the U. S. Public Health Service (which includes the Centers for Disease Control and the NPS public health service program);
 - to protect property when it is not possible to change the pattern of human activities; or
 - to maintain human safety when it is not possible to change the pattern of human activities.

Or,

- Removal of individuals or parts thereof
 - is part of an NPS research project described in an approved management plan, or is part of research being conducted by others who have been issued a scientific research and collecting permit;
 - is done to provide plants or animals for restoring native populations in parks or cooperating areas without diminishing the viability of the park populations from which the individuals are taken; or
 - meets specific park management objectives.

Audubon North Carolina, National Audubon Society, Defenders of Wildlife, Southern Environmental Law Center, Natural Resources Defense Council, The Wilderness Society

4.4.2.1 NPS Actions That Remove Native Plants and Animals

Whenever the Service removes native plants or animals, manages plant or animal populations to reduce their sizes, or allows others to remove plants or animals for an authorized purpose, the Service will seek to ensure that such removals will not cause unacceptable impacts on native resources, natural processes, or other park resources. Whenever the Service identifies a possible need for reducing the size of a park plant or animal population, the Service will use scientifically valid resource information obtained through consultation with technical experts, literature review, inventory, monitoring, or research to evaluate the identified need for population management; the Service will document it in the appropriate park management plan.

In addition, the Service will manage such removals to prevent them from interfering broadly with

- natural habitats, natural abundances, and natural distributions of native species and natural processes
- rare, threatened, and endangered plant or animal species or their critical habitats
- scientific study, interpretation, environmental education, appreciation of wildlife, or other public benefits
- opportunities to restore depressed populations of native species
- breeding or spawning grounds of native species

Where the need to reduce animal populations may be due to persistent human/animal conflicts, the Service will determine whether or not it can eliminate or mitigate the conflicts by modifying or curtailing the conflicting visitor use or other human activities. Where visitor use or other human activities cannot be modified or curtailed, the Service may directly reduce the animal population by using several animal population management techniques, either separately or together. These techniques include relocation, public hunting on lands outside a park or where legislatively authorized within a park, habitat management, predator restoration, reproductive intervention, and destruction of animals by NPS personnel or their authorized agents. Where animal populations are reduced, destroyed animals may be left in natural areas of the park to decompose unless there are human safety concerns regarding attraction of potentially harmful scavengers to populated sites or trails or other human health and sanitary concerns associated with decomposition.

4.4.2.2 Restoration of Native Plant and Animal Species

The Service will strive to restore extirpated native plant and animal species to parks whenever all of the following criteria are met:

- Adequate habitat to support the species either exists or can reasonably be restored in the park and if necessary also on adjacent public lands and waters; once a natural population level is achieved, the population can be self-perpetuating.
- The species does not, based on an effective management plan, pose a serious threat to the safety of people in parks, park resources, or persons or property within or outside park boundaries.

Audubon North Carolina, National Audubon Society, Defenders of Wildlife, Southern Environmental Law Center, Natural Resources Defense Council, The Wilderness Society

- The genetic type used in restoration most nearly approximates the extirpated genetic type.
- The species disappeared or was substantially diminished as a direct or indirect result of human-induced change to the species population or to the ecosystem.
- Potential impacts upon park management and use have been carefully considered.

4.4.2.3 Management of Threatened or Endangered Plants and Animals

The Service will survey for, protect, and strive to recover all species native to national park system units that are listed under the Endangered Species Act. The Service will fully meet its obligations under the NPS Organic Act and the Endangered Species Act to both proactively conserve listed species and prevent detrimental effects on these species. To meet these obligations, the Service will

- cooperate with both the U. S. Fish and Wildlife Service and the NOAA Fisheries to ensure that NPS actions comply with both the written requirements and the spirit of the Endangered Species Act. This cooperation should include the full range of activities associated with the Endangered Species Act, including consultation, conferencing, informal discussions, and securing all necessary scientific and/or recovery permits;
- undertake active management programs to inventory, monitor, restore, and maintain listed species' habitats; control detrimental nonnative species; manage detrimental visitor access; and reestablish extirpated populations as necessary to maintain the species and the habitats upon which they depend;
- manage designated critical habitat, essential habitat, and recovery areas to maintain and enhance their value for the recovery of threatened and endangered species;
- cooperate with other agencies to ensure that the delineation of critical habitat, essential habitat, and/or recovery areas on park-managed lands provides needed conservation benefits to the total recovery efforts being conducted by all the participating agencies;
- participate in the recovery planning process, including the provision of members on recovery teams and recovery implementation teams where appropriate;
- cooperate with other agencies, states, and private entities to promote candidate conservation agreements aimed at precluding the need to list species; and
- conduct actions and allocate funding to address endangered, threatened, proposed, and candidate species.

The National Park Service will inventory, monitor, and manage state and locally listed species in a manner similar to its treatment of federally listed species to the greatest extent possible. In addition, the Service will inventory other native species that are of special management concern to parks (such as rare, declining, sensitive, or unique species and their habitats) and will manage them to maintain their natural distribution and abundance.

The Service will determine all management actions for the protection and perpetuation of federally, state, or locally listed species through the park management planning process, and will include consultation with lead federal and state agencies as appropriate.

Audubon North Carolina, National Audubon Society, Defenders of Wildlife, Southern Environmental Law Center, Natural Resources Defense Council, The Wilderness Society

4.4.4.2 Removal of Exotic Species Already Present

All exotic plant and animal species that are not maintained to meet an identified park purpose will be managed—up to and including eradication—if (1) control is prudent and feasible, and (2) the exotic species

- interferes with natural processes and the perpetuation of natural features, native species or natural habitats, or
- disrupts the genetic integrity of native species, or
- disrupts the accurate presentation of a cultural landscape, or
- damages cultural resources, or
- significantly hampers the management of park or adjacent lands, or
- poses a public health hazard as advised by the U. S. Public Health Service (which includes the Centers for Disease Control and the NPS public health program), or
- creates a hazard to public safety.

High priority will be given to managing exotic species that have, or potentially could have, a substantial impact on park resources, and that can reasonably be expected to be successfully controlled. Lower priority will be given to exotic species that have almost no impact on park resources or that probably cannot be successfully controlled. Where an exotic species cannot be successfully eliminated, managers will seek to contain the exotic species to prevent further spread or resource damage.

The decision to initiate management should be based on a determination that the species is exotic. For species determined to be exotic and where management appears to be feasible and effective, superintendents should (1) evaluate the species' current or potential impact on park resources; (2) develop and implement exotic species management plans according to established planning procedures; (3) consult, as appropriate, with federal, tribal, local, and state agencies as well as other interested groups; and (4) invite public review and comment, where appropriate. Programs to manage exotic species will be designed to avoid causing significant damage to native species, natural ecological communities, natural ecological processes, cultural resources, and human health and safety. Considerations and techniques regarding removal of exotic species are similar to those used for native species (see 4.4.2.1 NPS Actions That Remove Native Plants and Animals).

Natural Resource Management and Protection

In 2002, an estimated 2.25 million people visited Cape Hatteras National Seashore; 91,907 vehicles were driven on Cape Hatteras National Seashore beaches (Vogelsong 2003). The peak visitor use periods for the Seashore coincides with the peak nesting season for waterbirds, shorebirds, and sea turtles; peak migration period for Piping Plover and other shorebirds; and the germination, growth, flowering, and seed dispersal of seabeach amaranth (*Amaranthus pumilis*), a federally-threatened plant species.

Audubon North Carolina, National Audubon Society, Defenders of Wildlife, Southern Environmental Law Center, Natural Resources Defense Council, The Wilderness Society

Nesting waterbirds and shorebirds, and migrating or wintering shorebirds, are very sensitive to human disturbances. Human disturbance is listed as one of the most significant threats to shorebirds and waterbirds in the applicable species and conservation plans including, but not limited to the following: (Atlantic Coast Piping Plover Recovery Plan, Recovery Plan For The Northwest Atlantic Loggerhead Sea Turtle, American Oystercatcher Conservation Plan, Red Knot Conservation Plan, US Shorebird Conservation Plan, North American Waterbird Conservation Plan, and numerous scientific studies).

Human disturbances have been shown to cause abandonment of nesting territories, abandonment of active nests, abandonment of entire nesting sites, increased nest failure, increased chick mortality, decreased foraging efficiency in shorebirds, decreased foraging duration by shorebirds, alteration of resting and roosting behaviors, and local population declines. Shorebirds have been found to be especially sensitive to vehicles and disturbances.

Natural resource protection, management, or conservation plans or strategies for Cape Hatteras National Seashore must adequately provide for the protection of shorebirds and waterbirds (breeding and non-breeding), and their habitats, from off-road vehicles and human disturbances. Nesting habitat and sites for sea turtles and habitat for seabeach amaranth must also be protected. Failure to provide adequate protection for breeding, migrating and wintering birds, nesting sea turtles, seabeach amaranth, and other native plants and plant communities will result in impairment of these species. Habitats these species depend on for survival at critical points in their life cycles are also impacted by vehicles.

In 2005, at the request of Cape Hatteras National Seashore, biologists with the US Geological Survey, Patuxent Wildlife Research Center, developed management and protection protocols (hereafter “protocols”) for Piping Plover, American Oystercatcher, colonial waterbirds, sea turtles, and seabeach amaranth at Cape Hatteras National Seashore. The authors of the protocols are among the leading experts in their respective fields. These documents outlined three options for protection:

- Option A: Highest level of Protection
- Option B: Moderate Protection
- Option C: Minimum Protection

The protocols present the state of the resource in the Seashore, state of present resource management or protection measures implemented by the Seashore, and the predicted effects of implementing each option. The protocols also provide guidelines for surveys and monitoring, data collection, data management, adaptive resource management, and education and outreach.

The result of the past natural resource protection measures implemented by the Seashore has been low productivity of beach-nesting birds, numbers of beach-nesting waterbirds and shorebirds at or near all-time lows, direct human caused mortality of chicks, and abandonment of nests and nesting sites due to inadequate management and protection. The result of Alternative E as presented by National Park Service in November 2008 and the Interim Plan will have similar results.

Audubon North Carolina, National Audubon Society, Defenders of Wildlife, Southern Environmental Law Center, Natural Resources Defense Council, The Wilderness Society

Waterbird and Shorebird Populations

Eight species of waterbirds and shorebirds presently nest or have previously nested on Cape Hatteras National Seashore beaches, dunes, overwash fans, and other early succession barrier island habitats. All are state or federally listed as species of conservation concern. These include:

Nesting waterbird and shorebird species at Cape Hatteras National Seashore

Shorebirds	Conservation Status
Piping Plover	Federally Threatened NC Threatened USSCP: Highly Imperiled SERR-USSCP: Extremely High Priority Species
American Oystercatcher	NC Species of Special Concern USSCP: Species of High Concern SERR-USSCP: Extremely High Priority Species
Wilson's Plover	NC Species of Special Concern USSCP: Species of High Concern SERR-USSCP: High Priority Species
Least Tern	NC Species of Special Concern NAWCP: Species of High Concern SEWCP: Continental Conservation Interest-Management Attention
Common Tern	NC Species of Special Concern NAWCP: Species of Low Concern SEWCP: Regional Conservation Interest-Management Attention
Gull-billed Tern	NC Threatened NAWCP: Species of High Concern SEWCP: Continental Conservation Interest-Management Attention
Black Skimmer	NC Species of Special Concern NAWCP: Species of High Concern SEWCP: Continental Conservation Interest-Management Attention

USSCP=US Shorebird Conservation Plan

SERR-USSCP=Southeastern Coastal Plain Regional Report-US Shorebird Conservation Plan

NAWCP=North American Waterbird Conservation Plan

SEWCP=Southeastern US Waterbird Conservation Plan

- Continental Conservation Interest (on the Continental WatchList): (a) Species with multiple causes for concern across their entire range; (b) Moderately abundant or widespread species with declines or high threats, and (c) Species with restricted distributions or low population size.
- Regional Conservation Interest (non-WatchList; but Total Score \geq 19): (a) high regional concern (AI+PT \geq 8); (b) high regional threats (TB+TN \geq 7, or TB or TN=5), (d) taxa – subspecies and populations – of regional conservation interest

Audubon North Carolina, National Audubon Society, Defenders of Wildlife, Southern Environmental Law Center, Natural Resources Defense Council, The Wilderness Society

not otherwise included in categories above; (c) high regional responsibility as measured by percent of global, continental, or regional populations.

- Management Attention = Management or other on-the-ground conservation Actions needed to reverse or stabilize significant, long-term population declines in species that are still relatively abundant.

Overall, the numbers of breeding pairs of waterbirds that nest on the Seashore’s beaches have declined significantly over the past 10 years; two species have been extirpated (Table 1). Without the long-term implementation of adequate, science-based protection measures, the potential for loss of the majority of waterbirds within the Seashore due to single catastrophic event (predator, human disturbance or vandalism) is high. The Seashore’s proposed approach to management of this natural resource is inconsistent with the most basic principles of management of colonial waterbirds.

Table 1. Waterbird nests at Cape Hatteras National Seashore from 1993 to 2008.

Nesting shorebirds within the Seashore, specifically Piping Plover (Table 4) and American Oystercatcher (Table 5), have also experienced population declines in the past decade. Data regarding nesting by other shorebird species, specifically Wilson’s Plover and Willet, are insufficient to assess population trends. Historically, Wilson’s Plover in North Carolina was “one of the most common and widely distributed beach-nesting birds” (Pearson et al. 1919). While a Wilson’s Plover pair was seen on Ocracoke in 2008, no nests or chicks were seen, leading to a concern that this species, as a breeding population, has been extirpated from the Seashore.

The present increasing trend in breeding pairs of Piping Plovers is encouraging. However, the number of breeding pairs of Piping Plovers within the Seashore still remains lower than a decade

Audubon North Carolina, National Audubon Society, Defenders of Wildlife, Southern Environmental Law Center, Natural Resources Defense Council, The Wilderness Society

ago when 14 breeding pairs were documented at the Seashore. Moreover, even the high of 14 pairs is well below the estimated capacity of 30 breeding pairs (USFWS 1996). Adequate, science-based protection measures during all life stages, following the recommendation of experts and the Atlantic Piping Plover Recovery Plan, is essential to recovery of this Federally-threatened species.

Table 4. Piping Plover nesting pairs at Cape Hatteras National Seashore 1990-2008.

The trends in American Oystercatchers breeding at Cape Hatteras National Seashore from 1999 to 2007 show that the species has steadily declined during the period (Table 5). Data prior to 1999 is incomplete for this species.

Table 5. American Oystercatchers nesting pairs at Cape Hatteras National Seashore 1999-2008.

Human Disturbance, Off-road Vehicles, and other Disturbances

Human disturbance has been defined as “any activity that changes the contemporaneous behavior or physiology of one or more individuals” (Nisbet 2000). The definition was proposed for waterbirds, but it is applicable to breeding and non-breeding shorebirds as well.

Audubon North Carolina, National Audubon Society, Defenders of Wildlife, Southern Environmental Law Center, Natural Resources Defense Council, The Wilderness Society

There is a wealth of knowledge about waterbirds and shorebirds and their responses to human disturbance. These are outlined in numerous publications. National, regional, and state conservation plans list human disturbance as a significant threat to waterbirds and shorebirds (Brown et al. 2001, Hunter et al. 2006, Hunter et al. 2000, Hunter et al. 2002, Kress and Hall 2000, Kushlan et al. 2002, Parnell and Shields 1990, Schulte et al. 2006, USFWS 1996). Research published in peer-reviewed scientific literature also list human disturbance as a significant threat to nesting waterbirds and shorebirds, and as a contributing factor to decreased productivity (Burger 1981, Burger 1994, Burger 1995, Burger and Gochfeld 1991, Burger et al. 1995, Carney and Sydeman 1999, Erwin 1980, Erwin 1989, Flemming et al. 1988, Laferty et al. 2006, McGowan and Simons 2006, Melvin et al. 1994, Nisbet 2000, Parnell et al. 1998, Rodgers and Smith 1995, Safina and Burger 1983, Sabine et al. 2005, Sabine et al. 2006, among many others). Furthermore, species accounts in *The Birds of North America* series of publications identify human disturbance as a key threat to terns, Black Skimmers and shorebirds (Nol and Humphrey 1994, Thompson et al. 1997, Gochfeld and Burger 1994, Nisbet 2002, Parnell et al. 1995, Haig and Elliot-Smith 2004, Corbat and Bergstrom 2000). The management recommendations developed specifically for the National Park Service and Cape Hatteras National Seashore also list human disturbance as a significant threat (Buckley and Buckley 1976, Erwin 2005, Meyers 2005, and Cohen 2005).

Human disturbance can result in egg loss, chick mortality, nest abandonment, nesting site or colony abandonment, premature fledging or nest evacuation, slow growth or reduced body mass of nestlings, behavior alterations, overall lowered reproductive success, prevention of access by shorebird chicks to foraging habitat, and reduced foraging efficiency. It is especially damaging during the breeding season. Disturbance at the time when nesting birds begin courtship, territory establishment, and nest building can lead to the abandonment of otherwise suitable nesting habitat. It can lead to the abandonment of individual nests or the abandonment of entire colonies in the case of waterbirds. Disturbance during incubation frequently causes an incubating or brooding adult to leave its nest or chicks, which exposes eggs or chicks to environmental conditions such as heat, cold, rain, and blowing sand, all of which can kill embryos developing within eggs and kill chicks. Disturbance also exposes eggs and chicks to avian predators such as gulls and crows; mammalian predators such as raccoon, fox, or mink; or ghost crabs. Disturbance can also cause adults to become separated from chicks, which increases a chick's vulnerability to predators and temperature stress, such as occurred in 2006 and resulted in the death of two American Oystercatcher chicks near Hatteras Inlet.

With an estimated 2.25 million visitors annually to Cape Hatteras National Seashore and an estimated 91,907 vehicles using Seashore beaches annually (Vogelsong 2003), waterbirds, shorebirds, and their habitats must be protected from all sources of human disturbance if they are to have a chance at survival and successful nesting. From early May to mid August 2007, there were 477 violations of bird closures at the Seashore (Table 8). The majority were pedestrian violations (360), followed by ORVs (47), dogs (44), and other (26).

Table 8. Violations of bird closures at the Seashore from early May to mid August 2007.

	ORV	Pedestrian	Dog	Other
Bodie Island	10	81	18	11
Hatteras Island	20	218	14	9

Audubon North Carolina, National Audubon Society, Defenders of Wildlife, Southern Environmental Law Center, Natural Resources Defense Council, The Wilderness Society

Ocraocke Island	17	61	12	6
Total	47	360	44	26

While these violations are not all by ORVs, some may be indirectly tied to ORV use, such as people who drive to remote locations and walk into closures or let their dog off the leash. As the U.S. Fish and Wildlife Service has noted, “vehicles extend impacts to remote stretches of beach where human disturbance would be very slight if access were limited to pedestrians” (USFWS 1996).

Erwin (1989) in a study conducted on North Carolina and Virginia beaches recommended that all waterbird nesting sites should be posted prior to the arrival of nesting birds. For North Carolina, the North Carolina Wildlife Resources Commission recommends that all waterbird nesting sites should be posted on or before April 1st. Shorebirds may initiate nesting prior to April 1st, therefore the North Carolina Wildlife resources Commission recommends that Piping Plover, American Oystercatcher, and Wilson’s Plover nesting sites be posted by March 15th.

Several studies have addressed the reaction of nesting birds to human disturbances and provide recommended minimum setback distances (Table 9). These recommended setback distances are the minimum distances at which recreation activity (including people and vehicles) should be kept from incubating birds and adults with chicks.

Table 9. Setback (buffer) distances for placement of symbolic fencing from waterbird and shorebird nests.

Species	Minimum Setback
Common Tern	200m (Erwin 1989, Rodgers and Smith 1995)
Least Tern	100m (Erwin 1989)
Black Skimmer	200m (Erwin 1989, Rodgers and Smith 1995)
Piping Plover	50m ¹ (USFWS 1996); 200m (Loegering 1992, Avery et al. 2004)
American Oystercatcher	150 m during incubation (Sabine et al. 2005)
Additional recommendations:	1. increase setback distances 100m early in the nesting cycle (during courtship, nest building, territory establishment) due to heightened sensitivity of terns and skimmers to disturbances during this period (Erwin 1989)
	2. increase setback distances an additional 100m in areas where dogs are permitted (Hunter et al. 2006)
	3. For nesting Piping Plovers, increase buffer zones from 50m to 100m any place that disturbance of plovers by recreation is observed, then increase to 200m if disturbance persists (Cohen 2005).

¹ USFWS noted that “fencing should be expanded in cases where the 50-meter radius is inadequate to protect incubating adults or unfledged chicks from harm or disturbance. Data from various sites distributed across the plovers’ Atlantic Coast range indicate that larger buffers may be needed in some locations...”(USFWS 1996:192). As an example, USFWS noted that “Assateague Island National Seashore established 200 meter buffer zones around most nest sites and primary foraging areas” (USFWS 1996: 192).

Studies addressing the reactions of shorebirds and waterbirds to the presence of dogs are limited. Dogs have been observed killing black skimmer chicks (W. Golder pers. obs.) and anecdotal observations of the reaction of nesting birds to the presence of dogs suggest that nesting birds are disturbed at greater distances by the presence of a dog (W. Golder pers. obs.). Dogs off leash have been reported to be a significant problem at the Seashore and the regulations pertaining to such have been “loosely enforced” (Cohen 2005). The Southeast US Waterbird Conservation Plan recognizes that dogs can be a significant threat to nesting waterbirds and recommends an increase of 100m of additional buffer distance in areas where dogs are permitted (Hunter et al. 2006).

This dog, which was brought to Hatteras Spit in an ORV during the nesting season, was let off leash and was observed chasing a Sanderling; the dog's owner is visible in the background, as is a posted nesting area (Sidney Maddock, Pers. Obs. 2003).

Off-road and other motorized vehicles present additional sources of disturbance that can kill adults and chicks, kill developing embryos in eggs, cause abandonment of nests, and destroy habitat. The threat is serious in areas where vehicle use is unregulated, where buffer distances are insufficient to protect mobile chicks, where buffer distances are insufficient to protect incubating adults from disturbance, where speed limits are in excess of 15 mph, and where birds are concentrated at roosts, foraging areas, and nesting areas. A study of Piping Plover mortality from off-road vehicles (Melvin et al. 1994) found that Piping Plover chicks were killed by off-road vehicles on beaches with “relatively little” vehicle traffic (20 or less vehicles passes/day) or beaches that were managed to protect chicks from vehicles; on beaches during daylight hours

Audubon North Carolina, National Audubon Society, Defenders of Wildlife, Southern Environmental Law Center, Natural Resources Defense Council, The Wilderness Society

where monitors were stationed to guide vehicles safely past chicks; on beaches that required a “look-out” to walk in front of all vehicles; on beaches with warning signs; and on beaches open only to monitoring and law enforcement vehicles.

The behavior of waterbird and shorebird chicks makes them especially vulnerable to mortality from vehicle traffic. When alarmed, chicks will often lie prone on the sand, and often seek a depression, shell or wrack to hide, and remain very still until the threat passes. When tire ruts are present in areas with waterbird or shorebird chicks, chicks often seek shelter in the tire ruts and then may be unable to climb out of the tire ruts due to soft sand. Furthermore, chicks are small, cryptic in color, and extremely difficult to see; and nearly impossible to see from a moving vehicle.

In 2005, a study of American Oystercatchers at Cape Hatteras and Cape Lookout National Seashores documented five deaths of chicks by vehicles (McGowan and Simons 2006). In 2005, at least one colony of terns and black skimmers in the process of courting, establishing territories and building nests, abandoned their nesting site due to chronic vehicle disturbance (W. Golder and S. Maddock pers. obs.). In 2006, two American Oystercatchers chicks at Cape Hatteras National Seashore died when they became separated from parents as a result of disturbance by vehicles (Simons et al. 2006).

In regards to Piping Plovers, the *Guidelines for Managing Recreational Activities in Piping Plover Breeding Habitat on the U.S. Atlantic Coast to Avoid Take Under Section 9 of the Endangered Species Act* (USFWS 1996) states:

“Unrestricted use of motorized vehicles on beaches is a serious threat to piping plovers and their habitats. Vehicles can crush eggs (Wilcox 1959; Tull 1984; Burger 1987b; Patterson et al. 1991; United States of America v. Breezy Point Cooperative, Inc., U.S. District Court, Eastern District of New York, Civil Action No. CV-90-2542, 1991; Shaffer and Laporte 1992), adults, and chicks. In Massachusetts and New York, biologists documented 14 incidents in which 18 chicks and 2 adults were killed by vehicles between 1989 and 1993 (Melvin et al. 1994). Goldin (1993) compiled records of 34 chick mortalities (30 on the Atlantic Coast and 4 on the Northern Great Plains) due to vehicles. Many biologists that monitor and manage piping plovers believe that many more chicks are killed by vehicles than are found and reported (Melvin et al. 1994). Beaches used by vehicles during nesting and brood-rearing periods generally have fewer breeding plovers than

Audubon North Carolina, National Audubon Society, Defenders of Wildlife, Southern Environmental Law Center, Natural Resources Defense Council, The Wilderness Society

available nesting and feeding habitat can support. In contrast, plover abundance and productivity has increased on beaches where vehicle restrictions during chick-rearing periods have been combined with protection of nests from predators (Goldin 1993; S. Melvin, pers. comm., 1993).

Typical behaviors of piping plover chicks increase their vulnerability to vehicles. Chicks frequently move between the upper berm or foredune and feeding habitats in the wrack line and intertidal zone. These movements place chicks in the paths of vehicles driving along the berm or through the intertidal zone. Chicks stand in, walk, and run along tire ruts, and sometimes have difficulty crossing deep ruts or climbing out of them (Eddings et al. 1990, Strauss 1990, Howard et al. 1993). Chicks sometimes stand motionless or crouch as vehicles pass by, or do not move quickly enough to get out of the way (Tull 1984, Hoopes et al. 1992, Goldin 1993). Wire fencing placed around nests to deter predators (Rimmer and Deblinger 1990, Melvin et al. 1992) is ineffective in protecting chicks from vehicles because chicks typically leave the nest within a day after hatching and move extensively along the beach to feed (see [Table 1](#)).

Vehicles may also significantly degrade piping plover habitat or disrupt normal behavior patterns. They may harm or harass plovers by crushing wrack into the sand and making it unavailable as cover or a foraging substrate, by creating ruts that may trap or impede movements of chicks, and by preventing plovers from using habitat that is otherwise suitable (MacIvor 1990, Strauss 1990, Hoopes et al. 1992, Goldin 1993).”

Protection for nesting colonial waterbirds

In 2005, the USGS Patuxent Wildlife Research Center prepared and submitted to Cape Hatteras National Seashore a document entitled *Monitoring and Protection Protocols for Colonially Nesting Waterbirds at Cape Hatteras National Seashore, North Carolina* (Erwin 2005). This document clearly outlined actions that should be taken by the Seashore to protect, manage, and monitor colonial waterbirds within the Seashore.

The protocols developed by Erwin (2005) are consistent with the five goals were outlined in Management of North Carolina’s Colonial Waterbirds (Parnell and Shields 1990). These include: 1. maintain stable reproductive populations; 2. recover species presently in declining or low numbers; 3. discourage problem species that have a strong, negative effect on native species; 4. encourage a dispersed nesting population; and 5. provide special attention to endangered, threatened, and special concern species. Adherence to the basic goals outlined in this document should also be goals of the Seashore.

Protection for colonial waterbirds that nest within the Seashore requires the development of a management and implementation plan or strategy that is consistent with recommendations that result from scientific studies of the species of birds and recommendations within conservation plans such as the Atlantic Piping Plover Recovery Plan, Southeast U.S. Waterbird Conservation

Audubon North Carolina, National Audubon Society, Defenders of Wildlife, Southern Environmental Law Center, Natural Resources Defense Council, The Wilderness Society

Plan, North American Waterbird Conservation Plan, United States Shorebird Conservation Plan, American Oystercatcher Conservation Plan and similar documents developed by objective biologists with demonstrated expertise in shorebird and waterbird biology, conservation, and management.

The recommendations in the conservation plans and those presented in the document by Erwin (2005) are based on research conducted by experienced and objective scientists. These recommendations are clear and based on science, experience, and expertise of the authors, and therefore should be followed. Significant deviations from the recommendations of experts will jeopardize these species at the Seashore.

Protection for nesting Piping Plovers

In 2005, the USGS Patuxent Wildlife Research Center prepared and submitted to Cape Hatteras National Seashore a document entitled *Management and Protection Protocols for the Threatened Piping Plover (*Charadrius melodus*) on Cape Hatteras National Seashore, North Carolina* (Cohen 2005). In addition, the Atlantic Piping Plover Recovery Plan (USFWS 1996) provides recommendations regarding the protection of adults, nests, chicks, and habitats. These documents clearly outline actions that should be taken by the Seashore to protect, manage, and monitor Piping Plovers within the Seashore. The recommendations provided are consistent with these recommendations and should be fully implemented to provide necessary protection for Piping Plovers.

Protection for American Oystercatchers

The American Oystercatcher is listed as a “Species of High Concern” in the US Shorebird Conservation Plan (Brown et al. 2001). Primary threats to this species are habitat loss, human disturbance, and predation by non-native predators and species closely associated with human activity (Schulte et al. 2006). Human disturbance has been implicated as a significant contributor to low reproductive success and high predation rates in studies conducted in North Carolina and Georgia (McGowan 2004, McGowan and Simons 2006, Davis et al. 2001, Sabine 2005, Sabine et al. 2005, Shulte et al. 2006, Simons 2004, Simons et al. 2006). Davis et al. (2001) also found that oystercatchers avoid nesting in areas with high human disturbance. Novick (1996) and Davis (1999) documented lower nesting success for American Oystercatchers in North Carolina in areas where disturbance was high. McGowan (2004) found that the presence of vehicles on beaches contributed to chick mortality and higher predation rates. McGowan (2005), Simons et al (2005), and Sabine (2005) documented lower nest survival and higher chick mortality in high disturbance sites.

Studies of American Oystercatchers nesting at Cape Hatteras and Cape Lookout National Seashores (Simons et al. 2006) documented mortality of American Oystercatcher chicks every year since 2004 and found that lower fledging success of chicks on beaches where vehicles and pedestrians were permitted. Simons et al. (2006) found a difference in behavior of chicks in full beach closures and those in partial beach closures. Chicks in partial beach closures spent more time in dunes, which subjects them to temperature stress, reduces the amount of foraging time, and increases the risk of mortality from predation, a risk that increases at night if vehicles, dogs, or people are present. Fledging success was found to be higher on full closure beaches was 48%,

Audubon North Carolina, National Audubon Society, Defenders of Wildlife, Southern Environmental Law Center, Natural Resources Defense Council, The Wilderness Society

while fledging success on beaches open to vehicle and/or pedestrian activity was 27%. The study explained their findings:

“...Very young chicks are highly mobile, much more so than previously believed. Within 24 hours of hatching, adults begin bringing their chicks to the waterline to feed, particularly after dark. This pattern continues throughout the chick-rearing stage. At night, chicks were always located at the waterline or on the open beach. During the day chicks spent most of their time hiding in the dunes. Movement between the dunes and the waterline places young chicks at considerable risk from vehicle traffic. We regularly observed chicks hiding in vehicle tracks in response to adult alarm calls and also observed chicks, and even some adults, running or flying directly into the headlights of oncoming vehicles at night. Shortly after we initiated the radio tracking study, we documented the mortality of a brood of two-day old chicks that were run over by an ATV on North Core Banks. We had radio-tagged the recently hatched brood at the nest on 16 June 2005.

That same evening the chicks were relocated hiding in seaweed at the tide line with the adult pair. The following morning we tracked the transmitter signals to a similar location and found two of the chicks crushed in a fresh ATV tire track, just above the high tide line (Figure 8).

On 23 May 2006 two three-day old chicks near Hatteras inlet on Cape Hatteras National Seashore died of exposure and depredation after their parents were disturbed by vehicle traffic after dark. The parents brought the chicks down to the tideline at sunset and were subsequently disoriented and frightened off by vehicle headlights. One of the chicks was found the next morning nearly dead of hypothermia, while the other had been killed by a ghost crab....

After the chicks were killed by a vehicle in 2005, Cape Lookout National Seashore initiated a policy under which they closed sections of beach with unfledged chicks to vehicle traffic, and re-routed traffic around the birds via the interdune road. No additional deaths from vehicle traffic have been documented on Cape Lookout since this policy went into effect. After the beach sections were closed, chicks were regularly observed on the open beach and at the tide line during daylight hours, suggesting that vehicle traffic was altering chick behavior and foraging patterns. Cape Hatteras National Seashore implemented a policy of completely closing sections of beach with oystercatcher broods in 2005 and no chick mortality due to vehicles was documented. In 2006 this policy was changed to allow vehicle traffic past some of the broods and two chicks died following vehicle disturbance as described above...” (Simons et al. 2006)

In 2005, the USGS Patuxent Wildlife Research Center prepared and submitted to Cape Hatteras National Seashore a document entitled *Management, Monitoring, and Protection Protocols for American Oystercatchers at Cape Hatteras National Seashore, North Carolina* (Meyers 2005). This document clearly outlines actions that should be taken by the Seashore to protect, manage, and monitor American Oystercatchers within the Seashore. The Seashore should take action and implement Option B: Moderate Protection.

Audubon North Carolina, National Audubon Society, Defenders of Wildlife, Southern Environmental Law Center, Natural Resources Defense Council, The Wilderness Society

Protection for non-breeding shorebirds

The Seashore is a critical migratory stopover and wintering area for North American shorebirds. A study of migrating and wintering shorebirds on the Outer Banks of North Carolina concluded:

“Our findings confirm that the Outer Banks of North Carolina provide a critical link in the migratory path of several shorebird species (e.g., Sanderling, Whimbrel). If habitat loss or alteration were to occur, portions of their Atlantic Flyway populations could be negatively affected, perhaps contributing to further population decline (Howe et al. 1989). The threatened Piping Plover, which depends on the Outer Banks for breeding habitat, could also be affected by such habitat changes. Given the regional significance of this area, efforts to ensure the continued availability of habitat for shorebirds amidst demands for development and recreational uses should constitute a conservation priority.” (Dinsmore et al. 1998)

Habitats that support migrating and wintering shorebirds deserve protection from human disturbance, which is a key contributing factor in the loss and degradation of habitat for non-breeding shorebirds (Brown et al. 2001). Most species of shorebirds are long distance migrants that may migrate hundreds to several thousand miles from breeding areas to winter areas. The habitats utilized along the migration route are essential to their survival during migration and winter, and their return to breeding areas in good condition for breeding.

The southward migration of shorebirds, often called “fall” migration, begins during the first week July and continues until December, at which time many shorebirds have arrived at wintering areas. The wintering period includes December to early March. The northward migration of shorebirds, often called “spring” migration, continues until the end of May.

Cape Hatteras National Seashore is critical to migrant shorebirds and waterbirds that utilize habitats within the Seashore during migration and during winter. Off-road vehicle use and human disturbances have been shown to have a significant negative impact on these species. These impacts include but are not limited to: direct mortality of adults from vehicle strikes, displacement of individuals, abandonment of otherwise suitable habitat, disruption of foraging time and behavior, disruption of resting and roosting time, destruction of foraging habitat, loss of habitat, and reduced prey base. Vehicle use on the Seashore beaches affects the distribution, abundance, and survival of migrating and wintering shorebirds and is a direct threat to the species that depend on habitats within the Seashore. High numbers of vehicles and the associated recreation, such as presently exists at many areas within the Seashore, renders key areas unavailable to these species and results in loss of habitat for these species. Disturbance that reduces foraging, resting and roosting time, forces species to forage in sub-optimal habitats, displaces species from otherwise suitable habitat, and increases energy expenditure threatens the survival of these species. (Nichols and Baldassarre 1990, Goss-Custard et al. 1996, Burton et al. 1996, Pienkowski 1982, Zonick 2000, Haig and Oring 1985, Harrington 2008, Burger 1986, Pfister 1992, Burger et al. 1995, Burger et al 2007, Elliot and Teas 1996, Vega 1988, among others).

Shorebirds roosting on beach

Studies in Delaware conclude it is imperative to keep people and dogs off beaches while shorebirds are foraging (Burger et al 2007). Data from Cape Lookout, Cape Hatteras, Assateague Island, Texas, Delaware, Massachusetts, and New Jersey beaches show reduced number of shorebirds on beaches with vehicles (Burger 1986, Burger 1981, Pfister 1992, Collazo et al. undated, Barbee 1994). Harrington (2008) concluded that inlets are critical to many species of shorebirds, especially species of conservation concern, during migration and winter, and that inlets should be protected from human disturbances. Off-road vehicles have been shown to have a direct negative impact on important prey for migrating and wintering shorebirds (Schlacher et al. 2008a, Schlacher et al. 2008b). Off-road vehicles have been shown to affect the behavior of resting, roosting, and foraging shorebirds in a manner that may threaten their survival and reproductive fitness (Tarr 2008, Burger 1986, Burger 1981, Pfister 1992, Gochfeld 1991, Thomas 2000, Niles et al. 2007, Piersma and Baker 2000, Burton et al. 1996, among others)

Vehicle use at the inlets, Cape Point, South Beach, and important shorebird habitat on the ocean facing beaches is at such a level that it presents a serious impairment to migrant and wintering shorebirds and waterbirds. We consider these impacts clear and definite impairment of these natural resources and allowing such destructive practices as vehicle use and the associated human disturbances is inconsistent with the laws and policies of National Park Service units such as Cape Hatteras National Seashore. For this reason, protection of habitats for migrating and wintering shorebirds by excluding vehicular traffic and other recreation activities known to impact shorebirds and waterbirds is warranted and critically important to the protection of these natural resources.

Audubon North Carolina, National Audubon Society, Defenders of Wildlife, Southern Environmental Law Center, Natural Resources Defense Council, The Wilderness Society

Vehicle use at Bodie Island

Shorebird Species: Sanderling, Red Knot, Willet, Whimbrel, Marbled Godwit, American Oystercatcher, Black-bellied Plover, Semipalmated Plover, Piping Plover, Wilson's Plover, Western Sandpiper, Dunlin, Least Sandpiper, Pectoral Sandpiper, Stilt Sandpiper, Semipalmated Sandpiper, Short-billed Dowitcher, Ruddy Turnstone, Greater Yellowlegs, Lesser Yellowlegs, Red Phalarope, Wilson's Phalarope, Red-necked Phalarope.

Waterbird Species: Common Tern, Black Tern, Caspian Tern, Least Tern, Black Skimmer, Gull-billed Tern

Key sites that support significant concentrations of migrating and wintering shorebirds include the soundside wet sand and/or mud flats, algal flats, ephemeral pools/ponds, the ocean beach, and the associated ocean intertidal zone associated with Bodie Island Spit, Hatteras Spit, Cape Point, South Beach, and all of Ocracoke Island; and the ocean beach from toe of the dune to ocean water line between Salvo and Avon, Avon and Buxton, Lighthouse Beach to Frisco Village, Ramp 55 to Hatteras Inlet, and Ocracoke Island.

Conclusion

We participated in the Negotiated Rulemaking process, providing information, sharing our expertise regarding beach nesting birds and pedestrian concerns, and extensively discussing the various proposals and counterproposals. We participated and negotiated in good faith. We hoped a consensus alternative could be reached. Unfortunately, there was just too much distance between the proposals from the ORV caucus and the environmental/pedestrian caucus.

As outlined in this document, the threats regarding ORV use and the associated human disturbance are well known, and the steps to address ORV use and the human disturbance also are well known, Implementation of adequate, science-based protection of the Seashore's natural resources is essential to the recovery of species that have declined significantly over the past decade and longer. This is equally critical to sustaining populations of natural resources on the Seashore and leaving these resources unimpaired for future generations.

Audubon North Carolina, National Audubon Society, Defenders of Wildlife, Southern Environmental Law Center, Natural Resources Defense Council, The Wilderness Society

The National Park Service has basic legal mandates that it is required to follow at Cape Hatteras National Seashore, and the law is clear: **When proposed park uses and the protection of park resources and values come into conflict, the protection of resources and values must be predominant.** Likewise, in determining whether there is a conflict, the NPS must use the best available science. If the impacts of actions or activities, such as ORV use or human disturbance, are unknown or not fully understood for some resources, then the National Park Service cannot allow such activities to occur within the Seashore. Furthermore, we believe that failure to protect breeding and non-breeding birds during all life stages, sea turtles, plants, plant communities, and the habitats upon which they depend while they are on the Seashore constitutes impairment of these species (Webster's Dictionary: Impair--To diminish in strength, value, quantity or quality: harm).

We hope the National Park Service will implement an ORV regulation that adequately protects natural resources on the Seashore and we look forward to working with the National Park Service on these matters in the future.

Audubon North Carolina, National Audubon Society, Defenders of Wildlife, Southern Environmental Law Center, Natural Resources Defense Council, The Wilderness Society

The following tables present a balance between natural resource protection and responsible ORV use on Cape Hatteras National Seashore. These are the minimum measures that must be implemented to allow ORV use on Cape Hatteras National Seashore.

Off-road vehicle operation at Cape Hatteras National Seashore

Topic	
Permits	<ul style="list-style-type: none"> - ORV Special Use permit required - Education required - fees should be reasonable and set for cost recovery to include resource management costs necessitated by ORV use. - -

Ramp 70 to 0.25mi west of ramp 72 designated as ORV route. g. 0.25mi west of ramp 72 to 1.25mi west of ramp 72 closed to vehicles with bypass route 10m in width, 75m from mean high water, pass through only, open seasonally from 1 September to 15 March (resource area).

Topic	
	<p>h. Mid-point of Ocracoke Inlet beach to soundside and north toward Ocracoke Village for 1.0mi, including all interior areas closed to vehicles (resource area). Designated ORV route from 1.25mi west of ramp 72 to mid-point of Ocracoke Inlet beach extends only within 50 of mean high water.</p>

Required Natural Resource Protection

Survey Time and Frequency	Piping Plover	American Oystercatcher and Wilson’s Plover	Colonial Waterbirds
All Species	<p><u>Zone of ocean backshore at least 10m wide and running the length of the Seashore is closed to ORV use. This zone should be adjacent to the toe of the primary dune wherever a primary dune exists.</u></p>		
All Bird Species	<p><u>Species Management 1 (SM1):</u> Will use larger, longer lasting buffers with less monitoring to alleviate the need for constant monitoring and frequent fencing changes. Will be applied at all resource areas other than Cape Point and S. Ocracoke. Estimated staffing requirements TBD by NPS.</p> <p><u>Species Management 2 (SM2):</u> Will use smaller buffers and require more frequent monitoring and fencing changes. Will be applied at Cape Point and S. Ocracoke only at the discretion of NPS. Estimated staffing requirements TBD by NPS. This method is less predictable for Seashore visitors, relies on variable closure and opening dates depending on presence of birds, requires additional skilled staff, and requires additional resources.</p> <p>If NPS is unable to survey, monitor, or protect areas as described, unable to implement SM1 as described, or determines that SM1 or SM2 are inadequate to protect natural resources, then NPS will implement USGS Protocol Option A or B for breeding species.</p> <p>NPS is committed to implementing science-based resource protection and management practices. NPS also recognizes</p>		

	<p>that new or additional data, and scientific studies, may indicate that species management and protection actions should be altered to adequately protect natural resources.</p> <p>Disturbance is defined as follows: “Human disturbance is any activity that changes the contemporaneous behavior or physiology of one or more individuals within a breeding colony of waterbirds” (Nisbet 2000). This definition shall be applied to nesting Colonial Waterbirds, Piping Plover, Wilson’s Plover, American Oystercatcher, and non-breeding shorebirds.</p> <p>Dogs are prohibited within 100 meters of all natural resource closures, including all natural resource areas for migrating and wintering shorebirds. Pet restrictions and leash regulations will be strictly enforced.</p>		
<p>Pre-Nesting Surveys</p>	<p>SM1, SM 2: By March 1, all potential habitats will have been evaluated. PIPL prenesting closures will be recommended based upon that habitat evaluation. Those closures will be installed by March 15.</p> <p>March 15 – July 15: Survey prenesting areas at least 3 times per week. Outside of prenesting areas and existing closures, survey suitable habitat 3 times per week; more often if breeding PIPL are observed in the area. If prenest closures allow pedestrian and/or ORV access corridors, survey daily.</p> <p>Survey for Wilson’s plover during piping plover surveys.</p> <p>Prenesting buffers will not be modified in cases where the beach erodes into the buffered habitat.</p>	<p>SM1: March 15 – July 15 survey historic breeding areas (last ten years) at least 3 times per week..</p> <p>SM2: March 15 – July 15 survey historic breeding areas (last ten years) at least 3 times per week. If/when AMOY pairs are observed in an area, survey site daily.</p> <p>As of May 1 turtle staff will observe for AMOYs during daily patrols. Turtle patrol will take over monitoring after July 15th. If pre-nesting closures allow pedestrian and/or ORV access corridors, survey daily.</p> <p>Bodie Island, Cape Point &</p>	<p>SM1: April 1 – July 15 survey historic Least Tern, Common Tern, and Gull-billed Tern breeding areas (last ten years) at least 3 times per week. April 1 – Aug 15 survey historic Black Skimmer breeding areas (last ten years) at least 3 times per week.</p> <p>SM2: April 1 – July 15 survey historic Least Tern, Common Tern, and Gull-billed Tern breeding areas (last ten years) at least 3 times per week. April 1 – Aug 15 survey historic Black Skimmer breeding areas (last ten years) at least 3 times per week If/when CWB are observed in an area, observe daily.</p> <p>As of May 1 turtle staff will observe for CWBs during daily patrols (i.e., survey for CWB while observing for AMOY.) Turtle patrol will take over monitoring after July 15th. If pre-nesting closures allow pedestrian and/or ORV access corridors,</p>

	<p>Bodie Island, Cape Point & South Beach, Hatteras Inlet, N & S Ocracoke Island, and historic nesting areas active in the past 10 years:</p>	<p>South Beach, Hatteras Inlet, N & S Ocracoke Island, and historic nesting areas active in the past 10 years:</p>	<p>survey daily.</p> <p>Bodie Island, Cape Point & South Beach, Hatteras Inlet, N & S Ocracoke Island, and historic nesting areas active in the past 10 years:</p>
<p>Pre-Nesting Buffers</p>	<p><u>SM1</u>: Areas designated as SM1 Resource Areas will not allow ORV or pedestrian access during the pre-nesting period.</p> <p><u>SM2</u>: Areas designated as SM2 may have a narrow ORV (where permitted) and/or pedestrian access corridor until nesting activity (including but not limited to territorial behavior, courtship, mating, scraping, confirmed scrapes, and other breeding or nest building activities) is observed. Standard buffer distances in Table 1 will apply immediately upon observation of nesting activity and will not be reduced to allow an ORV or pedestrian corridor. Pre-nesting closures will be established at all nesting sites active in the previous 10 years.</p> <p>Bodie Island: Due to location of waterbird colonies and shorebird nesting sites, and the location of nesting habitats for these species, the closure of the pedestrian corridor will begin at the northernmost boundary of the pre-nesting closures as delineated in Alt E. Cape Point: North side corridor to be not more than 50m wide; Hatteras Inlet: pre-nesting closure to include all suitable nesting habitat (dune to ocean) and nesting sites active in the past 10 years; S. Ocracoke: established as described above (page 13, revised map 2/13/09); N. Ocracoke: pre-nesting closure to include all suitable nesting habitat (dune to ocean) and nesting sites active in the past 10 years.</p> <p>Deliberate attempts to harass or disturb birds, or vandalize fencing, will result in immediate closure of the corridor.</p>		

	SM1/SM2: In February or March of each year, NPS natural resource staff will conduct an annual assessment of piping plover breeding habitat to plan pre-nesting closures in historic breeding areas that are adapted to current habitat and physiographic conditions. Historic breeding areas will be closed by posting symbolic fencing by March 15 . Closures will be removed if no breeding activity is seen in the area by July 15, or 2 weeks after chicks in the area have fledged, whichever comes later.	SM1/SM2: Pre-nesting closures will be installed by March 15 in areas that had nest(s) in the past 10 years, if habitat is still suitable. Closures will be removed if no breeding activity is seen in the area by July 15, or 2 weeks after the site is abandoned by AMOY or Wilson's Plover, whichever comes later.	SM1/SM2: Pre-nesting closures will be established for CWB by April 1 in areas that had a colony (or colonies) in the past 10 years, if habitat is still suitable. Closures will be removed if no breeding activity is seen in the area by July 31, or two weeks after the site has been abandoned by CWB, whichever comes later. NPS natural resource staff will conduct an annual assessment of colonial waterbird breeding habitat to plan pre-nesting closures that are adapted to current habitat and physiographic conditions.
Courtship/Mating Surveys:	<u>All areas with pre-nesting closures and pedestrian and/or ORV corridors will be surveyed daily from establishment to removal of the pre-nesting closure.</u> <u>SM1:</u> If PIPL, AMOY, WIPL, or CWB are observed exhibiting territorial or courtship behavior in suitable habitat, or if scrapes are observed in the absence of courtship behavior, observe 3 times per week. Survey potential new habitat 2 times per week; increase to 3 times week once birds are observed in the area. <u>SM2:</u> PIPL monitored as described for SM1. If AMOY or CWB are observed exhibiting territorial or courtship behavior in suitable habitat, or if scrapes are observed in the absence of courtship behavior, observe daily. Survey potential new habitat 2 times per week; increase to 3 times per week once birds are observed in the area.		
Courtship/Mating Buffers:	<u>SM1, SM2:</u> If courtship or copulation is observed outside of existing prenesting closure, or inside the closure but within 50 m of the closure boundary, establish or expand buffer to ensure 50 m buffer for the observed birds. Buffer will be increased in 50 m increments if disturbance occurs.	<u>SM1:</u> Outside of existing pre-nesting closure, or inside the closure but within 300 m of the closure boundary, if one observation of scraping or territorial behavior has been documented or if a scrape is being maintained, a 300 meter	<u>SM1:</u> Outside of existing pre-nesting closure, or inside the closure but within 300 m of the closure boundary, if one observation of scraping or territorial behavior has been documented or if scrapes are being maintained, a 300 meter buffer will be established around the scrape locations.

	<p>If nest buffer is less than 75 m observe nesting activity daily to determine if disturbance is occurring. Observations will continue until 50 passages of pedestrians or vehicles within 10m of the closure boundary are recorded. If no disturbance is observed, observations can be terminated. At the first disturbance, buffer will be expanded by 50 m if human disturbance is observed. Observations; observations will continue until 50 additional passages are documented and buffer will be expanded by an additional 50 m if human disturbance occurs again.</p>	<p>buffer will be established around the bird activity. <u>SM2</u>: Outside of existing pre-nesting closure, or inside the closure but within 150 m of the closure boundary, if one observation of scraping or territorial behavior has been documented or if a scrape is being maintained, a 150 meter pedestrian/ORV buffer will be established around the bird activity Courtship site will be monitored daily and the buffer will be adjusted as needed. Buffer will be increased in 50 m increments if disturbance occurs. If, in the judgment of NPS Resources Management staff, a pair has abandoned a territory and established a new territory at another location, the buffer may be removed at the abandoned territory after two weeks with no activity.</p>	<p><u>SM2</u>: Outside of existing pre-nesting closure, or inside the closure but within the buffer distance prescribed below of the closure boundary, if one observation of scraping or territorial behavior has been documented or if scrapes are being maintained, establish a buffer around the scrape location. Buffer will be 100 meters for least terns and 200 meters if the colony contains common terns, gull-billed terns or black skimmers. Colony will be monitored daily as new nest sites are being established and buffers will be adjusted as needed. Buffer will be increased in 50 m increments if disturbance occurs.</p>
Nesting Surveys:	Nesting survey (walk-through to look for nests) conducted every 3 days.	Nesting survey (walk-through to look for nests) conducted when observations suggest a nest is present.	Colonies will be surveyed by foot during the “peak” nesting period which is during the last week of May and the first week of June.
Nest Observation:	<u>SM1</u> , <u>SM2</u> : Observe nests daily	<u>SM1</u> : Observe nests at least 3	<u>SM1</u> : Observe colonies at least three times

	<p>from a distance that does not disturb the birds, based on professional judgment. Approach nests once per week to observe and record data.</p> <p>If nest buffer is less than 75 m observe nest daily to determine if disturbance is occurring. Observations will continue until 50 passages of pedestrians or vehicles within 10m of the closure boundary are recorded. If no disturbance is observed, observations can be terminated. At the first disturbance, buffer will be expanded by 50 m if human disturbance is observed. Observations; observations will continue until 50 additional passages are documented and buffer will be expanded by an additional 50 m if human disturbance occurs again.</p>	<p>times per week from a distance. For incubating birds that cannot be observed from a distance, check nests on a weekly basis (or as staff is available).</p> <p><u>SM2</u>: Observe nests daily from a distance that does not disturb the birds, based on professional judgment. For incubating birds that cannot be observed from a distance, check nests every 3 days.</p>	<p>per week from a distance. For incubating birds that cannot be observed from a distance, check colonies on a weekly basis.</p> <p><u>SM2</u>: Observe nests daily from a distance that does not disturb the birds, based on professional judgment. For incubating birds that cannot be observed from a distance, check colonies every three days.</p>
<p>Nesting Buffers:</p>	<p><u>All species</u>: The park retains the discretion to expand buffers under SM1 and SM2 depending on staffing and bird behavior. In unprotected areas, a closure will be established immediately when a nest with egg(s) is found. When nesting occurs in the immediate vicinity of paved roads, parking lots, campgrounds, buildings and other facilities, NPS retains the discretion to provide resource protection to the maximum extent possible while still allowing those sites to remain operational. Buffers will remain in place for 2 weeks after a nest is lost to determine if pair will re-nest, if no other species nesting in area.</p> <p><u>SM1, SM2</u>: NPS shall not reduce buffers to accommodate ramp access. After July 31, closures will be removed outside of prenesting closures two weeks after all nesting is complete or all chicks in area have fledged, whichever is later.</p> <p>Deliberate attempts to harass or disturb birds, or vandalize fencing, shall result in immediate expansion of the buffer by</p>		

50m for the first act, an additional 100m for the second act, and 500m for the third act.		
<p><u>SM1, SM2</u>: Establish 50 m buffer around piping plover nests occurring outside existing closures. If bird leaves nest due to human disturbance, buffer will be increased in 50 m increments until disturbance is abated. If the nest buffer falls within the intertidal zone a full-beach closure will result.</p> <p>If buffer is adequate to prevent human disturbance, a designated ORV or pedestrian access corridor can be maintained during incubation. During breeding season, pets are prohibited in pass-through corridors or at the points and spits.</p> <p>If nest buffer is less than 75 m observe nest daily to determine if disturbance is occurring. Observations will continue until 50 passages of pedestrians or vehicles within 10m for the closure boundary are recorded. If no disturbance is observed, observations can be terminated. At the first disturbance, buffer will be expanded by 50 m if human disturbance is observed. Observations will continue until 50 additional passages are documented and buffer will be expanded by an additional 50 m if human disturbance</p>	<p><u>SM1</u>: Use buffer of 300 m.</p> <p><u>SM2</u>: Use buffer of 150 m around nests occurring outside of existing closures.</p> <p><u>All</u>: Establish buffer immediately when nest is located. Increase buffer in 50 meter increments if necessary to prevent human disturbance. If the buffer falls within the intertidal zone a full-beach closure will result.</p> <p>For AMOY nests that occur inside a pre-nesting closure at one of the points or spits <u>and</u> requires a buffer expansion of the pre-nesting area, if the nest is lost due to overwash or predation, the buffer expansion shall be removed to the original pre-nesting closure after two weeks with no activity.</p>	<p><u>SM1</u>: Use buffer of 300 m for all species.</p> <p><u>SM2</u>: Use buffer of 100 m for least terns and 200 m if the colony contains common terns, gull-billed terns or black skimmers.</p> <p><u>All</u>: Establish buffer immediately when nest/colony is located. Increase buffer in 50 meter increments if necessary to prevent human disturbance. If the buffer falls within the intertidal zone a full-beach closure will result.</p> <p>Colony will be monitored daily for presence of new nesting activity and buffers will be adjusted as needed.</p> <p>For a colony that occurs inside a pre-nesting closure at one of the points or spits <u>and</u> requires buffer expansion of the pre-nesting area, if the colony is over-washed or predated, the buffer expansion shall be removed to the original pre-nesting closure after two weeks with no activity.</p>

	occurs again.		
Pass-through Corridors during Courtship/Mating and Incubation	n/a	n/a	n/a
Adult Foraging Surveys & Buffer:	Survey suitable piping plover breeding habitat 3 times per week to monitor for adults (with an associated scrape or nest territory) foraging outside of an existing closure. If observe foraging outside of existing closure, survey site <u>daily</u> . If observe foraging outside of buffer on two consecutive surveys, establish or expand the buffer using flexible increments based on observed bird behavior to include foraging site if the foraging area is associated with a prenesting closure. These closures are intended to provide foraging opportunities close to breeding sites. Remove closure if no foraging observed for a 2-week period during the breeding season, or when associated breeding activity has concluded.	No additional buffers/closures.	No additional buffers/closures.
Unfledged Chicks Surveys:	<u>SM1</u> .: Observe brood once daily. <u>SM2</u> .: Observe brood at least 1 hour each in am and pm daily. Have monitor(s) present during periods of ORV or pedestrian access. Observations end once chicks have fledged. Chicks are considered	<u>SM1</u> .: Observe brood at a minimum every other day. <u>SM2</u> .: Observe brood once daily. Observations end once the chicks have fledged. Chicks are	Colonies will be surveyed by foot during the “peak” hatching period which should fall 21 days after initial nest counts. A follow-up survey by foot should be conducted during the “peak” fledge which should fall 20 days after hatch counts.

	fledged at 35 days or are observed in sustained flight of >15 m.	considered fledged if they have been observed to be proficient in flying or observed in sustained flight of >30 m.	<p><u>SM1</u>: Observe colony every other day. Tern and skimmer chicks will often move 100m or more from their colony site, often toward the nearest shoreline.</p> <p><u>SM2</u>: Observe colony daily. Observations end after no unfledged chicks have been observed on 3 consecutive survey days. Closure can be removed after August 31 or two weeks after all chicks have fledged, whichever is later.</p>
Unfledged Chick Buffers:	<p><u>SM1</u>: Establish a minimum 1000 meter buffer on either side of brood based on observation of bird behavior and terrain conditions at site. No ORV or pedestrian access until all chicks have fledged.</p> <p><u>SM1</u>: For the first 2 weeks after hatching, establish a 1000 m buffer for ORVs .</p> <p>Based on mobility of the brood, at the discretion of park management, the buffer can be reduced after the first two weeks to 500 m for ORVs and 200 m for pedestrians (at Cape Point and South Point). Points and spits would only be accessible from 7 a.m. to 7 p.m. as long as unfledged PIPL chicks are in the area and only if prescribed buffers can be maintained. The 7 a.m. opening (shall) be delayed until the chicks have been located. If chicks are</p>	<p><u>SM1</u>: Establish a 300 meter buffer when unfledged chicks are present. Include foraging and roosting habitat from the ocean (low water line) to the dune (or sound shoreline, if applicable), if accessible. Closure would be removed 2 weeks after fledging (observed flight of 30 meters);.</p> <p>The closure will extend for 300m on each side of a line drawn through the nest site and perpendicular to the long axis of the beach. The resulting closure will extend from the ocean side low water line to the bayshore low water line or to the dune line if no bayshore habitat exists.</p>	<p><u>SM1</u>: Use 300 m buffer. If chicks move outside of the buffer, it will be adjusted to include an additional 200 meters from the chick(s) location outside of the closure.</p> <p><u>SM2</u>: Establish a 200 meter buffer around the chick(s) location. Adjust buffer as needed when chicks are mobile. Monitor daily if shoreline in front of colony open to ORV use.</p>

	<p>highly mobile, the 1000 m buffer may need to be maintained. Buffer moves with chicks. Vehicles may be allowed to pass through portions of the protected area that are considered inaccessible to PIPL chicks because of steep topography, dense vegetation, or other naturally occurring obstacles.</p> <p>SM1/SM2: The closure will extend for 1000m on each side of a line drawn through the nest site and perpendicular to the long axis of the beach. The resulting closure will extend from the ocean side low water line to the bayshore low water line or to the dune line if no bayshore habitat exists.</p>	<p><u>SM2</u>: Establish a 200 meter buffer around the unfledged chick(s) location. Include foraging and roosting habitat from the ocean (low water line) to the dune (or sound shoreline), if accessible. Adjust/increase buffer as needed when chicks are mobile. Buffer moves with chicks.</p> <p>The closure will extend for 200m on each side of a line drawn through the nest site and perpendicular to the long axis of the beach. The resulting closure will extend from the ocean side low water line to the bayshore low water line or to the dune line if no bayshore habitat exists.</p> <p>All: ORV access would not be allowed until 2 weeks after AMOY chicks have fledged (observed flight of 30 meters);</p>	
<p>SM1/SM2: Reopen access corridor outside of pre-nesting area after chicks fledge (except for AMOYs where the area will remain closed to ORVs for an additional 2 weeks). Dogs are prohibited within 100m of all natural resource closures established for breeding birds and chicks. Closure can be removed after July 31 or two weeks after all chicks have</p>			

	fledged, whichever is later, except for site with Black Skimmers. At sites with Black Skimmers, closure can be removed after August 31 or two weeks after all chicks have fledged, which ever is later.
Non-breeding / Wintering Survey	<p>NPS will monitor presence, abundance and behavior of migrating and wintering PIPL, AMOY, WIPL, and REKN 3 times per month at the points and spits July 1 through May 31 following the existing NPS winter monitoring protocol. In addition, the International Shorebird Survey (ISS) protocol will be used to document other migrating/wintering species. NPS will document the distribution and abundance of migrating and wintering shorebirds within the Seashore, following the International Shorebird Survey (ISS) protocols.</p> <p>Non-breeding shorebird surveys will begin on July 1 and continue until May 31.</p> <p>Survey sites TBD, but should include Cape Point, South Beach, all inlet spits (ocean and soundside habitats), and selected ocean facing beaches between Buxton and Salvo, Hatteras Village to Hatteras Inlet, and Ocracoke.</p>
Non-breeding / Wintering Areas	<p>Non-breeding and wintering areas will be considered natural resource protection areas.</p> <p>Cape Point and Inlets: An annual migrating/wintering habitat assessment will be conducted at the points and spits by NPS. Migrating/wintering <u>resource closures</u> will be established and will be based on foraging, resting, and roosting habitats used by migrating and wintering Piping Plovers, Red Knots, and other shorebirds in the past 10 years, and suitable habitat types based on the results of the annual surveys. ORV use will not be permitted within 75m of mean high water at terminus of Pole Road, Hatteras Inlet. S. Ocracoke: Corridor passing non-breeding/ wintering ocean beach closure will be pass-through only.</p> <p>Other Areas: To benefit Red Knots, Willets, Sanderlings, Black-bellied Plovers, Piping Plovers, and all other species of migrating and wintering shorebirds, NPS will establish resource protection areas for migrating and wintering shorebirds (open to pedestrians, unless closed for breeding birds or other reasons) that will provide relatively less disturbed foraging, resting, and roosting areas for migrating and wintering birds.</p> <p><u>Migrating/wintering resource closures will be maintained year round. Dogs will be prohibited within 100m of all migrating/wintering resource closures.</u> The following activities are compatible with the non-breeding/wintering shorebird resource protection areas: fishing, beach walking, birding, kayaking, kite boarding, paddle boarding, photography, picnicking, sailing, shelling, stargazing, sunbathing, surfing, swimming, wildlife viewing and wind surfing.</p> <p>The activities listed above singly or collectively could result in disturbance that is incompatible with protection of habitat for migrating and wintering shorebirds. Human disturbance in these areas will have to be monitored and should any single activity or collective activities become excessive (definition TBD), NPS will implement seasonal or additional restrictions on compatible uses.</p> <p>Within 12 months of the implementation of ORV regulations, NPS will initiate a study of migrating/wintering resource areas in cooperation with USGS or major university. Should this study or future research indicate additional restrictions are needed, NPS will implement such restrictions.</p>

Data Collected	Collect data as recommended by USGS (<i>Cohen 2005</i>) and use GPS to document nest locations. Record locations where territorial/courtship behavior occurs, including scrape locations. Estimate where adult and chick foraging occurs. Chicks should never be disturbed to obtain this information.	Collect data as recommended by USGS (<i>Meyers 2005</i>) and use GPS to document nest locations.	Collect data as recommended by USGS (<i>Erwin 2005</i>) and use GPS to document colony locations.
Future Research	Species Management protocols as outlined in this table will not prevent qualified biologists or ornithologists associated with a major university from conducting scientific research that will add to the existing knowledge of species or improve resource protection within the Seashore.		
Goals, Objectives, and Desired Conditions	NPS will develop goals, objectives, and desired conditions of all species of breeding birds within the Seashore, taking into consideration the best available scientific data regarding habitat conditions, historical distribution and abundance of breeding populations, carrying capacity of breeding species, fledging success, and productivity. NPS will work to achieve these goals, which may require additional resource protection measures at some or all locations. NPS will develop these goals in cooperation with USFWS, USGS, and NCWRC.		
Sea Turtles NPS will follow monitoring recommendations in the Atlantic Loggerhead Recovery Plan.			
Survey Time and Frequency	Sea turtle patrol will begin on May 1, unless leatherback nests have been reported within the state, in which case CAHA will follow the direction of NCWRC. Patrol will continue until September 15, or two weeks after the last sea turtle nest or crawl is found, whichever is later. Conduct daily morning surveys by ATV/UTVs and possibly ORVs for crawls and nests on all beaches before public ORV use. Daily surveys for nests end September 15, or two weeks after the last sea turtle nest or crawl was found, whichever is later. Periodic monitoring (e.g., every two to three days) for unknown nesting and emerging hatchlings will continue, especially in areas of high visitation from that date until November 15. Monitoring will also occur for post-hatchling washbacks during periods when there are large quantities of seaweed washed ashore or following severe storm events. Nest observations stop when all nests have hatched or excavation indicates that the nest was not viable.		

	Once a light filter fence is installed, monitor nests daily for signs of hatchling emergence.
Data Collected	<p>Follow the North Carolina Wildlife Resources Commission Handbook and record:</p> <ul style="list-style-type: none"> -Turtle species -Nest vs. false crawl -Location (physical description and GPS location) -If nest needs to be relocated and, if so, why and where (new physical description and GPS location), number of eggs relocated, and time of day -Necessary protective measures for nest and hatchlings -Information regarding any post hatching nest excavation and analysis <p>Examine all nests after hatching to determine productivity rates. Excavate nests in the evening a minimum of 72 hours after hatching event. In cases where hatching events or dates were unknown, unearth nest cavities 80–90 days after the lay date. Any live hatchlings found during excavations will be released after dark on the same day as excavation.</p> <p>For strandings the following will be recorded: species, location, measurements, and signs of human interactions. Samples and photos will be collected when necessary. Necropsies will be conducted when possible.</p>
Nest Closures/ Buffers	<p>Establish a buffer approximately 10 meters by 10 meters with symbolic fencing and signage around nest. Closure size may be modified due to environmental conditions at the nest site.</p> <p>Approximately 50– 55 days into incubation, closures expanded to the surf line. The width of the closure based on the type and level of use in the area of the beach where the nest was laid:</p> <ol style="list-style-type: none"> a. Vehicle-free areas with little or no pedestrian traffic – 25 meters wide (total width); b. Villages or other areas with high levels of day use –50 meters wide (total width); c. Areas with ORV traffic –105 meters wide (total width). <p>Opposite the surf line on the landward side of the closure, expand the closed area to 15 meters where possible, but no less than 10 meters landward from the nest. Pedestrian traffic detours behind the nest area clearly marked with signs and reflective arrows.</p> <p>Where present within closure, vehicle tracks manually smoothed with rakes or a steel mat attached to an ATV, so as not to impede hatchlings attempting to reach the surf.</p> <p>Use light filtering fence behind nests nearing hatch dates to block light pollution from the villages and vehicles operating on the beach after dark.</p> <p>If multiple nests are located near each other (within 150 feet), and have similar hatch dates (14 days), then closures will encompass all nests in the area, and will not be removed until all nests within the closure have hatched.</p>

Night Driving Restrictions	<p>Night driving restrictions will begin May 1st and continue until November 15th.</p> <p>Beach routes will be closed to ORV use from 30 minutes after sunset and will remain closed until nest search by sea turtle patrol has been completed and nests are marked with symbolic fencing. NPS will attempt to open each section of beach as soon as possible each morning.</p>
Nest Relocation	<p>By April 15th, areas deemed unsuitable for turtle nests (i.e. high erosion rate) will be identified by Park staff. Maps and descriptions of these areas will be analyzed by NCWRC prior to nesting season.</p> <p>When a nest is found, staff assesses need for nest relocation and follows relocation guidance identified in the NCWRC handbook.</p> <p>If it is determined the nest will not be relocated, it will be immediately protected with a symbolic fencing and signs and will measure approximately 10 meters by 10 meters in size. Closure size may vary at the discretion of staff due to the environmental factors at a nest location.</p> <p>If a nest is threatened by an imminent storm event, NPS will consult with NCWRC to determine appropriate action.</p>
Light Management	<p>Establish turtle friendly lighting standards and/or reduce light for all Seashore (NPS) structures.</p> <p>Encourage concessioners to install turtle friendly lighting.</p> <p>Develop educational material to inform visitors about their impact on the success of sea turtle nests.</p>
Research	<p>Support research efforts looking at the sex ratios of sea turtles.</p> <p>Respond to sea turtle strandings in a timely manner, and report all information, pictures, and signs of human interaction to NCWRC.</p> <p>Necropsies of strandings will be done when possible.</p>
Seabeach Amaranth	
Survey Time and Frequency	<p>August</p> <p>An annual survey of potential habitat will be conducted. Some bird closure areas may not be surveyed due to the potential to disturb nesting birds. Some areas may not be surveyed until just prior to re-opening an area to ORV traffic.</p> <p>July– September</p> <p>Before opening any species closure or identifying alternate ORV corridors, survey for seedlings/plants.</p> <p>End observations when all plants have died back.</p>
Data Collected	<p>Record location of all individual plants or plant clusters using a GPS and note if the plant is located in an area open or closed to recreational use.</p>

Buffers	<p>April 15 – November 30</p> <p>If a plant/seedling is found outside of an existing closure, the Seashore will erect symbolic fencing with signage creating a 10 meter by 10 meter buffer around the plant. If plants are located next to each other, the area will be expanded to create one enclosure protecting several plants.</p> <p>If a SBA is found during the survey prior to reopening a bird closure to ORV and pedestrian use, the Seashore will protect the SBA as described above and reopen the areas of the bird closure where no plants exist.</p> <p>Areas reopened if no plants are present by September 1. Where plants occur, the closed areas will be reopened after the plants have died.</p>
----------------	---

Table 1. Shorebird / Waterbird Buffer Summary

Species	Breeding Behavior/ Nest Buffer	Unfledged Chicks
	SM1 / SM2	SM1 / SM2
Piping Plover	50 m / 50 m	1000 m / 200-1000 m
American Oystercatcher	300 m / 150 m	300 m / 200 m
Least Terns	300 m / 100 m	300 m / 200 m
Other Species CWB	300 m / 200 m	300 m / 200 m

**Addendum to the Final Report of the Proceedings of the Negotiated Rulemaking Advisory
Committee for Off-Road Vehicle Management at Cape Hatteras National Seashore**

**Trip Forman
Matt Nuzzo**

March 25th, 2009

In conclusion of the Cape Hatteras National Seashore Negotiated Rule Making Process, the **Watersports Industry Association (WSIA)**, Trip Forman and Matt Nuzzo would like to express our thanks in being included in this process and being allowed to share the information that pertains to the sports that we represent including kiteboarding, surfing, windsurfing, sailing, kayaking, swimming, etc.

While the “Reg Neg” Committee may have not reached a unanimous consensus and is viewed as a failure by some, we feel that this process brought an unprecedented amount of valuable information to the table on how the park is used and viewed by each group, and was an excellent opportunity for the NPS to understand the current importance of watersports in the Cape Hatteras National Seashore Recreation Area given the rise in popularity of watersports in this park over the past 30 years.

Cape Hatteras is viewed as one of the top watersports destinations in the world by kiteboarders, surfers, windsurfers, and kayakers. This is not “top destination in the east coast”, or even “top destination in the country”, this is top destination in the world. The current and past world champions in each of these sports visits Cape Hatteras annually, considering it one of their most anticipated trips every year. A short list of these world champions includes **Kelly Slater** (9x World Surfing Champion), **CJ Hobgood** (Former World Surfing Champion), **Robby Naish** (23x World Windsurfing Champion), and **Aaron Hadlow** (5x World Kiteboarding Champion). **Greg “The Shark” Norman** known to all as one of the best golfers in the world, kiteboards in Cape Hatteras several times each year. His son Greg Norman JR is a professional kiteboarder and considers Cape Hatteras his favorite place to kiteboard in the world. Entertainer **Jimmy Buffett** is an avid surfer and fishermen and visits Cape Hatteras several times a year. His reasoning for spending so much time here? The ability to drive out onto the beach, find the perfect wave and relax...

Participants in these sports use ORVs to access the water and the best conditions on any given day. Once their ORVs are parked and cause no harm to the environment. Being the only group at the Reg Neg table that is **IN THE WATER** every day, it should be clear that we value the environment and are conscious of preserving the integrity of the Cape Hatteras National Seashore. Our group is as much or more environmentally conscious than any group at the Reg Neg table, including Audobon and Defenders of Wildlife. Our group is the first to organize and volunteer for beach clean ups, when most environmental groups have never seen our beaches firsthand. We consider the water, waves and wind a natural resource and value them equally with the natural resources on land including birds and turtles. We truly believe and know that there is a plan that can be developed that provides a “net gain” for all users of the park and protects all natural resources whether they be on the land or in the water.

Through the 2.5 year process of Reg Neg (including all pre-meetings), there was a more than adequate amount of time provided to bring forward all relevant data and science. In this time period, there was no science brought forward that was directly tied to Cape Hatteras and little or no time spent on developing a plan or strategy that would specifically increase bird or turtle populations in Cape Hatteras. After this period, it also became clear that the resource “experts” with regards to wildlife science and data were not the provided “scientists”, but the actual ORV user groups including Larry Hardham of the Cape Hatteras Anglers Club who knew (and continues to know) more data about Cape Hatteras turtles than any of the “experts” in the field that were flown in. This is not being presented to throw dirt at the process, but to bring light to the fact that the daily users of the park are the experts with regards to knowing what works and what will not work in Cape Hatteras. We consider ourselves among this group of experts, as we spend every day on the beach and in the water, and have the most knowledge with regards ocean and weather patterns, again specifically to Cape Hatteras, as this is what we live our lives by. We urge that the daily users in these groups are included in any and all decisions where actual “knowledge in the field” will help lead to a productive final plan.

We would like to thank you again for being included in this Negotiated Rule Making Process. It was an honor to be included and we are appreciative of being able to share the information on our sports. We are available 24/7 if any information, advice, data or additional observations are needed. The best way to reach us is through our representative Trip Forman, who is based in Cape Hatteras, on cell 252-305-6596 or email trip@realwatersports.com.

Sincerely,

Trip Forman / WSIA

Matt Nuzzo / WSIA

Biographies for Trip Forman and Matt Nuzzo. WSIA Seat Holders Reg Neg ORV Committee.

Trip Forman graduated from Tufts University with a BA in Economics. Trip is a member of the WSIA (Watersports Industry Association) and a Director for the Outer Banks Chamber of Commerce. Trip has lived on Cape Hatteras full time since 1990, spending time on the beach daily practicing the watersports of kiteboarding, windsurfing, surfing, standup paddleboarding, kayaking, sailing, wakeboarding and swimming.

In 2009, Trip was named among the “Top 10 Most Influential Kiteboarders in the History of the Sport” by Kiteboarding Magazine.

Trip has been or is currently a nationally ranked athlete in the sports of sailing, windsurfing, kiteboarding and standup paddleboarding. During this period, Trip has won the following watersports competitions : Sailing : Laser High School Championships, Around Long Island Regatta (200 miles), Vineyard Race (225 miles), Newport to Bermuda Race (635 miles). Windsurfing : NE Overall Championships, NW Regional Championships, Narragansett Bay Crossing, Buzzards Bay Crossing, Coast Guard Collegiate Windsurfing Championships, Hatteras Wave Challenge, etc. Kiteboarding : Cape Hatteras Freestyle and Big Air Championships. REAL Racing Series. Standup Paddleboarding : Trip was the first standup paddleboarder to paddle the 18 miles of the Charles River in Massachusetts and was 1st overall in the 2008 SEA Around Manhattan SUP Event (28 miles). Trip was the first surfer to “tow surf” the large outer breaks of Cape Hatteras, utilizing a PWC and strapped surfboard in 1995.

Matt Nuzzo graduated from Hobart College with a BA in Geology and a Minor in both Biology and Environmental Studies. Matt is a member of the WSIA and Director for the Hatteras Ocracoke Island Council, a sub chapter of the Outer Banks Chamber of Commerce. Matt has lived full time on Cape Hatteras since 2000, spending time on the beach daily practicing the watersports of kiteboarding, windsurfing, surfing, standup paddleboarding, kayaking, sailing, wakeboarding and swimming. Matt has a longstanding and internationally respected background in watersports instruction, teaching the sports of windsurfing, kiteboarding, surfing and standup paddleboarding. Matt is the featured instructor on the REAL Instructional DVD Series, a 7 DVD series which teaches the sports of kiteboarding and standup paddleboarding, and is distributed internationally, 25,000 DVDs annually. In 2007, Matt was featured on the Today Show teaching Matt Lauer how to kiteboard on National TV.

In conclusion, Kiteboarding Magazine recently voted Matt among the “Top 10 Most Influential Kiteboarders in the History of the Sport”.

Trip Forman and Matt Nuzzo are the Co-Founders of REAL Watersports, located in the village of Waves, Cape Hatteras, NC. REAL employs upwards of 65 people who transplant themselves to Cape Hatteras from as far away as Bulgaria, Australia, Hawaii and Mexico. When the company was founded, Trip Forman was the only full time resident on the island. REAL has since brought over 65 employees annually and 6,0000 students annually (2007 and 2008 figures) to Cape Hatteras, many of these people first time visitors to the Outer Banks. REAL instructs and equips clients with knowledge and gear for the sports of kiteboarding, surfing and standup paddleboarding. REAL hosts the #1 ranked kiteboarding competition in world, the Triple-S Invitational, in Cape Hatteras annually. REAL has been featured on a multitude of mainstream media channels including national ABC, NBC and CBS TV broadcasts, Discovery Channel (2x), Weather Channel, MTV, Nickelodeon, NPR Radio, NY Times, Life Magazine, Outside Magazine (3x), Men's Health (3x), Men's Journal(2x), National Geographic Adventure (3x), and Sports Illustrated. REAL helped the village of Waves be named among the "Top Ten Places to Live in the US for Watersports" in Life Magazine and was named themselves among The "Top 10 Adventure Camps in the World" by Outside Magazine.

Through their experiences at REAL and individually through their own efforts, Trip and Matt have brought an immeasurable amount of mainstream and new tourist exposure to the Outer Banks. They are respected authorities within and outside of their industries. With nearly 30 years of combined first hand contact with the Cape Hatteras National Seashore, they have daily exposure to not only how the beach is used within their sports, but also how the beach is affected by storm events, swell events, long term sand shifting, etc and the wildlife present on these beaches.

The WSIA (Watersports Industry Association) Seat at the Reg Negotiated Rulemaking Committee represents the following Watersports that are practiced in the Cape Hatteras National Seashore:

(In Alphabetical Order): Kayaking, Kiteboarding, Paddleboarding, Surfing, Sailing, Skimboarding, Swimming, Wakeboarding, Windsurfing, etc.

Below are participation figures and economic impact of kiteboarding, surfing, windsurfing and kayaking in the Cape Hatteras National Seashore.

Kiteboarding : Cape Hatteras is commonly regarded among the top 3 kiteboarding destinations in the world and the top destination in the world for learning the sport. Open access, shallow water, endless waves and consistent winds are the four unique combinations of elements that bring kiteboards to Cape Hatteras. Cape Hatteras has been featured as a premier kiteboarding destination on mainstream media channels including ABC, NBC, and CBS national broadcast TV, Discovery Channel, Weather Channel, MTV, Nickelodeon, NPR Radio, NY Times, Outside Magazine, National Geographic Adventure Magazine, etc. There are over 500,000 active kiteboarders worldwide, and this number is growing quickly with kiteboarding being the fastest growing watersport in the world.

Of these 500,000 kiteboarding participants, all have traveled to Cape Hatteras in the past, or will in the near future as the destination is commonly featured in all kiteboarding magazines and videos worldwide. Active kiteboarders travel to Cape Hatteras either 1-4 times annually, for a visit of 1 week up to 2 months in duration, if they must travel a long distance, or every weekend and holiday if they live within an 8-hour drive radius. These visitors spend money on accommodations, food, fuel, equipment, instruction, entertainment, etc. New (beginner) kiteboarders are a growing portion of this group, given the area's international reputation as the best destination to learn the sport. For the vast majority of these beginners, this is their first time to the Outer Banks and this experience then launches them into the above category where they then visit 1-4 annually or every weekend or holiday, depending on where they live. This group also spends money on accommodations, food, fuel, instruction and equipment, entertainment, etc.

Kiteboarding is practiced on both sides of the island (sound and ocean). See attached doc for specific popular areas. The number #1 ranked kiteboarding competition in the world, The Triple-S Invitational, is held in Cape Hatteras, every June and is attended by the world best competitive kiteboarders, men and women, hailing from nearly every country in the world.

Surfing : Cape Hatteras is commonly regarded as the #1 destination for surfing on the East Coast of North America and receives regular international coverage, respect and tourism among all surfers worldwide. Consistent swell, open access to find the best break, and a curved coastline producing offshore winds (better) somewhere along the island are the combination of elements that draw surfers to Cape Hatteras. There are over 20 million active surfers worldwide, whose industry represents \$7.5 billion dollars spent annually.

Cape Hatteras is the host of the ESA (Eastern Surfing Association) Championships, held at the Cape Hatteras Lighthouse annually in the month of September. This contest receives international coverage and has given birth to many internationally successful and ranked professional surfers including 9x current world champion Kelly Slater.

Surfers travel to Cape Hatteras for trips ranging from 1 day in length (day trip, no overnight), up to weekends, full weeks, several weeks and full seasons. Surfers spend money on food, fuel, accommodations, instruction, equipment, and entertainment. Independent economic surveys conducted in Trestles, California (San Clemente) and also Rincon, Puerto Rico proved that surfers allowed access to open beaches (versus development or private/closed beaches) produce more income and economic advancement to the surrounding community than any private operation or development can produce on its own with the same property. This survey was then used to halt development around Trestles and Rincon, where free and open access is still in place to this day. Cape Hatteras holds similar status to Trestles and Rincon on the international level, and the surfers that travel to Cape Hatteras bring similar economic benefits.

Surfing is practiced for the entire length of the Cape Hatteras National Seashore. The most popular areas are listed in the attached document.

Windsurfing : Cape Hatteras is widely regarded as the top destination for Windsurfing on the East Coast of North America and receives regular international acclaim and tourism from around the world. There are over 450,000 active windsurfers worldwide. Windsurfers are drawn to Cape Hatteras for the open access, consistent wind and waves, shallow water and moderate temperatures. Windsurfers travel to Cape Hatteras for weekend trips, full weeks and full seasons. They spend money on accommodations, food and fuel, instruction and equipment, entertainment, etc. Windsurfing is practiced on both sides of the island (sound and ocean) and is most popular at the areas listed in the attached document.

Kayaking : Cape Hatteras is widely regarded as one of the top kayaking destinations in North America and is the host the annual Ocean Kayaking National Championships event held in September at the Cape Hatteras Lighthouse and the southside beaches of Frisco. Cape Hatteras receives mainstream coverage related to kayaking on a regular basis. Total participants in recreational kayaking are estimated to be over 3x that in recreational surfing, therefore 60 million participants worldwide. Of all the Watersports practiced in the Cape Hatteras Seashore, this is the one that has penetrated nearly every medium income level or above family home in the world with numbers closing in on bicycling. This increased number of participants is caused by

the sport being more accessible to a wider user group and also more family oriented. Kayakers are drawn to the Cape Hatteras National Seashore for open access, moderate air and water temps, shallow water for learning, shelter from wind due to shape of island, and the Atlantic Ocean's waves. Kayaking is practice on both sides of the island (sound and ocean), for the full length of the seashore, with the most popular areas being listed on the attached document.

Cape Hatteras National Recreation Area Watersports Locations

This list is a brief account of ramps and locations for popular watersports in the Cape Hatteras National Park and surrounding areas. For further information, please contact Trip Forman at 252-305-6596 or trip@realwatersports.com.

TOP Locations for Watersports

Kiteboarding Soundside : Kite Point, Salvo Day Use Area, Soundside Ramp at MM 46, Sandy Bay/Isabel Washover, Turnouts north of Avon (#1 and #2, plus Little Kinnakeet Life Saving Station).

Kiteboarding Oceanside : Cape Hatteras Lighthouse Jetties, The Cove/Point Ramp 44(south facing beach at Cape Point), Ramp 55, Sandy Bay Ocean Access, Hatteras Inlet, Hatteras Inlet Ocracoke North End, Ramp 34, Ramp 38, Ego Beach Oceanside across from Haulover Day Use Area, Ramp 49, Ramp 23, Ocracoke Airport Ramp, Ocracoke South Point.

Surfing : Cape Hatteras Lighthouse Jetties, S-Turns/Mirlo Beach (need a parking solution here), Rodanthe Pier , North of Buxton Motels (used to be a parking lot here), The Cove/Point Ramp 44 (south facing beach at Cape Point), The Cove /Campground (other side of the bay in The Cove), Frisco Pier, Frisco Bath House, Ramp 49, Hatteras Inlet, Ramp 23, Hatteras Inlet Ocracoke North End, Ocracoke Airport Ramp, Ocracoke South Point.

Windsurfing Soundside: Canadian Hole/Haulover, Sandy Bay, “Vermont Hole” soundside turnout just north of Haulover, #1-3 Turnouts north of Avon, Salvo Day Use Area.

Windsurfing Oceanside : Cape Hatteras Lighthouse Jetties, The Cove Point (south facing beach at Cape Point), Sandy Bay Ocean Access, Hatteras Inlet, Ramp 34, Ramp 23, Ego Beach Oceanside across from Haulover Day Use Area, Ocracoke North Ramp 59(near Hatteras Island Ferry).

Sailing Soundside: Haulover Day Use Area, Salvo Day Use Area, 1st Turnout North of Avon.

Kayaking Soundside : Haulover, Kite Point, Salvo Day Use Area, 4 turnouts north of Avon (1st turnout thru Little Kinnakeet Life Saving Station), Sandy Bay, 1st turnout north of Buxton, Bodie Island Lighthouse.

Paddleboarding Soundside : Same as Kayak Soundside.

Paddleboarding Oceanside : Same as Surfing.

Kiteboarding Kites vs Recreational Kites

By Trip Forman WSIA

I saw the recent post on Cape Cod regarding kiteboarding and wanted to pass along the information and experience we gained from Negotiated Rule Making Committee and Process in Cape Hatteras, North Carolina, which ended in February of this year.

My alternate, Matt Nuzzo, and myself held one of the 30 seats on this federally appointed committee. Our seat was assigned to WSIA, the Waterports Industry Association. This is a nationally based non-profit organization of which Matt and I are both members. Our seat represented the interests of waterports enthusiasts who live in or travel to Cape Hatteras including surfers, kiteboarders, windsurfers, paddleboarders, kayakers, sailors, wakeboarders, swimmers, etc. Prior to us getting involved in this 2.5-year process, there was nobody representing these sports and interests. There were 14 fishing and 4wd groups, and 14 environmental groups. Our acceptance onto this committee gave us the position of representing those “in the water” where all the other groups seem to represent those “on the beach” whether it be pro access or pro conservation.

While we were extremely disappointed that the Reg Neg Committee did not reach a consensus agreement on how the NPS should move forward with their new ORV plan, we do feel that this time has been used in a positive way. Prior to this process, the NPS had only superficial level of information on how the park was used by each user group. During this 2.5-year process with 30 recognized experts representing each user group, the NPS has now gained invaluable information on how the Cape Hatteras National Seashore Recreation Area is used by each of its respective user groups. For instance, as we worked our way down the NPS maps, our input for each location would shed light on which break was good for surfing, which beach was good for kayaking, where the kites like to go and where they don’t like to go, and which beaches we were willing to lose in order to gain others. It is also during this process that we introduced the difference between a recreational kite and a kiteboarding kite.

There is language in all NPS Guidelines referring to “kites”, and over the past 5 years we have made several presentations to the NPS showing the differences between kiteboarding kites and recreational kites and this has been presented not only as an example, but as proven fact. Environmental concerns view recreational kites as a hazard to birds because the birds view them as “birds of prey”. If you go to a beach and watch an 8-year-old child playing with a stunt kite you will see why they have come up with this theory. The kite swoops through the air at a high rate of speed, often flapping or making noise, and often imploding into the ground (crashes). Many times children would, or could fly these kites into areas closed on the beach for sensitive wildlife. When you look at when these words (kites) made it into NPS language, and how they are used, it is obvious that they are referring to recreational kites (1 line, power kites, 2 line stunt kites, etc), like what is described above. While many of you may disagree that anyone should be

able to fly a kite anywhere, you can also see how this would be a nuisance to birds and could actually scare them away.

The difference that we presented to the NPS is that kiteboarding kites physically CAN NOT be flown in a similar fashion to recreational kites on land. They are simply too powerful and create too much lift. It is physically impossible for a kiteboarding kite to go through those same swooping motions, those same dives and those same climbs while the rider(flyer) is on land. The kiteboarding kites are also inflated with air (the bladders that hold the air cost around \$800 for a set of 6) This cost alone, keeps kiteboarders from crashing their kites on land, for financial fear of having to replace these bladders.

Then, how are kiteboarding kites used you ask? More in the way a windsurfer uses their “rig” or a sailor uses their “sails”. Kiteboarders are trained to rig and launch near the water’s edge so that the power of the kite pulls them towards the water. Kiteboarders prepare their gear, launch their kite, but keep it low and near or over the water. They then proceed directly into the water, where they begin kiteboarding, in the water. The entire time they are on land, the kite has little or no movement, and more closely resembles a cloud than a bird of prey. We use the similarities to windsurfing and sailing because that is what they do also. They rig near the water and then go into the water to practice their sport. Just as windsurfers can’t “fly their rigs” on the beach, kiteboarders do not “fly their kites” on the land. The kite is rigged, launched and then the rider goes into the water to practice their sport.

It is for these reasons, kiteboarding kites do not fall under the “recreational kites” umbrella that many people misunderstand them to be. This information was clearly presented during the Reg Neg process showing these differences and that kiteboarding kites do not affect wildlife in a negative manner.

March 16, 2009

Attention: Michael Murray, National Park Service
 From: Matt Walker, Senior Editor, Surfing Magazine
 RE: Maintaining access on Cape Hatteras

Dear Mr. Murray:

Although I already spoke publicly on the access issue currently involving Cape Hatteras, I feel it is important to offer a written account of my views in hopes they can help in your decision-making.

As a lifelong East Coast surfer, Outer Banks resident — and as Senior Editor of *Surfing* magazine — I cannot overemphasize the value of Cape Hatteras to surfers, as well as waveriders of every kind. Not only is this area responsible for grooming some of the sport's greatest athletes (please see the letters below), it serves as a “Mecca” for whole families of surfers who enjoy the power and quality of the waves and the pristine coastline. There are literally millions of surfers to whom just the name ‘Hatteras’ is a word of magical reverence; both their first ‘surf trip’ and most beloved returning point. And for the small band of lifelong residents like myself — teachers and principals, business owners and church leaders — these waves are the sole reason we moved here, and the sole reason we will continue to stay. Furthermore, of any piece of the Atlantic Seaboard, Hatteras alone can claim an international reputation for being a surfing epicenter. It is not just important; it is irreplaceable. Or as Kelly Slater says below, it is “sacred.” Please, when you make your decisions, do not underestimate the area's impact on surfing culture at large.

Likewise, do not underestimate surfers' impact on Hatteras. While I regret I can't offer more specific information about surfers' use of the park itself, national studies show surfers spend more time in the ocean than any other recreational user; as a result, we care more about the health of the ocean and its beaches. It's surfers who pick up litter and fishing lures. It's surfers who speak out against polluters. And though surfers spend hard dollars to surf their favorite waves, we also put the value of a robust coastal ecology above any monetary revenue. (Again, I believe the letters I've pasted below are evidence of that, as both professionals replied within a matter of hours, despite being in Australia for the opening day of their competitive season.)

That being said, we are not alone. Fishermen, shell hunters, surfers, kayakers, sunbathers – we are all beach lovers by nature. And, when it comes to protecting Cape Hatteras Seashore, we are its greatest defenders and stewards. We will not change our tune because it's “better for business.” We will not reverse stances because of a corporate donation. For this reason alone, I beg you to remember the role of humans as the most important line of defense in keeping developers and polluters from having their way with Cape Hatteras. As a diehard environmentalist, I'm ashamed of this lawsuit, which has done little more than make an enemy of the environmental movement, turning away valuable allies for fights that will one day affect us all. If we want to make sure that there's coastline to enjoy 30 years from now, we need to be sure humans can fully enjoy the activities that make the ocean and beaches dear to them right now. Otherwise, when a issue comes along that threatens our coastal environments, there will be nobody around remembers or cares enough to try to defend them.

Please consider these important elements when making your decision; please think long-term and consider what will serve the greatest good of the park for centuries to come. Humans and ecology can thrive together when they try.

Thank you,

Matt Walker
Senior Editor, *SURFING*
Resident, Kill Devil Hills

LETTER FROM CJ HOBGOOD

The 2001 ASP World Champion, CJ Hobgood and his brother, Damien, are considered two of the greatest surfers in the world. They developed their skills, in part, by surfing the beaches of Cape Hatteras:

The first thing my brother and I did when we signed our first pro contract ten years ago was buy a house in Avon. And we did it for one reason: the waves. Their power. Their quality. Their variety. And the freedom to enjoy them all. That freedom and access is the whole reason people come to the Outer Banks. Please consider all of those elements when you're making your decisions. And keep the Outer Banks special.

*Sincerely,
CJ Hobgood
2001 World Champion*

LETTER FROM KELLY SLATER

What I just said about CJ, you can multiply by nine for Kelly Slater – literally. A holder of nine world titles — five more than any other surfer — and every Association of Surfing Professional record, Mr. Slater is the sport's most accomplished competitor and the greatest modern surfer since Duke Kahanamoku introduced the sport around the globe in 1914. I don't expect you to understand the nuances of surfing, but if Tiger Woods said one of his all-time favorite and most influential golf courses was in Cape Hatteras, you would take him at his word. I'm asking you now to do the same. (On a more personal note, Kelly is so busy I sometimes email him regarding an article requiring his immediate input and don't hear back for two weeks; yet, when he heard surfers might lose access to one of his favorite breaks on the planet, he replied within hours. And he will do it again whenever Hatteras is threatened):

I'd have to say it'd be absurd not to think of beaches and waves as natural resources right alongside oil, minerals, fish, and birds. The resource is used as a pleasure, necessity or business for everyone on earth. Surfing is used as all three things. Not only that, we surfers bring to light many of the issues that arise with regards to pollution and erosion concerns. There are no better people for the job as it is inherently connected to our everyday lifestyle.

The good fortune we've all had of being able to have access to surfing all the beaches along the shores of the Outer Banks has created many life long memories for tens of thousands of surfers

and families who enjoy the area for all of its different resources. Many of the surfers I've been there with over the years are avid birdwatchers (which I find funny) and almost all of them are fishermen. Any day without surf is quickly filled with fishing and a freshly caught dinner.

I truly hope that surfing and waves and their beach access is equally considered in the decisions regarding the Outer Banks future. The Lighthouse has stood as a symbol of East Coast, and US, surfing since I can remember and is Mecca for easterners and all US surfers alike. Please consider this fact when determining the future of our sacred destination.

Sincerest Thanks.

Kelly Slater

9X World Surfing Champion, FL Native and long-time Hatteras visitor

Attn: Mike Murray, Superintendent, National Park Service Outer Banks Group
From: Marcus Sanders, Editor, Surflines.com
Subject: ORV/Pedestrian Access Plan, Cape Hatteras National Park and Recreation Area

Dear Mr. Murray:

I'm sure by now you've heard from many surfers how important Cape Hatteras is to the America's wave-riding community, recognized internationally for its consistency, wide variety of surf spots and treasured history. More than any other East Coast surf zone, it remains the 'go-to' destination for anyone in search of powerful waves and a unique, natural beach experience. I'm confident you are also aware the area is home to a thriving local surf industry encompassing dozens of businesses that depend on its annual influx of surf-enthusiasts. Simply put: when the Outer Banks has good waves, the whole world wants to be there. And I think the following statistics from Surflines.com ~ the planet's leading online surf reporting and forecasting source ~ help clarify just how much of a focal point Cape Hatteras remains.

First, North Carolina is our 7th most visited state with 515,000 unique "visitors" in 2008. And of the 759,547 page views attributed to our North Carolina "webcams" last year, Cape Hatteras accounted for nearly half with 327,000, while nearby Nags Head ranks next at 108,000 -- and that's just the surfers keen to find out the immediate conditions. What about the surfers who want to know what the waves will be like inside the next few days? Our Outer Banks forecast pages received 362,000 page views last year. Furthermore, our recent "Outer Banks Spot Check" ~ a feature discussing the ins and outs of ensuring the best trip possible ~ received 48,718 views at last count.

But perhaps the most important stat is not where or why we get the most traffic -- but when. We actually see a massive spike in numbers ~ approximately 4 to 5 times the normal daily traffic ~ during hurricane season, which I understand is roughly the same time period as the proposed closures. That means 80% percent of those previous viewers are hoping to surf Hatteras at the same time their favorite spot may prove inaccessible.

These aren't just numbers, Mr. Murray. They represent hundreds of thousands of living beach lovers who value Hatteras as much as any surf location on the planet ~ spending more hours in the ocean than any other user ~ yet leave the smallest impact on the beach itself. They park, they surf, and they go home, leaving nothing behind. Every single one the ideal example of a life-long steward of coastal ecology. Please consider all these elements when you are finalizing the access laws for Cape Hatteras National Park and Recreation Area.

Thank you for your careful consideration of this important issue.

Sincerely,

Marcus Sanders

Attn: Mike Murray, Superintendent, National Park Service Outer Banks Group
From: Matt Pruett, Editor, Eastern Surf Magazine
Subject: ORV/Pedestrian Access Plan, Cape Hatteras National Park and Recreation Area

Dear Mr. Murray,

Cape Hatteras dictates my life. Having ridden my first wave there, at Frisco Pier in 1985, the barrier island provided a magical escape route from all the childhood tribulations I experienced coming from a broken home in Virginia Beach, VA. From that point on, I made it a paramount goal to call the Outer Banks my home. When I was 17, I did just that, where those sandbars ultimately shaped my educational and career paths. I enrolled at the University of North Carolina at Wilmington, where I majored in English-Creative Writing, which led to my current career as a surf journalist, largely due to my expertise on Outer Banks surfing. And, from a waveriding standpoint, there is absolutely not a more iconic destination on the entire Eastern Seaboard than Hatteras.

For over 40 years, the ESA Eastern Surfing Championships have brought hundreds of competitors, spectators, and industry fixtures to the small town of Buxton, along with hundreds of thousands of dollars of revenue in a single week each year. And within the multibillion dollar surf industry as it stands today, these shores remain a preferred target for world-famous professional waveriders seeking the most powerful Atlantic swells meeting their most emphatic endpoint. Meanwhile, the Outer Banks has produced its own share of pro surfers including international icons Jesse Hines and Noah Snyder, Fuel TV host Matt Beacham, and Buxton native Brett Barley.

In 2001, I took my current job as the editor of Eastern Surf Magazine — the longest-running and most popular East Coast surf publication, currently celebrating 18 years in business. I've written hardcover books, directed videos, given extensive lectures, and contributed to nearly every major surfing publication, domestic and international. None of this would have been possible had it not been for the Cape Hatteras National Seashore and the spiritual, cerebral, and metaphysical effect the place had on me as a young man and a writer. And though I now live in Melbourne Beach, FL due to my job's location, to this day my fondest memories are of surfing Hatteras' shifting sandbars with close friends and family amidst a truly idyllic natural seascape. In my lifetime, I have traveled to Indonesia, Costa Rica, Barbados, El Salvador, Puerto Rico, Hawaii, Mexico, Nova Scotia, and Samoa for surf, and I still consider Cape Hatteras to be the most beautiful place on earth.

I can understand this issue is one of maintaining balance: a balance between conserving a natural resource and allowing the many loving user groups to enjoy its continued survival. My only wish is that, when making the ultimate decision over how to handle long-term access to the Cape Hatteras National Seashore's many resources, you fully recognize how important these relatively few miles are to surfers. Because to us, this is more than just a skinny little stretch of isolated sand; it's a hugely inspiring piece of our culture, crowded with countless individual stories like my own.

Save access to Cape Hatteras Surf Breaks!

We, the undersigned:

Recognize the unique ecological, recreational and economic value of the Cape Hatteras National Seashore.

We further recognize that beaches are a public resource and should be held in the public trust for their preservation.

We recognize that the Cape Hatteras National Seashore provides some of the best recreational resources on the East Coast, including surfing and fishing.

We recognize that if not regulated correctly ORV use may detrimentally affect migratory species that nest in the area.

We believe that a balance between access and preservation can be achieved and that allowing continued access with improved management of ORV use to the National Seashore is the optimal solution for this area.

We request that the Park Service study and utilize a wide range of solutions besides closures; ones that benefit the animal species while guaranteeing humans can continue to enjoy and protect this most-precious coastal resource for years to come.

SaveCapeHatteras REAL

From: Chuck Hardin [whitecapws@hotmail.com]
Sent: Monday, March 30, 2009 12:59 PM
To: SaveCapeHatteras REAL
Subject: Keep our access to OBX beaches!
Attachments: image001.jpg

I have a watersports business and I travel from Georgia to the Outer Banks twice a year with at least a dozen customers each time. If access to the ocean-side beaches is significantly restricted – by vehicle or foot – I'm sure we would immediately cease coming there. WE are the ones who care about the condition of the beach, water, and wildlife we find there.

Trip I just received this info from our Surf Rider club . We here on Saint Simons Island , Georgia hope its not too late for our comments .
We are a group of Surfers , Windsurfers , Kiteboarders , Cat Sailors , Divers and Fisherman who want fair and intelligent decisions to be made on this matter .
We all Love and Respect our environment and would do nothing to cause harm to it .
This is our LifeStyle and our Life
We travel to the Outter Banks twice a year to enjoy and respect this rare beautifull and special place .

Thanks

To: SaveCapeHatteras REAL
Subject: Surfers Beach access in Cape Hatteras

It has come to my attention that access to the beaches in Cape Hatteras may be in jeopardy due to threats to wildlife habitat. I can assure you surfers, windsurfers, and fisherman are the ones that need to be on the beaches as they have a vested interest in preserving clean, safe and wildlife friendly beaches. Please keep the beaches accessible and we will pledge to continue to take care of it.

Sincerely,

Danny Johnson

I am wondering if this is to shut down all accesses to 4 wheel... The Oregon inlet is a major place for people to come hang out and relax during the summertime, Alot of people come to Fish, Surf and just have family day. I say those rights should be preserved. Is there a way that the birds can be looked after for nesting relocation?

Thanks,

Sam Oakley-- Hometown "D.C." Currently residing in Wilmington, NC

Kelly Oakley--Hometown "Richmond, VA" Currently residing in Wilmington, NC

We permanently lived several places on the island for many years. We absolutely adore its people, its beauty, and respect its fragility. We are amongst those that enjoy traveling the beach by vehicle, as that is what its forefathers had to do to survive. Like many others out there, we respect the beach and all of its wildlife to the fullest. There are so many more people that respect it, than trash it. If we can learn to educate others, I am sure that we can decrease the levels of destruction and ignorance.

Thank you for your time and consideration,

Kelly Marie Oakley

SaveCapeHatteras REAL

From: Michael P. Okuley [michael@okuleygroup.com]
Sent: Friday, March 27, 2009 3:22 PM
To: SaveCapeHatteras REAL

Importance: High

Do not make the mistake of preventing us from enjoying our beaches...the human factor is not contributing to reduction in birds or turtles...I have been on the Hatteras beaches for almost 40 years and I have seen nothing but respect for nesting grounds and dunes. I have never ever been to Hatteras and not seen tons of birds and waterfowl both on the ocean side and sound side, regardless of human interaction. If this goes through it will be damaging to the local economy.

If it does go through then I expect the same rule of law to be applied to Daytona and everywhere else that someone can drive on the beach!

From: ewolverton@aol.com
Sent: Friday, March 27, 2009 2:03 PM
To: SaveCapeHatteras REAL
Subject: save the waves

I have been looking forward to returning to Hatteras for a few years. I scored solid waves for a week camping at Billy Mitchell and surfing the nearby breaks. I met a few cool locals who took me to some out of the way spots. I hope these breaks will remain open. Closing these areas will affect the local economy and without direct proof that this will solve the problem, it is a reckless approach to take. If I can help in any way, please contact me at ewolverton@aol.com. Thanks for standing up for the rights of all outdoorsmen.

Just a friendly word of advice, it would be more effective to have people send in letters with some small part altered. They are forced to count these and will help to flood the Congressman's mailbox or whatnot.

I'm sorry but I don't know enough about the issue to sign the petition. You don't say for what time period the limits are being placed. A seasonal limit may be a better alternative it just depends on the situation. I'm glad you have the passion to protect your beach as you see fit. Just please understand that they are trying to protect it too.

Take care,

Liz R.

Sent: Thursday, March 26, 2009 7:35 PM
To: SaveCapeHatteras REAL

To whom it may concern,

I am writing this letter out of concern, dismay and overall shock that the Audubon Society is even CONSIDERING closing access to Cape Hatteras and the surrounding areas. What is even more concerning is that these beach closures do not even seem to be a legitimate solution to the endangered wildlife situation. When human contact accounts for such a small portion of the animal mortality rate, it is unethical and completely unfair to restrict ORV and foot traffic to these areas as a means to remedy the situation. You are ruining a healthy recreation for a large portion of people that hold this area extremely sacred. Please be sensible and consider all options when finding a solution. There is certainly a way to be fair to wildlife, local business, fisherman and surfers/ocean enthusiasts alike, and I urge you to strike a balance and find that solution. Thank you for your consideration.

Hi,

My name is Michael Brisson and I am from Boone, NC. Please include my name in any kind of fight against restricting beach access on the Outer Banks due to the Piping Plover.

I have grown up surfing on the outer banks, particularly at the old lighthouse. Please don't take this from the citizens of North Carolina and the U.S. alike!

Thanks and good luck!

From: Dave Humphries [dhumphries@cytekdev.com]
Sent: Thursday, March 26, 2009 5:43 PM
To: SaveCapeHatteras REAL
Subject: Save Hatteras

Hi-

My name is David Humphries, grew up in Fairfax, VA, currently live in San Francisco, CA, and lived in Avon, NC on Hatteras Island for a short portion of life. It is there I fell in love with the beach, ocean, environment, and surfing. This was when I was 19, relatively late in life to spawn a dedication to the ocean that I currently live and will continue until the day I die. I can't imagine living more than 30 minutes from the beach for the rest of my life, and wandering up and down the beaches on Hatters, from Frisco and Billy Mitchell, to Pea Island was what created this bond for me. Hatteras is magical, where humans can get lost down the beach with just them and nature, and surfers can connect with this simply natural world at many peaks from Oregon Inlet to Hatteras Ferry. And the ability to explore on the beaches of Hatteras Island was exactly what brought me to appreciate and care for other environments and oceans of the world. And access to these areas on Hatteras is important to the proliferation of environmental appreciation, awareness, and conservation for Hatteras itself and the rest of the world. Now I reside in Northern California where we consistently get waves in many popular and desolate locations, but every year I am hungry to return to Hatteras at least once to grab my board and wander down the hot sand in search of a new place to connect with that environment once again. This is something that is unique to Hatteras and needs to be protected and preserved.

Hatteras has given me this love, and I must stress the importance of keeping Hatteras open so others can experience this love for the environment as well.

-Dave

Subject: Hatteras

I have personally gone to Cape Hatteras for over 35 years, owned a home and spent many good times with my children there. I am all for protecting nature but the stats tell the situation, predation and weather are the enemy and even that has a fault. Interfear with the balance of Nature by eliminating predators and you may cause other problems. Hatteras is our place and our tax dollars go into running it. By keeping people out you will ruin people business and lives that have been there for many years. Tell the wildlife nuts to look at the facts.

Sent: Thursday, March 26, 2009 1:56 PM
To: SaveCapeHatteras REAL
Subject: Save Cape Hatteras

As a life long surfer and one who started going to the Cape H back in 1978, I fully support the multiuse philosophy of all open park areas. Limited protection of all species is certainly required in this day, but only based on hard facts proving that such finite closings bring about the results intended. I would agree complete closure to the Cape area is unwarranted. The area of the Cape has long been know for its over wash in storms and extreme high tides. Nothing survives out there on a long term basis. For years, that I can recall, isolated closing throughout the Federal Park seemed to work best in providing protection to migratory species and still allow for public use to 95% of the area with no proven defect to the protected populations.
Keep the access open.

Thanks

SaveCapeHatteras REAL

From: Richard E. Quintilone II, Esq. [req@quintlaw.com]
Sent: Thursday, March 26, 2009 1:41 PM
To: SaveCapeHatteras REAL
Subject: Save Cape Hatteras- Lake Forest (Orange County) - CA 3.23.09

Dear Mr. Forman:

As a former Virginia Beach resident, I can attest that the Cape Hatteras Lighthouse and surrounding area is one of the best surfing, body boarding and fishing sports in the US. The water is clean and clear and the beaches are perfect. It's hard to imagine how "11 pairs of piping plovers" should restrict access since their breeding habits and population seem to fairly stable for the last 20 years, even without these restrictions. It seems the turtles had a good year overall, so why do we need additional government restrictions?

Out here the environmental advocacy groups have pursued matters to the detriment of local business and property owners without thought or care to the economic impact of the residents and human population. Businesses fail, schools close, homes are torn down? They seem to care only about the perceived noble objective of removing the human access to the same area humans and nature has played together for years. The residents of the Outer banks need to become more politically involved before they find themselves in a virtual sea of regulation, rules and arbitrary fines like beach owners and the public of California are already facing.

Similar to the environmental wrangling of the Outer Banks, the entire US public is blindly walking into the "Cap and Trade" regulation trap, which would set a limit, on carbon dioxide emissions from fossil fuel use, though not paying attention to the specifics: the stringency of the cap, the number and type of companies covered, the ground rules for allocating and trading allowances, and other details. Can you imagine the costs to small business if they had to pay a tax for the copiers? Small restaurants on their gas ovens? In the very likely event that Cap and Trade legislation becomes a reality, it will significantly raise domestic manufacturing costs and that developing nations refuse to impose similar restrictions, the American economy will experience the continued outsourcing of manufacturing jobs to those nations with lower energy costs who could "care less" about pollution controls.

While protecting the environment is our duty as citizens, it should never prevent people from earning a living. I hope and pray that the interests of the people impacted by further government regulation are not overlooked.

Hey, I've been surfing that area since '89 and suddenly there is all this hype about protecting something they can't really protect. For true surfers, it is an area of what snowboarders refer to as "backcountry", because you can drive on the beach and have your own break. Don't mess with something just because you can or you have nothing else to do. Save the barrels, not your stupid ego! I'm here all week...

Subject: Save the surf breaks and the birds

There is a way to responsibly protect these species of concern while still allowing the citizens (humans) to enjoy this National Seashore. Compromise is always the better answer and that should be fought for. We must view dilemmas like this on a larger scale and not get stuck in a narrow field of vision.

Save Cape Hatteras! I grew up in Winston-Salem, NC and have been to the outer banks and Hatteras several times. It is a beautiful place that does not need closing. Closing the beaches is not going to save a bird! Nature will do what it wants without any regard for surfers in the ocean. Besides, if government regulation has ever helped 1 THING, please let me know what. Everything you touch turns to crap overnight, leave the beaches to the people you do not own them!

Subject: Please keep Hatteras access open

I have enjoyed camping, fishing and surfing at Cape Hattera's beaches for the last 25 years. I have a 6 month old son and cant imagine not being able to expose him to the same experiences, it just will not be the same without vehicular and pedestrian access to the best fishing and surfing spots in the area. Our family is stewards of the outdoors and seek to preserve wildlife whenever possible, whether in our oceans, forests, or beaches, and we sympathize with the plight of the plovers and turtles but after reading the facts of this particular issue it seems that the positive impact of closing down beach access would be negligible, especially in light of the potential impact to local businesses which allow for easier access to the otherwise isolated Outer Banks.

Sent: Thursday, March 26, 2009 10:30 AM
To: SaveCapeHatteras REAL
Subject: Save Hatteras for surfers

Hello my name is Alex Maciolek, and I am just one of the many east coast surfers(hometown Cape May NJ) who have looked their whole lives at Cape Hatteras as a symbol of east coast surfing. I was just informed of the plans to shut down huge chunks of beaches, known previously by all as world class surf breaks to protect plovers and wildlife. I have nothing against the defenders of wildlife, because I am one myself. But with the little time I have at the moment to convince you of the importance of these beaches to surfers, I hope I can influence your opinion. The most important issue to realize is that 99.9% of surfers don't come into contact with / or affect plovers or any wildlife while on the beach. Along with realizing this, people must understand that there must be another way to make this work, that will benefit everyone and everything in the end. The current processes fail and everyone can see they do not work and are not working. So please look and both points of view and work to find a better solution that seems possible. This "One Way Only" process of doing things needs to change for everyone including mother earth to see a happy future.

Subject: Humans are a species Too!

To those responsible for the decision to allow beach access.

My name is Christopher King. I am 53 years old I reside @ 12010 Woodsman Roar Bishopville Maryland 21813.

I first visited Hatteras/ Buxton my freshman year of college with my parents in 1974.

I have vacationed there with my own family many times. We enjoy fishing, surfing and the beaches.

Some day I would like my grandchildren to enjoy the natural wonderful experience of Hatteras.

I do not wish to bring harm to anything or body. Man is not the only factor endangering the wildlife on the island. I feel we need to share the island . Designate areas for their protection from man and natural predators.

Man is a species too. We should be allowed to enjoy the splendor and beauty God has given us on Pea Island/Hatteras.

Sincerely

Christopher A. King

Subject: Stop the madness

I am a 50 year old surfer, originally from VB with ancestry in Hatteras. I visit every year from Hawaii to vacation and see friends and family. Personally if I can't surf and surf cast, I and others will likely not spend our money there with this restriction in place.

Aloha,

Archer Green

Subject: For Crying Out Loud!!!

To whom it may concern-

My name is Nick Walsh and I am currently a graduate student at Georgetown's McDonough School of Business. I grew up in Charleston, South Carolina and have been making the trek to the Outer Banks to surf since I was seven years old. It would be a travesty to ban the very people that care the most about the eco-system from a such a sacred ground. It appears that public inhabitants have very little to no effect on the wildlife at question; thus I find it both confusing and un-found to place a restriction on this area. The argument is arbitrary and ridiculous.

I pray that the courts find this appeal as preposterous as many of us do and that the Outer Banks can return to its quiet, uncontroversial, and magnificent ways. SSSUUUUURRRFFFF!

Regards,
Nick Walsh

From: Jerry McNamara [mcnamara.jerry@gmail.com]
Sent: Wednesday, March 25, 2009 9:55 PM
To: SaveCapeHatteras REAL
Subject: Save the Cape! thanks for your efforts!

I've grown up in Boca Raton, Fl and spent the past 10 summers in Martha's Vineyard. (currently reside in norwalk, ct)

The plovers inhabit and breed along the southern shores of Marthas vineyard every summer. These beaches are closed to over sand vehicles during periodically during the summer to protect them at this critical time but remain open to pedestrian traffic. As surfers and lovers of all things natural, especially in our sanctuary (the beach, its dunes and wildlife included) we are not the enemy of the plovers and should not be targeted as such by those seeking to protect the birds.

In business there is the 80/20 rule. 80% of your profits come from 20% of your customers therefore leading one to target efforts at this key group...targeting 2% of the cause is a waste of time, money, and controversy. Protective efforts elsewhere are oozing opportunity.

Keep the Cape Open!

- Jerry McNamara

Trip, thanks for all your effort. I have not had the opportunity to surf these amazing breaks and look forward to the day.

Name: Chris Shearin
Hometown: Newport News, Va.

Current residence: Lake Tahoe, CA.

Homeowner: Kill Devil Hills, NC – Colington Harbor

North Carolina doesn't seem to have as much tourist draw as many places in California. The Outer Banks are very appealing to the 100's of people I have talked to about taking a vacation to OBX partially because I mention that you can drive on the beaches, have a picnic, listen to music and take a dip or surf in the ocean to cool off. If you take that away, it's like making gambling illegal in Nevada. Why would anyone go to Nevada if gambling wasn't legal. The same applies to OBX if you make beach access illegal on Hatteras.

Good luck with the fight, let me know how I might be able to contribute.

thanks

My name is Kyle from Jacksonville Beach Florida and I would like to protest the movement to close portions of Cape Hatteras beaches. Surfers are the biggest environmentalist on this Earth and they are so without any bounds or outside propagated forces. They don't have any other agenda then to protect the ocean which is our playground and the beaches and environment that surround the ocean. People who take part in water sports are more connected and grounded with mother nature than any other group of people. Human beings should be able to co-habitate with any other species in any place there legs will take them. Did anybody ask the birds and turtles their opinion on the matter? Chew on that for a bit.

Thank You

Subject: Save Cape Hatteras

Hello,

I am originally from Newport News, Va. I spent every summer working in Kill Devil Hills, NC from 1980-1990. I currently live in Denver, Colorado. I travel back to the Outer Banks 2-3 times each year. My main reason for coming back to the Outer Banks is surfing. I have a family of 4 and spend anywhere from \$1,000.00-\$3,000.00 on each trip back. I am supporting the airlines, the rental car companies, restaurants, surf shops, retail stores and liquor stores. If there was no quality of surf on the Outer Banks, I would only travel there 1 time each year to visit family. **PLEASE DO NOT ALLOW OFFSHORE DRILLING.** We can not drill our way out of our current mess. It is a stupid, short sighted plan. We are a smarter nation than that. Do not let the promise of short term dollars, ruin the quality of life for our children and grandchildren. The "Big Oil" propaganda machine has made otherwise intelligent people, into morons, believing everything they see on their "IDIOT BOXES"

I will participate in any event to help the cause.

Subject: Surf Trip

I was saddened to hear surf access to Cape Hatteras was under assault. After surfing on the east coast of SC for ten plus years, I have never been to Cape Hatteras for a surf trip, but seem to threaten to make the trip every year. Being a business owner and family man, it is hard to get away and I tend to go to Costa Rica when I can get away. As a serious surfer, living in SC and not yet surfing Hatteras is no ones fault but mine, but it would be ashamed not to have that as an option. It is a surf trip I am saving. I hope it is not too late.

Subject: Do not close the beaches!

To whom it may concern:

I am writing to request that you considering keeping the beaches open. First, I believe that the people are more important in this instance than the wild life. What about the locals who have lived there all their lives and made their living off the people who come to use the beach? Do they deserve to go out of business at this time in our world's economy? Next the birds will go some place else to nest if people are truly in their way. I live in Wilmington, NC but grew up in Manteo. Here, we rope of the turtles' nest and the people are still allowed on the beaches. The people respect the turtles roped off nest. All does just fine. We have to figure out a way to co-exist w/nature not completely take nature away from man. I cannot believe that anyone would consider taking the wonderful experience of that beach away from us! Please reconsider!

Sincerely yours,
Angie Fentress

Subject: Hatteras access

As an attorney who surfs and lives on the East Coast, access to Hatteras and Pea Islands is imperative. My friends and I relish every opportunity to surf any part of the Outer Banks, and have since we first surfed there in the early '90's.

Thoughts of escaping the Piedmont region for some weekend waves on the Outer Banks keeps me planted in North Carolina. With limited access to the Banks and ever-increasing crowds in the limited surf spots in southern NC, my dreams of raising a surfer family in North Carolina are diminishing. I fear this may be the case for many in my position. It's a scary thought that future generations will not be able to make the rite of passage trip to Hatteras and Pea Islands. A thought I would not want to impose on any groms, mine or otherwise.

Subject: Beach Access Closures

hi,

My name is Andy Togni from Falls Church, VA. I strongly support the notion of keeping the OBX beach access to OVR's. It allows for surfing, swimming, and fishing wonderful spots while getting some tranquility in. If they close the beach access in the south beaches, they are dooming all business owners and home owners and banishing them north or off the OBX altogether. this is short sighted legislation that reminds me of our economic recovery plan, in regards to poor planning, no net affect, an no real positive outcome for anyone. Thanks

Andy Togni

I'm from Jacksonville Florida but spent time lanlocked in Richmond Va. I made the 4 hour drive many, many trmes to surf and enjoy the beautiful natural environment of the Hatteras area. The beaches and great waves kept me sane sometimes. I live in Kamakura, Japan now but in May will move to Virginia again. I have kids now and I want them to enjoy the freedom and wide open beaches of the Outerbanks as I have. I hope that you will consider keeping the all the beaches of the National Seashore open to everyone. Thanks

Ron Wilcox

Don Kindle
Huntington Beach, CA

Surfers are among the most environmentally aware people in the world. We are dedicated to preserving the sanctity of our oceans and beaches because we as individuals have witnessed the power, beauty and magic of mother earth as we face the surf and wildlife that inhabit the water. To create new policy that will restrict surfers from such a classic surfing destination is simply the wrong strategy. If we are to preserve the environment around Cape Hatteras, the Audubon Society should embrace the surfing community and not banish them. With this proposed decision, they are alienating a group of people that could be of great use to their causes in the future. The idea to restrict surfing and other benign water sports from the area is too broad of a stroke. The surfing community would undoubtedly join in the fight to preserve all wildlife in the area. That way, humans that live in harmony with the energy of nature may continue to coexist with the other species of Cape Hatteras. That way, the local wildlife gain a group of guardians. I have no doubt that surfers would consider this a worthy stewardship.

Hello,

My name is Jonathan Wyman. I just read about the closing of beach areas in Hatteras on Surflife. I hope that I am not too late to get my name on the list. Ever since I started surfing 15 years ago Hatteras was my dream destination. Every year my family and I would travel to Hatteras and spend a week or more on those beaches. When I got a little older and moved out of my parents house and into my own in Virginia Beach Hatteras became my local break. I would make the 2 hour or so drive on a regular basis just to catch some of those dream waves. Now due to my job I am living much farther away in Knoxville TN. This still does not stop me from making the trek to OBX on a pretty regular basis. Now my wife is about to have our first daughter and I want the OBX to be a place where I can take her and teach her how to catch the legendary waves that I had the chance to ride. Please do not close down the beaches. Thank you so much

Jonathan Wyman

Subject: Friends!!! Help save access to our favorite spots on the Outer Banks

Hi friends...Let me apologize in advance for including you in this e-mail. But this is an urgent matter I thought to forward to surfer friends and friends who believe in unrestricted access to the ocean and the wonderful recreation it provides us. See www.surflines.com/surf-news/spend-30-seconds-now-----score-another-30-years-surfing-cape-hatteras-take-a-break-to-save-one_25228/ (Please forward to anyone you feel may be supportive)

This is absolutely an appalling display of misinformed governmental zealots. Since 1986 the Outer Banks have marked a very special place in my life as a wonderful arena to enjoy surfing, windsurfing, sailing and simple beach-going. As ocean lovers we all understand the need to carefully protect and respect Mother Nature. If done thoughtfully, we can co-exist with the piping plover while still being able to enjoy the beaches and maintain total unrestricted access while protecting the wildlife that exists on these incredible spots. These blind and absolute approaches by government officials to limit beach/ocean access must cease.

We, the local resident, outside visitor, surfer, fisherman and beachgoers are the ones who quite literally put food on the tables of these self serving bureaucrats. Speak up and speak out. WE MUST BAND TOGETHER AND STOP THE INSANITY.

I grew up surfing in Ocean City New Jersey and my parents still have a home on the north end of the island. I am 36 years old and plan on surfing till I die. As a group, most surfers care for the environment we play in and take our part in protecting it. Some of my most memorable waves have been found driving along the beach, "in the search" along the capes national shore. To have this taken from us would be a shame and absolute nonsense.

Pray for Surf and Freedom,

Michael J. Rodgers

Subject: SAVE THE CAPE!!!

My name is John Wolfe, and I'm a surfer from Raleigh, North Carolina. Please keep Hatteras open! It is truly the best break on the East Coast, and it's here in Carolina! Maybe we can compromise with them, though. Saving the wildlife is just as important to me as surfing, so if we could reach an agreement that would please both sides, that'd be great. Maybe something along the lines of only closing it during the nesting season, and keeping it open when the hurricanes come through for the surfers.

Just a thought! Save the Cape!

Thanks,

John

Subject: beach

I have surfed Cape Hatteras and the surrounding areas since 1973, long before all the individual special interest group people were even born or groups formed. Closing off this area will not serve anyone and I surfed Cape Point when it was not available to very many unless you had 4WD and a sense of adventure. I am all for keeping the environment as clean as possible along with serving all the animals but this proposal is as crazy as any I have ever seen. Nothing will get better if this proposal is enacted.

TWIMC:

This is Jeff Blake, a Pocomoke City, MD native now living in Los Angeles, CA. I took my first surf trips to the Outer Banks as a teenager and returned dozens of times throughout college as the founder and president of the University of Maryland Surf Club. The club still takes two annual trips to the Outer Banks to this day. You have my support to try to come to a solution that will have minimal impact to the people who make that place their home, or their sanctuary.

Even though, I live in the Eastern Sierras in California (Mammoth Lakes) I grew up surfing the East coast were my family and I spent many family vacations. I have read on surfline the claims that reducing or eliminating civilian traffic would not help the species of wildlife involved here. Let's do more research before we remove a destination for surfers all over. As a surfers we are all interested in saving the planet and everything that lives on it. It helps us all out, but before we go and create an over-zealous plan, let's collect and review all the facts.

Thank you,

Tommy Starkweather

Subject: Friends!!! Help save access to our favorite spots on the Outer Banks
Attachments: image001.gif

Hi friends...Let me apologize in advance for including you in this e-mail. But this is an urgent matter I thought to forward to surfer friends and friends who believe in unrestricted access to the ocean and the wonderful recreation it provides us. See www.surflines.com/surf-news/spend-30-seconds-now----score-another-30-years-surfing-cape-hatteras-take-a-break-to-save-one_25228/ (Please forward to anyone you feel may be supportive)

This is absolutely an appalling display of misinformed governmental zealots. Since 1986 the Outer Banks have marked a very special place in my life as a wonderful arena to enjoy surfing, windsurfing, sailing and simple beach-going. As ocean lovers we all understand the need to carefully protect and respect Mother Nature. If done thoughtfully, we can co-exist with the piping plover while still being able enjoy the beaches and maintain total unrestricted access while protecting the wildlife that exists on these incredible spots. These blind and absolute approaches by government officials to limit beach/ocean access must cease.

We, the local resident, outside visitor, surfer, fisherman and beachgoers are the ones who quite literally put food on the tables of these self serving bureaucrat. Speak up and speak out. WE MUST BAND TOGETHER AND STOP THE INSANITY.

Subject: Keep Beach Access Open!!

Dear Realwatersports.com,

I just want to let my opinion be known that I hope that they keep the beach access open. I am from Richmond, Virginia and have been surfing since for the last 15 years. I have relative that live in Ocean, New Jersey; Va.beach, Virginia; Wilmington, North Carolina; Emerald Isle, North Carolina; and Jacksonville Beach, Florida, but that being said nothing comes close to nor have I been to any of those places more often than the Cape Hatteras area. When the waves get good and all the known spots are packed sometimes the only refuge is those beach so that you can find your own break or even if there is no waves at all and you just want to find a quiet spot on the beach with just your friends. I have tried to spread the word through my blog (<http://www.retrospectivesports.blogspot.com/>) and word of mouth. Thanks for taking the lead on this issue and I hope for a good outcome in favor of us. Keep up the good work.

Hello,

After just reading what potential harm that could be done to the beloved region of Cape Hatteras, I feel that my voice needs to be heard. Knowing my name and my voice only stand for one person, I feel as if my memories of the place could stand for hundreds. From placing in the finals at my first large contest, ESA Eastern's and taking my first road trip, to even my first legit barrel. Not to mention all the great people that I have meet in the water at the beaches of which are in danger of closing to all surfers and pedestrians alike. I hope that you can reconsider what the effects of the decision of closing off the beaches would do. I only hope that I can share more memories at the beaches of Hatteras for many years to come. Thank you.

Sean Poynter

I learned to surf in my home state of NJ. Cape Hatteras was always the Mecca, and I went there a few times back when I was living in NJ. Since then I've moved away and surfed Hawaii, Costa Rica, Panama, CA, and others. After over 25 years I went back to Hatteras last year. The place still has the magic. Surfing is tough enough for us East Coasters; let's do our part so it doesn't get any worse.

Hi,

My name is David Holloman, I am a doctor at the Medical University of South Carolina. My home town is Virginia Beach, Virginia and my current place of residence is Charleston, South Carolina. I (like thousands of other east coast surfers) have considered the Outer Banks as part of my backyard since I was 5 and my uncle (who lived in Buxton, NC at the time) pushed me into my first wave at a break near the Coast Guard base. The outer banks is always the place that I am trying to get back to (my dog is even named Buxton as a constant reminder) and I hope that I will still be able to enjoy all of the beaches of the Outer Banks for years to come.

Thank you,
David Holloman

R. Thomas Musgrave, Wall Township, NJ

Personal insight - Ive been going to Hatteras for years since I was old enough to surf and fish, I'm 33 now. Some of my best and most fun memories include surfing and fishing the unlimited beach there. The best parts, and the main reason we would go, was for the freedom of driving on the beach with all the awesome access and finding a place to ourselves to spend the day surfing and fishing. I recently returned last fall and observed the damaging effects the bird protection was having on the local atmosphere. It was a bummer that we could no longer access our favorite spots. It was also a surprise, as I was unaware of the access restrictions before planning the trip. Now that I am aware of possible restrictions I will check the status next year and possibly change my plans. Me and my family hope for everyone's sake, that access restrictions are discontinued.

Best Regards

Subject: OBX
Attachments: image001.gif

I am a resident of Melbourne Beach, Fl. The very spot where the 'Goods and the Slates are from. But, for my entire teenage and young adult life I was a resident of Oak Island, NC. I spent at least 3-4 weeks every summer traveling up to the OBX and camping, surfing and fishing every year for at least a decade. Let me tell you, we have stories of waves, flat spells, and parties and fishing that you could hear from thousands and thousands of people just like me. It is an absolute wrong doing to take anything away from the surfing and fishing community of the OBX. You will hurt the village's income by killing the tourism. People will go somewhere else if they are blocked out of where they like. I don't know 1 fisherman or SURFER that would in anyway intentionally harm a bird or a turtle. If by chance they unintentionally harmed one of these creatures they would more than likely take the action of calling a park ranger. After all, you are a national seashore with people employed to do such things. I VOTE NO ON CLOSING THE BEACH ACCESS AT ANY TIME.

My name is Rory Byrd and I grew up in Virginia Beach, VA. Every summer since I was a young boy my family would go down to the Outerbanks to camp and spend time on the beach. It was the highlight of my summer being able to ride shotgun in my dads truck down the beach as he was trying to find the best break. I cant imagine an Outerbanks where I cant ride down the beach creating memories with my kids. I have been making the drive to Hatteras for almost 15 years now, but if the beaches are closed down, I dont see why I would have a reason to travel down there. Plesae SAVE CAPE HATTERAS!!!!

Sincerely,

Rory

Subject: National Parks

To whom it may concern,

The Cape Hatteras National Seashore. One of the many areas of our country deemed geologically, ecologically, and aesthetically important to be included in our National Parks Service (NPS). The purpose of the NPS is to conserve and preserve historical, cultural, and environmental areas of our country for use by its citizens and visitors. The great appreciation of the ~400 NPS sites, by the people of this country, is what keeps the maintenance of these pristine and natural areas afloat.

Eliminating access of people to any one of our National Parks, particularly Cape Hatteras, is a complete mistake. Limiting and prohibiting off-road vehicles does have some merit. But the access of individuals is exactly what keeps these parks open and operating. As with any operation, there must be a cost benefit analysis, no visitors means no income or revenue. Therefore, how can we justify spending money on an area to preserve it, if it does not generate any money. Furthermore, visionaries like John Muir and Teddy Roosevelt are responsible for founding the NPS. Their ideology was simple: Provide access to unique and natural areas to the people of this country, and they will in turn appreciate those areas, and future generations would develop a sense identity with their homeland. What would the Grand Canyon be if we could not see it? Would the Great Smokies and Blue Ridge Mountains hold such a image of grandeur if it were not for the Appalachian Trail or multitude of camp sites throughout the aforementioned mountain ranges?

My family has lived in the Hampton Roads area of Virginia sense the 1930s, and my grandparents, parents, and myself have spent countless nights along the Cape Hatteras Seashore. I consider the Outer Banks and the Chesapeake Bay my back yard. The Chesapeake Bay is in much worse shape than Cape Hatteras, but you do not see anyone limiting access to it. In my youth I had a hard enough time with the locals for "surfing their break". The last thing I need is the Audubon Society telling me I cannot appreciate my favorite National Park.

Although I live in southern California now, I grew up surfing at Wrightsville beach, Topsail Beach and Cape Hatteras. It is essential that environmental protection of certain species has to be in balance with other needs as well. We cannot have tunnel vision in these cases. Protect your birds , turtles, etc. and keep the beaches open for surfing , fishing and beachgoers.

>

>

> Without going into too much detail or history, right now a huge chunk of this 'mecca' faces being shut-off because of an overzealous lawsuit by the Audubon Society and Defenders of Wildlife, claiming to protect turtles and ten bird species (piping plovers being the primary concern). Closed not just to Off-Road Vehicles (aka 'beach driving'), but pedestrians, as well. In some cases, the breaks threatened are among best waves around; in others, they can be the only rideable spots for hours. And from now through August, you might not get within miles of them. Furthermore, these restrictions could remain in place for the next 30 years, despite the following facts:

>

>

>

> 1. 90- 98% of the mortality rates attributed to the animals is due to predation and weather - not 'human contact' (which includes everything from ORVs to loose dogs.)

> 2. Of the 21 documented ORV-related plover deaths in the US, 20 were committed by federal vehicles; and no deaths have been documented in Cape Hatteras.

>

>

> 3. Humans actually scare off the very predators that are killing the bulk of the birds.

> 4. The increased closures have produced no increase in local animal populations whatsoever.

>

> Trip Forman, one of the owners of Real Watersports in Rodanthe, represented surfing, kiteboarding, and the every other water sports activity over two and half years of meetings between pro- and anti- access groups, before they officially finished last month. His take?

>

>

>

> "The number one thing killing everything on Cape Point is storm overwash and predation. Those two are responsible for between 90 and 98 % of the losses. So they're focusing their whole recovery plan on 2% to 10% of the problem. And anyone who runs a business or some other project will tell you that the 90% to 98% is where you focus your time and effort. We're on the very southern edge of the plover recovery plan, of which we're a single digit percentage. So a national park is being closed to citizens in defense of a micro-percentage of a species that - while it's making a comeback in its other habits - is having no difference right here either way. We want the birds to flourish. We want the turtles to flourish. But the problem with this process is nothing's flourishing. So what we want is for the park to look toward this situation with a 'net gain' approach: find a way where the wildlife gains, the users gain, and the businesses gain. We believe there's a way to do that."

>

>

>

> With the meetings over, the next step is for park officials to determine which areas to keep open and which ones to close seasonally. They've already heard from thousands of fishermen, birdwatchers and other beach-lovers speaking up for their favorite spots. Now we need thousands of surfers to speak up for theirs. We're not asking anyone to sacrifice eight hours of your day and hold up a protest sign; all you need to do is send your name and hometown to this email: SaveCapeHatteras@realwatersports.com

>

>

>

> Trip will include them all in his final submission to the park on March 25. If you happen to have some positive personal insights, feel free to include them; and if you happen to be a pro surfer or industry big wig, please put your title, as well. Remember: No 'plover-hating.' The whole purpose here is to clarify to decision-makers just how important surfers are to Cape Hatteras as lifelong coastal stewards -- and how important Cape

Hatteras is to surfers lifestyles and livelihoods.

>

>

>

> And how important is that? Well, somewhere between accepting his ninth world title and beginning his assault on number 10, Kelly Slater - the busiest man in the sport, at the busiest time of the year - took a minute to stand up for what he considers one of the most important waves on the planet. All we're asking is for you to do half that much.

>

My name is David Lane, I live in Mammoth Lakes ,CA.

I was born in Virginia Beach in 1972, I lived in VB for 18 years, I grew up learning to surf fish with my father and grandfather on the beaches of the Outer Banks. We spent many of summers down there as we had a cottage on the currituck sound, surfing the beaches of Pea Island and the freedom of responsible beach driving provided an adventure that many areas of the east are lacking due to the expansive urban sprawl, even on the outer banks. The experience that the beautiful beaches of North Carolinas' Outer Banks provide the people of our country is unique and should be protected for the peoples enjoyment in its historical manner of use that has presided over this area.

Thank you,

David Lane

From: Cooper, Andrew [Andrew.Cooper@henry.k12.ga.us]
Sent: Tuesday, March 24, 2009 9:40 AM
To: SaveCapeHatteras REAL

I just recently visited Cape Hatteras for the first time and surfed there in November. I was not only struck by the area itself and it's beauty, but also by the wonderful locals that I met at all the restaurants, surf shops and haunts that I frequented while in town. These people were concerned about their livelihood, their way of life and how this access issue would affect them and their children. When I thought about it, I could honestly say that I wouldn't make the ten hour drive if I didn't have access to the surf. These people's lives would be cut off in the place that they loved because I would definitely not be the only one not making the trip. That made me really sad.

From an outsider looking in, there has to be a better way. It seems that the Audubon Society has an agenda, and perhaps this runs much deeper than any of us can imagine. You can look out for the people and the animals at the same time. The people that I met on my trip were stewards of their community, people who respected the pristine piece of the world that they lived on and were about conservation. Why would you put this entire community out of business?

Andy Cooper

Subject: Save Cape Hatteras!

Name: Katy Capella

Hometown: Pennsville, NJ

While not a native to Cape Hatteras, I am a native to the East Coast and Ocean City, NJ happens to be my surf spot. I took my first trip to the Outer Banks in the summer of 2008 and it was the experience of a lifetime. From the locals, awesome surf breaks and just general peace and quiet of an area not completely overrun by tourism, it was just a great experience that I was able to share with 10 of my closest friends. It would be an absolute atrocity to take the beach away from the people who enjoy it most. And that list isn't limited to just surfers...Just everyone who appreciates the beach and the East Coast for what it has to offer for a limited time each year.

Save Cape Hatteras!! We only have so much, why take it all away?

Regards,

Katy

Hey,
good luck, hope this helps. It seems there must be a sensible solution. This reminds me of what the folks in West Yellowstone, MT have and are going through with snowmobiles and access to the park. Maybe worth contacting someone out there for their input/advice. Let me know if I can help and thank you for what you are doing.
best regards,
Scott Sevast

SaveCapeHatteras REAL

From: larry camp [larry.camp@comcast.net]
Sent: Tuesday, March 24, 2009 8:37 AM
To: SaveCapeHatteras REAL
Subject: Hatteras is important to me

I'm now a middle-aged, irregular surfer who lives about 8 hours away from the "Entering Cape Hatteras National Seashore" sign. That sign, which instantly lowers my shoulders and blood pressure, yet raises the pulse with excitement at what the day, or weekend, or week, or month will bring. Earlier in life, I lived much closer to Hatteras and spent most weekends there surfing, eating, and camping at Cape Woods or Frisco Woods campgrounds. Most of my recreation time is now spent racing and riding cross-country mountain bikes and skiing with my family, as I can see mountains from my new town.

Since moving here, we've looked at other summer places to try to avoid the long drive to Hatteras. Beaches in MD, DE, and NJ have all been suggested. People would say things like "LBI is sort of like Hatteras, or well, it's the closest you can get in NJ..." We tried once, to spend our time and money in Ocean City, MD, and we couldn't wait to leave. Now, we don't even think about it, we just assume that the first day and last day of our trip will be spent in the car, burning precious and expensive fuel, time, and money, knowing that Buxton and Frisco are worth just about anything to us. Now, we bring kids, friends, cousins and anyone else we can, to show off the beauty of Cape Hatteras.

I'm hoping for a win-win-win resolution to the beach access, bird, habitat, business, and wildlife issues. They are all equally important. I hope to have 40+ years left on this globe, maybe even get to see grandchildren surfing at First Jetty, Pea Island, S-Turns, or Frisco Pier. The last 20 of those years just might all be spent on Hatteras Island. If I'm still allowed to walk on the beach.

Please work for fairness,
Sincerely,
Larry Camp
Pennsylvania

My name is Brian Hyre. I live in Encinitas Ca. but grew up in Virginia. I learned to surf in a little coastal village called Cape Hatteras. I spent a lot of great times on Pea Island with my family and friends. It would be a shame if other people weren't able to experience the sun setting over the sound or the feeling of lonesness surfing a peak by yourself. Good luck, the Outer Banks are what I miss about the east coast.

To: SaveCapeHatteras REAL
Subject: Beach Access Closure!

I cannot believe that capital of beach access (OBX) would ever limit us from the very qualities that bring so many of us there in the first place! The tranquility, wildness and natural beauty (not to mention the waves) are the reason that the outer banks and hatteras are one of the best beach areas in the country. Not allowing access to something that I and my family and so many other families grew up appreciating and respecting would certainly be a tragedy.

I am very opposed to any restrictions on public use of the Cape Hatteras beaches!

sincerely,

Benjamin R. Leech

Subject: Save Hatteras

From: Lee Deakyne
Smyrna, DE 19977

To Whom It May Concern:

As a surfer who travels to Hatteras at least once a year, I hope a way can be found to keep the access to the beaches of the park open. Having seen sea turtles, rattle snakes and all types of wildlife on my trips, Hatteras is a unique landscape that should be shared by all. I know as a surfer, I have always respected the marine environment that has provided me with the great sport of surfing. Having driven on the beach for years I understand that rules must be followed. Given the proper guidelines I think both man and nature can share this great landscape. On a recent trip, a snake was crossing the paths behind Cape Point and I was easily able to stop and yield to allow him to pass by driving in a responsible manner.

I also know the people of this great area depend on surfers, fisherman, birdwatchers and many others to come to Hatteras for the great getaway it provides. I know our family has spent thousands of dollars over the years with businesses such as Sun Realty and Midget Realty and many of the local restaurants. Our trips have always been some of the best vacations we have taken.

Please keep an open mind and keep the beaches as open as possible. Man and nature can share this great resource!

Sincerely,

Lee Deakyne

SaveCapeHatteras REAL

From: Stevens, Matthew Patrick [mps6772@uncw.edu]
Sent: Monday, March 23, 2009 9:40 PM
To: SaveCapeHatteras REAL

Matthew P. Stevens

Hometown - Wilson, NC

College - UNCW

I have worked with wbsurfcamp for the past 2 summers and open beach is something that is needed to maintain water-safety among new surfers. With surfing growing more and more popular every year it is important that beaches stay open so beginners do not paddle out front and aggravate locals, pros, and whoever else may be in the water.

Not only is it important that beginners have an area to surf in a comfortable environment (no crowds) everyone is aware that fishing along the National Seashore is prevalent in the Fall. Although it would be nice if we were all mature adults keeping fisherman and surfers apart will keep everyone mellowed out while closing large amounts of beach will lead to more probable controversy between surfers and fisherman.

Education should be the number one tool to solving this problem. Programs for locals and visitors to become more environmentally aware and proactive would me a more realistic alternative to closing beaches to pedestrian traffic in order to help replenish the bird and turtle populations.

Sincerely,

Matthew Stevens

To: SaveCapeHatteras REAL

To Whom It May Concern,

My name is Jason Hamrick and I currently reside in Gastonia North Carolina. I know, you're thinking – must be a Hatteras perma-vacationer. I can tell you that Hatteras has been responsible in some way for every major event in my life. I grew up in Shelby NC and never saw Hatteras until my Freshman year of college at ECU - where I met several VB locals who introduced me and mentored me into what I now consider my sanctuary. My experiences on the Outer Banks (the scattered peaks accesible only by 4 x 4 predominantly) shaped my perception of surfing. It led me to pick up and move away from everything I had known before and move 3,000 miles across the country to Carlsbad, CA. I lived on several streets around "The Village" - all within 3 blocks of the Carlsbad State Beach (Tamarack, Cherry, Chinquapin) from 1999 until 2008. Because of Hatteras not only did I move to San Diego, I found my fiance and now have 2 beautiful children that were born in San Diego. In 2008, having indulged myself for 10 years in the consistant S.D. surf, we made the decision to move back to North Carolina (with a promise to my S.D. fiance that Hatteras was as close as a drive to Steamer Lane - but with 1/10 the people and better beaches). We have been to and stayed in Hatteras for a total of 3 weeks since our return and will be wed there on September 19th, 2009. We obviously plan on continuing our semi-annual pilgrimage - if we can continue exploring the beaches there on Hatteras Reserve. Shutting off these areas will be massive in our long term decision to either stay here in NC or return to S.D. (closer to her family). My children are happy here, as are we - but being able to provide them access to the pristine sands that I knew 15 years ago is paramount in the decision. Thank you for championing this cause and thanks to Surfline for being keeping us united in our efforts to perserve our pastime.

*Sincerely,
Jason Hamrick*

From: jim buche [jimbuche@hotmail.com]
Sent: Monday, March 23, 2009 5:11 PM
To: SaveCapeHatteras REAL
Subject: Support for Cape Hatteras Access

Responsible use and access of natural resources is an incredibly important part of conservation efforts. Without access, habitats easily become out-of-site, out-of-mind. People lose their awareness of habitat, and once that occurs on Cape Hatteras, it will be very difficult to maintain the popular support necessary for sustainable conservation. Access and education is essential to preserving habitat; the draconian methods used by Audubon and Defenders of Wildlife do not further sustainable conservation efforts and will likely do more harm than good.

I saw a concrete example of the effects of denied access while living in Corpus Christi, Texas, adjacent to the Padre Island National Seashore. The more remote areas of the Park with difficult public access were opened to drillers of natural gas; park visitors were unaware of the extent of drilling and habitat disruption because their access was severely restricted. Roads used to access the majority of the drilling were only open to construction trucks. I was able to witness the effects of the drilling because I own a 4x4 that was able to navigate the beach, which was open to the public (although all inland areas were restricted and no-smoking signs were posted due to the abundance of flammable materials). Had the public had access to these areas and been aware of and more able to use the resources, it is possible that this drilling and habitat destruction would not have occurred. Instead, our seashore now has the flammability of a gas station.

Seeing the Padre Island National Seashore habitat ruined as such changed my entire view on conservation, which prior to that experience, could have been described as disinterested. Without access, I would never have known of the destruction of our resources. If the public is denied access to Cape Hatteras, it is very likely that the public will eventually become blind and disinterested, leaving the area susceptible to abuse. Please keep these areas open to the public in furtherance of sound, sustainable habitat conservation.

I take at least two trips a year to the outerbanks.. but the lack of beach access last year put me off some and I only took one

Trip in Oct. when I had complete beach access to hunt for my own breaks..Probably won't go this year...Delaware and Maryland breaks will have to do..I'm not spending the extra money for a trip to a place that limits access to the beach..

What a shame....I loved those trips to the Outer Banks and more powerful waves..

Sent: Monday, March 23, 2009 1:41 PM
To: SaveCapeHatteras REAL
Subject: I love this place

My name is Stephen Bower and I am from Ashburn, Virginia.

I love Cape Hatteras and the Outer Banks as a whole. I have come to the Outer Banks and stayed in Kitty Hawk since I was 1 and a half years old, just feet from the beach on Virginia Dare Trail, I'm sure you know it better as beach road, I certainly do. I consider the Outer Banks as a true part of who I am. I now go to college in Utah and on an almost weekly basis recount a memory or part of the Outer Banks to my friends who have no idea of it's just general awesomeness. Although I never surfed at Hatteras, I have surfed a small amount in Kill Devil Hills and the Nags Head Kitty Hawk vicinity. I love these waters, I have heard countless accounts of how those spots are just a taste of the great waves found in Hatteras. I have walked the beaches of Hatteras, I have swam in the water, I've even been in a jeep that got stuck in the sand on Hatteras. These memories have made me better, have made me appreciate the area and have probably contributed to a drive to protect the environment in logical ways that can actually succeed. Thanks for your help in doing this in an area I truly love as I'm sure you do too.

Stephen Bower

Dear Trip,

I am a 25 y.o. surfer and law student in Charleston, S.C.. Hatteras has been an annual and often bi-annual destination for me, my girlfriend and my several surfing friends for our lifetimes. We all want to do whatever we can to preserve our right to surf and access the beaches of Hatteras and the rest of the Outer Banks. Please let us know what we can do to stop this.

Sincerely, Kenny Goode Jr.

My parents took me to Hatteras as a kid to share in the surfing, fishing, and the beaches. We always took care to not harm anything or leave anything behind. I look forward to one taking my children there as well and teaching them the same values about our beaches and especially our surfing mecca here on the east coast, good luck guys!

I am 33 years old and a teacher in the Boston area. I drive every year to cape Hatteras to surf, kitesurf, windsurf, lounge at the beach, and fish. We usually travel with 10-20 people and our favorite things to do all occur in some of the remote areas out on the beaches. Driving out on the beaches with my truck truly gives the Outer Banks it's special charm which is what brings us there every year. I am not sure that I would continue to vacation there if some of the beaches were to be closed off to vehicles and people. I love the freedom to surf, windsurf, fish, lounge, and kitesurf wherever I want on Cape Hatteras. I hope things remain the way they are because there are thousands of people from the Northeast that feel the same way. I feel that closing and restricting certain beaches would have all sorts of negative repercussions. This would be a negative blow to the tourism industry thus hurting the economy then filtering to the schools and people in the entire Outer Banks.

Concerned,
Adam Gustafson

Wow, this hard to imagine.

Growing up on the Gulf Coast (Pensacola), I cherished going to the outer banks during Jr High and High School summer breaks. After high school I actually spent a couple of months camping in the area. Surfing along the remote regions in the late 60s and early 70s was a special place and time. I still have the carousels of slides of the surf and landscape from that time period. Driving on the beach to some of the surf spots was a big part of the attraction. I hope and pray it will stay that way for generations to come.

SaveCapeHatteras REAL

From: Glenn Kleinhans [glennkleinhans@msn.com]
Sent: Monday, March 23, 2009 9:00 AM
To: SaveCapeHatteras REAL
Subject: Long Islanders for Cape Hatteras

Being a surfer from Long Island my buddies and I annually take the ten hour drive down to Hatteras to surf the warm waters in the late spring. This place is special for so many reasons that to make a list would prove futile. It boils down to the fact that Cape Hatteras is unique and part of what makes it so unique is the access that we have to use this natural playground.

Environmental groups with good intentions are taking it too far yet again. There comes a point when common sense has to prevail and when the facts are debated the only conclusion to be made should be that education, not restrictions will save these animals. Please look into who funds these groups and you may be surprised to find that they have conflicts of interest. And remind them of the tourism money they will lose as less surfers come down because of limited access.

Sent: Monday, March 23, 2009 5:21 AM
To: SaveCapeHatteras REAL
Subject: Having a chance to be a part of nature and see things first hand...

is far better than being excluded by a fence. If the enviro groups really care about the future of certain animals etc. they would let people observe this first hand. There is something special about seeing a sunset while your waiting for a wave or when your walking home along the beach by dusk. Surfers appreciate these things. Taking away the beach and the waves will do little to further the protection of certain animals. Many people enjoy the freedom that this place represents. Don't take it away because of something you think will be better. There are many facts that show you to be wrong. And respectful humans and animals have found ways to coexist. By taking away the rights to the beach you will also be denying the beach walker and jogger, the older retired couples, photographers, bird watchers, beach goers, and surfers. Many of these people are the best option that you have for keeping eyes towards any drastic environmental change. For example if something were to happen, like oil spil, damage to the environment, sickness of bird population, humans that visit this area would be able to report this to the right authority. By taking humans out of the equation you effectively eliminate this from happening. You might as well leave it up to chance. And a prayer. Responsible humans equal awareness. Continue to let humans be a part of the beach. Let them continue to enjoy and share this great experience.

Subject: fight for access

Aloha,

My name is Shea Harper and I live on Maui. I grew up in NC surfing all up and down the OBX from age 11 to 25 and still score during the occasional fall. I also worked for the National Park service helping to set up fencing for the Piping Plover along Cape Lookout and Cape Hatteras. I do remember that during this time I did see careless vehicles driving out of their way to run through nesting areas. I do agree that these are a sensitive species and do need to be protected. I also agree that pedestrians are the low percentage of detriment. Allow access through sensitive areas at low tides? Have volunteers monitor the areas in high nesting season in order to allow pedestrians. I wish I could be there to stand up for the fight. I'll keep watching.

Visualizing a compromise that suits all

Subject: Save the Surf

Trip,

Hey man. My name is Josh Elwang, and I grew up in Kitty Hawk. Actually, my family has a super long history on the Outer Banks, dating back to the late 1600's... Anyway, I grew up surfing with my dad at Kitty Hawk Pier, and its bad enough what they have down to our homebreak, but this is just insane whats happening in Hatteras Island. I've lived in Avon the last few summers and travel in the winters, and everytime I come back home, it's hard not to notice all the new changes! More rules, more police, more beach closures, more erosion. Then, they put those no parking signs all over Mirlo, for those happy homeowners who only rent their homes for a few months a year. Whats next? Close the whole island down because we have special birds there that are going to go extinct? What about the rare local people that are rapidly going extinct, due to higher cost of living, more development, less jobs, and less freedom? And on top of that they want to close some of our favorite beaches too? This is nuts man!!! People have lived in harmony with the amazing wildlife we have on the Outer Banks for centuries with no problems. Just because a corporate crew of self rightous environmentalist come to town, we have to shut down the beaches for people, trucks, and boats? I totally understand why they should stop some areas of 4X4 driving, mostly in Kitty Hawk through Nags Head where the beaches are almost gone due to erosion, but no, they want to stop driving on the largest stretch of sand on the island! What's really going on? I don't know, but man, we really need to rise up and not let these people control our lives. We can come up with a well balanced solution to these issues without the help of the Audobon Society. Leave it to the people who live here and the visitors alike to solve this fishy situation! Thanks for your help Trip, We need it!

Sent: Sunday, March 22, 2009 11:52 PM
To: SaveCapeHatteras REAL
Subject: Hatteras National Seashore access

To whom it may concern,

My name is **Eric Gaither** and I am a avid surfer and environmentalist currently residing in **Chapel Hill, NC**. Working in the environmental field I realize how challenging it is to balance the protecting of environmental resources with recreation as I work with this every day. I have also lived on Ocracoke Island and have taken countless trips to the outerbanks of NC. This is a very challenging problem that faces decision makers. Remaining relatively undeveloped the outer banks of NC is a very unique and special place to me and the millions of other people that continue to visit each and every year. The outer banks are a great adventure for every visitor even without considering the world class waves that they create. When you throw the great waves into the mix a trip to the outer banks feels like a distant place in another world. With the visitation on the rise in on Cape Hatteras National Seashore the park master plan needs a detailed and well thought out plan on how to deal with these visitors and protecting this fragile environment. Cutting the access to beaches does not balance both of these goals. Decision makers must take into account not only protection of the resources that are there but also the rights of people to use these places in ways that does not hurt the resources. Education should not be overlooked for protection of resources. Educating the public on the resources and what each person needs to do and why they need to do them is a huge step in the protection of resources. The livelihoods of the people that live on the outer banks is at stake with this decision as well. Most of the people on the outer banks depend on people visiting the outer banks to live. This is perhaps the most important issue in this hole debate. I still have many friends that currently live on the outer banks that depend on the visitors of this area. Please consider all these facts before making a decision on limiting or shutting down access in Cape Hatteras National Seashore. Thank You,

Eric Gaither
Concerned surfer and environmentalist

Coleman Mills, from Williamston NC. I have grown up surfing in the Hatteras area. I am currently a student at the University of North Carolina at Chapel Hill, and I still travel to the Hatteras area in order to surf almost every weekend. I believe this is a very special place for surfers and water enthusiasts. I support your view on this matter, and I am willing to do anything to help.

To whom it may concern-

When I was in High School every spring a group of us NJ surfers would venture down to Hatteras for a surfing expedition. We grew up with that place on our minds and enjoyed many good days surfing there. I live in Scituate, MA now, but as recently as last year traveled to the area for surf. While there I helped support the local community by purchasing fuel, hotel stays and restaurant patronage. It would be a great loss to any beach goer, the local community and surfers to not be able to access this area. I protest the closure. Best of Luck,
Dr. Greg Conard

Subject: real surfers

Hello,

As a surfer who birdwatches and catches and kills fish for food I don't think your campaign will "Save Hatteras" Hatteras is over crowded with to many surfers and rich kiteboarders. There is plenty of access to surf on Hatteras Island, too much easy access for the crowds in my opinion. 14 miles of Pea Island beaches are is accessible by foot year round and that doesn't stop the crowds from walking to the surf. The 7 villages beaches are accessible to the surf year round, how many miles is that? You can park along Highway 12 and walk to the surf in the national seashore, just check for the closures. The lighthouse beach is open year round to watersports. So that leaves the point and the cove. These are irregular breaks that can be classic, but more often are closeout bombs. I will agree that the closures can affect these spots, but the hurricane swells are usually after the bird nesting season. I do understand kites like the cove when the wind is right, but there are other spots. Frisco pier is still surfable and that sandbar towards hatteras inlet is orv accessible most of the time. All these accessible spots even after the consent decree.

I had a friend rent a house in Hatteras Village last summer and he surfed a break in front of his house all week. Didn't even go anywhere else. There was local guys at that break too. No reason to drive up and down the island. He said the closures didn't effect him one bit.

I personally will not go into any store that has a SaveHatteras sticker. I will stay at friends houses or camp at the NPS campgrounds. I will bring my own groceries and food. I lived in Buxton for ten years and I never had it so good for the east coast. i think people who live there take it for granted and are spoiled brats. OBPA and the other radical access groups have only made the situation worse and spread misinformation. They have cried the sky is falling for so many years. I think it has back fired on their businesses. People think the whole island is closed. Hopefully less people will go, I am all for less crowds and less traffic. Legally the environmental groups have the upper hand and they will get what the laws state no matter how much crying goes on. And in the end there will still be to much easy access for the crowds to overexploit.

Subject: Please Save Cape Hatteras

I live in New York and surf all over the globe. (And no, I am not a Wall Street-er). It would be a tragedy to close a single inch of surfing beach in Hatteras because surfable waves are one of the most valuable commodities in the world. They are more magnetic than gold because they attract people of all walks of life ready to spend money, and live a healthy life style. In this economy, why anyone would even consider downgrading their resources is a mystery to me. Please do not make your state less of an attraction by taking away what us surfer's live for, and will go to any lengths to find. If not in your state, then perhaps somewhere else.

Thank you,
John from NYC

To: SaveCapeHatteras REAL
Subject: beach access

My name is:

Jefferson Ray
1347 Waterlily Road
Coinjock, NC 27923

I live twenty miles from the Outer Banks and surf year round. I am a former member of the Audubon Society and I have never seen a clearer case of misguided litigation. Especially when one considers that 20 of 21 birds killed by humans have been killed by federal vehicles. The worst part of it all is that the overwhelming majority of the people who are trying to block human access do not live here and are judging the situation based on biased and dishonest information provided by what used to be a valid and important environmental organization.

Mike Murray told the Judge that the closures "appeared" to be working, while failing to be honest about the fact that we haven't been hit by any serious weather events during the recent past.

I support total beach access and the enforcement of the laws and rules that were already in place to protect wildlife and the quality of the beach experience for humans and animals alike.

This situation is a sad distortion of environmental stewardship when judged by anyone who is truly informed.

Sincerely,

Jeff Ray

I frequently travel to the Outer Banks, especially Cape Hatteras. I am a member of the Surfrider Foundation, and consider myself environmentally conscious. I typically camp while there, and employ the 'leave only footprints' mentality. I am also ornithologically savvy, and have a difficult time understanding the merit of this law suit. Furthermore, if this bill goes into fruition, I can only see it being detrimental to the local economy.

I hope that my singular voice is echoed by thousands of others.

My name is Tim Baker. I live in Suffolk, VA but my family has a cottage in Kill Devils Hills. I can't imagine not being able to go to pea island to surf. Not only that but Pea Island is a refuge for locals during the summer hustle that the Outer Banks has become renowned for. 99.9% of species that were at one time extant have gone extinct. We are in the middle of a mass extinction in modern times that has nothing to do with human activity. We may be, as of the last couple hundred years, adding to the problems, but extinction is a natural event that has happened repeatedly throughout geologic history. All species are destined to go extinct.

Hi,

Joseph J De Stefano and Abby Freed (my fiance) are against the closure of beaches in Hatteras. We live together in the coastal town of Margate NJ and visit Hatteras at least once a year to cruise the beaches, fish, surf, and camp. It would be a real shame to restrict access to such a remarkable stretch of coastline.

Thanks
Joe and Abby

9415 Ventnor Ave Apt A.
Margate NJ 08402

If this counts I am a 14 year veteran lifeguard and EMT (and still going) and have saved many a careless tourist who have found themselves getting sucked out to sea by a rip simply while driving down the beach on vacation in Hatteras. I simply pull over, paddle out and pull them in. So in effect you get free lifeguard services when I am down there cruising the beach in my truck looking for a suitable surf or fishing spot.

Subject: Cape Hatteras Closure

Realwatersports,

On behalf of my family, we are expressing our concern with the decision that could close the beaches in Cape Hatteras. Yes, we do realize that it is important to take care of our environment, but we also realize that everything can be done in balance. We would hate to say goodbye to our annual Hatteras trip after 17 years due to closed beaches, even though it has already been impacted over the last two years due to partial closures. Hopefully all of the facts can be carefully examined, and offered to the public for review, before final decisions are made. For all of the efforts that are made to protect and preserve our parks, it seems extreme to remove them from all use. Thank you for your efforts, and we truly hope our families voice can be heard with yours.

Sincerely,

Joseph Gates and Family,
Hopatcong, NJ

To whom it may concern,

In my honest opinion, I believe that closing down all of Pea Island would be a huge mistake. First off, the Outer Banks isn't very populated, and the only time it attracts tourists is during the summer, so closing the beaches won't do much good to save the endangered species of birds, because, really, surfers are the only people who go to the Outer Banks year-around. Second off, The Outer Banks is the most consistent surf break on the East Coast, and closing the banks would be like killing the east-coast surfing community, economy, and the whole structure itself! Lastly, if the beach closure were to happen, it's not fair that we (surfers and others like-minded) can't even get to the water when the birds nest on the dunes. At least have channels of beach open to get to the water. There are smarter ways to deal with this rather than to just do what's easiest.

Sincerely,
Michael Casper

Dear Audobon Society and Defenders of Wildlife,

Don't close our Hatteras beaches to save turtles and plovers. 98% of the mortality is due to storm overwash and predation unrelated to human activity. Much of the 2% remainder is caused by federal and state park ranger activities such as beach driving. Closing our park will take an important recreational outlet out of circulation with little concomitant benefit to the wildlife. In fact, the increased beach patrols to enforce the newly closed beaches could increase the human caused mortality of the wildlife you aim to protect.

Here in Monmouth County, New Jersey, a plover family set up a nest on a beach inside a county park. Park rangers enclosed the area, closed some beach access routes, and set up surveillance. I surf nearby and saw the rangers there dawn to sunset.

Racoons and a fox took advantage of the new quiet and ate most of the young chicks as the rangers watched. The rest of the plover family was not seen again after a powerful Memorial Day storm overwashed the dunes at night during a high tide. But the enclosed area stayed closed to encourage their return. Net result: less beach access, expenditure of taxpayer resources, discouraged rangers, and no increase in plovers.

Think about how nature works. People are not the problem. Keep Hatteras beaches open.

Hi,

My name is Matthew Doyle and I'm from Costa Mesa, CA. Reading through several surfline articles, I've gotten some basic background on the proposed management plan, and I think it's a horrible "solution".

I love hiking, surfing and the outdoors in general. And while I totally support protecting those beautiful places I enjoy so much, I think this is an example of that desire being taken to an unacceptable extreme. We can enjoy the beaches and natural places without having a massive impact as long as it's done so responsibly, don't be a littering jackass, ext. If someone can't handle that and does something like trying to scream down the sand doing 80, then they just need to get ticketed to ever increasing amounts until the behavior stops. There's no need to ruin it for everyone else. Don't restrict access.

T.E. Jones - Chesapeake, VA

I have been coming to Hatteras since I can remember. Fishing Oregon Inlet and surfing Rodanthe have been traditions for my family for years. Closing the beaches to all pedestrian traffic seems absurd. I understand limiting beach driving in certain areas for certain times, but closing them off completely to all access makes no sense. I have personally chased foxes, raccoons, and feral cats away from nest sites on several occasions while fishing the inlets marshes.

SaveCapeHatteras REAL

From: Pafford, Abram [apafford@cov.com]
Sent: Friday, March 20, 2009 11:27 AM
To: SaveCapeHatteras REAL
Subject: Preserving access for surfing on Cape Hatteras

My name is Abram Pafford, and I live at 3819 Larchwood Road in Falls Church, VA, 22041.

I am 36 years old, and my family and I have been vacationing on the Outer Banks every year for the past 21 years. I'm now married with two children, and we take them at least once a year, sometimes twice. It saddens me greatly to think that access to large stretches of the Outer Banks could essentially be lost for the rest of my life. The portions of the National Seashore area that would be affected by the proposed closures contain what on many days are the only rideable surf breaks for miles, and it strikes me as unfair to implement a complete ban on access to those areas. I can perhaps understand restricting vehicle access to prevent vehicles from disrupting the birds and turtles on the beaches, but it is completely unbalanced and one-sided to take the further extreme measure of banning pedestrian access as well.

Thanks for all you are doing to help preserve access, and please let me know if there is anything I can do to help.

Best wishes,

Abe

Subject: Save Hattereas

I am a conservationist and surfer from Garden City, NY. I have spent many days on the Outer Banks- it ranks as one of my favorite places in the world. Though surfers may have a bad public image (Thanks Spicoli- Fast Times at Ridgemont High), I have found that the vast majority are stewards of the environment. Surfers are the ones picking up trash on the sidewalk on their way to work, surfers are the ones petitioning government for environmental programs, surfers have been 'green" before the term was even coined.

It is with this sentiment, that I urge you to keep Cape Hatteras open. We don't need trucks, dogs, or any other allowance/service- Just the beach, and the ability to walk to the waterline.

Sincerely,
Brad Wells

Hi

My name is Raven Lundy. I have been visiting the outer banks for over 15 years. I currently live in Virginia beach, VA. I took my first trip to hateras with my dad when I was about 10 years old. He taught me to respect the ocean, land, waves, wildlife, and of course the locals. Take nothing and leave nothing. After this first trip to the island I was left with an attachment that has kept me coming back for years.

OBX is def the surfing mecca for waves on the East Coast. There's no question about it!

Anyways I saw all the stuff circulating about Save Hatteras and I just wanted to do my part!

Please keep me in the loop

To: SaveCapeHatteras REAL
Subject: Coastal NC

Good morning,

My name is Robert Langley. I live in Hampton Roads Va., namely Norfolk. I've been surfing for 28 yrs., and Cape Hatteras has always been a special and dear place. Some of my friends from back in the early eighties turned me onto the place when it was just a two lane highway from Va. Beach all the way to Hatteras. This place is very dear to me and holds many fond memories. Please count me in to preserve this special habitat for all of us who grew up surfing this place. This was actually my first surf trip adventure. I have a 2 yr. old daughter who absolutely loves the water, she has been there multiple times since she was born, but I want her to experience Hatteras as a surfer when she gets older. Please save it for her! Please keep me updated on any events that transpire. Count me in in helping anyway I possibly can.

Sincerely,
Robert

Subject: Hatteras closure

Do you need a full address?

This has been most distressing. I grew up in Murfreesboro, right down Rt. 158 a bit in Hertford County. And I spent every summer at the OBX, and now we return 3-4 times a year to surf, fish and enjoy the Park. But that's been tailing off since we can't get on the beach...

My formal education is as a biologist and the facts don't justify the actions. It is time to look at this without the rhetoric of extremist positions.

Thanks for all your work.

Subject: SAVE THE SURF
Attachments: image001.jpg; image002.jpg

To be clear I love Cape Hatteras, but if what is trying to be done goes into effect I will not come back to Hatteras there will be no point and thousands of surfers and fisherman feel this way. Hatteras is a magical place and worth the drive if you are able to roam as you please, but if that is taken away then the 10hr drive becomes pointless. Because I am essentially left with the same circumstance I have at home. Why would I go there if I am confined because of some attempt based on false data to save a bird when I can drive less distance to warmer locales in Florida and drive up and down the beach to my hearts content? Keep Hatteras the way it was special. Look at the facts because if you/ they /whoever do you will see this bird is being used under false pretenses. This is an attempt to kill tourism, make Hatteras a ghost town or something more like the Hamptons.

Subject: Save Hatteras

To Whom it May Concern:

I am a San Diego attorney, and an avid life-long surfer. My brother is a Harvard trained physician who lives in North Carolina. The Outer Banks, and specifically Cape Hatteras is a favorite vacation spot for our young families to get together each year. We meet up late summer/early fall to spend time enjoying the surf and beauty of the area. We have plans again this year to come out and spend a week in Hatteras in late September. Eliminating beach access to the quality waves in the Cape Point area is very bad decision, not only because of the unavoidable negative impact such a move will have on the local economy, but also because the minimal benefits of such a decision are strongly outweighed by the cons.

From: Artie Whitfield [artiewhitfield@yahoo.com]
Sent: Thursday, March 19, 2009 10:22 PM
To: SaveCapeHatteras REAL
Subject: Artie Whitfield; Stateline Nv

My name is Artie Whitfield & I live in Stateline Nv. I was born in Portsmouth Va. & still have plenty of family back in the tidewater area. The Outer Banks are one of my favorite places I've been.

I consider myself an environmentalist. I don't eat beef nor shrimp for example, because of the effects they both have on the environment. I'm also a surfer & when I go out for a surf I make it my passion to do the best I can to not disrupt the natural environment. I can understand not allowing Off Road Vehicles to drive on threatened beaches, but to not allow pedestrians on beaches seems quite a bit overboard in my humble opinion.

From the statistics that I've seen & heard it sounds like humans are not the most severe problem for the turtles, snowy plovers & other bird species that might be in danger.

I just hope that the powers that be make a wise decision that can appease everyone involved in this situation.

Don't know that this helps but certainly hope it does.

Good Luck with your cause & thanks for fighting it.

Artie Whitfield

Subject: Petition against the closure of beaches to pedestrians and the like!!!!

Hi,

I would like to support this petition. I totally disagree with banning this area to all beach and nature lovers. There should be a solution where all win. The impact of our sport is insignificant with regard to these claims and aims of the proposed beach closings and I dont think we should all suffer for the sake of a few users who really do have a negative impact on the environment under discussion.

Proposed regulations should not restrict beach users who have no significant impact on the environment under question.

Regards

Sent: Thursday, March 19, 2009 9:30 PM
To: SaveCapeHatteras REAL
Subject: save cape hatteras and eaverywhere else from zealots.....

my stand is clear....the eco-nazi societies have NO LOVE FOR PEOPLE.....they do not care about people interacting and coexisting with nature....they only care about the millions of dollars they gain to stand for "maintaining" the resource....think only surfers are hurt by this?....in hawaii they closed off thousands of miles of fishable space in the northwest Island chain....backed by them ...and pres bush at the time....based on the same unsound science you guys are now contending with...and nobody cared because they have never been there....and while all the intentions sounded good on paper,nobody really understood that this was just an extension of the kauai missile range facility...and now the only people with access is the military....and we ALL know where they stand on the environment....

the end result?....new fishing pressure on the main island resource,forcing the bottomfish closure of that area seasonally as well,which means no native bottom species are even available for local consumption most of the time...the military in 2011 will have an area the size of the main Islands with no one watching them whatsoever....the main threat to the vast majority of wildlife,open ocean plastic and trash,is continuing on such a scale that most everyone admits it's past our ability to fix it,and that area will one day have more concentrations of microscopic plastic than plankton....and to top it off the funding for the "park" got cut and now there is no money going towards restoration of any kind.....

my main point of all this?...

DO NOT TRUST THE "ECO" MINDED SOCIETIES...

WE AS A PEOPLE...NOT JUST SURFERS.... MUST ACTIVELY FIGHT FOR WHAT IS OURS TO BEGIN WITH....

IF YOU NEVER GET TO GO THERE YOU WILL NEVER REALLY KNOW WHATS GOING ON....SO PUBLIC ACCESS IS THE ONLY WAY TO ENSURE THAT THE RESOURCE IS BEING PROTECTED....

thanks for standing up and good luck!!!!!!!

Enough beaches have been closed and privatized for the rich. Surfers are one of the most environmentally conscious groups and deserve a right to these spots. Rent out beach friendly vehicles if you have to, but don't take away our shores. We should adopt the Hawaiian standard that allows locals to get to the ocean no matter who owns the property onshore.

From: Josh Clement [jclement4321@yahoo.com]
Sent: Thursday, March 19, 2009 7:22 PM
To: SaveCapeHatteras REAL
Subject: Save Gods Country

Hello, my name is Josh Clement, I live in Wilmington, NC. When I first moved to Wilmington I moved in with two friends that were born and raised in Cape Hatteras, NC. Throughout the year that I lived with them I got to know their families and lots of other friends of theirs that call Cape Hatteras home. Over the past six years of visiting the outerbanks I began to realize how important beach access is to all their lives. We all know that the economy is going through some hard times and if the beach access is shut down that would mean that none of the thousands of fisherman would be able to come and fish which would have a direct impact on the summer income that keeps the outerbanks ticking. I could go on for days on the impacts that this decision would have on the many livelihoods of the outerbanks locals. The outerbanks locals need the beach access to stay open and closing that down would make this beautiful place a ghost town. Thanks Josh

To: SaveCapeHatteras REAL
Subject: Save Cape Hatteras

Name: Joseph Mosquera

Home Town: Asheville, NC

As a paddle sports industry professional I spend a lot of time in the Cape Hatteras area kayaking, surfing and stand up paddle boarding and personally I think it would be a travesty to close this section of land to the public that are enjoying it the most. I strongly believe that efforts should be made to help the wildlife in the area flourish however it appears from the data that has been presented that closing the stretch to the public is not the solution that is going to obtain the desired results.

Please Keep Cape Hatteras open and explore other options.

Sincerely,

Joseph Mosquera

Joe O'Brien - South Bethany Beach, DE

Hatteras has been a fall/winter destination for me, my brothers, and 5 or 6 other friends who all share a common love for East Coast surfing for years. While I am not a Hatteras local, I still enjoy the trip south for great barrells, good fishing, and good camping. After reading the article on surfline, I couldn't help but remember all the great trips that I've had down there and felt more than obligated to speak my mind. Good luck with the fight in keeping Hatteras as beautiful, wave-rich, and natural as it currently is.

My Name is Patrick Taylor I live in Lake Tahoe Nevada, the most environmentally controlled place in the world I'm told. What a waste we get nothing from environmental controls except hassles and bills. The agency that controls the environment here is a mess and always has been since it was formed. I've been visiting and surfing at Cape Hatteras since May 2007 and hope that the environmentalist don't succeed in getting access to Cape Hatteras or any part of the Outer Banks.

My name is Will Serratelli and I'm 15. I live in Virginia Beach Virginia and have been surfing since I was about nine. The number of waves I've caught on the Outer Banks, from Corolla to Frisco, along with the hours of fun I've had, is too vast to count. When you are an avid surfer and live in Virginia Beach, the Outer Banks are a refuge, a haven, a place where you can go to get good surf and connect with nature. Without the Outer Banks, I'm not sure what we east coasters would do. Save them.

I understand the willingness to save the birds and turtles. I also agree that the Park Service should do whatever they can to protect them, but what about common sense? Look at the facts and figures because it is not the pedestrians killing the birds, but nature. And really the people are what keep the birds habitats alive.

A prime example is to look at Oregon Inlet, where beach access was closed off, and to see that now... there is no beach left! It is the footprints and tire tracks that truly keep our beaches strong. Without those ruts in the beach, there is no where for the sand to pile up when the wind is blowing; letting it just fly off into the ocean or dunes. All the years people have driven out on the beach at Oregon Inlet and the point (that extended into the inlet) had always remained. Take away the trucks and people, and now there's hardly anything left! That is exactly what is going to happen across the whole island if these restrictions take effect. Our beaches will slowly dwindle away, letting everything near the ocean fall in.

Ok, no you can't stop beach erosion everywhere all the time, but at least let us continually contribute to beach re-nourishment by just allowing us to have access everywhere. Put the string and signs around the nests, let the animals have their space, but don't take all of ours away in the process. If human families of 3 or more can live in little shacks and tiny apartments, then why does a bird need 11 football fields worth of land to rest on?? That is the question that I have never been able to comprehend.

I have lived here since i was born. I have grown up learning to surf along these beaches where my mom could drive out and let me practice without worries of other people. The Jetties at the Lighthouse have been my "Home" for surfing my entire life! My career is based from that area alone. Taking that, and other significant areas, away would not only be devastating to my everyday life, but would stunt my devolopement as a surfer living in Buxton.

These beaches that we have been blessed with are what provide so many lives with financial support. For me they are where I practice and progress my surfing everyday so I can earn a living through the sport. For others they attract tourists that come down and visit, bringing in money for almost all business' on this island. For fisherman the beach and ocean are their main source of income. Limiting and Prohibiting access is not only going to sadden everyone for the sake of not being able to enjoy the beach, but it is literally going to hurt lives. Forcing people to move away, lose their house, lose their business, etc...

PLEASE, i ask, PLEASE take into consideration the effects that beach closure is going to have on the economy here on the island. Everyone is already hurting enough as it is, please do not make it even harder and worse. But aside from the money and all... who doesn't love going to the beach? Why take that away?

Thank You For Your Time.

Sincerely

0078863

We make the trek a couple times a year to Hatteras, we spent 3 summers there and even made a documentary film about the moving of the lighthouse / infill project how it affected the surf.

We have great memories of Hatteras, working @ Pigmans, food at Mrs. T's and drinks at the Pit.

Here is a list of our crew

Jim Reilly

Subject: Save Hatteras

I'm a soon to be pharmacist that used to work on Hatteras Island and plan on moving to the Nags Head area this coming summer. I agree with the fact that this is a poorly focused environmental project. Fishermen, surfers, and tourists have been on the beaches for decades without problem. I believe that in this situation, the irresponsibility of a few is what has caused the problem. Overall, people on the beach are not the problem. The root issue with the environmental change that Hatteras has clearly undergone over the years (and seemingly more rapidly lately) is the development of the island. Trees used to go almost into the water. Also, wet lands have been repeatedly filled in over the years to build large rental homes. These root systems and wetlands are what buffered and protected the island. One issue to focus on should be the building permits that are continuing to be given to people with enough money to buy them. There's no reason for more beachfront buildings and wetland fillings. If you want to fight a battle this is the one. These are the issues more responsible for environmental deterioration and the resulting effect on the wildlife. Hatteras Island is an amazing place and I would like to keep it healthy; therefore, focus on the most important issues.

Sincerely,
Matt Thornbrough

trip;

as both a home owner and surfer who travels to the cape four to five times a year.....
first, the cape seashore was developed with the concept of a 'recreational area' in its plan
not as a wildlife area.
second, my seasonal rentals are down over 50% this spring after last
years limited access for my renters. in my opinion; the audubon
society is not in this for the wildlife but rather for the power trip.

I've been traveling to Cape Hatteras for 32 years and have never missed a year. I learned to surf on the beaches of Frisco, and have a million memories of riding the beaches with my father in search of fish and also learning about the wildlife along the shores. I am very disappointed that last year we couldn't get to the Southern most point to fish for flounder. I really hope y'all find a way to protect the animals while still allowing us to explore the island like we did 30+ years ago. J DeMent, Hamilton, N.J.

Subject: Save Hatteras!

To Whoever Wants to Alter Beach Access on the Outer Banks:

I've been going to Hatteras at least twice a year, every year I've been alive. I'm 23 now, and with probably over 50 trips under my belt, visiting virtually every part of the Outer Banks, I've had a great time, and great surf on every trip down. To close off areas of the beach would SEVERALLY impact my decision on where to travel. If I couldn't access the ocean, and couldn't surf, then why would I travel to that destination?

I travel to Hatteras to surf, like many of my friends, family members, and fellow NJ surfers. I manage a surf shop in New Jersey full time and if I had a dollar for every time I talked to a surfer, be it a guy, kid, family, or a couple who either have or are going to Hatteras for a surf trip I would be a millionaire!

Hatteras is a tourist destination, and a surf destination. We (surfers) are travelers at heart, and a trip down (or up) to Hatteras is part of every east coasters surfing career. Closing areas of the beach effects not only surfers, but sunbathers, swimmers, kite-surfers, families, fishermen, and countless others. Closing beaches would in return effect businesses, the rental industry, restaurants, and the entire local economy! It's a snowball effect that would ultimately hurt everyone on the Outer Banks.

Given the miserable state of the economy currently, does it make any sense to detriment it further by restricting access to the Outer Banks' beautiful beaches? The economy of the Outer Banks is similar to the economy of the area in which I live and work. It's driven by tourism. To do anything that would limit or restrict tourists ability to enjoy the beauty of Cape Hatteras is ensuring a drop in visitation, spending, and tourism almost immediately.

Lets make the right decisions, and do something that will benefit everyone, surfers, tourists, and local alike.

The “act” of surfing in no way harms the birds. It’s getting to the breaks that is the issue. Just agree to delineate narrow paths from the parking lots to the water and encourage surfers to use them.

Good luck!

Sent: Thursday, March 19, 2009 2:42 PM
To: SaveCapeHatteras REAL
Subject: Save Hatteras!

To Whom This May Concern,

My name is Mark Gilmartin, I am a college student from New Jersey. When I heard news about the possibility of Cape Hatteras being closed to pedestrians I felt the need to respond. The lawsuit that the Audubon Society has put together is looking protect the interest of a small percentage of birds and turtles at the cost of the humans who work and play in and around Cape Hatteras. I am also concerned about the preservation of these unique animals, but closing these beaches to pedestrians is not the answer. The research has proven that the pedestrians are not a serious threat to these animals, so why close these recreational areas that people from all over the East Coast enjoy using? I have countless memories from my experiences in Cape Hatteras and its surrounding areas. My first camping trip and my first surf trip were both to Cape Hatteras. Every year my friends and family take a trip to Cape Hatteras to camp, surf, fish and hike the beautiful barrier island. If these beaches are to be closed to pedestrians there will be no reason for us to take these trips to Cape Hatteras. I can say the same for several other families from my area that also take annual trips down to Cape Hatteras. The closing of these beaches will not only take away the great experiences that countless people experienced in Cape Hatteras, but it will also threaten the livelihood of the local businesses in Cape Hatteras who thrive on the surfers and fisherman. In conclusion, I understand the Audubon Societies concern for these birds and turtles but closing the beaches is simply the wrong action to take and such an action will only threaten the lives of more than just birds and turtles but also the lives of people who try to make a living in this area.

Sent: Thursday, March 19, 2009 2:12 PM
To: SaveCapeHatteras REAL
Subject: Save Cape Hatteras

To Whom It May Concern,

My name is Paul Hresko and I now live in Denver, CO. With my family, I have been going to the Outer Banks since 1974. Actually, during my first trip there, I celebrated my 5th birthday and the only restaurant that I recall was Van's Pizza in Kill Devil Hills. My family has owned property on Hatteras Island since the early '80s and that is where I learned to surf. I go to there as often as I am able and I believe the beaches and the waves there rank among the best in the country. I think of the Outer Banks as a home away from home.

On Hatteras Island, I consider the waves to be one of the greatest natural resources. I have surfed all over the world and Hatteras, with it's natural beauty and the fact that it has remained relatively unspoiled, is certainly a special place. I am environmentally conscious and think of myself as a leader on "green" issues. I sincerely hope that surfers, the waves and access to the beaches are given equal consideration when deciding on the future of the Outer Banks.

I urge you to keep in mind what it is about the Outer Banks that makes it such a wonderful place and what could come of making changes. Also consider the impact surfers have on the area, which I believe to be mostly positive.

Thank You,
Paul

Subject: Save Hatteras

I understand the need to promote the well being of wildlife, but I firmly believe that closing beaches is not the answer. I live in Charleston, SC. We have a rich history of working with local populations for the benefit of the wildlife that we share our habitat with. (You don't need to look any further than the Aquarium and their turtle hospital, the work we do to mark and preserve turtle nests, or the countless bird breeding areas that we mark off and protect) The answer is not limiting the publics access to the wildlife. The answer is in public awareness, notification, and restrictions when a specific breeding area is located. If we continue down paths like the one proposed and begin limiting public access to our natural resources, you limit the publics understanding and ability to react in order to preserve these resources. The people with the most effective and passionate response to a problem are the same people that have a vested interest solving the problem. The people with a vested interest are the surfers and others who use these habitats on a daily basis and want nothing more than to see them continue.

Make no mistake, this isn't just about the turtles and the birds. If public access is restricted to our beaches, we will lose the public support that pushes politicians to keep vital issues like beach erosion and preservation as well as wildlife preservation on the forefront of our public dialog.

Sincerely,
Chris Garrick

From: Charlie Cole [charliecole6b@gmail.com]
Sent: Thursday, March 19, 2009 2:04 PM
To: SaveCapeHatteras REAL
Subject: Hatteras Island Access

My name is Charlie Cole and I live in Murfreesboro, NC. I am an attorney for my district, and my work requirements only allow me to surf on weekends (unless court finishes early). However, I travel to the Hatteras Island beaches almost every single week from March through November and December to surf. Along the way I usually purchase fuel, food, and anything I need for the trip; In the spring and fall I often make a weekend of the trip with my family. This means I make local accommodations for overnight. I buy local surfboards from local shapers and surf shops. In short I support the local economy of Dare County and the surrounding area, just to keep surfing.

Many of the spots I surf are spots I have specifically chosen so that I can get away from crowds at more popular and accessible breaks. I prefer to spend my limited water time with a few good friends and family. Access to many of these spots will be affected by a ban on beach driving, and a ban on walking is undoubtedly more restrictive than reasonably necessary.

I am not against reasonable and least-restrictive efforts to protect the fragile ecosystem and wildlife of Hatteras Island, but I would like to share the same vast, open stretches of shoreline with my new daughter that I have always shared with my family and friends. Please consider that there are many like me who share my concerns as you decide how future generations of visitors will experience Hatteras Island.

Thank You,
Charlie Cole

The sport fishing industry is taking a huge hit from this situation. Sport fishermen understand better than most the need for common sense conservation to sustain healthy species population. The operating words being "common sense". I also happen to surf and enjoy the Outer Banks for beaching and driving around. We know what the impact is on the animal population. What is the impact for the human users of this resource, both economic and quality of life. A balance should be found.

SaveCapeHatteras REAL

From: Bruce Truckner [btruckner@liphartsteel.com]
Sent: Thursday, March 19, 2009 1:41 PM
To: SaveCapeHatteras REAL
Cc: Bruce Truckner; Drummond, Deidre R. (DJJ)
Subject: Save Hatteras

To all concerned,

My name is Bruce Truckner and I now live in Richmond, Va., but I still surf when I can. I'm also 54 years old and have surfed for the past 42.

I grew up in Virginia Beach during the 60s and 70s and spent many a weekend taking road trips to Hatteras. My friends and I always looked forward to heading down to the Outer Banks because we knew that we'd find better surf than at our "home" breaks. Half the fun of these trips was the chance to explore the coastline, looking for new bars and shoals to ride without feeling like we were wedged together like sardines. I still have great memories of these trips and hope to continue making new memories with my children and grandkids on the "free" beaches of Hatteras.

As a kid, I remember being able to drive from southern Sandbridge, Va. all the way to Nagshead, NC on the beach, checking out new surf breaks along the way. We were always conscientious of the environment and stayed off the dunes and avoided disturbing the wildlife we saw along our route. We caught a lot of fun waves along that section of the coast. Then all that changed. They designated the southern end of Va. Beach as a wildlife sanctuary, and stopped all beach traffic except for residents who lived beyond the park itself.

I understand the issue of protecting our wildlife species and keeping our coastlines as natural as possible, but I also see a need for the people of our region to have access to our beaches.

I've watched as our beach populations have grown exponentially, both in Virginia and in North Carolina, to the point where, at times we all feel the need to find our own little "piece of heaven"; a small uncrowded spot to surf and share with friends. Without the ability to traverse the beaches on Hatteras Island, we will lose this, along with access to many of the places that have provided us so many great memories in the past.

I've also watched surfing grow from a position where we were looked upon as beach bums and misfits, because our lifestyle didn't fit into society's normal boundaries, into a sport where we have world class athletes who make very decent livings doing what they love. My point is that surfing is being enjoyed by more and more people each year, and as it is an extension of a lifestyle, a lot of us continue to ride waves well into our middle ages and beyond. Beaches are finite in size, we aren't making any new spots that I know of and we can't afford to lose any more breaks than we have already.

As a member of the Surfrider Foundation, I understand the environmental issues and the plight of the so-called endangered bird's nesting sites and sea turtle grounds, but it is NOT in the best interests of all concerned to permanently close the beaches to human traffic. I can see where there might be a need to close certain areas of the beaches during nesting periods, but to deny all access is not only shortsighted on the part of the agencies and groups involved, but is also counterproductive to the regions well being. The surfing population is only one aspect of this. The economic impact that this would cause has a pyramidal effect. It affects the tourism industry, the fishermen who come to the

Outer Banks, plus the local economy that is supported by these activities. We are already dealing with an economic downturn of epic proportions...do we really want to cripple it any more?

I believe this is a case of the people, as in, "We the people..." to stand up and be heard. No one or two groups should have the power to decide what is best for the majority of people affected by this decision. The facts stated in the article from Surflife show that there are options that can be explored. Some sort of acceptable compromise should and can be worked out between all parties to insure that we can all enjoy our "National" beach while protecting the wildlife living there.

In closing, I hope that this issue can be worked out by the National Park Service to insure that "We the People..." have access to one of the most beautiful stretches of coast for many, many years to come. I intend continuing my visits to Hatteras and the surrounding areas with my children (who both surf), my niece and nephew, (also surfers) and plan on passing our surfing heritage to my grandchildren (who are water babies -2 & 4) when they can swim well enough. My wish is that when they are old enough to make their own trips down to "the island", they'll invite "Dadz" to come along for a drive on the beach in search of waves.

Aloha from a lifelong surfer.

I make two seasonal trips to Hatteras to surf and I believe this would be a major deterrent when considering where to travel. Access would be significantly limited and in turn significantly limited our ability to find surf along the island.

Subject: Save our beaches

Aloha,

Living in Hawaii and coming from Florida I have seen a lot of over-reaction when it comes time to protect what the environmentalists think is valuable and need their protection. There is always one side more zealous than the other even though it means just as much to each side. I am a surfer who happens to be spending 10 days in Cape Hatteras in August. I am coming to go to the very beaches that you are fighting over. I love nature and want it to flourish as natural as possible but man should not have to suffer very special losses to achieve this worthy idea. When it is proven that man is not the cause for one of these (SAVE SOMETHING) attempts it never seems to be enough to convince the environmentalist that we can still share the space as we have been and everything will be Ok.

It appears to be proven that the surfers and beachgoers are not the problem. Please either prove otherwise or be reasonable and look at the facts. The environmentalists are not infallible and when they are proven to be overreacting or just wrong they should be held accountable for all of the grief they cause the communities that are fighting to keep their life style in tact. Surfers and other outdoor enthusiasts are the very people who will look after the land and protect it.

Subject: Petition

Please add my name to the petition to Save Access to Cape Hatteras Surf breaks.

Ed Roach
531 Annadale Drive
Berwyn, Pa. 19312

I have been traveling to Rodanthe, Avon, Buxton and Frisco for over 20 years. I rent houses, shop at the local retail stores and support the local community as much as possible. I am also an environmentalist and lover of water birds.

If beach access was restricted, I would no longer bring my family to Cape Hatteras and instead would go to the New Jersey beaches.

Don't allow the 1% of the problem to affect so many hundreds of thousands of visitors every year.

Could you add a \$10-\$20 fee to every house rental that can be donated to the Audobon society so that they can fight the problems where they can actually do some good?

Save Hatteras Surf Breaks + Collect \$10 from every rental house from every week of the year = Give the environmentalists so they can fight the real fight somewhere that might actually help the birds.

Regards, Ed

Subject: Opposition

I would like to voice my opposition to shutting down access to areas of the cape to protect the plover.

Extinction is not a pleasant thing, but it is part of nature. Nature will adapt and survive. In addition, humans should not ever be in second place to any non-sentient being.

Why is it that every environmentalist never holds people to be of primary value? We are part of nature. We cannot exist without impacting the environment that we live in, which is exactly like every other living thing in the world.

Subject: Save Cape Hatteras

Hello,
My name is Ethan Bartlett. I'm writing from Patchogue, New York. As a long time member of the East Coast surfing community I am protesting the current move to shut down the beaches of Hatteras. I've surfed there myself, and my family works with the ESA contest there every September. I can honestly say that the surfers there have a positive effect on the environment, the community, as well as contribute to the local economy. Closing the beaches there would not only be detrimental to local businesses and fisherman, but would also keep one of the best surfing spots on the East Coast out of reach of literally thousands of surfers and their families who have made Hatteras their destination for nearly fifty years.

Sincerely,
Ethan Bartlett

Instead of closing off the entire park, why not barricade the nests when you find them and leave the rest of the beach open. That's what we do here. It allows us to continue using the beaches and at the same time, it a more targeted approach to saving the plovers and allows for more personalized management and protection. If you are interested in specifics, please call me at 508.228.1388. I'm no expert, but closing down an entire park system seems excessive when there is ample evidence to suggest that there is another viable option.

Regards,
Brook

Save the Outer Banks - YES

A very special place; unfortunately, unlike most of the East Coast it should be preserved for future generations.

Highest and Best use is one way to Quantify a properties worth- By protecting this U.S. Treasure the entire area(s) are/is enhanced. Protect this limited and valuable resource, as it is an endangered species.
A critical place for most vacationers in the north east and and absolute must destination for people from the Sunshine state, alike.

Do the right thing-

Subject: Saving Hatty!

Name: Jesse Farmer
Hometown: Emerald Isle, NC

It is with some tepidation that I add my name to the list, for I think surfers play a prominent job as environmentalists and represent one of the strongest voices for environmental protection in the country. We have a responsibility to protect and nuture the coastal environments we so cherish. There is no doubt that beach driving has some detrimental effects, and perhaps should be either limited (or courses on responsible driving taught), but the Audubon Society's move to completely ban beach driving and public access seems incredibly overzealous and a fundamental violation of public access. I look forward to hearing how this issue develops and hope a reasonable conclusion can be met by both sides.

Sincerely yours,

Jesse Farmer

My name is James Parnell. I live in Va. Beach, Va. I have surfed and fished Hatteras since 1962. I was 14 yrs old then. I am sure this National Sea Shore was created for U.S citizens to enjoy all the Natural Beauty of this location. The people of Hatteras have spent decades servicing the visitors there. It will be a sin to take this and all access to the beaches that so many have come to love away.

From: Hans Angermeier [hansangermeier@gmail.com]
Sent: Thursday, March 19, 2009 12:00 PM
To: SaveCapeHatteras REAL
Subject: Hometown: Waukesha, WI

Greetings,

Thank you for taking on the mission to protect the OBX and its people against the Audubon Society! I used to wait tables and bartend at the Froggy Dog in Avon for a couple of summers ('04 and '05) and learned to surf and kiteboard down there. I first learned about of the OBX during a family vacation that was the best vacation of my life. Originally from Wisconsin, I now live in New York and visit the OBX at least once a summer - mostly in the Avon / Buxton / Frisco range to surf and see old friends.

It has been with great concern that I have been following the Audubon's war on the local residents and tourists down there. I know firsthand that the locals rely on tourists for a significant portion of their income - and tourists, attracted by the area's pristine rawness and beauty are well-cared for by the locals and take care of the island. I see the actions taken by the Audubon Society as nothing short of an attempt to drive people out of their homes and the islands and am incised that they are ignoring science and reason to perpetuate a campaign that will literally end the livelihood of significant numbers of people - all of this during a recession!

Please feel free to reach out to me in whatever way I can be helpful.

Thanks,
Hans

I went to grew up in South Eastern VA, so spend a lot of time in Cape Hatteras. Now that I live in Deerfield Beach, FL every year in September/October I take my family up to the outer banks so they can enjoy the same things I had growing up. To have this new policy's in place it would take away from our enjoyment to the area. Please help save this.

SaveCapeHatteras REAL

From: Alex Vinson [alex@roundstonesystems.com]
Sent: Thursday, March 19, 2009 11:01 AM
To: SaveCapeHatteras REAL
Subject: Save the access!

We have a family vacation in Hatteras (Avon, actually) every year, and have been doing so for the last 10 years. I grew up in the area, and have always loved the access to the beach, and the ability to drive from break-to-break (in a responsible way, of course).

Access to the beach is one of the many things that makes Hatteras special, both to my generation, and the next generation that I'm now teaching to surf, fish, and be responsible stewards of the area we love so much.

Limited access will not help the wildlife. Responsible stewardship will.

Thank you,

Alex Vinson

My name is Kevin Boyd and I am from Long Island, New York. We have a very similar problem at my local surf spot; Instead of restricting people from driving or going to the areas of the pipping clovers, my beach just made sanctuaries that are closed off by fencing and it allows people to drive on and still surf the spot and allows the birds to be protected.

My name is Gary Nichols, Santa Paula, CA. Santa Paula is located a short 15 miles from California Street, Ventura. My son Brandon and I are local surfers. I started surfing here in 1963 after re-locating from Pennsylvania in 1962. I learned to love the ocean by going on family vacations to the New Jersey shore riding waves on styrofoam belly boards that rashed up your belly for days. I continued doing that on the shores of the Ventura Coast.

I brought Brandon to surfing when he was 7 1/2 years old here in California and we still have fun surfing together now, he is 26 years old.

Why is this important? Because both Brandon and I understand the quality of life that a very good surf break and beach area can have on you and the family life that you try to maintain in the frantic world we live in today. "C" Street is one of those sacred spots for sure! We have both surfed Trestles many times and we were involved in helping to support the movement to save the access and the waves there as well. Successfully!

We are behind you and the cause to save Cape Hatteras. Family is sacred! The beach in all of its wonder for family life needs to be protected and respected.

Sincerely,

Gary and Brandon Nichols

Here in Cape May we've had our own Plover issues, but they simply roped off areas of the beaches in question - not shut them off completely. Perhaps that could be a compromise.

Good luck,

Gavin

Thanks for taking the time to represent the surfers that consider the OBX their little slice of paradise. There are not many places I've been where you can walk over a dune (using a path) and suddenly feel like you could be 1000 miles from civilization, but that's the Outer Banks for me. It's my reset button. Wish I could be down there today scoring but somebody had to stay at work.

**Sent:** Thursday, March 19, 2009 10:03 AM  
**To:** SaveCapeHatteras REAL  
**Subject:** Save my favorite place

My name is Tommy Willcox and I grew up in Virginia Beach, VA. Since I was born my family has owned one of the original 13 cottages in Nags Head, NC. I now live in Charleston, SC but whenever there is swell I will drive the seven hours it takes to surf Hatteras because those waves are that good and Hatteras is that special to me. Hatteras is the backbone of a community that revolves around surfing and fishing. The idea of taking this place away from anyone makes me upset to even think about it. This decision is an easy one to make. SAVE HATTERAS.

Sincerely,

Tommy Willcox

I have been surfing in Hatteras for the last 20 years and have to say it would be an absolute shame for surfers or anyone (even if it is tourists) for that matter to lose access to an inch of that coastline.

My name is Nathan Rahn, from Silver Spring, MD, and I oppose the shutdown of these areas. As a frequent visitor to Hatteras Island (at least once a year for all 29 years of my life, and I think I was actually conceived in Hatteras, but that's a different story), I feel that these unnecessary measures would greatly hinder the experience of many visitors to the island, which could have a huge negative impact on the tourism industry that those who live on the island depend on. I will help in any way that I can, so feel free to contact me if you would like. Thanks for doing what you do.

**Sent:** Thursday, March 19, 2009 9:12 PM  
**To:** SaveCapeHatteras REAL

Surfers and beachgoers alike are the custodians of the beaches and the oceans. If exiled, who will pick up the trash after each heavy rainfall? Or hand clean and care for all the birds when the next oil tanker spills?

Environmentalism began with good intentions, but over the years its become as dysfunctional, political, and as bureaucratically bloated and incompetent as our ever-damaging government.

Let the people and their trusted judgment care for the beaches, not some massive, faceless organization.

**Subject:** Co-exists

When I read your article on Surflife, I felt compelled to write. My name is Guy Pollino, and I have been an avid surfer and lifeguard in Ogunquit, Maine for 20 years, and have visited Hatteras and the Outer Banks multiple times.

Ogunquit, Maine is tourist community 90 minutes north of Boston that relies almost solely on our beaches to support our community.

We have long had one of the few piping plover nesting areas on the Maine coast, and although not always easy, have managed to co-exist with the plovers and other protected species on our beaches.

Difficult decisions have been made in this seasonal, tourist driven community in order to protect a few nesting pairs of plovers, sometimes only 1 or 2 per year. The cancellation of 4th of July fireworks and the installation of fencing along the dune area, as well as the prohibition of dogs even during off hours have all been implemented at times.

These were done in order to protect these fragile birds, at the same time allowing the public to enjoy our beautiful beaches.

With education (our lifeguard service and DPW workers that clean the beaches have a seminar every year) and certain precautions, we have proved that man and plover can co-exist. I hope that you can find a way to do the same.

Sincerely:

Guy Pollino

Just want to send this to help the cause. Hatteras is very important to me. A little info about me... My father was the original owner of what is now the Rodanthe Surf Shop (back then it was Chicamacomico Watersports), my mother still lives in Rodanthe, and my Step-Dad is a long time local fisherman. We have always respected and up-held to the rules when it comes to the wildlife. No one wants to see it suffer, and to be honest, we all want to see it grow. The ecosystem there is part of the package, and it needs to survive for Hatteras to survive. However, closing the beach to the public is not the approach that needs to be taken. I am glad to see Real Watersports up and supporting their customers, and it was good news to see how you are not one sided. You guys got my respect.

Surfers know more about our coastlines than anyone. If there is any kind of issue, we undoubtedly have the best solution. The surfing community is present and active year-round. We covet every treasure the coastline has to offer. Surfing is an extremely positive way of life and certainly not just a hobby. We want whats best for all of the worlds beaches including Cape Hatteras.

**Subject:** ORV access...

Friends,

I am writing this on behalf me and my family, plus the many who have taken advantage of the incredible bounties that are the Cape Hatteras National Seashore. My name is John Cowperthwaite and I have been living on, working on, and now visiting Hatteras for the last 30 plus years. I was fortunate enough to be given the gift that is surfing at a very young age (12 in 1975) when my dad retired from military duty and moved us to Virginia Beach. There I learned the value of the sea, what she has to offer, and of course how to surf. My first job at 16 was working for Atlantic Pool Supply. When I turned 18, I was allowed to work with the crews that built pools. That first summer I began building pools in Rodanthe and Avon. In 1979 I fell for Hatteras and have either lived there or been back every year since. Today my job has me in Denver Colorado, but still manage to get a couple weeks in Hatteras year, visiting family in VB and dragging them down to a rental on the Cape.

I don't rent in KDH, or Duck, or even Corova - I rent in Avon or Buxton, and occasionally Frisco. There is good reason for this; as having grown up in VB and lived in Sandbridge (southern most VB) surfing north of Rodanthe didn't cut it. The waves were the same placid break I had in VB, but with smaller crowds. As many of us know, things start to change south of Pea Island; and for this now land-locked right-coaster, s-turns, avon pier, old lighthouse groins, the cove, and frisco pier mean surfing in the grandest sense of the word.

Why should this matter - I'll tell you. I live in Colorado now and get to ride some of the best powder on the planet, but this doesn't quench my thirst. Surfing does! I turned 45 a couple of months ago, which only matters in that I can now actually afford to go surf. This is why I come back to Hatteras year in, year out, by choice. I can drive right up to some of the best breaks in the world - many that some folks don't even know about (like the cove).

Where the proverbial rubber hits the road is right there on highway 12 in front of ramp 38, or maybe by the lighthouse ramp for access to the point, or maybe just south of Frisco. My point is I keep coming back to Hatteras because the surf is that good. Only Tamarindo in CR gives Hatteras a run for her money, and this is due to the confluence of big heavy waves and a sandy bottom. Hawaii and California are great, but nothing says forgiving like sand - I can't crack my head open on sand as easily as say coral or rock (but I digress). Hatteras has that perfect combination of sandy bottom, lots of moving warm water, and steep heavy fast waves. Surfing at its best.

I'll finish with something we can call the balance sheet. This is what will really matter to all of the capers that are trying to eek out a living. Last year I spent 1400 on 7 days of house, with another 500 on 3 days of hotel on O.I. I spent about 300 on groceries at the Food Lion, and another 100 on 2 tanks of gas. We went to dinner every night somewhere and lunch most days (really could go for some fish right now) which ran well north of 1500 by the time we drove back to VA to fly home. Tshirts, beach chairs, rental gear all tolled another 275. Surfing lessons for my wife (who by the way needs them every year being a Midwesterner) amount to another 120. Lastly and likely most importantly, my 6'5" rounded pin quad shaped by Scotty at Natural Art in Buxton - 600 bones. Someone reading this is going to say, that last one was a one time buy - Bull Shit. I now have an '08 In the Eye to add to my '06 Hatteras Glass, my '05 Shriver, and my '02 WRV (the only one not bought from a villager but shaped by one). I keep 4 boards on the East Coast and am thinking of a long board next year for my wife... but back to the balance sheet.

I dropped north of \$3200 last year alone - and I'm just one guy with a wife, and parent. I do this every year. I haven't missed a year on Hatteras since I moved to Colorado. My heart is in Hatteras and let me tell you, access needs to remain if you have any prayer of keeping the money coming in. How many

0079236

restaurants remain south of pea island that have the same owners and name since the calendar turned 2000? I bet you can count them on 2 hands. If you take away the ORV access, you will all but starve out those who make Hatteras their homes from October through April too. I get conservation, belong to the Surfrider foundation, and boycott run-off issues locally. But your problem is a 3 way street - birds, turtles and Capers with the latter struggling more so than any bird down there.

Please make the right decision and keep the ORV access. Tax and title it (NC beach buggy comes to mind), give a break to the locals through incentives and reductions based on drivers license address, sell paper tags by the week to us non-locals at ferocious cost, get day, night ,and day-night use plans/licensing in place, and stake off turtle nesting grounds (ranger duty or let the k-12 huricanes help). There is a solution and it can be done with a lot of planning and forethought.

Thanks for reading this, thanks for looking out for the Cape Hatteras National Seashore, and thank you for working towards retaining ORV access (and pedestrian for that matter). If there is anything I can do to help in these efforts, please do not hesitate to ask.

Kind Regards,

John Cowperthwaite - Surfer and Engineer

Cape Hatteras is one of my favorite places to surf, period. Having access to this resource is an amazing opportunity for average Americans who do not have money to buy their own chunk of beach front property.

I hope this remains accessible for my children and grandchildren. It would be a shame to see this taken away.

**Subject:** Surfer in support of keeping our beaches open

Hello, my name is Charlotte Hill Quinn and I'm a 41 yr old native and resident of Kill Devil Hills. I grew up surfing many of the spots listed in the possible closure areas. As well as, a great many other locations all along the North Carolina coastline from Carova to Wilmington.

Growing up here on the Outer Banks, has been a wonderful experience. My love of the Outer Banks coastline is one reason why I never moved away. Being raised here, I was also taught a great deal of respect for my/our environment. My parents owned an ORV of some sort for years. Many of my fondest memories are of trips to fish on the beach at Hatteras, Pea Island, and Oregon Inlet. We were taught how to drive on the beach( as well as how not to drive), not to play on the dunes, to leave the wildlife alone, and to pick up any trash found.

As I grew older and started surfing, I practiced the same ideals I was taught. Enjoying the out of the way locations only accessible by ORV. I am now a married surfing mother of two and have tried to teach my kids the same love of the ocean and all the wonderful things that the Outer Banks has to offer. As a family we used to travel from KDH to Hatteras, etc to surf and enjoy the beach father south. Stopping at various businesses to buy food, supplies, etc. (Whatever we needed or forgot)

Since the beaches have been closed, I admit we haven't gone south as much as we used to. I have however at various times sent out info to all my friends near and far about the possible beach access closures. I want our wildlife to thrive, but to close the beaches would be tragic in more ways than one. And I don't think many involved in the closures have any idea what it would do to the Outer Banks. My family is just one not spending money at local businesses, multiply that loss times thousands of people not visiting the Outer Banks Coastline.

Thousands of people come here every year to spend time on our beaches, because it's like nowhere else, surfers, bodyboarders, kiteboarders, windsurfers, fisherman, and the people just wanting to enjoy the beach. I have worked at Newman's Shell shop, Whalebone Surf shop, and many other retail businesses over the years, as well as Roanoke Island Festival Park, and our visitors all say they love our beaches for the very reason that they are truly unique, beautiful and open to the public!

I am now a Surf Artist, best know locally for my 2006 Outer Banks Beach Book Cover, the one with the surfer on it. I still surf, as does my husband and 2 children who are just learning how. As I stated earlier, I have sent out many messages to friends and family in support of keeping our beautiful beaches open. I plan on helping keep them open however I can. Thankfully my surf art has put me in contact with many in the surf industry who like myself, have enjoyed surfing, or some sort of watersport, and our beaches in Hatteras, etc. I have started sending them any info. I get and asking them if they love Hatteras Beaches, etc please help to keep them open!
